**Important notice**

---

The present document can be downloaded from the  
[ETSI Search & Browse Standards](#) application.

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format on [ETSI deliver](#) repository.

Users should be aware that the present document may be revised or have its status changed,  
this information is available in the [Milestones listing](#).

If you find errors in the present document, please send your comments to  
the relevant service listed under [Committee Support Staff](#).

If you find a security vulnerability in the present document, please report it through our  
[Coordinated Vulnerability Disclosure \(CVD\)](#) program.

# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

---

# Legal Notice

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at [3GPP to ETSI numbering cross-referencing](#).

---

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

| 5.2A.2 Inter-band CA .....                                                     | 31 |
| 5.2A.2.1 Inter-band CA (two bands).....                                        | 31 |
| 5.2A.2.2 Inter-band CA (three bands).....                                      | 35 |
| 5.2A.2.3 Inter-band CA (four bands) .....                                      | 38 |
| 5.2A.2.4 Inter-band CA (five bands) .....                                      | 40 |
| 5.2B Operating bands for DC .....                                              | 40 |
| 5.2C Operating band combination for SUL .....                                  | 40 |
| 5.2D Operating bands for UL MIMO .....                                         | 42 |
| 5.2E Operating band for V2X.....                                               | 43 |
| 5.2E.1 V2X operating bands .....                                               | 43 |
| 5.2E.2 V2X operating bands for concurrent operation.....                       | 43 |
| 5.3 UE channel bandwidth .....                                                 | 44 |
| 5.3.1 General.....                                                             | 44 |
| 5.3.2 Maximum transmission bandwidth configuration .....                       | 45 |
| 5.3.3 Minimum guardband and transmission bandwidth configuration.....          | 45 |
| 5.3.4 RB alignment.....                                                        | 47 |
| 5.3.5 UE channel bandwidth per operating band .....                            | 47 |
| 5.3.6 Asymmetric channel bandwidths .....                                      | 51 |
| 5.3A UE channel bandwidth for CA .....                                         | 52 |
| 5.3A.1 General.....                                                            | 52 |
| 5.3A.2 Maximum transmission bandwidth configuration for CA .....               | 52 |
| 5.3A.3 Minimum guardband and transmission bandwidth configuration for CA ..... | 52 |
| 5.3A.4 Void .....                                                              | 54 |
| 5.3A.5 UE channel bandwidth per operating band for CA.....                     | 54 |
| 5.3E Channel bandwidth for V2X .....                                           | 55 |
| 5.3E.1 General.....                                                            | 55 |
| 5.3E.2 Channel bandwidth for V2X concurrent operation.....                     | 56 |
| 5.3I Channel bandwidth for RedCap .....                                        | 57 |
| 5.4 Channel arrangement.....                                                   | 57 |
| 5.4.1 Channel spacing.....                                                     | 57 |
| 5.4.1.1 Channel spacing for adjacent NR carriers.....                          | 57 |
| 5.4.2 Channel raster .....                                                     | 57 |
| 5.4.2.1 NR-ARFCN and channel raster.....                                       | 57 |

|          |                                                                               |     |
|----------|-------------------------------------------------------------------------------|-----|
| 5.4.2.2  | Channel raster to resource element mapping.....                               | 58  |
| 5.4.2.3  | Channel raster entries for each operating band .....                          | 58  |
| 5.4.3    | Synchronization raster .....                                                  | 61  |
| 5.4.3.1  | Synchronization raster and numbering.....                                     | 61  |
| 5.4.3.2  | Synchronization raster to synchronization block resource element mapping..... | 61  |
| 5.4.3.3  | Synchronization raster entries for each operating band.....                   | 61  |
| 5.4.4    | TX–RX frequency separation .....                                              | 63  |
| 5.4A     | Channel arrangement for CA.....                                               | 64  |
| 5.4A.1   | Channel spacing for CA.....                                                   | 64  |
| 5.4A.2   | Channel raster for CA .....                                                   | 64  |
| 5.4A.3   | Synchronization raster for CA .....                                           | 65  |
| 5.4A.4   | Tx-Rx frequency separation for CA.....                                        | 65  |
| 5.4B     | Reserved .....                                                                | 65  |
| 5.4C     | Reserved .....                                                                | 65  |
| 5.4D     | Reserved .....                                                                | 65  |
| 5.4E     | Channel arrangement for V2X .....                                             | 65  |
| 5.4E.1   | Channel spacing.....                                                          | 65  |
| 5.4E.2   | Channel raster .....                                                          | 65  |
| 5.4E.2.1 | NR-ARFCN and channel raster.....                                              | 65  |
| 5.4E.2.2 | Channel raster to resource element mapping.....                               | 65  |
| 5.4E.2.3 | Channel raster entries for each operating band .....                          | 65  |
| 5.4E.3   | Synchronization raster for V2X .....                                          | 66  |
| 5.4I     | Channel arrangement for RedCap .....                                          | 66  |
| 5.4I.1   | Channel spacing for RedCap .....                                              | 66  |
| 5.4I.2   | Channel raster for RedCap.....                                                | 66  |
| 5.4I.2.1 | NR-ARFCN and channel raster.....                                              | 66  |
| 5.4I.2.2 | Channel raster to resource element mapping.....                               | 66  |
| 5.4I.2.3 | Channel raster entries for each operating band .....                          | 66  |
| 5.4I.3   | Synchronization raster for RedCap.....                                        | 66  |
| 5.4I.4   | Tx-Rx frequency separation for RedCap .....                                   | 66  |
| 5.5      | Void.....                                                                     | 67  |
| 5.5A     | Configurations for CA.....                                                    | 67  |
| 5.5A.0   | General.....                                                                  | 67  |
| 5.5A.1   | Configurations for intra-band contiguous CA.....                              | 67  |
| 5.5A.2   | Configurations for intra-band non-contiguous CA .....                         | 70  |
| 5.5A.3   | Configurations for inter-band CA.....                                         | 74  |
| 5.5A.3.1 | Configurations for inter-band CA (two bands) .....                            | 74  |
| 5.5A.3.2 | Configurations for inter-band CA (three bands) .....                          | 104 |
| 5.5A.3.3 | Configurations for inter-band CA (four bands).....                            | 169 |
| 5.5A.3.4 | Configurations for inter-band CA (five bands) .....                           | 202 |
| 5.5B     | Configurations for DC.....                                                    | 205 |
| 5.5C     | Configurations for SUL .....                                                  | 209 |
| 6        | Transmitter characteristics .....                                             | 215 |
| 6.1      | General .....                                                                 | 215 |
| 6.1A     | General .....                                                                 | 215 |

| <b>Annex H (informative):</b> | <b>Void .....</b>                                          | <b>640</b> |
| <b>Annex I (informative):</b> | <b>Void .....</b>                                          | <b>641</b> |
| <b>Annex J (informative):</b> | <b>Void .....</b>                                          | <b>642</b> |
| <b>Annex K (informative):</b> | <b>Void .....</b>                                          | <b>643</b> |
| <b>Annex L (normative):</b>   | <b>ModifiedMPR-Behavior .....</b>                          | <b>644</b> |
| L.1                           | Indication of modified MPR behavior.....                   | 644        |
| <b>Annex M (normative):</b>   | <b>Declared Supported Post Antenna Gain for UE .....</b>   | <b>646</b> |
| M.1                           | FRMCS operating bands .....                                | 646        |
| <b>Annex N (informative):</b> | <b>Change history .....</b>                                | <b>647</b> |

History .....672

---

# Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

- shall** indicates a mandatory requirement to do something
- shall not** indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

- should** indicates a recommendation to do something
- should not** indicates a recommendation not to do something
- may** indicates permission to do something
- need not** indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

- can** indicates that something is possible
- cannot** indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

- will** indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- will not** indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- might** indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

**might not** indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

**is** (or any other verb in the indicative mood) indicates a statement of fact

**is not** (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

---

# 1 Scope

The present document establishes the minimum RF requirements for NR User Equipment (UE) operating on frequency Range 1.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.

For a specific reference, subsequent revisions do not apply.

For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

**Aggregated Allocation Bandwidth:** Total bandwidth of all allocated RBs in a transmission occasion. Can be calculated for two aggregated CCs as  $L_{\text{CRB},1} * 12 * \text{SCS}_1 + L_{\text{CRB},2} * 12 * \text{SCS}_2$ .

**Aggregated Channel Bandwidth:** The RF bandwidth in which a UE transmits and receives multiple contiguously aggregated carriers.

**Carrier aggregation:** Aggregation of two or more component carriers in order to support wider transmission bandwidths.

**Carrier aggregation band:** A set of one or more operating bands across which multiple carriers are aggregated with a specific set of technical requirements.

**Carrier aggregation bandwidth class:** A class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by a UE.

**Carrier aggregation configuration:** A combination of CA operating band(s) and CA bandwidth class(es) supported by a UE.

**Concurrent operation:** The simultaneous transmission and reception of sidelink and Uu interfaces while operation is agnostic of the service used on each interface.

**Contiguous carriers:** A set of two or more carriers configured in a spectrum block where there are no RF requirements based on co-existence for un-coordinated operation within the spectrum block.

**Contiguous resource allocation:** A resource allocation of consecutive resource blocks within one carrier or across contiguously aggregated carriers. The gap between contiguously aggregated carriers due to the nominal channel spacing is allowed.

**Contiguous spectrum:** Spectrum consisting of a contiguous block of spectrum with no sub-block gaps.

**Inter-band carrier aggregation:** Carrier aggregation of component carriers in different operating bands.

NOTE: Carriers aggregated in each band can be contiguous or non-contiguous.

**Intra-band contiguous carrier aggregation:** Contiguous carriers aggregated in the same operating band.

**Intra-band non-contiguous carrier aggregation:** Non-contiguous carriers aggregated in the same operating band.

**Railway Mobile Radio:** railway operations encompassing GSM-R and its successor(s), including the Future Railway Mobile Communication System (FRMCS); in the context of this specification the Railway Mobile Radio is limited to NR operation in band n100, or n101.

**RedCap UE:** The UE with reduced capabilities as defined in clause 4.2.21.1 from TS38.306 [15].

**Sub-band:** For a UE that supports shared spectrum channel access in wideband operation, a sub-band is the set of RBs within an approximately 20 MHz segment of the channel where the wideband channel is uniformly divided into an integer number of 20 MHz sub-bands. Sub-bands may be separately allocated in uplink and downlink.

**Sub-block:** This is one contiguous allocated block of spectrum for transmission and reception by the same UE. There may be multiple instances of sub-blocks within an RF bandwidth.

**Sub-block bandwidth:** The bandwidth of one sub-block.

**Sub-block gap:** A frequency gap between two consecutive sub-blocks within an RF bandwidth, where the RF requirements in the gap are based on co-existence for un-coordinated operation.

**UE transmission bandwidth configuration:** Set of resource blocks located within the UE channel bandwidth which may be used for transmitting or receiving by the UE.

**Vehicular UE:** A UE embedded in a vehicle, permanently connected to an embedded antenna system that radiates externally for NR operating bands.

NOTE: Vehicular UE does not refer to other UE form factors placed inside the vehicle.

**Wideband operation:** For a UE that supports shared spectrum channel access, wideband operation refers to operation within a channel larger than 20 MHz in which intra-cell guard bands may be configured to distinguish individual RB-sets

## 3.2 Symbols

For the purposes of the present document, the following symbols apply:

|                                            |                                                                                                                                                                                       |
|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $\Delta F_{\text{Global}}$                 | Granularity of the global frequency raster                                                                                                                                            |
| $\Delta F_{\text{Raster}}$                 | Band dependent channel raster granularity                                                                                                                                             |
| $\Delta f_{\text{OOB}}$                    | $\Delta$ Frequency of Out Of Band emission                                                                                                                                            |
| $\Delta F_{\text{TX-RX}}$                  | Maximum deviation to the Tx-Rx carrier center frequency separation for asymmetric uplink/downlink channel bandwidth operation                                                         |
| $\Delta \text{MPR}_c$                      | Allowed Maximum Power Reduction relaxation for serving cell $c$                                                                                                                       |
| $\Delta P_{\text{PowerClass}}$             | Adjustment to maximum output power for a given power class                                                                                                                            |
| $\Delta_{\text{RB}}$                       | The starting frequency offset between the allocated RB and the measured non-allocated RB                                                                                              |
| $\Delta R_{\text{IB},c}$                   | Allowed reference sensitivity relaxation due to support for inter-band CA operation, for serving cell $c$                                                                             |
| $\Delta R_{\text{IBC}}$                    | Allowed reference sensitivity relaxation due to support for intra-band contiguous CA operation                                                                                        |
| $\Delta R_{\text{IBNC}}$                   | Allowed reference sensitivity relaxation due to support for intra-band non-contiguous CA operation                                                                                    |
| $\Delta R_{\text{IB},4R}$                  | Reference sensitivity adjustment due to support for 4 antenna ports                                                                                                                   |
| $\Delta R_{1R}$                            | Reference sensitivity adjustment due to support for 1 antenna ports                                                                                                                   |
| $\Delta_{\text{Shift}}$                    | Channel raster offset                                                                                                                                                                 |
| $\Delta T_C$                               | Allowed operating band edge transmission power relaxation                                                                                                                             |
| $\Delta T_{C,c}$                           | Allowed operating band edge transmission power relaxation for serving cell $c$                                                                                                        |
| $\Delta T_{\text{IB},c}$                   | Allowed maximum configured output power relaxation due to support for inter-band CA operation, inter-band NR-DC operation and due to support for SUL operations, for serving cell $c$ |
| $BW_{\text{Channel}}$                      | Channel bandwidth                                                                                                                                                                     |
| $BW_{\text{Channel},\text{block}}$         | Sub-block bandwidth, expressed in MHz. $BW_{\text{Channel},\text{block}} = F_{\text{edge},\text{block},\text{high}} - F_{\text{edge},\text{block},\text{low}}$                        |
| $BW_{\text{Channel\_CA}}$                  | Aggregated channel bandwidth, expressed in MHz                                                                                                                                        |
| $BW_{\text{Channel},\text{max}}$           | Maximum channel bandwidth supported among all bands in a release                                                                                                                      |
| $BW_{\text{GB}}$                           | $\max(BW_{\text{GB},\text{Channel}(k)})$                                                                                                                                              |
| $BW_{\text{GB},\text{Channel}(k)}$         | Minimum guard band defined in clause 5.3A.1 of carrier $k$                                                                                                                            |
| $BW_{\text{DL}}$                           | Channel bandwidth for DL                                                                                                                                                              |
| $BW_{\text{UL}}$                           | Channel bandwidth for UL                                                                                                                                                              |
| $BW_{\text{interferer}}$                   | Bandwidth of the interferer                                                                                                                                                           |
| $\text{Ceil}(x)$                           | Rounding upwards; $\text{ceil}(x)$ is the smallest integer such that $\text{ceil}(x) \geq x$                                                                                          |
| $\text{Floor}(x)$                          | Rounding downwards; $\text{floor}(x)$ is the greatest integer such that $\text{floor}(x) \leq x$                                                                                      |
| $F_C$                                      | Center frequency of a carrier for a numerology defined by the <i>RF reference frequency</i> on the channel raster mapped to the carrier according to sub-clause 5.4.2.2               |
| $F_{C,\text{block},\text{high}}$           | $F_C$ of the highest transmitted/received carrier in a <i>sub-block</i>                                                                                                               |
| $F_{C,\text{block},\text{low}}$            | $F_C$ of the lowest transmitted/received carrier in a <i>sub-block</i>                                                                                                                |
| $F_{C,\text{low}}$                         | The $F_C$ of the lowest carrier, expressed in MHz                                                                                                                                     |
| $F_{C,\text{high}}$                        | The $F_C$ of the highest carrier, expressed in MHz                                                                                                                                    |
| $F_{\text{DL},\text{low}}$                 | The lowest frequency of the downlink <i>operating band</i>                                                                                                                            |
| $F_{\text{DL},\text{high}}$                | The highest frequency of the downlink <i>operating band</i>                                                                                                                           |
| $F_{\text{UL},\text{low}}$                 | The lowest frequency of the uplink <i>operating band</i>                                                                                                                              |
| $F_{\text{UL},\text{high}}$                | The highest frequency of the uplink <i>operating band</i>                                                                                                                             |
| $F_{\text{edge},\text{block},\text{low}}$  | The lower <i>sub-block</i> edge, where $F_{\text{edge},\text{block},\text{low}} = F_{C,\text{block},\text{low}} - F_{\text{offset},\text{low}}$ .                                     |
| $F_{\text{edge},\text{block},\text{high}}$ | The upper <i>sub-block</i> edge, where $F_{\text{edge},\text{block},\text{high}} = F_{C,\text{block},\text{high}} + F_{\text{offset},\text{high}}$ .                                  |
| $F_{\text{edge},\text{low}}$               | The <i>lower edge of aggregated channel bandwidth</i> , expressed in MHz. $F_{\text{edge},\text{low}} = F_{C,\text{low}} - F_{\text{offset},\text{low}}$ .                            |
| $F_{\text{edge},\text{high}}$              | The <i>higher edge of aggregated channel bandwidth</i> , expressed in MHz. $F_{\text{edge},\text{high}} = F_{C,\text{high}} + F_{\text{offset},\text{high}}$ .                        |

|                                  |                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $F_{\text{Interferer}}$ (offset) | Frequency offset of the interferer (between the center frequency of the interferer and the carrier frequency of the carrier measured). For intra-band contiguous CA, the $F_{\text{Interferer}}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer |
| $F_{\text{Interferer}}$          | Frequency of the interferer                                                                                                                                                                                                                                                                                                                       |
| $F_{\text{offset}}$              | Frequency offset of the interferer (between the center frequency of the interferer and the closest edge of the carrier measured)                                                                                                                                                                                                                  |
| $F_{\text{offset,high}}$         | Frequency offset from $F_{C,\text{high}}$ to the <i>higher edge</i> or $F_{C,\text{low}}$ to the <i>lower edge</i> .                                                                                                                                                                                                                              |
| $F_{\text{offset,low}}$          | Frequency offset from $F_{C,\text{high}}$ to the upper <i>UE RF Bandwidth edge</i> , or from $F_{C,\text{block, high}}$ to the upper sub-block edge                                                                                                                                                                                               |
|                                  | Frequency offset from $F_{C,\text{low}}$ to the lower <i>UE RF Bandwidth edge</i> , or from $F_{C,\text{block, low}}$ to the lower sub-block edge                                                                                                                                                                                                 |
| $F_{\text{OOB}}$                 | The boundary between the NR out of band emission and spurious emission domains                                                                                                                                                                                                                                                                    |
| $F_{\text{REF}}$                 | RF reference frequency                                                                                                                                                                                                                                                                                                                            |
| $F_{\text{REF-Offs}}$            | Offset used for calculating $F_{\text{REF}}$                                                                                                                                                                                                                                                                                                      |
| $F_{\text{REF, shift}}$          | RF reference frequency for Supplementary Uplink (SUL) bands, the uplink of all FDD bands, and TDD bands                                                                                                                                                                                                                                           |
| $F_{\text{uw}}$ (offset)         | The frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer                                                                                                                                                                                                              |
| $GB_{\text{Channel}}$            | Minimum guard band defined in clause 5.3.3, expressed in kHz                                                                                                                                                                                                                                                                                      |
| $G_{n100\text{post connector}}$  | Declared value of the post chipset unit antenna connector gain for band n100, used for conversion of the radiated requirement into a conducted requirement (see principles described in annex M)                                                                                                                                                  |

| $P\text{-MPR}_c$                 | Power Management Maximum Power Reduction for serving cell c                                                                                                                                                                                                                                                                                       |
| $P_{\text{RB}}$                  | The transmitted power per allocated RB, measured in dBm                                                                                                                                                                                                                                                                                           |
| $P_{\text{UMAX}}$                | The measured configured maximum UE output power                                                                                                                                                                                                                                                                                                   |
| $P_{\text{uw}}$                  | Power of an unwanted DL signal                                                                                                                                                                                                                                                                                                                    |
| $P_{\text{w}}$                   | Power of a wanted DL signal                                                                                                                                                                                                                                                                                                                       |
| $RB_{\text{start}}$              | The lowest RB index of transmitted resource blocks                                                                                                                                                                                                                                                                                                |
| $RB_{\text{start\_CA}}$          | The lowest RB index of transmitted resource blocks for intra-band contiguous CA                                                                                                                                                                                                                                                                   |

|                            |                                                                                                                                       |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| $SCS_c$                    | SCS for the component carrier $c$ , expressed in kHz                                                                                  |
| $SCS_{\text{largest BW}}$  | SCS for the largest transmission bandwidth configuration of the component carriers in the bandwidth combination, expressed in kHz     |
| $SCS_c$                    | SCS for the component carrier $c$ , expressed in kHz                                                                                  |
| $SCS_{\text{largest BW}}$  | SCS for the largest transmission bandwidth configuration of the component carriers in the bandwidth combination, expressed in kHz     |
| $tp$                       | Transient Period value signalled by the UE                                                                                            |
| $tp_{\text{start}}$        | Start position of transient period relative to the symbol boundary                                                                    |
| $T(P_{\text{CMAX}}, f, c)$ | Tolerance for applicable values of $P_{\text{CMAX}}, f, c$ for configured maximum UE output power for carrier $f$ of serving cell $c$ |
| $T_{L,c}$                  | Absolute value of the lower tolerance for the applicable <i>operating band</i> as specified in clause 6.2.1                           |
| $SS_{\text{REF}}$          | SS block reference frequency position                                                                                                 |
| $UTRA_{\text{ACLR}}$       | UTRA ACLR                                                                                                                             |

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

|            |                                                                                                                                                                                             |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACLR       | Adjacent Channel Leakage Ratio                                                                                                                                                              |
| ACS        | Adjacent Channel Selectivity                                                                                                                                                                |
| A-MPR      | Additional Maximum Power Reduction                                                                                                                                                          |
| BS         | Base Station                                                                                                                                                                                |
| BW         | Bandwidth                                                                                                                                                                                   |
| BWP        | Bandwidth Part                                                                                                                                                                              |
| CA         | Carrier Aggregation                                                                                                                                                                         |
| CA_nX-nY   | Inter-band CA of component carrier(s) in one sub-block within Band nX and component carrier(s) in one sub-block within Band nY where nX and nY are the applicable NR <i>operating bands</i> |
| CC         | Component Carriers                                                                                                                                                                          |
| CG         | Carrier Group                                                                                                                                                                               |
| CP-OFDM    | Cyclic Prefix-OFDM                                                                                                                                                                          |
| CW         | Continuous Wave                                                                                                                                                                             |
| DC         | Dual Connectivity                                                                                                                                                                           |
| DFT-s-OFDM | Discrete Fourier Transform-spread-OFDM                                                                                                                                                      |
| DM-RS      | Demodulation Reference Signal                                                                                                                                                               |
| DTX        | Discontinuous Transmission                                                                                                                                                                  |
| E-UTRA     | Evolved UTRA                                                                                                                                                                                |
| EIRP       | Equivalent Isotropically Radiated Power                                                                                                                                                     |
| EVM        | Error Vector Magnitude                                                                                                                                                                      |
| FR         | Frequency Range                                                                                                                                                                             |
| FRMCS      | Future Railway Mobile Communication System                                                                                                                                                  |
| FRC        | Fixed Reference Channel                                                                                                                                                                     |
| FWA        | Fixed Wireless Access                                                                                                                                                                       |
| GSCN       | Global Synchronization Channel Number                                                                                                                                                       |

## 4 General

### 4.1 Relationship between minimum requirements and test requirements

The present document is a Single-RAT specification for NR UE, covering RF characteristics and minimum performance requirements. Conformance to the present specification is demonstrated by fulfilling the test requirements specified in the conformance specification 3GPP TS 38.521-1 [4].

The Minimum Requirements given in this specification make no allowance for measurement uncertainty. The test specification TS 38.521-1 [4] defines test tolerances. These test tolerances are individually calculated for each test. The test tolerances are used to relax the minimum requirements in this specification to create test requirements. For some requirements, including regulatory requirements, the test tolerance is set to zero.

The measurement results returned by the test system are compared - without any modification - against the test requirements as defined by the shared risk principle.

The shared risk principle is defined in Recommendation ITU-R M.1545 [5].

### 4.2 Applicability of minimum requirements

- a) In this specification the Minimum Requirements are specified as general requirements and additional requirements. Where the Requirement is specified as a general requirement, the requirement is mandated to be met in all scenarios
- b) For specific scenarios for which an additional requirement is specified, in addition to meeting the general requirement, the UE is mandated to meet the additional requirements.

- c) The spurious emissions power requirements are for the long-term average of the power. For the purpose of reducing measurement uncertainty it is acceptable to average the measured power over a period of time sufficient to reduce the uncertainty due to the statistical nature of the signal
- d) All the requirements for intra-band contiguous and non-contiguous CA apply under the assumption of the same slot format indicated by *TDD-UL-DL-ConfigurationCommon* and *TDD-UL-DL-ConfigurationDedicated* in the PCell and SCells for NR SA.
- e) The requirements for Tx diversity in this release are applied for UE which indicates IE [*txDiversity-r16*].

### 4.3 Specification suffix information

Unless stated otherwise, the suffixes shown in Table 4.3-1 are used for indicating at 2<sup>nd</sup> level clause. For shared spectrum channel access, suffixes A, B, and D are used for indicating at 3<sup>rd</sup> level clause.

**Table 4.3-1: Definition of suffixes**

| Clause suffix | Variant                               |
|---------------|---------------------------------------|
| None          | Single Carrier                        |
| A             | Carrier Aggregation (CA)              |
| B             | Dual-Connectivity (DC)                |
| C             | Supplementary Uplink (SUL)            |
| D             | UL MIMO                               |
| E             | V2X                                   |
| F             | Shared spectrum channel access        |
| G             | Tx Diversity (TxD)                    |
| H             | Carrier Aggregation (CA) with UL MIMO |
| I             | RedCap                                |

A terminal which supports the above features needs to meet both the general requirements and the additional requirement applicable to the additional clause (suffixes A to I) in clauses 5, 6 and 7. Where there is a difference in requirement between the general requirements and the additional clause requirements (suffixes A to I) in clauses 5, 6 and 7, the tighter requirements are applicable unless stated otherwise in the additional clause.

A terminal which supports advanced V2X services, public safety services and other commercial use cases related to NR sidelink operation shall meet all of the separate corresponding requirements in suffix E.

For a terminal that supports SUL for the band combination specified in Table 5.2C-1, the current version of the specification assumes the terminal is configured with active transmission either on UL carrier or SUL carrier at any time in one serving cell and the UE requirements for single carrier shall apply for the active UL or SUL carrier accordingly.

For a terminal that supports public safety service using sidelink, the minimum requirements are applicable when

- The UE is associated with a serving cell on PS carrier, or
- The UE is not associated with a serving cell on the PS carrier and is provisioned with the preconfigured radio parameters for PS that are associated with known Geographical Area, or
- The UE is associated with a serving cell on a carrier different than the PS carrier, and the radio parameters for PS that are provided by the serving cell, or
- The UE is associated with a serving cell on a carrier different than the PS carrier, and has a non-serving cell selected on the PS carrier with the preconfigured radio parameters.

When the advanced-V2X or PS UE is not associated with a serving cell on the V2X or PS carrier, and the UE does not have knowledge of its geographical area, or is provisioned with preconfigured radio parameters that are not associated with any Geographical Area, V2X or PS UE' transmissions are not allowed, and the requirements in Section 6.3E.2 apply.

For a terminal that supports operation in shared spectrum, the current version of this specification assumes in the uplink sub-bands within a wideband channel shall be contiguously allocated to the UE. The uplink requirements for one or more non-transmitted sub-bands between two transmitted sub-bands does not form a part of the current version of this specification.

Terminal that supports inter-band NR-DC configuration shall meet the minimum requirements for corresponding CA configuration (suffix A), unless otherwise specified.

A terminal which supports intra-band contiguous UL CA with UL MIMO shall meet the separate corresponding requirements in suffix H with all UL CCs with UL MIMO.

## 5 Operating bands and channel arrangement

### 5.1 General

The channel arrangements presented in this clause are based on the operating bands and channel bandwidths defined in the present release of specifications.

NOTE: Other operating bands and channel bandwidths may be considered in future releases.

Requirements throughout the RF specifications are in many cases defined separately for different frequency ranges (FR). The frequency ranges in which NR can operate according to this version of the specification are identified as described in Table 5.1-1. Whenever the FR2 is referred, both FR2-1 and FR2-2 frequency sub-ranges shall be considered, unless otherwise stated.

**Table 5.1-1: Definition of frequency ranges**

| Frequency range designation |       | Corresponding frequency range |
|-----------------------------|-------|-------------------------------|
| FR1                         |       | 410 MHz – 7125 MHz            |
| FR2                         | FR2-1 | 24250 MHz – 52600 MHz         |
|                             | FR2-2 | 52600 MHz – 71000 MHz         |

The present specification covers FR1 operating bands.

### 5.2 Operating bands

NR is designed to operate in the FR1 operating bands defined in Table 5.2-1.

**Table 5.2-1: NR operating bands in FR1**

| NR operating band | Uplink (UL) <i>operating band</i><br>BS receive / UE transmit<br>$F_{UL\_low} - F_{UL\_high}$ | Downlink (DL) <i>operating band</i><br>BS transmit / UE receive<br>$F_{DL\_low} - F_{DL\_high}$ | Duplex Mode |
|-------------------|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|-------------|
| n1                | 1920 MHz – 1980 MHz                                                                           | 2110 MHz – 2170 MHz                                                                             | FDD         |
| n2                | 1850 MHz – 1910 MHz                                                                           | 1930 MHz – 1990 MHz                                                                             | FDD         |
| n3                | 1710 MHz – 1785 MHz                                                                           | 1805 MHz – 1880 MHz                                                                             | FDD         |
| n5                | 824 MHz – 849 MHz                                                                             | 869 MHz – 894 MHz                                                                               | FDD         |
| n7                | 2500 MHz – 2570 MHz                                                                           | 2620 MHz – 2690 MHz                                                                             | FDD         |
| n8                | 880 MHz – 915 MHz                                                                             | 925 MHz – 960 MHz                                                                               | FDD         |
| n12               | 699 MHz – 716 MHz                                                                             | 729 MHz – 746 MHz                                                                               | FDD         |
| n13               | 777 MHz – 787 MHz                                                                             | 746 MHz – 756 MHz                                                                               | FDD         |
| n14               | 788 MHz – 798 MHz                                                                             | 758 MHz – 768 MHz                                                                               | FDD         |

| <p>NOTE 9: Variable duplex operation does not enable dynamic variable duplex configuration by the network, and is used such that DL and UL frequency ranges are supported independently in any valid frequency range for the band.</p> <p>NOTE 10: When this band is used for V2X SL service, the band is exclusively used for NR V2X in particular regions.</p> <p>NOTE 11: This band is unlicensed band used for V2X service. There is no expected network deployment in this band.</p> <p>NOTE 12: In the USA this band is restricted to 3450 – 3550 MHz and 3700 – 3980 MHz. In Canada this band is restricted to 3450 – 3650 MHz and 3650 – 3980 MHz.</p> <p>NOTE 13: This band is restricted to operation with shared spectrum channel access as defined in TS 37.213 [14].</p> <p>NOTE 14: This band is applicable only in countries/regions designating this band for shared-spectrum access use subject to country-specific conditions.</p> <p>NOTE 15: The requirements for this band are applicable only where no other NR or E-UTRA TDD operating band(s) are used within the frequency range of this band in the same geographical area. For scenarios where other NR or E-UTRA TDD operating band(s) are used within the frequency range of this band in the same geographical area, special co-existence requirements may apply that are not covered by the 3GPP specifications.</p> <p>NOTE 16: DL operation in this band is restricted to 1526 – 1536 MHz and UL operation is restricted to 1627.5 – 1637.5 MHz and 1646.5 – 1656.5 MHz.</p> <p>NOTE 17: For this band, CORESET#0 values from Table 13-5 or Table 13-6 in [8, TS 38.213] are applied regardless of the minimum channel bandwidth.</p> <p>NOTE 18: This band is applicable only in countries/regions designating this band for IMT licensed operation subject to country-specific conditions.</p> <p>NOTE 19: For SDL bands, downlink configuration for RRM performance testing is same as FDD.</p> <p>NOTE 20: This band is applicable only in countries subject to ECC Decision (20)02 [16], for the FRMCS application.</p> <p>NOTE 21: UL operation in this band is restricted to 1627.5 – 1637.5 MHz and 1646.5 – 1656.5 MHz.</p> |                                                                                               |                                                                                                 |             |

## 5.2A Operating bands for CA

### 5.2A.0 General

CA operating bands including Band n90 are defined by the corresponding CA operating bands including Band n41 with Band n90 replacing Band n41. For brevity the said CA operating bands including Band n90 are not listed in the tables below but are covered by this specification.

### 5.2A.1 Intra-band CA

NR intra-band carrier aggregation is designed to operate in the operating bands defined in Table 5.2A.1-1 and Table 5.2A.1-2, where all operating bands are within FR1.

**Table 5.2A.1-1: Intra-band contiguous CA operating bands in FR1**

| NR CA Band | NR Band<br>(Table 5.2-1) |
|------------|--------------------------|
| CA_n1      | n1                       |
| CA_n2      | n2                       |
| CA_n3      | n3                       |
| CA_n5      | n5                       |
| CA_n7      | n7                       |
| CA_n25     | n25                      |
| CA_n38     | n38                      |
| CA_n40     | n40                      |
| CA_n41     | n41                      |
| CA_n46     | n46                      |

|                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------|-----|
| CA_n48                                                                                                            | n48 |
| CA_n66                                                                                                            | n66 |
| CA_n71                                                                                                            | n71 |
| CA_n77                                                                                                            | n77 |
| CA_n78                                                                                                            | n78 |
| CA_n79                                                                                                            | n79 |
| CA_n96                                                                                                            | n96 |
| NOTE 1: The minimum requirements only apply for non simultaneous Tx/Rx between all carriers for TDD combinations. |     |

**Table 5.2A.1-2: Intra-band non-contiguous CA operating bands in FR1**

| NR CA Band                                                                                                                                      | NR Band<br>(Table 5.2-1) |

| CA_n7(*)                                                                                                                                        | n7                       |
| CA_n12(*)                                                                                                                                       | n12                      |
| CA_n25(*)                                                                                                                                       | n25                      |
| CA_n41(*)                                                                                                                                       | n41                      |
| CA_n48(*)                                                                                                                                       | n48                      |
| CA_n66(*)                                                                                                                                       | n66                      |
| CA_n71(*)                                                                                                                                       | n71                      |
| CA_n77(*)                                                                                                                                       | n77                      |
| CA_n78(*)                                                                                                                                       | n78                      |
| CA_n96(*)                                                                                                                                       | n96                      |
| NOTE 1: The minimum requirements only apply for non simultaneous Tx/Rx between all carriers for TDD combinations.                               |                          |
| NOTE 2: The notation CA_nX(*) in this table indicates intra-band non-contiguous CA for band nX. The configurations for each band are in 5.5A.2. |                          |

## 5.2A.2 Inter-band CA

NR inter-band carrier aggregation is designed to operate in the operating bands defined in Table 5.2A.2.1-1, Table 5.2A.2.2-1, Table 5.2A.2.3-1 and Table 5.2A.2.4-1, where all operating bands are within FR1.

If the mandatory simultaneous Rx/Tx capability applies for a lower order band combination, when the applicable lower order band combination is a band pair in a higher order band combination, the mandatory simultaneous Rx/Tx capability also applies for the band pair in the higher order band combination.

| CA n78-n92                                                                                                                                                                                                                                                                                                                                             | n78, n92                 |                                     |
| NOTE 1: Applicable for UE supporting inter-band carrier aggregation with mandatory simultaneous Rx/Tx capability.<br>NOTE 2: The frequency range in band n28 is restricted for this band combination to 703-733 MHz for the UL and 758-788 MHz for the DL.<br>NOTE 3: The frequency range below 2506 MHz for Band n41 is not used in this combination. |                          |                                     |

| NR CA Band                                                                                                                                                                                                                                                                                                            | NR Band<br>(Table 5.2-1) | DL interruption allowed<br>(Note 8) |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------------------------|
| NOTE 4: Applicable for frequency range above 4800 MHz for Band n79 in this combination.                                                                                                                                                                                                                               |                          |                                     |
| NOTE 5: For UEs supporting band n77, the minimum requirements apply only when there is non-simultaneous Rx/Tx operation between n78-n79 NR carriers. This restriction applies also for these carriers when applicable NR CA configuration is part of a higher order configuration.                                    |                          |                                     |
| NOTE 6: The PCell is allocated in the licensed band in this combination.                                                                                                                                                                                                                                              |                          |                                     |
| NOTE 7: The minimum requirements apply only when there is non-simultaneous Rx/Tx operation between n77-n78 or n77-n79 NR carriers. This restriction applies also for these carriers when applicable NR CA configuration is part of a higher order configuration.                                                      |                          |                                     |
| NOTE 8: Applicable when dynamic Tx switching is conducted. The DL interruption requirement is specified in clause 8.2.2.2.10 of 38.133 [13].                                                                                                                                                                          |                          |                                     |
| NOTE 9: Only applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx. Same restrictions are applied when applicable NR CA configuration is part of a higher order configurations.                                                                                                      |                          |                                     |
| NOTE 10: The frequency range in band n77 is restricted for this band combination to 3520-3560 MHz, 3700-3800 MHz, 4000-4100 MHz.                                                                                                                                                                                      |                          |                                     |
| NOTE 11: The frequency range in band n78 is restricted for this band combination to 3520-3560 MHz and 3700- 3800 MHz.                                                                                                                                                                                                 |                          |                                     |
| NOTE 12: The implementation with 4 antennas is targeted for FWA form factor for this band combination.                                                                                                                                                                                                                |                          |                                     |
| NOTE 13: Simultaneous Rx/Tx capability for TDD combinations does not apply for UEs supporting band n48 with an n77 implementation. Same restrictions are applied when applicable NR CA configuration is part of a higher order configurations.                                                                        |                          |                                     |
| NOTE 14: The band n48 and n77 will synchronize their uplink and downlink configurations and in commonly TDD network coordination                                                                                                                                                                                      |                          |                                     |
| NOTE 15: Simultaneous Rx/Tx capability does not apply for UEs supporting CA_n46-n96. Same restrictions are applied when applicable NR CA configuration is part of a higher order configurations                                                                                                                       |                          |                                     |
| NOTE 16: The minimum requirements for intra-band non-contiguous CA/DC apply for CA_n46-n96 and related higher order CA/DC configurations.                                                                                                                                                                             |                          |                                     |
| NOTE 17: The combination is not used alone as fall back mode of other band combinations in which UL in Band 48 is not used.                                                                                                                                                                                           |                          |                                     |
| NOTE 18: The minimum requirements for inter-band CA apply when the maximum power spectral density imbalance between downlink carriers is within 6 dB. The power spectral density imbalance condition also applies for these carriers when applicable CA configuration is a subset of a higher order CA configuration. |                          |                                     |

### 5.2A.2.2 Inter-band CA (three bands)

**Table 5.2A.2.2-1: Inter-band CA operating bands involving FR1 (three bands)**

| NR CA Band                | NR Band<br>(Table 5.2-1) | DL interruption allowed<br>(Note 4) |
|---------------------------|--------------------------|-------------------------------------|
| CA_n1-n3-n5               | n1, n3, n5               |                                     |

| CA_n1-n3-n7-n28-n78 | n1, n3, n7, n28, n78     |

## 5.2B Operating bands for DC

The operating bands are specified in clause 5.5B for operation with NR dual connectivity configured, where all operating bands are within FR1.

If the mandatory simultaneous Rx/Tx capability applies for a band combination, the mandatory simultaneous Rx/Tx capability also applies for the band combination when the applicable band combination is a subset of a higher order band combination.

## 5.2C Operating band combination for SUL

NR operation is designed to operate in the operating band combination defined in Table 5.2C-1, Table 5.2C-2, Table 5.2C-3 and Table 5.2C-4, where all operating bands are within FR1.

If the mandatory simultaneous Rx/Tx capability applies for a band combination, when the applicable lower order band combination is a band pair in a higher order band combination, the mandatory simultaneous Rx/Tx capability also applies for the band pair in the higher order band combination.

| n40               |
| n41               |
| n46               |
| n48               |
| n66               |
| n70               |
| n71 <sup>2</sup>  |
| n77               |
| n78               |
| n79               |
| n80               |
| n84               |
| n95               |
| n96               |
| n97               |
| n98               |
| n99               |
| n102              |

NOTE 1: Uplink transmission is not allowed at this band for UE with external vehicle-mounted antennas.  
NOTE 2: UL MIMO is targeted for FWA form factor.

## 5.2E Operating band for V2X

### 5.2E.1 V2X operating bands

NR V2X is designed to operate in the operating bands in FR1 defined in Table 5.2E.1-1.

**Table 5.2E.1-1 V2X operating bands in FR1**

| V2X Operating Band                                                                                                                               | Sidelink (SL) Transmission operating band  | Sidelink (SL) Reception operating band     | Duplex Mode | Interface |
|--------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|--------------------------------------------|-------------|-----------|
|                                                                                                                                                  | F <sub>UL_low</sub> – F <sub>UL_high</sub> | F <sub>DL_low</sub> – F <sub>DL_high</sub> |             |           |
| n14 <sup>2</sup>                                                                                                                                 | 788 MHz – 798 MHz                          | 788 MHz – 798 MHz                          | HD          | PC5       |
| n38 <sup>1</sup>                                                                                                                                 | 2570 MHz – 2620 MHz                        | 2570 MHz – 2620 MHz                        | HD          | PC5       |
| n47                                                                                                                                              | 5855 MHz – 5925 MHz                        | 5855 MHz – 5925 MHz                        | HD          | PC5       |
| n79                                                                                                                                              | 4400 MHz – 5000 MHz                        | 4400 MHz – 5000 MHz                        | HD          | PC5       |
| Note 1: When this band is used for V2X SL service, the band is exclusively used for NR V2X in particular regions.                                |                                            |                                            |             |           |
| Note 2: When this band is used for public safety service, the NR band is operated with both in-coverage scenarios and out-of-coverage scenarios. |                                            |                                            |             |           |

### 5.2E.2 V2X operating bands for concurrent operation

NR V2X operation is designed to operate concurrent with NR uplink/downlink on the operating bands combinations listed in Table 5.2E.2-1 and Table 5.2E.2-2.

**Table 5.2E.2-1 Inter-band concurrent V2X operating bands**

| V2X concurrent operating Band | NR or V2X Operating Band | Interface |
|-------------------------------|--------------------------|-----------|
| V2X_n1-n47                    | n1                       | Uu        |

## 5.3 UE channel bandwidth

### 5.3.1 General

The UE channel bandwidth supports a single NR RF carrier in the uplink or downlink at the UE. From a BS perspective, different UE channel bandwidths may be supported within the same spectrum for transmitting to and receiving from UEs connected to the BS. Transmission of multiple carriers to the same UE (CA) or multiple carriers to different UEs within the BS channel bandwidth can be supported.

From a UE perspective, the UE is configured with one or more BWP / carriers, each with its own UE channel bandwidth. The UE does not need to be aware of the BS channel bandwidth or how the BS allocates bandwidth to different UEs.

The placement of the UE channel bandwidth for each UE carrier is flexible but can only be completely within the BS channel bandwidth.

The relationship between the channel bandwidth, the guardband and the maximum transmission bandwidth configuration is shown in Figure 5.3.1-1.

**Figure 5.3.1-1: Definition of the channel bandwidth and the maximum transmission bandwidth configuration for one NR channel**

5.3.2 Maximum transmission bandwidth configuration

The maximum transmission bandwidth configuration N<sub>RB</sub> for each UE channel bandwidth and subcarrier spacing is specified in Table 5.3.2-1.

Table 5.3.2-1: Maximum transmission bandwidth configuration N<sub>RB</sub>

| SCS<br>(kHz) | 5<br>MHz        | 10<br>MHz       | 15<br>MHz       | 20<br>MHz       | 25<br>MHz       | 30<br>MHz       | 35<br>MHz       | 40<br>MHz       | 45<br>MHz       | 50<br>MHz       | 60<br>MHz       | 70<br>MHz       | 80<br>MHz       | 90<br>MHz       | 100<br>MHz      |
|--------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
|              | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> | N <sub>RB</sub> |
| 15           | 25              | 52              | 79              | 106             | 133             | 160             | 188             | 216             | 242             | 270             | N/A             | N/A             | N/A             | N/A             | N/A             |
| 30           | 11              | 24              | 38              | 51              | 65              | 78              | 92              | 106             | 119             | 133             | 162             | 189             | 217             | 245             | 273             |
| 60           | N/A             | 11              | 18              | 24              | 31              | 38              | 44              | 51              | 58              | 65              | 79              | 93              | 107             | 121             | 135             |

5.3.3 Minimum guardband and transmission bandwidth configuration

The minimum guardband for each UE channel bandwidth and SCS is specified in Table 5.3.3-1,

Table 5.3.3-1: Minimum guardband for each UE channel bandwidth and SCS (kHz)

| SCS<br>(kHz) | 5<br>MHz | 10<br>MHz | 15<br>MHz | 20<br>MHz | 25<br>MHz | 30<br>MHz | 35<br>MHz | 40<br>MHz | 45<br>MHz | 50<br>MHz | 60<br>MHz | 70<br>MHz | 80<br>MHz | 90<br>MHz | 100<br>MHz |
|--------------|----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|------------|
| 15           | 242.5    | 312.5     | 382.5     | 452.5     | 522.5     | 592.5     | 572.5     | 552.5     | 712.5     | 692.5     | N/A       | N/A       | N/A       | N/A       | N/A        |
| 30           | 505      | 665       | 645       | 805       | 785       | 945       | 925       | 905       | 1065      | 1045      | 825       | 965       | 925       | 885       | 845        |
| 60           | N/A      | 1010      | 990       | 1330      | 1310      | 1290      | 1630      | 1610      | 1590      | 1570      | 1530      | 1490      | 1450      | 1410      | 1370       |

NOTE: The minimum guardbands have been calculated using the following equation:  $GB_{channel} = (BW_{Channel} \times 1000 \text{ (kHz)} - N_{RB} \times SCS \times 12) / 2 - SCS/2$ , where N<sub>RB</sub> are from Table 5.3.2-1 and GB<sub>channel</sub> expressed in kHz.

Figure 5.3.3-1: Void

The number of RBs configured in any channel bandwidth shall ensure that the minimum guardband specified in this clause is met.

**Figure 5.3.3-2: UE PRB utilization**

In the case that multiple numerologies are multiplexed in the same symbol due to BS transmission of SSB, the minimum guardband on each side of the carrier is the guardband applied at the configured channel bandwidth for the numerology that is received immediately adjacent to the guard.

If multiple numerologies are multiplexed in the same symbol and the UE channel bandwidth is >50 MHz, the minimum guardband applied adjacent to 15 kHz SCS shall be the same as the minimum guardband defined for 30 kHz SCS for the same UE channel bandwidth.

**Figure 5.3.3-3 Guard band definition when transmitting multiple numerologies**

NOTE: Figure 5.3.3-3 is not intended to imply the size of any guard between the two numerologies. Inter-numerology guard band within the carrier is implementation dependent.

For a UE supporting wideband operation, the nominal intra-cell guard bands and the corresponding sizes of the RB sets separated by the said guard bands are as specified in Table 5.3.3-2 for each UE channel bandwidth and sub-carrier spacing for the downlink and uplink. The nominal intra-cell guard bands in Table 5.3.3-2 are applicable when the respective IE *intraCellGuardBandsUL-List* and *intraCellGuardBandsDL-List* [7] for the uplink and downlink are not provided, as specified in [10] clause 7.

**Table 5.3.3-2: Nominal intra-cell guard bands for wideband operation**

| SCS (kHz) | 40 MHz    | 60 MHz | 80 MHz | 100 MHz |
|-----------|-----------|--------|--------|---------|
| 15        | 105-6-105 | N/A    | N/A    | N/A     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                  |                       |                            |                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|-----------------------|----------------------------|---------------------------------|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | (216)            |                       |                            |                                 |
| 30                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 50-6-50<br>(106) | 50-6-50-6-50<br>(162) | 50-6-50-5-50-6-50<br>(217) | 50-6-50-6-49-6-50-6-50<br>(273) |
| 60                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 23-5-23<br>(51)  | 23-5-23-5-23<br>(79)  | 23-5-23-5-23-5-23<br>(107) | 23-5-23-5-23-5-23-5-23<br>(135) |
| NOTE 1: The intra-cell guard band is denoted $TBW_0-GB_0-...-GB_{N\_RBset-2}-TBW_{N\_RBset-1}$ for $N\_RBset > 1$ number of RB-sets with $TBW_r$ the maximum transmission bandwidth (PRB) of RB-set $r$ and $GB_r$ the guard band (PRB) above the upper edge of RB-set $r$ . The RB-set 0 is starting at the first common resource block (CRB) of the carrier as indicated by <i>offsetToCarrier</i> . The total transmission bandwidth configuration (size of resource grid) including guard bands is given in between parentheses. |                  |                       |                            |                                 |

For a UE that supports shared spectrum channel access, there are no uplink or downlink intra-cell guard bands for operation with 10 MHz and 20 MHz channel bandwidths; the maximum transmission bandwidth configurations for these channel bandwidths are in accordance with clause 5.3.2.

For each UE channel bandwidth and sub-carrier spacing given by Table 5.3.3-2, the maximum transmission bandwidth configuration of the carrier including intra-cell guard bands, if configured for the uplink and downlink by the respective IE *intraCellGuardBandsUL-List* and *intraCellGuardBandsDL-List* [7], and corresponding RB-set(s) shall be in accordance with clause 5.3.2 with a minimum inter-cell guard band of the UE channel bandwidth as specified in Table 5.3.3-1 for the uplink and downlink. Minimum requirements specified for wideband operation in Clause 6 and Clause 7 also apply for intra-cell guard bands larger than the nominal sizes in Table 5.3.3-2 as listed in Table 5.3.3-3 for each sub-carrier spacing; each guard band in order of CRB index must be larger than or equal to the corresponding nominal guard band specified in Table 5.3.3-2 for each channel bandwidth.

**Table 5.3.3-3: Applicable intra-cell guard bands for wideband operation**

| Parameter                               | Unit | SCS     |          |
|-----------------------------------------|------|---------|----------|
|                                         |      | 15 kHz  | 30 kHz   |
| Intra-cell guard band (size)            | PRB  | 6,7     | 5,6,7    |
| Transmission bandwidth (size) of RB-set | PRB  | 104,105 | 49,50,51 |

If the UE is configured with zero width intra-cell guard bands for the uplink and downlink by the IE *intraCellGuardBandsUL-List* and *intraCellGuardBandsDL-List* [7] on a carrier greater than 20 MHz, the maximum transmission bandwidth configuration for the uplink and downlink shall be in accordance with clause 5.3.2 with a minimum inter-cell guard band of the UE channel bandwidth as specified in Table 5.3.3-1.

### 5.3.4 RB alignment

For each numerology, its common resource blocks are specified in Clause 4.4.4.3 in TS 38.211 [6], and the starting point of its transmission bandwidth configuration on the common resource block grid for a given channel bandwidth is indicated by an offset to "Reference point A" in the unit of the numerology. The *UE transmission bandwidth configuration* is indicated by the higher layer parameter *carrierBandwidth* [7] and will fulfil the minimum UE guardband requirement specified in Clause 5.3.3.

### 5.3.5 UE channel bandwidth per operating band

The requirements in this specification apply to the combination of channel bandwidths, SCS and operating bands shown in Table 5.3.5-1. The transmission bandwidth configuration in Table 5.3.2-1 shall be supported for each of the specified channel bandwidths. The channel bandwidths are specified for both the TX and RX path.

**Table 5.3.5-1: Channel bandwidths for each NR band**

| NR Band | SCS (kHz) | UE Channel bandwidth (MHz) |    |    |    |    |    |                 |    |                 |    |    |    |    |    |     |
|---------|-----------|----------------------------|----|----|----|----|----|-----------------|----|-----------------|----|----|----|----|----|-----|
|         |           | 5                          | 10 | 15 | 20 | 25 | 30 | 35              | 40 | 45              | 50 | 60 | 70 | 80 | 90 | 100 |
| n1      | 15        | 5                          | 10 | 15 | 20 | 25 | 30 |                 | 40 | 45 <sup>4</sup> | 50 |    |    |    |    |     |
|         | 30        |                            | 10 | 15 | 20 | 25 | 30 |                 | 40 | 45 <sup>4</sup> | 50 |    |    |    |    |     |
|         | 60        |                            | 10 | 15 | 20 | 25 | 30 |                 | 40 | 45 <sup>4</sup> | 50 |    |    |    |    |     |
| n2      | 15        | 5                          | 10 | 15 | 20 | 25 | 30 | 35 <sup>4</sup> | 40 |                 |    |    |    |    |    |     |
|         | 30        |                            | 10 | 15 | 20 | 25 | 30 | 35 <sup>4</sup> | 40 |                 |    |    |    |    |    |     |

| NR Band           | SCS (kHz) | UE Channel bandwidth (MHz) |                 |    |                 |                 |                 |                   |    |                   |    |    |    |    |    |                  |

| n104    | 15        |                            |                 |    | 20 |                 | 30 |                 | 40 |                 | 50 |    |    |    |    |                  |
|         | 30        |                            |                 |    | 20 |                 | 30 |                 | 40 |                 | 50 | 60 | 70 | 80 | 90 | 100              |
|         | 60        |                            |                 |    | 20 |                 | 30 |                 | 40 |                 | 50 | 60 | 70 | 80 | 90 | 100              |

NOTE 1: Void.

NOTE 2: Void.

NOTE 3: This UE channel bandwidth is applicable only to downlink.

NOTE 4: This UE channel bandwidth is optional in this release of the specification.

NOTE 5: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as an SCell part of DC or CA configuration.

NOTE 6: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as a downlink SCell part of CA configuration.

NOTE 7: For UEs supporting up to 30 MHz channel bandwidth, the minimum requirements are specified for any NR UL channel bandwidth confined to 703-733 MHz or 718-748 MHz

NOTE 8: This UE channel bandwidth is applicable only to uplink.

NOTE 9: Void.

NOTE 10: For this band, UE channel bandwidths which are applicable to sidelink operation are specified in Table 5.3E.1-1.

| NR Band | SCS (kHz) | UE Channel bandwidth (MHz) |    |    |    |    |    |    |    |    |    |    |    |    |    |     |
|---------|-----------|----------------------------|----|----|----|----|----|----|----|----|----|----|----|----|----|-----|
|         |           | 5                          | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 | 60 | 70 | 80 | 90 | 100 |

NOTE 11: Not all frequency positions of 5 MHz carriers are possible due limitations of the SSB position relative to the 5 MHz channels. 5 MHz channels with  $F_c$  such that  $2499+N*1.2 \leq F_c < 2499.3+N*1.2$  MHz for  $0 \leq N < 157$  are not compatible with SSB positions and cannot be used for 5 MHz n41.

### 5.3.6 Asymmetric channel bandwidths

The UE channel bandwidth can be asymmetric in downlink and uplink. In asymmetric channel bandwidth operation, the narrower carrier shall be confined within the frequency range of the wider channel bandwidth.

In FDD, the confinement is defined as a maximum deviation to the Tx-Rx carrier center frequency separation (defined in Table 5.4.4-1) as following:

$$\Delta F_{\text{TX-RX}} = |(BW_{\text{DL}} - BW_{\text{UL}})/2|$$

The operating bands and supported asymmetric channel bandwidth combinations are defined in Table 5.3.6-1.

**Table 5.3.6-1: FDD asymmetric UL and DL channel bandwidth combinations**

| NR Band          | Channel bandwidths for UL (MHz) | Channel bandwidths for DL (MHz) | Asymmetric channel bandwidth combination set |
|------------------|---------------------------------|---------------------------------|----------------------------------------------|
| n5               | 20                              | 25                              | 0                                            |
| n8               | 20                              | 35                              | 0                                            |
| n24              | 10                              | 5                               | 0                                            |
| n25              | 40                              | 45                              | 0                                            |
| n26              | 20                              | 25, 30                          | 0                                            |
| n66              | 5, 10                           | 20, 40                          | 0                                            |
|                  | 20                              | 40                              |                                              |
|                  | 5, 10                           | 20, 25, 30, 40                  | 1                                            |
|                  | 20, 25, 30                      | 40                              |                                              |
| n70              | 5, 10                           | 15                              | 0                                            |
|                  | 5, 10, 15                       | 20, 25                          |                                              |
| n71              | 5                               | 10                              | 0                                            |
|                  | 10                              | 15                              |                                              |
|                  | 15                              | 20                              |                                              |
|                  | 5                               | 10                              | 1                                            |
|                  | 10                              | 15                              |                                              |
|                  | 15                              | 20                              |                                              |
|                  | 20                              | 35                              |                                              |
|                  | 20                              | 25, 30, 35                      | 2                                            |
| n91 <sup>1</sup> | 10                              | 5                               | 0                                            |
| n92 <sup>1</sup> | 5                               | 10, 15, 20                      | 0                                            |
|                  | 10                              | 15, 20                          |                                              |
| n93 <sup>1</sup> | 10                              | 5                               | 0                                            |
| n94 <sup>1</sup> | 5                               | 10, 15, 20                      | 0                                            |
|                  | 10                              | 15, 20                          |                                              |

NOTE 1: The assignment of the paired UL and DL channels are subject to a TX-RX separation as specified in clause 5.4.4.

NOTE 2: As indicated in TS38.306 [15], it is mandatory for UEs to support asymmetric channel BCS0 if there is an asymmetric BCS0 defined for the band.

In TDD, the operating bands and supported asymmetric channel bandwidth combinations are defined in Table 5.3.6-2.

**Table 5.3.6-2: TDD asymmetric UL and DL channel bandwidth combinations**

| NR Band | Channel bandwidths for UL (MHz) | Channel bandwidths for DL (MHz) | Asymmetric channel bandwidth combination set |
|---------|---------------------------------|---------------------------------|----------------------------------------------|
| n50     | 60                              | 80                              | 0                                            |

- NOTE 1: Both centre frequency and BWP-ID shall match between DL and UL carriers as defined in TS 38.331 [7] cl. 6.3.2 and TS 38.213 [8] clause 12.
- NOTE 2: In a case a UE is configured with a full width of BWP within both UL/ DL channels, the centre frequency of UL/ DL channels shall be same.
- NOTE 3: A position of Point A is common between UL and DL carriers as defined in TS 38.331 [7] cl. 6.3.2.

## 5.3A UE channel bandwidth for CA

### 5.3A.1 General

Figure 5.3A.1-1: Void

Figure 5.3A.1-2: Void

### 5.3A.2 Maximum transmission bandwidth configuration for CA

For carrier aggregation, the maximum transmission bandwidth configuration is defined per component carrier and the requirement is specified in clause 5.3.2.

### 5.3A.3 Minimum guardband and transmission bandwidth configuration for CA

For intra-band contiguous carrier aggregation, *Aggregated Channel Bandwidth* and *Guard Bands* are defined as follows, see Figure 5.3A.3-1.

Figure 5.3A.3-1: Definition of *Aggregated Channel Bandwidth* for intra-band carrier aggregation

The *aggregated channel bandwidth*,  $BW_{\text{Channel\_CA}}$ , is defined as

$$BW_{\text{Channel\_CA}} = F_{\text{edge,high}} - F_{\text{edge,low}} \text{ (MHz)}.$$

The lower bandwidth edge  $F_{\text{edge,low}}$  and the upper bandwidth edge  $F_{\text{edge,high}}$  of the aggregated channel bandwidth are used as frequency reference points for transmitter and receiver requirements and are defined by

$$F_{\text{edge,low}} = F_{\text{C,low}} - F_{\text{offset,low}}$$

$$F_{\text{edge,high}} = F_{\text{C,high}} + F_{\text{offset,high}}$$

The lower and upper frequency offsets depend on the transmission bandwidth configurations of the lowest and highest assigned edge component carrier and are defined as

$$F_{\text{offset,low}} = (N_{\text{RB,low}} * 12 + 1) * \text{SCS}_{\text{low}} / 2 + \text{BW}_{\text{GB}} \text{ (MHz)}$$

$$F_{\text{offset,high}} = (N_{\text{RB,high}} * 12 - 1) * \text{SCS}_{\text{high}} / 2 + \text{BW}_{\text{GB}} \text{ (MHz)}$$

$$\text{BW}_{\text{GB}} = \max(\text{BW}_{\text{GB,Channel}(k)})$$

$N_{\text{RB,low}}$  and  $N_{\text{RB,high}}$  are the transmission bandwidth configurations according to Table 5.3.2-1 for the lowest and highest assigned component carrier,  $\text{SCS}_{\text{low}}$  and  $\text{SCS}_{\text{high}}$  are the sub-carrier spacing for the lowest and highest assigned component carrier respectively.  $\text{SCS}_{\text{low}}$ ,  $\text{SCS}_{\text{high}}$ ,  $N_{\text{RB,low}}$ ,  $N_{\text{RB,high}}$ , and  $\text{BW}_{\text{GB,Channel}(k)}$  use the largest  $\mu$  value among the subcarrier spacing configurations supported in the operating band for both of the channel bandwidths according to Table 5.3.5-1 and  $\text{BW}_{\text{GB,Channel}(k)}$  is the minimum guard band for carrier  $k$  according to Table 5.3.3-1 for the said  $\mu$  value.

In case there is no common  $\mu$  value for both of the channel bandwidths,  $\mu=1$  is used for  $\text{SCS}_{\text{low}}$ ,  $\text{SCS}_{\text{high}}$ ,  $N_{\text{RB,low}}$ ,  $N_{\text{RB,high}}$ , and  $\text{BW}_{\text{GB,Channel}(k)}$ .

For intra-band non-contiguous carrier aggregation *Sub-block Bandwidth* and *Sub-block edges* are defined as follows, see Figure 5.3A.3-2.

**Figure 5.3A.3-2: Definition of sub-block bandwidth for intra-band non-contiguous spectrum**

The lower sub-block edge of the Sub-block Bandwidth ( $\text{BW}_{\text{Channel,block}}$ ) is defined as

$$F_{\text{edge,block,low}} = F_{\text{C,block,low}} - F_{\text{offset,low}}$$

The upper sub-block edge of the Sub-block Bandwidth is defined as

$$F_{\text{edge,block,high}} = F_{\text{C,block,high}} + F_{\text{offset,high}}$$

The Sub-block Bandwidth,  $\text{BW}_{\text{Channel,block}}$ , is defined as follows:

$$\text{BW}_{\text{Channel,block}} = F_{\text{edge,block,high}} - F_{\text{edge,block,low}} \text{ (MHz)}$$

The lower and upper frequency offsets  $F_{\text{offset,block,low}}$  and  $F_{\text{offset,block,high}}$  depend on the transmission bandwidth configurations of the lowest and highest assigned edge component carriers within a sub-block and are defined as

$$F_{\text{offset,block,low}} = (N_{\text{RB,low}} * 12 + 1) * \text{SCS}_{\text{low}} / 2 + \text{BW}_{\text{GB}} \text{ (MHz)}$$

$$F_{\text{offset,block,high}} = (N_{\text{RB,high}} * 12 - 1) * \text{SCS}_{\text{high}} / 2 + \text{BW}_{\text{GB}} \text{ (MHz)}$$

$$\text{BW}_{\text{GB}} = \max(\text{BW}_{\text{GB,Channel}(k)})$$

where  $N_{\text{RB,low}}$  and  $N_{\text{RB,high}}$  are the transmission bandwidth configurations according to Table 5.3.2-1 for the lowest and highest assigned component carrier within a sub-block, respectively.  $\text{SCS}_{\text{low}}$  and  $\text{SCS}_{\text{high}}$  are the sub-carrier spacing for the lowest and highest assigned component carrier within a sub-block, respectively.  $\text{SCS}_{\text{low}}$ ,  $\text{SCS}_{\text{high}}$ ,  $N_{\text{RB,low}}$ ,  $N_{\text{RB,high}}$ ,

and  $BW_{GB,Channel(k)}$  use the largest  $\mu$  value among the subcarrier spacing configurations supported in the operating band for both of the channel bandwidths according to Table 5.3.5-1 and  $BW_{GB,Channel(k)}$  is the minimum guard band for carrier  $k$  according to Table 5.3.3-1 for the said  $\mu$  value. In case there is no common  $\mu$  value for both of the channel bandwidths,  $\mu=1$  is used for  $SCS_{low}$ ,  $SCS_{high}$ ,  $N_{RB,low}$ ,  $N_{RB,high}$ , and  $BW_{GB,Channel(k)}$ .

The sub-block gap size between two consecutive sub-blocks  $W_{gap}$  is defined as

$$W_{gap} = F_{edge,block\ n+1,low} - F_{edge,block\ n,high} \text{ (MHz)}$$

### 5.3A.4 Void

### 5.3A.5 UE channel bandwidth per operating band for CA

The requirements for carrier aggregation in this specification are defined for carrier aggregation configurations.

For intra-band contiguous carrier aggregation, a carrier aggregation configuration is a single operating band supporting a carrier aggregation bandwidth class with associated bandwidth combination sets specified in clause 5.5A.1. For each carrier aggregation configuration, requirements are specified for all aggregated channel bandwidths contained in a bandwidth combination set, a UE can indicate support of several bandwidth combination sets per carrier aggregation configuration. For intra-band non-contiguous carrier aggregation, a carrier aggregation configuration is a single operating band supporting two or more sub-blocks, each supporting a carrier aggregation bandwidth class.

For intra-band non-contiguous uplink carrier aggregation, frequency separation class ( $F_s$ ) specified in Table 5.3A.5-2 indicates the maximum frequency span between lower edge of lowest component carrier and upper edge of highest component carrier that UE can support per band combination in uplink in non-contiguous intra-band operation when the signalling is absent for dualPA-Architecture IE.

For inter-band carrier aggregation, a carrier aggregation configuration is a combination of operating bands, each supporting a carrier aggregation bandwidth class.

**Table 5.3A.5-1: NR CA bandwidth classes**

| NR CA bandwidth class | Aggregated channel bandwidth                                        | Number of contiguous CC | Fallback group       |
|-----------------------|---------------------------------------------------------------------|-------------------------|----------------------|
| A                     | $BW_{Channel} \leq BW_{Channel,max}$                                | 1                       | 1, 2, 3 <sup>4</sup> |
| B                     | $20 \text{ MHz} \leq BW_{Channel\_CA} \leq 100 \text{ MHz}$         | 2                       | 2, 3 <sup>4</sup>    |
| C                     | $100 \text{ MHz} < BW_{Channel\_CA} \leq 2 \times BW_{Channel,max}$ | 2                       | 1, 3 <sup>4</sup>    |
| D                     | $200 \text{ MHz} < BW_{Channel\_CA} \leq 3 \times BW_{Channel,max}$ | 3                       |                      |
| E                     | $300 \text{ MHz} < BW_{Channel\_CA} \leq 4 \times BW_{Channel,max}$ | 4                       |                      |
| G                     | $100 \text{ MHz} < BW_{Channel\_CA} \leq 150 \text{ MHz}$           | 3                       | 2                    |
| H                     | $150 \text{ MHz} < BW_{Channel\_CA} \leq 200 \text{ MHz}$           | 4                       |                      |
| I                     | $200 \text{ MHz} < BW_{Channel\_CA} \leq 250 \text{ MHz}$           | 5                       |                      |
| J                     | $250 \text{ MHz} < BW_{Channel\_CA} \leq 300 \text{ MHz}$           | 6                       |                      |
| K                     | $300 \text{ MHz} < BW_{Channel\_CA} \leq 350 \text{ MHz}$           | 7                       |                      |

| N <sup>3</sup>        | $80 \text{ MHz} \leq BW_{Channel\_CA} \leq 300 \text{ MHz}$         | 4                       |                      |
| O <sup>3</sup>        | $100 \text{ MHz} \leq BW_{Channel\_CA} \leq 400 \text{ MHz}$        | 5                       |                      |

NOTE 1:  $BW_{Channel,max}$  is maximum channel bandwidth supported among all bands in a release

NOTE 2: It is mandatory for a UE to be able to fallback to lower order NR CA bandwidth class configuration within a fallback group. It is not mandatory for a UE to be able to fallback to lower order NR CA bandwidth class configuration that belong to a different fallback group.

NOTE 3: This bandwidth class is only applicable to bands identified for use with shared spectrum channel access in Table 5.2-1.

NOTE 4: Fallback group 3 is only applicable to bands identified for use with shared spectrum channel access in Table 5.2-1.

Table 5.3A.5-2: NR intra-band non-contiguous UL CA frequency separation classes

| NR NC UL CA frequency separation class | Maximum allowed frequency separation |
|----------------------------------------|--------------------------------------|
| I                                      | 100 MHz                              |
| II                                     | 200 MHz                              |
| III                                    | [600MHz]                             |

5.3E Channel bandwidth for V2X

5.3E.1 General

NR V2X operation channel bandwidths for each operating band are specified in Table 5.3E.1-1. The same (symmetrical) channel bandwidth is specified for both the transmission and reception path. The maximum channel bandwidth for SL operation in licensed band is 40MHz.

Table 5.3E.1-1 NR V2X operation channel bandwidths for each operating band

| NR band / SCS / UE Channel bandwidth (MHz) |           |   |    |    |    |    |
|--------------------------------------------|-----------|---|----|----|----|----|
| NR Band                                    | SCS (kHz) | 5 | 10 | 20 | 30 | 40 |
| n14                                        | 15        | 5 | 10 |    |    |    |
|                                            | 30        |   | 10 |    |    |    |
|                                            | 60        |   |    |    |    |    |
| n38                                        | 15        |   | 10 | 20 | 30 | 40 |
|                                            | 30        |   | 10 | 20 | 30 | 40 |
|                                            | 60        |   | 10 | 20 | 30 | 40 |
| n47                                        | 15        |   | 10 | 20 | 30 | 40 |
|                                            | 30        |   | 10 | 20 | 30 | 40 |
|                                            | 60        |   | 10 | 20 | 30 | 40 |
| n79                                        | 15        |   | 10 | 20 | 30 | 40 |
|                                            | 30        |   | 10 | 20 | 30 | 40 |
|                                            | 60        |   | 10 | 20 | 30 | 40 |

## 5.3E.2 Channel bandwidth for V2X concurrent operation

For NR V2X inter-band concurrent operation in FR1, the NR V2X channel bandwidths for each operating band are specified in Table 5.3E.2-1.

**Table 5.3E.2-1: Inter-band concurrent operation configurations**

| NR V2X inter-band concurrent operating configuration                           | NR Band | Interface | Channel bandwidth (MHz) (NOTE 1)                | NR V2X inter-band concurrent operating configuration |
|--------------------------------------------------------------------------------|---------|-----------|-------------------------------------------------|------------------------------------------------------|
| V2X_n1A-n47A                                                                   | n1      | Uu        | 5, 10, 15, 20, 25, 30, 40, 45, 50               | 0                                                    |
|                                                                                | n47     | PC5       | 10, 20, 30, 40                                  |                                                      |
| V2X_n5A-n47A                                                                   | n5      | Uu        | 5, 10, 15, 20, 25                               | 0                                                    |
|                                                                                | n47     | PC5       | 10, 20, 30, 40                                  |                                                      |
| V2X_n8A-n47A                                                                   | n8      | Uu        | 5, 10, 15, 20, 35                               | 0                                                    |
|                                                                                | n47     | PC5       | 10, 20, 30, 40                                  |                                                      |
| V2X_n39A-n47A                                                                  | n39     | Uu        | 5, 10, 15, 20, 25, 30, 40                       | 0                                                    |

| V2X_n71A-n47A                                                                  | n71     | Uu        | 5, 10, 15, 20                                   | 0                                                    |
|                                                                                | n47     | PC5       | 10, 20, 30, 40                                  |                                                      |
| V2X_n78A-n47A                                                                  | n78     | Uu        | 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100 | 0                                                    |
|                                                                                | n47     | PC5       | 10, 20, 30, 40                                  |                                                      |
| V2X_n79A-n47A                                                                  | n79     | Uu        | 40, 50, 60, 80, 100                             | 0                                                    |
|                                                                                | n47     | PC5       | 10, 20, 30, 40                                  |                                                      |
| NOTE 1: The SCS of each channel bandwidth for NR band refers to Table 5.3.5-1. |         |           |                                                 |                                                      |

For NR V2X intra-band concurrent operation in FR1, the NR V2X channel bandwidths for each operating band are specified in Table 5.3E.2-2.

**Table 5.3E.2-2: Intra-band concurrent operation configurations**

| NR V2X intra-band concurrent operating configuration                           | NR Band | Interface | Channel bandwidth (MHz) (NOTE 1) | NR V2X intra-band concurrent operating configuration |
|--------------------------------------------------------------------------------|---------|-----------|----------------------------------|------------------------------------------------------|
| V2X_n79B                                                                       | n79     | Uu        | 40, 50, 60, 80, 100              | 0                                                    |
|                                                                                | n79     | PC5       | 10, 20, 30, 40                   |                                                      |
| NOTE 1: The SCS of each channel bandwidth for NR band refers to Table 5.3.5-1. |         |           |                                  |                                                      |

## 5.3I Channel bandwidth for RedCap

The requirements in this specification apply to the combination of channel bandwidths, SCS and operating bands shown in Table 5.3.5-1 with maximum channel bandwidth of 20MHz. The transmission bandwidth configuration in Table 5.3.2-1 shall be supported for each of the specified channel bandwidths up to 20 MHz. The channel bandwidths are specified for both the TX and RX path.

## 5.4 Channel arrangement

### 5.4.1 Channel spacing

#### 5.4.1.1 Channel spacing for adjacent NR carriers

The spacing between carriers will depend on the deployment scenario, the size of the frequency block available and the channel bandwidths. The nominal channel spacing between two adjacent NR carriers is defined as following:

- For NR operating bands with 100 kHz channel raster,

$$\text{Nominal Channel spacing} = (\text{BW}_{\text{Channel}(1)} + \text{BW}_{\text{Channel}(2)})/2$$

- For NR operating bands with 15 kHz channel raster,

$$\text{Nominal Channel spacing} = (\text{BW}_{\text{Channel}(1)} + \text{BW}_{\text{Channel}(2)})/2 + \{-5 \text{ kHz}, 0 \text{ kHz}, 5 \text{ kHz}\} \text{ for } \Delta F_{\text{Raster}} \text{ equals } 15 \text{ kHz}$$

$$\text{Nominal Channel spacing} = (\text{BW}_{\text{Channel}(1)} + \text{BW}_{\text{Channel}(2)})/2 + \{-10 \text{ kHz}, 0 \text{ kHz}, 10 \text{ kHz}\} \text{ for } \Delta F_{\text{Raster}} \text{ equals } 30 \text{ kHz}$$

where  $\text{BW}_{\text{Channel}(1)}$  and  $\text{BW}_{\text{Channel}(2)}$  are the channel bandwidths of the two respective NR carriers. The channel spacing can be adjusted depending on the channel raster to optimize performance in a particular deployment scenario.

For NR bands restricted to operation with shared-spectrum channel access, the maximum deviation from the nominal channel spacing is 40 kHz.

### 5.4.2 Channel raster

#### 5.4.2.1 NR-ARFCN and channel raster

The global frequency channel raster defines a set of RF reference frequencies  $F_{\text{REF}}$ . The RF reference frequency is used in signalling to identify the position of RF channels, SS blocks and other elements.

The global frequency raster is defined for all frequencies from 0 to 100 GHz. The granularity of the global frequency raster is  $\Delta F_{\text{Global}}$ .

RF reference frequencies are designated by an NR Absolute Radio Frequency Channel Number (NR-ARFCN) in the range (0...2016666) on the global frequency raster. The relation between the NR-ARFCN and the RF reference frequency  $F_{\text{REF}}$  in MHz is given by the following equation, where  $F_{\text{REF-Offs}}$  and  $N_{\text{Ref-Offs}}$  are given in Table 5.4.2.1-1 and  $N_{\text{REF}}$  is the NR-ARFCN.

$$F_{\text{REF}} = F_{\text{REF-Offs}} + \Delta F_{\text{Global}} (N_{\text{REF}} - N_{\text{REF-Offs}})$$

**Table 5.4.2.1-1: NR-ARFCN parameters for the global frequency raster**

| Frequency range (MHz) | $\Delta F_{\text{Global}}$ (kHz) | $F_{\text{REF-Offs}}$ (MHz) | $N_{\text{REF-Offs}}$ | Range of $N_{\text{REF}}$ |
|-----------------------|----------------------------------|-----------------------------|-----------------------|---------------------------|
| 0 – 3000              | 5                                | 0                           | 0                     | 0 – 599999                |
| 3000 – 24250          | 15                               | 3000                        | 600000                | 600000 – 2016666          |

The channel raster defines a subset of RF reference frequencies that can be used to identify the RF channel position in the uplink and downlink. The RF reference frequency for an RF channel maps to a resource element on the carrier. For each operating band, a subset of frequencies from the global frequency raster are applicable for that band and forms a channel raster with a granularity  $\Delta F_{\text{Raster}}$ , which may be equal to or larger than  $\Delta F_{\text{Global}}$ .

For SUL bands except n95, n97, n98 and for the uplink of all FDD bands defined in Table 5.2-1, and for TDD bands n34, n39, n48, n90, n38 and n40

$$F_{\text{REF, shift}} = F_{\text{REF}} + \Delta_{\text{shift}}, \Delta_{\text{shift}} = 0 \text{ kHz or } 7.5 \text{ kHz.}$$

where  $\Delta_{\text{shift}}$  is signalled by the network in higher layer parameter *frequencyShift7p5khz* [7]. For Band n34, n38, n39, n40, n48  $F_{\text{REF, shift}}$  is only applicable to uplink transmissions using a 15 kHz SCS.

The mapping between the channel raster and corresponding resource element is given in Clause 5.4.2.2. The applicable entries for each operating band are defined in Clause 5.4.2.3.

### 5.4.2.2 Channel raster to resource element mapping

The mapping between the RF reference frequency on the channel raster and the corresponding resource element is given in Table 5.4.2.2-1 and can be used to identify the RF channel position. The mapping depends on the total number of RBs that are allocated in the channel and applies to both UL and DL. The mapping must apply to at least one numerology supported by the UE.

**Table 5.4.2.2-1: Channel raster to resource element mapping**

|                                                | $N_{\text{RB}} \bmod 2 = 0$                                           | $N_{\text{RB}} \bmod 2 = 1$                                           |
|------------------------------------------------|-----------------------------------------------------------------------|-----------------------------------------------------------------------|
| Resource element index $k$                     | 0                                                                     | 6                                                                     |
| Physical resource block index $n_{\text{PRB}}$ | $n_{\text{PRB}} = \left\lfloor \frac{N_{\text{RB}}}{2} \right\rfloor$ | $n_{\text{PRB}} = \left\lfloor \frac{N_{\text{RB}}}{2} \right\rfloor$ |

$N_{\text{RB}}$  is the maximum transmission bandwidth configuration specified in sub-clause 5.3.2,  $n_{\text{PRB}}$  is the PRB index within the  $N_{\text{RB}}$ , and  $k$  is the resource element index within this PRB.

### 5.4.2.3 Channel raster entries for each operating band

The RF channel positions on the channel raster in each NR operating band are given through the applicable NR-ARFCN in Table 5.4.2.3-1, using the channel raster to resource element mapping in clause 5.4.2.2.

For NR operating bands with 100 kHz channel raster,  $\Delta F_{\text{Raster}} = 20 \times \Delta F_{\text{Global}}$ . In this case every 20<sup>th</sup> NR-ARFCN within the operating band are applicable for the channel raster within the operating band and the step size for the channel raster in Table 5.4.2.3-1 is given as <20>.

For NR operating bands with 15 kHz channel raster below 3GHz,  $\Delta F_{\text{Raster}} = I \times \Delta F_{\text{Global}}$ , where  $I \in \{3,6\}$ . Every  $I^{\text{th}}$  NR-ARFCN within the operating band are applicable for the channel raster within the operating band and the step size for the channel raster in Table 5.4.2.3-1 is given as < $I$ >.

For NR operating bands with 15 kHz channel raster above 3GHz,  $\Delta F_{\text{Raster}} = I \times \Delta F_{\text{Global}}$ , where  $I \in \{1,2\}$ . Every  $I^{\text{th}}$  NR-ARFCN within the operating band are applicable for the channel raster within the operating band and the step size for the channel raster in Table 5.4.2.3-1 is given as < $I$ >.

In frequency bands with two or more  $\Delta F_{\text{Raster}}$ , the higher  $\Delta F_{\text{Raster}}$ : For 15 kHz and 30 kHz channel raster applies to channels using only the SCS that is equal to or larger than the higher  $\Delta F_{\text{Raster}}$  and SSB SCS is equal to the higher  $\Delta F_{\text{Raster}}$ .

**Table 5.4.2.3-1: Applicable NR-ARFCN per operating band**

| NR operating band | $\Delta F_{\text{Raster}}$ (kHz) | Uplink Range of $N_{\text{REF}}$ (First – <Step size> – Last) | Downlink Range of $N_{\text{REF}}$ (First – <Step size> – Last) |
|-------------------|----------------------------------|---------------------------------------------------------------|-----------------------------------------------------------------|
| n1                | 100                              | 384000 – <20> – 396000                                        | 422000 – <20> – 434000                                          |

| NR operating band | $\Delta F_{\text{Raster}}$ (kHz) | Uplink Range of $N_{\text{REF}}$ (First – <Step size> – Last) | Downlink Range of $N_{\text{REF}}$ (First – <Step size> – Last) |
|-------------------|----------------------------------|---------------------------------------------------------------|-----------------------------------------------------------------|

## 5.4.3 Synchronization raster

### 5.4.3.1 Synchronization raster and numbering

The synchronization raster indicates the frequency positions of the synchronization block that can be used by the UE for system acquisition when explicit signalling of the synchronization block position is not present.

A global synchronization raster is defined for all frequencies. The frequency position of the SS block is defined as  $SS_{\text{REF}}$  with corresponding number GSCN. The parameters defining the  $SS_{\text{REF}}$  and GSCN for all the frequency ranges are in Table 5.4.3.1-1.

The resource element corresponding to the SS block reference frequency  $SS_{\text{REF}}$  is given in clause 5.4.3.2. The synchronization raster and the subcarrier spacing of the synchronization block is defined separately for each band.

**Table 5.4.3.1-1: GSCN parameters for the global frequency raster**

| Frequency range                                                                                               | SS Block frequency position $SS_{\text{REF}}$                                         | GSCN           | Range of GSCN |
|---------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|----------------|---------------|
| 0 – 3000 MHz                                                                                                  | $N * 1200\text{kHz} + M * 50\text{ kHz}$ ,<br>$N=1:2499$ , $M \in \{1,3,5\}$ (Note 1) | $3N + (M-3)/2$ | 2 – 7498      |
| 3000 – 24250 MHz                                                                                              | $3000\text{ MHz} + N * 1.44\text{ MHz}$<br>$N = 0:14756$                              | $7499 + N$     | 7499 – 22255  |
| NOTE 1: The default value for operating bands with which only support SCS spaced channel raster(s) is $M=3$ . |                                                                                       |                |               |

### 5.4.3.2 Synchronization raster to synchronization block resource element mapping

The mapping between the synchronization raster and the corresponding resource element of the SS block is given in Table 5.4.3.2-1.

**Table 5.4.3.2-1: Synchronization raster to SS block resource element mapping**

|                            |     |
|----------------------------|-----|
| Resource element index $k$ | 120 |
|----------------------------|-----|

$k$  is the subcarrier number of SS/PBCH block defined in TS 38.211 clause 7.4.3.1 [6].

### 5.4.3.3 Synchronization raster entries for each operating band

The synchronization raster for each band is give in Table 5.4.3.3-1. The distance between applicable GSCN entries is given by the <Step size> indicated in Table 5.4.3.3-1.

Table 5.4.3.3-1: Applicable SS raster entries per operating band

| NR operating band | SS Block SCS | SS Block pattern <sup>1</sup> | Range of GSCN<br>(First – <Step size> – Last) |
|-------------------|--------------|-------------------------------|-----------------------------------------------|
| n1                | 15 kHz       | Case A                        | 5279 – <1> – 5419                             |
| n2                | 15 kHz       | Case A                        | 4829 – <1> – 4969                             |
| n3                | 15 kHz       | Case A                        | 4517 – <1> – 4693                             |
| n5                | 15 kHz       | Case A                        | 2177 – <1> – 2230                             |
|                   | 30 kHz       | Case B                        | 2183 – <1> – 2224                             |
| n7                | 15 kHz       | Case A                        | 6554 – <1> – 6718                             |
| n8                | 15 kHz       | Case A                        | 2318 – <1> – 2395                             |
| n12               | 15 kHz       | Case A                        | 1828 – <1> – 1858                             |
| n13               | 15 kHz       | Case A                        | 1871 – <1> – 1885                             |
| n14               | 15 kHz       | Case A                        | 1901 – <1> – 1915                             |
| n18               | 15 kHz       | Case A                        | 2156 – <1> – 2182                             |
| n20               | 15 kHz       | Case A                        | 1982 – <1> – 2047                             |
| n24               | 15 kHz       | Case A                        | 3818 – <1> – 3892                             |
|                   | 30 kHz       | Case B                        | 3824 – <1> – 3886                             |

| n100                                                                                                                                                                                                                                                                                                                                                                                                                                               | 45 MHz                                            |
| NOTE 1: Void<br>NOTE 2: The range of TX-RX frequency separation given paired UL and DL channel bandwidths $BW_{UL}$ and $BW_{DL}$ is given by the respective lower and upper limit $F_{DL\_low} - F_{UL\_high} + 0.5(BW_{DL} + BW_{UL})$ and $F_{DL\_high} - F_{UL\_low} - 0.5(BW_{DL} + BW_{UL})$ . The UL and DL channel bandwidth combinations specified in Table 5.3.5-1 and 5.3.6-1 depend on the subcarrier spacing configuration $\mu$ [6]. |                                                   |

## 5.4A Channel arrangement for CA

### 5.4A.1 Channel spacing for CA

For intra-band contiguous carrier aggregation with two or more component carriers, the nominal channel spacing between two adjacent NR component carriers is defined as the following unless stated otherwise:

For NR operating bands with a 100 kHz channel raster:

$$\text{Nominal channel spacing} = \left\lfloor \frac{BW_{Channel(1)} + BW_{Channel(2)} - 2|GB_{Channel(1)} - GB_{Channel(2)}|}{0.6} \right\rfloor 0.3 [\text{MHz}]$$

while for NR operating bands without a 100 kHz channel raster:

$$\text{Nominal channel spacing} = \left\lfloor \frac{BW_{Channel(1)} + BW_{Channel(2)} - 2|GB_{Channel(1)} - GB_{Channel(2)}|}{0.015 * 2^{n+1}} \right\rfloor 0.015 * 2^n [\text{MHz}]$$

with

$$n = \mu_0$$

where  $BW_{Channel(1)}$  and  $BW_{Channel(2)}$  are the channel bandwidths of the two respective NR component carriers according to Table 5.3.2-1 with values in MHz,  $\mu_0$  is the largest  $\mu$  value among the subcarrier spacing configurations supported in the operating band for both of the channel bandwidths according to Table 5.3.5-1 and  $GB_{Channel(i)}$  is the minimum guard band for channel bandwidth  $i$  according to Table 5.3.3-1 for the said  $\mu$  value with  $\mu$  as defined in TS 38.211. In case there is no common  $\mu$  value for both of the channel bandwidths,  $\mu_0=1$  is selected and  $GB_{Channel(i)}$  is the minimum guard band for channel bandwidth  $i$  according to Table 5.3.3-1 for  $\mu=1$  with  $\mu$  as defined in TS 38.211.

The channel spacing for intra-band contiguous carrier aggregation can be adjusted to any multiple of least common multiple of channel raster and sub-carrier spacing less than the nominal channel spacing to optimize performance in a particular deployment scenario.

For intra-band contiguous carrier aggregation in NR bands restricted to operation with shared-spectrum channel access, the maximum deviation from the nominal channel spacing is 300 kHz.

For intra-band non-contiguous carrier aggregation, the channel spacing between two NR component carriers in different sub-blocks shall be larger than the nominal channel spacing defined in this clause.

### 5.4A.2 Channel raster for CA

For inter-band and intra-band contiguous carrier aggregation, the channel raster requirements in clause 5.4.2 apply for each operating band.

### 5.4A.3 Synchronization raster for CA

For inter-band and intra-band contiguous carrier aggregation, the synchronization raster requirements in clause 5.4.3 apply for each operating band.

### 5.4A.4 Tx-Rx frequency separation for CA

For inter-band carrier aggregation, the Tx-Rx frequency separation requirements in clause 5.4.4 apply for each operating band.

For intra-band contiguous carrier aggregation, the same TX-RX frequency separation as specified in Table 5.4.4-1 is applied to PCC and SCC, respectively.

## 5.4C Reserved

## 5.4D Reserved

## 5.4E Channel arrangement for V2X

### 5.4E.1 Channel spacing

For NR V2X, the channel spacing requirements in clause 5.4.1 apply for each operating band.

### 5.4E.2 Channel raster

#### 5.4E.2.1 NR-ARFCN and channel raster

For NR V2X, the NR-ARFCN and channel raster requirements in clause 5.4.2.1 apply for each operating band.

For NR V2X UE, the reference frequency can be shifted by configuration.

$$F_{\text{REF\_V2X}} = F_{\text{REF}} + \Delta_{\text{shift}} + N * 5 \text{ kHz}$$

where

$\Delta_{\text{shift}} = 0 \text{ kHz}$  or  $7.5 \text{ kHz}$  indicated in IE (*frequencyShift7p5khz*), and

N can be set as one of following values  $\{-1, 0, 1\}$ , which are signalled by the network in higher layer parameters or configured by pre-configuration parameters.

#### 5.4E.2.2 Channel raster to resource element mapping

For NR V2X, the channel raster to resource element mapping requirements in clause 5.4.2.2 apply for each operating band.

#### 5.4E.2.3 Channel raster entries for each operating band

For NR V2X, the channel raster entries requirements in clause 5.4.2.3 apply for each operating band.

The RF channel positions on the channel raster in each NR V2X operating band are given through the applicable NR-ARFCN in Table 5.4.2.3-1, using the channel raster to resource element mapping in clause 5.4.2.2.

For NR V2X operating band n47,  $\Delta F_{\text{Raster}} = I \times \Delta F_{\text{Global}}$ , where  $I \in \{1\}$ . Every  $I^{\text{th}}$  NR-ARFCN within the operating band are applicable for the channel raster within the operating band and the step size for the channel raster in Table 5.4.2.3-1 is given as  $\langle I \rangle$ .

### 5.4E.3 Synchronization raster for V2X

There is no synchronization raster definition for NR V2X for both licensed bands and unlicensed bands.

## 5.4I Channel arrangement for RedCap

### 5.4I.1 Channel spacing for RedCap

For RedCap UEs, the channel spacing requirements in clause 5.4.1 apply for each operating band.

### 5.4I.2 Channel raster for RedCap

#### 5.4I.2.1 NR-ARFCN and channel raster

For RedCap UEs, the NR-ARFCN and channel raster requirements in clause 5.4.2.1 apply for each operating band.

#### 5.4I.2.2 Channel raster to resource element mapping

For RedCap UEs, the channel raster to resource element mapping requirements in clause 5.4.2.2 apply for each operating band.

#### 5.4I.2.3 Channel raster entries for each operating band

For RedCap UEs, the RF channel positions on the channel raster in each NR operating band are given through the applicable NR-ARFCN in Table 5.4.2.3-1 and additional intermediary NR-ARFCN with a step size of  $\langle 2 \rangle$  for operating bands that are included in Table 5.4.2.3-1 with a step size of  $\langle 20 \rangle$ , using the channel raster to resource element mapping in clause 5.4I.2.2.

For NR operating bands included in Table 5.4.2.3-1 with a step size of  $\langle 20 \rangle$ , the channel raster for RedCap UEs is defined with  $\Delta F_{\text{Raster}} = 2 \times \Delta F_{\text{Global}}$ . In this case every 2<sup>nd</sup> NR-ARFCN within the operating band are applicable for the channel raster within the operating band and the step size for the channel raster is given as  $\langle 2 \rangle$ , every 10<sup>th</sup> of these channel raster entries coincides with entries defined in Table 5.4.2.3-1 for this operating band.

NOTE: The RedCap UE, which complies with Rel-17 specifications of version 17.14.0 and before version 17.14.0, may support the legacy channel raster only.

### 5.4I.3 Synchronization raster for RedCap

For RedCap UEs, the synchronization raster requirements in clause 5.4.3 apply for each operating band. The synchronization raster and the corresponding SS block do not cover all possible RF channel bandwidths and locations on the channel raster defined in sub-clause 5.4I.2.

### 5.4I.4 Tx-Rx frequency separation for RedCap

For RedCap UEs, the Tx-Rx frequency separation requirements in clause 5.4.4 apply for each operating band.

## 5.5 Void

### 5.5A Configurations for CA

#### 5.5A.0 General

The configurations for CA operating band including Band n41 also apply for the corresponding CA operating bands with Band n90 replacing Band n41 but with otherwise identical parameters. For brevity the said configuration for CA operating bands with Band n90 are not listed in the tables below but are covered by this specification.

Non-contiguous resource allocation and almost contiguous allocation are not applicable for each NR carrier of intra-band contiguous and non-contiguous CA configurations.

For a CA configuration with one or more operating band supporting asymmetric channel bandwidths as specified in sub-clause 5.3.6, requirements are defined for an asymmetric UL and DL channel bandwidth combination of a supported asymmetric channel bandwidth combination set for an operating band of the CA configuration when the said UL and DL channel bandwidths are also contained in a supported bandwidth combination set of the CA configuration.

For a higher order band combination of which CA\_n20-n28 is a subset, the frequency range in band n28 is restricted for the higher order band combination to 703-733 MHz for the UL and 758-788 MHz for the DL.

The configuration tables for CA describe Bandwidth Combination Sets. Bandwidth Combination Set 4 and 5 contain all possible defined channel bandwidths for each band in the combination. The fact that BCS4 and BCS5 contain all channel bandwidths for each band does not alter if a bandwidth is mandatory or optional for a given band. Bandwidths that are identified as optional in Table 5.3.5-1 for a given release are still optional for UEs that support BCS4 or BCS5, where the bandwidths the UE supports for each band, the maximum bandwidth and/or minimum bandwidth for the band in the band combination are indicated in the UE capabilities. The minimum bandwidth per CC and maximum aggregated FDD, TDD and total bandwidth per band combination may be indicated only for BCS5 as described in 38.306 [15] and BCS5 shall not be indicated together with BCS4 for a CA configuration. For inter-band CA combinations including FR1 intra-band CA and with BCS4 or BCS5 in the following configuration tables, the Bandwidth Combination Sets for the FR1 intra-band CA are BCS4 or BCS5, respectively.

By default, power class 3 is applicable for the CA configurations listed in the following clauses. The applicability of higher power class(es) is described in the CA configuration tables in clauses 5.5A.1, 5.5A.2 and 5.5A.3. For inter-band CA combinations in clause 5.5A.3, the applicability of higher power class(es) for higher order band combinations is extended based on the following conditions:

- For a combination of intra-band and inter-band CA, the same higher power class(es) may be supported, which are specified for the inter-band UL CA configuration(s) in the combination composed of the same bands without intra-band CA.
- For a combination of intra-band and inter-band CA, the higher power class(es) may be supported for single-carrier UL when the same higher power class(es) are specified for all its fallback combinations.
- For a combination with 3 or more DL bands without intra-band CA, the higher power class(es) may be supported for single-carrier UL when the same higher power class(es) are specified for all its 2-band fallback combinations.
- For a combination with 4 or more DL bands without intra-band CA, the higher power class(es) may be supported for inter-band UL CA configuration(s) when the same higher power class(es) are specified for all its 3-band fallback combinations.

A UE supporting a given power class for a CA configuration shall meet the corresponding transmitter and receiver requirements in Clause 6 and Clause 7, respectively.

#### 5.5A.1 Configurations for intra-band contiguous CA

**Table 5.5A.1-1: NR CA configurations and bandwidth combination sets defined for intra-band contiguous CA**

| NR CA configuration / Bandwidth combination set |                                                                |                                                                           |                                      |                                      |                                      |                                      |                                    |                           |
|-------------------------------------------------|----------------------------------------------------------------|---------------------------------------------------------------------------|--------------------------------------|--------------------------------------|--------------------------------------|--------------------------------------|------------------------------------|---------------------------|
| NR CA configuration                             | Uplink CA configurations or single uplink carrier <sup>5</sup> | Channel bandwidths for carrier (MHz)                                      | Channel bandwidths for carrier (MHz) | Channel bandwidths for carrier (MHz) | Channel bandwidths for carrier (MHz) | Channel bandwidths for carrier (MHz) | Maximum aggregated bandwidth (MHz) | Bandwidth combination set |
| CA_n1B                                          | -                                                              | 10                                                                        | 10,15                                |                                      |                                      |                                      | 40                                 | 0                         |
|                                                 |                                                                | 15                                                                        | 15,20                                |                                      |                                      |                                      |                                    |                           |
|                                                 |                                                                | 20                                                                        | 20                                   |                                      |                                      |                                      |                                    |                           |
| CA_n2B                                          | -                                                              | 5                                                                         | 15                                   |                                      |                                      |                                      | 20                                 | 0                         |
|                                                 |                                                                | 10                                                                        | 10                                   |                                      |                                      |                                      |                                    |                           |
| CA_n3B                                          | -                                                              | 5                                                                         | 15, 20, 25, 30                       |                                      |                                      |                                      | 60                                 | 0                         |
|                                                 |                                                                | 10                                                                        | 10, 15, 20, 25, 30                   |                                      |                                      |                                      |                                    |                           |
|                                                 |                                                                | 15, 20, 25, 30                                                            | 5, 10, 15, 20, 25, 30                |                                      |                                      |                                      |                                    |                           |
| CA_n5B                                          | CA_n5B                                                         | 5, 10, 15                                                                 | 5, 10, 15                            |                                      |                                      |                                      | 20                                 | 0                         |
| CA_n7B                                          | CA_n7B                                                         | 10                                                                        | 10, 15, 20, 30, 40                   |                                      |                                      |                                      | 50                                 | 0                         |
|                                                 |                                                                | 15                                                                        | 15, 20, 30                           |                                      |                                      |                                      |                                    |                           |

NOTE 1: Void.

NOTE 2: Parameter value accounts for both, the maximum frequency range of band n48 (150 MHz), and the minimum frequency gaps in between NR non-contiguous component carriers.

NOTE 3: Minimum requirements for Power Class 2 are applicable for this uplink combination or single uplink carrier in this downlink/uplink combination

NOTE 4: Minimum requirements for Power Class 1.5 are applicable for this uplink combination or single uplink carrier in this downlink/uplink combination

NOTE 5: Only single uplink carriers with power class other than PC3 are listed.

NOTE 6: For each channel bandwidth of each component carrier, refer to Table 5.3.5-1 for the applicable SCSs. For a given band, not all UE channel bandwidths support the same SCSs.

Table 5.5A.2-2: NR CA configurations and bandwidth combination sets defined for mixed intra-band contiguous and non-contiguous CA

| NR CA configuration                                                                                                                                                                  | Uplink CA configuration or single uplink carrier <sup>4</sup> | NR Band | Channel bandwidth (MHz)                                            |    |    |    |    |    |    |                 |                 |                 |                 |                 |                  | Bandwidth combination set |

The following notes are applied to the above tables:

NOTE 1: This UE channel bandwidth is applicable only to downlink.

NOTE 2: The minimum requirements for intra-band contiguous or non-contiguous CA apply.

NOTE 3: For each channel bandwidth of each component carrier, refer to Table 5.3.5-1 for the applicable SCSs. For a given band, not all UE channel bandwidths support the same SCSs..

NOTE 4: This UE channel bandwidth is optional in this release of the specification.

NOTE 5: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as a SCell part of DC or CA configuration.

NOTE 6: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as a downlink SCell part of CA configuration

NOTE 7: Limited to operation at 3450-3550 MHz and 3700–3980 MHz.

NOTE 8: Minimum requirements for Power Class 2 are applicable for this uplink combination or single uplink carrier in this downlink/uplink combination

NOTE 9: Minimum requirements for Power Class 1.5 are applicable for this uplink combination or single uplink carrier in this downlink/uplink combination

NOTE 10: Only single uplink carriers with power class other than PC3 are listed.

NOTE 11: The CA configurations are given in Table 5.5A.1-1 or Table 5.5A.2-1 in this specification

### 5.5A.3.2 Configurations for inter-band CA (three bands)

**Table 5.5A.3.2-1: NR CA configurations and bandwidth combinations sets defined for inter-band CA (three bands)**

| NR CA configuration | Uplink CA configuration or single uplink carrier <sup>6</sup> | NR Band | Channel bandwidth (MHz) (NOTE 3) | Bandwidth combination set |

| CA_n66(2A)-n71A-n78(2A)                                                                                                                                                                 | CA_n66A-n71A<br>CA_n66A-n78A<br>CA_n71A-n78A                  | n66     | CA_n66(2A)_BCS1                                 | 0                         |
|                                                                                                                                                                                         |                                                               | n71     | 5, 10, 15, 20                                   |                           |
|                                                                                                                                                                                         |                                                               | n78     | CA_n78(2A)_BCS2                                 |                           |
| NOTE 1: This UE channel bandwidth is applicable only to downlink                                                                                                                        |                                                               |         |                                                 |                           |
| NOTE 2: For the 20 MHz bandwidth, the minimum requirements are specified for NR UL carrier frequencies confined to either 713-723 MHz or 728-738 MHz.                                   |                                                               |         |                                                 |                           |
| NOTE 3: For each channel bandwidth of each component carrier, refer to Table 5.3.5-1 for the applicable SCSSs. For a given band, not all UE channel bandwidths support the same SCSSs.. |                                                               |         |                                                 |                           |
| NOTE 4: The minimum requirements only apply for non-simultaneous Tx/Rx between all carriers for TDD combinations.                                                                       |                                                               |         |                                                 |                           |
| NOTE 5: Simultaneous Rx/Tx capability for TDD combinations does not apply for UEs supporting band n78 with an n77 implementation.                                                       |                                                               |         |                                                 |                           |
| NOTE 6: Only single uplink carriers with power class other than PC3 are listed.                                                                                                         |                                                               |         |                                                 |                           |
| NOTE 7: Minimum requirements for Power Class 2 are applicable for this uplink combination or single uplink carrier in this downlink/uplink combination                                  |                                                               |         |                                                 |                           |
| NOTE 8: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as an SCell part of DC or CA configuration.                                 |                                                               |         |                                                 |                           |
| NOTE 9: Minimum requirements for Power Class 1.5 are applicable for single uplink carrier in this downlink/uplink combination                                                           |                                                               |         |                                                 |                           |
| NOTE 10: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as a downlink SCell part of CA configuration                               |                                                               |         |                                                 |                           |

### 5.5A.3.3 Configurations for inter-band CA (four bands)

**Table 5.5A.3.3-1: NR CA configurations and bandwidth combinations sets defined for inter-band CA (four bands)**

| NR CA configuration | Uplink CA configuration or single uplink carrier <sup>4</sup>      | NR Band | Channel bandwidth (MHz) (NOTE 3) | Bandwidth combination set |
|---------------------|--------------------------------------------------------------------|---------|----------------------------------|---------------------------|

| NOTE 1: This UE channel bandwidth is optional in this release of the specification.                                                                                                                                                                                                                             |                                                                                              |     |                                                 |   |
| NOTE 2: For the 20 MHz bandwidth, the minimum requirements are specified for NR UL carrier frequencies confined to either 713-723 MHz or 728-738 MHz. For the 30MHz bandwidth, the minimum requirements are specified for NR UL transmission bandwidth configuration confined to either 703-733 or 718-748 MHz. |                                                                                              |     |                                                 |   |
| NOTE 3: For each channel bandwidth of each component carrier, refer to Table 5.3.5-1 for the applicable SCSSs. For a given band, not all UE channel bandwidths support the same SCSSs..                                                                                                                         |                                                                                              |     |                                                 |   |
| NOTE 4: Only single uplink carriers with power class other than PC3 are listed.                                                                                                                                                                                                                                 |                                                                                              |     |                                                 |   |
| NOTE 5: Minimum requirements for Power Class 2 are applicable for this uplink combination or single uplink carrier in this downlink/uplink combination.                                                                                                                                                         |                                                                                              |     |                                                 |   |
| NOTE 6: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as a downlink SCell part of CA configuration                                                                                                                                                        |                                                                                              |     |                                                 |   |

### 5.5A.3.4 Configurations for inter-band CA (five bands)

**Table 5.5A.3.4-1: NR CA configurations and bandwidth combinations sets defined for inter-band CA (five bands)**

| NR CA configuration     | Uplink configuration                                                                                                                         | NR Band | Channel bandwidth (MHz) (NOTE 1)                | Bandwidth combination set |

| NOTE 1: For each channel bandwidth of each component carrier, refer to Table 5.3.5-1 of TS 38.101-1 and TS 38.101-2 for the applicable SCSs for NR FR1 and NR FR2 bands respectively. For a given band, not all UE channel bandwidths support the same SCSs. |                                                                                                                                                 |         |                                                                                                                               |                           |
| NOTE 2: For this bandwidth, the minimum requirements are restricted to operation when carrier is configured as a downlink SCell part of CA configuration                                                                                                     |                                                                                                                                                 |         |                                                                                                                               |                           |

## 5.5B Configurations for DC

For an NR DC configuration specified in Table 5.5B-1, the bandwidth combination sets for the corresponding NR CA configuration in 5.5A.3, i.e., dual uplink inter-band carrier aggregation with uplink assigned to two NR bands, are applicable to Dual Connectivity.

**Table 5.5B-1: Inter-band NR DC configurations (two bands)**

| NR DC configuration         | Uplink NR DC configuration |

| NR DC configuration                                                                                                                                                                                                                                   | Uplink NR DC configuration |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| NOTE 1: The minimum requirements apply only when there is non-simultaneous Rx/Tx operation between n77-n79 NR carriers. This restriction applies also for these carriers when applicable NR DC configuration is part of a higher order configuration. |                            |
| NOTE 2: Applicable for UE supporting inter-band NR DC with mandatory simultaneous Rx/Tx capability.                                                                                                                                                   |                            |

## 5.5C Configurations for SUL

The configuration tables for SUL describe Bandwidth Combination Sets. Bandwidth Combination Set 4 and 5 contains all possible defined channel bandwidths for each band in the combination. The fact that BCS4 and BCS5 contains all channel bandwidths for each band does not alter if a bandwidth is mandatory or optional for a given band. Bandwidths that are identified as optional in Table 5.3.5-1 for a given release are still optional for UEs that support BCS4 or BCS5. , where the bandwidths the UE supports for each band, the maximum bandwidth and/or minimum bandwidth for the band in the band combination are indicated in the UE capabilities. The minimum bandwidth per CC and aggregated FDD, TDD and total bandwidth per band combination may be indicated only for BCS5 as described in 38.306 [15] and BCS5 shall not be indicated together with BCS4 for a SUL configuration. For SUL band combinations including FR1 intra-band CA and with BCS4 or BCS5, the Bandwidth Combination Sets for the FR1 intra-band CA are BCS4 or BCS5.

**Table 5.5C-1: Supported channel bandwidths per SUL band combination**

| SUL configuration | NR Band | Channel bandwidth (MHz) (NOTE 1)                   | Bandwidth combination set |
|-------------------|---------|----------------------------------------------------|---------------------------|
| SUL_n24A-n99A     | n24     | 5, 10                                              | 0                         |
|                   | n99     | 5, 10                                              |                           |

NOTE 1: The SCS of each channel bandwidth for NR band refers to Table 5.3.5-1.

## 6 Transmitter characteristics

### 6.1 General

Unless otherwise stated, the transmitter characteristics are specified at the antenna connector of the UE with a single or multiple transmit antenna(s). For UE with integral antenna only, a reference antenna with a gain of 0 dBi is assumed.

For UEs that do not indicate IE *dualPA-Architecture*, transmitter requirements for CA operation apply only when the DMRS initialization parameters (including the case when the UE applies cell ID as DMRS scrambling ID) are different across all CCs. The UE may use higher MPR values outside this limitation.

Transmitter requirements for UL MIMO operation apply when the UE transmits on 2 ports on the same CDM group. The UE may use higher MPR values outside this limitation.

The applicability of transmitter requirements for Band n90 is in accordance with that for Band n41; a UE supporting Band n90 shall meet the minimum requirements for Band n41.

NOTE: For FRMCS (Future Railway Mobile Communication System) operation in bands n100 and n101, the EIRP requirements shall be converted to conducted requirements based on the post chipset unit antenna connector gain  $G_{n100\text{post connector}}$  or  $G_{n101\text{post connector}}$  declared for the UE following the principle described in annex M.

#### 6.1A General

The minimum requirements for band combinations including Band n41 also apply for the corresponding band combinations with Band n90 replacing Band n41 but with otherwise identical parameters. For brevity the said band combinations with Band n90 are not listed in the tables below but are covered by this specification.

#### 6.1F General

For wideband operations, the minimum requirements for the transmitter characteristics are specified for transmissions on one scheduled RB set or  $\geq 1$  scheduled contiguous RB set(s) within the UE channel. The requirements apply with configured UL intra-cell guard bands of non-zero size according to Table 5.3.3-2, with the union of the scheduled RB sets and the intra-cell guard bands.

Unless stated otherwise, when a clause is not present for shared spectrum channel access, the general requirements and the additional clause requirements (suffices A,B,D) in clause 6 apply.

## 6.2 Transmitter power

### 6.2.1 UE maximum output power

The following UE Power Classes define the maximum output power for any transmission bandwidth within the channel bandwidth of NR carrier unless otherwise stated. The period of measurement shall be at least one sub frame (1ms).

Table 6.2.1-1: UE Power Class

| NR band | Class 1 (dBm) | Tolerance (dB) | Class 1.5 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB)     | Class 3 (dBm) | Tolerance (dB) |
|---------|---------------|----------------|-----------------|----------------|---------------|--------------------|---------------|----------------|
| n1      |               |                |                 |                | 26            | +2/-3              | 23            | $\pm 2$        |
| n2      |               |                |                 |                |               |                    | 23            | $\pm 2^3$      |

| n101 |                   |       |                 |                    |    |                    | 23 | ±2                 |
| n104 |                   |       |                 |                    | 26 | +2/-3              | 23 | +2/-3              |

NOTE 1:  $P_{\text{PowerClass}}$  is the maximum UE power specified without taking into account the tolerance.

NOTE 2: Power class 3 is default power class unless otherwise stated.

NOTE 3: Refers to the transmission bandwidths confined within  $F_{\text{UL\_low}}$  and  $F_{\text{UL\_low}} + 4 \text{ MHz}$  or  $F_{\text{UL\_high}} - 4 \text{ MHz}$  and  $F_{\text{UL\_high}}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB.

NOTE 4: The maximum output power requirement is relaxed by reducing the lower tolerance limit by 0.3 dB.

NOTE 5: Achieved via 2Tx.

NOTE 6: Generally, PC1 UE is not targeted for smartphone form factor.

NOTE 7: The UE power class 1 requirements for Band n14 are applicable for public safety scenario only.

If a UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:

- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is absent and the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than 50% (The exact evaluation period is no less than one radio frame); or
- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is not absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-PC2-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or

- if the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is not absent and half the percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-PC1dot5-MPE-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or
- if the IE P-Max as defined in TS 38.331 [7] is provided and set to the maximum output power of the default power class or lower;
- shall apply all requirements for the default power class to the supported power class and set the configured transmitted power as specified in clause 6.2.4;
- else if the UE does not support a power class with higher maximum output power than PC2; or
- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is absent and the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than 25% (The exact evaluation period is no less than one radio frame); or
- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is not absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than  $0.5 \cdot \text{maxUplinkDutyCycle-PC2-FR1}$  (The exact evaluation period is no less than one radio frame); or
- if the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is not absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-PC1dot5-MPE-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or
- if the IE P-Max as defined in TS 38.331 [7] is provided and set to the maximum output power of the power class 2 or lower;
- shall apply all requirements for power class 2 to the supported power class and set the configured transmitted power as specified in clause 6.2.4;
- else shall apply all requirements for the supported power class and set the configured transmitted power as specified in clause 6.2.4.

## 6.2.11 Void

## 6.2.2 UE maximum output power reduction

UE is allowed to reduce the maximum output power due to higher order modulations and transmit bandwidth configurations. For UE power class 2 and 3 and UE power class 1, the allowed maximum power reduction (MPR) is defined in Table 6.2.2-2, Table 6.2.2-1 and Table 6.2.2-5, respectively for channel bandwidths  $\leq 100$  MHz. For UE power class 1.5, the allowed maximum power reduction (MPR) is defined in Table 6.2D.2-2 and Table 6.2D.2-3 in accordance with the indicated *modifiedMPR-Behavior* specified in Table L.1-1 for channel bandwidths  $\leq 100$  MHz. . When A UE that indicates PC1.5 for a given band is limited to PC2 by the rules in clause 6.2.1, the MPR requirements in Table 6.2.2-2 apply. Unless otherwise specified, ‘pi/2 BPSK’ refers to both variants of pi/2 BPSK referenced in table 6.2.2-1.

If the relative channel bandwidth  $\leq 4\%$  for TDD bands or  $\leq 3\%$  for FDD band, the  $\Delta\text{MPR}$  is set to zero.

If the relative channel bandwidth  $> 4\%$  for TDD bands or  $> 3\%$  for FDD bands, the  $\Delta\text{MPR}$  is defined in Table 6.2.2-3.

Where relative channel bandwidth =  $2 \cdot \text{BW}_{\text{Channel}} / (\text{F}_{\text{UL\_low}} + \text{F}_{\text{UL\_high}})$

The allowed MPR for SRS, PUCCH formats 0, 1, 3 and 4, and PRACH shall be as specified for QPSK modulated DFT-s-OFDM of equivalent RB allocation. The allowed MPR for PUCCH format 2 shall be as specified for QPSK modulated CP-OFDM of equivalent RB allocation.

**Table 6.2.2-1 Maximum power reduction (MPR) for power class 3**

| Modulation | MPR (dB)            |                      |                      |
|------------|---------------------|----------------------|----------------------|
|            | Edge RB allocations | Outer RB allocations | Inner RB allocations |

|            |                            |              |              |              |
|------------|----------------------------|--------------|--------------|--------------|
| DFT-s-OFDM | Pi/2 BPSK w/ Rel-15 DMRS   | $\leq 3.5^1$ | $\leq 1.2^1$ | $\leq 0.2^1$ |
|            |                            | $\leq 0.5^2$ | $\leq 0.5^2$ | $0^2$        |
|            | Pi/2 BPSK w Pi/2 BPSK DMRS | $\leq 0.5^2$ | $0^2$        | $0^2$        |
|            | QPSK                       | $\leq 1$     |              | 0            |
|            | 16 QAM                     | $\leq 2$     |              | $\leq 1$     |
|            | 64 QAM                     | $\leq 2.5$   |              |              |
| CP-OFDM    | 256 QAM                    | $\leq 4.5$   |              |              |
|            | QPSK                       | $\leq 3$     |              | $\leq 1.5$   |
|            | 16 QAM                     | $\leq 3$     |              | $\leq 2$     |
|            | 64 QAM                     | $\leq 3.5$   |              |              |
|            | 256 QAM                    | $\leq 6.5$   |              |              |

NOTE 1: Applicable for UE operating in TDD mode with Pi/2 BPSK modulation and UE indicates support for UE capability *powerBoosting-pi2BPSK* and if the IE *powerBoostPi2BPSK* is set to 1 and 40 % or less slots in radio frame are used for UL transmission for bands n40, n41, n77, n78 and n79. The reference power of 0 dB MPR is 26 dBm.

NOTE 2: Applicable for conditions where note 1 does not apply.

Table 6.2.2-2 Maximum power reduction (MPR) for power class 2

| Modulation |           | MPR (dB)            |                      |                      |

|            | 16 QAM                     | $\leq 3$            |                      | $\leq 2$             |
|            | 64 QAM                     | $\leq 3.5$          |                      |                      |
|            | 256 QAM                    | $\leq 6.5$          |                      |                      |

Where the following parameters are defined to specify valid RB allocation ranges for Outer and Inner RB allocations:

$N_{RB}$  is the maximum number of RBs for a given Channel bandwidth and sub-carrier spacing defined in Table 5.3.2-1.  
 $RB_{Start,Low} = \max(1, \text{floor}(L_{CRB}/2))$

where  $\max()$  indicates the largest value of all arguments and  $\text{floor}(x)$  is the greatest integer less than or equal to  $x$ .

$$RB_{Start,High} = N_{RB} - RB_{Start,Low} - L_{CRB}$$

The RB allocation is an Inner RB allocation if the following conditions are met

$$RB_{Start,Low} \leq RB_{Start} \leq RB_{Start,High}, \text{ and}$$

$$L_{CRB} \leq \text{ceil}(N_{RB}/2)$$

where  $\text{ceil}(x)$  is the smallest integer greater than or equal to  $x$ .

An Edge RB allocation is the one for which the RB(s) is (are) allocated at the lowermost or uppermost edge of the channel  $L_{CRB} \leq 2$  RBs.

The RB allocation is an Outer RB allocation for all other allocations which are not an Inner RB allocation or Edge RB allocation.

If CP-OFDM allocation satisfies following conditions, it is considered as almost contiguous allocation

$$N_{RB\_gap} / (N_{RB\_alloc} + N_{RB\_gap}) \leq 0.25$$

and  $N_{RB\_alloc} + N_{RB\_gap}$  is larger than 106, 51 or 24 RBs for 15 kHz, 30 kHz or 60 kHz respectively where  $N_{RB\_gap}$  is the total number of unallocated RBs between allocated RBs and  $N_{RB\_alloc}$  is the total number of allocated RBs. The size and location of allocated and unallocated RBs are restricted by RBG parameters specified in clause 6.1.2.2 of TS 38.214 [10]. For UE that indicates support for *almostContiguousCP-OFDM-UL*, the almost contiguous signals in power class 1.5, power class 2 and 3, the allowed maximum power reduction defined in Table 6.2.2-2, Table 6.2.2-1 and Tables 6.2D.2-1 to 6.2D.2-3 are increased by

$$\text{CEIL}\{ 10 \log_{10}(1 + N_{RB\_gap} / N_{RB\_alloc}), 0.5 \} \text{ dB},$$

where  $\text{CEIL}\{x, 0.5\}$  means  $x$  rounding upwards to closest 0.5dB. The parameter of  $L_{CRB}$  which is used to specify valid RB allocation ranges for Outer and Inner RB allocations is replaced by  $(N_{RB\_alloc} + N_{RB\_gap})$  for almost contiguous allocation cases

For the UE maximum output power modified by MPR, the power limits specified in clause 6.2.4 apply.

## 6.2.3 UE additional maximum output power reduction

### 6.2.3.1 General

Additional emission requirements can be signalled by the network. Each additional emission requirement is associated with a unique network signalling (NS) value indicated in RRC signalling by an NR frequency band number of the applicable operating band and an associated value in the field *additionalSpectrumEmission*. Throughout this specification, the notion of indication or signalling of an NS value refers to the corresponding indication of an NR frequency band number of the applicable operating band, the IE field *freqBandIndicatorNR* and an associated value of *additionalSpectrumEmission* in the relevant RRC information elements [7].

To meet the additional requirements, additional maximum power reduction (A-MPR) is allowed for the maximum output power as specified in Table 6.2.1-1. Unless stated otherwise, the total reduction to UE maximum output power is  $\max(\text{MPR} + \Delta\text{MPR}, \text{A-MPR})$  where MPR and  $\Delta\text{MPR}$  are defined in clause 6.2.2. Outer and inner allocation notation used in clause 6.2.3 is defined in clause 6.2.2. Unless stated otherwise, Edge RB allocations get the same AMPR as Outer RB allocations. In absence of modulation and waveform types the A-MPR applies to all modulation and waveform types.

Table 6.2.3.1-1 specifies the additional requirements with their associated network signalling values and the allowed A-MPR and applicable operating band(s) for each NS value. In case of a power class 3 UE, when IE *powerBoostPi2BPSK* is set to 1, power class 2 A-MPR values apply. The mapping of NR frequency band numbers and values of the *additionalSpectrumEmission* to network signalling labels is specified in Table 6.2.3.1-1A.

For almost contiguous allocations in CP-OFDM waveforms in power class 1.5, 2 and 3, the allowed A-MPR defined in clause 6.2.3 is increased by  $\text{CEIL}\{10 \log_{10}(1 + N_{\text{RB\_gap}} / N_{\text{RB\_alloc}}), 0.5\}$  dB, where  $\text{CEIL}\{x, 0.5\}$  means  $x$  rounding upwards to closest 0.5dB,  $N_{\text{RB\_gap}}$  is the total number of unallocated RBs between allocated RBs and  $N_{\text{RB\_alloc}}$  is the total number of allocated RBs, and the parameter  $L_{\text{CRB}}$  is replaced by  $N_{\text{RB\_alloc}} + N_{\text{RB\_gap}}$  in specifying the RB allocation regions.

Unless otherwise specified, pi/2 BPSK in following A-MPR tables refers to both variants of pi/2 BPSK referenced in 6.2.2 tables 6.2.2-1.

**Table 6.2.3.1-1: Additional maximum power reduction (A-MPR)**

| Network signalling label | Requirements (clause)   | NR Band                    | Channel bandwidth (MHz)                                    | Resources blocks ( $N_{\text{RB}}$ ) | A-MPR (dB)                                                                   |

| NS_100                   | 6.5.2.4.2             | n1, n2, n3, n5, n8, n18, n25, n26, n65, n66, n80, n81, n84, n86, n89 (NOTE 1) |                                                 |                                       | Table 6.2.3.1-2                                |

NOTE 1: This NS can be signalled for NR bands that have UTRA services deployed.

NOTE 2: No A-MPR is applied for 5 MHz  $BW_{Channel}$  where the upper channel edge is  $\geq 1930$  MHz, 10 MHz  $BW_{Channel}$  where the upper channel edge is  $\geq 1950$  MHz and 15 MHz  $BW_{Channel}$  where the upper channel edge is  $\geq 1955$  MHz and 20 MHz  $BW_{Channel}$  where the upper channel edge is  $\geq 1970$  MHz.

NOTE 3: Applicable when the NR carrier is within 1447.9 – 1462.9 MHz.

NOTE 4: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980 MHz.

NOTE 5: Applicable when the NR carrier is within 2545 – 2575 MHz.  $BW_{Channel}$  less than 30 MHz are addressed in Table 6.5.3.2-1.

NOTE 6: This NS value is applicable for cells in the range 3450 – 3550 MHz for operations in the USA. This NS value does not indicate any additional spurious emission and maximum output power reduction requirements.

NOTE 7: The 1Tx architecture is assumed. For power class 2 UE indicating  $txDiversity-r16$  [TS 38.306], the additional relaxation of [2] dB is applicable.

NOTE 8: The NS\_01 label with the field *additionalPmax* [7] absent is default for all NR bands.

NOTE 9: Void

NOTE 10: This NS value is applicable for cells below 3980 MHz that are partly or fully within the range 3650-3980 MHz for operations in Canada. This NS value does not indicate any additional spurious emission and maximum output power reduction requirements.

Table 6.2.3.1-1A: Mapping of network signalling label

| NR band           | Value of <i>additionalSpectrumEmission</i> |        |        |        |        |       |   |   |
|-------------------|--------------------------------------------|--------|--------|--------|--------|-------|---|---|

|                     | 256 QAM   | $\leq 6.5$ |
| NOTE 1: Void        |           |            |
| NOTE 2: Void        |           |            |

### 6.2.3.2 A-MPR for NS\_04

For NS\_04, A-MPR is not added to MPR. Also, when NS\_04 is signalled, MPR shall be set to zero in the  $P_{\text{CMAX}}$  equations to avoid double counting MPR.

Allowed maximum power reduction is defined as  $\text{A-MPR} = \max(\text{MPR}, \text{A-MPR}')$ ,

Note that  $\text{A-MPR}' = 0$  dB means only MPR is applied,

where  $\text{A-MPR}'$  is defined as

```

if  $\text{RB}_{\text{start}} \leq f_{\text{start,max,IMD3}} / (12\text{-SCS})$  and  $\text{LCRB} \leq \text{AW}_{\text{max,IMD3}} / (12\text{-SCS})$  and  $F_{\text{C}} - \text{BW}_{\text{channel}}/2 < F_{\text{UL\_low}} + \text{offset}_{\text{IMD3}}$ ,
then
    the A-MPR' is defined according to Table 6.2.3.2-2 PC3_A2 relative to 23 dBm for power class 3,
    PC2_A4 relative to 26 dBm for power class 2, and PC1.5_A6 relative to 29 dBm for power class 1.5,
else,
if  $\text{RB}_{\text{start}} \leq \text{LCRB}/2 + \Delta_{\text{start}} / (12\text{-SCS})$  and  $\text{LCRB} \leq \text{AW}_{\text{max,regrowth}} / (12\text{-SCS})$  and  $F_{\text{C}} - \text{BW}_{\text{channel}}/2 < F_{\text{UL\_low}} + \text{offset}_{\text{regrowth}}$ ,
then
    the A-MPR' is defined according to Table 6.2.3.2-2 PC3_A1 relative to 23 dBm for power class 3,
    PC2_A3 relative to 26 dBm for power class 2, , and PC1.5_A5 relative to 29 dBm for power class 1.5,
else
    A-MPR' = 0 dB and apply MPR.

```

With the parameters defined in Table 6.2.3.2-1.

**Table 6.2.3.2-1: Parameters for region edges and frequency offsets**

| Parameter                                               | Symbol                            | Value                                                 |                                                       | Related condition                                                                                         |
|---------------------------------------------------------|-----------------------------------|-------------------------------------------------------|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
|                                                         |                                   | CP-OFDM                                               | DFT-s-OFDM                                            |                                                                                                           |
| Max allocation start in IMD3 region                     | $f_{\text{start,max,IMD3}}$       | $0.33 \text{ BW}_{\text{channel}}$                    |                                                       | $\text{RB}_{\text{start}} \leq f_{\text{start,max,IMD3}} / (12\text{SCS})$                                |
| Max allocation BW in IMD3 region                        | $\text{AW}_{\text{max,IMD3}}$     | 4 MHz                                                 |                                                       | $\text{LCRB} \leq \text{AW}_{\text{max,IMD3}} / (12\text{SCS})$                                           |
| Freq. offset required to avoid A-MPR in IMD3 region     | $\text{offset}_{\text{IMD3}}$     | $\text{BW}_{\text{channel}} - 6 \text{ MHz}$          |                                                       | $F_{\text{C}} - \text{BW}_{\text{channel}}/2 \geq F_{\text{UL\_low}} + \text{offset}_{\text{IMD3}}$       |
| Right edge of regrowth region                           | $\Delta_{\text{start}}$           | $0.08 \text{ BW}_{\text{channel}}$                    |                                                       | $\text{RB}_{\text{start}} \leq \text{LCRB}/2 + \Delta_{\text{start}} / (12\text{SCS})$                    |
| Max allocation BW in regrowth region                    | $\text{AW}_{\text{max,regrowth}}$ | 100 MHz                                               |                                                       | $\text{LCRB} \leq \text{Min}(\text{LCRB}_{\text{Max}}, \text{AW}_{\text{max,regrowth}} / (12\text{SCS}))$ |
| Freq. offset required to avoid A-MPR in regrowth region | $\text{offset}_{\text{regrowth}}$ | Max (10 MHz, $0.25 * \text{BW}_{\text{channel}}$ MHz) | Max (10 MHz, $0.45 * \text{BW}_{\text{channel}}$ MHz) | $F_{\text{C}} - \text{BW}_{\text{channel}}/2 \geq F_{\text{UL\_low}} + \text{offset}_{\text{regrowth}}$   |

Table 6.2.3.2-2: A-MPR' values Access

|                     | 256 QAM   | ≤ 6.5       | ≤ 8    | ≤ 7.5  | ≤ 10   | ≤ 9                   | ≤ 11.5                |

NOTE 1: PC1.5 assumes 2Tx.

### 6.2.3.3 A-MPR for NS<sub>10</sub>

Table 6.2.3.3-1: A-MPR for NS<sub>10</sub>

| Channel bandwidth (MHz) | Parameters             | Region A |
|-------------------------|------------------------|----------|
| 15                      | RB <sub>start</sub>    | 0 – 10   |
|                         | L <sub>CRB</sub> (RBs) | 1 – 20   |
|                         | A (dB)                 | ≤ 3      |
| 20                      | RB <sub>start</sub>    | 0 – 15   |
|                         | L <sub>CRB</sub> (RBs) | 1 – 20   |
|                         | A (dB)                 | ≤ 6      |

NOTE 1: RB<sub>start</sub> indicates the lowest RB index of transmitted resource blocks

NOTE 2: L<sub>CRB</sub> is the length of a contiguous resource block allocation

NOTE 3: For intra-subframe frequency hopping which intersects Region A, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects Region A, notes 1 and 2 apply on a T<sub>no\_hopping</sub> basis.

NOTE 4: For intra-subframe frequency hopping which intersect Region A, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects Region A, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects Region A, the larger A-MPR value may be applied for the subslot.

NOTE 5: The A-MPR for DFT-s-OFDM is the total backoff and is obtained by taking the maximum value of MPR + A-MPR specified in Table 6.2.3-1 and Table 6.2.4-1 in TS 36.101 and A value specified in Table 6.2.3.3-1.

NOTE 6: The A-MPR for CP-OFDM is the total backoff and is obtained by adding the A value in Table 6.2.3.3-1 to the corresponding MPR specified in Table 6.2.2-1.

### 6.2.3.4 A-MPR for NS<sub>05</sub> and NS<sub>05U</sub>

Table 6.2.3.4-1: A-MPR regions for NS\_05 and NS\_05U (Power Class 3)

| Channel Bandwidth (MHz)                                                              | Carrier Centre Frequency, $F_c$ (MHz) | Region A                       |                             |       | Region B                                                      |                            |       | Region C                        |                                |       |
|--------------------------------------------------------------------------------------|---------------------------------------|--------------------------------|-----------------------------|-------|---------------------------------------------------------------|----------------------------|-------|---------------------------------|--------------------------------|-------|
|                                                                                      |                                       | $RB_{start}$                   | $L_{CRB}$                   | A-MPR | $RB_{start}$                                                  | $L_{CRB}$                  | A-MPR | $RB_{start}$                    | $L_{CRB}$                      | A-MPR |
| 5                                                                                    | $1922.5 \leq F_c < 1927.5$            | $< 1.62 \text{ MHz/12/SCS}$    | $> 2.52 \text{ MHz/12/SCS}$ | A3    |                                                               |                            |       |                                 |                                |       |
| 10                                                                                   | $1925 \leq F_c < 1935$                | $\leq 1.62 \text{ MHz/12/SCS}$ | $> 0$                       | A1    | $> 1.62 \text{ MHz/12/SCS}$<br>$\leq 3.60 \text{ MHz/12/SCS}$ | $> 5.4 \text{ MHz/12/SCS}$ | A7    | $\geq 7.2 \text{ MHz/12/SCS}$   | $\leq 1.08 \text{ MHz/12/SCS}$ | A2    |
| 10                                                                                   | $1935 \leq F_c < 1945$                |                                | $> 4.5 \text{ MHz/12/SCS}$  | A4    |                                                               |                            |       |                                 |                                |       |

Table 6.2.3.6-3: Void

When NS\_43U is signalled for 5 and 10 MHz channel bandwidths A-MPR is defined in Table 6.2.3.1-2 except for DFT-s-OFDM QPSK when  $L_{CRB} > 5.4$  MHz/12/SCS the A-MPR is 2.5 dB. For 15 MHz channel bandwidth Table 6.2.3.6-4 applies.

Table 6.2.3.6-4: A-MPR for NS\_43U

| Modulation/Waveform |           | 15 MHz<br>Outer / Inner (dB) |
|---------------------|-----------|------------------------------|
| DFT-s-OFDM          | Pi/2 BPSK | $\leq 9$                     |
|                     | QPSK      | $\leq 9$                     |
|                     | 16 QAM    | $\leq 9$                     |
|                     | 64 QAM    | $\leq 9$                     |
|                     | 256 QAM   | $\leq 9$                     |
| CP-OFDM             | QPSK      | $\leq 9$                     |
|                     | 16 QAM    | $\leq 9$                     |
|                     | 64 QAM    | $\leq 9$                     |
|                     | 256 QAM   | $\leq 9$                     |

### 6.2.3.7 A-MPR for NS\_03 and NS\_03U

Table 6.2.3.7-1 A-MPR for NS\_03

Table 6.2.3.7-1 A-MPR for NS\_03

| Modulation/Waveform | Outer (dB) | Inner (dB) |
|---------------------|------------|------------|
|---------------------|------------|------------|

|              |              |       |     |
|--------------|--------------|-------|-----|
| DFT-s-OFDM   | PI/2<br>BPSK | ≤ 1.5 | N/A |
|              | QPSK         | ≤ 2   |     |
|              | 16<br>QAM    | ≤ 3   |     |
|              | 64<br>QAM    | ≤ 3.5 |     |
|              | 256<br>QAM   | ≤ 5.5 |     |
| CP-OFDM      | QPSK         | ≤ 4   |     |
|              | 16<br>QAM    | ≤ 4   |     |
|              | 64<br>QAM    | ≤ 4.5 |     |
|              | 256<br>QAM   | ≤ 7.5 |     |
| NOTE 1: Void |              |       |     |
| NOTE 2: Void |              |       |     |

In case UE operates in a band where NS\_03U applies and it receives *additionalSpectrumEmission* value of 3 then A-MPR values specified in Table 6.2.3.7-1 apply with an exception that DFT-s-OFDM Pi/2 BPSK A-MPR is 2 dB.

### 6.2.3.8 A-MPR for NS\_37

**Table 6.2.3.8-1: A-MPR regions for B11/B21 protection (NS\_37) (1447.9 - 1462.9 MHz)**

| Channel Bandwidth (MHz)                                    | Carrier Centre Frequency, $F_c$ (MHz) | Region A (Outer/Inner) |                    |           | Region B (Outer/Inner) |                     |           | Region C (Outer/Inner) |                     |           |
|------------------------------------------------------------|---------------------------------------|------------------------|--------------------|-----------|------------------------|---------------------|-----------|------------------------|---------------------|-----------|
|                                                            |                                       | RB <sub>start</sub>    | LCRB               | A-MPR     | RB <sub>start</sub>    | LCRB                | A-MPR     | RB <sub>start</sub>    | LCRB                | A-MPR     |
| 10                                                         | $1452.9 < F_c \leq 1457.9$            | $\geq 0$               | $> 7.2$ MHz/12/SCS | $\leq A1$ | N/A                    | N/A                 | N/A       | N/A                    | N/A                 | N/A       |
| 15                                                         | $F_c = 1455.4$                        | $\geq 0$               | $> 9.9$ MHz/12/SCS | $\leq A1$ | $< 0.54$ MHz/12/SCS    | $< 1.08$ MHz/12/SCS | $\leq A2$ | $> 13.86$ MHz/12/SCS   | $< 1.08$ MHz/12/SCS | $\leq A2$ |
| NOTE 1: The A-MPR values are specified in Table 6.2.3.8-2  |                                       |                        |                    |           |                        |                     |           |                        |                     |           |
| NOTE 2: Void                                               |                                       |                        |                    |           |                        |                     |           |                        |                     |           |
| NOTE 3: Void                                               |                                       |                        |                    |           |                        |                     |           |                        |                     |           |
| NOTE 4: No A-MPR for SCS = 60 kHz for region B and C only. |                                       |                        |                    |           |                        |                     |           |                        |                     |           |

**Table 6.2.3.8-2: A-MPR for NS\_37**

| Modulation/Waveform |           | A1 (dB) |       | A2 (dB)     |
|---------------------|-----------|---------|-------|-------------|
|                     |           | Outer   | Inner | Outer/Inner |

### 6.2.3.30 A-MPR for NS\_56

For 5 MHz channel centered on frequencies ( $F_c$ ) = 1630.0, 1630.3 MHz, A-MPR is defined as

```

if  $RB_{start} \leq \lceil 3/SCS/15 \text{ kHz} \rceil$  and  $L_{CRB} \leq \lceil 17/SCS/15 \text{ kHz} \rceil$ ,
then
    the A-MPR = 14 dB for SCS = 15 kHz and AMPR = 8 dB for SCS  $\geq$  30 kHz,
else,
if  $RB_{start} \leq \lceil 3/(SCS/15 \text{ kHz}) \rceil$  and  $L_{CRB} > \lceil 17/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 6 dB,
else,
if  $RB_{start} \leq \lceil 8/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 4 dB.

```

For 5 MHz channel centered on frequencies ( $F_c$ ) = 1635.0, 1649.0, 1654.0 MHz, no A-MPR is needed.

For Channel 10 MHz with center frequency of 1632.5 MHz, A-MPR is defined as

```

if  $RB_{start} < \lceil 3/(SCS/15 \text{ kHz}) \rceil$  and  $L_{CRB} \leq \lceil 8/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 12 dB for SCS = 15 kHz and AMPR = 8 dB for SCS  $\geq$  30 kHz,
else,
if  $RB_{start} < \lceil 9/(SCS/15 \text{ kHz}) \rceil$ , and  $L_{CRB} > \lceil 8/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 8 dB,
else,
if  $RB_{start} \leq \lceil 18/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 6 dB,
else,
if  $RB_{start} \geq \lfloor 40/(SCS/15 \text{ kHz}) \rfloor$ , and  $L_{CRB} \leq \lceil 7/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 5 dB,
else,
if  $RB_{start} \geq \lfloor 40/(SCS/15 \text{ kHz}) \rfloor$  and  $L_{CRB} > \lceil 7/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 3 dB,
else,
if  $RB_{start} \geq \lfloor 35/(SCS/15 \text{ kHz}) \rfloor$  and  $L_{CRB} \leq \lceil 7/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 4 dB,
else,
if  $RB_{start} \geq \lfloor 35/(SCS/15 \text{ kHz}) \rfloor$  and  $L_{CRB} > \lceil 7/(SCS/15 \text{ kHz}) \rceil$ ,
then
    the A-MPR = 2 dB.

```

For 10 MHz channel centered on frequency of 1651.5 MHz, no A-MPR is needed.

## 6.2.4 Configured transmitted power

The UE is allowed to set its configured maximum output power  $P_{CMAX,f,c}$  for carrier  $f$  of serving cell  $c$  in each slot. The configured maximum output power  $P_{CMAX,f,c}$  is set within the following bounds:

$$P_{CMAX_{L,f,c}} \leq P_{CMAX_{f,c}} \leq P_{CMAX_{H,f,c}} \text{ with}$$

$$P_{CMAX_{L,f,c}} = \min \{ P_{EMAX,c} - \Delta T_{C,c}, (P_{PowerClass} - \Delta P_{PowerClass}) - \max(\max(MPR_c + \Delta MPR_c, A-MPR_c) + \Delta T_{IB,c} + \Delta T_{C,c} + \Delta T_{RxSRS}, P-MPR_c) \}$$

$$P_{CMAX_{H,f,c}} = \min \{ P_{EMAX,c}, P_{PowerClass} - \Delta P_{PowerClass} \}$$

where

$P_{\text{EMAX},c}$  is the value given by either the *p-Max* IE or the field *additionalPmax* of the *NR-NS-PmaxList* IE, whichever is applicable according to TS 38.331[7];

$P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.1-1 and in Table 6.2F.1-1 for shared spectrum access operation, without taking into account the tolerance specified in the Table 6.2.1-1 and in Table 6.2F.1-1 for shared spectrum access operation;

When the IE *powerBoostPi2BPSK* is set to 1,  $P_{\text{EMAX},c}$  is increased by +3 dB for a power class 3 UE operating in TDD bands n40, n41, n77, n78, and n79 with Pi/2 BPSK modulation with Rel-15 DMRS and UE indicates support for UE capability *powerBoosting-pi2BPSK* and 40% or less symbols in certain evaluation period are used for UL transmission when  $P_{\text{EMAX},c} \geq 20$  dBm (The exact evaluation period is no less than one radio frame).

When the IE *powerBoostPi2BPSK* is set to 1,  $\Delta P_{\text{PowerClass}} = -3$  dB for a power class 3 UE operating in TDD bands n40, n41, n77, n78, and n79 with Pi/2 BPSK modulation with Rel-15 DMRS and UE indicates support for UE capability *powerBoosting-pi2BPSK* and 40% or less slots in radio frame are used for UL transmission.

$\Delta P_{\text{PowerClass}} =$

- 3 dB for a power class 2 UE or 6 dB for a power class 1.5 UE when P-max of 23 dBm or lower is indicated; or when the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is absent and the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than 50%; or when the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is not absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-PC2-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or when the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is not absent and half the percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-PC1dot5-MPE-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame).
- 3 dB for a power class 1.5 UE when P-max of between 23 dBm and 26 dB is indicated; or when the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is absent and the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is absent and the percentage of uplink symbols transmitted in a certain evaluation period is between 25% and 50%; or when the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is not absent and the percentage of uplink symbols transmitted in a certain evaluation period is between *maxUplinkDutyCycle-PC2-FR1* and *maxUplinkDutyCycle-PC2-FR1/2* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or when the field of UE capability *maxUplinkDutyCycle-PC1dot5-MPE-FR1* is not absent and the percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-PC1dot5-MPE-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame).
- 3dB when the UE is configured with SUL configurations and the requirements of default power class are applied as specified in sub-clause 6.2C.1 on the band where UE indicates power class 2;
- 3dB is applied during SRS transmission occasions with usage in SRS-ResourceSet set as 'antennaSwitching' with configured SRS resources in each SRS resource set(s) consisting of one SRS port when PC2 UE with txDiversity-r16 capability or PC1.5 UE further indicates SRS-TxSwitch capability 't1r2' or 't1r4' or 't1r1-t1r2' or 't1r1-t1r2-t1r4';
- 0 dB otherwise;

$\Delta T_{\text{IB},c}$  is the additional tolerance for serving cell c as specified in clause 6.2A.4.2 for NR CA, clause 6.2C.2 for SUL, or TS 38.101-3 clause 6.2B.4.2 for EN-DC;  $\Delta T_{\text{IB},c} = 0$  dB otherwise; In case the UE supports more than one of band combinations for V2X operating bands for concurrent operation, CA, SUL or DC, and an operating band belongs to more than one band combinations then

- a) When the operating band frequency range is  $\leq 1$  GHz, the applicable additional  $\Delta T_{\text{IB},c}$  shall be the average value for all band combinations defined in clause 6.2A.4.2, 6.2C.2 in this specification and 6.2B.4.2 in TS 38.101-3 [3], truncated to one decimal place that apply for that operating band among the supported band combinations. In case there is a harmonic relation between low band UL and high band DL, then the maximum  $\Delta T_{\text{IB},c}$  among the different supported band combinations involving such band shall be applied

- b) When the operating band frequency range is  $> 1$  GHz, the applicable additional  $\Delta T_{IB,c}$  shall be the maximum value for all band combinations defined in clause 6.2A.4.2, 6.2C.2 in this specification and 6.2B.4.2 in TS 38.101-3 [3] for the applicable operating bands.

$\Delta T_{C,c} = 1.5\text{dB}$  when NOTE 3 in Table 6.2.1-1 in 38.101-1 applies for a serving cell  $c$ , otherwise  $\Delta T_{C,c} = 0$  dB ;

$\text{MPR}_c$  and  $\text{A-MPR}_c$  for serving cell  $c$  are specified in clause 6.2.2 and clause 6.2.3, respectively and in clause 6.2F.2 and clause 6.2F.3 respectively for shared spectrum access operation;

$\Delta \text{MPR}_c$  for serving cell  $c$  is specified in clause 6.2.2 and in clause 6.2F.2 for shared spectrum access operation.

$\Delta T_{\text{RxSRS}}$  is applied during SRS transmission occasions with *usage* in *SRS-ResourceSet* set as 'antennaSwitching' when

- UE transmits SRS on the second SRS resource in every configured SRS resource set when the *SRS-TxSwitch* capability is indicated as 't1r2' or 't1r1-t1r2'
- UE transmits SRS on the second, third and fourth SRS resources of the total 4 SRS resources from all configured SRS resource set(s) consisting of one SRS port when the *SRS-TxSwitch* capability is indicated as 't1r4' or, 't1r4-t2r4' or 't1r1-t1r2-t1r4' or, 't1r1-t1r2-t2r2-t1r4-t2r4'
- UE transmits SRS from the SRS port pair on the second SRS resource in every configured SRS resource set consisting of two SRS ports when the *SRS-TxSwitch* capability is indicated as 't2r4' or 't1r4-t2r4', or 't1r1-t1r2-t2r2-t2r4' or 't1r1-t1r2-t2r2-t1r4-t2r4', or
- UE transmits SRS to a DL-only carrier

The value of  $\Delta T_{\text{RxSRS}}$  is 4.5dB for bands whose  $F_{\text{UL\_high}}$  is higher than the  $F_{\text{UL\_low}}$  of n79 and 3 dB for bands whose  $F_{\text{UL\_high}}$  is lower than the  $F_{\text{UL\_low}}$  of n79 when the device is power class 3 or power class 5 or power class 1.5 in the band, or when the device is power class 2 in the band and  $\Delta P_{\text{PowerClass}} = 3$  dB, or when UE indicating *txDiversity-r16*.

The value of  $\Delta T_{\text{RxSRS}}$  is 7.5dB for bands whose  $F_{\text{UL\_high}}$  is higher than the  $F_{\text{UL\_low}}$  of n79 and 6 dB for bands whose  $F_{\text{UL\_high}}$  is lower than the  $F_{\text{UL\_low}}$  of n79 during SRS transmission occasions with configured SRS resources consisting of one SRS port when the device is power class 2 in the band and  $\Delta P_{\text{PowerClass}} = 0$  dB and not indicating *txDiversity-r16*.

For other SRS transmissions  $\Delta T_{\text{RxSRS}}$  is zero;

$\text{P-MPR}_c$  is the power management maximum power reduction for

- ensuring compliance with applicable electromagnetic energy absorption requirements and addressing unwanted emissions / self desense requirements in case of simultaneous transmissions on multiple RAT(s) for scenarios not in scope of 3GPP RAN specifications;
- ensuring compliance with applicable electromagnetic energy absorption requirements in case of proximity detection is used to address such requirements that require a lower maximum output power.

The UE shall apply  $\text{P-MPR}_c$  for serving cell  $c$  only for the above cases. For UE conducted conformance testing  $\text{P-MPR}_c$  shall be 0 dB

NOTE 1:  $\text{P-MPR}_c$  was introduced in the  $P_{\text{CMAX},f,c}$  equation such that the UE can report to the gNB the available maximum output transmit power. This information can be used by the gNB for scheduling decisions.

NOTE 2:  $\text{P-MPR}_c$  may impact the maximum uplink performance for the selected UL transmission path.

$T_{\text{REF}}$  and  $T_{\text{eval}}$  are specified in Table 6.2.4-1. For each  $T_{\text{REF}}$ , the  $P_{\text{CMAX},L,c}$  for serving cell  $c$  are evaluated per  $T_{\text{eval}}$  and given by the minimum value taken over the transmission(s) within the  $T_{\text{eval}}$ ; the minimum  $P_{\text{CMAX},L,f,c}$  over one or more  $T_{\text{eval}}$  is then applied for the entire  $T_{\text{REF}}$

**Table 6.2.4-1: Evaluation and reference periods for P<sub>cm</sub>**

| $T_{\text{REF}}$ | $T_{\text{eval}}$ | $T_{\text{eval}}$ with frequency hopping |
|------------------|-------------------|------------------------------------------|
|------------------|-------------------|------------------------------------------|

|                         |                         |                                                                      |
|-------------------------|-------------------------|----------------------------------------------------------------------|
| Physical channel length | Physical channel length | $\text{Min}(T_{\text{no\_hopping}}, \text{Physical Channel Length})$ |
|-------------------------|-------------------------|----------------------------------------------------------------------|

The measured configured maximum output power  $P_{\text{UMAX},f,c}$  shall be within the following bounds:

$$P_{\text{CMAX},L,f,c} - \text{MAX}\{T_{L,c}, T(P_{\text{CMAX},L,f,c})\} \leq P_{\text{UMAX},f,c} \leq P_{\text{CMAX},H,f,c} + T(P_{\text{CMAX},H,f,c}).$$

where the tolerance  $T(P_{\text{CMAX},f,c})$  for applicable values of  $P_{\text{CMAX},f,c}$  is specified in Table 6.2.4-1. The tolerance  $T_{L,c}$  is the absolute value of the lower tolerance for the applicable operating band as specified in Table 6.2.1-1 and in Table 6.2F.1-1 for shared spectrum access operation.

**Table 6.2.4-1:  $P_{\text{CMAX}}$  tolerance**

| $P_{\text{CMAX},f,c}$ (dBm)         | Tolerance $T(P_{\text{CMAX},f,c})$ (dB) |
|-------------------------------------|-----------------------------------------|
| $23 < P_{\text{CMAX},c} \leq 33$    | 2.0                                     |
| $21 \leq P_{\text{CMAX},c} \leq 23$ | 2.0                                     |
| $20 \leq P_{\text{CMAX},c} < 21$    | 2.5                                     |
| $19 \leq P_{\text{CMAX},c} < 20$    | 3.5                                     |
| $18 \leq P_{\text{CMAX},c} < 19$    | 4.0                                     |
| $13 \leq P_{\text{CMAX},c} < 18$    | 5.0                                     |
| $8 \leq P_{\text{CMAX},c} < 13$     | 6.0                                     |
| $-40 \leq P_{\text{CMAX},c} < 8$    | 7.0                                     |

## 6.2A Transmitter power for CA

### 6.2A.0 General

As an exception, HPUE applicability notes in 5.5A do not restrict power class indication for single configured UL CC with DL CA. UE can indicate power class for the single configured UL CC with DL CA as specified in Table 6.2.1-1 and if UE supports UL MIMO in this carrier, UE can indicate power class for the CA configuration as specified in Table 6.2D.1-1.

### 6.2A.1 UE maximum output power for CA

#### 6.2A.1.1 UE maximum output power for Intra-band contiguous CA

For uplink intra-band contiguous carrier aggregation, the maximum output power is specified in Table 6.2A.1.1-1. For downlink intra-band contiguous carrier aggregation with a single uplink component carrier configured in the NR band, the maximum output power is specified in Table 6.2.1-1 for power class 3 and other power classes if indicated in clause 5.5A.1.

**Table 6.2A.1.1-1: UE Power Class for intra-band contiguous CA**

| NR CA Configuration                                                                                                                                                                                                                                                                                                  | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 5 (dBm) | Tolerance (dB) |

| CA_n77C                                                                                                                                                                                                                                                                                                              |               |                |               |                | 23            | +2/-3          |               |                |
| CA_n78C                                                                                                                                                                                                                                                                                                              |               |                | 26            | +2/-3          | 23            | +2/-3          |               |                |
| CA_n79C                                                                                                                                                                                                                                                                                                              |               |                |               |                | 23            | +2/-3          |               |                |
| NOTE 1: An uplink CA configuration in which the band has NOTE 3 in Table 6.2.1-1 is allowed to reduce the lower tolerance limit by 1.5 dB when the transmission bandwidths of the band are confined within $F_{\text{UL\_low}} + 4 \text{ MHz}$ or $F_{\text{UL\_high}} - 4 \text{ MHz}$ and $F_{\text{UL\_high}}$ . |               |                |               |                |               |                |               |                |
| NOTE 2: $P_{\text{PowerClass}}$ is the maximum UE power specified without taking into account the tolerance.                                                                                                                                                                                                         |               |                |               |                |               |                |               |                |

- NOTE 3: For intra-band contiguous carrier aggregation the maximum power requirement shall apply to the total transmitted power over all component carriers (per UE).
- NOTE 4: Power class 3 is the default power class unless otherwise stated.

If a UE supports a different power class than the default UE power class for the band combination listed in Table 6.2A.1.1-1 and the supported power class enables the higher maximum output power than that of the default power class:

- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is absent and the percentage of total uplink symbols transmitted on all UL CCs in a certain evaluation period is larger than 50% (The exact evaluation period is no less than one radio frame); or
- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is not absent and the percentage of total uplink symbols transmitted on all UL CCs in a certain evaluation period is larger than *maxUplinkDutyCycle-PC2-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or
- if  $10 \log_{10} \sum P_{\text{EMAX},c}$  or  $P_{\text{EMAX},CA}$  which defined in clause 6.2A.4.1.1 is 23dBm or lower;
  - shall apply all requirements for the default power class to the supported power class and set the configured transmitted power as specified in clause 6.2A.4.1.1;
- else shall apply all requirements for the supported power class and set the configured transmitted power as specified in clause 6.2A.4.1.1.

### 6.2A.1.2 UE maximum output power for Intra-band non-contiguous CA

For intra-band non-contiguous carrier aggregation with one uplink carrier on the PCC, the requirements in clause 6.2.1 apply for power class 3 and other power classes if indicated in clause 5.5A.2. For intra-band non-contiguous carrier aggregation with two uplink carriers the maximum output power is specified in Table 6.2A.1.2-1.

**Table 6.2A.1.2-1: UE Power Class for intraband non-contiguous CA**

| NR CA Configuration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 5 (dBm) | Tolerance (dB) |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|----------------|---------------|----------------|---------------|----------------|---------------|----------------|
| CA_n41(2A)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |               |                | 26            | +2/-3          | 23            | +2/-3          |               |                |
| CA_n77(2A)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |               |                |               |                | 23            | +2/-3          |               |                |
| CA_n78(2A)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |               |                | 26            | +2/-3          | 23            | +2/-3          |               |                |
| NOTE 1: An uplink CA configuration in which the band has NOTE 3 in Table 6.2.1-1 is allowed to reduce the lower tolerance limit by 1.5 dB when the transmission bandwidths of the band are confined within $F_{UL\_low}$ and $F_{UL\_low} + 4 \text{ MHz}$ or $F_{UL\_high} - 4 \text{ MHz}$ and $F_{UL\_high}$ .<br>NOTE 2: $P_{\text{PowerClass}}$ is the maximum UE power specified without taking into account the tolerance.<br>NOTE 3: For intra-band non-contiguous carrier aggregation the maximum power requirement shall apply to the total transmitted power over all component carriers (per UE).<br>NOTE 4: Power class 3 is the default power class unless otherwise stated. |               |                |               |                |               |                |               |                |

If a UE supports a different power class than the default UE power class for the band combination listed in Table 6.2A.1.1-2 and the supported power class enables the higher maximum output power than that of the default power class:

- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is absent and the percentage of total uplink symbols transmitted on all UL CCs in a certain evaluation period is larger than 50% (The exact evaluation period is no less than one radio frame); or
- if the field of UE capability *maxUplinkDutyCycle-PC2-FR1* is not absent and the percentage of total uplink symbols transmitted on all UL CCs in a certain evaluation period is larger than *maxUplinkDutyCycle-PC2-FR1* as defined in TS 38.306 (The exact evaluation period is no less than one radio frame); or
- if  $10 \log_{10} \sum P_{\text{EMAX},c}$  or  $P_{\text{EMAX},CA}$  which defined in clause 6.2A.4.1.2 is 23dBm or lower;
  - shall apply all requirements for the default power class to the supported power class and set the configured transmitted power as specified in clause 6.2A.4.1.2;

- else shall apply all requirements for the supported power class and set the configured transmitted power as specified in clause 6.2A.4.1.2.

### 6.2A.1.3 UE maximum output power for Inter-band CA

For inter-band downlink carrier aggregation with one uplink carrier assigned to one NR band, the transmitter power requirements in Table 6.2.1-1 apply for power class 3 and other power classes if indicated in clause 5.5A.3.

For inter-band carrier aggregation with two uplink contiguous carrier assigned to one NR band, the transmitter power requirements specified in subclause 6.2A.1.1 apply.

For inter-band carrier aggregation with two uplink non-contiguous carrier assigned to one NR band, the transmitter power requirements specified in subclause 6.2A.1.2 apply. For inter-band uplink carrier aggregation with uplink assigned to two NR bands, UE maximum output power shall be measured over all component carriers from different bands. If each band has separate antenna connectors, maximum output power is defined as the sum of maximum output power from each UE antenna connector. The period of measurement shall be at least one sub frame (1 ms). The maximum output power is specified in Table 6.2A.1.3-1.

**Table 6.2A.1.3-1 UE Power Class for uplink inter-band CA (two bands)**

| Uplink CA Configuration | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm)   | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 5 (dBm) | Tolerance (dB) |
|-------------------------|---------------|----------------|-----------------|----------------|---------------|----------------|---------------|----------------|
| CA_n1A-n3A              |               |                |                 |                | 23            | +2/-3          |               |                |
| CA_n1A-n5A              |               |                |                 |                | 23            | +2/-3          |               |                |
| CA_n1A-n7A              |               |                |                 |                | 23            | +2/-3          |               |                |
| CA_n1A-n8A              |               |                |                 |                | 23            | +2/-3          |               |                |

NOTE 1: Void

NOTE 2: An uplink CA configuration in which at least one of the bands has NOTE 3 in Table 6.2.1-1 is allowed to reduce the lower tolerance limit by 1.5 dB when the transmission bandwidths of at least one of the bands is confined within  $F_{UL\_low}$  and  $F_{UL\_low} + 4$  MHz or  $F_{UL\_high} - 4$  MHz and  $F_{UL\_high}$ .

NOTE 3:  $P_{PowerClass}$  is the maximum UE power specified without taking into account the tolerance

NOTE 4: For inter-band carrier aggregation the maximum power requirement should apply to the total transmitted power over all component carriers (per UE).

NOTE 5: Power class 3 is the default power class unless otherwise stated.

NOTE 6: The UE supports PC3 within NR FDD band, and supports either PC3 or PC2 within NR TDD band.

NOTE 7: The UE that supports a PC2 uplink CA configuration with single carrier for each individual band and a composite of supporting PC3 within an NR TDD or FDD band and PC2 within a second NR TDD band may signal a *higherPowerLimit-r17* capability whereby the maximum output power indicated in the table may be exceeded in accordance with sub-clause 6.2A.4.1.3. The power classes referenced are according to the reported *ue-PowerClassPerBandPerBC-r17* if indicated or *ue-PowerClass* otherwise.

NOTE 8: The UE supports either PC3 or PC2 within each NR TDD band.

If a UE supports a different power class than the default UE power class for the band combination listed in Table 6.2A.1.3-1 and the supported power class enables the higher maximum output power than that of the default power class:

- if the field of UE capability *maxUplinkDutyCycle-interBandCA-PC2* is not absent and the average percentage of uplink symbols transmitted in a certain evaluation period is larger than *maxUplinkDutyCycle-interBandCA-PC2* as defined in TS 38.331 (The exact evaluation period is no less than one radio frame); or
- if  $10 \log_{10} \sum P_{EMAX,c}$  or  $P_{EMAX,CA}$  which defined in clause 6.2A.4.1.3 is 23dBm or lower;

- shall apply all requirements for the default power class to the supported power class and set the configured transmitted power as specified in clause 6.2A.4.1.3;
- else;
- shall apply all requirements for the supported power class and set the configured transmitted power as specified in clause 6.2A.4.1.3 (regardless of the average percentage of uplink symbols if the field of UE capability *maxUplinkDutyCycle-interBandCA-PC2* is absent).

The average percentage of uplink symbols is defined as  $50\% \times (\text{Duty}_{\text{NR},x} / \text{maxDuty}_{\text{NR},x} + \text{Duty}_{\text{NR},y} / \text{maxDuty}_{\text{NR},y})$ .  $\text{Duty}_{\text{NR},x}$ ,  $\text{Duty}_{\text{NR},y}$  represent the actual percentage of uplink symbols transmitted in the same evaluation period (The exact evaluation period is no less than one radio frame) for NR Band x, NR Band y respectively;  $\text{maxDuty}_{\text{NR},x}$ ,  $\text{maxDuty}_{\text{NR},y}$  represent the field of UE capability *maxUplinkDutyCycle-PC2-FR1* per band as defined in TS 38.331. For NR Band x or NR Band y,

- if power class of one or both of the bands within the band combination is power class 2 and the corresponding UE capability *maxUplinkDutyCycle-PC2-FR1* is absent;
- the corresponding  $\text{maxDuty}_{\text{NR},x}$  or  $\text{maxDuty}_{\text{NR},y}$  is equal to 50%;
- else if the band is configured with power class 3;
- the corresponding  $\text{maxDuty}_{\text{NR},x}$  or  $\text{maxDuty}_{\text{NR},y}$  is equal to 100%.

6.2A.1.5 Void

## 6.2A.2 UE maximum output power reduction for CA

### 6.2A.2.1 UE maximum output power reduction for Intra-band contiguous CA

For intra-band contiguous carrier aggregation the allowed Maximum Power Reduction (MPR) for the maximum output power in 6.2A.1.1-1 with contiguous RB allocation is specified in Table 6.2A.2.1-1 for UE power class 3 CA bandwidth classes B and C. The MPR with contiguous RB allocation is specified in Table 6.2A.2.1-1a for power class 2 CA bandwidth classes B and C when the signalling is absent for *dualPA-Architecture* IE, and for power class 2 CA bandwidth classe C when the signalling is indicated for *dualPA-Architecture* IE. The MPR with contiguous RB allocation is specified in Table 6.2A.2.1-1b for power class 2 CA bandwidth classes B and C with TxD supported.

In case the modulation format or waveform type is different on different component carriers then the requirement is set by rules applied to the waveform type (DFT-s-OFDM or CP-OFDM) and modulation order used in the configuration with the largest MPR.

Unless otherwise specified, pi/2 BPSK in following MPR tables refers to both variants of pi/2 BPSK referenced in clause 6.2.2 Table 6.2.2-1.

**Table 6.2A.2.1-1: Contiguous RB allocation for Power Class 3**

| Modulation |           | MPR for bandwidth class B(dB) |       | MPR for bandwidth class C(dB) |       |
|------------|-----------|-------------------------------|-------|-------------------------------|-------|
|            |           | inner                         | outer | inner                         | outer |
| DFT-s-OFDM | Pi/2 BPSK | 1.0                           | 3.5   | 2.5                           | 7     |
|            | QPSK      | 1.0                           | 3.5   | 2.5                           | 7     |
|            | 16QAM     | 1.5                           | 3.5   | 2.5                           | 7     |
|            | 64QAM     | 3.0                           | 4.0   | 5                             | 7     |
