The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.1.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH

Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	C: Low range, High range
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Lowest N_{RB_agg}, Highest N_{RB_agg} (Note 3)

Test Parameters for CA Configurations

CA Configuration / N_{RB_agg}		DL Allocation		UL Allocation					
PCC N_{RB}	SCC N_{RB}	CC MOD	PCC & SCC RB allocation	CC MOD	N_{RB_alloc}	PCC & SCC RB allocations (L_{CRB} @ RB_{start})			
25	25	QPSK	25+25	QPSK	50	P_25@0	S_25@0	-	-
50	25	QPSK	50+25	QPSK	25	P_25@25	S_0@0	-	-
50	50	QPSK	50+50	QPSK	25	P_25@25	S_0@0	-	-

100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0	-	-

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.0-1 for UE supporting two uplink carriers is tested per Test CA configuration.
Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg}, only the combination with the highest NRB_PCC is tested.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.32 as appropriate if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.1.4.3.

7.3A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.1.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

7.3A.1.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.1.5-1 and table 7.3A.1.5-2.

Table 7.3A.1.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band

CA Configuration	100RB+25RB		100RB+50RB		75RB+75RB		75RB+50RB		100RB+75RB		100RB+100RB		Duplex Mode

CA_42C	-92	-98	-92	-95	-	-	-	-	-92	-93.2	-92	-92	TDD
	-94.2[4]	-100.2[4]	-94.2[4]	-97.2[4]					-94.2[4]	-95.4[4]	-94.2[4]	-94.2[4]	

Note 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for intra-band specified in Table 7.3A.1.5-1 shall be met for each uplink CA configurations less than or equal to that specified in Table 7.3A.1.5-2.

NOTE: Table 7.3A.1.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.1.5-2: Intra-band CA uplink configuration for reference sensitivity

CA configuration / CC combination / NRB_agg / Duplex mode													
CA configuration	100RB+25RB		100RB+50RB		75RB+75RB		75RB+50RB		100RB+75RB		100RB+100RB		Duplex Mode
	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	
CA_1C	N/A	N/A	N/A	N/A	75	54	N/A	N/A	N/A	N/A	100	30	FDD
CA_3C	50	0	50	0	N/A	N/A	N/A	N/A	50	0	50	0	FDD
CA_7C	N/A	N/A	N/A	N/A	75	0	75	0	N/A	N/A	75	0	FDD
CA_38C	N/A	N/A	N/A	N/A	75	75	N/A	N/A	N/A	N/A	100	100	TDD
CA_39C	100	25	100	50	N/A	N/A	N/A	N/A	100	75	N/A	N/A	TDD
CA_40C	N/A	N/A	100	50	75	75	N/A	N/A	100	75	100	100	TDD
CA_41C	100	25	100	50	75	75	75	50	100	75	100	100	TDD
CA_42C	100	25	100	50	N/A	N/A	N/A	N/A	100	75	100	100	TDD

Note 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
Note 2: The transmitted power over both PCC and SCC shall be set to P_{UMAX} as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.
Note 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2A-1).
Note 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
Note 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.

7.3A.2 Reference sensitivity level for CA (intra-band contiguous DL CA without UL CA)

7.3A.2.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.3A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.2.4 Test description

7.3A.2.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.2.4.1-1.

Table 7.3A.2.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			B: Low range, High range C: Low range, High range (Note 4)						
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.			Lowest N_{RB_agg}, Highest N_{RB_agg} (Notes 3, 4)						
Test Parameters for CA Configurations

100	100	QPSK	100+100	QPSK	100	P_100@0	-	-	-

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2:	Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3:	If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.
Note 4:	For CA_70C all test frequency IDs shall be tested according to table 4.3.1.1.70A-1, in TS 36.508 [7].

7.3A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.2.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Tables 7.3A.1.5-1 to 7.3A.1.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.2.4.3 Message contents

Same as in clause 7.3A.1.4.3.

7.3A.2.5 Test requirement

Same as in clause 7.3A.1.5 with the following test requirement defined in Table 7.3A.2.5-1 additions.

Table 7.3A.2.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous DL CA without UL CA

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.
NOTE 6: Void.
NOTE 7: The PCC is contained within 1710-1780 MHz.

Table 7.3A.2.5-5: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous DL CA without UL CA (table 5)

Configuration / CC combination / N_{RB_agg} / Duplex mode									
CA configuration	75RB+25RB		50RB+50RB		50RB+25RB		25RB+25RB		Duplex Mode
	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	
CA_66B	-94	-98.8	-95.8	-95.8	-95.8	-98.8	-98.8	-98.8	FDD
	-96.7[4]	-101.5[4]	-98.5[4]	-98.5[4]	-98.5[4]	-101.5[4]	-101.5[4]	-101.5[4]	

Note 1: The transmitter shall be set to P_{UMAX} as defined in clause 6.2.5A
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

Table 7.3A.2.5-6: Intra-band CA without UL CA uplink configuration for reference sensitivity (table 6)

Configuration / CC combination / N_{RB_agg} / Duplex mode									
Uplink CA configuration	75RB+25RB		50RB+50RB		50RB+25RB		25RB+25RB		Duplex Mode
	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	

CA_66B (NOTE 7)	75	N/A	50	N/A	50	N/A	25	N/A	FDD

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to PUMAX as defined in subclause 6.2.5A.
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.
NOTE 6: Void.
NOTE 7: The PCC is contained within 1710-1780 MHz.

Table 7.3A.2.5-7: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous DL CA without UL CA (table 7)

Configuration / CC combination / N_{RB_agg} / Duplex mode													
CA configuration	**25RB+100RB**		**50RB+75RB**		**75RB+50RB**								**Duplex Mode**
	PCC	**SCC**	**PCC**	**SCC**	**PCC**	**SCC**							
CA_70C	-99.3	-93.3	-96.3	-94.5	-94.5	-96.3							FDD

Note 1: The transmitter shall be set to P_{UMAX} as defined in clause 6.2.5
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port

7.3A.3 Reference sensitivity level for CA (inter-band DL CA without UL CA)

Editor's note: Band 70 CA configurations are missing test point analysis

7.3A.3.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

This test case applies only for CA configurations that do not support UL CA.

7.3A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.3.4 Test description

7.3A.3.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.3.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.3.4.3.

Table 7.3A.3.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH

Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.	A: Mid range for PCC and SCC, unless otherwise specified in the Tables 7.3A.3.4.1-2 to 7.3A.3.4.1-33
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB_agg}, unless otherwise specified in the Tables 7.3A.3.4.1-2 to 7.3A.3.4.1-33
Network signalling value	NS_01 Unless given by Table 7.3.3.-3 for the band with active uplink carrier

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.

Table 7.3A.3.4.1-1a: Void

Table 7.3A.3.4.1-2: Test frequencies and Test CC combinations for CA_1A-3A

CBW			**Band 3**		
			5MHz	**15MHz**	**20MHz**
			High range		
Band 1 as PCC (Note 1)	**20MHz**	**Low range**	X^2	X^2	X^2
		Mid range	-	-	X^3
Band 1 as SCC	**20MHz**	**Low range**	-	-	X

Note 1: For Band 1 as PCC, the exceptions described in Table 7.3A.0-0bA are tested.
Note 2: This is the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. The appropriate Uplink RB allocation value according to Table 7.3A.0-0bB should be applied.
Note 3: This is the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. The appropriate Uplink RB allocation value according to Table 7.3A.0-0bB should be applied.

		High range	-	-	-

7.3A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A3.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.3.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.3.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

7.3A.3.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

7.3A.3.4.3.2 Message contents exceptions (network signalled value "NS_06")

1. Information element additionalSpectrumEmission is set to NS_06. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3A.3.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_06"

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	**Value/remark**	**Comment**	**Condition**
additionalSpectrumEmission	6 (NS_06)		

7.3A.3.5 Test requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in

Tables 7.3A.3.5-1 and Table 7.3A.3.5-2 (originated from single carrier Tables 7.3.5-1 and 7.3.5-2). The reference sensitivity is defined to be met with both downlink component carriers active and either of the uplink component carriers active.

Table 7.3A.3.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for inter-band

		Channel bandwfidth						
CA Configuration	**E-UTRA Band**	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**

	71	-	-	-96.5	-93.5	-91.3	-86.8	

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.3.5-2)
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1.
Note 3: The signal power is specified per port
Note 4: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-0a.
Note 5: [5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 6: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz
Note 7: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-0a.

Note 8:	Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-0a.
Note 9:	These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
Note 10:	The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
Note 11:	These requirements apply when the uplink is active in Band 41.
Note 12:	These requirements apply when the uplink is active in Band 3.
Note 13:	Reference sensitivity for the high band for which the 5th harmonic of the low band is within transmission bandwidth, as specified Note 15 and 16 in Table 7.3A.0-0a.
Note 14:	These requirements apply when the uplink is active in Band 1.
Note 15:	These requirements apply when the uplink is active in Band 40.
Note 16:	Reference sensitivity for the high band for which the 4th harmonic of the low band is within transmission bandwidth, as specified Note 12 and 13 in Table 7.3A.0-0a.
Note 17:	The requirements do not apply when there is at least one individual RE within the uplink transmission bandwidth of the lower band for which the transmitter harmonic is within the downlink transmission bandwidth of the higher band and a range ΔF_{HD} from lower and higher frequency of the uplink transmission bandwidth multiplied by the harmonic order. Negative ΔF_{HD} reduces the REFSENS exclusion range while positive ΔF_{HD} extends the range. ΔF_{HD} = [30] MHz for the E-UTRA configuration which has 2nd harmonic issue. ΔF_{HD} = 15 MHz for the E-UTRA configuration which has 3rd harmonic issue. ΔF_{HD} = [10] MHz for the E-UTRA configuration which has 4th harmonic issue. ΔF_{HD} = [-20] MHz for the E-UTRA configuration which has 6th harmonic issue. ΔF_{HD} = [-30] MHz for the E-UTRA configuration which has 7th harmonic issue. ΔF_{HD} = [-40] MHz for the E-UTRA configuration which has for 8th harmonic issue. For band combinations including more than one licensed band with band 46, the value ΔF_{HD} depends on which licensed band is used for uplink transmission.
Note 18:	The value ΔF_{HD} in Note 17 shall be scaled as ΔF_{HD} *(N_{RB}/100) according to the uplink configuration defined in Table 7.3A.3.5-2.
Note 19:	Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 20:	These requirements apply when the uplink is active in Band 28.
Note 21:	These requirements apply when the uplink is active in Band 7.
Note 22:	These requirements apply when the uplink is active in Band 42.
Note 23:	These requirements apply when the uplink is active in Band 8.
Note 24:	These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz. These requirements also apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
Note 25:	These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is $\leq$ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.3.5-1 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3A.3.5-2.

NOTE: Table 7.3A.3.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.3.5-2: Inter-band CA uplink configuration for reference sensitivity, L_{CRB} @ RB_{start} format

Channel bandwidth

Note 1: Void
Note 2: Configuration for the low band for which the 3rd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 5.
Note 3: Void
Note 4: Void
Note 5: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
Note 6: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
Note 7: Void
Note 8: Void
Note 9: Configuration for the low band for which the 2nd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 9 or Note 11.
Note 10: This configuration is used for testing the 3rd harmonic or 4th harmonic interfered high band only. It is for low band with multiple choices of RB number corresponding to different high band bandwidth as indicated in Table 7.3A.0-0aa: Uplink configuration for the low band (exceptions). Only one bandwidth option was used for simplicity.
Note 11: Configuration for the low band for which the 4th harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 12 and 13.

7.3A.4 Reference sensitivity level for CA (intra-band non-contiguous DL CA without UL CA)

7.3A.4.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.3A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.4.4 Test description

7.3A.4.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.4.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.3.4.3.

Table 7.3A.4.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.				A: N/A (Range is not relevant)			
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point			
Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.
Note 2: The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.
Note 3: Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.
Note 4: Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.
Note 5: Not applicable if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 6: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 7: Applicable if only Bandwidth Combination Set 1 is supported by the UE for the CA Configuration.
Note 8: Void
Note 9: Void
Note 10: Applicable test configuratons are specified in Table 7.3A.4.4.1-1a.
Note 11: Applicable test configurations are specified in Table 7.3A.4.4.1-1b.

7.3A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A4.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.4.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.4.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

7.3A.4.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

7.3A.4.4.3.2 Message contents exceptions (network signalled value "NS_03")

1. Information element additionalSpectrumEmission is set to NS_03. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3A.4.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_03"

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1

Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	3 (NS_03)		

7.3A.4.5 Test requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier on the PCC, the throughput of each downlink component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.3A.4.5-1.

Table 7.3A.4.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band Non-contiguous

Note 1: The transmitter shall be set to maximum output power level.
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The signal power is specified per port.
Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is $\leq$ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for intra-band non-contiguous specified in Table 7.3A.4.5-1 shall be met for an uplink CA configurations equal to that specified in Table 7.3A.4.4.1-1.

NOTE: Table 7.3A.4.4.1-1 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.4.5-2: Void

7.3A.5 Reference sensitivity level for 3DL CA

Editor's note: This test case is incomplete. The following aspects are either missing or not yet determined:

- TR 36.905 test point analysis for CA_28A-40C is missing, meaning it is not yet determined if testing of fallback configuration CA_28A_40A can be skipped.
- Band 70 CA configurations are missing test point analysis.

7.3A.5.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.5.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 3DL with CA configurations in Table 7.1-2a.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 3DL CA involving Band 46.

7.3A.5.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.5.4 Test description

7.3A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.5.4.1-1 through table 7.3A.5.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.5.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC N_{RB}” and “SCCs N_{RB} ” columns
Network signalling value	NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41
Note 6: **Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-19A,X=1,Y=3,Z=19
Note 7: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration, e.g. for CA_1C-3A, X=1,Y=3, for CA_1A_42C, X=1,Y=42.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}
Note 10: Band 12: f_{UL} = 706.7 MHz (N_{UL} = 23087), f_{DL} = 736.7 MHz (N_{DL} = 5087)
Band 4: f_{DL} = 2120.1 MHz (N_{DL} = 2051)
Note 11: Band 12: f_{UL} = 710.9 MHz (N_{UL} = 23129), f_{DL} = 740.9 MHz (N_{DL} = 5129)
Band 4: f_{DL} = 2132.7 MHz (N_{DL} = 2177)
Note 12: N/A
Note 13: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3
Note 14: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested
Note 15: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested
Note 16: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)
Note 17: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)
Band 42: fUL/DL = 3520MHz (NDL = 42790)
Note 18: N/A
Note 19: Only Band 1 and Band 19 need to be tested and Band 28 does not need to be tested
Note 20: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 21: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)
Note 22: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790).
Note 23: Band 28: f_{UL} = 719.3MHz (N_{UL} = 27373), f_{DL} = 774.3MHz (N_{DL} = 9373).
Note 24: Band 42: $f_{UL/DL}$ for SCC1 = 3515.8MHz (N_{UL} = 42748), $f_{UL/DL}$ for SCC2 = 3527.5MHz (N_{DL} = 42865).
Note 25: Band 8: f_{UL} = 897.5MHz (N_{UL} = 21625), f_{DL} = 942.5MHz (N_{DL} = 3625), Band 42: $f_{UL/DL}$ = 3590MHz ($N_{UL/DL}$ = 43490).
Note 26: Band 28: f_{UL} = 722.5 MHz (N_{UL} = 27405), f_{DL} = 777.5 MHz (N_{DL} = 9405), Band 1: f_{DL} = 2167.5 MHz (N_{DL} = 575).
Note 27: Band 28: f_{UL} = 743 MHz (N_{UL} = 27610), f_{DL} = 798 MHz (N_{DL} = 9610). Band 11: f_{DL} = 1480.9 MHz (N_{DL} = 4800).
Note 28: Band 12: f_{UL} = 704MHz (N_{UL} = 23060), f_{DL} = 734MHz (N_{DL} = 5060)
Band 66: f_{UL} = 1712.5MHz (N_{UL} = 131997), f_{DL} = 2112.5MHz (N_{DL} = 66461)
Note 29: Band 12: f_{UL} = 707.5MHz (N_{UL} = 23095), f_{DL} = 737.5MHz (N_{DL} = 5095)
Band 66: f_{UL} = 1720MHz (N_{UL} = 132072), f_{DL} = 2120MHz (N_{DL} = 66536)

Note 30: Band 12: f_{UL} = 711MHz (N_{UL} = 23130), f_{DL} = 741MHz (N_{DL} = 5130)
Band 66: f_{UL} = 1717.5MHz (N_{UL} = 132047), f_{DL} = 2117.5MHz (N_{DL} = 66511).
Note 31: Band 3: f_{UL} = 1757.4MHz (N_{UL} = 19674), f_{DL} = 1852.4MHz (N_{DL} = 1674),
Band 11: f_{DL} = 1480.9MHz (N_{DL} = 4800).
Note 32: Band 3: f_{DL} = 1852.4MHz (N_{DL} = 1674),
Band 11: f_{UL} = 1432.9MHz (N_{UL} = 22800), f_{DL} = 1480.9MHz (N_{DL} = 4800).
Note 33: Band 2: f_{UL} = 1868.3MHz (N_{UL} = 18783), f_{DL} = 1948.3MHz (N_{DL} = 783).
Band 4: f_{UL} = 1735MHz (N_{UL} = 20200), f_{DL} = 2135MHz (N_{DL} = 2200).
Note 34: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 35: Band 3: f_{UL} = 1737MHz (N_{UL} = 19470), f_{DL} = 1832MHz (N_{DL} = 1470).
Band 7: f_{UL} = 2543MHz (N_{UL} = 23430), f_{DL} = 2663MHz (N_{DL} = 3180).
Band 20: f_{UL} = 847MHz (N_{UL} = 24300), f_{DL} = 806MHz (N_{DL} = 6300).
Note 36: Band 3: f_{UL} = 1775MHz (N_{UL} = 19850), f_{DL} = 1870MHz (N_{DL} = 1850).
Band 7: f_{UL} = 2510MHz (N_{UL} = 23100), f_{DL} = 2630MHz (N_{DL} = 2850).
Band 20: f_{UL} = 855MHz (N_{UL} = 24380), f_{DL} = 814MHz (N_{DL} = 6380).
Note 37: Band 7: f_{UL} = 2512MHz (N_{UL} = 23120), f_{DL} = 2632MHz (N_{DL} = 2512).
Band 20: f_{UL} = 851MHz (N_{UL} = 24340), f_{DL} = 851MHz (N_{DL} = 6340).
Note 38: Test frequency for each CA configuration shall follow Table 7.3A.0-0f. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-0f.
Note 39: Test frequency for each CA configuration shall follow Table 7.3A.0-0g. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-0g.
Note 40: Band 71:f_{UL} = 679.3 MHz (N_{UL} = 133285), f_{DL} = 633.3 MHz (N_{DL} = 68749)

Table 7.3A.5.4.1-2: Test Configuration Table W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC N_{RB}" and “SCCs N_{RB} ” columns
Network signalling value	NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band

Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 5: **Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5 or Y=5, X =2
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.
Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Inter-band:** Configuration for the low band for which the 3rd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 5.
Note 9: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10: Not applicable if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 11: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 12: Void
Note 13: Void
Note 14: Void
Note 15: Void
Note 16: Void
Note 17 Void
Note 18: Applicable test configuratons are specified in Table 7.3A.5.4.1-2a.
Note 19: Applicable test configurations are specified in Table 7.3A.5.4.1-2b.
Note 20: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 21: Band 71:f_{UL} = 679.3 MHz (N_{UL} = 133285), f_{DL} = 633.3 MHz (N_{DL} = 68749)
Note 22: Applicable test configurations are specified in Table 7.3A.5.4.1-2c.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.5.4.1-1 through Table7.3A.5.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.5.4.3.

7.3A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.5.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3A.5.4.1-1 through Table7.3A.5.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.5.4.1-1 through Table7.3A.5.4.1-2 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.5.5-1 through Table7.3A.5.5-8. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

7.3A.5.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for Intra-band contiguous

Channel bandwidth								
CA Configuration	E-UTRA Band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
CA_40D	40	-	-	-	-96.3	-94.5	-93.3	TDD
		-	-	-	-99.0[4]	-97.2[4]	-96.0[4]	
CA_41D	41	-	-	-	-94.3	-92.5	-91.3	TDD
		-	-	-	-97.0[4]	-95.2[4]	-94.0[4]	
CA_42D	42	-	-	-98.0	-95.0	-93.2	-92.0	TDD
		-	-	-100.2[4]	-97.2[4]	-95.4[4]	-94.2[4]	

Note 1:	The transmitter shall be set to maximum output power level (Table 7.3A.5.5-2)
Note 2:	The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3:	The signal power is specified per port
Note 4:	Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

Table 7.3A.5.5-2: Void

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-3 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-3: Reference sensitivity QPSK $P_{REFSENS}$ for inter-band

	71	-	-	-96.5	-93.5	-91.2	-86.8	

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.5.5-4)
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
Note 5: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
Note 6: [6] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.2A-2).
Note 8: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-0a.
Note 9: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-0a.
Note 10: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-0a.
Note 11: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
NOTE 12: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 13: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 14: The B41 requirements also apply to the supported CA_1A-41A.
NOTE 15: These requirements apply when the uplink is active in Band 1 or Band 8.
NOTE 16: These requirements apply when the uplink is active in Band 3 or Band 8.
NOTE 17: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690MHz.
NOTE 18: These requirements apply when the uplink is active in Band 41.
NOTE 19: These requirements apply when the uplink is active in Band 3.
NOTE 20: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 21: These requirements apply when the uplink is active in a lower-frequency band and is within a specified frequency range such that transmitter harmonics fall within the downlink transmission bandwidth assigned in a higher band.
NOTE 22: These requirements apply when the uplink is active in Band 42.
NOTE 23: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
NOTE 24: These requirements apply when UL CA is configured and the uplink is active in Band 2 and Band 4.
NOTE 25: These requirements apply when the uplink is active in Band 40.
NOTE 26: These requirements apply when the uplink is active in Band 1.
NOTE 27: These requirements apply when UL CA is configured and the uplink is active in Band X and Band Y in CA_XA-YA-ZA.
NOTE 28: These requirements apply when UL CA is configured and the uplink is active in Band Y and Band Z in CA_XA-YA-ZA.
NOTE 29: These requirements apply when UL CA is configured and the uplink is active in Band Z and Band X in CA_XA-YA-ZA.

NOTE 30: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz. These requirements also apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

NOTE 31: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.5.5-3 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.5.5-4 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.5.5-4: Void

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-5: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous + inter-band

Channel bandwidth

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.5.5-4)
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-0a.
Note 5: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-0a.
Note 6: [6]indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7: Reference sensitivity for the high band for which the 5th harmonic of the low band is within transmission bandwidth, as specified Note 15 and 16 in Table 7.3A.0-0a.
Note 8: Reference sensitivity for the high band for which the 4th harmonic of the low band is within transmission bandwidth, as specified Note 12 and 13 in Table 7.3A.0-0a.
Note 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
Note 10: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
Note 11: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
Note 12: These requirements apply when the uplink is active in Band 3.
Note 13: These requirements apply when the uplink is active in Band 40.
Note 14: These requirements apply when the uplink is active in Band 41.
Note 15: These requirements apply when the uplink is active in Band 28.
Note 16: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 17: These requirements apply when UL CA is configured and the uplink is active in Band X and Band Y in CA_XA-YC.
Note 18: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-0a.

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-6. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-6: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band non-contiguous + inter-band

CA Configuration	Testpoint ID	PCC			SCC1			SCC2

Note 1: Requirements with additional relaxation (ΔR_{IBNC}) as per Table 7.3A.0-3.
Note 2: "Testpoint ID" refers to IDs in Table 7.3A.5.4.1-4.
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 4: The signal power is specified per port.
Note 5: $P_{REFSENS}$ refers to the PCC band's single carrier reference sensitivity according to table 7.3.5-1.
Note 6: Void
Note 7: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-0a.
Note 8: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 9: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz. These requirements also apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
Note 10: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

For combinations of intra-band non-contiguous and intra-band contiguous carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-7. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-7: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band non-contiguous + intra-band contiguous

Note 3: The signal power is specified per port.
Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

7.3A.6 Reference sensitivity level for CA (inter-band DL CA and UL CA)

7.3A.6.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.6.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

7.3A.6.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.6.4 Test description

7.3A.6.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.6.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.6.4.3.

Table 7.3A.6.4.1-1: Test Configuration Table

Initial Conditions												
Test Environment as specified in TS 36.508[7] subclause 4.1							NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.							For test frequencies refer to “Range” columns.					
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.							Refer to “PCC N_{RB}”and “SCC N_{RB} ” columns					
Network signalling value							NS_01 Unless given by Table 7.3.3-3 for the band with active uplink carrier					
Test Parameters for CA Configurations

Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 3:	X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A,X=1,Y=3.
Note 4:	REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 5:	Test frequency for each CA configuration shall follow Table 7.3A.0-0f. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-0f.
Note 6:	Not applicable if the UE only supports Bandwidth Combination Set 1.

7.3A.6.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.6.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.6.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.6.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.6.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

7.3A.6.5 Test requirement

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3A.6.5-1 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with both downlink component carriers active and both of the uplink component carriers active.

Table 7.3A.6.5-1: Reference sensitivity QPSK PREFSENS

	42	-	-	-	-94.8	-93	-91.8	
Note 1: Both of the transmitters shall be set min(+20 dBm, $P_{CMAX_L,c}$) as defined in subclause 6.2.5A								

Note 2:	The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3:	The signal power is specified per port
Note 4:	Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-0a.
Note 5:	[5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 6:	Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

7.3A.7 Reference sensitivity level for CA (intra-band non-contiguous DL CA and UL CA)

7.3A.7.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.7.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

7.3A.7.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.7.4 Test description

7.3A.7.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.7.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.7.4.3.

Table 7.3A.7.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH								
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.	A: N/A (Range is not relevant)								
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	Refer to test point								
Test Parameters for CA Configurations									
ID	**CA Configuration / N_{RB_agg}**		**W_{gap} [MHz]**	**DL Allocation**		**UL Allocation**			
	PCC N_{RB}	**SCCs N_{RB}**		**CC MOD**	**PCC & SCC RB allocation**	**CC MOD**	**PCC N_{RB_alloc} (L_{CRB} @ RB_{start})**	**CC MOD**	**SCC N_{RB_alloc} (L_{CRB} @ RB_{start})**
Test Parameters for CA_4A-4A Configurations									
1	100	25	35	QPSK	100+25	QPSK	100@0	QPSK	25@0
2	100	100	20	QPSK	100+100	QPSK	100@0	QPSK	100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.									

Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.

7.3A.7.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A7.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.7.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.7.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.7.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.7.4.3 Message contents

Same as in clause 7.3A.4.4.3.

7.3A.7.5 Test requirement

For intra-band non-contiguous carrier aggregation with two uplink carriers, the throughput of each downlink component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.3A.7.5-1.

Table 7.3A.7.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band Non-contiguous

ID/ CA configuration / $P_{REFSENS}$			
ID	**CA configuration**	**PCC measurement (dBm)**	**SCC measurement (dBm)**
1	CA_4A-4A	-93.3	-99.3
		-96[4]	-102[4]
2		-93.3	-93.3
		-96[4]	-96[4]
Note 1: The transmitter shall be set to maximum output power level Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 Note 3: The signal power is specified per port Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.			

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating

band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied.

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations.

7.3A.8

7.3A.9 Reference sensitivity level for 4DL CA

Editor's note: Following aspects missing or not yet determined:

- Reference sensitivity QPSK $P_{REFSENS}$ has defined and made for some CA bands, some of are incomplete.

7.3A.9.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.9.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 4DL with CA configurations in Table 7.1-2b.

7.3A.9.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.9.4 Test description

7.3A.9.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.9.4.1-1 through table 7.3A.9.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.9.4.1-1: Test Configuration Table

Initial Conditions																
Test Environment as specified in TS 36.508 [7] subclause 4.1					NC, TL/VL, TL/VH, TH/VL, TH/VH											
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.					For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns											
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Refer to “PCC NRB” and “SCCs NRB” columns											
Network signalling value					NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band											
Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3.
Note 12: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested.
Note 13: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)
Note 14: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested.
Note 15: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)
Band 42: fUL/DL = 3520MHz (NDL = 42790)
Note 16: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)
Note 17: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790)
Note 18: Band 12: f_{UL} = 706.7 MHz (N_{UL} = 23087), f_{DL} = 736.7 MHz (N_{DL} = 5087)
Band 4: f_{DL} = 2120.1 MHz (N_{DL} = 2051)
Note 19: Band 12: f_{UL} = 710.9 MHz (N_{UL} = 23129), f_{DL} = 740.9 MHz (N_{DL} = 5129)
Band 4: f_{DL} = 2132.7 MHz (N_{DL} = 2177)
Note 20: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 21: Test point that fulfils criteria of Note 16 in Table 7.3A.0-0a.
Band 71: f_{UL} = 679.3 MHz (N_{UL} = 133285), f_{DL} = 633.3 MHz (N_{DL} = 68749)
Note 22: Band 28: f_{DL} = 790.0 MHz (N_{UL} = 9530)
Note 23: The band combinations with difference appearance order of bands/sub-blocks in the band combination string are not distinguished. E.g. CA_XA-YA-YD represents the set of CA_XA-YD-YA, YD-YA-XA, YA-XA-YD and YA-YD-XA

Table 7.3A.9.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH

Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band

Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band non-contiguous + Inter-band:** X, Y, Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12, for CA_2A-66A-66A-66A, X=2,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.
Note 7: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10: Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration. (This note is not applicable for any existing test point and only reserved for future use)
Note 11: Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.
Note 12: Applicable if only Bandwidth Combination Set 1 is supported by the UE for the CA Configuration. (This note is not applicable for any existing test point and only reserved for future use)
Note 13: Not applicable if only Bandwidth Combination Set 1 is supported by the UE for the CA Configuration.
Note 14: Not applicable if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 15: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 16: Band 2: f_{UL} = 1868.3MHz (N_{UL} = 18783), f_{DL} = 1948.3MHz (N_{DL} = 783).
Band 4: f_{UL} = 1735MHz (N_{UL} = 20200), f_{DL} = 2135MHz (N_{DL} = 2200).
Note 17: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 18: Test point that fulfils criteria of Note 16 in Table 7.3A.0-0a.
Band 71: f_{UL} = 679.3 MHz (N_{UL} = 133285), f_{DL} = 633.3 MHz (N_{DL} = 68749)

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.9.4.1-1 through Table7.3A.9.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.9.4.3.

7.3A.9.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.9.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3A.9.4.1-1 through Table7.3A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.9.4.1-1 through Table7.3A.9.4.1-2 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.9.5-1 through Table7.3A.9.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.9.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

7.3A.9.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.9.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for Intra-band contiguous

		Channel bandwidth						
EUTRA CA Configuration	**EUTRA band**	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex mode**
CA_40E	40	-	-	-99.3	-96.3	-94.5	-93.3	TDD
		-	-	-102[4]	-99[4]	-97.2[4]	-96[4]	
CA_42E	40	-	-	-98.0	-95.0	-93.2	-92.0	TDD
		-	-	-100.2[4]	-97.2[4]	-95.4[4]	-94.2[4]	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

Table 7.3A.9.5-2: FFS

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-3 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.9.5-3: Reference sensitivity QPSK $P_{REFSENS}$ for inter-band

	32	-	-	-99.5	-96.5	-94.7	-93.5	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range ΔF_{HD} above and below the edge of this downlink transmission bandwidth. The value ΔF_{HD} depends on the E-UTRA configuration: ΔF_{HD} = 10 MHz for CA_3A-42A, CA_3A-42C, CA_1A-3A-42A, CA_1A-3A-42C, CA_3A-19A-42A, CA_3A-19A-42C, CA_1A-3A-19A-42A and CA_1A-3A-19A-42C.
NOTE 6: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB}/0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with f_{DL}^{HB} carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 7: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB}/2)$ MHz offset from $2f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
NOTE 8: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 10: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-0a.
NOTE 11: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 12: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB}/0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with f_{DL}^{HB} the

carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.
NOTE 13: These requirements apply when the uplink is active in Band 40.
NOTE 14: These requirements apply when the uplink is active in Band 3.
NOTE 15: These requirements apply when the uplink is active in Band 1.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 4DL inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one 4DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 4DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 4DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 4DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 4DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.9.5-3 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.9.5-4 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.9.5-4: Void

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.9.5-5: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous + inter-band/(inter-band) intra-band contiguous

	71			-96.5	-93.5	-91.2	-86.8	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range ΔF_{HD} above and below the edge of this downlink transmission bandwidth. The value ΔF_{HD} depends on the E-UTRA configuration: ΔF_{HD} = 10 MHz for CA_3A-42C, CA_1A-3A-42C and CA_3A-19A-42C.

NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB}/0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with f_{DL}^{HB} carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.

NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20+BW_{Channel}^{HB}/2)$ MHz offset from $2f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 10: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

NOTE 11: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that $f_{DL}^{LB} = \lfloor f_{UL}^{HB}/0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with f_{DL}^{LB} the carrier frequency in the victim (lower) band and $BW_{Channel}^{HB}$ the channel bandwidth configured in the higher band.

NOTE 12: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

NOTE 13: These requirements apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

NOTE 14: These requirements apply when active uplink channel is in Band 40.

NOTE 15: These requirements apply when active uplink channel is in Band 28.

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-6. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

	71			-96.5	-93.5	-91.2	-86.8	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port

NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

NOTE 5: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).

NOTE 6: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 7: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with f_{DL}^{HB} the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 8: These requirements apply when UL CA is configured and the uplink is active in Band 2 and Band 4.

NOTE 9: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

NOTE 10: These requirements apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

For combinations of intra-band non-contiguous and intra-band contiguous carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-7. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Note 1: Requirements with additional relaxation (ΔR_{IBNC}) as per Table 7.3A.0-3.
Note 2: "ID" refers to IDs in Table 7.3A.9.4.1-6.
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 4: The signal power is specified per port.
Note 5: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

7.3A.10 Reference sensitivity level for 5DL CA

Editor's note: Following aspects missing or not yet determined:

- Test configuration table is under investigating
- Test requirement for some CA configuration is TBD
- Test applicability with related information in Table 7.1-2a needs to add to TS36.521-2

7.3A.10.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.10.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

7.3A.10.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.10.4 Test description

7.3A.10.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.10.4.1-1 through table 7.3A.10.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.10.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-42A,X=1,Y=3,Z=7,R=20,S=42.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3.
Note 12: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested.
Note 13: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested.
Note 14: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)
Note 15: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790)
Note 16: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)
Note 17: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)
Band 42: fUL/DL = 3520MHz (NDL = 42790)

Note 18: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)
Note 19: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790).
Note 20: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.3A.10.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.10.4.1-1 through Table 7.3A.10.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.10.4.3.

7.3A.10.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.10.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3A.10.4.1-1 through Table7.3A.10.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.10.4.1-1 through Table 7.3A.10.4.1-2 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.10.5-1 through Table7.3A.10.5-5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.10.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

7.3A.10.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.10.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.10.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for CA_XF Configuration

Channel bandwidth								
CA Configuration	**E-UTRA Band**	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**
CA_41F	41			-97.3	-94.3	-92.5	-91.3	TDD
				-100[4]	-97.0[4]	-95.2[4]	-94.0[4]	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.10.5-2 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.10.5-2: Reference sensitivity QPSK $P_{REFSENS}$ for CA_XA-YA-ZA-RA-SA

Channel bandwidth								
EUTRA CA Configuration	**EUTRA band**	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex mode**
CA_XA-YA-ZA-RA-SA								
NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A. NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. NOTE 3: The signal power is specified per port.								

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 5DL inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one 5DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 5DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 5DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 5DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 5DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.10.5-2 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.10.5-3 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.10.5-3: Void

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters

specified in Table 7.3A.10.5-4. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.10.5-4: Reference sensitivity QPSK $P_{REFSENS}$ for CA_XA-YA-ZA-RC or XA-YC-ZC or XA-YE or XC-YD or XD-YC (intra-band contiguous + inter-band)

Channel bandwidth

	71			-96.5	-93.5	-91.2	-86.8	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range ΔF_{HD} above and below the edge of this downlink transmission bandwidth. The value ΔF_{HD} depends on the E-UTRA configuration: ΔF_{HD} = 10 MHz for CA_3A-42C, CA_1A-3A-42C and CA_3A-19A-42C.
NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with f_{DL}^{HB} carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm (20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.10.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.10.5-5: Reference sensitivity QPSK $P_{REFSENS}$ for CA_XA-XA-XD or XA-XC-XC or XA-YC-YC or XA-YA-YA-YC or XA-XA-YD or XA-XA-YA-YC or XA-XA-YA-YA-YA or XA-XA-XA-YC or XA-YA-ZA-ZA-ZA or XA-YA-YA-ZC or XA-YA-YA-ZA-ZA or XA-YA-ZA-RA-RA or CA_XA-XA-YA-ZA-RA or XA-XA-YA-YA-ZA

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

7.3A.11 Reference sensitivity level for 6DL CA

Editor's note: Following aspects missing or not yet determined:

- Test configuration table is under investigating
- Test requirement for some CA configuration is TBD

7.3A.11.1 Test purpose

Same as in clause 7.3A.1.1.

7.3A.11.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d.

7.3A.11.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

7.3A.11.4 Test description

7.3A.11.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.11.4.1-1 through table 7.3A.11.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.11.4.1-1: Test Configuration Table

Initial Conditions																									
Test Environment as specified in TS 36.508 [7] subclause 4.1													NC, TL/VL, TL/VH, TH/VL, TH/VH												
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns												
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to “PCC NRB” and “SCCs NRB” columns												
Network signalling value													NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band												
Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-42A,X=1,Y=3,Z=7,R=20,S=42.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.

Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)
Note 12: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790)
Note 13: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)
Note 14: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)
Band 42: fUL/DL = 3520MHz (NDL = 42790)

Table 7.3A.11.4.1-2: Test Configuration Table with Wgap

Initial Conditions																																
Test Environment as specified in TS 36.508 [7] subclause 4.1						NC, TL/VL, TL/VH, TH/VL, TH/VH																										
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.						For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns																										
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Highest N_{RB}																										
Network signalling value						NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.11.4.1-1 through Table 7.3A.11.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.11.4.3.

7.3A.11.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.11.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3A.11.4.1-1 through Table7.3A.11.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.11.4.1-1 through Table 7.3A.11.4.1-2 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.11.5-1 through Table7.3A.11.5-5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.3A.11.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

7.3A.11.5 Test requirement

NOTE: Table 7.3A.11.5-1 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3A.11.5-1: Void

Table 7.3A.11.5-2: FFS

Table 7.3A.11.5-3: FFS

For combinations of intra-band contiguous and inter-band carrier aggregation with three or four downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.11.5-4. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.11.5-4: Reference sensitivity QPSK $P_{REFSENS}$ for CA_XE-YA-ZA or XD-YA-ZA-RA or XD-YC-ZA or XC-YC-ZC or XC-YC-ZA-RA

Channel bandwidth								
EUTRA CA Configuration	**EUTRA band**	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex mode**

	41			-97.3	-94.3	-92.5	-91.3	TDD
				-100[4]	-97[4]	-95.2[4]	-94[4]	
	42			-70.7	-70.7	-70.7	-70.7	
CA_1A-3A-41C-42C[9]	1			-99.1	-96.1	-94.3	-93.1	FDD
	3			-96.0	-93.0	-91.2	-90.0	
				-98.7[4]	-95.7[4]	-93.9[4]	-92.7[4]	
	41			-97.3	-94.3	-92.5	-91.3	TDD
				-100[4]	-97[4]	-95.2[4]	-94[4]	
	42			-96.1	-93.7	-92.2	-91.5	

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range ΔF_{HD} above and below the edge of this downlink transmission bandwidth. The value ΔF_{HD} depends on the E-UTRA configuration: ΔF_{HD} = 10 MHz for CA_3A-42C, CA_1A-3A-42C and CA_3A-19A-42C.
NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB}/0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with f_{DL}^{HB} carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB}/2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and BW_{Channe}^{HB} are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

7.3B Reference sensitivity level for UL-MIMO

7.3B.1 Test purpose

To verify the ability of UE that support UL-MIMO to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

7.3B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

7.3B.3 Minimum conformance requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.3.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter P_{UMAX} is the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1B.

7.3B.4 Test description

7.3B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3B.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1		NC, TL/VL, TL/VH, TH/VL, TH/VH				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1		Low range, Mid range, High range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1		Lowest, 5MHz, Highest				
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD	**TDD**		**FDD**	**TDD**
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5[4]	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A

20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A

20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth.						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3B.4.3.

7.3B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 7.3B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the appropriate REFSENS value defined in Table 7.3B.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the throughput measurement.
4. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.

7.3B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exceptions.

7.3B.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] clause 4.6 can be used without exceptions.

7.3B.4.3.2 Message contents exceptions (network signalled value "NS_03")

1. Information element additionalSpectrumEmission is set to NS_03. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3B.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS_03"

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	**Value/remark**	**Comment**	**Condition**
additionalSpectrumEmission	3 (NS_03)		

7.3B.4.3.3 Message contents exceptions (network signalled value "NS_06")

1. Information element additionalSpectrumEmission is set to NS_06. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3B.4.3.3-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS_06"

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	**Value/remark**	**Comment**	**Condition**
additionalSpectrumEmission	6 (NS_06)		

7.3B.4.3.4 Message contents exceptions (network signalled value "NS_[09]")

1. Information element additionalSpectrumEmission is set to NS_[09]. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3B.4.3.4-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS_[09]"

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	**Value/remark**	**Comment**	**Condition**
additionalSpectrumEmission	TBD		

7.3B.4.3.5 Message contents exceptions (network signalled value "NS_62")

1. Information element additionalSpectrumEmission is set to NS_62. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3B.4.3.5-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS_62"

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	**Value/remark**	**Comment**	**Condition**
additionalSpectrumEmission	62 (NS_62)		

7.3B.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3B.5-1 and Table 7.3B.5-2.

Table 7.3B.5-1: Reference sensitivity QPSK $P_{REFSENS}$

…							
48			-98.0	-95.0	-93.2	-92.0	TDD
…							
54	-106.2	-102.2	-100				TDD
…							
65	-103.5	-100.5	-99.5	-96.5	-94	-92.8	FDD
66	-103.5	-100.5	-98.8	-95.8	-94	-92.8	FDD
…							
68			-97.8	-94.8	-93.0		FDD
…							
72	-98.3	-95.0	-92.8				FDD

Note 1: The transmitter shall be set to P_{UMAX} as defined in clause 6.2.5
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
Note 5: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
Note 6: [6] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

NOTE 1: The relation to the received PSD is $\left\langle \mathrm{REH}\hat{I}_{or} \right\rangle = P_{REFSENS}\left(N_{sc}^{RB} N_{RB} \Delta f\right)^{-1}$ with N_{RB} is the transmission bandwidth configuration according to Table 5.4.2-1.

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3B.5-1 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3B.5-2.

NOTE 2: Table 7.3B.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3B.5-2: Uplink configuration for reference sensitivity

E-UTRA Band / Channel bandwidth / N_{RB} / Duplex mode

72	6	5[4]	5[4]				FDD

Note 1: The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 2: For the UE which supports both Band 11 and Band 21 the uplink configuration for reference sensitivity is FFS.

Note 3: For Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RB_{start}=11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RB_{start}=16.

Note 4: [4] refers to Bands 31 and 72; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 10.

7.3C

7.3D Reference sensitivity level for ProSe

7.3D.0 Minimum requirements (QPSK) for ProSe

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.3D.0-1 and Table 7.3D.0-2.

Table 7.3D.0-1: Reference sensitivity for ProSe Direct Discovery QPSK PREFSENS

Channel bandwidth							
E-UTRA ProSe Band	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**
2			-104.1	-104.1	-104.1	-104.1	HD
3			-103.1	-103.1	-103.1	-103.1	HD

68			-104.4	-104.4	-104.4		HD
72			-99.5				HD

NOTE 1: Reference measurement channel is A.6.2.
NOTE 2: The signal power is specified per port.
NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
NOTE 4: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 5: [5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

Table 7.3D.0-2: Reference sensitivity for ProSe Direct Communication QPSK PREFSENS

Channel bandwidth							
E-UTRA ProSe Band	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**
3				-97.6			HD
7				-98.3			HD
14				-97.6			HD
20				-97.7			HD
26				-98.0 [5]			HD
28				-98.9			HD
31			-96.7				HD
68			-101.7	-98.9			HD
72			-96.7				HD

NOTE 1: Reference measurement channel is A.6.2.
NOTE 2: The signal power is specified per port.
NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
NOTE 4: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 5: [5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

NOTE: Table 7.3D.0-1/ Table 7.3D.0-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of allocated resource blocks will be practically constrained by other factors.

For the UE which supports ProSe in an operating band as specified in Clause 5.2D and is configured with (and can transmit on) only PCell, and the UE also supports a E-UTRA downlink inter-band carrier aggregation configuration in Table 7.3.3-1A or Table 7.3.3-1B, the minimum requirement for reference sensitivity in Table 7.3D.0-1 and Table 7.3D.0-2 shall be increased by the amount given in $\Delta_{RIB,c}$ in Table 7.3.3-1A or Table 7.3.3-1B for the corresponding E-UTRA ProSe band.

7.3D.1 Reference sensitivity level for ProSe Direct Discovery

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.

- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

7.3D.1.1 Test purpose

Verify that UE receives ProSe Discovery physical channels data with a given average throughput under conditions of low signal level and ideal propagation.

7.3D.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

7.3D.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3D.0.

7.3D.1.4 Test description

7.3D.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.3D.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Low range, Mid range, High range (Note 4)					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz, Highest					
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.67.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.

4. The UL and DL Reference Measurement channels are set according to Table 7.3D.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.3D.1.4.3.

7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

7.3D.1.4.2 Test procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "…Step 1…") are defined in clause 7.3D.1.4.3.

2. The UE shall transmit RRCConnectionReconfigurationComplete message.

3. Initialise the variables Ptot and Pok as 0.

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.

6. SS transmits PSDCH to transmit the SL RMC according to Table 7.3D.1.4.1-1. Set the Sidelink signal level to the appropriate REFSENS value defined in Table 7.3D.1.5-1.

7. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.

8. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".

9. SS calculates the variable Pok as (current counter value - counter value at last test iteration).

10. SS shall compute the throughput as following:

    TP = Pok / Ptot * 100%

7.3D.1.4.3 Message contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

7.3D.1.5 Test requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.3D.1.5-1.

Table 7.3D.1.5-1: Reference sensitivity for ProSe Direct Discovery QPSK PREFSENS

Channel bandwidth							
E-UTRA ProSe Band	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**
2			-103.4	-103.4	-103.4	-103.4	HD
3			-102.4	-102.4	-102.4	-102.4	HD
4			-105.4	-105.4	-105.4	-105.4	HD
7			-103.1	-103.1	-103.1	-103.1	HD
14			-102.4	-102.4			HD
20			-102.5	-102.5	-101.5	-101.5	HD
26			-102.8[5]	-102.8[5]	-102.8[5]		HD
28			-103.7	-103.7	-103.7	-102.2	HD
31			-98.8				HD
68			-103.7	-103.7	-103.7		HD
72			-98.8				HD

NOTE 1: Reference measurement channel is A.6.2
NOTE 2: The signal power is specified per port
NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
NOTE 4: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 5: [5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

NOTE: Table 7.3D.1.5-1 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of allocated resource blocks will be practically constrained by other factors.

For the UE which supports ProSe in an operating band as specified in Clause 5.2D and is configured with (and can transmit on) only PCell, and the UE also supports a E-UTRA downlink inter-band carrier aggregation configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, the test requirement for reference sensitivity in Table 7.3D.1.5-1 shall be

increased by the amount given in $\Delta_{RIB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C for the corresponding E-UTRA ProSe band.

7.3D.2 Reference sensitivity level for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Many clauses are TBD

7.3D.2.1 Test purpose

Verify that UE receives ProSe Communication physical channels data with a given average throughput under conditions of low signal level and ideal propagation.

7.3D.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

7.3D.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3D.0.

7.3D.2.4 Test description

TBD

7.3D.2.4.1 Initial conditions

TBD

7.3D.2.4.2 Test procedure

TBD

7.3D.2.4.3 Message contents

TBD

7.3D.2.5 Test requirements

TBD

7.3E Reference sensitivity level for UE category 0

7.3E.1 Test purpose

Same test purpose as in clause 7.3.1

7.3E.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

7.3E.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3E.3-1/Table 7.3E.3-2 and Table 7.3E.3-3.

Table 7.3E.3-1: Reference sensitivity for FDD and TDD UE category 0 QPSK $P_{REFSENS}$

	Channel bandwidth						
E-UTRA Band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
2	-100.2	-97.2	-95.5	-92.5	-90.7	-89.5	FDD
3	-99.2	-96.2	-94.5	-91.5	-89.7	-88.5	FDD
4	-102.2	-99.2	-97.5	-94.5	-92.7	-91.5	FDD

5	-100.7	-97.7	-95.5	-92.5			FDD
8	-99.7	-96.7	-94.5	-91.5			FDD
13			-94	-91			FDD
20			-94.5	-91.5	-88.2	-87	FDD
39			-97.5	-94.5	-92.7	-91.5	TDD
41			-95.5	-92.5	-90.7	-89.5	TDD
NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1							

Table 7.3E.3-2: Reference sensitivity for HD-FDD UE category 0 QPSK $P_{REFSENS}$

Channel bandwidth							
E-UTRA Band	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**
2	-101	-98	-96.3	-93.3	-91.5	-90.3	HD-FDD
3	-100	-97	-95.3	-92.3	-90.5	-89.3	HD-FDD
4	-103	-100	-98.3	-95.3	-93.5	-92.3	HD-FDD
5	-101.5	-98.5	-96.3	-93.3			HD-FDD
8	-100.5	-97.5	-95.3	-92.3			HD-FDD
13			-95.3	-92.3			HD-FDD
20			-95.3	-92.3	-89.5	-88.3	HD-FDD
NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1							

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3E.3-1/Table 7.3E.3-2 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3E.3-3.

NOTE: Table 7.3E.3-3 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3E.3-3: FDD and TDD UE category 0 Uplink configuration for reference sensitivity

E-UTRA Band / Channel bandwidth / N_{RB} / Duplex mode							
E-UTRA Band	**1.4 MHz**	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**	**Duplex Mode**
2	6	15	25	36[1]	36[1]	36[1]	FDD and HD-FDD
3	6	15	25	36[1]	36[1]	36[1]	FDD and HD-FDD
4	6	15	25	36[1]	36[1]	36[1]	FDD and HD-FDD
5	6	15	25	25[1]			FDD and HD-FDD
8	6	15	25	25[1]			FDD and HD-FDD
13			20[1]	20[1]			FDD and HD-FDD
20			25	20[1]	20[2]	20[2]	FDD and HD-FDD
39			25	36[1]	36[1]	36[1]	TDD
41			25	36[1]	36[1]	36[1]	TDD
NOTE 1: [1] refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1). NOTE 2: [2] refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 16.							

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1E.

7.3E.4 Test description

7.3E.4.1 Initial conditions

Same initial conditions as in clause 7.3.4.1 with the following exceptions:

- Instead of Table 7.3.4.1-1 → use Table 7.3E.4.1-1.

- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

Table 7.3E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Low range, Mid range, High range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD	**TDD**		**FDD and HD-FDD**	**TDD**
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2. Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Downlink RB position shall be RB_{start} = 0						

7.3E.4.2 Test procedure

Same test procedure as in clause 7.3.4.2.

7.3E.4.3 Message contents

Same message contents as in clause 7.3.4.3

7.3E.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3E.5-1 and Table 7.3E.5-2.

Table 7.3E.5-1: Reference sensitivity for FDD and TDD UE category 0 QPSK $P_{REFSENS}$

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1							

7.3EA Reference sensitivity level for UE category M1

7.3EA.1 Test purpose

To verify the category M1 UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

7.3EA.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

7.3EA.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3EA-1 and Table 7.3EA-2.

Table 7.3EA-1: Reference sensitivity for FDD and TDD UE category M1 QPSK $P_{REFSENS}$

E-UTRA Band	REFSENS (dBm)	Duplex Mode
1	-102.2	FDD
2	-100.2	FDD
3	-99.2	FDD
4	-102.2	FDD
5	-100.7	FDD
7	-100.2	FDD
8	-99.7	FDD
11	-102.2[3]	FDD
12	-99.2	FDD
13	-98.7	FDD
14	-98.7	FDD
18	-102.2[4]	FDD
19	-102.2	FDD
20	-99.7	FDD
21	-102.2[3]	FDD
26	-100.2	FDD

27	-100.7	FDD
28	-100.7	FDD
31	-96.5	FDD
…		
39	-103.7	TDD
41	-101.7	TDD
42	-102.7	TDD
43	-102.7	TDD
…		
71	-99.4	FDD
72	-96.5	FDD
73	-96.5	FDD
85	-99.2	FDD
87	-96.5	FDD
88	-96.5	FDD
106	-99.7	FDD

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5EA.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.
NOTE 5: For cat M1 the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2.1-1.
NOTE 6: The reference receive sensitivity shall be met for an uplink transmission bandwidth less than or equal to 6 RB except for bands 31 and 72. For bands 31 and 72; in the case of 3 MHz channel bandwidth 5 RB applies and the UL resource blocks shall be located at RB_{start} 9. In case of 5 MHz channel bandwidth 5 RB applies and the UL resource blocks shall be located at RB_{start} 10.
NOTE 7: The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth.

Table 7.3EA-2: Reference sensitivity for HD-FDD UE category M1 QPSK $P_{REFSENS}$

E-UTRA Band	REFSENS (dBm)	Duplex Mode
1	-103	HD-FDD

19	-103	HD-FDD
20	-100.5	HD-FDD
21	-103[3]	HD-FDD
26	-101	HD-FDD
27	-101.5	HD-FDD
28	-101.5	HD-FDD
31	-97.3	HD-FDD

71	-100.2	HD-FDD
72	-97.3	HD-FDD
73	-97.3	HD-FDD
85	-100	HD-FDD
87	-97.3	HD-FDD
88	-97.3	HD-FDD
106	-100.5	HD-FDD

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5EA.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.
NOTE 5: For cat M1 the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2-1.

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3EA-1/Table 7.3EA-2 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3EA-3.

NOTE: Table 7.3EA-3 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G (informative).

7.3EA.4 Test description

7.3EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.3EA.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Low range, Mid range, High range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz					
Test Parameters for Channel Bandwidths and Narrowband positions						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD	TDD		FDD and HD-FDD	TDD
5MHz	QPSK	4	4	QPSK	6	6

Note 1:	Downlink RB position shall be RB_{start} = 0 within the narrowband
Note 2:	The Narrowband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.3EA.4.3.

7.3EA.4.2 Test procedure

1. SS transmits PDSCH via M-PDCCH DCI format 6-1A for C_RNTI to transmit the DL RMC according to Table 7.3EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 7.3EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the appropriate REFSENS value defined in Table 7.3EA.5-1 for FDD and TDD and in Table 7.3EA.5-2 for HD-FDD. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.
4. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.

7.3EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

Table 7.3EA.4.3-1: EPDCCH-Config-r11-DEFAULT

Derivation Path: 36.508 Table 4.6.3-2B			
Information Element	**Value/remark**	**Comment**	**Condition**
mpdcch-NumRepetition-r13	r1		

7.3EA.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

7.3EA.4.3.2 Message contents exceptions (network signalled value "NS_03")

1. Information element additionalSpectrumEmission is set to NS_03. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 7.3EA.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_03"

85	-98.5	FDD
87	-95.8	FDD
88	-95.8	FDD
106	-99.0	FDD

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5EA.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.
NOTE 5: For cat M1 the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2.1-1.
NOTE 6: The reference receive sensitivity shall be met for an uplink transmission bandwidth less than or equal to 6 RB except for bands 31 and 72. For bands 31 and 72; in the case of 3 MHz channel bandwidth 5 RB applies and the UL resource blocks shall be located at RB_{start} 9. In case of 5 MHz channel bandwidth 5 RB applies and the UL resource blocks shall be located at RB_{start} 10.
NOTE 7: The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth.
NOTE 8: These REFSENS levels are applicable only to 6 RB. OCNG shall be filled to entire channel bandwidth with the same PSD of REFSENS level in 6 RBs.

85	-99.3	HD-FDD
87	-96.6	HD-FDD
88	-96.6	HD-FDD
106	-99.8	HD-FDD

NOTE 1: The transmitter shall be set to P_{UMAX} as defined in subclause 6.2.5EA.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.
NOTE 5: For cat M1 the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2-1.
NOTE 6: These REFSENS levels are applicable only to 6 RB. OCNG shall be filled to entire channel bandwidth with the same PSD of REFSENS level in 6 RBs.

7.3EB Reference sensitivity level for UE category 1bis

7.3EB.1 Test purpose

To verify the category 1bis UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

7.3EB.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

7.3EB.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3EB.3-1 and Table 7.3EB.3-2.

NOTE 1: [1] refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 2: [2] refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 16.
NOTE 3: [3] refers to Bands 31 and 72; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 10.

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1E.

7.3EB.4 Test description

7.3EB.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Tables 7.3EB.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3EB.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Low range, Mid range, High range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
3MHz	QPSK	15	15	QPSK	5[4]	N/A
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	5[4]	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20[5]	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2. Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3EB.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

Note 4: Applicable only to E-UTRA FDD Bands 31 and 72; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 10. (according to Table 7.3EB.3-2).

Note 5: Applicable only to E-UTRA FDD Band 20; in the case of 15 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 11 and in the case of 20 MHz channel bandwidth, the UL resource blocks shall be located at RB_{start} 16. (according to Table 7.3EB.3-2).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.3 using only main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.

4. The UL and DL Reference Measurement channels are set according to Tables 7.3EB.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3EB.4.3.

7.3EB.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3EB.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.3EB.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the appropriate REFSENS value defined in Table 7.3EB.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits P_{UMAX} level for at least the duration of the Throughput measurement.

4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.3EB.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.3EB.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3EB.5-1 and Table 7.3EB.5-2.

Table 7.3EB.5-1: Reference sensitivity for FDD and TDD UE category 1bis QPSK $P_{REFSENS}$

7.3EC Reference sensitivity level for UE category M2

7.3EC.1 Test purpose

To verify the category M2 UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

7.3EC.2 Test applicability

This test applies to all types of E-UTRA UE release 14 and forward of UE category M2.

7.3EC.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3EC.3-1 and Table 7.3EC.3-2.

88	-97.3	-93.3	-91.3				HD-FDD
106	-100.5	-96.5					HD-FDD

NOTE 1: The transmitter shall be set to PUMAX as defined in subclause 6.2.5

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3EC.3-1/Table 7.3EC.3-2 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3EC.3-3.

NOTE: Table 7.3EC.3-3 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G (informative).

87	6	5[4]	5[4]				FDD/HD-FDD
88	6	5[4]	5[4]				FDD/HD-FDD
88	6	15					FDD/HD-FDD

NOTE 1: [1] refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 2: For the UE which supports both Band 11 and Band 21 the uplink configuration for reference sensitivity is FFS.
NOTE 3: [3] refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RBstart 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RBstart 16
NOTE 4: [4] refers to Bands 31, 72, 73; 87 and88, in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at RBstart 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at RBstart 10.

Unless given by Table 7.3EC.3-4, the minimum requirements specified in Tables 7.3EC.3-1 and 7.3EC.3-2 shall be verified with the network signalling value NS_01 (Table 6.2.4EA-1) configured.

Table 7.3EC.3-4: Network signalling value for reference sensitivity

E-UTRA Band	Network Signalling value
2	NS_03
4	NS_03
10	NS_03
12	NS_06
13	NS_06
14	NS_06
17	NS_06
19	NS_08
21	NS_09
23	NS_03
30	NS_21
66	NS_03
71	NS_35
85	NS_06

The normative reference for this requirement is TS 36.101 [2] clauses 7.3.1 and 7.3.1E.

7.3EC.4 Test description

7.3EC.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M2 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3EC.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.3EC.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD	**TDD**		**FDD and HD-FDD**	**TDD**
1.4MHz	QPSK	4	N/A	QPSK	6	N/A
3MHz	QPSK	8	N/A	QPSK	15	N/A
5MHz	QPSK	16	N/A	QPSK	24	N/A
5MHz	QPSK	16	N/A	QPSK	20[3]	N/A
5MHz	QPSK	16	N/A	QPSK	5[4]	N/A
10MHz	QPSK	N/A	16	QPSK	N/A	24

Note 1:	Downlink RB position shall be RB_{start} = 0 within the narrowband
Note 2:	The Wideband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.
Note 3:	Applicable only to E-UTRA FDD band 12 and 13. The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
Note 4:	Applicable only to E-UTRA FDD bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3EC.3-3).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3EC.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.3EC.4.3.

7.3EC.4.2 Test procedure

Same as in clause 7.3EA.4.2

7.3EC.4.3 Message contents

Same as in clause 7.3EA.4.3

7.3EC.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 with parameters specified in Table 7.3EC.5-1 and Table 7.3EC.5-2.

106	-99.8	-95.8					HD-FDD

NOTE 1: The transmitter shall be set to PUMAX as defined in subclause 6.2.5
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

7.3F Reference sensitivity level for category NB1 and NB2

7.3F.1 Reference sensitivity level without repetitions for category NB1 and NB2

7.3F.1.1 Test purpose

To verify the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

7.3F.1.2 Test applicability

This test applies to all types of NB-IoT FDD UE release 13 and forward of category NB1.

This test applies to all types of NB-IoT FDD UE release 14 and forward of category NB2.

This test applies to all types of NB-IoT TDD UE release 15 and forward of category NB1 and NB2.

7.3F.1.3 Minimum conformance requirements

The category NB1 and NB2 UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with received signal level as specified in Table 7.3F.1.3-1. Requirement in Table 7.3F.1.3-1 applies for any uplink configuration.

Table 7.3F.1.3-1: Reference sensitivity for category NB1 and NB2

Operating band	REFSENS [dBm]
According to subclause 5.2F	- 108.2

The normative reference for this requirement is TS 36.101 clause 7.3.1F.1.

7.3F.1.4 Test description

7.3F.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.3F.1.4.1-1. The details of the downlink reference measurement channel (RMC) are specified in Annex A.3. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

Table 7.3F.1.4.1-1: Test Configuration Table for FDD & TDD

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause 8.1.1			NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS36.508 [7] clause 8.1.3.1			Frequency ranges defined in Annex K.1.2		
Configuration ID	**Downlink Configuration**		**Uplink Configuration**		
	Modulation	Subcarriers	Modulation	N_{tones}	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15kHz

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only the main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C0, C1 and C.3.0, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channels are set according to Table 7.3F.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 7.3F.1.4.3.

7.3F.1.4.2 Test Procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C_RNTI to transmit the DL RMC according to Table 7.3F.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send the HARQ feedback based on information contain in DCI format N1.
2. Set the Downlink signal level to the REFSENS value defined in Table 7.3F.1.5-1.
3. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.3F.1.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 8.1.6.

7.3F.1.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.3F.1.5-1.

Table 7.3F.1.5-1: Reference sensitivity for category NB1 and NB2

Operating band	REFSENS [dBm]
According to subclause 5.2F	- 107.5

7.3F.2 Void

7.3G Reference sensitivity level for V2X Communication

7.3G.0 Minimum conformance requirements

When UE is configured for E-UTRA V2X reception non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.2G-1, the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3G.0-1.

Table 7.3G.0-1: Reference sensitivity of E-UTRA V2X Bands (PC5)

Channel bandwidth							
E-UTRA V2X Band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
47				-90.4		-87.5	HD
NOTE 1: Reference measurement channel is defined in A.8.2. NOTE 2: The signal power is specified per port.							

Table 7.3G.0-1a: Sidelink TX configuration for reference sensitivity of E-UTRA V2X Bands (PC5)

E-UTRA Band / Channel bandwidth / N_{RB} / Duplex mode							
E-UTRA V2X Band	1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz	Duplex Mode
47				50		98	HD

When UE is configured for E-UTRA V2X reception on V2X carrier con-current with E-UTRA uplink and downlink for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.2G-2 with one or multiple contiguous carriers in V2X sidelink, E-UTRA V2X sidelink throughput for each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3G.0-2. Also the E-UTRA downlink throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.3.2.

For the UE which supports V2X in an operating band as specified in Table 5.2G-2, and the UE also supports a E-UTRA downlink inter-band con-current configuration in Table 7.3.1-1A, the minimum requirement for reference sensitivity in Table 7.3G.0-1 and Table 7.3G.0-2 shall be increased by the amount given in $\Delta R_{IB,c}$ in Table 7.3G.0-2a for the corresponding E-UTRA V2X band.

Table 7.3G.0-2: Reference sensitivity for V2X Communication QPSK $P_{REFSENS}$

Inter-band V2X reception		Channel bandwidth							
E-UTRA V2X Band	E-UTRA or V2X band	E-UTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
Band 47	Band 3	3	-101.7	-98.7	-97	-94	-92.2	-91	FDD

V2X_39A-47A	39	0

V2X_41A-47A	41	0
V2X_71A-47A	71	0

The reference sensitivity is defined to be met with E-UTRA uplink assigned to one band (that differs from the V2X operating band) and all E-UTRA downlink carriers active. The E-UTRA uplink resource blocks shall be located as close as possible to E-UTRA V2X operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). The uplink configuration for the E-UTRA operating band is specified in Table 7.3G.0-3 and 7.3G.0-4.

Table 7.3G.0-3: Uplink configuration for REFSENS of E-UTRA V2X Bands(PC5)

47	71	47	10	50	HD

For intra-band contiguous multi-carrier operation the reference sensitivity requirement specified in Table 7.3G.0-1 shall apply for each component carrier with all carriers active. The requirement is applied for multi-carrier intra-band concurrent receptions when 2 carrier transmissions are activated at the same time.

Table 7.3G.0-5: Sidelink TX configuration for REFSENS of E-UTRA V2X Bands for intra-band multi-carrier operation

V2X configuration	50RB+50RB		100RB+50RB		Duplex Mode
	PCC	SCC	PCC	SCC	
V2X_47B	50	50	N/A	N/A	HD

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1G.

7.3G.1 Reference sensitivity level for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

7.3G.1.1 Test purpose

Verify that UE receives V2X Communication physical channels data with a given average throughput under conditions of low signal level and ideal propagation.

7.3G.1.2 Test applicability

This test case applies to all types of UE that support V2X Sidelink Communication and Band 47.

7.3G.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3G.0.

7.3G.1.4 Test description

7.3G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3G.1.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.3G.1.4.1-1: Test Configuration Table

Initial Conditions		
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal, TL/VL, TL/VH, TH/VL, TH/VH	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range	
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, Highest	
Test Parameters for Channel Bandwidths		
	V2X Configuration to Receive	
Ch BW	Modulation	PSSCH RB allocation
10MHz	QPSK	48@2
20MHz	QPSK	96@2

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RX antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.3G.1.4.3.

3. The V2X reference measurement channel is set according to Table 7.3G.1.4.1-1.

3a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. Ensure the UE is in State 5A-V2X in Receive Mode according to TS 36.508 [7] clause 4.5.9. Message content exceptions are defined in clause 7.3G.1.4.3.

6. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.3G.1.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.3G.1.4.1-1.

2. Set the signal level of V2X to the appropriate REFSENS value defined in Table 7.3 G.1.3-1.

3. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.3G.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.10.

7.3G.1.5 Test requirements

When UE is configured for E-UTRA V2X reception non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.2G-1, the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3G.1.5-1.

Table 7.3G.1.5-1: Reference sensitivity

Channel bandwidth							
E-UTRA V2X Band	**1.4 MHz (dBm)**	**3 MHz (dBm)**	**5 MHz (dBm)**	**10 MHz (dBm)**	**15 MHz (dBm)**	**20 MHz (dBm)**	**Duplex Mode**
47				-89		-86.1	TDD
NOTE 1: Reference measurement channel is defined in A.8.2. NOTE 2: The signal power is specified per port.							

7.3G.2 Reference sensitivity level for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

7.3G.2.1 Test purpose

Same as in clause 7.3G.1.1.

7.3G.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 14 and forward that support V2X Communication.

7.3G.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3G.0.

7.3G.2.4 Test description

7.3G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3G.2.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3.

Table 7.3G.2.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal, TL/VL, TL/VH, TH/VL, TH/VH

Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1				Low range, Mid range, High range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest N_{RB_agg}, Highest N_{RB_agg}			
Test Parameters for Channel Bandwidths							
	Downlink		**Uplink Configuration**		**V2X Configuration**		
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Ch BW	Mod'n	PSSCH RB allocation
1.4 MHz	QPSK	1	QPSK	1	10 MHz	QPSK	48@2
1.4 MHz	QPSK	5	QPSK	5	20 MHz	QPSK	96@2
3 MHz	QPSK	1	QPSK	1			
3 MHz	QPSK	4	QPSK	4			
5 MHz	QPSK	1	QPSK	1			
5 MHz	QPSK	8	QPSK	8			
10 MHz	QPSK	1	QPSK	1			
10 MHz	QPSK	12	QPSK	12			
15 MHz	QPSK	1	QPSK	1			
15 MHz	QPSK	16	QPSK	16			
20 MHz	QPSK	1	QPSK	1			
20 MHz	QPSK	18	QPSK	18			
Note 1: V2X con-current band configurations are checked separately for each band configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G.1-2.							
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3G.0-4 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2G.1-2).							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.93a.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3. Message content exceptions are defined in clause 7.3G.2.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.3G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C. Message content exceptions are defined in clause 7.3G.2.4.3.

7.3G.2.4.2 Test procedure

1. The SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3G.2.4.1-1 on E-UTRA band. The SS sends downlink MAC padding bits on the DL RMC.
2. SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 7.3G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL and V2X RMCs.
3. Set the signal level of V2X for V2X band and E-UTRA band to the appropriate REFSENS value defined in Table 7.3G.2.5-1.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.3G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.3G.2.5 Test requirements

When UE is configured for E-UTRA V2X reception on V2X carrier con-current with E-UTRA uplink for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.2G-2, E-UTRA V2X sidelink throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3G.2.5-1. Also the E-UTRA downlink throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.3.2.

For the UE which supports V2X in an operating band as specified in Table 5.2G-2, and the UE also supports a E-UTRA downlink inter-band con-current configuration in Table 7.3.1G-2A, the minimum requirement for reference sensitivity in Table 7.3G.0-1 and Table 7.3G.0-2 shall be increased by the amount given in $\Delta R_{IB,c}$ in Table 7.3.1G-2A for the corresponding E-UTRA V2X band.

Table 7.3G.2.5-1: Reference sensitivity for V2X Communication QPSK $P_{REFSENS}$

Inter-band V2V reception		Channel bandwidth							
E-UTRA V2X Band	E-UTRA band	E-UTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
Band 47	Band 3	3	-101	-98	-96.3	-93.3	-91.5	-90.3	TDD-FDD

7.3G.3 Reference sensitivity level for V2X Communication / Intra-band contiguous multi-carrier operation

7.3G.3.1 Test purpose

Same as in clause 7.3G.1.1.

7.3G.3.2 Test applicability

This test case applies to all types of UE that support Intra-band contiguous multi-carrier operation V2X Sidelink Communication and Band 47.

7.3G.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3G.0.

7.3G.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3G.3.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.3G.3.4.1-1: Test Configuration Table

Initial Conditions			
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal, TL/VL, TL/VH, TH/VL, TH/VH	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1		Low range, High range	
Test CC Combination setting(N_{RB_agg}) as specified in subclause 5.4.2G		Lowest N_{RB_agg}, Highest N_{RB_agg}	
Test Parameters for Channel Bandwidths			
V2X Multi-carrier Configuration		**V2X PSSCH Allocation**	
CC1 N_{RB}	**CC2 N_{RB}**	**CC1 & CC2 Mod**	**CC1 and CC2 RB Allocation**
50	50	QPSK	48@2+48@2

1. Connect the SS and GNSS simulator to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.89a.
2. The parameter settings for the V2X sidelink communication over PC5 are pre-configured according to TS 36.508 [7] subclause 101.4. Message content exceptions are defined in clause 7.3G.3.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.3G.3.4.1-1.

4a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 5A-V2X according to TS 36.508 [7] clause 4.5.9.
7. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)
8. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.3G.3.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.3G.3.4.1-1 for 2 carrier intra-concurrent receptions. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Set the signal level of V2X for each component carrier to the appropriate REFSENS value defined in Table 7.3G.3.5-3.
3. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2 .

7.3G.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.3G.3.5 Test requirements

When UE is configured for E-UTRA V2X reception non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.2G-1, the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3G.3.5-3.

Table 7.3G.3.5-3: Reference sensitivity for V2X Communication QPSK $P_{REFSENS}$

Intra-band multi-carrier		Channel bandwidth							
E-UTRA V2X Band	E-UTRA V2X Band	E-UTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
Band 47	Band 47	47				-88.9			TDD-TDD
		47				-88.9			

For intra-band contiguous multi-carrier operation, the above reference sensitivity requirement shall apply for each component carrier with both carriers active. The requirement is applied for 2 carrier intra-concurrent receptions when 2 carrier transmissions are activated at the same time.

7.4 Maximum input level

7.4.1 Test purpose

Maximum input level tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

7.4.3 Minimum conformance requirements

Maximum input level is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.4.3-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-25[2]					
		-27[3]					
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.							
NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1.

7.4.4 Test description

7.4.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1			NC

20MHz	64-QAM	17	N/A	QPSK	25	N/A	1
20MHz	64-QAM	17	N/A	QPSK	20	N/A	1

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.
Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.4.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4.4.3.

7.4.4.2 Test procedure

SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.4.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

Set the Downlink signal level to the value defined in Table 7.4.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

Table 7.4.4.3-1: UplinkPowerControlDedicated

20MHz	64QAM	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2. Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						

7.4_1.4.2 Test procedure

Same as in clause 7.4.4.2 with following exceptions:

- Instead of Table 7.4.4.1-1→ use Table 7.4_1.4.1-1.

7.4_1.4.3 Message contents

Same as in clause 7.4.4.3.

7.4_1.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4_1.5-1.

Table 7.4_1.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4_H Maximum input level for 256QAM in DL

7.4_H.1 Test purpose

Same test purpose as in clause 7.4.1.

7.4_H.2 Test applicability

This test applies to all types of E-UTRA UEs release 12 and forward that support 256QAM in DL.

7.4_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4.3.

7.4_H.4 Test description

7.4_H.4.1 Initial conditions

Same initial conditions as in clause 7.4.4.1 with the following exceptions:

- Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Figure A.3 if the UE supports 2 Rx antennas or Figure A.69 if the UE supports 4 Rx antennas in the band.

- Instead of Table 7.4.4.1-1, use Table 7.4_H.4.1-1.

Table 7.4_H.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] clause 4.1	NC

20MHz	256-QAM	100	N/A	QPSK	25	N/A
20MHz	256-QAM	100	N/A	QPSK	20	N/A

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

7.4_H.4.2 Test procedure

Same test procedure as in clause 7.4.4.2 with the following exceptions:

- Instead of Table 7.4.4.1-1, use Table 7.4_H.4.1-1.
- Instead of Table 7.4.5-1, use Table 7.4_H.5-1.
- Instead of DCI format 1A use DCI format 1.

7.4_H.4.3 Message contents

Same message contents as defined in clause 7.4.4.3.

7.4_H.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4_H.5-1.

Table 7.4_H.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth

		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A Maximum input level for CA

7.4A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the maximum input level is defined with the uplink active on the band(s) other than the band whose downlink is being tested. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part, the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. The UE shall meet the requirements specified in subclause 7.4.3 for each component carrier while all downlink carriers are active.

For intra-band contiguous carrier aggregation maximum input level is defined as the powers received at the UE antenna port over the Transmission bandwidth configuration of each CC, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel over each component carrier.

The downlink SCC shall be configured at nominal channel spacing to the PCC. For FDD the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.4A.0-1 with the uplink configuration set according to Table 7.3A.0-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2.

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels over each component carrier as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4A.0-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Table 7.4A.0-1.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, each larger than or equal to 5 MHz, the maximum input level requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in Table 7.4.3-1 and Table 7.4A.0-1 for one component carrier and two component carriers per sub-block, respectively. The throughput of each downlink component carrier shall be ≥ 95% of the maximum throughput of the specified reference measurement channel as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1). The requirements apply with all downlink carriers active.

Table 7.4A.0-1: Maximum input level for intra-band contiguous CA

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largestTransmission Bandwidth Configuration CC	dBm		-28[2]	-25[2]	-25[2]	-26[2]	-27[2]
			-30[3]	-27[3]	-27[3]	[-28][3]	[-29][3]
Power in each other CC	dBm		-28 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]	-25 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]	-25 + 10log ($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]	-26 + 10log ($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]	-27 + 10log ($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]
			-30+ 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [3]	-27 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [3]	-27 + 10log ($N_{RB,c}$ /$N_{RB,la}$	[-28] + 10log ($N_{RB,c}$ /$N_{RB,la}$	[-29] + 10log ($N_{RB,c}$ /$N_{RB,la}$

					rgest BW) [3]	rgest BW) [3]	rgest BW) [3]
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in clause 6.2.5A.							
Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguous sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the maximum input-level requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.4.3. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative references for this requirement are TS 36.101 [2] clauses 7.4.1A and 7.4.1.

7.4A.1 Maximum input level for CA (intra-band contiguous DL CA and UL CA)

Editor's note:

- Any restriction of the applicability of test points due to the supported UE category is under investigation

7.4A.1.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

7.4A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

7.4A.1.4 Test description

7.4A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.1.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1			NC				
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			Mid range				
Test CC Combination setting (N_{RB_agg}) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.			Lowest N_{RB_agg} Highest N_{RB_agg} (Note 3)				
Test Parameters for CA Configurations

100	100	64-QAM	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1. Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-1 is tested per CA Configuration Test CC combination. Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.32 as appropriate if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1

4. The UL and DL Reference Measurement channels are set according to Table 7.4A.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.1.4.3.

7.4A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.4A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.4A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
or within (+0dB, -4 dB) of (target level in Table 7.4A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$) for carrier frequency $3.0\text{GHz} < f \leq 4.2$GHz.
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.4A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
or within (+0dB, -4 dB) of (target level in Table 7.4A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$) for carrier frequency $3.0\text{GHz} < f \leq 4.2$GHz.

7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.4A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

7.4A.1.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.1.5-1.

Table 7.4A.1.5-1: Maximum input level for intra-band contiguous CA

Rx Parameter	**Units**	**CA Bandwidth Class**					
		A	**B**	**C**	**D**	**E**	**F**
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0			
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)			
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.1_H Maximum input level for CA (intra-band contiguous DL CA and UL CA) for 256QAM in DL

7.4A.1_H.1 Test purpose

Same test purpose as in clause 7.4A.1.

7.4A.1_H.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward that support intra-band contiguous DL CA and UL CA and 256QAM in DL.

7.4A.1_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0 with the following exceptions:

- Instead of Table 7.4A.0-1, use Table 7.4A.1_H.3-1.

Table 7.4A.1_H.3-1: Maximum input level for intra-band contiguous CA

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		-28[2]	-25[2]	-25[2]		
			-30[3]	-27[3]	-27[3]		
Power in each other CC	dBm		-28+ 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]	-25 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]	-25 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]		
			-30+ 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [3]	-27 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [3]	-27 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [3]		
NOTE 1: The transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A.							
NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.1_H.4 Test description

7.4A.1_H.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1, use Table 7.4A.1_H.4.1-1.

Table 7.4A.1_H.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] clause 4.1	NC

100	100	64-QAM	100+100	QPSK	100	P_100@0	NA
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.							

Note 3:	If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.
Note 4:	For CA_70C all test frequency IDs shall be tested according to table 4.3.1.1.70A-1, in TS 36.508 [7].

7.4A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.4A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4A.1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.4A.2.4.3 Message contents

Same message contents as in clause 7.4.4.3.

7.4A.2.5 Test requirement

Same test requirements as in clause 7.4A.1.5 with the following exceptions:

- Instead of Table 7.4A.1.5-1 → use Table 7.4A.2.5-1.

Table 7.4A.2.5-1: Maximum input level for intra-band contiguous CA

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0			
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)			
Note 1: The transmitter shall be set to 4dB below PC_{MAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.2_H Maximum input level for CA (intra-band contiguous DL CA without UL CA) for 256QAM in DL

7.4A.2_H.1 Test purpose

Same test purpose as in clause 7.4A.2.1.

7.4A.2_H.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward that support intra-band contiguous DL CA and 256QAM in DL. This test case applies only for CA configurations that do not support UL CA.

7.4A.2_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1_H.3.

7.4A.2_H.4 Test description

7.4A.2_H.4.1 Initial conditions

Same initial conditions as in clause 7.4A.2.4.1 with the following exceptions:

- Instead of Table 7.4A.2.4.1-1, use Table 7.4A.2_H.4.1-1.
- Instead of clause 7.4A.2.4.3, use clause 7.4A.2_H.4.3.

Table 7.4A.2_H.4.1-1: Test Configuration Table

Initial Conditions
use the content of Table 7.4A.2.4.1-1 raplacing CC MOD of DL Allocation by 256QAM

7.4A.2_H.4.2 Test procedure

Same test procedure as defined in clause 7.4A.2.4.2 with the following exceptions:

- Instead of Table 7.4A.2.4.1-1, use Table 7.4A.2_H.4.1-1.
- Instead of Table 7.4A.1.5-1, use Table 7.4A.2_H.5-1.
- Instead of DCI format 1A use DCI format 1.

7.4A.2_H.4.3 Message contents

Same message contents as defined in clause 7.4A.2.4.3.

7.4A.2_H.5 Test requirement

Same test requirements as in clause 7.4A.1.5 with the following exceptions:

- Instead of Table 7.4A.1.5-1, use Table 7.4A.2_H.5-1.

Table 7.4A.2_H.5-1: Maximum input level for intra-band contiguous CA

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -30.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -31.0	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0			

Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -30.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -31.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -27.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)			
Note 1: The transmitter shall be set to 4dB below PC_{MAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.3 Maximum input level for CA (inter-band DL CA without UL CA)

Editor's note:

- Any restriction of the applicability of test points due to the supported UE category is under investigation

7.4A.3.1 Test purpose

Same test purpose as in clause 7.4A.1.1

7.4A.3.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

This test case applies only for CA configurations that do not support UL CA.

7.4A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

7.4A.3.4 Test description

7.4A.3.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Table 7.4A.3.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3.4.3.

Table 7.4A.3.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: Mid range for PCC and SCC
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE	Highest N_{RB_agg} for PCC and SCC
Test Parameters for CA Configurations

100	100	64-QAM	100	100	QPSK	25
100	100	64-QAM	100	100	QPSK	20

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.

7.4A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4A.3.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level to the value as defined in Table 7.4A.3.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4A.3.5-1 for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the Throughput measurement.

7. Measure the average throughput of SCC for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4A.3.4.3 Message contents

Same message contents as in clause 7.4.4.3.

7.4A.3.5 Test requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the maximum input level is defined with the uplink active on the band other than the band whose downlink is being tested, i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.3.5-1 (originated from the single carrier Table 7.4.5-1).

Table 7.4A.3.5-1: Maximum input level for inter-band DL CA without UL CA

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 For carrier frequency 4.2GHz < f ≤ 6.0GHz: -26.5					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.3_H Maximum input level for CA (inter-band DL CA without UL CA) for 256QAM in DL

7.4A.3_H.1 Test purpose

Same test purpose as in clause 7.4A.3.

7.4A.3_H.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward that support inter-band DL CA and 256QAM in DL. This test case applies only for CA configurations that do not support UL CA.

7.4A.3_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1_H.3.

7.4A.3_H.4 Test description

7.4A.3_H.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Table 7.4A.3_H.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3_H.4.3.

Initial Conditions
use the content of Table 7.4A.3.4.1-1 raplacing CC MOD of DL Allocation by 256QAM

7.4A.3_H.4.2 Test procedure

Same test procedure as in clause 7.4A.3.4.2 with the following exceptions:

- Instead of Table 7.4A.3.4.1-1 → use Table 7.4A.3_H.4.1-1.
- Instead of Table 7.4A.3.5-1 → use 7.4A.3_H.5-1.
- Instead of DCI format 1A use DCI format 1.

7.4A.3_H.4.3 Message contents

Same message contents as defined in clause 7.4A.3.4.3.

7.4A.3_H.5 Test requirement

Same test requirement as defined in clause 7.4A.3.5 with the following exceptions:

- Instead of Table 7.4A.3.5-1 → use 7.4A.3_H.5-1.

Table 7.4A.3_H.5-1: Maximum input level for inter-band CA

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.4 Maximum input level for CA (intra band non-contiguous DL CA without UL CA)

7.4A.4.1 Test purpose

Same as in clause 7.4A.1.1.

7.4A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.4A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

7.4A.4.4 Test description

7.4A.4.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Tables 7.4A.4.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3.4.3.

Table 7.4A.4.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: N/A (Range is not relevant)
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	Refer to test point
Test Parameters for CA Configurations	
use the content of Table 7.3A.4.4.1-1	

7.4A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.4A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.4.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4A.4.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.4A.4.4.3 Message contents

Same message contents as in clause 7.4.4.3.

7.4A.4.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.4.5-1 (originated from the single carrier Table 7.4.5-1).

Table 7.4A.4.5-1: Maximum input level for intra band non-contiguous DL CA without UL CA

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.4_H Maximum input level for CA (intra band non-contiguous DL CA without UL CA) for 256QAM in DL

7.4A.4_H.1 Test purpose

Same as in clause 7.4A.1.1.

7.4A.4_H.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward that support intra-band non-contiguous DL CA and 256QAM in DL. This test case applies only for CA configurations that do not support UL CA.

7.4A.4_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1_H.3

7.4A.4_H.4 Test description

7.4A.4_H.4.1 Initial conditions

Same initial conditions as defined in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Tables 7.4A.4_H.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3.4.3.

Table 7.4A.4_H.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: N/A (Range is not relevant)
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	Refer to test point
Test Parameters for CA Configurations	
use the content of Table 7.3A.4.4.1-1 raplacing CC MOD of DL Allocation by 256QAM	

7.4A.4_H.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.4_H.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer 3GPP TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer 3GPP TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1 for C_RNTI to transmit the DL RMC according to Table 7.4A.4_H.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4A.4_H.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.4_H.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:
   The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.4A.4_H.5-1), for carrier frequency f ≤ 3.0GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.4A.4_H.5-1) for carrier frequency 3.0GHz < f ≤ 4.2GHz.

7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

7.4A.4_H.4.3 Message contents

Same message contents as defined in clause 7.4.4.3.

7.4A.4_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.4_H.5-1 (originated from the single carrier Table 7.4.5-1).

Table 7.4A.4_H.5-1: Maximum input level for intra band non-contiguous DL CA without UL CA

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.1-2 with P_{CMAX_L} as defined in subclause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.5 Maximum input level for 3DL CA

7.4A.5.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4A.5.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 3DL with CA configurations in Table 7.1-2a.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 3DL CA involving Band 46.

7.4A.5.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.0.

7.4A.5.4 Test description

7.4A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.5.4.1-1 to 7.4A.5.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.5.4.1-1: Test Configuration Table

Initial Conditions

Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

ID	PCC				SCC1				SCC2			
	Band	**Range**	**NRB**		**Band**	**Range**	**NRB**		**Band**	**Range**	**NRB**	
	UL MOD	**DL MOD**	**ULalloc**	**DLalloc**	**UL MOD**	**DL MOD**	**ULalloc**	**DLalloc**	**UL MOD**	**DL MOD**	**ULalloc**	**DLalloc**
Default Test Settings for a CA_XD Configuration (Intra-band contiguous)												
1	X	Mid/CC 1	REFSENS	All RBs	X	Mid/CC 2	N/A	All RBs	X	Mid/CC 3	N/A	All RBs

	QPSK	64-QAM		Highest N_{RB_agg}	N/A	64-QAM		Highest N_{RB_agg}	N/A	64-QAM		Highest N_{RB}
29	Y	Mid/CC 1	REFSENS	All RBs	Y	Mid/CC 2	N/A	All RBs	X	Mid	N/A	All RBs
	QPSK	64-QAM		Lowest N_{RB_agg}	N/A	64-QAM		Lowest N_{RB_agg}	N/A	64-QAM		Highest N_{RB}
31 1	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs
	QPSK	64-QAM		Highest N_{RB}	N/A	64-QAM		Highest N_{RB_agg}	N/A	64-QAM		Highest N_{RB_agg}
41 1	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs
	QPSK	64-QAM		Highest N_{RB}	N/A	64-QAM		Lowest N_{RB_agg}	N/A	64-QAM		Lowest N_{RB_agg}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration, The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band contiguous:** X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41
Note 5: **Inter-band:** X,Y,Z correspond to the 1st, 2nd and 3rd band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19
Note 6: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1C-3A, X=1 and Y=3
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_SCCx} = N_{RB_SCCx+1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_SCCx} for testing.

Table 7.4A.5.4.1-2: Test Configuration Table with W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

	QPSK	QPSK	100		N/A	QPSK	100		N/A	QPSK	25	

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.
Note 7: **Intra-band non-contiguous + Inter-band:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.

2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1

4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.5.4.1-1 to 7.4A.5.4.1-2.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.5.4.3.

7.4A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.5.4.1-1 to 7.4A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.5.4.1-1 to 7.4A.5.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.5.5-2 or 7.4A.5.5-3 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

7. Measure the average throughput for the carrier(s) indicated in table 7.4A.5.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.

8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.5.4.2-1.

Table 7.4A.5.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.4A.5.5-1
	2		
Inter-band	1	SCC1	7.4A.5.5-2
		SCC2	
	2	SCC1	
		SCC2	
	3	SCC1	
		SCC2	
Intra-band contiguous + Inter-band	1	SCC2	7.4A.5.5-2
	2		
	3	SCC1, SCC2	7.4A.5.5-1
	4		
Intra-band non-contiguous + Inter-band	1	SCC2	7.4A.5.5-2
	2	SCC1	
		SCC2	
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.4A.5.5-2
		SCC1, SCC2	7.4A.5.5-1
	2	PCC, SCC1	7.4A.5.5-1
		SCC2	7.4A.5.5-2
Intra-band non-contiguous	1	PCC, SCC1, SCC2	7.4A.5.5-2
	2		

Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.5.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.4A.5.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.5.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.5.5-1 and 7.4A.5.5-2, as applicable.

Table 7.4A.5.5-1: Maximum input level for 3DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 For carrier frequency 3.0GHz < f ≤	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤		

			4.2GHz: -29.0	4.2GHz: -26.0	4.2GHz: -26.0		
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)		
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.4A.5.5-2: Maximum input level for 3DL CA (Inter-band, Intra-band non-contiguous), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.5_H Maximum input level for 3DL CA for 256QAM in DL

7.4A.5_H.1 Test purpose

Same test purpose as in clause 7.4A.5.1.

7.4A.5_H.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward that support 256QAM in DL and 3DL CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 256QAM in DL and 3DL CA involving Band 46.

7.4A.5_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1_H.3.

7.4A.5_H.4 Test description

7.4A.5_H.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.5_H.4.1-1 and 7.4A.5_H.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in clauses A.2 and A.3 respectively. The details of the OCNG patterns used are specified in clause A.5. Configurations of PDSCH and PDCCH before measurement are specified in clause C.2.

Table 7.4A.5_H.4.1-1: Test Configuration Table

Initial Conditions
use the content of Table 7.4A.5.4.1-1 raplacing DL MOD by 256QAM

Table 7.4A.5_H.4.1-2: Test Configuration Table with W_{gap}

Initial Conditions
use the content of Table 7.4A.5.4.1-2 raplacing DL MOD by 256QAM

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to clauses C.0, C.1 and C.3.1, and uplink signals according to clauses H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.5_H.4.1-1 and 7.4A.5_H.4.1-2.
5. Propagation conditions are set according to clause B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.5_H.4.3.

7.4A.5_H.4.2 Test procedure

1. Configure SCCs according to clauses C.0, C.1 and clause C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.5_H.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1 for C_RNTI to transmit the DL RMC according to Table 7.4A.5_H.4.1-1 and 7.4A.5_H.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.5_H.4.1-1 and 7.4A.5_H.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.5_H.5-1 or 7.4A.5_H.5-2 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within (+0dB, -3.4dB) of the target level for carrier frequency $f \leq 3.0$GHz or within (+0dB, -4dB) of the target level for carrier frequency 3.0GHz < $f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to clause G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.5_H.4.2-1.

Table 7.4A.5_H.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

Intra-band non-contiguous	1	PCC, SCC1, SCC2	7.4A.5_H.5-2
	2		
Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.5_H.4.1.			
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.			
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.4A.5_H.4.3 Message contents

Same message contents as defined in clause 7.4A.5.4.3.

7.4A.5_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Table 7.4A.5_H.5-1 and Table 7.4A.5_H.5-2.

Table 7.4A.5_H.5-1: Maximum input level for 3DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -30.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -31.0	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0		
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -30.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -31.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -27.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -27.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$		

Note 1:	The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in clause 6.2.5 for one uplink carrier.
Note 2:	Reference measurement channel is clause A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.

Table 7.4A.5_H.5-2: Maximum input level for 3DL CA (Inter-band, Intra-band non-contiguous), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.6

7.4A.7 Maximum input level for 4DL CA

7.4A.7.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4A.7.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 4DL with CA configurations in Table 7.1-2b.

7.4A.7.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.0.

7.4A.7.4 Test description

7.4A.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.7.4.1-1 to 7.4A.7.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.7.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.7.4.1-1 to 7.4A.7.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.7.4.3.

7.4A.7.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.7.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.7.4.1-1 to 7.4A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.7.4.1-1 to 7.4A.7.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.7.5-2 or 7.4A.7.5-3 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.7.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.7.4.2-1.

Table 7.4A.7.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

		PCC, SCC1, SCC3	7.4A.7.5-2 7.4A.7.5-1
Intra-band non-contiguous + Intra-band non-contiguous	1	SCC2 SCC3	7.4A.7.5-2
	2		

Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.7.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.4A.7.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.7.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.7.5-1 to 7.4A.7.5-2, as applicable.

Table 7.4A.7.5-1: Maximum input level for 4DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7	For carrier frequency f ≤ 3.0GHz: -25.7	For carrier frequency f ≤ 3.0GHz: -25.7	For carrier frequency f ≤ 3.0GHz: -26.7	

			For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0	
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -26.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.4A.7.5-2: Maximum input level for 4DL CA (Inter-band), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.7_H Maximum input level for 4DL CA for 256QAM in DL

7.4A.7_H.1 Test purpose

Same test purpose as in clause 7.4A.7_H.1.

7.4A.7_H.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 4DL with CA configurations in Table 7.1-2b and 256QAM in DL.

7.4A.7_H.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.1_H.3.

7.4A.7_H.4 Test description

7.4A.7_H.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.7_H.4.1-1 to 7.4A.7_H.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.7_H.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.4A.7_H.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.

Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.

Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.

Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.7_H.4.1-1 to 7.4A.7_H.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.7_H.4.3.

7.4A.7_H.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.7_H.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.7_H.4.1-1 to 7.4A.7_H.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.7_H.4.1-1 to 7.4A.7_H.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.7_H.5-2 or 7.4A.7_H.5-3 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.7_H.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.7_H.4.2-1.

Table 7.4A.7_H.4.2-1: Test repetition and measurement configuration

	2		

Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.7_H.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.4A.7_H.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.7_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.7_H.5-1 to 7.4A.7_H.5-5, as applicable.

Table 7.4A.7_H.5-1: Maximum input level for 4DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7	For carrier frequency f ≤ 3.0GHz: -25.7	For carrier frequency f ≤ 3.0GHz: -25.7	For carrier frequency f ≤ 3.0GHz: -26.7	

			For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0	
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -26.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.4A.7_H.5-2: Maximum input level for 4DL CA (Inter-band), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.8 Maximum input level for 5DL CA

7.4A.8.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4A.8.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

7.4A.8.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.0.

7.4A.8.4 Test description

7.4A.8.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.8.4.1-1 to 7.4A.8.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.8.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_42F, X=42.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-28A,X=1,Y=3,Z=7,R=20,S=28.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-5A-7A-46C, X=1,Y=5,Z=7 and R=46.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.4A.8.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.8.4.1-1 to 7.4A.8.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.8.4.3.

7.4A.8.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.8.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.8.4.1-1 to 7.4A.8.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.8.4.1-1 to 7.4A.8.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.8.5-1 or 7.4A.8.5-2 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.8.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.8.4.2-1.

Table 7.4A.8.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

	2		
	3		

Note 1:	Test point ID for the particular CA configuration as defined in section 7.4A.8.4.1.
Note 2:	The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3:	Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.4A.8.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.8.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.8.5-1 to 7.4A.8.5-2, as applicable.

Table 7.4A.8.5-1: Maximum input level for 5DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency f ≤ 3.0GHz: -26.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -25.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -26.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)	For carrier frequency f ≤ 3.0GHz: -27.7 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0 + 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$)
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.4A.8.5-2: Maximum input level for 5DL CA (Inter-band), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.8_H Maximum input level for 5DL CA for 256QAM in DL

7.4A.8_H.1 Test purpose

Same test purpose as in clause 7.4A.8.1.

7.4A.8_H.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c and 256QAM in DL.

7.4A.8_H.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.1_H.3.

7.4A.8_H.4 Test description

7.4A.8_H.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.8_H.4.1-1 to 7.4A.8_H.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.8_H.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_42F, X=42.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-28A,X=1,Y=3,Z=7,R=20,S=28.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-5A-7A-46C, X=1,Y=5,Z=7 and R=46.

Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.4A.8_H.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.8_H.4.1-1 to 7.4A.8_H.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.8_H.4.3.

7.4A.8_H.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.8_H.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.8_H.4.1-1 to 7.4A.8_H.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.8_H.4.1-1 to 7.4A.8_H.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.8_H.5-1 or 7.4A.8_H.5-2 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.8_H.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.8_H.4.2-1.

Table 7.4A.8_H.4.2-1: Test repetition and measurement configuration

	2		
	3		

Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.8_H.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.

Note 3:	Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.4A.8_H.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.8_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.8_H.5-1 to 7.4A.8_H.5-2, as applicable.

Table 7.4A.8_H.5-1: Maximum input level for 5DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency f ≤ 3.0GHz: -26.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -25.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -25.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -26.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -27.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.4A.8_H.5-2: Maximum input level for 5DL CA (Inter-band), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.9 Maximum input level for 6DL CA

7.4A.9.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4A.9.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d.

7.4A.9.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.0.

7.4A.9.4 Test description

7.4A.9.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.9.4.1-1 to 7.4A.9.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.9.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.																								

Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_42F, X=42.
Note 6: **Inter-band:** X,Y,Z,R,S,U correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-28A-42A,X=1,Y=3,Z=7,R=20,S=28.U=42
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-5A-7A-46C, X=1,Y=5,Z=7 and R=46.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.

Table 7.4A.9.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.9.4.1-1 to 7.4A.9.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.9.4.3.

7.4A.9.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.9.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.9.4.1-1 to 7.4A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.9.4.1-1 to 7.4A.9.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.9.5-1 or 7.4A.9.5-2 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.9.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.9.4.2-1.

Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.9.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.4A.9.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.9.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.9.5-1 to 7.4A.9.5-2, as applicable.

Table 7.4A.9.5-1: Maximum input level for 6DL CA (Intra-band contiguous)

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier. NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.4A.9.5-2: Maximum input level for 6DL CA (Inter-band), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4A.9_H Maximum input level for DL CA for 256QAM in DL

7.4A.9_H.1 Test purpose

Same test purpose as in clause 7.4A.9.1.

7.4A.9_H.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d and 256QAM in DL.

7.4A.9_H.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.1_H.3.

7.4A.9_H.4 Test description

7.4A.9_H.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.9_H.4.1-1 to 7.4A.9_H.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.9_H.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_42F, X=42.
Note 6: **Inter-band:** X,Y,Z,R,S,U correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-28A-42A,X=1,Y=3,Z=7,R=20,S=28.U=42
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-5A-7A-46C, X=1,Y=5,Z=7 and R=46.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.

Table 7.4A.9_H.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.9_H.4.1-1 to 7.4A.9_H.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.9_H.4.3.

7.4A.9_H.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.9_H.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4A.9_H.4.1-1 to 7.4A.9_H.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.4A.9_H.4.1-1 to 7.4A.9_H.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.9_H.5-1 or 7.4A.9_H.5-2 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.9_H.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.9_H.4.2-1

Table 7.4A.9_H.4.2-1: Test repetition and measurement configuration

Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.9_H.4.1.			
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.			
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.4A.9_H.4.3 Message contents

Same message contents as in clause 7.4.4.3 for without UL CA.

Same message contents as in clause 7.4A.1.4.3 for UL CA.

7.4A.9_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.9_H.5-1 to 7.4A.9_H.5-2, as applicable.

Table 7.4A.9_H.5-1: Maximum input level for 6DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0	For carrier frequency f ≤ 3.0GHz: -26.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0	For carrier frequency f ≤ 3.0GHz: -27.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0
Power in each other CC	dBm		For carrier frequency f ≤ 3.0GHz: -28.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -29.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -25.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -25.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -26.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -27.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency f ≤ 3.0GHz: -27.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency 3.0GHz < f ≤ 4.2GHz: -28.0 + $10\log(N_{RB,c}$

							/$N_{RB,largest\ BW}$)

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier.
Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

Table 7.4A.9_H.5-2: Maximum input level for 6DL CA (Inter-band), per CC

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.
Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

7.4B Maximum input level for UL-MIMO

7.4B.1 Test purpose

Maximum input level tests the ability of UE that support UL- MIMO to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL- MIMO.

7.4B.3 Minimum conformance requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing, the minimum requirements in Clause 7.4.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter P_{CMAX_L} is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1B.

7.4B.4 Test description

7.4B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4B.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC

Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest				
Test Parameters for Channel Bandwidths							
	Downlink Configuration			**Uplink Configuration**			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		UE Category
		FDD	TDD		FDD	TDD	
1.4MHz	64-QAM	6	6	QPSK	5	5	1-5
3MHz	64-QAM	15	15	QPSK	4	4	1-5
5MHz	64-QAM	25	25	QPSK	8	8	2-5
5MHz	64-QAM	25	N/A	QPSK	5[3]	N/A	2-5
5MHz	64-QAM	18	18	QPSK	8	8	1
5MHz	64-QAM	18	N/A	QPSK	5[3]	N/A	1
10MHz	64-QAM	50	50	QPSK	12	12	2-5
10MHz	64-QAM	17	17	QPSK	12	12	1
15MHz	64-QAM	75	75	QPSK	16	16	2-5
15MHz	64-QAM	17	17	QPSK	16	16	1
20MHz	64-QAM	100	100	QPSK	18	18	3-5
20MHz	64-QAM	83	83	QPSK	18	18	2
20MHz	64-QAM	17	17	QPSK	18	18	1
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 7.3.3-2. Note 2: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 3: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.4B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4B.4.3.

7.4B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.4B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 7.4B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value defined in Table 7.4B.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB- of the target level in Table 7.4B.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

Table 7.4B.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2

filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

7.4B.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4B.5-1.

Table 7.4B.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3MHz	5MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz:- 25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4C

7.4D Maximum input level for ProSe

7.4D.0 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.4D.0-1.

Table 7.4D.0-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-22					

The normative reference for this requirement is TS 36.101 clause 7.4.1D.

7.4D.1 Maximum input level for ProSe Direct Discovery

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.

- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

7.4D.1.1 Test purpose

Verify the UE's ability to receive ProSe Discovery data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

7.4D.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

7.4D.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause TS 36.101 [2] 7.4D.0.

7.4D.1.4 Test description

7.4D.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.4D.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz, Highest					
	Downlink Configuration (Note 2)		**Uplink Configuration (Note 2)**		**Sidelink Configuration (Reception) (Note 3)**	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	0	QPSK	0	QPSK	2
10MHz	QPSK	0	QPSK	0	QPSK	2
15MHz	QPSK	0	QPSK	0	QPSK	2
20MHz	QPSK	0	QPSK	0	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: The RB start for the transmission of Sidelink RMC is RB#0.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.67.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.4D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.4D.1.4.3.

7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

7.4D.1.4.2 Test procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "…Step 1…") are defined in clause 7.4D.1.4.3.

2. The UE shall transmit RRCConnectionReconfigurationComplete message.

3. Initialise the variables P_{tot} and P_{ok} as 0.

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.4D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.

6. SS transmits PSDCH to transmit the SL RMC according to Table 7.4D.1.4.1-1. Set the Sidelink signal level to the value defined in Table 7.4D.1.5-1.

7. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable P_{tot}.

8. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".

9. SS calculates the variable P_{ok} as (current counter value - counter value at last test iteration).

10. SS shall compute the throughput as following:

$$TP = P_{ok} / P_{tot} * 100\%$$

7.4D.1.4.3 Message contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD

Table 7.4D.1.4.3-1: ACTIVATE TEST MODE: Maximum input level for ProSe Direct Discovery

}			

7.4D.1.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.4D.1.5-1.

Table 7.4D.1.5-1: Maximum input level for ProSe Direct Discovery

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-22 – TT					

7.4D.2 Maximum input level for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Many clauses are TBD

7.4D.2.1 Test purpose

Verify the UE's ability to receive ProSe Communication data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

7.4D.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

7.4D.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in TS 36.101 [2] clause 7.4D.0.

7.4D.2.4 Test description

TBD

7.4D.2.4.1 Initial conditions

TBD

7.4D.2.4.2 Test procedure

7.4D.2.5 Test requirements

TBD

7.4E Maximum input level for UE category 0

7.4E.1 Test purpose

Same test purpose as in clause 7.4.1.

7.4E.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

7.4E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.4.3.

7.4E.4 Test description

7.4E.4.1 Initial conditions

Same initial conditions as in clause 7.4.4.1 with the following exceptions:

- Instead of Table 7.4.4.1-1 → use Table 7.4E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

Table 7.4E.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508 [7] clause 4.1	NC						
Test Frequencies as specified in TS 36.508 [7] clause 4.3.1	Mid range						
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1	Lowest, 5MHz, Highest						
Test Parameters for Channel Bandwidths							
	Downlink Configuration			**Uplink Configuration**			
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**		**UE Category**
		FDD and HD-FDD	**TDD**		**FDD and HD-FDD**	**TDD**	
1.4MHz	64QAM	2	2	QPSK	6	6	0
3MHz	64QAM	2	2	QPSK	15	15	0
5MHz	64QAM	2	2	QPSK	25	25	0
5MHz	64QAM	2	N/A	QPSK	20	N/A	0
10MHz	64QAM	2	2	QPSK	36	36	0
10MHz	64QAM	2	N/A	QPSK	25	N/A	0
10MHz	64QAM	2	N/A	QPSK	20	N/A	0
15MHz	64QAM	2	2	QPSK	36	36	0
20MHz	64QAM	2	2	QPSK	36	36	0
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 5.4.2.1-1.							
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).							
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.							
Note 4: Downlink RB position shall be RB_{start} = 0							

7.4E.4.2 Test procedure

Same test procedure as in clause 7.4.4.2.

7.4E.4.3 Message contents

Same message contents as in clause 7.4.4.3.

7.4E.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4E.5-1.

Table 7.4E.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4EA Maximum input level for UE category M1

7.4EA.1 Test purpose

Maximum input level tests the ability of category M1 UE to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4EA.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

7.4EA.3 Minimum conformance requirements

Maximum input level is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4EA.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.4EA.3-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-25[2]					
		-27[3]					
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA. NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1.

7.4EA.4 Test description

7.4EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4EA.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.4EA.4.1-1: Test Configuration Table RX test cases UE Cat-M1

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1	NC						
Test Frequencies as specified in TS36.508 [7] clause 4.3.1	Mid range						
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1	5MHz						
Test Parameters for Channel Bandwidths and Narrowband positions							
	Downlink Configuration			**Uplink Configuration**			
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**		**UE Category**
		FDD and HD-FDD	**TDD**		**FDD and HD-FDD**	**TDD**	
5MHz	16QAM	2	2	QPSK	6	6	M1
Note 1: Downlink RB position shall be RB_{start} = 0 within the narrowband Note 2: The Narrowband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.

4. The UL and DL Reference Measurement channels are set according to Table 7.4EA.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.4EA.4.3.

7.4EA.4.2 Test procedure

1. SS transmits PDSCH via M-PDCCH DCI format 6-1A for C_RNTI to transmit the DL RMC according to Table 7.4EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via M-PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.4EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the value defined in Table 7.4EA.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4EA.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4EA.4.3 Message contents

- Same message contents as in clause 7.4.4.3 with the following exception.

Table 7.4EA.4.2-1: EPDCCH-Config-r11-DEFAULT

Derivation Path: 36.508 Table 4.6.3-2B			
Information Element	**Value/remark**	**Comment**	**Condition**
mpdcch-NumRepetition-r13	r1		

7.4EA.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.2.2, A.2.3 and A.3.2 with parameters specified in Table 7.4EA.5-1.

Table 7.4EA.5-1: Maximum input level

Rx Parameter	**Units**	**Channel bandwidth**
		5 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5EA. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.		

7.4EB Maximum input level for UE Category 1bis

7.4EB.1 Test purpose

Same test purpose as in clause 7.4.1.

7.4EB.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

7.4EB.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.4.3.

7.4EB.4 Test description

7.4EB.4.1 Initial conditions

Same initial conditions as in clause 7.4.4.1 with the following exceptions:

- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

7.4EB.4.2 Test procedure

Same test procedure as in clause 7.4.4.2.

7.4EB.4.3 Message contents

Same message contents as in clause 7.4.4.3.

7.4EB.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4EB.5-1.

Table 7.4EB.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -26.0					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

7.4EC Maximum input level for UE category M2

7.4EC.1 Test purpose

Maximum input level tests the ability of category M2 UE to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4EC.2 Test applicability

This test applies to all types of E-UTRA UE release 14 and forward of UE category M2.

7.4EC.3 Minimum conformance requirements

Same as in clause 7.4EA.3.

7.4EC.4 Test description

7.4EC.4.1 Initial conditions

Same as in clause 7.4EA.4.1 with following exceptions:

- Instead of Table 7.4EA.4.1-1 → use Table 7.4EC.4.1-1

Table 7.4EC.4.1-1: Test Configuration Table RX test cases UE Cat-M2

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1	NC

5MHz	16QAM	15	15	QPSK	24	24	M2
Note 1: Downlink RB position shall be RB_{start} = 0 within the wideband Note 2: The Wideband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.							

7.4EC.4.2 Test procedure

Same as in clause 7.4EA.4.2.

7.4EC.4.3 Message contents

Same as in clause 7.4EA.4.3.

7.4EC.5 Test requirement

Same as in clause 7.4EA.5.

7.4F Maximum input level for category NB1 and NB2

7.4F.1 Test Purpose

Maximum input level tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

7.4F.2 Test Applicability

This test case applies to all types of NB-IoT FDD UE release 13 and forward of category NB1.

This test case applies to all types of NB-IoT FDD UE release 14 and forward of category NB2.

This test case applies to all types of NB-IoT TDD UE release 15 and forward of category NB1 and NB2.

7.4F.3 Minimum Conformance Requirements

Maximum input level is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

Category NB1 and NB2 UE maximum input level requirement is – 25 dBm. For this input level the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channel as specified in Annex A.3.2.

The normative reference for this requirement is TS 36.101 clause 7.4F.

7.4F.4 Test Description

7.4F.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the set of E-UTRA operating bands defined for NB-IoT in clause 5.2.F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.4F.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

Table 7.4F.4.1-1: Test Configuration Table

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause 8.1.1			NC		
Test Frequencies as specified in TS36.508 [7] clause 8.1.3.1			Frequency ranges defined in Annex K.1.1		
Configuration ID	**Downlink Configuration**		**Uplink Configuration**		
	Modulation	Subcarriers	Modulation	N_{tones}	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15kHz

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only the main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C0, C1 and C.3.0, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channels are set according to Table 7.4F.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 7.4F.4.3.

7.4F.4.2 Test Procedure

4. SS transmits NPDSCH via NPDCCH DCI format N1 for C_RNTI to transmit the DL RMC according to Table 7.4F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send the HARQ feedback based on information contain in DCI format N1.
5. Set the Downlink signal level to the value defined in Table 7.4F.5-1.
6. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4F.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 8.1.6.

7.4F.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4F.5-1.

Table 7.4F.5-1: Maximum input level for category NB1 and NB2

Rx Parameter	Units	Maximum input level test requirement
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency f ≤ 3.0GHz: -25.7

7.4G Maximum input level for V2X Communication

7.4G.1 Maximum input level for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

7.4G.1.1 Test purpose

Verify the UE's ability to receive V2X Communication data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

7.4G.1.2 Test applicability

This test case applies to all types of UE that support V2X Sidelink Communication and Band 47.

7.4G.1.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.4G.1.3-1.

Table 7.4G.1.3-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz

Power in Transmission Bandwidth Configuration	dBm	-	-	-	-22	-	-22
NOTE 1: Reference measurement channel is defined in Annex A.8.2.							

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.4G.1.3 apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.4.3 apply for the E-UTRA downlink reception while all downlink carriers are active.

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1G.

7.4G.1.4 Test description

7.4G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4G.1.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.4G.1.4.1-1: Test Configuration Table

Initial Conditions		
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal, TL/VL, TL/VH, TH/VL, TH/VH	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range	
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, Highest	
Test Parameters for Channel Bandwidths		
	V2X Configuration to Receive	
Ch BW	Modulation	PSSCH RB allocation
10MHz	QPSK	48@2
20MHz	QPSK	96@2

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RX antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.4G.1.4.3.

3. The V2X reference measurement channel is set according to Table 7.4G.1.4.1-1.

3a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. Ensure the UE is in State 5A-V2X in Receive Mode according to TS 36.508 [7] clause 4.5.9. Message content exceptions are defined in clause 7.4G.1.4.3.

6. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.4G.1.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.4G.1.4.1-1.
2. Set the signal level of V2X to the value defined in Table 7.4G.1.5-1.
3. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4G.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.10.

7.4G.1.5 Test requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.4G.1.5-1.

Table 7.4G.1.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency 4.2GHz < f ≤ 6GHz: -23.5					
NOTE 1: Reference measurement channel is defined in Annex A.8.2.							

7.4G.2 Maximum input level for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

7.4G.2.1 Test purpose

Same test purpose as in clause 7.4G.1.

7.4G.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 14 and forward that support V2X Communication.

7.4G.2.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.4G.2.3-1.

Table 7.4G2.3-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-	-	-	-22	-	-22
NOTE 1: Reference measurement channel is defined in Annex A.8.2.							

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.4G.2.3 apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.4.3 apply for the E-UTRA downlink reception while all downlink carriers are active.

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1G.

7.4G.2.4 Test description

7.4G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4G.2.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively.

Table 7.4G.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal, TL/VL, TL/VH, TH/VL, TH/VH				
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1			Mid range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest N_{RB_agg}, Highest N_{RB_agg}				
Test Parameters for Channel Bandwidths							
	Downlink		**Uplink Configuration**		**V2X Configuration**

3 MHz	QPSK	4	QPSK	4			
5 MHz	QPSK	1	QPSK	1			
5 MHz	QPSK	8	QPSK	8			
10 MHz	QPSK	1	QPSK	1			
10 MHz	QPSK	12	QPSK	12			
15 MHz	QPSK	1	QPSK	1			
15 MHz	QPSK	16	QPSK	16			
20 MHz	QPSK	1	QPSK	1			
20 MHz	QPSK	18	QPSK	18			
Note 1: V2X con-current band configurations are checked separately for each band configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G.1-2.							
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3G.0-4 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2G.1-2).							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.93a.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.7. Message content exceptions are defined in clause 7.4G.2.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.4G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C. Message content exceptions are defined in clause 7.4G.2.4.3.

7.4G.2.4.2 Test procedure

1. The SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.4G.2.4.1-1 on E-UTRA band. The SS sends downlink MAC padding bits on the DL RMC.

2. SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 7.4G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL and V2X RMCs.

3. Set the signal level of V2X for V2X band and E-UTRA band to the value defined in Table 7.4G.2.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4G.2.5-1 for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz or within +0, -4.3 dB of the target level for carrier frequency f ≤ 6.0GHz for at least the duration of the Throughput measurement.

4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.4G.2.5 Test requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.4G.2.5-1.

Table 7.4G.2.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for V2X sidelink	dBm	-	-	-	-23.5	-	-23.5
Power in Transmission Bandwidth Configuration for E-UTRA	dBm	For carrier frequency f ≤ 3.0GHz: -22.7 For carrier frequency 3.0GHz < f ≤ 4.2GHz: -23					
NOTE 1: Reference measurement channel is defined in Annex A.8.2.							

7.4G.3 Maximum input level for V2X Communication / Intra-band contiguous multi-carrier operation

7.4G.3.1 Test purpose

Same test purpose as in clause 7.4G.1.

7.4G.3.2 Test applicability

This test case applies to all types of UE that support Intra-band contiguous multi-carrier operation V2X Sidelink Communication and Band 47.

7.4G.3.3 Minimum conformance requirements

For intra-band contiguous multi-carrier operation maximum input level is defined as the powers received at the UE antenna port over the Transmission bandwidth configuration of each CC, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel over each component carrier.

Table 7.4G.3.3-2: Maximum input level for intra-band contiguous multi-carrier for V2X UE

Rx Parameter	Units	V2X Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		-22[2]				

Power in each other CC	dBm		-22+ 10log($N_{RB,c}$ /$N_{RB,largest\ BW}$) [2]				
NOTE 1: Void NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.							

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1G.

7.4G.3.4 Test description

7.4G.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4G.3.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.4G.3.4.1-1: Test Configuration Table

Initial Conditions			
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal, TL/VL, TL/VH, TH/VL, TH/VH	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1		Low range, High range	
Test CC Combination setting(N_{RB_agg}) as specified in subclause 5.4.2G		Lowest N_{RB_agg}, Highest N_{RB_agg}	
Test Parameters for Channel Bandwidths			
V2X Multi-carrier Configuration		**V2X PSSCH Allocation**	
CC1 N_{RB}	CC2 N_{RB}	CC1 & CC2 Mod	CC1 and CC2 RB Allocation
50	50	QPSK	48@2+48@2

1. Connect the SS and GNSS simulator to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.89a.
2. The parameter settings for the V2X sidelink communication over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.4G.3.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.4G.3.4.1-1.

4a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 5A-V2X according to TS 36.508 [7] clause 4.5.9.
7. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)
8. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.4G.3.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.4G.3.4.1-1 for 2carrier intr-band-concurrent receptions. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

2. Set the signal level of V2X for each component carrier to the value defined in Table 7.4G.3.5-2.

3. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.4G.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.4G.3.5 Test requirements

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Table 7.4G.3.5-2.

Table 7.4G.3.5-2: Maximum input level for intra-band contiguous multi-carrier for V2X

Rx Parameter	Units	V2X Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		-23.5[2]				
Power in each other CC	dBm		-23.5+ $10\log(N_{RB,c}/N_{RB,largest\ BW})$ [2]				
NOTE 1: Void NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.							

7.5 Adjacent Channel Selectivity (ACS)

7.5.1 Test purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

7.5.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

The UE shall fulfil the minimum requirement specified in Table 7.5.3-1 for all values of an adjacent channel interferer up to –25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5.3-2 and Table 7.5.3-3 where the throughput R_{av} shall be $\geq$ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1). For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.5.3-1: Adjacent channel selectivity

		Channel bandwidth					
Rx Parameter	**Units**	**1.4 MHz**	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
ACS	dB	33.0	33.0	33.0	33.0	30	27

Table 7.5.3-2: Test parameters for Adjacent channel selectivity, Case 1

Rx Parameter	**Units**	**Channel bandwidth**					
		1.4 MHz	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
Power in Transmission Bandwidth Configuration	dBm	REFSENS + 14 dB					
$P_{Interferer}$	dBm	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +42.5dB	REFSENS +39.5dB

$F_{Interferer}$ (offset)	MHz	**1.4+0.0025 /** -1.4-0.0025	**3+0.0075 /** -3-0.0075	**5+0.0025 /** -5-0.0025	**7.5+0.0075 /** -7.5-0.0075	**10+0.0125 /** -10-0.0125	**12.5+0.0025 /** -12.5-0.0025

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
Note 3: The REFSENS power level is specified in Table 7.3.3-1 and Table 7.3.3-1a for two and four antenna ports, respectively.

Table 7.5.3-3: Test parameters for Adjacent channel selectivity, Case 2

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-56.5	-56.5	-56.5	-56.5	-53.5	-50.5
$P_{Interferer}$	dBm	-25					
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{Interferer}$ (offset)	MHz	**1.4+0.0025 /** -1.4-0.0025	**3+0.0075 /** -3-0.0075	**5+0.0025 /** -5-0.0025	**7.5+0.0075 /** -7.5-0.0075	**10+0.0125 /** -10-0.0125	**12.5+0.0025 /** -12.5-0.0025
Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1.

7.5.4 Test description

7.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] clause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] clause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5[4]	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A

15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100

20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS and interfering source to the UE antenna connectors as shown in TS 36.508 [7] Figure A.4.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5.4.3.

7.5.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.5.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.5.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value as defined in Table 7.5.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5.5-2 (Case 1) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
4. Set the Interferer signal level to the value as defined in Table 7.5.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 4.
7. Set the Downlink signal level to the value as defined in Table 7.5.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5.5-3 (Case 2) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
8. Set the Interferer signal level to the value as defined in Table 7.5.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
9. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
10. Repeat steps from 7 to 9, using an interfering signal above the wanted signal in Case 2 at step 8.

11. Repeat for applicable channel bandwidths and operating band combinations in both Case 1 and Case 2.

7.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception

Table 7.5.4.3-1: UplinkPowerControlDedicated

20MHz	QPSK	100	N/A	QPSK	20	N/A

Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2.	Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 3:	For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

7.5_1.4.2 Test procedure

Same as in clause 7.5.4.2 with following exceptions:

- Instead of Table 7.5.4.1-1→ use Table 7.5_1.4.1-1.
- Instead of Table 7.5.5-2→ use Table 7.5_1.5-2.
- Instead of Table 7.5.5-3→ use Table 7.5_1.5-3.

7.5_1.4.3 Message contents

Same as in clause 7.5.4.3.

7.5_1.5 Test requirement

The throughput R_{av} shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5_1.5-2, and also under the conditions specified in table 7.5_1.5-3.

Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

7.5A Adjacent Channel Selectivity (ACS) for CA

7.5A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band, the adjacent channel requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.5.3 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink operation or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For a component carrier configured in Band 46, the requirements specified in subclause 7.5.3 are replaced by the requirements in Table 7.5A.0-1a with test parameters in Table 7.5A.0-2a and Table 7.5A.0-3a.

Table 7.5A.0-1a: Adjacent channel selectivity

E-UTRA band	Rx Parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46	ACS	dB				33		27

Table 7.5A.0-2a: Test parameters for Adjacent channel selectivity, Case 1

E-UTRA Band	Rx Parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46	Power in Transmission Bandwidth Configuration	dBm	REFSENS + 14 dB					
	$P_{Interferer}$	dBm				REFSENS+45.5dB		REFSENS +39.5dB
	$BW_{Interferer}$	MHz				20		20
	$F_{Interferer}$ (offset)	MHz				15+0.0075/-15-0.0075		20+0.0025 / -20-0.0025
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.								

Table 7.5A.0-3a: Test parameters for Adjacent channel selectivity, Case 2

E-UTRA band	Rx Parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46	Power in Transmission	dBm				-56.5		-50.5

	Bandwidth Configuration							
	$P_{Interferer}$	dBm	-25					
	$BW_{Interferer}$	MHz				20		20
	$F_{Interferer}$ (offset)	MHz				15+0.0075/-15-0.0075		20+0.0025 / -20-0.0025
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 24dB below P_{CMAX_L} at the minimum uplink configuration specified in Table Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.								

For E-UTRA CA configurations listed in Table 7.3A.0-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the adjacent channel requirements of subclause 7.5A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.5A.0-2 or Table 7.5A.0-3 with the uplink configuration set according to Table 7.3A.0-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The UE shall fulfil the minimum requirement specified in Table 7.5A.0-1 for an adjacent channel interferer on either side of the aggregated downlink signal at a specified frequency offset and for an interferer power up to -25 dBm. The throughput of each carrier shall be $\geq$ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.5A.0-2 and 7.5A.0-3. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.5A.0-2 and 7.5A.0-3.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, each larger than or equal to 5 MHz, the adjacent channel selectivity requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.5.3 and 7.5A.0 for one component carrier and two component carriers per sub-block, respectively. The UE shall fulfil the minimum requirements all values of a single adjacent channel interferer in-gap and out-of-gap up to a –25 dBm interferer power while all downlink carriers are active. For the lower range of test parameters (Case 1), the interferer power $P_{interferer}$ shall be set to the maximum of the levels given by the carriers of the respective sub-blocks as specified in Table 7.5.3-2 and Table 7.5A.0-2 for one component carrier and two component carriers per sub-block, respectively. The wanted signal power levels for the carriers of each sub-block shall then be adjusted relative to $P_{interferer}$ in accordance with the ACS requirement for each sub-block (Table 7.5.3-1 and Table 7.5A.0-1). For the upper range of test parameters (Case 2) for which the interferer power $P_{interferer}$ is -25 dBm (Table 7.5.3-3 and Table 7.5A.0-3) the wanted signal power levels for the carriers of each sub-block shall be adjusted relative to $P_{interferer}$ like for Case 1.

		-2.5 - F_{offset}	-2.5 - F_{offset}	/ -2.5 - F_{offset}	-2.5 - F_{offset}	-2.5 - F_{offset}

NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.5A.0-3: Test parameters for Adjacent channel selectivity, Case 2

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	-50.5 +10log$_{10}$($N_{RB,c}$/ $N_{RB\ agg}$)	-47.5 +10log$_{10}$($N_{RB,c}$/$N_{RB\ agg}$)	-45.743.9 +10log$_{10}$($N_{RB,c}$/$N_{RB\ agg}$)	-44.5 +10log$_{10}$($N_{RB,c}$/$N_{RB\ agg}$) 5	-43.5 +10log$_{10}$($N_{RB,c}$/$N_{RB\ agg}$)
$P_{Interferer}$	dBm	-25				
$BW_{Interferer}$	MHz	5	5	5	5	5
$F_{Interferer}$ (offset)	MHz	2.5+ F_{offset} / -2.5- F_{offset}	2.5+ F_{offset} / -2.5- F_{offset}	2.5+ F_{offset} / -2.5- F_{offset}	2.5+ F_{offset} / -2.5- F_{offset}	2.5+ F_{offset} / -2.5- F_{offset}

NOTE 1: The transmitter shall be set to 24dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to four non-contiguously aggregated carriers per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in each band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the adjacent channel selectivity requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with ΔR_{IBNC} = 0 dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.5.3. For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of downlink carriers are replaced by requirements in Table 7.5A.0-4 with test parameters in Table 7.5A.0-5 and Table 7.5A.0-6. For non-contiguously aggregated component carriers configured in Band 46, the said requirements are applied to each sub-block for in-gap and out-of-gap interferers. For the sub-block with a single component carrier, the requirement is replaced by Table 7.5A.0-1a with test parameters in Table 7.5A.0-1b and Table 7.5A.0-1c. For the sub-block with two or more contiguous component carriers, the requirement is replaced by Table 7.5A.0-4 with test parameters in Table 7.5A.0-5 and Table 7.5A.0-6. All downlink carriers shall be active throughout the tests and the requirements for downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

Table 7.5A.0-4: Adjacent channel selectivity

E-UTRA band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	ACS	dB		24	22.2	21

	$BW_{Interferer}$	MHz		20	20	20	
	$F_{Interferer}$ (offset)	MHz		10 + F_{offset} / -10 - F_{offset}	10 + F_{offset} / -10 - F_{offset}	10 + F_{offset} / -10 - F_{offset}	
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 24dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1 and set-up according to Annex C.3.1. NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.							

The normative references for this requirement are TS 36.101 [2] clauses 7.5.1A and 7.5.1.

7.5A.1 Adjacent Channel Selectivity (ACS) for CA (intra-band contiguous DL CA and UL CA)

7.5A.1.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

7.5A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

7.5A.1.4 Test description

7.5A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5A.1.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] clause 4.1			NC						
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			Mid range						
Test CC Combination setting (NRB_agg) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE			Lowest N_{RB_agg} Highest N_{RB_agg} (Note 3)

100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0	-	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.									

Note 2:	Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier and to table 7.3A.0-1 for UE supporting two uplink carriers are tested per Test CA configuration.
Note 3:	If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.

1. Connect the SS and interfering source to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.5A.1.4.1-1.

5, Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.1.4.3.

7.5A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.1.4.3.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.5A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) + $10\log(P_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) + $10\log(P_L_{CRB}/N_{RB_alloc})$) for carrier frequency 3.0GHz < $f \leq 4.2$GHz.
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) + $10\log(S_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) + $10\log(S_L_{CRB}/N_{RB_alloc})$) for carrier frequency 3.0GHz < $f \leq 4.2$GHz.

7. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.

8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal in Case 1 at step 7.

10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) + $10\log(P_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,

or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) + 10log(P_L_{CRB}/N_{RB_alloc})) for carrier frequency 3.0GHz < f ≤ 4.2GHz.
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) + 10log(S_L_{CRB}/N_{RB_alloc})), for carrier frequency f ≤ 3.0GHz,
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) + 10log(S_L_{CRB}/N_{RB_alloc})) for carrier frequency 3.0GHz < f ≤ 4.2GHz.

11. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.

12. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the wanted signal in Case 2 at step 11.

Table 7.5A.1.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
F_{DL} = CA_1C Mid range (BW 20MHz + 20MHz)	2130.1 MHz	2149.9 MHz
F_{offset}	10 MHz	10 MHz
$F_{Interferer}$ (offset)	-12.5 MHz	+12.5 MHz
$\lfloor \lvert F_{interferer\ (offset)} \rvert / 0.015 + 0.5 \rfloor 0.015 + 0.0075$	12.5025 MHz	12.5025 MHz
Adjusted $F_{Interferer}$ (offset)	-12.5025 MHz	+12.5025 MHz
$F_{Interferer} = F_{DL}$ + Adjusted $F_{Interferer}$ (offset)	2117.5975 MHz	2162.4025 MHz

7.5A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

7.5A.1.5 Test Requirements

The throughput of each carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5A.1.5-2, and also under the conditions specified in table 7.5A.1.5-3.

Table 7.5A.1.5-1: Adjacent channel selectivity

		CA Bandwidth Class				
Rx Parameter	**Units**	**B**	**C**	**D**	**E**	**F**
ACS	dB	27	24			

Table 7.5A.1.5-2: Test parameters for Adjacent channel selectivity, Case 1

Rx Parameter	**Units**	**CA Bandwidth Class**				
		B	**C**	**D**	**E**	**F**
Pw in Transmission Bandwidth Configuration, per CC		REFSENS + 14 dB	REFSENS + 14 dB			
$P_{Interferer}$	dBm	Aggregated power + 25.5 dB	Aggregated power + 22.5 dB			
$BW_{Interferer}$	MHz	5	5			
$F_{Interferer}$ (offset)	MHz	2.5 + F_{offset} / -2.5 - F_{offset}	2.5 + F_{offset} / -2.5 - F_{offset}			
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.						
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1						
Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor \lvert F_{interferer\ (offset)} \rvert / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.						

Table 7.5A.1.5-3: Test parameters for Adjacent channel selectivity, Case 2

		B	**C**	**D**	**E**	**F**
Pw in Transmission Bandwidth Configuration, per CC	dBm	-50.5 +10log$_{10}$($N_{RB,c}$/ $N_{RB\ agg}$)	-47.5 +10log($N_{RB,c}$/ $N_{RB\ agg}$)			
$P_{Interferer}$	dBm	-25				
$BW_{Interferer}$	MHz	5	5			
$F_{Interferer}$ (offset)	MHz	2.5+ F_{offset}	2.5+ F_{offset}			

		/ -2.5- F_{offset}	/ -2.5- F_{offset}			

Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.

Note 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1

Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor |F_{interferer\ (offset)}| / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

7.5A.2 Adjacent Channel Selectivity (ACS) for CA (intra-band contiguous DL CA without UL CA)

7.5A.2.1 Test purpose

The test purpose is the same as in clause 7.5A.1.1.

7.5A.2.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.5A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

7.5A.2.4 Test description

7.5A.2.4.1 Initial conditions

Same as in clause 7.5A.1.4.1 with the following exceptions:

- Instead of Table 7.5A.1.4.1-1→ use Table 7.5A.2.4.1-1.
- Instead of clause 7.5A.1.4.3 → use clause 7.5A.2.4.3.

100	100	QPSK	100+100	QPSK	100	P_100@0	-	-	-

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier.
Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.
Note 4: For CA_70C all test frequency IDs shall be tested according to table 4.3.1.1.70A-1, in TS 36.508 [7].

7.5A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.5A.2.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.1.5-2 (Case 1) for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the Throughput measurement.

7. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-2 (Case 1) and frequency below the aggregated component carriers, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.

8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers in Case 1 at step 7.

10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.1.5-3 (Case 2) for carrier frequency f ≤

3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the Throughput measurement.

11. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-3 (Case 2) and frequency below the aggregated component carriers, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.

12. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the aggregated component carriers in Case 2 at step 11.

7.5A.2.4.3 Message contents

The message contents are the same as in clause 7.5.4.3.

7.5A.2.5 Test Requirements

The test requirements are the same as in clause 7.5A.1.5 with the following exceptions:

- Instead of Table 7.5A.1.5-1 → use Table 7.5A.2.5-1.
- Instead of Table 7.5A.1.5-2 → use Table 7.5A.2.5-2.
- Instead of Table 7.5A.1.5-3 → use Table 7.5A.2.5-3.

Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} as defined in subclause 6.2.5.
Note 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1
Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\left\lfloor F_{\text{interferer (offset)}} \right\rfloor / 0.015 + 0.5 \left\rfloor 0.015 + 0.0075 \right.$ MHz to be offset from the sub-carrier raster.

7.5A.3 Adjacent Channel Selectivity (ACS) for CA (inter-band DL CA without UL CA)

7.5A.3.1 Test purpose

The test purpose is the same as in clause 7.5A.1.1.

7.5A.3.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

This test case applies only for CA configurations that do not support UL CA.

7.5A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

7.5A.3.4 Test description

7.5A.3.4.1 Initial conditions

Same as in clause 7.5A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2.- Instead of Table 7.5A.1.4.1-1→ use Table 7.5A.3.4.1-1.
- Instead of clause 7.5A.1.4.3 → use clause 7.5A.3.4.3.

Table 7.5A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC

100	100	QPSK	100	100	QPSK	45
100	100	QPSK	100	100	QPSK	25
100	100	QPSK	100	100	QPSK	20

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.

7.5A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.5A.3.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.3.5-2 (Case 1), or 7.5A.3.5-2a for operating band 46. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.3.5-2 (Case 1) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

7. Set the Interferer signal level to the value as defined in Table 7.5A.3.5-2 (Case 1), or 7.5A.3.5-2a for operating band 46, and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

8. Measure the average throughput of SCC for a duration sufficient to achieve statistical significance according to Annex G.2.

9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal in Case 1 at step 7.

10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.3.5-3 (Case 2), or 7.5A.3.5-3a for operating band 46. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.3.5-3 (Case 2) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

11. Set the Interferer signal level to the value as defined in Table 7.5A.3.5-3 (Case 2), or 7.5A.3.5-3a for operating band 46, and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

12. Measure the average throughput of SCC for a duration sufficient to achieve statistical significance according to Annex G.2.

13. Repeat steps from 10 to 12, using an interfering signal above the wanted signal in Case 2 at step 11.

7.5A.3.4.3 Message contents

The message contents are the same as in clause 7.5.4.3.

7.5A.3.5 Test Requirements

For inter-band carrier aggregation with uplink assigned to one E-UTRA band, the adjacent channel requirements are defined with the uplink active on the band other than the band whose downlink is being tested i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement specified in Table 7.5A.3.5-1 (originated from the single carrier Table 7.5.3.5-1), or the requirement specified in Table 7.5A.3.5-1a for operating band 46, with the test parameters specified in Tables 7.5A.3.5-2 and 7.5A.3.5-3 (originated from the single carrier Tables 7.5.5-2 and 7.5.5-3), or with the test parameters specified in Tables 7.5A.3.5-2a and 7.5A.3.5-3a for operating band 46, for each component carrier, when operated as SCell, while both downlink carriers are active.

The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of any downlink CC.

7.5A.4 Adjacent Channel Selectivity (ACS) for CA (intra-band non-contiguous DL CA without UL CA)

7.5A.4.1 Test purpose

Same as in clause 7.5A.1.1.

7.5A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.5A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

7.5A.4.4 Test description

7.5A.4.4.1 Initial conditions

Same as in clause 7.5A.1.4.1 with the following exceptions:

- Instead of Table 7.5A.1.4.1-1→ use Tables 7.5A.4.4.1-1.
- Instead of clause 7.5A.1.4.3 → use clause 7.5A.4.4.3.

Table 7.5A.4.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes , and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: N/A (Range is not relevant)
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	Refer to test point
Test Parameters for CA Configurations	
use the content of Table 7.3A.4.4.1-1	

7.5A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.4.4.3.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.5A.4.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.4.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.1.5-2 (Case 1) for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the Throughput measurement.

7. Set the Interferer signal level to the value as defined in Table 7.5A.4.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal in Case 1 at step 7.

10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.4.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.4.5-3 (Case 2) for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the Throughput measurement.

11. Set the Interferer signal level to the value as defined in Table 7.5A.4.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

12. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the wanted signal in Case 2 at step 11.

7.5A.4.4.3 Message contents

The message contents are the same as in clause 7.5.4.3.

7.5A.4.5 Test requirement

The throughput of each carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5A.4.5-2, and also under the conditions specified in table 7.5A.4.5-3.

Table 7.5A.4.5-1: Adjacent channel selectivity

Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1							

7.5A.5 Adjacent Channel Selectivity (ACS) for 3DL CA

7.5A.5.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5A.5.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 3DL with CA configurations in Table 7.1-2a.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 3DL CA involving Band 46.

7.5A.5.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.5A.0.

7.5A.5.4 Test description

7.5A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with

applicable test parameters for each CA Configuration, and are shown in tables 7.5A.5.4.1-1 to 7.5A.5.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5A.5.4.1-1: Test Configuration Table

Initial Conditions												
Test Environment as specified in TS 36.508[7] subclause 4.1				NC								
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.				For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns								
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Refer to “PCC NRB” and “SCCs NRB” columns								
Network signalling value				NS_01 by default

3[12]	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs

	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB_agg}
41 2	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs
	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Lowest N_{RB_agg}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration, The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band contiguous:** X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41
Note 5: **Inter-band:** X,Y,Z correspond to the 1st, 2nd and 3rd band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19
Note 6: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1C-3A, X=1 and Y=3
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no refsens requirement shall be skipped.
Note 12: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_SCCx} = N_{RB_SCCx+1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_SCCx} for testing.

Table 7.5A.5.4.1-2: Test Configuration Table W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

ID	PCC				W_{gap} [MHz]	SCC1				W_{gap} [MHz]	SCC2			
	Band	Range	NRB			Band	Range	NRB			Band	Range	NRB	
	UL MOD	DL MOD	ULalloc (Note 2,3,4)	DL alloc		UL MOD	DL MOD	UL alloc	DL alloc		UL MOD	DL MOD	UL alloc	DL alloc
Default Test Settings for CA_XA-XA-YA Configurations (Intra-band non-contiguous + Inter-band)														
1	X	CC2	REFSENS	All RBs	Max	X	CC1	N/A	All RBs	-	Y	Mid	N/A	All RBs
	QPSK	QPSK		Highest N_{RB_agg}		N/A	QPSK		Highest N_{RB_agg}		N/A	QPSK		Highest N_{RB}
2	Y	Mid	REFSENS	All RBs	-	X	CC2	N/A	All RBs	Max	X	CC1	N/A	All RBs
	QPSK	QPSK		Highest N_{RB}		N/A	QPSK		Highest N_{RB_agg}		N/A	QPSK		Highest N_{RB_agg}

Default Test Settings for CA_XA-YA-YA Configurations (Intra-band non-contiguous + Inter-band)														
1	Y	CC2	REFSENS	All RBs	Max	Y	CC1	N/A	All RBs	-	X	Mid	N/A	All RBs
	QPSK	QPSK		Highest N_{RB_agg}		N/A	QPSK		**Highest N_{RB_agg}**		N/A	QPSK		Highest N_{RB}
2	X	Mid	REFSENS	All RBs	-	Y	CC2	N/A	All RBs	Max	Y	CC1	N/A	All RBs
	QPSK	QPSK		Highest N_{RB}		N/A	QPSK		Highest N_{RB_agg}		N/A	QPSK		Highest N_{RB_agg}
Test Settings for CA_29A-66A-66A Configuration (Intra-band non-contiguous + Inter-band)														
1	66	CC1	100@0	All RBs	50	66	CC2	N/A	All RBs	-	29	Mid	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		50
Test Settings for a CA_41C-41A Configuration (Intra-band non-contiguous + Intra-band contiguous)														
1	41	CC3	100@0	All RBs	134.2	41	CC2	N/A	All RBs	-	41	CC1	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100
Test Settings for a CA_41A-41C Configuration (Intra-band non-contiguous + Intra-band contiguous)														
2	41	CC3	100@0	All RBs	-	41	CC2	N/A	All RBs	134.2	41	CC1	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100
Group Test Settings for CA_66A-66A-XA or CA_XA-66A-66A Configurations (Intra-band non-contiguous + Inter-band)														
1	66	CC1	100@0	All RBs	50	66	CC2	N/A	All RBs	-	X	Mid	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		Highest NRB
2	X	Mid	REFSENS	All RBs	-	66	CC1	N/A	All RBs	50	66	CC2	N/A	All RBs
	QPSK	QPSK		Highest NRB		N/A	QPSK		100		N/A	QPSK		100
Test Settings for a CA_66A-66C Configuration (Intra-band non-contiguous + Intra-band contiguous)														
1	66	CC1	100@0	All RBs	30.2	66	CC2	N/A	All RBs	-	66	CC3	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100
Test Settings for a CA_66A-66A-66A Configuration (Intra-band non-contiguous)														
1	66	CC1	100@0	All RBs	15	66	CC2	N/A	All RBs	15	66	CC3	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.

Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 5: **Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5

Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.

Note 7: **Intra-band non-contiguous + Inter-band:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band non-contiguous + Intra-band contiguous:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 9:	**Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10:	The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11:	ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.58 if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.5A.5.4.1-1 to 7.5A.5.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.5.4.3.

7.5A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.5.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer to TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.5.4.1-1 to 7.5A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.5A.5.4.1-1 to 7.5A.5.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined for Case 1 in Table 7.5A.5.4.2-1according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq$ 3.0GHzor within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value defined for Case 1 in Table 7.5A.5.4.2-1, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.5.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.
8. Measure the average throughput for the carrier(s) indicated in table 7.5A.5.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.5A.5.4.2-1.
10. Set the Downlink signal level for PCC and SCCs to the value defined for Case 2 in Table 7.5A.5.4.2-1, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq$ 3.0GHz,
    or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value defined for Case 2 in Table 7.5A.5.4.2-1, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.5.4.2-1, using a modulated interferer

bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.

12. Measure the average throughput for the carrier(s) indicated in table 7.5A.5.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the measured carrier(s) according to table 7.5A.5.4.2-1.

14. Repeat steps 6 to 13 for component carriers listed in Table 7.5A.5.4.2-1.

Table 7.5A.5.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.5A.5.5-2 7.5A.5.5-3
	2		
Inter-band	1	SCC1	7.5A.5.5-0e 7.5A.5.5-0f 7.5A.5.5-5 7.5A.5.5-6
		SCC2	
	2	SCC1	
		SCC2	
	3	SCC1	
		SCC2	
Intra-band contiguous + Inter-band	1	SCC2	7.5A.5.5-0e 7.5A.5.5-0f 7.5A.5.5-5 7.5A.5.5-6
	2		
	3	SCC1, SCC2	7.5A.5.5-0b 7.5A.5.5-0c 7.5A.5.5-2 7.5A.5.5-3
	4		
Intra-band non-contiguous + Inter-band	1	SCC2	7.5A.5.5-0e 7.5A.5.5-0f 7.5A.5.5-5 7.5A.5.5-6
	2	SCC1

		SCC1, SCC2	7.5A.5.5-0b 7.5A.5.5-0c 7.5A.5.5-2 7.5A.5.5-3
	2	PCC, SCC1	7.5A.5.5-0b 7.5A.5.5-0c 7.5A.5.5-2 7.5A.5.5-3
		SCC2	7.5A.5.5-5 7.5A.5.5-6
Intra-band non-contiguous	1	PCC, SCC1, SCC2	7.5A.5.5-5 7.5A.5.5-6

Note 1: Test point ID for the particular CA configuration as defined in section 7.5A.5.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.5A.5.4.3 Message contents

The message contents are the same as in clause 7.5.4.3 for without UL CA.

The message contents are the same as in clause 7.5A.1.4.3 for UL CA.

7.5A.5.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of any downlink CC.

Table 7.5A.5.5-0a: Adjacent channel selectivity for 3DL CA (band 46)

E-UTRA band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	ACS	dB		24	22.2		

Table 7.5A.5.5-0b: Test parameters for Adjacent channel selectivity for 3DL CA (band 46), Case 1

E-UTRA Band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC			REFSENS + 14 dB	REFSENS + 14 dB		
	PInterferer	dBm		Aggregated power + 22.5 dB	Aggregated power + 20.7 dB		
	$BW_{Interferer}$	MHz		20	20		
	$F_{Interferer\ (offset)}$	MHz		$10 + F_{offset}$ / $-10 - F_{offset}$	$10 + F_{offset}$ / $-10 - F_{offset}$		

NOTE 1*: In a band capable of uplink operation, the transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1 and set-up according to Annex C.3.1.
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.5A.5.5-0c: Test parameters for Adjacent channel selectivity for 3DL CA (band46), Case 2

E-UTRA band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm		$-47.5 + 10\log10(N_{RB,c}/N_{RB\ agg})$	$-45.7 + 10\log10(N_{RB,c}/N_{RB\ agg})$		
	$P_{Interferer}$	dBm	-25				
	$BW_{Interferer}$	MHz		20	20		
	$F_{Interferer}$ (offset)	MHz		$10 + F_{offset}$ / $-10 - F_{offset}$	$10 + F_{offset}$ / $-10 - F_{offset}$		

NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 24dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1 and set-up according to Annex C.3.1.
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.5A.5.5-0d: Adjacent channel selectivity for 3DL CA (band 46)

E-UTRA band	Rx Parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46	ACS	dB				33		27

Table 7.5A.5.5-0e: Test parameters for Adjacent channel selectivity for 3DL CA (band 46), Case 1

E-UTRA Band	Rx Parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46	Power in Transmission Bandwidth Configuration	dBm	REFSENS + 14 dB					
	$P_{Interferer}$	dBm				REFSENS +45.5dB		REFSENS +39.5dB
	$BW_{Interferer}$	MHz				20		20
	$F_{Interferer}$ (offset)	MHz				15+0.0075 /-15-0.0075		20+0.0025 /-20-0.0025
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.								
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1 and set-up according to Annex C.3.1.								

Table 7.5A.5.5-0f: Test parameters for Adjacent channel selectivity for 3DL CA (band 46), Case 2

E-UTRA band	Rx Parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46	Power in Transmission Bandwidth Configuration	dBm				-56.5		-50.5
	$P_{Interferer}$	dBm	-25					
	$BW_{Interferer}$	MHz				20		20
	$F_{Interferer}$ (offset)	MHz				15+0.0075 /-15-0.0075		20+0.0025 /-20-0.0025
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 24dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.								
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1 and set-up according to Annex C.3.1.

NOTE 1: The transmitter shall be set to 24dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

7.5A.6

7.5A.7 Adjacent Channel Selectivity (ACS) for 4DL CA

7.5A.7.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5A.7.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 4DL with CA configurations in Table 7.1-2b.

7.5A.7.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.5A.0.

7.5A.7.4 Test description

7.5A.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 7.5A.7.4.1-1 to 7.5A.7.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3

respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5A.7.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 12: ID/test points that result in no refsens requirement shall be skipped.

Table 7.5A.7.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		

Note 2:	Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4:	**Intra-band non-contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.
Note 5:	**Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.
Note 6:	**Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.
Note 7:	REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8:	**Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9:	The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 10:	ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.58 if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in at least one band within the CA configuration.

2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1

4. The UL and DL Reference Measurement channels are set according to Tables 7.5A.7.4.1-1 to 7.5A.7.4.1-2.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.7.4.3.

7.5A.7.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.7.4.3.

3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer to TS 36.133 [4], clause 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.7.4.1-1 to 7.5A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.5A.7.4.1-1 to 7.5A.7.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCCs to the value defined for Case 1 in Table 7.5A.7.5-2 or 7.5A.7.5-5, 7.5A.7.5-2a or 7.5A.7.5-a for operating band 46 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHzor within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

7. Set the Interferer signal level to the value defined for Case 1 in Table 7.5A.7.5-2 or 7.5A.7.5-5, 7.5A.7.5-2a or 7.5A.7.5-a for operating band 46, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.7.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.

8. Measure the average throughput for the carrier(s) indicated in table 7.5A.7.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.5A.7.4.2-1.

10. Set the Downlink signal level for PCC and SCCs to the value defined for Case 2 in Table 7.5A.7.5-3 or 7.5A.7.5-6, and 7.5A.7.5-2a or 7.5A.7.5-a for operating band 46 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz,
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

11. Set the Interferer signal level to the value defined for Case 2 in Table 7.5A.7.5-3 or 7.5A.7.5-6 and 7.5A.7.5-2a or 7.5A.7.5-a for operating band 46, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.7.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.

12. Measure the average throughput for the carrier(s) indicated in table 7.5A.7.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the measured carrier(s) according to table 7.5A.7.4.2-1.

14. Repeat steps 6 to 13 for component carriers listed in Table 7.5A.7.4.2-1.

Note 1: Test point ID for the particular CA configuration as defined in section 7.5A.7.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.5A.7.4.3 Message contents

Same message contents as in clause 7.5.4.3 for without UL CA.

Same message contents as in clause 7.5A.1.4.3 for UL CA.

7.5A.7.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of any downlink CC.

7.5A.8 Adjacent Channel Selectivity (ACS) for 5DL CA

7.5A.8.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5A.8.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

7.5A.8.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.5A.0.

7.5A.8.4 Test description

7.5A.8.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 7.5A.8.4.1-1 to 7.5A.8.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5A.8.4.1-1: Test Configuration Table

Initial Conditions	
est Environment as specified in S 36.508 [7] subclause 4.1	NC
est Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA andwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
est CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the A Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
etwork signalling value	NS_01 by default

ote 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
ote 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
ote 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
ote 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
ote 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
ote 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-42A,X=1,Y=3,Z=7,R=20,S=42.
ote 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
ote 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
ote 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
ote 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
ote 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.5A.8.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.58 if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.5A.8.4.1-1 to 7.5A.8.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.8.4.3.

7.5A.8.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.8.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer to TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.8.4.1-1 to 7.5A.8.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.5A.8.4.1-1 to 7.5A.8.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined for Case 1 in Table 7.5A.8.5-2 or 7.5A.8.5-5, and7.5A.8.5-2a or 7.5A.8.5-5a for operating band 46 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHzor within +0dB, -4 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value defined for Case 1 in Table 7.5A.8.5-2 or 7.5A.8.5-5, and7.5A.8.5-2a or 7.5A.8.5-5a for operating band 46 according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.8.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for the carrier(s) indicated in table 7.5A.8.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.5A.8.4.2-1.
10. Set the Downlink signal level for PCC and SCCs to the value defined for Case 2 in Table 7.5A.8.5-3 or 7.5A.8.5-6 and 7.5A.8.5-2a or 7.5A.8.5-5a for operating band 46, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz,
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value defined for Case 2 in Table 7.5A.8.5-3 or 7.5A.8.5-6 and 7.5A.8.5-2a or 7.5A.8.5-5a for operating band 46, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.8.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
12. Measure the average throughput for the carrier(s) indicated in table 7.5A.8.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the measured carrier(s) according to table 7.5A.8.4.2-1.

14. Repeat steps 6 to 13 for component carriers listed in Table 7.5A.8.4.2-1.

Table 7.5A.8.4.2-1: Test repetition and measurement configuration

Note 1: Test point ID for the particular CA configuration as defined in section 7.5A.8.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.5A.8.4.3 Message contents

Same message contents as in clause 7.5.4.3 for without UL CA.

Same message contents as in clause 7.5A.1.4.3 for UL CA.

7.5A.8.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

7.5A.9 Adjacent Channel Selectivity (ACS) for 6DL CA

7.5A.9.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5A.9.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d.

7.5A.9.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.5A.0.

7.5A.9.4 Test description

7.5A.9.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 7.5A.9.4.1-1 to 7.5A.9.4.1-2. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5A.9.4.1-1: Test Configuration Table

Initial Conditions																									
Test Environment as specified in TS 36.508 [7] subclause 4.1					NC																				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.					For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns																				
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Refer to “PCC NRB” and “SCCs NRB” columns																				
Network signalling value					NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_42F, X=42.
Note 6: **Inter-band:** X,Y,Z,R,S,U correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-28A-42A,X=1,Y=3,Z=7,R=20,S=28.U=42
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-5A-7A-46C, X=1,Y=5,Z=7 and R=46.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.

Table 7.5A.9.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.58 if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.5A.9.4.1-1 to 7.5A.9.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.9.4.3.

7.5A.9.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.9.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer to TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5A.9.4.1-1 to 7.5A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.5A.9.4.1-1 to 7.5A.9.4.1-2 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined for Case 1 in Table 7.5A.9.5-2 or 7.5A.9.5-5, and7.5A.9.5-2a or 7.5A.9.5-5a for operating band 46 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value defined for Case 1 in Table 7.5A.9.5-2 or 7.5A.9.5-5, and7.5A.9.5-2a or 7.5A.9.5-5a for operating band 46 according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.9.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for the carrier(s) indicated in table 7.5A.9.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.5A.9.4.2-1.
10. Set the Downlink signal level for PCC and SCCs to the value defined for Case 2 in Table 7.5A.9.5-3 or 7.5A.9.5-6 and 7.5A.9.5-2a or 7.5A.9.5-5a for operating band 46, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency $f \leq 3.0$GHz,
or within +0dB, -4 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value defined for Case 2 in Table 7.5A.9.5-3 or 7.5A.9.5-6 and 7.5A.9.5-2a or 7.5A.9.5-5a for operating band 46, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.9.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
12. Measure the average throughput for the carrier(s) indicated in table 7.5A.9.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.

13. Repeat steps from 10 to 12, using an interfering signal above the measured carrier(s) according to table 7.5A.9.4.2-1.

14. Repeat steps 6 to 13 for component carriers listed in Table 7.5A.9.4.2-1.

Note 1: Test point ID for the particular CA configuration as defined in section 7.5A.9.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.5A.9.4.3 Message contents

Same message contents as in clause 7.5.4.3 for without UL CA.

Same message contents as in clause 7.5A.1.4.3 for UL CA.

7.5A.9.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

Table 7.5A.9.5-1: Adjacent channel selectivity for 6DL CA (Intra-band contiguous)

		CA Bandwidth Class				
Rx Parameter	**Units**	**B**	**C**	**D**	**E**	**F**

			B	**C**	**D**	**E**	**F**
46	ACS	dB		24	22.2	21	

Table 7.5A.9.5-2: Test parameters for Adjacent channel selectivity, Case 1, 6DL CA (Intra-band contiguous)

Rx Parameter	**Units**	**CA Bandwidth Class**				
		B	**C**	**D**	**E**	**F**
Pw in Transmission Bandwidth Configuration, per CC		REFSENS + 14 dB	REFSENS + 14 dB	REFSENS + 14 dB	REFSENS + 14 dB	REFSENS + 14 dB
$P_{Interferer}$	dBm	Aggregated power + 25.5 dB	Aggregated power + 22.5 dB	Aggregated power + 20.7 dB	Aggregated power + 19.5 dB	Aggregated power + 18.5 dB
$BW_{Interferer}$	MHz	5	5	5	5	5
$F_{Interferer}$ (offset)	MHz	2.5 + F_{offset} / -2.5 - F_{offset}	2.5 + F_{offset} / -2.5 - F_{offset}	2.5 + F_{offset} / -2.5 - F_{offset}	2.5 + F_{offset} / -2.5 - F_{offset}	2.5 + F_{offset} / -2.5 - F_{offset}
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier.						
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.						
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.						

Table 7.5A.9.5-2a: Test parameters for Adjacent channel selectivity, Case 1, 6DL CA, (Intra-band contiguous), Band 46

E-UTRA Band	**Rx Parameter**	**Units**	**CA Bandwidth Class**				
			B	**C**	**D**	**E**	**F**
46	Pw in Transmission Bandwidth Configuration, per CC			REFSENS + 14 dB	REFSENS + 14 dB	REFSENS + 14 dB	
	PInterferer	dBm		Aggregated power + 22.5 dB	Aggregated power + 20.7 dB	Aggregated power + 19.5 dB	
	$BW_{Interferer}$	MHz		20	20	20	
	$F_{Interferer\ (offset)}$	MHz		10 + F_{offset} / -10 - F_{offset}	10 + F_{offset} / -10 - F_{offset}	10 + F_{offset} / -10 - F_{offset}	
NOTE 1*: In a band capable of uplink operation, the transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A.							

NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1.
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5 \rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.5A.9.5-3: Test parameters for Adjacent channel selectivity, Case 2, 6DL CA (Intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	-50.5 +10log10(N RB,c/ N RB agg)	-47.5 +10log10(N RB,c/N RB agg)	-45.7 +10log10 (N RB,c/N RB agg)	-44.5 +10log10(N RB,c/N RB agg)	-43.5 +10log10(N RB ,c/N RB agg)
$P_{Interferer}$	dBm	-25				
$BW_{Interferer}$	MHz	5	5	5	5	5
$F_{Interferer}$ (offset)	MHz	2.5+ Foffset / -2.5- Foffset	2.5+ Foffset / -2.5- Foffset	2.5+ Foffset / -2.5- Foffset	2.5+ Foffset / -2.5- Foffset	2.5+ Foffset / -2.5- Foffset

NOTE 1: The transmitter shall be set to 24dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5 \rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.5A.9.5-3a: Test parameters for Adjacent channel selectivity, Case 2, 6DL CA(Intra-band contiguous), Band 46

E-UTRA band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm		-47.5 +10log10(NRB ,c/N RB agg)	-45.7 +10log10(N RB,c/N RB agg)	-44.5 +10log10(N RB,c/N RB agg)	
	$P_{Interferer}$	dBm	-25				
	$BW_{Interferer}$	MHz		20	20	20	
	$F_{Interferer}$ (offset)	MHz		10 + Foffset / -10 - Foffset	10 + Foffset / -10 - Foffset	10 + Foffset / -10 - Foffset	

NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 24dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1.
NOTE 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5 \rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

7.5B Adjacent Channel Selectivity (ACS) for UL-MIMO

7.5B.1 Test purpose

Adjacent channel selectivity tests the ability of UE that support UL-MIMO to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

7.5B.3 Minimum conformance requirements

For UE(s) with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.5.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter P_{CMAX_L} is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1B.

7.5B.4 Test description

7.5B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5B.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC

Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD	**TDD**		**FDD**	**TDD**
1.4MHz	QPSK	Full	Full	QPSK	5	5
3MHz	QPSK	Full	Full	QPSK	4	4
5MHz	QPSK	Full	Full	QPSK	8	8
5MHz	QPSK	Full	N/A	QPSK	5[3]	N/A
10MHz	QPSK	Full	Full	QPSK	12	12
15MHz	QPSK	Full	Full	QPSK	16	16
20MHz	QPSK	Full	Full	QPSK	18	18
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 7.3.3-2. Note 2: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 3: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS and interfering source to the UE antenna connectors as shown in TS 36.508 [7] Figure A.29.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5B.4.3.

7.5B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.5B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 7.5B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value as defined in Table 7.5B.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5B.5-2 (Case 1) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the Throughput measurement.
4. Set the Interferer signal level to the value as defined in Table 7.5B.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 4.
7. Set the Downlink signal level to the value as defined in Table 7.5B.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5B.5-3 (Case 2) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.
8. Set the Interferer signal level to the value as defined in Table 7.5B.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

9. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

10. Repeat steps from 7 to 9, using an interfering signal above the wanted signal in Case 2 at step 8.

11. Repeat for applicable channel bandwidths and operating band combinations in both Case 1 and Case 2.

7.5B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception

Table 7.5B.4.3-1: UplinkPowerControlDedicated

Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

7.5D Adjacent Channel Selectivity (ACS) for ProSe

7.5D.0 Minimum conformance requirements

The UE shall fulfil the minimum requirement specified in Table 7.5D.0-1 for all values of an adjacent channel interferer up to –25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5D.0-2 and Table 7.5D.0-3 where the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2.

Table 7.5D.0-1: Adjacent channel selectivity for ProSe

		Channel bandwidth					
Rx Parameter	**Units**	**1.4 MHz**	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS 36.211.							

Table 7.5D.0-3: Test parameters for Adjacent channel selectivity for ProSe, Case 2

Rx Parameter	**Units**	**Channel bandwidth**					
		1.4 MHz	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
Power in Transmission Bandwidth Configuration	dBm			-56.5	-56.5	-53.5	-50.5
$P_{Interferer}$	dBm	-25					
$BW_{Interferer}$	MHz			5	5	5	5
$F_{Interferer}$ (offset)	MHz			5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 / -12.5-0.0025

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS 36.211.

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1D.

7.5D.1 Adjacent Channel Selectivity (ACS) for ProSe Direct Discovery

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

7.5D.1.1 Test Purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

7.5D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.5D.0.

7.5D.1.4 Test Description

7.5D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.5D.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range(Note 4)					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz, Highest					
	Downlink Configuration (Note 2)		**Uplink Configuration (Note 2)**		**Sidelink Configuration (Reception) (Note 3)**	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2

20MHz	QPSK	30	QPSK	30	QPSK	2

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1.
Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes.
Note 3: The RB start for the transmission of Sidelink RMC is RB#0.
Note 4: Sidelink uses the frequencies defined for Uplink.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.70.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.5D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

7.5D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "…Step 1…") are defined in clause 7.5D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.5D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.5D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.5D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.5D.1.4.1-1 to the value as defined in Table 7.5D.1.5-2 (Case 1)
7. Set the Interferer signal level to the value as defined in Table 7.5D.1.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
9. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
10. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
11. SS shall compute the throughput as following:

    TP = Pok / Ptot * 100%

12. Repeat steps from 6 to 12, using an interfering signal above the wanted signal in Case 1 at step 7.
13. SS transmits PSDCH to transmit the SL RMC according to Table 7.5D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.5D.1.4.1-1 to the value as defined in Table 7.5D.1.5-3 (Case 2)

14. Set the Interferer signal level to the value as defined in Table 7.5D.1.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

15. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.

16. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".

17. SS calculates the variable Pok as (current counter value - counter value at last test iteration).

18. SS shall compute the throughput as following:

    TP = Pok / Ptot * 100%

19. Repeat steps from 13 to 18, using an interfering signal above the wanted signal in Case 2 at step 14.

7.5D.1.5 Test Requirement

The throughput TP shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.5D.1.5-1, 7.5D.1.5-2 and 7.5D.1.5-3.

Table 7.5D.1.5-1: Adjacent channel selectivity for ProSe

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
ACS	dB			33.0	33.0	30	27

Table 7.5D.1.5-2: Test parameters for Adjacent channel selectivity for ProSe, Case 1

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + 14 dB					
$P_{Interferer}$	dBm			REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +42.5dB	REFSENS +39.5dB
$BW_{Interferer}$	MHz			5	5	5	5
$F_{Interferer}$ (offset)	MHz			5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 / -12.5-0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.5D.1.5-3: Test parameters for Adjacent channel selectivity for ProSe, Case 2

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm			-56.5	-56.5	-53.5	-50.5

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

7.5D.2 Adjacent Channel Selectivity (ACS) for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test procedure is TBD
- Message contents are TBD

7.5D.2.1 Test Purpose

Same test purpose as in clause 7.5D.1.

7.5D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

7.5D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.5D.0.

7.5D.2.4 Test Description

7.5D.2.4.1 Initial Conditions

TBD

7.5D.2.4.2 Test Procedure

TBD

7.5D.2.4.3 Message Contents

TBD

7.5D.2.5 Test Requirement

Same test requirement as in clause 7.5D.1.5.

7.5E Adjacent Channel Selectivity (ACS) for category 0

7.5E.1 Test purpose

Same test purpose as in clause 7.5.1.

7.5E.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward of category 0.

7.5E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.5.3

7.5E.4 Test description

7.5E.4.1 Initial conditions

Same initial conditions as in clause 7.5.4.1 with the following exceptions:

- Instead of Table 7.5.4.1-1 → use Table 7.5E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

Table 7.5E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] clause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] clause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A

10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.
Note 4: Downlink RB position shall be RB_{start} = 0.

7.5E.4.2 Test procedure

Same test procedure as in clause 7.5.4.2

7.5E.4.3 Message contents

Same message contents as in clause 7.5.4.3.

7.5E.5 Test requirement

The throughput R_{av} shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5E.5-2, and also under the conditions specified in table 7.5E.5-3.

Table 7.5E.5-1: Adjacent channel selectivity

$F_{Interferer}$ (offset)	MHz	1.4+0.0025 / -1.4-0.0025	3+0.0075 / -3-0.0075	5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 / -12.5-0.0025
Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

7.5EA Adjacent Channel Selectivity (ACS) for UE category M1

7.5EA.1 Test purpose

Adjacent channel selectivity tests the ability of category M1 UE to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5EA.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of category M1.

7.5EA.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

The UE shall fulfil the minimum requirement specified in Table 7.5EA.3-1 for all values of an adjacent channel interferer up to –25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5EA.3-2 and Table 7.5EA.3-3 where the throughput R_{av} shall be $\geq$ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1). For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.5EA.3-1: Adjacent channel selectivity

		Channel bandwidth					
Rx Parameter	**Units**	**1.4 MHz**	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**

Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in clause 6.2.5EA. Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1.

7.5EA.4 Test description

7.5EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5EA.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.5EA.4.1-1: Test Configuration Table RX test cases UE Cat-M1

Initial Conditions	
Test Environment as specified in TS 36.508[7] clause 4.1	NC
Test Frequencies as specified in TS36.508 [7] clause 4.3.1	Mid range
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.	1.4, 3MHz, 5MHz
Test Parameters for Channel Bandwidths and Narrowband positions	

	Downlink Configuration			Uplink Configuration		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	4	4	QPSK	6	6
3MHz	QPSK	4	4	QPSK	6	6
5MHz	QPSK	4	4	QPSK	6	6
Note 1: Downlink RB position shall be RB_{start} = 0 within the narrowband. Note 2: Use narrowband index (TS36.211, 5.2.4) 0 when interferer is below carrier, and max narrowband index when interferer is above carrier.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.

4. The UL and DL Reference Measurement channels are set according to Table 7.5EA.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.5EA.4.3.

7.5EA.4.2 Test procedure

1. SS transmits PDSCH via M-PDCCH DCI format 6-1A for C_RNTI to transmit the DL RMC according to Table 7.5EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via M-PDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 7.5EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the value as defined in Table 7.5EA.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5EA.5-2 (Case 1) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

4. Set the Interferer signal level to the value as defined in Table 7.5EA.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 4.

7. Set the Downlink signal level to the value as defined in Table 7.5EA.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5EA.5-3 (Case 2) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the Throughput measurement.

8. Set the Interferer signal level to the value as defined in Table 7.5EA.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

9. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

10. Repeat steps from 7 to 9, using an interfering signal above the wanted signal in Case 2 at step 8.

11. Repeat for applicable channel bandwidths and operating band combinations in both Case 1 and Case 2.

7.5EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception:

Note 1: The transmitter shall be set to 24dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

7.5EC Adjacent Channel Selectivity (ACS) for UE category M2

7.5EC.1 Test purpose

Adjacent channel selectivity tests the ability of category M2 UE to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5EC.2 Test applicability

This test applies to all types of E-UTRA UE release 14 and forward of category M2.

7.5EC.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive a E-UTRA signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

The UE shall fulfil the minimum requirement specified in Table 7.5EC.3-1 for all values of an adjacent channel interferer up to –25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5EC.3-2 and Table 7.5EC.3-3 where the throughput R_{av} shall be $\geq$ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1). For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.5EC.3-1: Adjacent channel selectivity

		Channel bandwidth					
Rx Parameter	**Units**	**1.4 MHz**	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**

7.5F Adjacent Channel Selectivity (ACS) for category NB1 and NB2

7.5F.1 Test purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5F.2 Test applicability

This test case applies to all types of E-UTRA FDD UE release 13 and forward of category NB1 UE.

This test case applies to all types of E-UTRA FDD UE release 14 and forward of category NB2 UE.

This test case applies to all types of E-UTRA TDD UE release 15 and forward of category NB1 and NB2.

7.5F.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive a signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

Category NB1 and NB2 UE shall fulfil the minimum requirement specified in Table 7.5F.3-1 for all values of an adjacent channel interferer up to –25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5F.3-1 where the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channel as specified in Annex A.3.2.

Table 7.5F.3-1: Adjacent channel selectivity parameters for category NB1 and NB2 UE

ACS1 test Parameters		
Interferer	**GSM (GMSK)**	**E-UTRA**
Category NB1 or NB2 signal power (P_{wanted}) / dBm	REFSENS + 14 dB	
interferer signal power ($P_{Interferer}$) / dBm	REFSENS + 42 dB	REFSENS + 47 dB
Interferer bandwidth	200 kHz	5 MHz
Interferer offset from category NB1 or NB2 channel edge	±200 kHz	±2.5 MHz
ACS2 test Parameters

interferer signal power ($P_{Interferer}$) / dBm	-25 dBm	
Interferer bandwidth	200 kHz	5 MHz
Interferer offset from category NB1 or NB2 channel edge	±200 kHz	±2.5 MHz

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1F.

7.5F.4 Test description

7.5F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.5F.4.1-1. The details of the downlink reference measurement channel (RMC) are specified in Annex A.3. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

Table 7.5F.4.1-1: Test Configuration Table

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause 8.1.1			NC		
Test Frequencies as specified in TS36.508 [7] clause 8.1.3.1			Frequency ranges defined in Annex K.1.1		
Configuration ID	**Downlink Configuration**		**Uplink Configuration**		
	Modulation	Subcarriers	Modulation	N_{tones}	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15kHz

1. Connect the SS to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.4 using only the main UE Tx/Rx antenna, and noting that the interference can be either GSM or E-UTRA.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.2, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channel is set according to Table 7.5F.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 7.5F.4.3.

7.5F.4.2 Test procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C_RNTI to transmit the DL RMC according to Table 7.5F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send HARQ feedback based on information contained in DCI format N1.
2. Set the Downlink signal level to the value defined for ACS1, GSM in Table 7.5F.5-1. For steps 2 to 5 and 6 to 9, use the default message contents.
3. Set the Interferer signal level to the value defined for ACS1, GSM in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer bandwidth as defined in Annex D.2 of the present document.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
5. Repeat steps 2 to 4, using an interfering signal above the wanted signal at step 3.
6. Set the Downlink signal level to the value defined for ACS1, E-UTRA in Table 7.5F.5-1.
7. Set the Interferer signal level to the value defined for ACS1, E-UTRA in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer bandwidth as defined in Annex D.2 of the present document.
8. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps 6 to 8, using an interfering signal above the wanted signal at step 7.
10. Release the connection through State 3A-NB.
11. Modify system information elements according to Table 7.5F.4.3-1 and notify the UE via paging message with SystemInformationModification included.
12. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5 using the new UL power control setting.
13. SS transmits NPDSCH via NPDCCH DCI format N1 for C_RNTI to transmit the DL RMC according to Table 7.5F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send HARQ feedback based on information contained in DCI format N1.
14. Set the Downlink signal level to the value defined for ACS2, GSM in Table 7.5F.5-1. For steps 14 to 17 and 18 to 21, use message contents with the exceptions defined in Table 7.5F.4.3-1.
15. Set the Interferer signal level to the value defined for ACS2, GSM in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer of 5MHz bandwidth defined in Annex D.2 of the present document.
16. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
17. Repeat steps 14 to 16, using an interfering signal above the wanted signal at step 15.
18. Set the Downlink signal level to the value defined for ACS2, E-UTRA in Table 7.5F.5-1.
19. Set the Interferer signal level to the value defined for ACS2, E-UTRA in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer of 5MHz bandwidth defined in Annex D.2 of the present document.
20. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
21. Repeat steps 18 to 20, using an interfering signal above the wanted signal at step 19.

7.5F.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 8.1.6 with the following exceptions:

7.5G Adjacent Channel Selectivity (ACS) for V2X Communication

7.5G.1 Adjacent channel selectivity (ACS) for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

7.5G.1.1 Test Purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

7.5G.1.2 Test Applicability

This test applies to all types of UE that support V2X Sidelink Communication and Band 47.

7.5G.1.3 Minimum Conformance Requirements

The V2X UE shall fulfil the minimum requirement specified in Table 7.5G.1.3-1 for all values of an adjacent channel interferer up to -25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5G.1.3-2 and Table 7.5G.1.3-3 where the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2.

Table 7.5G.1.3-1: Adjacent channel selectivity for V2X

		Channel bandwidth

$F_{Interferer}$ (offset)	MHz				10+0.0125 / -10-0.0125		15+0.0075 / -15-0.0075
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1G.

7.5G.1.4 Test Description

7.5G.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5G.1.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.5G.1.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range

Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, Highest	
Test Parameters for Channel Bandwidths		
	V2X Configuration to Receive	
Ch BW	Modulation	PSSCH RB allocation
10MHz	QPSK	48@2
20MHz	QPSK	96@2

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RX antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92a.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.5G.1.4.3.

3. The V2X reference measurement channel is set according to Table 7.5G.1.4.1-1.

3a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. Ensure the UE is in State 5A-V2X in Receive Mode according to TS 36.508 [7] clause 4.5.9. Message content exceptions are defined in clause 7.5G.1.4.3.

6. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.5G.1.4.2 Test Procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.5G.1.4.1-1.

2. Set the Interferer signal level to the value as defined in Table 7.5G.1.5-2 (Case 1) and frequency below and above the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

3. Set the Interferer signal level to the value as defined in Table 7.5G.1.5-3 (Case 2) and frequency below and above the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.5G.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.10.

7.5G.1.5 Test Requirement

The throughput R_{av} shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 under the conditions specified in table 7.5G.1.5-2, and also under the conditions specified in table 7.5G.1.5-3.

Table 7.5G.1.5-1: Adjacent channel selectivity for V2X

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

7.5G.2 Adjacent channel selectivity (ACS) for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

7.5G.2.1 Test Purpose

The test purpose is the same as in clause 7.5G.1.1.

7.5G.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 14 and forward that support V2X Communication.

7.5G.2.3 Minimum Conformance Requirements

The V2X UE shall fulfil the minimum requirement specified in Table 7.5G.2.3-1 for all values of an adjacent channel interferer up to -22 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5G.2.3-2 and Table 7.5G.2.3-3 where the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2

Table 7.5G.2.3-1: Adjacent channel selectivity for V2X

		Channel bandwidth

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.5G.2 apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.5.3 apply for the E-UTRA downlink reception while all downlink carriers are active.

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1G.

7.5G.2.4 Test Description

7.5G.2.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5G.2.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively.

Table 7.5G.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal						
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range						
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest N_{RB_agg}, Highest N_{RB_agg}						
Test Parameters for Channel Bandwidths							
	Downlink		**Uplink Configuration**		**V2X Configuration**		
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Ch BW	Mod'n	PSSCH RB allocation
1.4 MHz	QPSK	1	QPSK	1	10 MHz	QPSK	48@2

1.4 MHz	QPSK	5	QPSK	5	20 MHz	QPSK	96@2
3 MHz	QPSK	1	QPSK	1			
3 MHz	QPSK	4	QPSK	4			
5 MHz	QPSK	1	QPSK	1			
5 MHz	QPSK	8	QPSK	8			
10 MHz	QPSK	1	QPSK	1			
10 MHz	QPSK	12	QPSK	12			
15 MHz	QPSK	1	QPSK	1			
15 MHz	QPSK	16	QPSK	16			
20 MHz	QPSK	1	QPSK	1			
20 MHz	QPSK	18	QPSK	18			
Note 1: V2X con-current band configurations are checked separately for each band configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G.1-2.							
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3G.0-4 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2G.1-2).							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.93c.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3. Message content exceptions are defined in clause 7.5G.2.4.3.

3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and V2X Reference Measurement Channels are set according to Table 7.5G.2.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C. Message content exceptions are defined in clause 7.5G.2.4.3.

7.5G.2.4.2 Test Procedure

1. The SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.5G.2.4.1-1 on E-UTRA Band. The SS sends downlink MAC padding bits on the DL RMC.

2. SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 7.5G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL and V2X RMCs.

3. Set the Downlink signal level for V2X band and E-UTRA band to the value as defined in Table 7.5G.2.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5G.2.5-2 (Case 1) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz or within +0, -4.3 dB of the target level for carrier frequency $f \leq 6.0$GHz, for at least the duration of the Throughput measurement.

4. Set the Interferer signal level to the value as defined in Table 7.5G.2.5-2 (Case 1) and frequency below and above the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

5. Measure the mean power of the UE in the channel bandwidth for each test point in table 7.5G.1.5-2 according to the test configuration from Table 7.5G.2.4.1-1. The period of measurement shall be at least continuous duration of one sub-frame (1ms).

6. Set the Downlink signal level for V2X band and E-UTRA band to the value as defined in Table 7.5G.2.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5G.2.5-2 (Case 1) for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz or within +0, -4.3 dB of the target level for carrier frequency $f \leq 6.0$GHz, for at least the duration of the Throughput measurement.

7. Set the Interferer signal level to the value as defined in Table 7.5G.2.5-3 (Case 2) and frequency below and above the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

8. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.5G.2.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.5G.2.5 Test Requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Table 7.5G.2.5-2, and also under the conditions specified in table 7.5G.2.5-3.

Table 7.5G.2.5-1: Adjacent channel selectivity for V2X

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

7.5G.3 Adjacent channel selectivity (ACS) for V2X Communication / Intra-band contiguous multi-carrier operation

7.5G.3.1 Test Purpose

The test purpose is the same as in clause 7.5G.1.1.

7.5G.3.2 Test Applicability

This test applies to all types of UE that support Intra-band contiguous multi-carrier operation V2X Sidelink Communication and Band 47.

7.5G.3.3 Minimum Conformance Requirements

For intra-band contiguous multi-carrier operation, the V2X UE shall fulfil the minimum requirement specified in Table 7.5G.3.3-1 to Table 7.5G.3.3-3 where the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2.

Table 7.5G.3.3-1: Adjacent channel selectivity for intra-band contiguous multi-carrier for V2X UE

		V2X Bandwidth Class

$F_{Interferer}$ (offset)	MHz	5+ F_{offset} / -5- F_{offset}				
NOTE 1: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5 \rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.						
NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.						

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1G.

7.5G.3.4 Test Description

7.5G.3.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5G.3.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.5G.3.4.1-1: Test Configuration Table

Initial Conditions			
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1		Low range, High range	
Test CC Combination setting(N_{RB_agg}) as specified in subclause 5.4.2G		Lowest N_{RB_agg}, Highest N_{RB_agg}	
Test Parameters for Channel Bandwidths			
V2X Multi-carrier Configuration		**V2X PSSCH Allocation**	
CC1 N_{RB}	**CC2 N_{RB}**	**CC1 & CC2 Mod**	**CC1 and CC2 RB Allocation**
50	50	QPSK	48+48

1. Connect the SS and GNSS simulator to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92d.
2. The parameter settings for the V2X sidelink communication over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.5G.3.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.5G.3.4.1-1.

4a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 5A-V2X according to TS 36.508 [7] clause 4.5.9.
7. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)
8. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.5G.3.4.2 Test Procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.5G.3.4.1-1.
2. Set the Interferer signal level to the value as defined in Table 7.5G.3.5-2 (Case 1) and frequency below and above the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
3. Set the Interferer signal level to the value as defined in Table 7.5G.3.5-3 (Case 2) and frequency below and above the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.

4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2 .

7.5G.3.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.5G.3.5 Test Requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Table 7.5G.3.5-2, and also under the conditions specified in table 7.5G.3.5-3.

Table 7.5G.3.5-1: Adjacent channel selectivity for intra-band contiguous multi-carrier for V2X

		V2X Bandwidth Class

$F_{Interferer}$ (offset)	MHz	5 + F_{offset} / -5 - F_{offset}				
NOTE 1: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5 \rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.						
NOTE 2: The requirement is applied for 2 carrier intra-concurrent receptions when 2 carrier transmission are activated at the same time						

Table 7.5G.3.5-3: Test parameters for Adjacent channel selectivity, Case 2

Rx Parameter	**Units**	**V2X Bandwidth Class**				
		B	**C**	**D**	**E**	**F**
Pw in Transmission Bandwidth Configuration, per CC	dBm	-50.5 +10log$_{10}$($N_{RB,c}$/ $N_{RB\ agg}$)				
$P_{Interferer}$	dBm	-22				
$BW_{Interferer}$	MHz	10				
$F_{Interferer}$ (offset)	MHz	5+ F_{offset} / -5- F_{offset}				
NOTE 1: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5 \rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.						
NOTE 2: The requirement is applied for 2 carrier intra-concurrent receptions when 2 carrier transmissions are activated at the same time.						

7.6 Blocking characteristics

The blocking characteristic is a measure of the receiver's ability to receive a wanted signal at its assigned channel frequency in the presence of an unwanted interferer on frequencies other than those of the spurious response or the adjacent channels, without this unwanted input signal causing a degradation of the performance of the receiver beyond a

specified limit. The blocking performance shall apply at all frequencies except those at which a spurious response occur.

7.6.1 In-band blocking

7.6.1.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 8 and forward.

7.6.1.3 Minimum Conformance Requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1.3-1 and 7.6.1.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.1.3-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
Note 3: The REFSENS power level is specified in Table 7.3.3-1 and Table 7.3.3-1a for two and four antenna ports, respectively.

Table 7.6.1.3-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 48, 50,	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 15 to F_{DL_high} + 15				

51, 53, 54, 65, 66, 68, 70, 72, 73, 74, 85, 87, 88, 106								
30	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				F_{DL-low} –12
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 – $F_{loffset, case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset, case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies								

For the UE which supports inter band CA configuration in Table 7.3.3-1A, $P_{Interferer}$ power defined in Table 7.6.1.3-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.

7.6.1.4 Test Description

7.6.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Applicable only to E-UTRA FDD Bands 31, 72 and 73. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.4.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to in Table 7.6.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1.4.3.

7.6.1.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1.5-1 and 7.6.1.5-2.
4. Set the downlink signal level according to the table 7.6.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 3.
7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1.4.2-1.

Table 7.6.1.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 5MHz)	2137.5 MHz	2142.5 MHz
Interferer case 1	2129.9875 MHz	2150.0125 MHz
Interferer case 2 (inner frequency)	2124.9925 MHz	2155.0075 MHz
Interferer case 2 (outer frequency)	2099.9925 MHz	2180.0075 MHz
Outer limit for in band blocking	2095MHz	2185MHz
Number of test frequencies case 2	6	6

Number of test frequencies for Band 17(asymmetric!), BW 5MHz, case 2	0	2

7.6.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

Table 7.6.1.5-2: In-band blocking

E-UTRA band	**Parameter**	**Unit**	**Case 1**	**Case 2**	**Case 3**	**Case 4**	**Case 5**	**Case 6**
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$			-BW/2 – 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 31, 33, 34, 35,	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 15 to F_{DL_high} + 15				

36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 48, 50, 51, 53, 54, 65, 66, 68, 70, 72, 73, 74, 85, 87, 88, 106								
30	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				F_{DL-low} –– 12
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 – $F_{loffset, case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset, case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies								

For the UE which supports inter band CA configuration in Table 7.3.3-1A, $P_{Interferer}$ power defined in Table 7.6.1.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A.

7.6.1_1 In-band blocking with 4 Rx antenna ports

7.6.1_1.1 Test Purpose

In-band blocking with 4 Rx antenna ports is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE 4 Rx receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

7.6.1_1.3 Minimum Conformance Requirements

Same as in clause 7.6.1.3.

7.6.1_1.4 Test Description

7.6.1_1.4.1 Initial Conditions

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
Note 3: The REFSENS power level is specified in Table 7.3_1.5-1.

7.6.1A In-band blocking for CA

7.6.1A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the in-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.6.1 for each component carrier while all downlink carriers are active. For the UE which supports inter band CA configuration in Table 7.3.3-1A, $P_{Interferer}$ power defined in Table 7.6.1.3-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A. For E-UTRA CA configurations including an operating band without uplink operation or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. The requirements for the component carrier configured in the operating band without uplink operation are specified in Table 7.6.1A.0-0, Table 7.6.1A.0-0a and Table 7.6.1A.0-0b.

Table 7.6.1A.0-0: In-band blocking for additional operating bands for carrier aggregation

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
29, 32, 67, 69	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.0-0a: In band blocking parameters for additional operating bands for carrier aggregation

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					9
	$BW_{Interferer}$	MHz						20
	$F_{Ioffset,\ case\ 1}$	MHz						30+0.0125
	$F_{Ioffset,\ case\ 2}$	MHz						50+0.0075

NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: The interferer consists of the Reference measurement channel specified in Annex A.3.2 (TBD)

Table 7.6.1A.0-0b: In-band blocking for additional operating bands for carrier aggregation

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
46	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 60 to F_{DL_high} + 60

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band.

NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

For E-UTRA CA configurations listed in Table 7.3A.0-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the in-band blocking requirements of subclause 7.6.1A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.1A.0-1 with the uplink configuration set according to Table 7.3A.0-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Tables 7.6.1A.0-1 and Tables 7.6.1A.0-2 being on either side of the aggregated signal. The throughput of each carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1A.0-1 and 7.6.1A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.6.1A.0-1 and 7.6.1A.0-2.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, each larger than or equal to 5 MHz, the in-band blocking requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclause 7.6.1.3 and in this subclause for single component carrier and two component carriers per sub-block, respectively. The requirements apply for in-gap and out-of-gap interferers while all downlink carriers are active.

Table 7.6.1A.0-1: In band blocking parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8	15	16
$BW_{Interferer}$	MHz	5	5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz	7.5	7.5	7.5	7.5	7.5
$F_{Ioffset,\ case\ 2}$	MHz	12.5	12.5	12.5	12.5	12.5
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1						

Table 7.6.1A.0-2: In-band blocking

CA configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq-F_{offset}-F_{Ioffset,case\ 2}$ & $\geq+F_{offset}+F_{Ioffset,case\ 2}$
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C, CA_42D, CA_42E, CA_42F, CA_43C, CA_48C, CA_48D, CA_48E, CA_48F, CA_66B, CA_66C, CA_70C	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band Note 2: For each carrier frequency the requirement is valid for two frequencies: a) the carrier frequency -F_{offset} - $F_{Ioffset,\ case\ 1}$ and b) the carrier frequency +F_{offset} + $F_{Ioffset,\ case\ 1}$ Note 3: F_{offset} is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth.				

lote 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in the band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the in-band blocking requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with ΔR_{IBNC} = 0 dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.6.1.3. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of uplink operation.

For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of downlink carriers are replaced by requirements in Table 7.6.1A.0-3 and 7.6.1A.0-4.

Table 7.6.1A.0-3: In band blocking parameters

E-UTRA Band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
				12	13.8	15	
	$BW_{Interferer}$	MHz		20	20	20	
	$F_{Ioffset,\ case\ 1}$	MHz		30	30	30	
	$F_{Ioffset,\ case\ 2}$	MHz		50	50	50	
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

Table 7.6.1A.0-4: In-band blocking

E-UTRA Band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	$=-F_{offset} - F_{Ioffset,case\ 1}$ & $=+F_{offset} + F_{Ioffset,case\ 1}$	$\leq -F_{offset} - F_{Ioffset,case\ 2}$ & $\geq +F_{offset} + F_{Ioffset,case\ 2}$
46	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low} - 60$ to $F_{DL_high} + 60$
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band. NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-F_{offset} - F_{Ioffset,\ case\ 1}$ and b. the carrier frequency $+F_{offset} + F_{Ioffset,\ case\ 1}$ NOTE 3: F_{offset} is the frequency offset from the centre frequency of the CC being tested to the edge of aggregated channel bandwidth. NOTE 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.				

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1A.

7.6.1A.1 In-band blocking for CA (intra-band contiguous DL CA and UL CA)

7.6.1A.1.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels. The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

7.6.1A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.1.4 Test Description

7.6.1A.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.6.1A.1.4.1-1. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.1.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			Mid range				
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.			Lowest N_{RB_agg} Highest N_{RB_agg} (Note 3)				
Test Parameters for CA Configurations

100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-1 is tested per CA Configuration Test CC combination.							
Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are for PCC initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.1.4.3.

7.6.1A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Tables 7.6.1A.1.5-1 and 7.6.1A.1.5-2.
7. Set the downlink signal level according to the table 7.6.1A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:
   The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.1A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.6.1A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$) for carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$.
   The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.1A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.6.1A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$) for carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers in Case 1 at step 6.

10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

Table 7.6.1A.1.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	PCC: 2132.5 MHz SCC: 2147.5 MHz	
Receive band wanted signal (CC Configuration / N_{RB_agg} 75 + 75)	PCC: 2125 MHz SCC: 2140 MHz	2140 MHz 2155 MHz

7.6.1A.1.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.1A.1.5-1 and 7.6.1A.1.5-2.

Table 7.6.1A.1.5-1: In band blocking parameters

Rx Parameter	**Units**	**CA Bandwidth Class**				
		B	**C**	**D**	**E**	**F**
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12			
$BW_{Interferer}$	MHz	5	5			
$F_{Ioffset,\ case\ 1}$	MHz	7.5	7.5			
$F_{Ioffset,\ case\ 2}$	MHz	12.5	12.5			
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.						
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1						

Table 7.6.1A.1.5-2: In-band blocking

CA configuration	**Parameter**	**Unit**	**Case 1**	**Case 2**
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq-F_{offset}-F_{Ioffset,case\ 2}$ & $\geq+F_{offset}+F_{Ioffset,case\ 2}$
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_28C, CA_38C, CA_39C, CA_40C, CA_41C, CA_42C, CA_43C, CA_48C, CA_66B, CA_66C, CA_70C,	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$

Note 1:	For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
Note 2:	For each carrier frequency the requirement is valid for two frequencies: a) the carrier frequency $-F_{offset} - F_{loffset,\ case\ 1}$ and b) the carrier frequency $+F_{offset} + F_{loffset,\ case\ 1}$
Note 3:	F_{offset} is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth.
Note 4:	The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1A.1.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.1A.2 In-band blocking for CA (intra-band contiguous DL CA without UL CA)

7.6.1A.2.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

7.6.1A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.6.1A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.2.4 Test Description

7.6.1A.2.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1A.1.4.1 with the following exceptions:

- Instead of Table 7.6.1A.1.4.1-1 → use Table 7.6.1A.2.4.1-1.
- Instead of clause 7.6.1A.1.4.3 → use clause 7.6.1A.2.4.3.

100	100	QPSK	100+100	QPSK	100	P_100@0	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.							
Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.							
Note 4: For CA_70C all test frequency IDs shall be tested according to table 4.3.1.1.70A-1, in TS 36.508 [7].							

7.6.1A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Tables 7.6.1A.1.5-1 and 7.6.1A.1.5-2.
7. Set the downlink signal level according to the table 7.6.1A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

7.6.1A.2.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3.

7.6.1A.2.5 Test Requirement

Same test requirement as in clause 7.6.1A.1.5 with the following exceptions:

- Instead of Table 7.6.1A.1.5-1 → use Table 7.6.1A.2.5-1.
- Instead of Table 7.6.1A.1.5-2 → use Table 7.6.1A.2.5-2.

Table 7.6.1A.2.5-1: In band blocking parameter

	$F_{Interferer}$	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq-F_{offset}-F_{Ioffset,case\ 2}$ & $\geq+F_{offset}+F_{Ioffset,case\ 2}$
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_28C, CA_38C, CA_39C, CA_40C, CA_41C, CA_42C, CA_43C, CA_48C, CA_66B, CA_66C, CA_70C	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band Note 2: For each carrier frequency the requirement is valid for two frequencies: a) the carrier frequency $-F_{offset} - F_{Ioffset,\ case\ 1}$ and b) the carrier frequency $+F_{offset} + F_{Ioffset,\ case\ 1}$ Note 3: F_{offset} is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth. Note 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5\rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1A.2.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.1A.3 In-band blocking for CA (inter-band DL CA without UL CA)

7.6.1A.3.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below (60 MHz for band 46) to 15MHz above (60 MHz for band 46) the UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

7.6.1A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

This test case applies only for CA configurations that do not support UL CA.

7.6.1A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.3.4 Test Description

7.6.1A.3.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2.
- Instead of Table 7.6.1A.1.4.1-1 → use Table 7.6.1A.3.4.1-1.
- Instead of clause 7.6.1A.1.4.3 → use clause 7.6.1A.3.4.3.

100	100	QPSK	100	100	QPSK	25
100	100	QPSK	100	100	QPSK	20

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.

7.6.1A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the SCC in Case 1 according to Tables 7.6.1.5-1 and 7.6.1.5-2, or 7.6.1.5-1 and 7.6.1A.3.5-0 for operating bands without uplink band (as noted in Table 5.2-1) , or 7.6.1A.3.5-0a and 7.6.1A.3.5-0b for operating band 46 without uplink band.
7. Set the downlink signal level according to the table 7.6.1A.3.5-1 or table 7.6.1A.3.5-0a for operating band 46. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.3.5-1 or table 7.6.1A.3.5-0a for operating band 46 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps from 6 to 8, using an interfering signal above the SCC in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1.4.2-1.

7.6.1A.3.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3.

7.6.1A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the in-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

For band combinations including an operating band without uplink band (as noted in Table 5.2-1), the requirements for both downlinks shall be met with the uplink in the band capable of UL operation.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be $\geq 95\%$ of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1A.3.5-1 and 7.6.1A.3.5-2 (originated from the single carrier Tables 7.6.1.5-1 and 7.6.1.5-2) and also Table 7.6.1A.3.5-0 for band combinations including an operating band without uplink operation or Table 7.6.1A.3.5-0a and Table 7.6.1A.3.5-0b for band combinations including operating band 46 without uplink operation.

Table 7.6.1A.3.5-0: In-band blocking for additional operating bands for carrier aggregation

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
29, 32, 69	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band. Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$ Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

Table 7.6.1A.3.5-0a: In band blocking parameters for additional operating bands for carrier aggregation

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
						6		9
	$BW_{Interferer}$	MHz				20		20
	$F_{Ioffset,\ case\ 1}$	MHz				30+0.0025		30+0.0125
	$F_{Ioffset,\ case\ 2}$	MHz				50+0.0125		50+0.0075
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1 and set-up according to Annex C.3.1. NOTE 3: The interferer consists of the Reference measurement channel specified in Annex A.3.2 (TBD).									

Table 7.6.1A.3.5-0b: In-band blocking for additional operating bands for carrier aggregation

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
46	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 60 to F_{DL_high} + 60
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band. NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

Table 7.6.1A.3.5-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz

		6	6	6	6	7	9

Configuration, per CC							
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{loffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. Note 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.							

Table 7.6.1A.3.5-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 48, 66, 70, 72, 73, 74, 85	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15				
30	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				$F_{DL\text{-}low}$ - 12
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$ Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies								

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1A.3.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.1A.4 In-band blocking for CA (intra-band non-contiguous DL CA without UL CA)

7.6.1A.4.1 Test Purpose

Same as in clause 7.6.1A.1.1.

7.6.1A.4.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.6.1A.4.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.4.4 Test description

7.6.1A.4.4.1 Initial Conditions

Same as in clause 7.6.1A.1.4.1 with the following exceptions:

- Instead of Table 7.6.1A.1.4.1-1→ use Table 7.6.1A.4.4.1-1.

Table 7.6.1A.4.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes , and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: N/A (Range is not relevant)
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	Refer to test point
Test Parameters for CA Configurations	
use the content of Table 7.3A.4.4.1-1	

7.6.1A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the PCC in Case 1 according to Tables 7.6.1.5-1 and 7.6.1.5-2, excluding frequencies where the interferer centre frequency falls within SCC carrier $\pm(BW/2 + F_{Ioffset,case\ 1})$, where BW & offset refer to SCC.
7. Set the downlink signal level for PCC and SCC according to the table 7.6.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput of the PCC for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the PCC in Case 1 at step 6.
10. Repeat steps from 6 to 9, using an interfering signal below and above the SCC in Case 1 and measuring SCC instead of PCC in step 8, excluding the frequencies where the interferer centre frequency falls within PCC carrier $\pm(BW/2 + F_{Ioffset,case\ 1})$, where BW & offset refer to PCC.
11. Repeat steps from 6 to 10**,** replacing references to Case 1 with references to Case 2. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1.4.2-1.

7.6.1A.4.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3.

7.6.1A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, each larger than or equal to 5 MHz, the in-band blocking requirements are defined with the uplink configuration of the PCC being in accordance with Table 7.3A.0-3. The UE shall meet the requirements specified in tables 7.6.1A.4.5-1 and 7.6.1A.4.5-2 for each component carrier while both downlink carriers are active. The requirements for each component carrier are the same as single carrier requirements in Tables 7.6.1.5-1 and 7.6.1.5-2.

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1A.4.5-1 and 7.6.1A.4.5-2.

Table 7.6.1A.4.5-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

Table 7.6.1A.4.5-2: In-band blocking

CA Configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset)	MHz	$=-BW/2 - F_{Ioffset,case\ 1}$ & $=+BW/2 + F_{Ioffset,case\ 1}$	$\leq -BW/2 - F_{Ioffset,case\ 2}$ & $\geq +BW/2 + F_{Ioffset,case\ 2}$
CA_1A-1A, CA_2A-2A, CA_3A-3A, CA_4A-4A, CA_5A-5A, CA_7A-7A, CA_12A-12A CA_23A-23A, CA_25A-25A, CA_41A-41A, CA_42A-42A, CA_48A-48A, CA_66A-66A	$F_{Interferer}$	MHz	(Note 2)	$F_{DL_low} - 15$ to $F_{DL_high} + 15$
Note1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{Ioffset,\ case\ 1}$ and b. the carrier frequency $+BW/2 + F_{Ioffset,\ case\ 1}$ Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1A.4.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.1A.5 In-band blocking for 3DL CA

7.6.1A.5.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

7.6.1A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 3DL CA involving Band 46.7.6.1A.5.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.5.4 Test Description

7.6.1A.5.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.5.4.1-1 through table 7.6.1A.5.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.5.4.1-1: Test Configuration Table

Initial Conditions												
Test Environment as specified in TS 36.508[7] subclause 4.1					NC							
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.					For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns							
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Refer to “PCC NRB” and “SCCs NRB” columns							
Network signalling value					NS_01 by default							
Test Parameters for CA Configurations												
ID	**PCC**				**SCC1**				**SCC2**			
	Band	**Range**	**NRB**		**Band**	**Range**	**NRB**		**Band**	**Range**	**NRB**	
	UL MOD	**DL MOD**	**ULalloc (Note 2,3)**	**DLalloc**	**UL MOD**	**DL MOD**	**ULalloc**	**DLalloc**	**UL MOD**	**DL MOD**	**ULalloc**	**DLalloc**
Default Test Settings for a CA_XD Configuration (Intra-band contiguous)												
1	X	Mid/CC 1	REFSENS	All RBs	X	Mid/CC 2	N/A	All RBs	X	Mid/CC 3	N/A	All RBs
	QPSK	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Lowest N_{RB_agg}

Default Test Settings for CA_XA-YB and CA_XA-YC Configuration (Intra-band contiguous + Inter-band)												
1[9]	Y	Mid/CC 1	REFSENS	All RBs	Y	Mid/CC 2	N/A	All RBs	X	Mid	N/A	All RBs
	QPSK	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB}
2[9]	Y	Mid/CC 1	REFSENS	All RBs	Y	Mid/CC 2	N/A	All RBs	X	Mid	N/A	All RBs
	QPSK	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Highest N_{RB}
3[12]	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs
	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB_agg}
4[12]	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs
	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Lowest N_{RB_agg}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration, The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band contiguous:** X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41
Note 5: **Inter-band:** X,Y,Z correspond to the 1st, 2nd and 3rd band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19
Note 6: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1C-3A, X=1 and Y=3
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no refsens requirement shall be skipped.
Note 12: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_SCCx} = N_{RB_SCCx+1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_SCCx} for testing.

Table 7.6.1A.5.4.1-2: Test Configuration Table W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2:	**Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3:	**Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5:	**Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5
Note 6:	**Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.
Note 7:	**Intra-band non-contiguous + Inter-band:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8:	**Intra-band non-contiguous + Intra-band contiguous:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9:	**Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10:	The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11:	ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.5.4.1-1 through Table 7.6.1A.5.4.1-2 as appropriate.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.5.4.3.

7.6.1A.5.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.5.4.1-1 through Table 7.6.1A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.5.4.1-1 through Table 7.6.1A.5.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6 Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.5.4.2-1.

7 Set the downlink signal level according to the Table 7.6.1A.5.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.5.4.2-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.

8 Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.5.4.2-1for duration sufficient to achieve statistical significance according to Annex G.2A.

9 Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.5.4.2-1 in Case 1 at step 6.

10 Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

11. Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.5.4.2-1.

Table 7.6.1A.5.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

		PCC, SCC1	7.6.1A.5.5-2 7.6.1A.5.5-3
Intra-band non-contiguous	1	PCC, SCC1, SCC2	7.6.1A.5.5-4 7.6.1A.5.5-5

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.1A.5.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.1A.5.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3 for without UL CA.

Same message contents as in clause 7.6.1A.1.4.3 for UL CA.

7.6.1A.5.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

Table 7.6.1A.5.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
29	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.5.5-1a: In band blocking parameters for additional operating bands for carrier aggregation

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
						6		9
	$BW_{Interferer}$	MHz				20		20
	$F_{loffset,\ case\ 1}$	MHz				30+0.0025		30+0.0125
	$F_{loffset,\ case\ 2}$	MHz				50+0.0125		50+0.0075

NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: The interferer consists of the Reference measurement channel specified in Annex A.3.2 (TBD)

Table 7.6.1A.5.5-1b: In-band blocking for additional operating bands for carrier aggregation

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
46	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 60 to F_{DL_high} + 60

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band.

NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.5.5-2: In band blocking parameter (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8		
$BW_{Interferer}$	MHz	5	5	5		
$F_{Ioffset,\ case\ 1}$	MHz	7.5	7.5	7.5		
$F_{Ioffset,\ case\ 2}$	MHz	12.5	12.5	12.5		

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1

Table 7.6.1A.5.5-3: In-band blocking (intra-band contiguous)

CA configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq-F_{offset}-F_{Ioffset,case\ 2}$ & $\geq+F_{offset}+F_{Ioffset,case\ 2}$
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_28C, CA_38C, CA_39C, CA_40C, CA_40D, CA_41C, CA_41D, CA_42C, CA_42D, CA_43C, CA_48C, CA_48D, CA_66B, CA_66C, CA_70C, CA_66D	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -F_{offset} - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +F_{offset} + $F_{Ioffset,\ case\ 1}$
Note 3: F_{offset} is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth.
Note 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5\rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.6.1A.5.5-3a: In band blocking parameters (band 46, intra-band contiguous)

E-UTRA Band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
				12	13.8		
	$BW_{Interferer}$	MHz		20	20		
	$F_{Ioffset,\ case\ 1}$	MHz		30	30		
	$F_{Ioffset,\ case\ 2}$	MHz		50	50		

NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

Table 7.6.1A.5.5-3b: In-band blocking (band 46, intra-band contiguous)

E-UTRA Band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	$=-F_{offset}-F_{loffset,case\ 1}$ & $=+F_{offset}+F_{loffset,case\ 1}$	$\leq-F_{offset}-F_{loffset,case\ 2}$ & $\geq+F_{offset}+F_{loffset,case\ 2}$
46	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-60$ to $F_{DL_high}+60$

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency $-F_{offset}-F_{loffset,\ case\ 1}$ and
b. the carrier frequency $+F_{offset}+F_{loffset,\ case\ 1}$
NOTE 3: F_{offset} is the frequency offset from the centre frequency of the CC being tested to the edge of aggregated channel bandwidth.
NOTE 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5\rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.6.1A.5.5-4: In-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{loffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

Table 7.6.1A.5.5-5: In-band blocking (inter-band, intra-band non-contiguous)

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset from SCC)	MHz	$=-BW/2-F_{loffset,case\ 1}$ & $=+BW/2+F_{loffset,case\ 1}$	$\leq-BW/2-F_{loffset,case\ 2}$ & $\geq+BW/2+F_{loffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 48, 50, 51, 52,65, 66, 68, 70, 72, 73, 74, 85	$F_{Interferer}$	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$				

30	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				F_{DL-low} - 12
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.								
Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$								
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.								
Note 4: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.								

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.1A.5.5-1, 7.6.1A.5.5-3 and 7.6.1A.5.5-5 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.1A.6

7.6.1A.7 In-band blocking for 4DL CA

7.6.1A.7.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

7.6.1A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL with TDD Intra-band contiguous CA, or 4DL with Inter-band CA, or 4DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 4DL Intra-band non-contiguous CA + Inter-band CA or 4DL Intra-band non-contiguous + Intra-band contiguous CA, or 4DL with Intra-band non-contiguous and Intra-band non-contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

7.6.1A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.7.4 Test Description

7.6.1A.7.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.7.4.1-1 through table 7.6.1A.7.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.7.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

	QPSK	QPSK		Lowest N_{RB}	N/A	QPSK		Lowest N_{RB}	N/A	QPSK		Lowest N_{RB}	N/A	QPSK		Lowest N_{RB}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 12: ID/test points that result in no refsens requirement shall be skipped.

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 10: ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.7.4.1-1 through Table 7.6.1A.7.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.7.4.3.

7.6.1A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.7.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.7.4.1-1 through Table 7.6.1A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.7.4.1-1 through Table 7.6.1A.7.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6 Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.7.4.2-1.

7 Set the downlink signal level according to the Table 7.6.1A.7.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.7.5-1 or 7.6.1A.7.5-3, but 7.6.1A.7.5-1b and 7.6.1A.7.5-3b for operating band 46 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.

8 Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.7.4.2-1for duration sufficient to achieve statistical significance according to Annex G.2A.

9 Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.7.5-1 or 7.6.1A.7.5-3, but Table 7.6.1A.7.5-1b and 7.6.1A.7.5-3b for operating band 46 in Case 1 at step 6.

10 Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

11. Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.7.4.2-1.

Table 7.6.1A.7.4.2-1: Test repetition and measurement configuration

		SCC3	

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.1A.7.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.1A.7.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3 for without UL CA.

Same message contents as in clause 7.6.1A.1.4.3 for UL CA.

7.6.1A.7.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

Table 7.6.1A.7.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
29, 32, 67, 69	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.7.5-1a: In band blocking parameters for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
						6		9
	$BW_{Interferer}$	MHz				20		20
	$F_{loffset,\ case\ 1}$	MHz				30+0.0025		30+0.0125
	$F_{loffset,\ case\ 2}$	MHz				50+0.0125		50+0.0075

Table 7.6.1A.7.5-1b: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
46	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 60 to F_{DL_high} + 60

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer center frequencies

Table 7.6.1A.7.5-2: In band blocking parameter (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8	15	
$BW_{Interferer}$	MHz	5	5	5	5	
$F_{Ioffset,\ case\ 1}$	MHz	7.5	7.5	7.5	7.5	
$F_{Ioffset,\ case\ 2}$	MHz	12.5	12.5	12.5	12.5	
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1						

Table 7.6.1A.7.5-3: In-band blocking (intra-band contiguous)

CA configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$	MHz	$=-F_{offset}- F_{Ioffset,case\ 1}$ & $=+F_{offset} + F_{Ioffset,case\ 1}$	$\leq-F_{offset}- F_{Ioffset,case\ 2}$ & $\geq+F_{offset} + F_{Ioffset,case\ 2}$
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_28C, CA_38C, CA_39C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_42C, CA_42D, CA_42E, CA_43C, CA_48C, CA_48D, CA_48E, CA_66B, CA_66C, CA_70C, CA_66D	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low} - 15$ to $F_{DL_high} + 15$
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band. Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-F_{offset} - F_{Ioffset,\ case\ 1}$ and b. the carrier frequency $+F_{offset} + F_{Ioffset,\ case\ 1}$ Note 3: F_{offset} is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth. Note 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.				

Table 7.6.1A.7.5-3a: In band blocking parameters (intra-band contiguous)

E-UTRA Band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
				12	13.8	15	
	$BW_{Interferer}$	MHz		20	20	20	
	$F_{Ioffset,\ case\ 1}$	MHz		30	30	30	
	$F_{Ioffset,\ case\ 2}$	MHz		50	50	50	
NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1							

Table 7.6.1A.7.5-3b: In-band blocking intra-band contiguous)

E-UTRA Band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	$=-F_{offset}-F_{loffset,case\ 1}$ & $=+F_{offset}+F_{loffset,case\ 1}$	$\leq-F_{offset}-F_{loffset,case\ 2}$ & $\geq+F_{offset}+F_{loffset,case\ 2}$
46	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-60$ to $F_{DL_high}+60$

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band

NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency $-F_{offset} - F_{loffset,\ case\ 1}$ and
b. the carrier frequency $+F_{offset} + F_{loffset,\ case\ 1}$

NOTE 3: F_{offset} is the frequency offset from the center frequency of the CC being tested to the edge of aggregated channel bandwidth.

NOTE 4: The $F_{interferer}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5\rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.6.1A.7.5-4: In-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{loffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.

Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

Table 7.6.1A.7.5-5: In-band blocking (inter-band, intra-band non-contiguous)

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset from SCC)	MHz	$=-BW/2-F_{loffset,case\ 1}$ & $=+BW/2+F_{loffset,case\ 1}$	$\leq-BW/2-F_{loffset,case\ 2}$ & $\geq+BW/2+F_{loffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 48, 50, 51, 52,65, 66, 68, 70, 72, 73, 74, 85	$F_{Interferer}$	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$				
30	$F_{Interferer}$	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$			$F_{DL_low}-11$	

71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				F_{DL-low} - 12
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.								
Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$								
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.								
Note 4: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.								

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.1A.7.5-1, 7.6.1A.7.5-3 and 7.6.1A.7.5-5 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.1A.8 In-band blocking for 5DL CA

7.6.1A.8.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

7.6.1A.8.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

7.6.1A.8.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.8.4 Test Description

7.6.1A.8.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.8.4.1-1 through table 7.6.1A.8.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.8.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.

Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-42A,X=1,Y=3,Z=7,R=20,S=42.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.6.1A.8.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.8.4.1-1 through Table 7.6.1A.8.4.1-2 as appropriate.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.8.4.3.

7.6.1A.8.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.8.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.8.4.1-1 through Table 7.6.1A.8.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.8.4.1-1 through Table 7.6.1A.8.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6 Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.8.4.2-1.

7 Set the downlink signal level according to the Table 7.6.1A.8.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.8.5-1 or 7.6.1A.8.5-3 or 7.6.1A.8.5-5 and Table 7.6.1A.8.5-1b and 7.6.1A.8.5-3b for operating band 46 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.

8 Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.8.4.2-1for duration sufficient to achieve statistical significance according to Annex G.2A.

9 Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.8.5-1 or 7.6.1A.8.5-3 or 7.6.1A.8.5-5, and Table 7.6.1A.8.5-1b and 7.6.1A.8.5-3b for for operating band 46 in Case 1 at step 6.

10 Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

11. Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.8.4.2-1.

Table 7.6.1A.8.4.2-1: Test repetition and measurement configuration

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.1A.8.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.6.1A.8.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3 for without UL CA.

Same message contents as in clause 7.6.1A.1.4.3 for UL CA.

7.6.1A.8.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

Table 7.6.1A.8.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
29, 32, 67, 69	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to

				F_{DL_high} + 15

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.8.5-1a: In band blocking parameters for additional operating bands for carrier aggregation (inter-band)

E-UTRA bandf	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
						6		9
	$BW_{Interferer}$	MHz				20		20
	$F_{loffset,\ case\ 1}$	MHz				30+0.0025		30+0.0125
	$F_{loffset,\ case\ 2}$	MHz				50+0.0125		50+0.0075

NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table Table 7.3.3-2 with P_{CMAX_L} as defined in subclause 6.2.5.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1
NOTE 3: The interferer consists of the Reference measurement channel specified in Annex A.3.2 (TBD)

Table 7.6.1A.8.5-1b: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
46	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 60 to F_{DL_high} + 60

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer center frequencies

Table 7.6.1A.8.5-2: In band blocking parameter (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8	15	16
$BW_{Interferer}$	MHz	5	5	5	5	5
$F_{loffset,\ case\ 1}$	MHz	7.5	7.5	7.5	7.5	7.5
$F_{loffset,\ case\ 2}$	MHz	12.5	12.5	12.5	12.5	12.5

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1

Table 7.6.1A.8.5-3: In-band blocking (intra-band contiguous)

CA configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq-F_{offset}-F_{Ioffset,case\ 2}$ & $\geq+F_{offset}+F_{Ioffset,case\ 2}$
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C, CA_42D, CA_42E, CA_42F, CA_43C, CA_48C, CA_48D, CA_48E, CA_48F, CA_66B, CA_66C, CA_70C, CA_66D	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-15$ to $F_{DL_high}+15$

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency $-F_{offset}-F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency $+F_{offset}+F_{Ioffset,\ case\ 1}$
Note 3: F_{offset} is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth.
Note 4: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5\rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.6.1A.8.5-3a: In band blocking parameters (intra-band contiguous)

E-UTRA Band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
				12	13.8	15	
	$BW_{Interferer}$	MHz		20	20	20	
	$F_{Ioffset,\ case\ 1}$	MHz		30	30	30	
	$F_{Ioffset,\ case\ 2}$	MHz		50	50	50	

NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below $P_{CMAX_L,c}$ or P_{CMAX_L} as defined in subclause 6.2.5A
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1

Table 7.6.1A.8.5-3b: In-band blocking (intra-band contiguous)

E-UTRA Band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq-F_{offset}-F_{Ioffset,case\ 2}$ & $\geq+F_{offset}+F_{Ioffset,case\ 2}$
46	$F_{Interferer}$ (Range)	MHz	(Note 2)	$F_{DL_low}-60$ to $F_{DL_high}+60$

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency $-F_{offset}-F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency $+F_{offset}+F_{Ioffset,\ case\ 1}$
NOTE 3: F_{offset} is the frequency offset from the center frequency of the CC being tested to the edge of aggregated channel bandwidth.

NOTE 4: The $F_{interferer}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

Table 7.6.1A.8.5-4: In-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset, case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{loffset, case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

Table 7.6.1A.8.5-5: In-band blocking (inter-band, intra-band non-contiguous)

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 48, 65, 66, 68, 70, 72. 73, 74, 85	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15				
30	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				$F_{DL\text{-}low}$ - 12
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.								
Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$								
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.								
Note 4: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.								

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, PInterferer power defined in Tables 7.6.1A.8.5-1, 7.6.1A.8.5-3 and 7.6.1A.8.5-5 is increased by the amount given by ΔRIB,c in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.1A.9 In-band blocking for 6DL CA

7.6.1A.9.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

7.6.1A.9.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d.

7.6.1A.9.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.9.4 Test Description

7.6.1A.9.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.9.4.1-1 through table 7.6.1A.9.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.9.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous+ Inter-band , Intra-band contiguous + Intra-band contiguous , Intra-band contiguous + Intra-band contiguous + inter-band & Intra-band contiguous + Intra-band contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S,U correspond to the different bands in the CA Configuration. E.g. X !=Y !=Z !=R !=S !=U.
Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no ref sens requirement shall be skipped.

Table 7.6.1A.9.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: **Intra-band non-contiguous + Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-3A-7A-7A-8A,X=1,Y=3,Z=7,R=8.

Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y,Z,R corresponds to the band of the CA Configuration. E.g. for CA_1A-1A-3A-7C-28A,X=1,Y=3,Z=7,R=28.

Note 6: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 7: Intra-band non-contiguous + Intra-band contiguous: If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.9.4.1-1 through Table 7.6.1A.9.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.9.4.3.

7.6.1A.9.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.9.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.9.4.1-1 through Table 7.6.1A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.9.4.1-1 through Table 7.6.1A.9.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6 Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.9.4.2-1.

7 Set the downlink signal level according to the Table 7.6.1A.9.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.9.5-1 or 7.6.1A.9.5-3 or 7.6.1A.9.5-5 and Table 7.6.1A.9.5-1b and 7.6.1A.9.5-3b for operating band 46 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.

8 Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.9.4.2-1for duration sufficient to achieve statistical significance according to Annex G.2A.

9 Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.9.5-1 or 7.6.1A.9.5-3 or 7.6.1A.9.5-5, and Table 7.6.1A.9.5-1b and 7.6.1A.9.5-3b for for operating band 46 in Case 1 at step 6.

10 Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

11. Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.9.4.2-1.

	2	SCC3 SCC4, SCC5	

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.1A.9.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.1A.9.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3 for without UL CA.

Same message contents as in clause 7.6.1A.1.4.3 for UL CA.

7.6.1A.9.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

Table 7.6.1A.9.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
29, 32, 67, 69	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.9.5-1a: In band blocking parameters for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
						6		9
	$BW_{Interferer}$	MHz				20		20
	$F_{loffset,\ case\ 1}$	MHz				30+0.0025		30+0.0125
	$F_{loffset,\ case\ 2}$	MHz				50+0.0125		50+0.0075

49 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm				6		6
	$BW_{Interferer}$	MHz				10		20
	$F_{Ioffset,\ case\ 1}$	MHz				15+0.025		30+0.125
	$F_{Ioffset,\ case\ 2}$	MHz				25+0.075		50+0.075
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.1-2 with P_{CMAX_L} as defined in subclause 6.2.5. NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1 NOTE 3: The interferer consists of the Reference measurement channel specified in Annex A.3.2 (TBD)								

Table 7.6.1A.9.5-1b: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-50	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
46, 49	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 60 to F_{DL_high} + 60
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer center frequencies				

Table 7.6.1A.9.5-2: In band blocking parameter (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

Table 7.6.1A.9.5-5: In-band blocking (inter-band, intra-band non-contiguous)

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66, 68, 70, 72. 73, 74, 85	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15				
30	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				$F_{DL\text{-}low}$ - 12

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.
Note 4: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, PInterferer power defined in Tables 7.6.1A.9.5-1, 7.6.1A.9.5-3 and 7.6.1A.9.5-5 is increased by the amount given by ΔRIB,c in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.1A.10 In-band blocking for 7DL CA

7.6.1A.10.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

7.6.1A.10.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 7DL with CA configurations in Table 7.1-2e.

7.6.1A.10.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

7.6.1A.10.4 Test Description

7.6.1A.10.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.10.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2

Table 7.6.1A.10.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

ID	PCC				SCC1				SCC2				SCC3				SCC4				SCC5				SCC6			
	Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: **Intra-band contiguous+ Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.

Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.

Note 6: **Inter-band:** X,Y,Z and R correspond to the different bands in the CA Configuration. E.g. X !=Y !=Z !=R.

Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 11: ID/test points that result in no ref sens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.10.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.10.4.3.

7.6.1A.10.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.10.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1A.10.4.1-1 on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.1A.10.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6 Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.10.4.2-1.

7 Set the downlink signal level according to the Table 7.6.1A.10.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.10.5-1 or 7.6.1A.10.5-3 or 7.6.1A.10.5-5 and Table 7.6.1A.10.5-1b and 7.6.1A.10.5-3b for operating band 46 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.

8 Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.10.4.2-1for duration sufficient to achieve statistical significance according to Annex G.2A.

9 Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.10.5-1 or 7.6.1A.10.5-3 or 7.6.1A.10.5-5, and Table 7.6.1A.10.5-1b and 7.6.1A.10.5-3b for operating band 46 in Case 1 at step 6.

10 Repeat steps from 6 to 9 using interfering signals in Case 2at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

11.Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.10.4.2-1.

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.1A.10.4.1.

Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.

Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.1A.10.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3 for without UL CA.

Same message contents as in clause 7.6.1A.1.4.3 for UL CA.

7.6.1A.10.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

Table 7.6.1A.10.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
29, 32, 67, 69	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.

Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$

Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.

Table 7.6.1A.10.5-1a: In band blocking parameters for additional operating bands for carrier aggregation (inter-band)

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
						6		9
	$BW_{Interferer}$	MHz				20		20
	$F_{Ioffset,\ case\ 1}$	MHz				30+0.0025		30+0.0125

$F_{Ioffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075

Note 1:	The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

Table 7.6.1A.10.5-5: In-band blocking (inter-band, intra-band non-contiguous)

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38	-15
	$F_{Interferer}$ (offset from SCC)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$			-BW/2 - 11	
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66, 68, 70, 72. 73, 74, 85	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15				
30	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11	
71	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 12 to F_{DL_high} + 15				$F_{DL\text{-}low}$ - 12

Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.
Note 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$
Note 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.
Note 4: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, PInterferer power defined in Tables 7.6.1A.10.5-1, 7.6.1A.10.5-3 and 7.6.1A.10.5-5 is increased by the amount given by ΔRIB,c in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.1B In-band blocking for UL-MIMO

7.6.1B.1 Test Purpose

In-band blocking for UL- MIMO is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE that support UL-MIMO receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

7.6.1B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter P_{CMAX_L} is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.6B.

7.6.1B.4 Test Description

7.6.1B.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**

15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.29.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to in Table 7.6.1B.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1B.4.3.

7.6.1B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.1B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 7.6.1B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1B.5-1 and 7.6.1B.5-2.

4. Set the downlink signal level according to the table 7.6.1B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1B.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.

5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 3.

7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1B.4.2-1.

8. Repeat steps from 3 to 5, using successively all interfering signals in Case 3 and Case 4 at step 3.

Table 7.6.1B.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 5MHz)	2137.5 MHz	2142.5 MHz
Interferer case 1	2129.9875 MHz	2150.0125 MHz
Interferer case 2 (inner frequency)	2124.9925 MHz	2155.0075 MHz
Interferer case 2 (outer frequency)	2099.9925 MHz	2180.0075 MHz
Outer limit for in band blocking	2095MHz	2185MHz
Number of test frequencies case 2	6	6
Number of test frequencies for Band 17(asymmetric!), BW 5MHz, case 2	0	2

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 54, 65, 66, 68, 70, 72	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			
30	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			F_{DL_low} – 11
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 – $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies							

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1B.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.1D In-band blocking for ProSe

7.6.1D.0 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2.

Table 7.6.1D.0-1: In band blocking parameters for ProSe Direct Discovery

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below + P_{offset}					
				6	6	7	9
$BW_{Interferer}$	MHz			5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz			7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset,\ case\ 2}$	MHz			12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
P_{offset}	dB			10.9	13.9	15.7	16.9
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.6.1D.0-2: In band blocking parameters for ProSe Direct Communication

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below					
				6	6	7	9
$BW_{Interferer}$	MHz			5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz			7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset,\ case\ 2}$	MHz			12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.6.1D.0-3: In-band blocking for ProSe

E-UTRA ProSe band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
2,3,4,7,14, 20,26,28,31 , 68, 72	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band. NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.1D.0-3 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1D.

7.6.1D.1 In-band blocking for ProSe Direct Discovery

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

7.6.1D.1.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the ProSe band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other Sidelink transmitters exist (except in the adjacent channels and spurious response).

7.6.1D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

7.6.1D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1D.0.

7.6.1D.1.4 Test Description

7.6.1D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.6.1D.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range(Note 4)					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz, Highest					
	Downlink Configuration (Note 2)		**Uplink Configuration (Note 2)**		**Sidelink Configuration (Reception) (Note 3)**	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.70.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.1D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

7.6.1D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "…Step 1…") are defined in clause 7.6.1D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.1D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.6.1D.1.5-1.
7. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Tables 7.6.1D.1.5-1 and 7.6.1D.1.5-2.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
10. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
11. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
12. SS shall compute the throughput as following:

    TP = Pok / Ptot * 100%

13. Repeat steps from 6 to 12, using an interfering signal above the wanted signal in Case 1 at step 7.
14. Repeat steps from 6 to 13, using interfering signals in Case 2 at step 7 and 13. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1D.1.4.2-1.

Table 7.6.1D.1.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 2 SL	1850 MHz	1910 MHz
Band 2 Midrange	1880 MHz	
Sidlink wanted signal (BW 5MHz)	1877.5 MHz	1882.5 MHz

Interferer case 1	1869.9875 MHz	1890.0125 MHz
Interferer case 2 (inner frequency)	1864.9925 MHz	1895.0075 MHz
Interferer case 2 (outer frequency)	1839.9925 MHz	1920.0075 MHz
Outer limit for in band blocking	1835 MHz	1925 MHz
Number of test frequencies case 2	6	6

7.6.1D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

7.6.1D.1.5 Test Requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.6.1D.1.5-1 and 7.6.1D.1.5-2.

Table 7.6.1D.1.5-1: In band blocking parameters for ProSe Direct Discovery

Rx parameter	**Units**	**Channel bandwidth**					
		1.4 MHz	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below + P_{offset}					
				6	6	7	9
$BW_{Interferer}$	MHz			5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz			7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125

$F_{loffset,\ case\ 2}$	MHz			12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
P_{offset}	dB			10.9	13.9	15.7	16.9
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.6.1D.1.5-2: In-band blocking for ProSe

E-UTRA ProSe band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-56	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
2,3,4,7,14, 20,26,28,31 , 68, 72	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band. NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1D.1.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.1D.2 In-band blocking for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test description is TBD
- Test system uncertainties and test tolerances are TBD

7.6.1D.2.1 Test Purpose

Same test purpose as in clause 7.6.1D.1.1.

7.6.1D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

7.6.1D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1D.0.

7.6.1D.2.4 Test Description

TBD

7.6.1D.2.5 Test Requirement

Same test requirement as in clause 7.6.1D.1.5 with the following exceptions:

- Instead of Table 7.6.1D.1.5-1 → use Table 7.6.1D.2.5-1.

Table 7.6.1D.2.5-1: In band blocking parameters for ProSe Direct Communication

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz

Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below					
				6	6	7	9
$BW_{Interferer}$	MHz			5	5	5	5
$F_{Ioffset, case\ 1}$	MHz			7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset, case\ 2}$	MHz			12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

7.6.1E In-band blocking for UE category 0

7.6.1E.1 Test Purpose

The same test purpose as in clause 7.6.1.

7.6.1E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

7.6.1E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.1.3.

7.6.1E.4 Test Description

7.6.1E.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1.4.1 with the following exceptions:

- Instead of Table 7.6.1.4.1-1 → use Table 7.6.1E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

Table 7.6.1E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD and HD-FDD	**TDD**		**FDD and HD-FDD**	**TDD**
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A

Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2:	Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 3:	For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.
Note 4:	Downlink RB position shall be RBstart = 0.

7.6.1E.4.2 Test Procedure

Same test procedure as in clause 7.6.1.4.2

7.6.1E.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3

7.6.1E.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.1E.5-1 and 7.6.1E.5-2.

Table 7.6.1E.5-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{loffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5E.							
Note 2: The interferer consists of the Reference measurement channel specified in clause A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1 and set-up according to clause C.3.1.							

Table 7.6.1E.5-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$			-BW/2 - 11
2, 3, 4, 5, 8, 13, 20, 39, 41	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.							
NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$.							
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.							

7.6.1EA In-band blocking for UE category M1

7.6.1EA.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the category M1 UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

7.6.1EA.3 Minimum Conformance Requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1EA.3-1 and 7.6.1EA.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.1EA.3-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075

NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2 should be used as REFSENS for the power in Transmission Bandwidth Configuration.
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.

Table 7.6.1EA.3-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$			-BW/2 - 11
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41,42, 43, 72	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 15 to F_{DL_high} + 15			

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.

7.6.1EA.4 Test Description

7.6.1EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.6.1EA.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1	NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range						
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz						
Test Parameters for Channel Bandwidths and Narrowband positions							
	Downlink Configuration			**Uplink Configuration**			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD	TDD		FDD and HD-FDD	TDD	Narrowband index (Note 1)
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.6.1EA.4.3.

7.6.1EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C_RNTI to transmit the DL RMC according to Table 7.6.1EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 7.6.1EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1EA.5-1 and 7.6.1EA.5-2.
4. Set the downlink signal level according to the table 7.6.1EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1EA.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.

5. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.

6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 3.

7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3 and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1EA.4.2-1.

Table 7.6.1EA.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 5MHz)	2137.5 MHz	2142.5 MHz
Interferer case 1	2129.9875 MHz	2150.0125 MHz
Interferer case 2 (inner frequency)	2124.9925 MHz	2155.0075 MHz
Interferer case 2 (outer frequency)	2099.9925 MHz	2180.0075 MHz
Outer limit for in band blocking	2095MHz	2185MHz
Number of test frequencies case 2	6	6

7.6.1EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA and the following exception.

}			

7.6.1EA.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1EA.5-1 and 7.6.1EA.5-2.

Table 7.6.1EA.5-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{Ioffset,\ case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{Ioffset,\ case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA.							

NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2 should be used as REFSENS for the power in Transmission Bandwidth Configuration.
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.

Table 7.6.1EA.5-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38
	$F_{Interferer}$ (offset)	MHz	$=-BW/2 - F_{loffset,case\ 1}$ & $=+BW/2 + F_{loffset,case\ 1}$	$\leq -BW/2 - F_{loffset,case\ 2}$ & $\geq +BW/2 + F_{loffset,case\ 2}$			-BW/2 - 11
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41, 42, 43,72	$F_{Interferer}$	MHz	(NOTE 2)	$F_{DL_low} - 15$ to $F_{DL_high} + 15$			

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency $-BW/2 - F_{loffset,\ case\ 1}$ and
b. the carrier frequency $+BW/2 + F_{loffset,\ case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies

7.6.1EB In-band blocking for UE Category 1bis

7.6.1EB.1 Test Purpose

The same test purpose as in clause 7.6.1.

7.6.1EB.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

7.6.1EB.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.1.3.

7.6.1EB.4 Test Description

7.6.1EB.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1.4.1 with the following exceptions:

Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

7.6.1EB.4.2 Test Procedure

Same test procedure as in clause 7.6.1.4.2

7.6.1EB.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3

7.6.1EB.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.1EB.5-1 and 7.6.1EB.5-2.

Table 7.6.1EB.5-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset, case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5E. Note 2: The interferer consists of the Reference measurement channel specified in clause A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1 and set-up according to clause C.3.1. Note 3: The REFSENS power level is specified in Table 7.3EB.3-1 for main antenna port.							

Table 7.6.1EB.5-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$			-BW/2 - 11
1, 2, 3, 4, 5, 6, 7, 8, 12, 13, 18, 26, 28, 31, 34, 39, 40, 41, 66, 72	$F_{Interferer}$	MHz	(Note 2)	F_{DL_low} – 15 to F_{DL_high} + 15			
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band. NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset, case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset, case\ 1}$. NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.							

7.6.1EC In-band blocking for UE category M2

7.6.1EC.1 Test purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the category M2 UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1EC.2 Test applicability

This test applies to all types of E-UTRA UE release 14 and forward of category M2.

7.6.1EC.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1EC.3-1 and 7.6.1EC.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.1EC.3-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth

		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{Interferer}$	MHz	1.4	3	5	5	5	5
$F_{loffset, case\ 1}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{loffset, case\ 2}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075

NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: For DL category M1 and M2 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2 and category M2 in Table 7.3EC-1 should be used as REFSENS for the power in Transmission Bandwidth Configuration.
NOTE 4: For DL category M1 and M2 UE, the parameters for the applicable channel bandwidth apply.

Table 7.6.1EC.3-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{Interferer}$	dBm	-56	-44	Void	Void	-38
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$			-BW/2 - 11
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 14, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41, 42, 43	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} – 15 to F_{DL_high} + 15			

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - $F_{loffset, case\ 1}$ and
b. the carrier frequency +BW/2 + $F_{loffset, case\ 1}$
NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.

7.6.1EC.4 Test description

7.6.1EC.4.1 Initial conditions

Same as in clause 7.6.1EA.4.1 with the following exceptions:

7.6.1F In-band blocking for category NB1 and NB2

7.6.1F.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.1F.2 Test Applicability

This test case applies to all types of NB-IoT FDD UE release 13 and forward of category NB1.

This test case applies to all types of NB-IoT FDD UE release 14 and forward of category NB2.

This test case applies to all types of NB-IoT TDD UE release 15 and forward of category NB1 and NB2.

7.6.1F.3 Minimum Conformance Requirements

Category NB1 and NB2 UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channel as specified in Annex A.3.2 with parameters specified in Table 7.6.1F.3-1.

Table 7.6.1F.3-1: In-band blocking parameters for category NB1 and NB2

IBB1 test Parameters	
Category NB1 or NB2 signal power (P_{wanted}) / dBm	REFSENS + 6 dB
Interferer	E-UTRA
Interferer signal power ($P_{Interferer}$) / dBm	- 56 dBm
Interferer bandwidth	5 MHz
Interferer offset from category NB1 or NB2 channel edge	+7.5 MHz + 0.005 MHz and -7.5 MHz - 0.005 MHz
IBB2 test Parameters	
Category NB1 or NB2 signal power (P_{wanted}) / dBm	REFSENS + 6 dB
Interferer	E-UTRA
Interferer signal power	- 44 dBm

($P_{Interferer}$) / dBm	
Interferer bandwidth	5 MHz
Interferer offset range from category NB1 or NB2 channel edge	From +12.5 MHz to F_{DL_high} + 15 MHz and From -12.5 MHz to F_{DL_low} - 15 MHz

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1F.

7.6.1F.4 Test Description

7.6.1F.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.6.1F.4.1-1. The details of the downlink reference measurement channels (RMCs) are specified in Annex A.3. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

Table 7.6.1F.4.1-1: Test Configuration Table

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause 8.1.1			NC		
Test Frequencies as specified in TS36.508 [7] clause 8.1.3.1			Frequency ranges defined in Annex K.1.1		
Configuration ID	**Downlink Configuration**		**Uplink Configuration**		
	Modulation	Subcarriers	Modulation	N_{tones}	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15 kHz

1. Connect the SS to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.4 using only the main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.2, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channel is set according to Table 7.6.1F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 7.6.1F.4.3.

7.6.1F.4.2 Test Procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C_RNTI to transmit the DL RMC according to Table 7.6.1F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send HARQ feedback based on information contained in DCI format N1.
2. Set the downlink signal level according to the table 7.6.1F.5-1.
3. Set the parameters of the signal generator for an interfering signal below the wanted signal in IBB1 according to Table 7.6.1F.5-1.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
5. Repeat steps from 3 to 4, using an interfering signal above the wanted signal in IBB1 at step 3.

6. Repeat steps from 3 to 5, using interfering signals in IBB2 at step 3 and 5. The ranges of IBB2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1F.4.2-1.

Table 7.6.1F.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 200KHz)	2139.9 MHz	2140.1 MHz
Interferer IBB1	2132.395 MHz	2147.605 MHz
Interferer IBB2	2127.4 MHz	2152.6 MHz
Outer limit for in band blocking	2095MHz	2185MHz

7.6.1F.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 8.1.6.

7.6.1F.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.1F.5-1.

Table 7.6.1F.5-1: In-band blocking parameters for category NB1 and NB2

IBB1 test Parameters	
Category NB1 or NB2 signal power (P_{wanted}) / dBm	REFSENS + 6 dB
Interferer	E-UTRA
Interferer signal power ($P_{Interferer}$) / dBm	- 56 dBm
Interferer bandwidth	5 MHz
Interferer offset from category NB1 or NB2 channel edge	+7.5 MHz + 0.005 MHz and -7.5 MHz - 0.005 MHz
IBB2 test Parameters	
Category NB1 or NB2 signal power (P_{wanted}) / dBm	REFSENS + 6 dB
Interferer	E-UTRA
Interferer signal power ($P_{Interferer}$) / dBm	- 44 dBm
Interferer bandwidth	5 MHz
Interferer offset range from category NB1 or NB2 channel edge	From +12.5 MHz to F_{DL_high} + 15 MHz and From -12.5 MHz to F_{DL_low} - 15 MHz

7.6.1G In-band blocking for V2X Communication

7.6.1G.1 In-band blocking for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

7.6.1G.1.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 30MHz below to 30MHz above the V2X band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other Sidelink transmitters exist (except in the adjacent channels and spurious response).

7.6.1G.1.2 Test Applicability

This test applies to all types of UE that support V2X Sidelink Communication and Band 47.

7.6.1G.1.3 Minimum Conformance Requirements

The V2X UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters defined in Table 7.6.1G.1.3-1 and Table 7.6.1G.1.3-2.

Table 7.6.1G.1.3-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
$BW_{Interferer}$	MHz				10		10
$F_{Ioffset,\ case\ 1}$	MHz				15+0.0025		15+0.005
$F_{Ioffset,\ case\ 2}$	MHz				25+0.0075		25+0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211							

Table 7.6.1G.1.3-2: In-band blocking

E-UTRA V2X band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-44	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{Ioffset,case\ 1}$ & =+BW/2 + $F_{Ioffset,case\ 1}$	≤-BW/2 – $F_{Ioffset,case\ 2}$ & ≥+BW/2 + $F_{Ioffset,case\ 2}$
47	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} –30 to F_{DL_high} + 30
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{Ioffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{Ioffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies				

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.6.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.6.1.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1G.

7.6.1G.1.4 Test Description

7.6.1G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1G.1.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.6.1 G.1.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal

Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range	
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, Highest	
Test Parameters for Channel Bandwidths		
	V2X Configuration to Receive	
Ch BW	Modulation	PSSCH RB allocation
10MHz	QPSK	48@2
20MHz	QPSK	96@2

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RX antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92a.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.6.1 G.1.4.3.

3. The V2X reference measurement channel is set according to Table 7.6.1 G.1.4.1-1.

3a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. Ensure the UE is in State 5A-V2X in Receive Mode according to TS 36.508 [7] clause 4.5.9. Message content exceptions are defined in clause 7.6.1G.1.4.3.

6. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.6.1G.1.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.6.1G.1.4.1-1.

2. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1G.1.5-1 and 7.6.1G.1.5-2.

3. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

4. Repeat step 3, using an interfering signal above the wanted signal in Case 1 at step 2.

5. Repeat step 3, using interfering signals in Case 2 at step2 and 4. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1G.1.5-2.

7.6.1G.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.10.

7.6.1G.1.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.6.1G.1.5-1 and 7.6.1G.1.5-2.

Table 7.6.1G.1.5-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
$BW_{Interferer}$	MHz				10		10

$F_{loffset, case\ 1}$	MHz				15+0.0025		15+0.005
$F_{loffset, case\ 2}$	MHz				25+0.0075		25+0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.6.1G.1.5-2: In-band blocking

E-UTRA V2X band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-44	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
47	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} –30 to F_{DL_high} + 30
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset, case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset, case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies				

7.6.1G.2 In-band blocking for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

7.6.1G.2.1 Test Purpose

Same as in clause 7.6.1G.1.1.

7.6.1G.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 14 and forward that support V2X Communication.

7.6.1G.2.3 Minimum Conformance Requirements

The V2X UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters defined in Table 7.6.1G.2.3-1 and Table 7.6.1G.2.3-2.

Table 7.6.1G.2.3-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
$BW_{Interferer}$	MHz				10		10
$F_{loffset, case\ 1}$	MHz				15+0.0025		15+0.005
$F_{loffset, case\ 2}$	MHz				25+0.0075		25+0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211							

Table 7.6.1G.2.3-2: In-band blocking

E-UTRA V2X band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-44	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$

47	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} –30 to F_{DL_high} + 30
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.6.1G.2.3 apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.6.1.3 apply for the E-UTRA downlink reception while all downlink carriers are active.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1G.

7.6.1G.2.4 Test Description

7.6.1G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1G.2.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively.

Table 7.6.1G.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal				
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1			Mid range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest N_{RB_agg}, Highest N_{RB_agg}				
Test Parameters for Channel Bandwidths							
	Downlink		**Uplink Configuration**		**V2X Configuration**		
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Ch BW	Mod'n	PSSCH RB allocation
1.4 MHz	QPSK	1	QPSK	1	10 MHz	QPSK	48@2
1.4 MHz	QPSK	5	QPSK	5	20 MHz	QPSK	96@2
3 MHz	QPSK	1	QPSK	1			
3 MHz	QPSK	4	QPSK	4			
5 MHz	QPSK	1	QPSK	1			
5 MHz	QPSK	8	QPSK	8			
10 MHz	QPSK	1	QPSK	1			
10 MHz	QPSK	12	QPSK	12			
15 MHz	QPSK	1	QPSK	1			
15 MHz	QPSK	16	QPSK	16			
20 MHz	QPSK	1	QPSK	1			
20 MHz	QPSK	18	QPSK	18			
Note 1: V2X con-current band configurations are checked separately for each band configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G.1-2. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3G.0-4 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2G.1-2).							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.93c.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.6.1G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C. Message content exceptions are defined in clause 7.6.1G.2.4.3.

7.6.1G.2.4.2 Test procedure

1. The SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.6.1G.2.4.1-1 on E-UTRA Band. The SS sends downlink MAC padding bits on the DL RMC.
2. SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 7.6.1G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL and V2X RMCs.
3. Set the parameters of the signal generator for an interfering signal below the V2X band in Case 1 according to Tables 7.6.1G.2.5-1 and 7.6.1G.2.5-2.
4. Set the downlink signal level according to the table 7.6.1G.2.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1G.2.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz or within +0, -4.3 dB of the target level for carrier frequency $f \leq 6.0$GHz, for at least the duration of the throughput measurement.
5. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the V2X band in Case 1 at step 6.
7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3 and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth.

7.6.1G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.6.1G.2.5 Test Requirement

Same test requirement as in clause 7.6.1G.2.3 with the following exceptions:

- Instead of Table 7.6.1G.2.3-1 → use Table 7.6.1G.2.5-1.
- Instead of Table 7.6.1G.2.3-2 → use Table 7.6.1G.2.5-2.

Table 7.6.1G.2.5-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
$BW_{Interferer}$	MHz				10		10
$F_{Ioffset,\ case\ 1}$	MHz				15+0.0025		15+0.005
$F_{Ioffset,\ case\ 2}$	MHz				25+0.0075		25+0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211							

Table 7.6.1G.2.5-2: In-band blocking

E-UTRA V2X band	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-44	-44
	$F_{Interferer}$ (offset)	MHz	=-BW/2 – $F_{loffset,case\ 1}$ & =+BW/2 + $F_{loffset,case\ 1}$	≤-BW/2 – $F_{loffset,case\ 2}$ & ≥+BW/2 + $F_{loffset,case\ 2}$
47	$F_{Interferer}$	MHz	(NOTE 2)	F_{DL_low} –30 to F_{DL_high} + 30
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - $F_{loffset,\ case\ 1}$ and b. the carrier frequency +BW/2 + $F_{loffset,\ case\ 1}$ NOTE 3: $F_{Interferer}$ range values for unwanted modulated interfering signal are interferer centre frequencies				

7.6.1G.3 In-band blocking for V2X Communication / Intra-band contiguous multi-carrier operation

7.6.1G.3.1 Test Purpose

Same as in clause 7.6.1G.1.1.

7.6.1G.3.2 Test Applicability

This test applies to all types of UE that support Intra-band contiguous multi-carrier operation V2X Sidelink Communication and Band 47.

7.6.1G.3.3 Minimum Conformance Requirements

For intra-band contiguous multi-carrier operation the V2X UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters defined in Table 7.6.1G.3.3-1 and Table 7.6.1G.3.3-2.

Table 7.6.1G.3.3-1: In band blocking parameters for intra-band contiguous multi-carrier for V2X

Rx Parameter	Units	V2X Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + V2X Bandwidth Class specific value below				
		9				
$BW_{Interferer}$	MHz	10				
$F_{loffset,\ case\ 1}$	MHz	15				
$F_{loffset,\ case\ 2}$	MHz	25				

Table 7.6.1G.3.3-2: In-band blocking for intra-band contiguous multi-carrier for V2X

V2X multi-carrier configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-44	-44
	$F_{Interferer}$ (offset)	MHz	=-F_{offset}– $F_{loffset,case\ 1}$ & =+F_{offset} + $F_{loffset,case\ 1}$	≤-F_{offset}– $F_{loffset,case\ 2}$ & ≥+F_{offset} + $F_{loffset,case\ 2}$
V2X_47B	$F_{Interferer}$ (Range)	MHz	(NOTE 2)	F_{DL_low} – 30 to F_{DL_high} + 30
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 30 MHz below or above the UE receive band NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -Foffset - FIoffset, case 1 and b. the carrier frequency +Foffset + FIoffset, case 1				

NOTE 3: Foffset is the frequency offset from the centre frequency of the CC being tested to the edge of aggregated channel bandwidth.
NOTE 4: The Finterferer (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
NOTE 5: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1G.

7.6.1G.3.4 Test Description

7.6.1G.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1G.3.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.6.1G.3.4.1-1: Test Configuration Table

Initial Conditions			
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1		Low range, High range	
Test CC Combination setting(N_{RB_agg}) as specified in subclause 5.4.2G		Lowest N_{RB_agg}, Highest N_{RB_agg}	
Test Parameters for Channel Bandwidths			
V2X Multi-carrier Configuration		**V2X PSSCH Allocation**	
CC1 N_{RB}	**CC2 N_{RB}**	**CC1 & CC2 Mod**	**CC1 and CC2 RB Allocation**
50	50	QPSK	48@2+48@2

1. Connect the SS and GNSS simulator to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92d.

2. The parameter settings for V2X sidelink communication over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.6.1G.3.4.3.

3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and V2X Reference Measurement Channels are set according to Table 7.6.1G.3.4.1-1.

4a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 5A-V2X according to TS 36.508 [7] clause 4.5.9..

7. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).)

8. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.6.1G.3.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration and to schedule the V2X RMC according to Table 7.6.1G.3.4.1-1.
2. Set the parameters of the signal generator for an interfering signal below the V2X band in Case 1 according to Tables 7.6.1G.3.5-1 and 7.6.1G.3.5-2.
3. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2 .
4. Repeat steps from 3, using an interfering signal above the V2X band in Case 1 at step 2.
5. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3 and4 . The ranges of case 2 are covered in steps equal to the interferer bandwidth.

7.6.1G.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.10.

7.6.1G.3.5 Test Requirement

Same test requirement as in clause 7.6.1G.3.3 with the following exceptions:

- Instead of Table 7.6.1G.3.3 -1 → use Table 7.6.1G.3.5 -1.
- Instead of Table 7.6.1G.3.3 -2 → use Table 7.6.1G.3.5-2.

Table 7.6.1G.3.5-1: In band blocking parameters for intra-band contiguous multi-carrier for V2X

V2X multi-carrier configuration	Parameter	Unit	Case 1	Case 2
	$P_{Interferer}$	dBm	-44	-44
	$F_{Interferer}$ (offset)	MHz	$=-F_{offset}-F_{Ioffset,case\ 1}$ & $=+F_{offset}+F_{Ioffset,case\ 1}$	$\leq -F_{offset}-F_{Ioffset,case\ 2}$ & $\geq +F_{offset}+F_{Ioffset,case\ 2}$
V2X_47B	$F_{Interferer}$ (Range)	MHz	(NOTE 2)	$F_{DL_low}-30$ to $F_{DL_high}+30$

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 30 MHz below or above the UE receive band

NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -Foffset - FIoffset, case 1 and
b. the carrier frequency +Foffset + FIoffset, case 1

NOTE 3: Foffset is the frequency offset from the centre frequency of the CC being tested to the edge of aggregated channel bandwidth.

NOTE 4: The Finterferer (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015+0.5\rfloor 0.015+0.0075$ MHz to be offset from the sub-carrier raster.

NOTE 5: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

7.6.2 Out-of-band blocking

7.6.2.1 Test Purpose

Out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5.1 and sub-clause 7.6.1 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 8 and forward.

7.6.2.3 Minimum Conformance Requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2.3-1 and 7.6.2.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

For Table 7.6.2.3-2 in frequency range 1, 2 and 3, up to $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.4.2-1). For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

For Table 7.6.2.3-2 in frequency range 4, up to $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configurations (see Figure 5.4.2-1) and L_{CRBs} is the number of resource blocks allocated in the uplink. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

Table 7.6.2.3-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: The REFSENS power level is specified in Table 7.3.3-1 and Table 7.3.3-1a for two and four antenna ports, respectively.							

Table 7.6.2.3-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20,	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to	F_{DL_high} +60 to	F_{DL_high} +85 to	-

21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 2), 43 (Note 2), 44, 45, 48 (NOTE 2), 53, 54, 65, 66, 68, 70, 71, 72, 73, 74, 87, 88, 106			F_{DL_high} + 60	F_{DL_high} +85	+12750 MHz	
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	$F_{UL_low} - F_{UL_high}$
Note 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS. Note 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz. Note 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.						

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.

7.6.2.4 Test Description

7.6.2.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	One frequency chosen arbitrarily from low or high range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest

20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.
Note 4: Applicable only to E-UTRA FDD Bands 31, 72 and 73. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.5.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2.4.3.

7.6.2.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2.5-2. The frequency step size is 1MHz.
4. Set the downlink signal level according to the table 7.6.2.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Record the frequencies for which the throughput doesn't meet the requirements.
7. Repeat steps from 3 to 6, using an interfering signal above the wanted signal at step 3.

7.6.2.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

Table 7.6.2.4.3-1: UplinkPowerControlDedicated

}			

7.6.2.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.2.5-1 and 7.6.2.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

Table 7.6.2.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.6.2.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 3), 43 (Note 3), 44, 45, 53, 54, 65, 66, 68, 70, 71, 72, 73, 74, 87, 88, 106	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} – F_{UL_high}
Note 1: Range 3 shall be tested only with the highest channel bandwidth.						
Note 2: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.						
Note 3: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.						
Note 4: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.						

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.2.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.2_1 Out-of-band blocking with 4 Rx antenna ports

7.6.2_1.1 Test Purpose

Out-of-band band blocking with 4 Rx antenna ports is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE 4 Rx receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5_1.1 and sub-clause 7.6.1_1.1 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

Note 3: The REFSENS power level is specified in Table 7.3_1.5-1.							

7.6.2A Out-of-band blocking for CA

7.6.2A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band, the out-of-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The throughput in the downlink measured shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2.3-1 and 7.6.2A.0-0. For E-UTRA CA configurations including an operating band without uplink operation (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the uplink active in the band(s) capable of UL operation. The UE shall meet these requirements for each component carrier while all downlink carriers are active.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the out-of-band blocking requirements specified above shall be met with the transmitter power for the uplink set to 7 dB below $P_{CMAX_L,c}$ for each serving cell *c*.

For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the out-of-band blocking requirements of subclause 7.6.2A.0 do not apply.

Table 7.6.2A.0-0: Out-of-band blocking for inter-band carrier aggregation

Parameter	Unit	Range 1	Range 2	Range 3
P_W	dBm	Table 7.6.2.3-1 for all component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ or $15 < f - F_{DL_High(j)} < 60$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(1)} - 85$ or $F_{DL_High(j)} + 85 \le f \le F_{DL_Low(j+1)} - 85$ with $j < X$ or $F_{DL_High(X)} + 85 \le f \le 12750$

Note 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier j, j = 1,…,X, with carriers numbered in increasing order of carrier frequency and X the number of component carriers in the band combination (X ≤ 5 for the present version of this specification).

Note 2: For $F_{DL_Low(j+1)} - F_{DL_High(j)} < 145$ MHz and $F_{Interferer}$ in $F_{DL_High(j)} < f < F_{DL_Low(j+1)}$, $F_{Interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{Interferer}$ applies.

Note 3: For $F_{DL_Low(j)} - 15$ MHz ≤ f ≤ $F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied for carrier j.

Note 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell c is measured.

Note 5 For inter-band CA combinations containing Bands 42 ,43 or B48, the interferer with respect to Band 42 , Band 43 or Band 48 shall have power level ($P_{Interferer}$) for Range 3 modified to $-20 + \Delta R_{IB,c}$ dBm for $F_{Interferer} > 2800$ MHz and $F_{Interferer} < 4400$ MHz.

NOTE 6: For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{Interferer}$ Bands 7 and 38 are considered as one single band as follows: $F_{DL_Low} = 2570$ MHz and $F_{DL_High} = 2690$ MHz. For Range 2, the following applies for F_{DL_Low}: $-95 < f - F_{DL_Low} \le -60$ or $60 \le f - F_{DL_High} < 85$. For Range 3 the following applies $1 \le f \le F_{DL_Low} - 95$ or $F_{DL_High} + 85 \le f \le 12750$.

NOTE 7: For CA_20A-28A, CA_1A-3A-7A-20A-28A, CA_1A-3A-20A-28A, CA_1A-3A-3A-20A-28A, CA_1A-7A-20A-28A, CA_1A-20A-28A, CA_3A-7A-20A-28A, CA_3A-20A-28A and CA_7A-20A-28A the $F_{DL_low(1)}$ is given by the lower limit of the restricted operating frequency range in Band 28 and $F_{DL_high(2)}$ by Band 20 (Table 5.2A-2).

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2.1-1 for all component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$ (NOTE 5)
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ with $j \le K$ or $15 < f - F_{DL_High(j)} < 60$ with $j \le K$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(j)} - 85$ or $F_{DL_High(j)} + 85 \le f \le 12750$

NOTE 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$, j = 1,…,K,…N, denote the respective lower and upper frequency limits of the (non-overlapping) operating bands of the CA configuration numbered in increasing order of frequency, with N the number of bands in the band combination and K the number of bands with $F_{DL_High} \le 3800$ MHz.

NOTE 2: For $F_{DL_Low(j)} - 15$ MHz ≤ f ≤ $F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied for carrier j ≤ K.

NOTE 3: For $F_{DL_Low(j)} - 60$ MHz ≤ f ≤ $F_{DL_High(j)} + 60$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied for carrier K < j ≤ N.

NOTE 4: RIB,c according to Table 7.3.1-1A applies when serving cell c is measured.

NOTE 5: The power level ($P_{Interferer}$) for Range 3 is modified to -20 dBm for $F_{Interferer} > 4400$ MHz except for band combinations with Band 42 or Band 43 for which $P_{Interferer}$ for Range 3 is modified to -20 dBm for $F_{Interferer} > 2800$ MHz.

For Table 7.6.2A.0-0 in frequency ranges 1, 2 and 3, up to $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per downlink are allowed for spurious response frequencies for one active uplink when measured using a step size of 1 MHz.

For Table 7.6.2A.0-0 in frequency ranges 1, 2 and 3, up to $2 \cdot \max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per downlink are allowed for spurious response frequencies for two active uplinks when measured using a step size of 1 MHz. For these exceptions the requirements in clause 7.7A.0 apply.

For intra-band contiguous carrier aggregations the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.2A.0-1 with the uplink configuration set according to Table 7.3A.0-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2.

The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Tables 7.6.2A.0-1 and Tables 7.6.2A.0-2 being on either side of the aggregated signal. The throughput of each carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2A.0-1 and 7.6.2A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.6.2A.0-1 and 7.6.2A.0-2.

For Table 7.6.2A.0-2 in frequency range 1, 2 and 3, up to $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7 Spurious response are applicable.

Table 7.6.2A.0-1: Out-of-band blocking parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A. Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.0-2: Out of band blocking

CA configuration	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C[1], CA_42D[1], CA_42E[1], CA_42F[1], CA_43C[1], CA_48C[1], CA_48D[1], CA_48E[1], CA_48F[1], CA_66B, CA_66C, CA_66D, CA_70C	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note 1: For CA_42C, the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the out-of-band blocking requirements are defined with the uplink configuration in accordance with table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.6.2.3 and 7.6.2A.0 for one component carrier and two component carriers per sub-block, respectively. The requirements apply with all downlink carriers active.

For Table 7.6.2.3-2 in frequency range 1, 2 and 3, up to $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.4.3 spurious response are applicable.

For Table 7.6.2.3-2 in frequency range 4, up to $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs})/8 \rceil)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.4.3 spurious response are applicable.

For intra-band non-contiguous carrier aggregation with two uplink carriers and two downlink carriers, the out-of-band blocking requirements are defined with the uplink configuration of the PCC and SCC being in accordance with Table 7.3A.0-4 and powers of both carriers set to $P_{CMAX_L,c} - 7$ dBm. The UE shall meet the requirements specified in subclause 7.6.2A.0 for each component carrier while both downlink carriers are active.

For Table 7.6.2.3-2 in frequency range 1, 2 and 3, up to $2 \cdot \max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for two active uplinks in the same operating band when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7 spurious response are applicable.

For Table 7.6.2.3-2 in frequency range 4, up to $2 \cdot \max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs})/8 \rceil)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for two active uplinks in the same operating band when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 spurious response are applicable.

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and the uplink assigned to one E-UTRA band, the requirement is defined with the uplink active a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For the two non-contiguous component carriers within the same band, P_{wanted} in Table 7.6.2A.0-0 is set using $\Delta R_{IBNC} = 0$ dB for all sub-block gaps (Table 7.3A.0-3) while a band supporting contiguously aggregated carriers the out-of-band blocking parameters in Table 7.6.2.3-1 are replaced by those specified in Table 7.6.2A.0-1. For each downlink the UE shall meet the out-of-band blocking requirements applicable for inter-band carrier aggregation with one component carrier per operating band but with up to four component carriers assigned to the same band with the following exception. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1A.

7.6.2A.1 Out-of-band blocking for CA (intra-band contiguous DL CA and UL CA)

7.6.2A.1.1 Test Purpose

Out-of-band blocking for CA is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels in aggregated signals.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5A and sub-clause 7.6.1A shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

7.6.2A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.1.4 Test Description

7.6.2A.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.6.2A.1.4.1-1. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.1.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			Mid range				
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE			Highest N_{RB_agg} (Note 3)				
Test Parameters for CA Configurations							
CA Configuration / N_{RB_agg}		**DL Allocation**		**UL Allocation**			
PCC N_{RB}	**SCC N_{RB}**	**CC MOD**	**PCC & SCC RB allocation**	**CC MOD**	**N_{RB_alloc}**	**PCC & SCC RB allocations (L_{CRB} @ RB_{start})**	
25	25	QPSK	25+25	QPSK	50	P_25@0	S_25@0
50	50	QPSK	50+50	QPSK	25	P_25@25	S_0@0
75	25	QPSK	75+25	QPSK	100	P_75@0	S_25@0

100	100	QPSK	100+100	QPSK	50	P_50@50	S_0@0
100	100	QPSK	100+100	QPSK	75	P_75@25	S_0@0
100	100	QPSK	100+100	QPSK	130	P_100@0	S_30@0
100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-1 is tested per CA Configuration Test CC combination.							
Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.1.4.3.

7.6.2A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the CA Band according to Table 7.6.2A.1.5-2. The frequency step size is 1MHz.
7. Set the downlink signal level according to the table 7.6.2A.1.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:
   The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.2A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.6.2A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$) for carrier frequency 3.0GHz < $f \leq 4.2$GHz.
   The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.2A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.6.2A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$) for carrier frequency 3.0GHz < $f \leq 4.2$GHz.
8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.
9. Record the frequencies for which the throughput doesn't meet the requirements.
10. Repeat steps from 6 to 9, using an interfering signal above the CA Band at step 5.

7.6.2A.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

7.6.2A.1.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.2A.1.5-1 and 7.6.2A.1.5-2.

For Table 7.6.2A.1.5-2 in frequency range 1, 2 and 3, up to $\max\left(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A Spurious response for CA are applicable.

Table 7.6.2A.1.5-1: Out-of-band blocking parameters

Rx Parameter	**Units**	**CA Bandwidth Class**				
		B	**C**	**D**	**E**	**F**
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9			
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A. NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.1.5-2: Out of band blocking

CA configuration	**Parameter**	**Units**	**Frequency**		
			range 1	**range 2**	**range 3**
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C,CA_41C, CA_42C (note)	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to	F_{DL_high} +60 to	F_{DL_high} +85 to

			F_{DL_high} + 60	F_{DL_high} +85	+12750 MHz
Note: For CA_42C, the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.2A.1.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.2A.2 Out-of-band blocking for CA (intra-band contiguous DL CA without UL CA)

7.6.2A.2.1 Test Purpose

Same test purpose as 7.6.2A.1.

7.6.2A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.6.2A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.2.4 Test Description

7.6.2A.2.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2A.1.4.1 with the following exceptions:

- Instead of Table 7.6.2A.1.4.1-1 → use Table 7.6.2A.2.4.1-1.
- Instead of clause 7.6.2A.1.4.3 → use clause 7.6.2A.2.4.3.

Table 7.6.2A.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			NC

100	100	QPSK	100+100	QPSK	100	P 100@0	-

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2:	Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.
Note 3:	If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg} , only the combination with the highest NRB_PCC is tested.
Note 4:	For CA_70C 75+50 shall be tested.

7.6.2A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the CA Band according to Table 7.6.2A.1.5-2. The frequency step size is 1MHz.
7. Set the downlink signal level according to the table 7.6.2A.1.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.
9. Record the frequencies for which the throughput doesn't meet the requirements.
10. Repeat steps from 6 to 9, using an interfering signal above the CA Band at step 5.

7.6.2A.2.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3.

7.6.2A.2.5 Test Requirement

Same test requirement as in clause 7.6.2A.1.5 with the following exceptions:

- Instead of Table 7.6.2A.1.5-1 → use Table 7.6.2A.2.5-1.
- Instead of Table 7.6.2A.1.5-2 → use Table 7.6.2A.2.5-2.

Table 7.6.2A.2.5-1: Out-of-band blocking parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9			
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5.						
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.2.5-2: Out of band blocking

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_5B, CA_7C, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_41C, CA_42C (note) , CA_48C (note), CA_66B, CA_66C, CA_70C	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note: For CA_42C and CA_48C, the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ >2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For the UE which supports inter band CA configuration in Tables 7.3.3-1A**,** 7.3.3-1B and 7.3.3-1C $P_{Interferer}$ power defined in Table 7.6.2A.2.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.2A.3 Out-of-band blocking for CA (inter-band DL CA without UL CA)

Editor's notes: This clause is incomplete for Band 46. The following aspects are either missing or not yet determined.

- Test system uncertainties are missing in annex F.

7.6.2A.3.1 Test Purpose

Out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 15 MHz below or above (60 MHz for band 46) the UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above (60 MHz for band 46) the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5.1 and sub-clause 7.6.1 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

This test case applies only for CA configurations that do not support UL CA.

7.6.2A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.3.4 Test Description

7.6.2A.3.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2A.1.4.1 with the following exceptions:

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2:	Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3:	The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4:	The frequencies of PCC and SCC shall be switched and tested in each configuration (given UL is supported in PCC band as per Table 5.2-1).

7.6.2A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the SCC's operating band according to Table 7.6.2 A.3.5-2, or Table 7.6.2A.3.5-2a for operating band 46 without uplink band. The frequency step size is 1 MHz.
7. Set the downlink signal level according to the table 7.6.2A.3.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.3.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.
9. Record the frequencies for which the throughput doesn't meet the requirements.
10. Repeat steps from 6 to 9, using an interfering signal above the SCC's operating band at step 6.
11. Switch the SCell into PCell and repeat steps 1 to 10, except for operating bands without uplink band (as noted in Table 5.2-1).

7.6.2A.3.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3.

7.6.2A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the out-of-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

Except for the spurious response frequencies recorded at step 9, the throughput measured during the test procedure for each component carrier, when operated as SCell, shall be $\geq$ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2A.3.5-1 (originated from the single carrier Table 7.6.2.5-1) and 7.6.2.3.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.3 Spurious Response are applicable.

Table 7.6.2A.3.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.6.2A.3.5-2: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier

Parameter	Unit	Range 1	Range 2	Range 3
P_W	dBm	Table 7.6.2A.3.5-1 for both component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(1)} < -15$ or $-60 < f - F_{DL_Low(2)} < -15$ or $15 < f - F_{DL_High(1)} < 60$ or $15 < f - F_{DL_High(2)} < 60$	$-85 < f - F_{DL_Low(1)} \le -60$ or $-85 < f - F_{DL_Low(2)} \le -60$ or $60 \le f - F_{DL_High(1)} < 85$ or $60 \le f - F_{DL_High(2)} < 85$	$1 \le f \le F_{DL_Low(1)} - 85$ or $F_{DL_High(1)} + 85 \le f \le F_{DL_Low(2)} - 85$ or $F_{DL_High(2)} + 85 \le f \le 12750$
Note 1: $F_{DL_Low(1)}$ and $F_{DL_High(1)}$ denote the respective lower and upper frequency limits of the lower operating band, $F_{DL_Low(2)}$ and $F_{DL_High(2)}$ the respective lower and upper frequency limits of the upper operating band.				
Note 2: For $F_{DL_Low(2)} - F_{DL_High(1)} < 145$ MHz and FInterferer in $F_{DL_High(1)} < f < F_{DL_Low(2)}$, $F_{Interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{Interferer}$ applies.				
Note 3: For $F_{DL_Low(1)} - 15$ MHz $\le f \le F_{DL_High(1)} + 15$ MHz and $F_{DL_Low(2)} - 15$ MHz $\le f \le F_{DL_High(2)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking in the respective subclauses 7.5A.1.5 and 7.6.1A.5 shall be applied.				
Note 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell c is measured.				
Note 5 For inter-band CA combinations containing Bands 42, 43, or 48 the interferer with respect to Band 42, Band 43, or Band 48 shall have power level ($P_{Interferer}$) for Range 3 modified to $-20 + \Delta R_{IB,c}$ dBm for $F_{Interferer} > 2800$ MHz and $F_{Interferer} < 4400$ MHz.				
Note 6: For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{Interferer}$ Bands 7 and 38 are considered as one single band as follows: $F_{DL_Low} = 2570$ MHz and $F_{DL_High} = 2690$ MHz. For Range 2, the following applies for F_{DL_Low}: $-95 < f - F_{DL_Low} \le -60$ or $60 \le f - F_{DL_High} < 85$. For Range 3 the following applies $1 \le f \le F_{DL_Low} - 95$ or $F_{DL_High} + 85 \le f \le 12750$.				
Note 7: For CA_20A-28A, CA_1A-3A-7A-20A-28A, CA_1A-3A-20A-28A, CA_1A-3A-3A-20A-28A, CA_1A-7A-20A-28A, CA_1A-20A-28A, CA_3A-7A-20A-28A, CA_3A-20A-28A and CA_7A-20A-28A the $F_{DL_low(1)}$ is given by the lower limit of the restricted operating frequency range in Band 28 and $F_{DL_high(2)}$ by Band 20 (Table 5.2A-2).				

Table 7.6.2A.3.5-2a: Out-of-band blocking for inter-band carrier aggregation with band 46 and with one active uplink

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.3.5-1 for both component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$ (NOTE 5)
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(1)} < -15$ or $15 < f - F_{DL_High(1)} < 60$	$-85 < f - F_{DL_Low(1)} \le -60$ or $-85 < f - F_{DL_Low(2)} \le -60$ or $60 \le f - F_{DL_High(1)} < 85$ or	$1 \le f \le F_{DL_Low(1)} - 85$ or $1 \le f \le F_{DL_Low(2)} - 85$ or $F_{DL_High(1)} + 85 \le f \le 12750$

			$60 \le f - F_{DL_High(2)} < 85$	or $F_{DL_High(2)} + 85 \le f \le 12750$
NOTE 1: $F_{DL_Low(1)}$ and $F_{DL_High(1)}$ denote the respective lower and upper frequency limits of the lower operating band, $F_{DL_Low(2)}$ and $F_{DL_High(2)}$ the respective lower and upper frequency limits of the upper operating band.				
NOTE 2: For $F_{DL_Low(1)} - 15$ MHz $\le f \le F_{DL_High(1)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied.				
NOTE 3: For $F_{DL_Low(2)} - 60$ MHz $\le f \le F_{DL_High(2)} + 60$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied.				
NOTE 4: RIB,c according to Table 7.3.1-1A applies when serving cell c is measured.				
NOTE 5: The power level ($P_{Interferer}$) for Range 3 is modified to -20 dBm for $F_{Interferer} > 4400$ MHz except for band combinations with Band 42 or Band 43 for which $P_{Interferer}$ for Range 3 is modified to -20 dBm for $F_{Interferer} > 2800$ MHz.				

7.6.2A.4 Out-of-band blocking for CA (intra-band non-contiguous DL CA without UL CA)

7.6.2A.4.1 Test Purpose

Same as in clause 7.6.2A.1.1.

7.6.2A.4.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.6.2A.4.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.4.4 Test description

7.6.2A.4.4.1 Initial Conditions

Same as in clause 7.6.2A.1.4.1 with the following exceptions:

- Instead of Table 7.6.2A.1.4.1-1→ use Table 7.6.2A.4.4.1-1.

Table 7.6.2A.4.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes , and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: N/A (Range is not relevant)
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	highest N_{RB_agg}
Test Parameters for CA Configurations	
use the content of Table 7.3A.4.4.1-1 and test only for each CA configuration highest N_{RB_agg},	

7.6.2A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

6. Set the parameters of the signal generator for an interfering signal below the CA band according to Table 7.6.2.5-2. The frequency step size is 1 MHz.

7. Set the downlink signal level according to the table 7.6.2.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2.5-1 for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the throughput measurement.

8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.

9. Record the frequencies for which the throughput doesn't meet the requirements.

10. Repeat steps from 6 to 9, using an interfering signal above the CA band at step 6.

7.6.2A.4.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3.

7.6.2A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, the out-of-band blocking requirements are defined with the uplink configuration of the PCC being in accordance with table 7.3.1A-3.The UE shall meet the requirements specified in tables 7.6.2A.4.5-1 and 7.6.2A.4.5-2 for each component carrier while both downlink carriers are active.

The out-of-band blocking parameters in tables 7.6.2A.4.5-1 and 7.6.2A.4.5-2 for each component carrier are the same as single carrier requirements in Tables 7.6.2.5-1 and 7.6.2.5-2.

For Table 7.6.2A.4.5-2 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,6\cdot\lceil N_{RB}\cdot/6\rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.4 spurious response are applicable.

For Table 7.6.2A.4.5-2 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.4 spurious response are applicable.

Table 7.6.2A.4.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.6.2A.4.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency

			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 4), 43 (Note 4),44, 66	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}

Note 1: Range 3 shall be tested only with the highest channel bandwidth.
Note 2: For the UE which supports both Band 11 and Band 21 the out of band blocking is FFS.
Note 3: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.
Note 4: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.2A.4.5-2 is increased by the amount given by $\Delta_{RIB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.2A.5 Out-of-band blocking for 3DL CA

7.6.2A.5.1 Test Purpose

Same test purpose as in clause 7.6.2A.3.1.

7.6.2A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 3DL with CA configurations in Table 7.1-2a.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 3DL CA involving Band 46.

7.6.2A.5.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.5.4 Test Description

7.6.2A.5.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.5.4.1-1 through table 7.6.2A.5.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.5.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC N_{RB}” and “SCCs N_{RB} ” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations												
ID	PCC				SCC1				SCC2			
	Band	Range	NRB		Band	Range	NRB		Band	Range	NRB	
	UL MOD	DL MOD	ULalloc (Note 2,3)	DLalloc	UL MOD	DL MOD	ULalloc	DLalloc	UL MOD	DL MOD	ULalloc	DLalloc
Default Test Settings for a CA_XD Configuration (Intra-band contiguous)

Default Test Settings for CA_XA-YB and CA_XA-YC Configuration (Intra-band contiguous + Inter-band)												
1[9]	Y	Mid/CC 1	REFSENS	All RBs	Y	Mid/CC 2	N/A	All RBs	X	Mid	N/A	All RBs
	QPSK	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB}
2[12]	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs
	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB_agg}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band contiguous:** X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41
Note 5: **Inter-band:** X,Y,Z correspond to the 1st, 2nd and 3rd band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19
Note 6: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1C-3A, X=1 and Y=3
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no refsens requirement shall be skipped.
Note 12: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_SCCx} = N_{RB_SCCx+1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_SCCx} for testing.

Table 7.6.2A.5.4.1-2: Test Configuration Table with W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns

Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Highest N_{RB}				
Network signalling value										NS_01 by default

2	X	Mid	REFSENS	All RBs	-	66	CC1	N/A	All RBs	50	66	CC2	N/A	All RBs
	QPSK	QPSK		Highest NRB		N/A	QPSK		100		N/A	QPSK		100
Test Settings for a CA_66A-66C Configuration (Intra-band non-contiguous + Intra-band contiguous)														

1	66	CC1	100@0	All RBs	30.2	66	CC2	N/A	All RBs	-	66	CC3	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100
Test Settings for a CA_66A-66A-66A Configuration (Intra-band non-contiguous)														
1	66	CC1	100@0	All RBs	15	66	CC2	N/A	All RBs	15	66	CC3	N/A	All RBs
	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.
Note 7: **Intra-band non-contiguous + Inter-band:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-2 as appropriate.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.5.4.3.

7.6.2A.5.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.5.4.2-1. The frequency step size is 1MHz. Use the highest $\Delta R_{IB,c}$ among CA bands for $P_{interferer}$ calculation.

7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.5.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.5.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.

8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.

9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.

10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which $\Delta R_{IB,c}$ is the same as ΔR_{IB} used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use $\Delta R_{IB,c}$ relevant to recorded carrier for $P_{interferer}$ calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.

11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.5.4.2-1.

12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.5.4.2-1.

13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.5.4.2-1.

Table 7.6.2A.5.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.6.2A.5.5-1	7.6.2A.5.5-2
	2			
Inter-band	1	SCC1, SCC2	7.6.2A.5.5-3	7.6.2A.5.5-4
	2	SCC1, SCC2		
	3	SCC1, SCC2		
Intra-band contiguous + Inter-band	1	SCC2	7.6.2A.5.5-3	7.6.2A.5.5-4 (Note 4)
	2	SCC1, SCC2	7.6.2A.5.5-1	7.6.2A.5.5-2 (Note 5)
Intra-band non-contiguous + Inter-band	1	SCC2	7.6.2A.5.5-3	7.6.2A.5.5-4 (Note 6)
	2	SCC1,	7.6.2A.5.5-3	7.6.2A.5.5-5 (Note 5)
		SCC2		
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.6.2A.5.5-3	7.6.2A.5.5-5 (Note 4)
		SCC1, SCC2	7.6.2A.5.5-1	7.6.2A.5.5-2 (Note 6)
	2	SCC2	7.6.2A.5.5-3	7.6.2A.5.5-5 (Note 4)
		PCC, SCC1	7.6.2A.5.5-1	7.6.2A.5.5-2 (Note 6)
Intra-band non-contiguous	1	PCC, SCC1, SCC2	7.6.2A.5.5-3	7.6.2A.5.5-5

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.5.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.
Note 4: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.5.5-2. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 5: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.5.5-4. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 6: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.5.5-5. When interferer position is closer than 15 MHz from other CC block interferer is OFF.

7.6.2A.5.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3 for without UL CA.

Same message contents as in clause 7.6.2A.1.4.3 for UL CA.

7.6.2A.5.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

For Table 7.6.2A.5.5-2 in frequency range 1, 2 and 3, up to $\max(24,6\cdot\lceil N_{RB}\cdot/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.5.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9		
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5. Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.5.5-2: Out of band blocking (intra-band contiguous)

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_7C , CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_41C, CA_40D, CA_42C (Note) , CA_48C (Note), CA_48D (Note), CA_66C	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note: For CA_42C, CA_48C, and CA_48D, the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For Table 7.6.2A.5.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.5.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.6.2A.5.5-4: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.5.5-3 for all component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ or $15 < f - F_{DL_High(j)} < 60$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(j)} - 85$ or $F_{DL_High(j)} + 85 \le f \le F_{DL_Low(j+1)} - 85$ or $F_{DL_High(X)} + 85 \le f \le 12750$

Note 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier *j*, *j* = 1,…,X, with carriers numbered in increasing order of carrier frequency and X the number of component carriers in the band combination (X = 2 or X = 3 for the present version of this specification).

Note 2: For $F_{DL_Low(j+1)} - F_{DL_High(j)} < 145$ MHz and $F_{Interferer}$ in $F_{DL_High(j)} < f < F_{DL_Low(j+1)}$, $F_{Interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{Interferer}$ applies.

Note 3: For $F_{DL_Low(j)} - 15$ MHz ≤ f ≤ $F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier *j*.

Note 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell c is measured.

Note 5: For inter-band CA combinations containing Bands 42, 43, or 48, the interferer with respect to Band 42, Band 43, or Band 48 shall have power level ($P_{Interferer}$) for Range 3 modified to $-20 + \Delta R_{IB,c}$ dBm for $F_{Interferer} > 2800$ MHz and $F_{Interferer} < 4400$ MHz.

Table 7.6.2A.5.5-4a: Out-of-band blocking for inter-band carrier aggregation with band 46 and with one active uplink

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.5.5-3 for all component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$ (NOTE 5)
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ with $j \le K$ or $15 < f - F_{DL_High(j)} < 60$ with $j \le K$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(j)} - 85$ or $F_{DL_High(j)} + 85 \le f \le 12750$

NOTE 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$, *j* = 1,…,K,…N, denote the respective lower and upper frequency limits of the (non-overlapping) operating bands of the CA configuration numbered in increasing order of frequency, with N the number of bands in the band combination and K the number of bands with $F_{DL_High} \le 3800$ MHz.

NOTE 2: For $F_{DL_Low(j)} - 15$ MHz ≤ f ≤ $F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier $j \le K$.

NOTE 3: For $F_{DL_Low(j)} - 60$ MHz ≤ f ≤ $F_{DL_High(j)} + 60$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier $K < j \le N$.

NOTE 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell *c* is measured.

NOTE 5: The power level ($P_{Interferer}$) for Range 3 is modified to -20 dBm for $F_{Interferer} > 4400$ MHz except for band combinations with Band 42 or Band 43 for which $P_{Interferer}$ for Range 3 is modified to -20 dBm for $F_{Interferer} > 2800$ MHz.

For Table 7.6.2A.5.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.5 spurious response for CA are applicable.

For Table 7.6.2A.5.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 spurious response for CA are applicable.

Table 7.6.2A.5.5-5: Out of band blocking (intra-band non-contiguous)

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 4), 43 (Note 4), 48 (Note 4) 44, 66	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}
Note 1: Range 3 shall be tested only with the highest channel bandwidth. Note 2: For the UE which supports both Band 11 and Band 21 the out of band blocking is FFS. Note 3: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps. Note 4: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.						

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.2A.5.5 2, 7.6.2A.5.5-4 and 7.6.2A.5.5-5 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.2A.6

7.6.2A.7 Out-of-band blocking for 4DL CA

7.6.2A.7.1 Test Purpose

Same test purpose as in clause 7.6.2A.1.

7.6.2A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 4DL with CA configurations in Table 7.1-2b.

7.6.2A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.7.4 Test Description

7.6.2A.7.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.7.4.1-1 through table 7.6.2A.7.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.7.4.1-1: Test Configuration Table

Initial Conditions																
Test Environment as specified in TS 36.508 [7] subclause 4.1					NC											
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.					For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns											
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Refer to “PCC N_{RB}" and “SCCs N_{RB} ” columns											
Network signalling value					NS_01 by default											
Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 12: ID/test points that result in no refsens requirement shall be skipped.

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.

Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.

Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.

Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 10: ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.7.4.3.

7.6.2A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.7.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.7.4.2-1. The frequency step size is 1MHz. Use the highest $\Delta R_{IB,c}$ among CA bands for $P_{interferer}$ calculation.
7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.7.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.7.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.
9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.
10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which $\Delta R_{IB,c}$ is the same as ΔR_{IB} used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use $\Delta R_{IB,c}$ relevant to recorded carrier for $P_{interferer}$ calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.
11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.7.4.2-1.
12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.7.4.2-1.
13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.7.4.2-1.

Table 7.6.2A.7.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)

	2	SCC2, SCC3	7.6.2A.7.5-1	7.6.2A.7.5-2 (Note 5)
Intra-band non-contiguous + Inter-band	1	SCC2, SCC3	7.6.2A.7.5-3	7.6.2A.7.5-4 (Note 6)
	2	SCC1, SCC2	7.6.2A.7.5-3	7.6.2A.7.5-5 (Note 5)
		SCC3	7.6.2A.7.5-3	7.6.2A.7.5-4 (Note 6)
	3	SCC1	7.6.2A.7.5-3	7.6.2A.7.5-4 (Note 6)
		SCC2, SCC3	7.6.2A.7.5-3	7.6.2A.7.5-5 (Note 5)
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.6.2A.7.5-3	7.6.2A.7.5-5 (Note 4)
		SCC1, SCC2, SCC3	7.6.2A.7.5-1	7.6.2A.7.5-2 (Note 6)
	2	SCC2	7.6.2A.7.5-3	7.6.2A.7.5-5 (Note 4)
		PCC, SCC1, SCC3	7.6.2A.7.5-1	7.6.2A.7.5-2 (Note 6)
Intra-band non-contiguous + Intra-band non-contiguous	1	SCC2, SCC3	7.6.2A.7.5-3	7.6.2A.7.5-5
	2			

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.7.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.
Note 4: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.7.5-2. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 5: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.7.5-4. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 6: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.7.5-5. When interferer position is closer than 15 MHz from other CC block interferer is OFF.

7.6.2A.7.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3 for without UL CA.

Same message contents as in clause 7.6.2A.1.4.3 for UL CA.

7.6.2A.7.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

For Table 7.6.2A.7.5-2 in frequency range 1, 2 and 3, up to $\max\left(24,6\cdot\left\lceil N_{RB}\cdot/6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.7.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A. Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.7.5-2: Out of band blocking (intra-band contiguous)

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_41C, CA_41D, CA_40D, CA_40E, CA_42C[1], CA_42D[1], CA_42E[1], CA_48C[1], CA_48D[1], CA_66B, CA_66C, CA_66D, CA_70C	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note 1: The power level of the interferer ($P_{Interferer}$) for this CA configuration for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For Table 7.6.2A.7.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.7.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. NOTE 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.							

Table 7.6.2A.7.5-4: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.7.5-3 for all component carriers		
$P_{interferer}$	dBm	-44 + $\Delta R_{IB,c}$	-30 + $\Delta R_{IB,c}$	-15 + $\Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ or $15 < f - F_{DL_High(j)} < 60$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(j)} - 85$ or $F_{DL_High(j)} + 85 \le f \le F_{DL_Low(j+1)} - 85$ with $j < X$ or $F_{DL_High(X)} + 85 \le f \le 12750$
Note 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier j, j = 1,…,X, with carriers numbered in increasing order of carrier frequency and X the number of component carriers in the band combination (X ≤ 5 for the present version of this specification).				

Note 2: For $F_{DL_Low(j+1)} - F_{DL_High(j)} < 145$ MHz and $F_{Interferer}$ in $F_{DL_High(j)} < f < F_{DL_Low(j+1)}$, $F_{Interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{Interferer}$ applies.
Note 3: For $F_{DL_Low(j)} - 15$ MHz ≤ f ≤ $F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier *j*.
Note 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell c is measured.
Note 5: For inter-band CA combinations containing Bands 42, 43,or 48, the interferer with respect to Band 42, Band 43, or Band 48 shall have power level ($P_{Interferer}$) for Range 3 modified to -20 + $\Delta R_{IB,c}$ dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.
Note 6: For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{Interferer}$ Bands 7 and 38 are considered as one single band as follows: F_{DL_Low} = 2570 MHz and F_{DL_High} = 2690 MHz. For Range 2, the following applies for F_{DL_Low}: -95 < f – F_{DL_Low} ≤ -60 or 60 ≤ f – F_{DL_High} < 85. For Range 3 the following applies 1 ≤ f ≤ F_{DL_Low} -95 or F_{DL_High} + 85 ≤ f ≤ 12750.

Table 7.6.2A.7.5-4a: Out-of-band blocking for inter-band carrier aggregation with band 46 and with one active uplink

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.5.5-3 for all component carriers		
$P_{interferer}$	dBm	-44 + $\Delta R_{IB,c}$	-30 + $\Delta R_{IB,c}$	-15 + $\Delta R_{IB,c}$ (NOTE 5)
$F_{interferer}$ (CW)	MHz	-60 < f – $F_{DL_Low(j)}$ < -15 with *j* ≤ K or 15 < f – $F_{DL_High(j)}$ < 60 with *j* ≤ K	-85 < f – $F_{DL_Low(j)}$ ≤ -60 or 60 ≤ f – $F_{DL_High(j)}$ < 85	1 ≤ f ≤ $F_{DL_Low(j)}$ – 85 or $F_{DL_High(j)}$ + 85 ≤ f ≤ 12750

NOTE 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$, *j* = 1,…,K,…N, denote the respective lower and upper frequency limits of the (non-overlapping) operating bands of the CA configuration numbered in increasing order of frequency, with N the number of bands in the band combination and K the number of bands with F_{DL_High} ≤ 3800 MHz.
NOTE 2: For $F_{DL_Low(j)} - 15$ MHz ≤ f ≤ $F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier *j* ≤ K.
NOTE 3: For $F_{DL_Low(j)} - 60$ MHz ≤ f ≤ $F_{DL_High(j)} + 60$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier K < *j* ≤ N.
NOTE 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell *c* is measured.
NOTE 5: The power level ($P_{Interferer}$) for Range 3 is modified to -20 dBm for $F_{Interferer}$ > 4400 MHz except for band combinations with Band 42 or Band 43 for which $P_{Interferer}$ for Range 3 is modified to -20 dBm for $F_{Interferer}$ > 2800 MHz.

For Table 7.6.2A.7.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.5 spurious response for CA are applicable.

For Table 7.6.2A.7.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 spurious response for CA are applicable.

Table 7.6.2A.7.5-5: Out of band blocking (intra-band non-contiguous)

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-

(NOTE 2), 43 (NOTE 2), 44, 45, 48 (Note 2), 65, 66, 68, 70						
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.
NOTE 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.
NOTE 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.
NOTE 4: For a UE supporting CA_20A-28A the requirements for Band 20 and Band 28 apply with F_{DL_low} given by the lower limit of the restricted operating frequency range in Band 28 and F_{DL_high} by Band 20 (Table 5.5A-2).

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.2A.7.5 2, 7.6.2A.7.5-4 and 7.6.2A.7.5-5 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.2A.8 Out-of-band blocking for 5DL CA

7.6.2A.8.1 Test Purpose

Same test purpose as in clause 7.6.2A.1.

7.6.2A.8.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

7.6.2A.8.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.8.4 Test Description

7.6.2A.8.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.8.4.1-1 through table 7.6.2A.8.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.8.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default
Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-42A,X=1,Y=3,Z=7,R=20,S=42.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.

Note 8:	REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9:	**Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10:	**Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11:	The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.6.2A.8.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.8.4.1-1 through Table 7.6.2A.8.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.8.4.3.

7.6.2A.8.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.8.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.8.4.1-1 through Table 7.6.2A.8.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.8.4.1-1 through Table 7.6.2A.8.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.8.4.2-1. The frequency step size is 1MHz. Use the highest $\Delta R_{IB,c}$ among CA bands for $P_{interferer}$ calculation.
7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.8.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.8.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.
9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.
10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which $\Delta R_{IB,c}$ is the same as ΔR_{IB} used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use $\Delta R_{IB,c}$ relevant to recorded carrier for $P_{interferer}$ calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.
11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.8.4.2-1.
12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.8.4.2-1.
13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.8.4.2-1.

Table 7.6.2A.8.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.8.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.
Note 4: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.8.5-2. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 5: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.8.5-4. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 6: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.8.5-5. When interferer position is closer than 15 MHz from other CC block interferer is OFF.

7.6.2A.8.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3 for without UL CA.

Same message contents as in clause 7.6.2A.1.4.3 for UL CA.

7.6.2A.8.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

For Table 7.6.2A.8.5-2 in frequency range 1, 2 and 3, up to $\max\left(24, 6\cdot\left\lceil N_{RB}\cdot/6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.8 Spurious Response for CA are applicable.

Table 7.6.2A.8.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	9

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.

Table 7.6.2A.8.5-2: Out of band blocking (intra-band contiguous)

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C , CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C[1],	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to	F_{DL_low} - 60 to	F_{DL_low} - 85 to 1 MHz

CA_42D[1], CA_42E[1], CA_42F[1], CA_43C[1], CA_48C[1], CA_48D[1], CA_48E[1], CA_48F[1], CA_66B, CA_66C, CA_66D, CA_70C			F_{DL_low} - 60	F_{DL_low} - 85	
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note 1: The power level of the interferer ($P_{Interferer}$) for this CA configuration for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For Table 7.6.2A.8.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.8.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.							

Table 7.6.2A.8.5-4: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.8.5-3 for all component carriers		
$P_{interferer}$	dBm	-44 + $\Delta R_{IB,c}$	-30 + $\Delta R_{IB,c}$	-15 + $\Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ or $15 < f - F_{DL_High(j)} < 60$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(j)} - 85$ or $F_{DL_High(j)} + 85 \le f \le F_{DL_Low(j+1)} - 85$ with $j < X$ or $F_{DL_High(X)} + 85 \le f \le 12750$
Note 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier j, j = 1,…,X, with carriers numbered in increasing order of carrier frequency and X the number of component carriers in the band combination (X ≤ 5 for the present version of this specification).				
Note 2: For $F_{DL_Low(j+1)} - F_{DL_High(j)}$ < 145 MHz and $F_{Interferer}$ in $F_{DL_High(j)} < f < F_{DL_Low(j+1)}$, $F_{Interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{Interferer}$ applies.				
Note 3: For $F_{DL_Low(j)}$ – 15 MHz ≤ f ≤ $F_{DL_High(j)}$ + 15 MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier j.				
Note 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell c is measured.				
Note 5: For inter-band CA combinations containing Bands 42, 43, or Band 48 the interferer with respect to Band 42, Band 43, or Band 48 shall have power level ($P_{Interferer}$) for Range 3 modified to -20 + $\Delta R_{IB,c}$ dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.				
Note 6: For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{Interferer}$ Bands 7 and 38 are considered as one single band as follows: F_{DL_Low} = 2570 MHz and F_{DL_High} = 2690 MHz. For Range 2, the following applies for F_{DL_Low}: $-95 < f - F_{DL_Low} \le -60$ or $60 \le f - F_{DL_High} < 85$. For Range 3 the following applies $1 \le f \le F_{DL_Low}$ -95 or F_{DL_High} + 85 ≤ f ≤ 12750.				

For Table 7.6.2A.8.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24, 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.8 spurious response for CA are applicable.

For Table 7.6.2A.8.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs})/8 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.8 spurious response for CA are applicable.

Table 7.6.2A.8.5-5: Out of band blocking (intra-band non-contiguous)

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (NOTE 2), 43 (NOTE 2), 44, 45, 48 (NOTE 2), 65, 66, 68, 70	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}

Note 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.
Note 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.
Note 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.
Note 4: For a UE supporting CA_20A-28A the requirements for Band 20 and Band 28 apply with F_{DL_low} given by the lower limit of the restricted operating frequency range in Band 28 and F_{DL_high} by Band 20 (Table 5.5A-2).

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.2A.8.5 2, 7.6.2A.8.5-4 and 7.6.2A.8.5-5 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.2A.9 Out-of-band blocking for 6DL CA

7.6.2A.9.1 Test Purpose

Same test purpose as in clause 7.6.2A.1.

7.6.2A.9.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d.

7.6.2A.9.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.9.4 Test Description

7.6.2A.9.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.9.4.1-1 through table 7.6.2A.9.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.9.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous+ Inter-band , Intra-band contiguous + Intra-band contiguous , Intra-band contiguous + Intra-band contiguous + inter-band & Intra-band contiguous + Intra-band contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S,U correspond to the different bands in the CA Configuration. E.g. X !=Y !=Z !=R !=S !=U.
Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no ref sens requirement shall be skipped.

Table 7.6.2A.9.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: **Intra-band non-contiguous + Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-3A-7A-7A-8A,X=1,Y=3,Z=7,R=8.

Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y,Z,R corresponds to the band of the CA Configuration. E.g. for CA_1A-1A-3A-7C-28A,X=1,Y=3,Z=7,R=28.

Note 6: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 7: Intra-band non-contiguous + Intra-band contiguous: If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.9.4.1-1 through Table 7.6.2A.9.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.9.4.3.

7.6.2A.9.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.9.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.9.4.1-1 through Table 7.6.2A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.9.4.1-1 through Table 7.6.2A.9.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.9.4.2-1. The frequency step size is 1MHz. Use the highest $\Delta R_{IB,c}$ among CA bands for $P_{interferer}$ calculation.
7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.9.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.9.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.
9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.
10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which $\Delta R_{IB,c}$ is the same as ΔR_{IB} used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use $\Delta R_{IB,c}$ relevant to recorded carrier for $P_{interferer}$ calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.
11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.9.4.2-1.
12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.9.4.2-1.
13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.9.4.2-1.

Table 7.6.2A.9.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)

	2	SCC3,SCC4,SCC5		

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.9.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.
Note 4: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.9.5-2. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 5: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.9.5-4. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 6: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.9.5-5. When interferer position is closer than 15 MHz from other CC block interferer is OFF.

7.6.2A.9.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3 for without UL CA.

Same message contents as in clause 7.6.2A.1.4.3 for UL CA.

7.6.2A.9.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

For Table 7.6.2A.9.5-2 in frequency range 1, 2 and 3, up to $\max\left(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.9 Spurious Response for CA are applicable.

Table 7.6.2A.9.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	9

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.

Table 7.6.2A.9.5-2: Out of band blocking (intra-band contiguous)

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C , CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C[1], CA_42D[1], CA_42E[1], CA_42F[1], CA_43C[1], CA_48C[1], CA_48D[1], CA_48E[1], CA_48F[1], CA_66B, CA_66C, CA_66D, CA_70C	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note 1: The power level of the interferer ($P_{Interferer}$) for this CA configuration for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For Table 7.6.2A.9.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.9.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.							

Table 7.6.2A.9.5-4: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier

Parameter	Unit	Range 1	Range 2	Range 3
P_{wanted}	dBm	Table 7.6.2A.9.5-3 for all component carriers		
$P_{interferer}$	dBm	-44 + $\Delta R_{IB,c}$	-30 + $\Delta R_{IB,c}$	-15 + $\Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	-60 < f – $F_{DL_Low(j)}$ < -15 or 15 < f – $F_{DL_High(j)}$ < 60	-85 < f – $F_{DL_Low(j)}$ ≤ -60 or 60 ≤ f – $F_{DL_High(j)}$ < 85	1 ≤ f ≤ $F_{DL_Low(j)}$ – 85 or $F_{DL_High(j)}$ + 85 ≤ f ≤ $F_{DL_Low(j+1)}$ – 85 with j < X or $F_{DL_High(X)}$ + 85 ≤ f ≤ 12750
Note 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier j, j = 1,…,X, with carriers numbered in increasing order of carrier frequency and X the number of component carriers in the band combination (X ≤ 5 for the present version of this specification).				
Note 2: For $F_{DL_Low(j+1)}$ – $F_{DL_High(j)}$ < 145 MHz and $F_{Interferer}$ in $F_{DL_High(j)}$ < f < $F_{DL_Low(j+1)}$, $F_{Interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{Interferer}$ applies.				
Note 3: For $F_{DL_Low(j)}$ – 15 MHz ≤ f ≤ $F_{DL_High(j)}$ + 15 MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier j.				
Note 4: $\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell c is measured.				
Note 5: For inter-band CA combinations containing Bands 42 or 43, the interferer with respect to Band 42 or Band 43 shall have power level ($P_{Interferer}$) for Range 3 modified to -20 + $\Delta R_{IB,c}$ dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.				
Note 6: For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{Interferer}$ Bands 7 and 38 are considered as one single band as follows: F_{DL_Low} = 2570 MHz and F_{DL_High} = 2690 MHz. For Range 2, the following applies for F_{DL_Low}: -95 < f – F_{DL_Low} ≤ -60 or 60 ≤ f – F_{DL_High} < 85. For Range 3 the following applies 1 ≤ f ≤ F_{DL_Low} -95 or F_{DL_High} + 85 ≤ f ≤ 12750.				

For Table 7.6.2A.9.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.9 spurious response for CA are applicable.

For Table 7.6.2A.9.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.9 spurious response for CA are applicable.

Table 7.6.2A.9.5-5: Out of band blocking (intra-band non-contiguous)

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (NOTE 2), 43 (NOTE 2), 44, 45, 65, 66, 68, 70	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}

Note 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.
Note 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.
Note 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.
Note 4: For a UE supporting CA_20A-28A the requirements for Band 20 and Band 28 apply with F_{DL_low} given by the lower limit of the restricted operating frequency range in Band 28 and F_{DL_high} by Band 20 (Table 5.5A-2).

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Tables 7.6.2A.9.5 2, 7.6.2A.9.5-4 and 7.6.2A.9.5-5 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.2A.10 Out-of-band blocking for 7DL CA

7.6.2A.10.1 Test Purpose

Same test purpose as in clause 7.6.2A.1.

7.6.2A.10.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 7DL with CA configurations in Table 7.1-2e.

7.6.2A.10.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

7.6.2A.10.4 Test Description

7.6.2A.10.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.10.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.10.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

ID	PCC				SCC1				SCC2				SCC3				SCC4				SCC5				SCC6			
	Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB		Band	Range	NRB

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: **Intra-band contiguous+ Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.

Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.

Note 6: **Inter-band:** X,Y,Z and R correspond to the different bands in the CA Configuration. E.g. X !=Y !=Z !=R.

Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.

Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.

Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 11: ID/test points that result in no ref sens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.10.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.10.4.3.

7.6.2A.10.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.10.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.10.4.1-1 on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.10.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.10.4.2-1. The frequency step size is 1MHz. Use the highest $\Delta R_{IB,c}$ among CA bands for $P_{interferer}$ calculation.
7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.10.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.10.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for all the carrier(s) indicated in the Table 7.6.2A.10.4.2-1 simultaneously for duration sufficient to achieve statistical significance according to Annex G.2. Note that the statistical decision for each component carrier should be postponed until the statistical decisions for all component carriers are obtained simultaneously according to table G.2.4-1.
9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.
10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which $\Delta R_{IB,c}$ is the same as ΔR_{IB} used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use $\Delta R_{IB,c}$ relevant to recorded carrier for $P_{interferer}$ calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.
11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.10.4.2-1.
12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.10.4.2-1.
13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.10.4.2-1.

Table 7.6.2A.10.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)
Intra-band contiguous + Inter-band	1	SCC1, SCC2, SCC3, SCC4, SCC5, SCC6	7.6.2A.10.5-1	7.6.2A.10.5-2 (Note 5)
	2	PCC, SCC1, SCC2, SCC3, SCC4, SCC5	7.6.2A.10.5-1	7.6.2A.10.5-2 (Note 5)
		SCC6	7.6.2A.10.5-3	7.6.2A.10.5-4 (Note 4)
	3	PCC, SCC1, SCC2, SCC3, SCC4, SCC5	7.6.2A.10.5-1	7.6.2A.10.5-2 (Note 5)
		SCC6	7.6.2A.10.5-3	7.6.2A.10.5-4 (Note 4)
Intra-band contiguous + Inter-band(2)	1	SCC1	7.6.2A.10.5-3	7.6.2A.10.5-4 (Note 4)
		SCC2, SCC3, SCC4, SCC5, SCC6	7.6.2A.10.5-1	7.6.2A.10.5-2 (Note 5)
	2	SCC1, SCC2, SCC3, SCC4, SCC5	7.6.2A.10.5-1	7.6.2A.10.5-2 (Note 5)
		SCC6	7.6.2A.10.5-3	7.6.2A.10.5-4 (Note 4)
	3	SCC1, SCC2, SCC3, SCC4, SCC5	7.6.2A.10.5-1	7.6.2A.10.5-2 (Note 5)
		SCC6	7.6.2A.10.5-3	7.6.2A.10.5-4 (Note 4)

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.10.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.
Note 4: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.10.5-2. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 5: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.10.5-4. When interferer position is closer than 15 MHz from other CC block interferer is OFF.
Note 6: When interferer position is within range 1 or 2 frequency of other CC block, Pinterfer is selected from table 7.6.2A.10.5-5. When interferer position is closer than 15 MHz from other CC block interferer is OFF.

7.6.2A.10.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3 for without UL CA.

Same message contents as in clause 7.6.2A.1.4.3 for UL CA.

7.6.2A.10.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

For Table 7.6.2A.10.5-2 in frequency range 1, 2 and 3, up to $\max(24,6\cdot\lceil N_{RB}\cdot/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.9 Spurious Response for CA are applicable.

Table 7.6.2A.10.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A. Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.10.5-2: Out of band blocking (intra-band contiguous)

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3B, CA_3C, CA_5B, CA_7C , CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_40D, CA_40E, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C[1], CA_42D[1], CA_42E[1], CA_42F[1], CA_43C[1], CA_48C[1], CA_48D[1], CA_48E[1], CA_48F[1], CA_66B, CA_66C, CA_66D, CA_70C	$F_{Interferer}$ (CW)	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
Note 1: The power level of the interferer ($P_{Interferer}$) for this CA configuration for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.					

For Table 7.6.2A.10.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.10.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.							

Table 7.6.2A.10.5-4: out-of-band blocking for inter-band carrier aggregation with band 46 or Band 49 and with one active uplink

Parameter	Unit	Range 1	Range 2	Range 3

P_{wanted}	dBm	Table 7.6.2A.10.5-3 for all component carriers in bands with $j \le K$ and Table 7.6.1A.9.5-1a for component carriers in bands with $j > K$		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$ (NOTE 5)
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL_Low(j)} < -15$ with $j \le K$ or $15 < f - F_{DL_High(j)} < 60$ with $j \le K$	$-85 < f - F_{DL_Low(j)} \le -60$ or $60 \le f - F_{DL_High(j)} < 85$	$1 \le f \le F_{DL_Low(j)} - 85$ or $F_{DL_High(j)} + 85 \le f \le 12750$
NOTE 1: $F_{DL_Low(j)}$ and $F_{DL_High(j)}$, j = 1,…,K,…N, denote the respective lower and upper frequency limits of the (non-overlapping) operating bands of the CA configuration numbered in increasing order of frequency, with N the number of bands in the band combination and K the number of bands with $F_{DL_High} \le 3800$ MHz for Band 46 and $F_{DL_High} \le 2700$ MHz for Band 49.				
NOTE 2: For $F_{DL_Low(j)} - 15$ MHz $\le f \le F_{DL_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied for carrier $j \le K$.				
NOTE 3: For $F_{DL_Low(j)} - 60$ MHz $\le f \le F_{DL_High(j)} + 60$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied for carrier $K < j \le N$.				
NOTE 4: $\Delta R_{IB,c}$ according to Table 7.3.1-1A applies when serving cell c is measured.				
NOTE 5: The power level ($P_{Interferer}$) for Range 3 is modified to -20 dBm for $F_{Interferer} > 4400$ MHz except for band combinations with Band 42 or Band 43 for which $P_{Interferer}$ for Range 3 is modified to -20 dBm for $F_{Interferer} > 2800$ MHz.				

For Table 7.6.2A.10.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(24,6\cdot\lceil N_{RB}\cdot/6\rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.9 spurious response for CA are applicable.

For Table 7.6.2A.10.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.9 spurious response for CA are applicable.

Table 7.6.2A.10.5-5: Out of band blocking (intra-band non-contiguous)

E-UTRA band	Parameter	Units	Frequency			
			range 1	**range 2**	**range 3**	**range 4**
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (NOTE 2), 43 (NOTE 2), 44, 45, 65, 66, 68, 70	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}
Note 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.						
Note 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer} > 2800$ MHz and $F_{Interferer} < 4400$ MHz.						
Note 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.						
Note 4: For a UE supporting CA_20A-28A the requirements for Band 20 and Band 28 apply with F_{DL_low} given by the lower limit of the restricted operating frequency range in Band 28 and F_{DL_high} by Band 20 (Table 5.5A-2).						

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, PInterferer power defined in Tables 7.6.2A.10.5-2, 7.6.2A.10.5-4 and 7.6.2A.10.5-5 is increased by the amount given by ΔRIB,c in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

7.6.2B Out-of-band blocking for UL-MIMO

7.6.2B.1 Test Purpose

Out-of-band band blocking for UL-MIMO is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE that support UL- MIMO receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE that support UL-MIMO receive band the appropriate in-band blocking for UL-MIMO or adjacent channel selectivity for UL-MIMO in sub-clause 7.5.3 and sub-clause 7.6.1.3 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

7.6.2B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter P_{CMAX_L} is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.6B.

7.6.2B.4 Test Description

7.6.2B.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	One frequency chosen arbitrarily from low or high range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A

10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A

10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth.						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.30.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2B.4.3.

7.6.2B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 7.6.2B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2B.5-2. The frequency step size is 1MHz.
4. Set the downlink signal level according to the table 7.6.2B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2B.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Record the frequencies for which the throughput doesn't meet the requirements.
7. Repeat steps from 3 to 6, using an interfering signal above the wanted signal at step 3.

7.6.2B.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

Table 7.6.2B.4.3-1: UplinkPowerControlDedicated

}			

7.6.2B.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.2B.5-1 and 7.6.2B.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

Table 7.6.2B.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.6.2B.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 54, 65, 66, 68, 70, 72	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}
Note 1: Range 3 shall be tested only with the highest channel bandwidth.						
Note 2: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.						

Note 3:	The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz.
Note 4:	For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.

7.6.2D Out-of-band blocking for ProSe

7.6.2D.0 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.6.2.1D.0-1, 7.6.2.1D.0-2 and 7.6.2.1D.0-3.

For Table 7.6.2D.0-3 in frequency range 1, 2 and 3, up to $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.4.2-1). For these exceptions the requirements of subclause 7.7D Spurious response are applicable.

For Table 7.6.2D.0-3 in frequency range 4, up to $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configurations (see Figure 5.6-1) and L_{CRBs} is the number of resource blocks allocated in the uplink. For these exceptions the requirements of clause 7.7D spurious response are applicable.

Table 7.6.2D.0-1: Out-of-band blocking parameters for ProSe Direct Discovery

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below + P_{offset}					
				6	6	7	9
P_{offset}	dB			10.9	13.9	15.7	16.9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

Table 7.6.2D.0-2: Out-of-band blocking parameters for ProSe Direct Communication

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below					
				6	6	7	9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

Table 7.6.2D.0-3: Out of band blocking for ProSe

E-UTRA ProSe band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
2,3,4,7,14, 20,26,28,31, 68, 72	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.					

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1D.

7.6.2D.1 Out-of-band blocking for ProSe Direct Discovery

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

7.6.2D.1.1 Test Purpose

Out-of-band blocking for ProSe is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the ProSe band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels in aggregated signals.

For the first 15 MHz below or above the ProSe band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5D and sub-clause 7.6.1D shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

7.6.2D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2D.0.

7.6.2D.1.4 Test Description

7.6.2D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.6.2D.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range (Note 4)					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Highest					
	Downlink Configuration (Note 2)		**Uplink Configuration (Note 2)**		**Sidelink Configuration (Reception) (Note 3)**	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2

Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1.
Note 2:	After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes.
Note 3:	The RB start for the transmission of Sidelink RMC is RB#0.
Note 4:	Sidelink uses the frequencies defined for Uplink.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.71
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.2D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

7.6.2D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "…Step 1…") are defined in clause 7.6.2D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the Sidelink Band according to Table 7.6.2D.1.5-2. The frequency step size is 1MHz.
7. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.2D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.6.2D.1.5-1.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
9. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
10. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
11. SS shall compute the throughput as following:

    TP = Pok / Ptot * 100%

12. Record the frequencies for which the throughput doesn't meet the requirements.
13. Repeat steps from 6 to 12, using an interfering signal above the Sidelink Band at step 6.

7.6.2D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

7.6.2D.1.5 Test Requirement

Except for the spurious response frequencies recorded in step 12 of the test procedure, the throughput measurement of the sidelink derived in the test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.6.2D.1.5-1 and 7.6.2D.1.5-2.

For Table 7.6.2D.1.5-2 in frequency range 1, 2 and 3, up to $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.6-1). For these exceptions the requirements of subclause 7.7D Spurious response are applicable.

Table 7.6.2D.1.5-1: Out-of-band blocking parameters for ProSe Direct Discovery

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below + P_{offset}					
				6	6	7	9

P_{offset}	dB			10.9	13.9	15.7	16.9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.

			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.					

7.6.2D.2 Out-of-band blocking for Prose Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test description is TBD

7.6.2D.2.1 Test Purpose

Same test purpose as 7.6.2D.1.1.

7.6.2D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

7.6.2D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2D.0.

7.6.2D.2.4 Test Description

TBD

7.6.2D.2.5 Test Requirement

Same test requirement as in clause 7.6.2D.1.5 with the following exceptions:

- Instead of Table 7.6.2D.1.5-1 → use Table 7.6.2D.2.5-1.
- Instead of Table 7.6.2D.1.5-2 → use Table 7.6.2D.2.5-2.

Table 7.6.2D.2.5-1: Out-of-band blocking parameters for ProSe Direct Communication

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_ProSe}$ + channel bandwidth specific value below					
				6	6	7	9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.

			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
2,3,4,7,14, 20,26,28,31, 68	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.

7.6.2E Out-of-band blocking for UE category 0

7.6.2E.1 Test Purpose

Same test purpose as in clause 7.6.2.1.

7.6.2E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

7.6.2E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.2.3.

7.6.2E.4 Test Description

7.6.2E.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2.4.1 with the following exceptions:

- Instead of Table 7.6.2.4.1-1 → use Table 7.6.2E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.

Table 7.6.2E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	One frequency chosen arbitrarily from low or high range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	**Mod'n**	**RB allocation**		**Mod'n**	**RB allocation**	
		FDD and HD-FDD	**TDD**		**FDD and HD-FDD**	**TDD**
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Downlink RB position shall be RB_{start} = 0.						

7.6.2E.4.2 Test Procedure

Same test procedure as in clause 7.6.2.4.2

7.6.2E.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3

7.6.2E.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2E.5-1 and 7.6.2E.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7E Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7E Spurious Response are applicable.

Table 7.6.2E.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5E.							
Note 2: The reference measurement channel is specified in clause A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.							

Table 7.6.2E.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
2, 3, 4, 5, 8, 13, 20, 39, 41	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5,	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}
Note 1: Range 3 shall be tested only with the highest channel bandwidth.						

7.6.2EA Out-of-band blocking for UE category M1

7.6.2EA.1 Test Purpose

Out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the category M1 UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5EA.1 and sub-clause 7.6.1EA shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

7.6.2EA.3 Minimum Conformance Requirements

Same as in clause 7.6.2.3.

7.6.2EA.4 Test Description

7.6.2EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.6.2EA.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1	NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	One frequency chosen arbitrarily from low or high range						
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz						
Test Parameters for Channel Bandwidths and Narrowband positions							
	Downlink Configuration			**Uplink Configuration**			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD	TDD		FDD and HD-FDD	TDD	Narrowband index (Note 1)
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.6.2EA.4.3.

7.6.2EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C_RNTI to transmit the DL RMC according to Table 7.6.2EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 7.6.2EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2EA.5-2. The frequency step size is 1MHz.
4. Set the downlink signal level according to the table 7.6.2EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of

the target level in table 7.6.2EA.5-1 for carrier frequency f ≤ 3.0GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < f ≤ 4.2GHz, for at least the duration of the throughput measurement.

5. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.

6. Record the frequencies for which the throughput doesn't meet the requirements.

7. Repeat steps from 3 to 6, using an interfering signal above the wanted signal at step 3.

7.6.2EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA and the following exception.

Table 7.6.2EA.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2

}			

7.6.2EA.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.2EA.5-1 and 7.6.2EA.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24, \ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7EA Spurious Response are applicable.

Table 7.6.2EA.5-1: Out-of-band blocking parameters

Rx Parameter	**Units**	**Channel bandwidth**					
		1.4 MHz	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
NOTE 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA. NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2. NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2 should be used as REFSENS for the power in Transmission Bandwidth Configuration. NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

Table 7.6.2EA.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41, 42 (NOTE 2), 43 (NOTE 2), 72	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS. NOTE 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz. NOTE 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.					

7.6.2EB Out-of-band blocking for UE category 1bis

7.6.2EB.1 Test Purpose

Same test purpose as in clause 7.6.2.1.

7.6.2EB.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

7.6.2EB.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.2.3.

7.6.2EB.4 Test Description

7.6.2EB.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2.4.1 with the following exceptions:

Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.

7.6.2EB.4.2 Test Procedure

Same test procedure as in clause 7.6.2.4.2

7.6.2EB.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3

7.6.2EB.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2EB.5-1 and 7.6.2EB.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7E Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(8,\ \lceil(N_{RB}+2\cdot L_{CRBs})/8\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7E Spurious Response are applicable.

Table 7.6.2EB.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5E.							
Note 2: The reference measurement channel is specified in clause A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3EB.3-1 for main antenna port.							

Table 7.6.2EB.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 12, 13, 18, 26, 28, 31, 34, 39, 40, 41, 66, 72	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -15 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz	-
			F_{DL_high} +15 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz	-
2, 5, 12	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}
Note 1: Range 3 shall be tested only with the highest channel bandwidth.						
Note 2: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to FDL_low and FDL_high of Band 66.						

7.6.2EC Out-of-band blocking for UE category M2

7.6.2EC.1 Test Purpose

Same as in clause 7.6.2EA.

7.6.2EC.2 Test Applicability

This test applies to all types of E-UTRA UE release 14 and forward of UE category M2.

7.6.2EC.3 Minimum Conformance Requirements

Same as in clause 7.6.2.3.

7.6.2EC.4 Test Description

7.6.2EC.4.1 Initial Conditions

Same as in 7.6.2EA.4.1 with following exception:

- Instead of Table 7.6.2EA.4.1-1 → use Table 7.6.2EC.4.1-1

Table 7.6.2EC.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	One frequency chosen arbitrarily from low or high range

2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	F_{UL_low} - F_{UL_high}
Note 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS. Note 2: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 2800 MHz and $F_{Interferer}$ < 4400 MHz. Note 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to F_{DL_low} and F_{DL_high} of Band 66.						

7.6.2G Out-of-band blocking for V2X Communication

7.6.2G.1 Out-of-band blocking for V2X Communication/ Non-concurrent with E-UTRA uplink transmissions

7.6.2G.1.1 Test Purpose

Out-of-band blocking for V2X is defined for an unwanted CW interfering signal falling more than 30 MHz below or above the V2X band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels in aggregated signals.

For the first 30 MHz below or above the V2X band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5G and sub-clause 7.6.1G shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2G.1.2 Test Applicability

This test applies to all types of UE that support V2X Sidelink Communication and Band 47.

7.6.2G.1.3 Minimum Conformance Requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.6.2G.3-1, 7.6.2G.3-2.

For Table 7.6.2G.3-2 in frequency range 1, 2 and 3, up to $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.4.2-1). For these exceptions the requirements of subclause 7.7G Spurious response are applicable.

Table 7.6.2G.1.3-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
NOTE 1: Reference measurement channel is specified in TS 36.101 [2] Annex A.8.2.							

Table 7.6.2G.1.3-2: Out of band blocking

E-UTRA V2X band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15

47	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -30 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +30 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE: The power level of the interferer (PInterferer) for Range 3 shall be modified to -20 dBm for FInterferer > 4400 MHz.					

NOTE: it is FFS how to accommodate the blocking level of -30dBm in Region 1.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1G.

7.6.2G.1.4 Test Description

7.6.2G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2G.1.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annex A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

Table 7.6.2G.1.4.1-1: Test Configuration Table

Initial Conditions		
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range	
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, Highest	
Test Parameters for Channel Bandwidths		
	V2X Configuration to Receive	
Ch BW	Modulation	PSSCH RB allocation
10MHz	QPSK	48@2
20MHz	QPSK	96@2

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RX antenna connector as shown in TS 36.508 [7] Annex A, Figure A. 92b.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 6.8.2. Message content exceptions are defined in clause 7.6.2G.1.4.3.

3. The V2X reference measurement channel is set according to Table 7.6.2G.1.4.1-1.

3a. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. UE test mode – State 5A-V2X according to TS 36.508 [7] clause 5.2A.2C.

6. Trigger the UE to reset UTC time. (NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.6.2G.1.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the V2X RMC.

2. Set the downlink signal level according to the table 7.6.2G.1.5-1.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2G.1.5-2. The frequency step size is 1MHz.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
5. Record the frequencies for which the throughput doesn't meet the requirements.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

7.6.2G.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, 4.7.I and 4.10.

7.6.2G.1.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2G.1.5-1 and 7.6.2G.1.5-2

For Table 7.6.2G.1.5-2 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7G spurious response are applicable.

Table 7.6.2G.1.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
NOTE 1: Reference measurement channel is specified in TS 36.101 [2] Annex A.8.2.							

Table 7.6.2G.1.5-2: Out of band blocking

E-UTRA V2X band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
47	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -30 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +30 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE: The power level of the interferer (PInterferer) for Range 3 shall be modified to -20 dBm for FInterferer > 4400 MHz.					

7.6.2G.2 Out-of-band blocking for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

7.6.2G.2.1 Test Purpose

Same as in clause 7.6.2G.1.1.

7.6.2G.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 14 and forward that support V2X Communication.

7.6.2G.2.3 Minimum Conformance Requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.6.2G.2.3-1, 7.6.2G.2.3-2.

For Table 7.6.2G.2.3-2 in frequency range 1, 2 and 3, up to $\max(24,\ 6\cdot\lceil N_{RB}/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where N_{RB} is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.4.2-1). For these exceptions the requirements of subclause 7.7G Spurious response are applicable.

Table 7.6.2G.2.3-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
NOTE 1: Reference measurement channel is specified in TS 36.101 [2] Annex A.8.2.							

Table 7.6.2G.2.3-2: Out of band blocking

E-UTRA V2X band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
47	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -30 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +30 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE: The power level of the interferer (PInterferer) for Range 3 shall be modified to -20 dBm for FInterferer > 4400 MHz.					

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.2G-2, the requirements in subclause 7.6.2G.2.3 apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.6.2.3 apply for the E-UTRA downlink reception while all downlink carriers are active.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1G.

7.6.2G.2.4 Test Description

7.6.2G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2G.2.4.1-1. The details of the uplink, downlink and V2X reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.8.3 respectively.

Table 7.6.2G.2.4.1-1: Test Configuration Table

Initial Conditions			
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal		
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest for uplink Lowest, Highest for V2X		
Test Parameters for Channel Bandwidths			
	Downlink	**Uplink Configuration**	**V2X Configuration**

Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Ch BW	Mod'n	PSSCH RB allocation
1.4 MHz	QPSK	1	QPSK	1	10 MHz	QPSK	48@2
1.4 MHz	QPSK	5	QPSK	5	20 MHz	QPSK	96@2
3 MHz	QPSK	1	QPSK	1			
3 MHz	QPSK	4	QPSK	4			
5 MHz	QPSK	1	QPSK	1			
5 MHz	QPSK	8	QPSK	8			
10 MHz	QPSK	1	QPSK	1			
10 MHz	QPSK	12	QPSK	12			
15 MHz	QPSK	1	QPSK	1			
15 MHz	QPSK	16	QPSK	16			
20 MHz	QPSK	1	QPSK	1			
20 MHz	QPSK	18	QPSK	18			

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3G.0-4 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2G.1-2).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure 93c.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3. Message content exceptions are defined in clause 7.6.2G.2.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to Table 7.6.2G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C. Message content exceptions are defined in clause 7.6.2G.2.4.3.

7.6.2G.2.4.2 Test procedure

1. The SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.6.2G.2.4.1-1 on E-UTRA Band. The SS sends downlink MAC padding bits on the DL RMC.
2. SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 7.6.2G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL and V2X RMCs.
3. Set the downlink signal level according to the table 7.6.2G.2.5-1.
4. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2G.2.5-2. The frequency step size is 1MHz.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Record the frequencies for which the throughput doesn't meet the requirements.
7. Repeat steps from 4 to 6, using an interfering signal above the wanted signal at step 4.

7.6.2G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

7.6.2G.2.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2G.2.5-1 and 7.6.2G.2.5-2

For Table 7.6.2G.2.5-2 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24, \ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7G spurious response are applicable.

Table 7.6.2G.2.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{REFSENS_V2X}$ + channel bandwidth specific value below					
					6		9
NOTE 1: Reference measurement channel is specified in TS 36.101 [2] Annex A.8.2.							

Table 7.6.2G.2.5-2: Out of band blocking

E-UTRA V2X band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
47	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -30 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +30 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE: The power level of the interferer (PInterferer) for Range 3 shall be modified to -20 dBm for FInterferer > 4400 MHz.					

7.6.2G.3 Out-of-band blocking for V2X Communication / Intra-band contiguous multi-carrier operation

7.6.2G.3.1 Test Purpose

Same as in clause 7.6.2G.1.1.

7.6.2G.3.2 Test Applicability

This test applies to all types of UE that support Intra-band contiguous multi-carrier operation V2X Sidelink Communication and Band 47.

7.6.2G.3.3 Minimum Conformance Requirements

For intra-band contiguous multi-carrier operation, the V2X UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.6.2G.3.3-1 and 7.6.2G.3.3-2.

For Table 7.6.2G.3.3-2 in frequency range 1, 2 and 3, up to $\max(24, 6\cdot\lceil N_{RB}/6\rceil)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7 spurious response are applicable.

Table 7.6.2G.3.3-1: Out-of-band blocking parameters for intra-band contiguous multi-carrier for V2X UE

Rx Parameter	Units	V2X Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + V2X Bandwidth Class specific value below				
		9				

Table 7.6.2G.3.3-2: Out of band blocking for intra-band contiguous multi-carrier for V2X UE

V2X multi-carrier configuration	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
V2X_47B	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -30 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +30 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE 1: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 4400 MHz.					
NOTE 2: The requirement is applied for 2 carrier intra-concurrent receptions when 2 carrier transmission are activated at the same time					

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1G.

7.6.2G.3.4 Test Description

7.6.2G.3.4.1 Initial conditions

Same initial conditions as in clause 7.6.2G.1.4.1 with the following exceptions- Instead of Table 7.6.2G.1.4.1-1 → use Table 7.6.2G.3.4.1-1.

The details of the GNSS configuration are specified in TS 36.508 [7] subclause 4.11.

Table 7.6.2G.3.4.1-1: Test Configuration Table

Initial Conditions			
Test Environment as specified in TS 36.508[7] subclause 4.1	Normal		
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Low range, High range		
Test CC Combination setting(N_{RB_agg}) as specified in subclause 5.4.2G	Lowest N_{RB_agg}, Highest N_{RB_agg}		
Test Parameters for Channel Bandwidths			
V2X MCC Configuration		**V2X PSSCH Allocation**	
CC1 N_{RB}	**CC2 N_{RB}**	**CC1 & CC2 Mod**	**CC1 and CC2 RB Allocation**
50	50	QPSK	48@2+48@2

1. Connect the SS and GNSS simulator to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.92d.
2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 7.6.2G.3.4.3.
3. The V2X reference measurement channel is set according to Table 7.6.2G.3.4.1-1.
4. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 5A-V2X according to TS 36.508 [7] clause 4.5.9.
7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

7.6.2G.3.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the V2X RMC.

2. Set the downlink signal level according to the table 7.6.2G.3.5-1.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2G.3.5-2. The frequency step size is 1MHz.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
5. Record the frequencies for which the throughput doesn't meet the requirements.

7.6.2G.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, 4.7.I and 4.10.

7.6.2G.3.5 Test Requirement

For intra-band contiguous multi-carrier operation, except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2G.3.5-1 and 7.6.2G.3.5-2

For Table 7.6.2G.3.5-2 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed $\max(24, \ 6\cdot\lceil N_{RB}/6\rceil)$ in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7G spurious response are applicable.

Table 7.6.2G.3.5-1: Out-of-band blocking parameters for intra-band contiguous multi-carrier for V2X UE

Rx Parameter	Units	V2X Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + V2X Bandwidth Class specific value below				
		9				

Table 7.6.2G.3.5-2: Out of band blocking for intra-band contiguous multi-carrier for V2X UE

V2X multi-carrier configuration	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{Interferer}$	dBm	-44	-30	-15
V2X_47B	$F_{Interferer}$ (CW)	MHz	F_{DL_low} -30 to F_{DL_low} -60	F_{DL_low} -60 to F_{DL_low} -85	F_{DL_low} -85 to 1 MHz
			F_{DL_high} +30 to F_{DL_high} + 60	F_{DL_high} +60 to F_{DL_high} +85	F_{DL_high} +85 to +12750 MHz
NOTE 1: The power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to -20 dBm for $F_{Interferer}$ > 4400 MHz.					
NOTE 2: The requirement is applied for 2 carrier intra-concurrent receptions when 2 carrier transmission are activated at the same time					

7.6.2F Out-of-band blocking for category NB1 and NB2

7.6.2F.1 Test Purpose

Out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5F.1 and sub-clause 7.6.1F.1 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.2F.2 Test Applicability

This test case applies to all types of NB-IoT FDD UE release 13 and forward of category NB1.

This test case applies to all types of NB-IoT FDD UE release 14 and forward of category NB2.

This test case applies to all types of NB-IoT TDD UE release 15 and forward of category NB1 and NB2.

7.6.2F.3 Minimum Conformance Requirements

The category NB1 and NB2 UE throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.6.2F.3-1.

For Table 7.6.2F.3-1 in frequency range 1, 2 and 3, up to 24 exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7F spurious response are applicable.

Table 7.6.2F.3-1: Out-of-band blocking parameters for category NB1 and NB2 UE

Parameter	Units	Frequency		
		Range 1	Range 2	Range 3
P_{wanted}	dBm	REFSENS + 6 dB		
$P_{interferer}$ (CW)	dBm	-44	-30	-15
$F_{interferer}$ range	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
	MHz	F_{DL_high} + 15 to F_{DL_high} + 60	F_{DL_high} + 60 to F_{DL_high} + 85	F_{DL_high} + 85 to 12750 MHz
NOTE 1: For operating bands which downlink band frequency range is between 617 MHz < 1 GHz the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to: -18 dBm for the frequency range which is bounded by F_{DL_low} - 150 MHz of the lowest band that UE supports in frequency range 617 MHz < 1 GHz and F_{DL_high} + 150 MHz of the highest band that UE supports in frequency range 617 MHz < 1 GHz.				
NOTE 2: For operating bands which downlink band frequency range is between 1805 MHz < f < 2690 MHz the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to: [-20] dBm for the frequency range which is bounded by F_{DL_low} - [200] MHz of the lowest band that UE supports in frequency range 1805 MHz < f < 2690 MHz and F_{DL_high} + [200] MHz of the highest band that UE supports in frequency range 1805 MHz < f < 2690 MHz.				

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1F.

7.6.2F.4 Test Description

7.6.2F.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.6.2F.4.1-1. The details of the downlink reference measurement channels (RMCs) are specified in Annex A.3. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

Table 7.6.2F.4.1-1: Test Configuration Table for FDD & TDD

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause 8.1.1			NC		
Test Frequencies as specified in TS36.508 [7] clause 8.1.3.1			Frequency ranges defined in Annex K.1.1 (Note)		
Configuration ID	**Downlink Configuration**		**Uplink Configuration**		
	Modulation	Subcarriers	Modulation	N_{tones}	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15 kHz
Note: Among all frequency bands ranges below 1GHz supported by the UE, one test frequency chosen arbitrarily from low or high range defined in Annex K.1.1 is tested; Among all					

frequency bands ranges above 1GHz supported by the UE, one test frequency chosen arbitrarily from low or high range defined in Annex K.1.1 is tested.

1. Connect the SS to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.5 using only the main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.2, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channel is set according to Table 7.6.2F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 7.6.2F.4.3.

7.6.2F.4.2 Test Procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C_RNTI to transmit the DL RMC according to Table 7.6.2F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send HARQ feedback based on information contained in DCI format N1.
2. Set the downlink signal level according to the table 7.6.2F.5-1.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2F.5-1. The frequency step size is 1MHz.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
5. Record the frequencies for which the throughput doesn't meet the requirements.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

7.6.2F.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 8.1.6.

7.6.2F.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2F.5-1.

For Table 7.6.2F.5-1 in frequency range 1, 2 and 3, up to 24 exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7F spurious response are applicable.

Table 7.6.2F.5-1: Out-of-band blocking parameters for category NB1 and NB2 UE

Parameter	Units	Frequency		
		Range 1	Range 2	Range 3
P_{wanted}	dBm	REFSENS + 6 dB		
$P_{interferer}$ (CW)	dBm	-44	-30	-15
$F_{interferer}$ range	MHz	F_{DL_low} - 15 to F_{DL_low} - 60	F_{DL_low} - 60 to F_{DL_low} - 85	F_{DL_low} - 85 to 1 MHz
	MHz	F_{DL_high} + 15 to F_{DL_high} + 60	F_{DL_high} + 60 to F_{DL_high} + 85	F_{DL_high} + 85 to 12750 MHz
NOTE 1: For operating bands which downlink band frequency range is between 729 MHz < 1 GHz the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to: [-18] dBm for the frequency range which is bounded by F_{DL_low} - [150] MHz of the lowest band that UE supports in frequency range 729 MHz < 1 GHz and F_{DL_high} + [150] MHz of the highest band that UE supports in frequency range 729 MHz < 1 GHz.				

NOTE 2: For operating bands which downlink band frequency range is between 1805 MHz < f < 2690 MHz the power level of the interferer ($P_{Interferer}$) for Range 3 shall be modified to: [-20] dBm for the frequency range which is bounded by F_{DL_low} - [200] MHz of the lowest band that UE supports in frequency range 1805 MHz < f < 2690 MHz and F_{DL_high} + [200] MHz of the highest band that UE supports in frequency range 1805 MHz < f < 2690 MHz.

7.6.3 Narrow band blocking

7.6.3.1 Test Purpose

Verifies a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 8 and forward.

7.6.3.3 Minimum Conformance Requirements

The relative throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.3.3-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.3-1 and Table 7.3.3-1a for two and four antenna ports, respectively.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, P_{uw} power defined in Table 7.6.3.3-1 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.

7.6.3.4 Test Description

7.6.3.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5[4]	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75

15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.5.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1

4. The UL and DL Reference Measurement channels are set according to Table 7.6.3.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3.4.3.

7.6.3.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3.5-1.

4. Set the downlink signal level according to the table 7.6.3.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.

5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

7.6.3.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

Table 7.6.3.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2			
Information Element	**Value/remark**	**Comment**	**Condition**
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {

}			

7.6.3.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3.5-1.

Table 7.6.3.5-1: Narrow-band blocking

Parameter	**Unit**	**Channel Bandwidth**					
		1.4 MHz	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3.5-1 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3_1 Narrow band blocking with 4 Rx antenna ports

7.6.3_1.1 Test Purpose

Same test purpose as in clause 7.6.3.

7.6.3_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

7.6.3_1.3 Minimum Conformance Requirements

Same as in clause 7.6.3.3.

7.6.3_1.4 Test Description

F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: The REFSENS power level is specified in Table 7.3_1.5-1.							

7.6.3A Narrow band blocking for CA

7.6.3A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the narrow-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.6.3 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the narrow-band blocking requirements of subclause 7.6.3A.0 do not apply. For E-UTRA CA configurations with a component carrier assigned in Band 46, narrow-band blocking requirements do not apply in the presence of a narrow-band interferer in Band 46.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.3A.0-1 with the uplink configuration set according to Table 7.3A.0-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2.

The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Table 7.6.3A.0-1 being on either side of the aggregated signal. The throughput of each carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3A.0-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Table 7.6.3A.0-1.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, the narrow band blocking requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.6.3.3 and 7.6.3A.0 for one component carrier and two component carriers per sub-block, respectively. The requirements apply for in-gap and out-of-gap interferers while all downlink carriers are active.

Table 7.6.3A.0-1: Narrow-band blocking

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16[4]	16	16	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55

F_{uw} (offset for Δf = 15 kHz)	MHz	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2
F_{uw} (offset for Δf = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The F_{uw} (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
Note 4: The requirement is applied for the band combinations whose component carriers' BW≥5 MHz.

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the narrow-band blocking requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with ΔR_{IBNC} = 0 dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.6.3. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

For E-UTRA CA configurations with a component carriers assigned in Band 46, narrow-band blocking requirements do not apply in the presence of a narrow-band interferer in Band 46.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.1A.

7.6.3A.1 Narrow band blocking for CA (intra-band contiguous DL CA and UL CA)

7.6.3A.1.1 Test Purpose

Verifies a receiver's ability to receive an E-UTRA signal at its assigned CA channel frequencies in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.3A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

7.6.3A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.1.4 Test Description

7.6.3A.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test

parameters for each CA Configuration, and are shown in table 7.6.3A.1.4.1-1. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.

Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-1 is tested per CA Configuration Test CC combination.

Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg,}$ only the fcombination with the highest NRB_PCC irst of those is tested, according to the order on the Test Configuration Table list.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are for PCC initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.1.4.3.

7.6.3A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.1.4.3.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.1.5-1.

7. Set the downlink signal level according to the table 7.6.3A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:
   The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.3A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.6.3A.1.5-1 + $10\log(P_L_{CRB}/N_{RB_alloc})$) for carrier frequency 3.0GHz < $f \leq 4.2$GHz.
   The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.3A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$), for carrier frequency $f \leq 3.0$GHz,
   or within (+0dB, -4 dB) of (target level in Table 7.6.3A.1.5-1 + $10\log(S_L_{CRB}/N_{RB_alloc})$) for carrier frequency 3.0GHz < $f \leq 4.2$GHz.

8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers at step 6.

7.6.3A.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

7.6.3A.1.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3A.5-1.

Table 7.6.3A.1.5-1: Narrow-band blocking

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
			16			
P_{uw} (CW)	dBm		-55			
F_{uw} (offset for Δf = 15 kHz)	MHz		- F_{offset} – 0.2 / + F_{offset} + 0.2			
F_{uw} (offset for Δf = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.

Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

Note 3: The F_{uw} (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor |F_{uw}(\text{offset for } \Delta f = 15\text{kHz})| / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3A.1.5-1 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3A.2 Narrow band blocking for CA (intra-band contiguous DL CA without UL CA)

7.6.3A.2.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.6.3A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.2.4 Test Description

7.6.3A.2.4.1 Initial Conditions

Same initial conditions as in clause 7.6.3A.1.4.1 with the following exceptions:

- instead of Table 7.6.3A.1.4.1-1 → use Table 7.6.3A.2.4.1-1.
- Instead of clause 7.6.3A.1.4.3 → use clause 7.6.3A.2.4.3.

Table 7.6.3A.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			B: Mid range C: Mid range (Note 4)				
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.			Lowest N_{RB_agg} Highest N_{RB_agg} (Notes 3, 4)

100	25	QPSK	100+25	QPSK	100	P_100@0	-
100	50	QPSK	100+50	QPSK	75	P_75@25	-
100	50	QPSK	100+50	QPSK	100	P_100@0	-
100	75	QPSK	100+75	QPSK	100	P_100@0	-
100	100	QPSK	100+100	QPSK	50	P_50@75	-
100	100	QPSK	100+100	QPSK	75	P_75@25	-
100	100	QPSK	100+100	QPSK	100	P 100@0	-

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2:	Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.
Note 3:	If the UE supports multiple CC Combinations in the CA Configuration with the same N_{RB_agg}, only the combination with the highest NRB_PCC is tested.
Note 4:	For CA_70C all test frequency IDs shall be tested according to table 4.3.1.1.70A-1, in TS 36.508 [7].

7.6.3A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.1.5-1. The interferer frequency is adjusted in analogy with table 7.6.3A.2.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers at step 6.

Table 7.6.3A.2.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
F_{DL} = CA_1C Mid range (BW 20MHz + 20MHz)	2130.1 MHz	2149.9 MHz
F_{offset}	10 MHz	10 MHz
F_{uw} (offset for Δf = 15 kHz)	-10.2 MHz	+10.2 MHz
$\lfloor F_{uw}(\text{offset for } \Delta f = 15\text{kHz}) / 0.015 + 0.5 \rfloor 0.015 + 0.0075$	10.2075 MHz	10.2075 MHz
Adjusted F_{uw} (offset for Δf = 15 kHz)	-10.2075 MHz	+10.2075 MHz
F_{uw} = F_{DL} + Adjusted F_{uw} (offset for Δf = 15 kHz)	2117.5975 MHz	2162.4025 MHz

7.6.3A.2.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3.

7.6.3A.2.5 Test Requirement

Same test requirement as in clause 7.6.3A.1.5 with the following exceptions:

- Instead of Table 7.6.3A.1.5-1 → use Table 7.6.3A.2.5-1.

Table 7.6.3A.2.5-1: Narrow-band blocking

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16			

P_{uw} (CW)	dBm	-55	-55			
F_{uw} (offset for Δf = 15 kHz)	MHz	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2			
F_{uw} (offset for Δf = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The F_{uw} (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor |F_{uw}(\text{offset for } \Delta f = 15\text{kHz})| / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3A.2.5-1 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3A.3 Narrow band blocking for CA (inter-band DL CA without UL CA)

7.6.3A.3.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case applies only for CA configurations that do not support UL CA.

7.6.3A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.3.4 Test Description

7.6.3A.3.4.1 Initial Conditions

Same initial conditions as in clause 7.6.3A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2.
- instead of Table 7.6.3A.1.4.1-1 → use Table 7.6.3A.3.4.1-1.
- Instead of clause 7.6.3A.1.4.3 → use clause 7.6.3A.3.4.3.

Table 7.6.3A.3.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: Mid range for PCC and SCC
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE	Highest N_{RB_agg} for PCC and SCC

100	100	QPSK	100	100	QPSK	25
100	100	QPSK	100	100	QPSK	20

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.

Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.

Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands. (given UL is supported in PCC band as per Table 5.2-1).

7.6.3A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

6. Set the parameters of the CW signal generator for an interfering signal below the SCC according to Table 7.6.3A.3.5-1.

7. Set the downlink signal level according to the table 7.6.3A.3.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.3.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.

8. Measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.

9. Repeat steps from 6 to 8, using an interfering signal above the SCC at step 6.

7.6.3A.3.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3.

7.6.3A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the narrow-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested, i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3A.3.5-1 (originated from the single carrier Table 7.6.3.5-1).

Table 7.6.3A.3.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz from SCC)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3A.3.5-1 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3A.4 Narrow band blocking for CA (intra-band non-contiguous DL CA without UL CA)

7.6.3A.4.1 Test Purpose

Same as in clause 7.6.3A.1.1.

7.6.3A.4.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA. This test case applies only for CA configurations that do not support UL CA.

7.6.3A.4.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.4.4 Test description

7.6.3A.4.4.1 Initial Conditions

Same as in clause 7.6.3A.1.4.1 with the following exceptions:

- Instead of Table 7.6.3A.1.4.1-1→ use Table 7.6.3A.4.4.1-1.

Table 7.6.3A.4.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes , and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2	A: N/A (Range is not relevant)
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration.	Refer to test point
Test Parameters for CA Configurations	
use the content of Table 7.3A.4.4.1-1	

7.6.3A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for the interfering signal below the PCC according to Tables 7.6.3A.4.5-1.
7. Set the downlink signal level for PCC and SCC according to the table 7.6.3.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.4.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using the interfering signal above the PCC at step 6.
10. Repeat the steps from 6 to 9, using the interferer signal to the SCC.

7.6.3A.4.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3.

7.6.3A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, the narrow band blocking requirements are defined with the uplink configuration of the PCC being in accordance with Table 7.3A.0-3. The UE shall meet the requirements specified in table 7.6.3A.4.5-1 for each component carrier while both downlink carriers are active. The requirements for each component carrier are the same as single carrier requirements in Table 7.6.3.5-1.

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3A.4.5-1.

Table 7.6.3A.4.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3A.4.5-1 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3A.5 Narrow band blocking for 3DL CA

7.6.3A.5.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

7.6.3A.5.3 Minimum Conformance Requirements

Same as in clause 7.6.3A.1.

7.6.3A.5.4 Test Description

7.6.3A.5.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.5.4.1-1 through table 7.6.3A.5.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3A.5.4.1-1: Test Configuration Table

Initial Conditions												
Test Environment as specified in TS 36.508[7] subclause 4.1				NC								
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.				For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns								
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Refer to “PCC NRB” and “SCCs NRB” columns								
Network signalling value				NS_01 by default								
Test Parameters for CA Configurations												
ID	**PCC**				**SCC1**				**SCC2**

	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Highest N_{RB_agg}	N/A	QPSK		Highest N_{RB_agg}
4[12]	X	Mid	REFSENS	All RBs	Y	Mid/CC 1	N/A	All RBs	Y	Mid/CC 2	N/A	All RBs

	QPSK	QPSK		Highest N_{RB}	N/A	QPSK		Lowest N_{RB_agg}	N/A	QPSK		Lowest N_{RB_agg}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band contiguous:** X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41
Note 5: **Inter-band:** X,Y,Z correspond to the 1st, 2nd and 3rd band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19
Note 6: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1C-3A, X=1 and Y=3
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no refsens requirement shall be skipped.
Note 12: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_SCCx} = N_{RB_SCCx+1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_SCCx} for testing.

Table 7.6.3A.5.4.1-2: Test Configuration Table with W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

ID	PCC				W_{gap} [MHz]	SCC1				W_{gap} [MHz]	SCC2

	QPSK	QPSK		100		N/A	QPSK		100		N/A	QPSK		100

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.
Note 7: **Intra-band non-contiguous + Inter-band:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 11: ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.5.4.1-1 through Table 7.6.3A.5.4.1-2 as appropriate.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.5.4.3.

7.6.3A.5.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.5.4.1-1 through Table 7.6.3A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.5.4.1-1 through Table 7.6.3A.5.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.5.4.2-1.

7. Set the downlink signal level according to the table 7.6.3A.5.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.5.4.2-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement.

8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.5.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.

9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.5.4.2-1 at step 6.

10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.5.4.2-1.

Table 7.6.3A.5.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.6.3A.5.5-1
	2		
Inter-band	1	SCC1	7.6.3A.5.5-2
		SCC2	
	2	SCC1	
		SCC2	
	3	SCC1	
		SCC2	
Intra-band contiguous + Inter-band	1	SCC2	7.6.3A.5.5-2
	2		
	3	SCC1, SCC2	7.6.3A.5.5-1
	4		
Intra-band non-contiguous + Inter-band	1	SCC2	7.6.3A.5.5-2
	2	SCC1,	7.6.3A.5.5-2
		SCC2	
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.6.3A.5.5-2
		SCC1, SCC2	7.6.3A.5.5-1
	2	SCC2	7.6.3A.5.5-2
		PCC, SCC1	7.6.3A.5.5-1
Intra-band contiguous	1	PCC, SCC1, SCC2	7.6.3A.5.5-2

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.5.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.3A.5.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3 for without UL CA.

Same message contents as in clause 7.6.3A.1.4.3 for UL CA.

7.6.3A.5.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

Table 7.6.3A.5.5-1: Narrow-band blocking (intra-band contiguous)

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16[4]	16		
P_{uw} (CW)	dBm	-55	-55	-55		
F_{uw} (offset for Δf = 15 kHz)	MHz	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2		
F_{uw} (offset for Δf = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The F_{uw} (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor |F_{uw}(\text{offset for } \Delta f = 15\text{kHz})| / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
Note 4: The requirement is applied for the band combinations whose component carriers' BW≥5 MHz.

Table 7.6.3A.5.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz from SCC)	MHz						

Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3A.5.5-1 and 7.6.3A.5.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3A.6

7.6.3A.7 Narrow band blocking for 4DL CA

7.6.3A.7.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL with TDD Intra-band contiguous CA, or 4DL with Inter-band CA, or 4DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support4DL Intra-band non-contiguous CA + Inter-band CA or 4DL Intra-band non-contiguous + Intra-band contiguous CA, or 4DL with Intra-band non-contiguous and Intra-band non-contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

7.6.3A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.7.4 Test Description

7.6.3A.7.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.7.4.1-1 through table 7.6.3A.7.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3A.7.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 12: ID/test points that result in no refsens requirement shall be skipped.

Table 7.6.3A.7.4.1-2: Test Configuration Table with Wgap

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

	QPSK	QPSK		N_{RB_agg}		N/A	QPSK		N_{RB_agg}		N/A	QPSK		N_{RB_agg}		N/A	QPSK		N_{RB_agg}
2	Y	CC4	REFSENS	ALL RBs	Max	Y	CC3	N/A	ALL RBs	-	X	CC2	N/A	ALL RBs	Max	X	CC1	N/A	ALL RBs
	QPSK	QPSK		N_{RB_agg}		N/A	QPSK		N_{RB_agg}		N/A	QPSK		N_{RB_agg}		N/A	QPSK		N_{RB_agg}

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.

Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.

Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.

Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 10: ID/test points that result in no refsens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.7.4.1-1 through Table 7.6.3A.7.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.7.4.3.

7.6.3A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.7.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.7.4.1-1 through Table 7.6.3A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.7.4.1-1 through Table 7.6.3A.7.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.7.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.7.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.7.4.2-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.7.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.7.4.2-1 at step 6.
10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.7.4.2-1.

		SCC3	
	2	SCC2	
		SCC3	

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.7.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.3A.7.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3 for without UL CA.

Same message contents as in clause 7.6.3A.1.4.3 for UL CA.

7.6.3A.7.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

Table 7.6.3A.7.5-1: Narrow-band blocking (intra-band contiguous)

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16[4]	16	16	
P_{uw} (CW)	dBm	-55	-55	-55	-55	
F_{uw} (offset for Δf = 15 kHz)	MHz	- F_{offset} – 0.2 /	- F_{offset} – 0.2 /	- F_{offset} – 0.2	- F_{offset} – 0.2	

		+ F_{offset} + 0.2	+ F_{offset} + 0.2	/ + F_{offset} + 0.2	/ + F_{offset} + 0.2	
F_{uw} (offset for Δf = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
Note 4: The requirement is applied for the band combinations whose component carriers' BW≥5 MHz.

Table 7.6.3A.7.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz from SCC)	MHz						

Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3A.7.5-1 and 7.6.3A.7.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3A.8 Narrow band blocking for 5DL CA

7.6.3A.8.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.8.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

7.6.3A.8.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.8.4 Test Description

7.6.3A.8.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.8.4.1-1 through table 7.6.3A.8.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3A.8.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC N_{RB}” and “SCCs N_{RB}” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.
Note 6: **Inter-band:** X,Y,Z,R,S correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-20A-42A,X=1,Y=3,Z=7,R=20,S=42.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-28A-42C, X=1, Y=3, Z=28 and R=42.
Note 8: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.
Note 11: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Table 7.6.3A.8.4.1-2: Test Configuration Table with W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 4: **Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-12A-66A,X=2,Y=5,Z=12,R=66.
Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y corresponds to the band of the CA Configuration. E.g. for CA_5A-5A-66D,X=5,Y=66.
Note 6: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A-66A-66A,X=2,Y=5,Z=66.
Note 7: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.
Note 9: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.8.4.1-1 through Table 7.6.3A.8.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.8.4.3.

7.6.3A.8.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.8.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.8.4.1-1 through Table 7.6.3A.8.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.8.4.1-1 through Table 7.6.3A.8.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.8.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.8.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.8.4.2-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.8.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.8.4.2-1 at step 6.
10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.8.4.2-1.

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.8.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.3A.8.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3 for without UL CA.

Same message contents as in clause 7.6.3A.1.4.3 for UL CA.

7.6.3A.8.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

Table 7.6.3A.8.5-1: Narrow-band blocking (intra-band contiguous)

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16[4]	16	16	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2
F_{uw} (offset for Δf = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
Note 4: The requirement is applied for the band combinations whose component carriers' BW≥5 MHz.

Table 7.6.3A.8.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)

Parameter	Unit	Channel Bandwidth

		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz from SCC)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B, 7.3.3-1C and 7.3.3-1D, P_{uw} power defined in Table 7.6.3A.8.5-1 and 7.6.3A.8.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B, 7.3.3-1C and 7.3.3-1D.

7.6.3A.9 Narrow band blocking for 6DL CA

7.6.3A.9.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.9.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 6DL with CA configurations in Table 7.1-2d.

7.6.3A.9.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.9.4 Test Description

7.6.3A.9.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.9.4.1-1 through table 7.6.3A.9.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3A.9.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: **Intra-band contiguous+ Inter-band , Intra-band contiguous + Intra-band contiguous , Intra-band contiguous + Intra-band contiguous + inter-band & Intra-band contiguous + Intra-band contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.

Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.

Note 6: **Inter-band:** X,Y,Z,R,S,U correspond to the different bands in the CA Configuration. E.g. X !=Y !=Z !=R !=S !=U.

Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.

Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.

Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 11: ID/test points that result in no ref sens requirement shall be skipped.

Table 7.6.3A.9.4.1-2: Test Configuration Table with W_{gap}

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Highest N_{RB}
Network signalling value	NS_01 by default

Default Test Settings for CA_XC-YD, YD-XC Configuration (Intra-band contiguous + Inter-band)																														

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: **Intra-band non-contiguous + Intra-band non-contiguous + Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-3A-7A-7A-8A,X=1,Y=3,Z=7,R=8.

Note 5: **Intra-band non-contiguous + Intra-band contiguous:** X,Y,Z,R corresponds to the band of the CA Configuration. E.g. for CA_1A-1A-3A-7C-28A,X=1,Y=3,Z=7,R=28.

Note 6: REFSENS refers to the PCC band's and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 7: Intra-band non-contiguous + Intra-band contiguous: If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg} , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum N_{RB_CC1} for testing.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.9.4.1-1 through Table 7.6.3A.9.4.1-2 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.9.4.3.

7.6.3A.9.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.9.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.9.4.1-1 through Table 7.6.3A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.9.4.1-1 through Table 7.6.3A.9.4.1-2 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.9.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.9.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.9.4.2-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.9.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.9.4.2-1 at step 6.
10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.9.4.2-1.

Table 7.6.3A.9.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

		SCC4,SCC5	7.6.3A.9.5-1
Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.9.4.1.			
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.			
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

7.6.3A.9.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3 for without UL CA.

Same message contents as in clause 7.6.3A.1.4.3 for UL CA.

7.6.3A.9.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

Table 7.6.3A.9.5-1: Narrow-band blocking (intra-band contiguous)

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16[4]	16	16	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2
F_{uw} (offset for Δf = 7.5 kHz)	MHz					
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A.						

Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
Note 4: The requirement is applied for the band combinations whose component carriers' BW≥5 MHz.

Table 7.6.3A.9.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz from SCC)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: For intra-band non-contiguous + inter-band CA, ΔR_{IBNC} = 0 dB for all sub-block gaps.							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B, 7.3.3-1C and 7.3.3-1D, P_{uw} power defined in Table 7.6.3A.9.5-1 and 7.6.3A.9.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B, 7.3.3-1C and 7.3.3-1D.

7.6.3A.10 Narrow band blocking for 7DL CA

7.6.3A.10.1 Test Purpose

Same test purpose as 7.6.3A.1.

7.6.3A.10.2 Test Applicability

This test case applies to all types of E-UTRA UE and forward that support 7DL with CA configurations in Table 7.1-2e.

7.6.3A.10.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

7.6.3A.10.4 Test Description

7.6.3A.10.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.10.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3A.10.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.	For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns
Test CC Combination setting (N_{RB_agg}) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.	Refer to “PCC NRB” and “SCCs NRB” columns
Network signalling value	NS_01 by default

Test Parameters for CA Configurations

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: **Intra-band contiguous+ Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.

Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.

Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41F, X=41.

Note 6: **Inter-band:** X,Y,Z and R correspond to the different bands in the CA Configuration. E.g. X !=Y !=Z !=R.

Note 7: REFSENS refers to the PCC bands and PCC N_{RB} 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 8: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose for testing the Combination with maximum N_{RB_PCC} and then select maximum N_{RB_SCC1} for the chosen N_{RB_PCC}.

Note 9: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same N_{RB_agg}, choose the Combination with N_{RB_PCC} = N_{RB_SCC1} for testing. If no such combination is supported, choose Combination with maximum N_{RB_PCC} for testing.

Note 10: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 11: ID/test points that result in no ref sens requirement shall be skipped.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate if the UE supports 2 Rx antennas or Figure A.82 if the UE supports 4 Rx antennas in the band.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.10.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.10.4.3.

7.6.3A.10.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.10.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3A.10.4.1-1 on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3A.10.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.10.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.10.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.10.4.2-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.10.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.10.4.2-1 at step 6.
10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.10.4.2-1.

Table 7.6.3A.10.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous + Inter-band	1	SCC1, SCC2, SCC3,SCC4,SCC5,SCC6	7.6.3A.10.5-1
	2	PCC,SCC1,SCC2, SCC3, SCC4,SCC5	7.6.3A.10.5-1
		SCC6	7.6.3A.10.5-2
	3	PCC,SCC1,SCC2, SCC3, SCC4,SCC5	7.6.3A.10.5-1
		SCC6	7.6.3A.10.5-2
Intra-band contiguous + Inter-band(2)	1	SCC1	7.6.3A.10.5-2
		SCC2, SCC3,SCC4,SCC5,SCC6	7.6.3A.10.5-1
	2	SCC1,SCC2, SCC3,SCC4,SCC5	7.6.3A.10.5-1

		SCC6	7.6.3A.10.5-2
	3	SCC1,SCC2, SCC3,SCC4,SCC5	7.6.3A.10.5-1
		SCC6	7.6.3A.10.5-2

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.10.4.1.
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

7.6.3A.10.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3 for without UL CA.

Same message contents as in clause 7.6.3A.1.4.3 for UL CA.

7.6.3A.10.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

Table 7.6.3A.10.5-1: Narrow-band blocking (intra-band contiguous)

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16[4]	16	16	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55
F_{uw} (offset for □*f* = 15 kHz)	MHz	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2	- F_{offset} – 0.2 / + F_{offset} + 0.2
F_{uw} (offset for□ □f = 7.5 kHz)	MHz					

Note 1: The transmitter shall be set to 4dB below PCMAX_L or PCMAX_L_CA as defined in subclause 6.2.5A.
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: The $F_{interferer}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to $\lfloor F_{interferer}/0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.
Note 4: The requirement is applied for the band combinations whose component carriers' BW≥5 MHz.

Table 7.6.3A.10.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for □*f* = 15 kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for□ □f = 7.5 kHz from SCC)	MHz						

Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 3: For intra-band non-contiguous + inter-band CA, □R_{IBNC} = 0 dB for all sub-block gaps.

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B, 7.3.3-1C and 7.3.3-1D, P_{uw} power defined in Table 7.6.3A.10.5-1 and 7.6.3A.10.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B, 7.3.3-1C and 7.3.3-1D.

7.6.3B Narrow band blocking for UL-MIMO

7.6.3B.1 Test Purpose

Narrow band blocking for UL-MIMO is defined for an unwanted CW interfering signal falling near the UE that supports UL-MIMO receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels,

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.3B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

7.6.3B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in clause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UL-MIMO, the parameter P_{CMAX_L} is defined as the total transmitter power over the two transmit antenna connectors.

7.6.3B.4 Test Description

7.6.3B.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] clause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] clause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5[4]	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A

15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.30.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3B.4.3.

7.6.3B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 7.6.3B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3B.5-1.
4. Set the downlink signal level according to the table 7.6.3B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3B.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq 4.2$GHz, for at least the duration of the throughput measurement and the UE output power is mean sum power of each antenna connector for UE.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

7.6.3B.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

Table 7.6.3B.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2

}			

7.6.3B.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3B.5-1.

Table 7.6.3B.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.6.3B.5-1 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3D Narrow band blocking for ProSe

7.6.3D.0 Minimum conformance requirements

The relative throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.6.3D.0-1 and Table 7.6.3D.0-2.

Table 7.6.3D.0-1: Narrow-band blocking for ProSe Direct Discovery

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS_ProSe}$ + channel-bandwidth specific value below + P_{offset}					
				16	13	14	16
P_{uw} (CW)	dBm			-55	-55	-55	-55
P_{offset}	dB			10.9	13.9	15.7	16.9
F_{uw} (offset for Δf = 15 kHz)	MHz			2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

Table 7.6.3D.0-2: Narrow-band blocking for ProSe Direct Communication

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS_ProSe}$ + channel-bandwidth specific value below					
				16	13	14	16
P_{uw} (CW)	dBm			-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz			2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

For the UE which supports inter-band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{UW} power defined in Table 7.6.3D.0-1 and Table 7.6.3D.0-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.1D.

7.6.3D.1 Narrow band blocking for ProSe Direct Discovery

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

7.6.3D.1.1 Test Purpose

Narrow-band blocking verifies the receiver's ability to receive a E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

7.6.3D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

7.6.3D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3D.0.

7.6.3D.1.4 Test Description

7.6.3D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.6.3D.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range(Note 4)					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz, Highest					
	Downlink Configuration (Note 2)		**Uplink Configuration (Note 2)**		**Sidelink Configuration (Reception) (Note 3)**	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2

Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1.
Note 2:	After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes.
Note 3:	The RB start for the transmission of Sidelink RMC is RB#0.
Note 4:	Sidelink uses the frequencies defined for Uplink.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.71.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.1D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

7.6.1D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "…Step 1…") are defined in clause 7.6.3D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.3D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.3D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.6.3D.1.5-1.
7. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3D.1.5-1.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
10. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
11. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
12. SS shall compute the throughput as following:

    TP = Pok / Ptot * 100%

13. Repeat steps from 6 to 12, using an interfering signal above the wanted signal in step 7.

7.6.1D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD

7.6.3D.1.5 Test Requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.6.3D.1.5-1.

Table 7.6.3D.1.5-1: Narrow-band blocking for ProSe Direct Discovery

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS_ProSe}$ + channel-bandwidth specific value below + P_{offset}					
				16	13	14	16
P_{uw} (CW)	dBm			-55	-55	-55	-55
P_{offset}	dB			10.9	13.9	15.7	16.9
F_{uw} (offset for Δf = 15 kHz)	MHz			2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, $P_{Interferer}$ power defined in Table 7.6.1D.1.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.6.3D.2 Narrow band blocking for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test description is TBD

7.6.3D.2.1 Test Purpose

Same test purpose as in clause 7.6.3D.1.1.

7.6.3D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

7.6.3D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3D.0.

7.6.3D.2.4 Test Description

TBD

7.6.3D.2.5 Test Requirement

Same test requirement as in clause 7.6.3D.1.5 with the following exceptions:

- Instead of Table 7.6.3D.1.5-1 → use Table 7.6.3D.2.5-1.

Table 7.6.3D.2.5-1: Narrow-band blocking for ProSe Direct Communication

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS_ProSe}$ + channel-bandwidth specific value below					
				16	13	14	16
P_{uw} (CW)	dBm			-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz			2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

7.6.3E Narrow band blocking for UE category 0

7.6.3E.1 Test Purpose

Same test purpose as in clause 7.6.3.

7.6.3E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

7.6.3E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.3.3.

7.6.3E.4 Test Description

7.6.3E.4.1 Initial Conditions

Same initial conditions as in clause 7.5.4.1 with the following exceptions:

- Instead of Table 7.6.3.4.1-1 → use Table 7.6.3E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.

Table 7.6.3E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	Lowest, 5MHz, Highest					
Test Parameters for Channel Bandwidths						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Downlink RB position shall be RB_{start} = 0						

7.6.3E.4.2 Test Procedure

Same test procedure as in clause 7.6.3.4.2

7.6.3E.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3

7.6.3E.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Table 7.6.3E.5-1.

Table 7.6.3E.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	**3 MHz**	**5 MHz**	**10 MHz**	**15 MHz**	**20 MHz**
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5E.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.							

7.6.3EA Narrow band blocking for UE Category M1

7.6.3EA.1 Test Purpose

Verifies a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

7.6.3EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

7.6.3EA.3 Minimum Conformance Requirements

The relative throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3EA.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.3EA.3-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	22	22	22	22	22
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: The transmitter shall be set a 4 dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2should be used as $P_{REFSENS}$ for P_w.							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.

7.6.3EA.4 Test Description

7.6.3EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 7.6.3EA.4.1-1: Test Configuration Table

Initial Conditions	
Test Environment as specified in TS 36.508[7] subclause 4.1	NC
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1	Mid range
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1	5MHz

Test Parameters for Channel Bandwidths and Narrowband positions							
	Downlink Configuration			Uplink Configuration			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD	TDD		FDD and HD-FDD	TDD	Narrowband index (Note 1)
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.6.3EA.4.3.

7.6.3EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C_RNTI to transmit the DL RMC according to Table 7.6.1EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 7.6.3EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3EA.5-1.
4. Set the downlink signal level according to the table 7.6.3EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3EA.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz $< f \leq$ 4.2GHz, for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

7.6.3EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA and the following exception.

Table 7.6.3EA.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2

		the RSRP measurement variation	
}			

7.6.3EA.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3EA.5-1.

Table 7.6.3EA.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	22	22	22	22	22
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: The transmitter shall be set a 4 dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA. NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2 should be used as $P_{REFSENS}$ for P_w. NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

7.6.3EB Narrow band blocking for UE category 1bis

7.6.3EB.1 Test Purpose

Same test purpose as in clause 7.6.3.

7.6.3EB.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

7.6.3EB.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.3.3.

7.6.3EB.4 Test Description

7.6.3EB.4.1 Initial Conditions

Same initial conditions as in clause 7.5.4.1 with the following exceptions:

Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.

7.6.3E.4.2 Test Procedure

Same test procedure as in clause 7.6.3.4.2

7.6.3EB.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3

7.6.3EB.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Table 7.6.3EB.5-1.

Table 7.6.3EB.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5E.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3EB.3-1 for main antenna port.							

7.6.3EC Narrow band blocking for UE category M2

7.6.3EC.1 Test purpose

Same as in clause 7.6.3EA.1

7.6.3EC.2 Test applicability

This test applies to all types of E-UTRA UE release 14 and forward of category M2.

7.6.3EC.3 Minimum conformance requirements

The relative throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3EC.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.3EC.3-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P_w	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
P_{uw} (CW)	dBm	-55	-55	-55	-55	-55	-55
F_{uw} (offset for Δf = 15 kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F_{uw} (offset for Δf = 7.5 kHz)	MHz						
NOTE 1: The transmitter shall be set a 4 dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3EA-3 with P_{CMAX_L} as defined in subclause 6.2.5EA.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: For DL category M1 and M2 UE, the reference sensitivity for category M1 in table 7.3EA-1 and 7.3EA-2 and category M2 in Table 7.3 EC-1 should be used as $P_{REFSENS}$ for P_w.							
NOTE 4: For DL category M1 and M2 UE, the parameters for the applicable channel bandwidth apply.							

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.

7.6.3EC.4 Test description

7.6.3EC.4.1 Initial conditions

Same as in clause 7.6.3EA.4.1 with the following exceptions:

- Instead of Table 7.6.3EA.4.1-1 → use Table 7.6.3EC.4.1-1

- Instead of CAT M1 → use CAT M2

Table 7.6.3EC.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] clause 4.1	NC					
Test Frequencies as specified in TS36.508 [7] clause 4.3.1	Mid range					
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.	1.4, 3MHz, 5MHz					
Test Parameters for Channel Bandwidths and Narrowband positions						
	Downlink Configuration			**Uplink Configuration**		
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	4	4	QPSK	6	6
3MHz	QPSK	8	8	QPSK	15	15
5MHz	QPSK	16	16	QPSK	24	24
Note 1: Downlink RB position shall be RB_{start} = 0 within the narrowband. Note 2: Use narrowband index (TS36.211, 5.2.4) 0 when interferer is below carrier, and max narrowband index when interferer is above carrier.						

7.6.3EC.4.2 Test procedure

Same as in clause 7.6.3EA.4.2 with the following exceptions:

7.6.3EC.5 Test requirement

Same as in clause 7.6.3EA.5.

7.7 Spurious response

7.7.1 Test Purpose

Spurious response verifies the receiver's ability to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

7.7.2 Test Applicability

This test applies to all types of E-UTRA UE release 8 and forward.

7.7.3 Minimum Conformance Requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.3-1 and 7.7.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.7.3-1: Spurious response parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
	dBm	REFSENS + channel bandwidth specific value below					

Power in Transmission Bandwidth Configuration		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} at the minimum uplink configuration specified in Table 7.3.3-2 with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.3-1 and Table 7.3.3-1a for two and four antenna ports, respectively.							

Table 7.7.3-2: Spurious Response

Parameter	Unit	Level
$P_{Interferer}$ (CW)	dBm	-44
$F_{Interferer}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, P_{uw} power defined in Table 7.7.3-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A.

The normative reference for this requirement is TS 36.101 [2] clause 7.7.

7.7.4 Test Description

7.7.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2.4.1 in order to test spurious responses obtained in clause 7.6.2 under the same conditions.

7.7.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2.4.2.

4. Set the downlink signal level according to the table 7.7.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.

5. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.7.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

Table 7.7.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2			
Information Element	**Value/remark**	**Comment**	**Condition**
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		

pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

7.7.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7.5-1 and 7.7.5-2.

Table 7.7.5-1: Spurious response parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.7.5-2: Spurious Response

Parameter	Unit	Level
$P_{Interferer}$ (CW)	dBm	-44
$F_{Interferer}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.7.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.7_1 Spurious response with 4 Rx antenna ports

7.7_1.1 Test Purpose

To verify the ability of UE that supports 4 Rx antenna ports to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2_2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

7.7_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

7.7_1.3 Minimum Conformance Requirements

Same as in clause 7.7.3.

7.7_1.4 Test Description

7.7_1.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2_1.4.1 in order to test spurious responses obtained in clause 7.6.2_1 under the same conditions.

7.7_1.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2_1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2_1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7_1.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2_1.4.2.

4. Set the downlink signal level according to the table 7.7_1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7_1.5-1 for carrier frequency $f \leq 3.0$GHz or within +0, -4.0 dB of the target level for carrier frequency 3.0GHz < $f \leq 4.2$GHz, for at least the duration of the throughput measurement.

5. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

7.7_1.4.3 Message Contents

Same as in clause 7.7.4.3.

7.7_1.5 Test Requirement

The throughput measurement derived in test procedure shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7_1.5-1 and 7.7_1.5-2.

Table 7.7_1.5-1: Spurious response parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} with P_{CMAX_L} as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.3-1a.							

Table 7.7_1.5-2: Spurious Response

Parameter	Unit	Level
$P_{Interferer}$ (CW)	dBm	-44
$F_{Interferer}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P_{uw} power defined in Table 7.7_1.5-2 is increased by the amount given by $\Delta R_{IB,c}$ in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

7.7A Spurious response for CA

7.7A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the spurious response requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The throughput measured in each downlink with $F_{interferer}$ in Table 7.6.2A.0-0 and Table 7.6.2A.0-0a at spurious response frequencies shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.3-1 and 7.7.3-2. The UE shall meet these requirements for each component carrier while all downlink carriers are active.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spurious response requirements applicable specified above shall be met with the transmitter power for the uplink set to 7 dB below $P_{CMAX_L,c}$ for each serving cell *c*.

For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the spurious response requirements of subclause 7.7A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall configure closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.7A.0-1 with the uplink configuration set according to Table 7.3A.0-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7A.0-1 and 7.7A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.7A.0-1 and 7.7A.0-2.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the spurious response requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.7.3 and 7.7A.0 for one component carrier and two component carriers per sub-block, respectively. The requirements apply with all downlink carriers active.

For intra-band non-contiguous carrier aggregation with two uplink carriers and two downlink carriers, the spurious response requirements applicable specified above shall be met with the transmitter powers for the uplinks set to $P_{CMAX_L,c}$ – 7 dBm.

Table 7.7A.0-1: Spurious response parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	9
Note 1: The transmitter shall be set to 4dB below P_{CMAX_L} or $P_{CMAX_L_CA}$ as defined in subclause 6.2.5A. Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

Table 7.7A.0-2: Spurious response

Parameter	Unit	Level
$P_{Interferer}$ (CW)	dBm	-44
$F_{Interferer}$	MHz	Spurious response frequencies

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For the two non-contiguous component carriers within the same band, P_{wanted} in Table 7.6.2A.0-0 is set using ΔR_{IBNC} = 0 dB for all sub-block gaps (Table 7.3A.0-3) while a band supporting contiguously aggregated carriers the out-of-band blocking parameters in Table 7.7.3-1 are replaced by those specified in Table 7.7A.0-1. For each downlink the UE shall meet the spurious-response requirements applicable for inter-band carrier aggregation with one component carrier per operating band but with up to three component carriers assigned to the same band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative reference for this requirement is TS 36.101 [2] clause 7.7.1A.

7.7A.1 Spurious response for CA (intra-band contiguous DL CA and UL CA)

7.7A.1.1 Test Purpose

Spurious response for CA verifies the receiver's ability to receive a wanted aggregated signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2A is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

7.7A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

7.7A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

7.7A.1.4 Test Description

7.7A.1.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.1.4.1 in order to test spurious responses obtained in clause 7.6.2A.1 under the same conditions.

7.7A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.7A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
