5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first path (in time) of DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.7.4.1.2 NR UE Transmit Timing Test for FR2-2

### A.7.4.1.2.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeb and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in table A.7.4.1.2.1-1.

**Table A.7.4.1.2.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | NR TDD, SSB SCS 480 kHz, data SCS 480 kHz, BW 400 MHz |
| 3 | NR TDD, SSB SCS 960 kHz, data SCS 960 kHz, BW 400 MHz |
| NOTE: The UE is required to be tested in the configuration with the largest supported SCS | |

For this test a single NR cell is used. Tables A.7.4.1.2.1-2 and A.7.4.1.2.1-2A define the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.7.4.1.2.1-3.

**Table A.7.4.1.2.1-2: Cell Specific Test Parameters for UL Transmit Timing test**

| Parameter | Unit | Config | Test1 | Test2 |

#### A.7.4.1.2.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test:

1) Setup NR PCell according to parameters given in table A.7.4.1.2.2-1.
2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB.
   a. The $N_{TA}$ offset value (in $T_c$ units) is 13792
   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1
3) The test system shall adjust the timing of the DL path by values given in table A.7.4.1.2.2-1

**Table A.7.4.1.2.2-1 Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 120 | $+8*64T_c$ | $+4*64T_c$ |
| 480 | $+4*64T_c$ | $+2*64T_c$ |
| 960 | $+4*64T_c$ | $+2*64T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.
5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

The rate of correct transmit timing observed during repeated tests shall be at least 90 %.

### A.7.4.1.3 NR UE Transmit Timing Test with 2-TA for FR2 UE supporting *multiDCI-IntraCellMultiTRP-TwoTA-r18*

#### A.7.4.1.3.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeb and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits, for UE supporting *multiDCI-IntraCellMultiTRP-TwoTA-r18* and is configured with 2 TAGs for multi-DCI multi-TRP operation. UE is also configured with *dl-OrJointTCI-StateList* or *ul-TCI-State-List*. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in table A.7.4.1.3.1-1.

**Table A.7.4.1.3.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |

For this test a single NR cell is used. Tables A.7.4.1.3.1-2 and A.7.4.1.3.1-2A define the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.7.4.1.3.1-3.

For UE not support the capability of “rxTimingDiff-r18”, the UE is only required to be tested in Test1 and Test3.

For UE supports the capability of “rxTimingDiff-r18”, the UE is only required to be tested in Test2 and Test4.

**Table A.7.4.1.3.1-4: Void**

### A.7.4.1.3.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test:

1) Setup NR PCell according to parameters given in table A.7.4.1.3.1-1.

2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB for each TAG.

   a. The $N_{TA}$ offset value (in $T_c$ units) is 13792

   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1

3) The test system shall adjust the timing of the DL path by values given in table A.7.4.1.3.2-1 for only TRP#1. The timing of the DL path of TRP#2 is not changed.

**Table A.7.4.1.3.2-1 Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1&Test2 | Test3&Test4 |
| 240 | $+8*64T_c$ | $+4*64T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first path (in time) of DL SSB of each TAG used by the UE to determine downlink timing is received from the reference cell at the UE antenna. For TRP#2, the test system shall verify there is no adjustment. Skip this step for Test 3 and Test 4 with DRX confiured.

5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first path (in time) of DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna. For Test 3 and Test 4 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.7.4.2 UE timer accuracy

## A.7.4.3 Timing advance

### A.7.4.3.1 SA FR2 timing advance adjustment accuracy

#### A.7.4.3.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

#### A.7.4.3.1.2 Test Parameters

Supported test configurations are shown in table A.7.4.3.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.7.4.3.1.2-2, A.7.4.3.1.2-3 and A.7.4.3.1.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.7.4.3.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.7.4.3.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in Clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k+1 for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.7.4.3.1.2-1: Timing advance supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.4.3.1.2-2: General test parameters for timing advance**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF channel number | | 1 | |
| Initial DL BWP | | DLBWP.0.1 | As specified in table A.3.9.2.1-1 |
| Dedicated DL BWP | | DLBWP.1.1 | As specified in table A.3.9.2.2-1 |
| Initial UL BWP | | ULBWP.0.1 | As specified in table A.3.9.3.1-1 |
| Dedicated UL BWP | | ULBWP.1.1 | As specified in table A.3.9.3.2-1 |
| Timing Advance Command ($T_A$) value during T1 | | 31 | $N_{TA_new} = N_{TA_old}$ for the purpose of establishing a reference value from which the timing advance adjustment accuracy can be measured during T2 |
| Timing Advance Command ($T_A$) value during T2 | | 39 | *For 120 kHz SCS* $N_{TA_new} = N_{TA_old}$ + *1024*Tc* (based on equation in clause 4.2 of TS 38.213 [3]) |
| T1 | s | 5 | |
| T2 | s | 5 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone

**Table A.7.4.3.1.2-3A: OTA related test parameters**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | T1 | T2 |
| Angle of arrival configuration | | Setup 1 according to clause A.3.15.1 | |
| Assumption for UE beams[Note 6] | | Fine | |
| $N_{oc}$ [Note1] | dBm/15 kHz[Note4] | -112 | |
| $N_{oc}$ [Note1] | dBm/SCS[Note3] | -103 | |
| $\hat{E}_s / N_{oc}$ | dB | 4 | |
| SS-RSRP[Note2] | dBm/SCS [Note4] | -99 | |
| $\hat{E}_s / I_{ot}$ | dB | 4 | |
| Io[Note2] | dBm/95.04 MHz [Note4] | -68.5 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

**Table A.7.4.3.1.2-4: Sounding Reference Symbol Configuration for timing advance**

| Field | Value | Comment |
|---|---|---|
| c-SRS | 16 | Frequency hopping is disabled |
| b-SRS | 0 | |
| b-hop | 0 | |
| freqDomainPosition | 0 | Frequency domain position of SRS |

| cyclicShift-n2 | 0 | |
| nrofSRS-Ports | port1 | Number of antenna ports used for SRS transmission |

NOTE: For further information see clause 6.3.2 in TS 38.331 [2].

## A.7.4.3.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command, where *k* = 11.

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

## A.7.4.3.2 SA FR2-2 timing advance adjustment accuracy

### A.7.4.3.2.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

### A.7.4.3.2.2 Test Parameters

Supported test configurations are shown in table A.7.4.3.2.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.7.4.3.2.2-2, A.7.4.3.2.2-3 and A.7.4.3.2.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.7.4.3.2.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.7.4.3.2.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in Clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.7.4.3.2.2-1: Timing advance supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | NR TDD, SSB SCS 480 kHz, data SCS 480 kHz, BW 400 MHz |
| 3 | NR TDD, SSB SCS 960 kHz, data SCS 960 kHz, BW 400 MHz |
| NOTE: The UE is required to be tested in the configuration with the largest supported SCS | |

**Table A.7.4.3.2.2-2: General test parameters for timing advance**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF channel number | | 1 | |
| Initial DL BWP | | DLBWP.0.1 | As specified in table A.3.9.2.1-1 |

### A.7.4.3.2.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command.

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

# A.8 E-UTRA standalone tests for NR RRM

*Editor notes: All NR RRM tests under E-UTRA standalone operations are included in this annex. All EN-DC related NR RRM tests are in A.4 and A.5.*

## A.8.1 Void

## A.8.2 RRC_IDLE state mobility

### A.8.2.1 Inter-RAT NR Cell re-selection

#### A.8.2.1.1 E-UTRA Cell reselection to higher priority NR target Cell in FR1

##### A.8.2.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell reselection requirements specified in clause 4.2.2.5.6 in TS 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell as given in tables A.8.2.1.1.1-1, A.8.2.1.1.1-2, A.8.2.1.1.1-3 and A.8.2.1.1.1-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. E-UTRA cell 1 is already identified by the UE prior to the start of the test. Cell 2 is of higher priority than cell 1.

**Table A.8.2.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.8.2.1.1.1-2: General test parameters for E-UTRA cell re-selection FR1 NR cell test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE camps on cell 2 in the initial phase |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | |
| T1 end condition | Active cell | | | Cell 1 | During T1 period the UE reselects to cell 1 |
| | Neighbour cell | | | Cell 2 | |
| T3 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE shall perform reselection to cell 2 during T3 |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | |
| RF Channel Number | | | 1, 2, 3, 4, 5, 6 | 1, 2 | E-UTRAN radio channel (1) and NR radio channel (2) are used for this test |
| Time offset between cells | | | 1, 4 | 3 ms | Asynchronous cells |
| | | | 2, 5 | 3 μs | Synchronous cells |
| | | | 3, 6 | 3 μs | Synchronous cells |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1, 2, 3, 4, 5, 6 | 1.28 | The value shall be used for all cells in the test. |

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR PRACH configuration index | | 1, 2, 3, 4, 5, 6 | 102 | The detailed configuration is specified in TS 38.211 clause 6.3.3.2 |
| T1 | s | 1, 2, 3, 4, 5, 6 | 15 | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2 | s | 1, 2, 3, 4, 5, 6 | >7 | During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3. |
| T3 | s | 1, 2, 3, 4, 5, 6 | 75 | T3 needs to be defined so that cell re-selection reaction time is taken into account. |

#### A.8.2.1.1.2 Test Requirements

The cell reselection delay to a higher priority NR cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration updateon cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search}$ + $T_{evaluate,\ NR}$ + $T_{SI\text{-}NR,}$ and to a lower priority cell can be expressed as: $T_{evaluate,\ EUTRAN}$+ $T_{SI\text{-}EUTRA,}$

Where:

$T_{higher_priority_search}$ See clause 4.2.2 in TS 36.133 [15]

$T_{evaluate,\ NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

$T_{evaluate,\ EUTRAN}$ See Table 4.2.2.5-1 in clause 4.2.2.5

$T_{SI\text{-}EUTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority NR cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

### A.8.2.1.2 E-UTRA Cell reselection to lower priority NR target Cell in FR1 for UE configured with highSpeedInterRAT-NR-r16

#### A.8.2.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell reselection requirements specified in clause 4.2.2.5.6 in 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell as given in tables A.8.2.1.2.1-1, A.8.2.1.2.1-2, A.8.2.1.2.1-3 and A.8.2.1.2.1-4. In SIB of the E-UTRA cell, highSpeedInterRAT-NR-r16 is configured and the carrier of NR cell is configured with highSpeedCarrierNR-r16. The test consists of two time periods, with time duration of T1 and T2 respectively. Both E-UTRA cell 1 and NR cell 2 are already identified by the UE prior to the start of the test. NR cell 2 is of lower priority than E-UTRA cell 1.

**Table A.8.2.1.2.1-1: Supported test configurations for UE configured with highSpeedInterRAT-NR-r16**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

### A.8.2.1.2.2 Test Requirements

The cell reselection delay to a lower priority NR cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, NR_HST}$ + $T_{SI-NR,}$

Where:

$T_{evaluate, NR_HST}$ See Table 4.2.2.5.6-2 in clause 4.2.2.5.6 in [15]

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 2.24 s, allow 3 s for the cell re-selection delay to a lower priority NR cell.

## A.8.2.2 E-UTRA – NR Inter-RAT Early Measruement Reporting

## A.8.2.2.1 E-UTRA – NR Early Measurement Reporting for NR in FR1

### A.8.2.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 4.9.2.4 in TS 36.133 [15]. This test is also to verify the accuracy requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 9.11.1A and 9.11.2A in TS 36.133 [15]. Supported test configurations are shown in table A.8.2.2.1.1-1.

**Table A.8.2.2.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

The test scenario comprises of 1 E-UTRA cell (Cell 1) and 1 NR cell (Cell 2). The the test parameters and applicability for the E-UTRAN cell are defined in table A.8.2.2.1.1-4. The general test parameters and the cell specific test parameters for the NR cell are specified in table A.8.2.2.1.1-2 and table A.8.2.2.1.1-3, respectively.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Prior to the start of the time duration T1, the UE shall be connected to Cell 1. During T1, Cell 2 shall be powered off. At the end of T1, the RRC connection to Cell 1 is released and UE is configured Idle mode DC measurement on the carrier frequency of Cell 2. Time duration T2 starts when the RRC connection is released, and during the T2 UE is in Idle mode. Cell 2 shall be powered on from the beginning of T2. At beginning of T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

**Table A.8.2.2.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3, 4, 5, 6 | E-UTRAN Cell 1 | |
| Neighbour cell | | 1, 2, 3, 4, 5, 6 | NR Cell 2 | Cell 2 is of higher priority. |
| RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1: Cell 1<br>2: Cell 2 | |
| DRX cycle length | s | 1, 2, 3, 4, 5, 6 | 1.28 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.8.2.2.1.2 Test Requirements

At the beginning of the time-period T2 the connection is released, and UE enters idle mode. During the time period T2 the UE is in Idle mode and Cell 2 is active. The UE shall not perform reselection. The UE shall perform Idle Mode DC measurement according to clause 4.9.2.4 in TS 36.133 [15]. UE shall be able to detect, acqure the SSB index and measure the SS-RSRP and SS-RSRQ from Cell 2 for Idle mode DC measurement during T2.

NOTE: The Idle mode DC measurement period for the test setup can be expressed as: $T_{higher_priority_search}$ + $T_{SSB_index,NR}$ + $T_{evaluate, NR}$.

Where:

$T_{higher_priority_search}$ See clause 4.2.2 in TS 36.133 [15]

$T_{SSB_index,NR}$ See Table 4.9.2.4-1 in clause 4.9.2.4 in TS 36.133 [15]

$T_{evaluate, NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

This gives a total of 70.24 s, allow 71 s for the T2.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in section 9.1.2B in TS 36.133 [15] and section 9.1.3B, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.8.2.2.2 E-UTRA – NR Early Measurement Reporting for NR in FR2

#### A.8.2.2.2.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 4.9.2.4 in TS 36.133 [15]. This test is also to verify the accuracy requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 9.11.1A and 9.11.2A in TS 36.133 [15]. Supported test configurations are shown in table A.8.2.2.2.1-1.

**Table A.8.2.2.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

The test scenario comprises of 1 E-UTRA cell (Cell 1) and 1 NR cell (Cell 2). The the test parameters and applicability for the E-UTRAN cell are defined in table A.8.2.2.2.1-4. The general test parameters and the cell specific test parameters for the NR cell are speficied in table A.8.2.2.2.1-2 and table A.8.2.2.2.1-3, respectively.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Prior to the start of the time duration T1, the UE shall be connected to Cell 1. During T1, Cell 2 shall be powered off. At the end of T1, the RRC connection to Cell 1 is released and UE is configured Idle mode DC measurement on the carrier frequency of Cell 2. Time duration T2 starts when the RRC connection is released, and during the T2 UE is in Idle mode. Cell 2 shall be powered on from the beginning of T2. At beginning of T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

**Table A.8.2.2.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2 | E-UTRAN Cell 1 | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2. |
| Neighbour cell | | 1, 2 | NR Cell 2 | Cell 2 is of higher priority. |
| E-UTRA RF Channel Number | | 1, 2 | 1 | One E-UTRA carrier frequency is used. |
| NR RF Channel Number | | 1, 2 | 1 | One FR2 NR carrier frequency is used. |
| DRX cycle length | s | 1, 2 | 1.28 | |
| Time offset between Cell 1 and Cell 2 | | 1, 2 | 3 μs | |
| T1 | s | 1, 2 | 0.5 | |
| T2 | s | 1, 2 | 128 | |
| T3 | s | 1, 2 | 2 | |
| T331 | s | 1, 2 | 300 | |

NOTE 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.8.2.2.2.2 Test Requirements

At the beginning of the time-period T2 the connection is released, and UE enters idle mode. During the time period T2 the UE is in Idle mode and Cell 2 is active. The UE shall not perform reselection. The UE shall perform Idle Mode DC measurement according to clause 4.9.2.4 in TS 36.133 [15]. UE shall be able to detect, acqure the SSB index and measure the SS-RSRP and SS-RSRQ from Cell 2 for Idle mode DC measurement during T2.

NOTE: The Idle mode DC measurement period for the test setup can be expressed as: $T_{detect, NR}$.

Where:

$T_{detect, NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

This gives a total of 128 s, allow 128 s for the T2.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in section 9.1.2B in TS 36.133 [15] and section 9.1.3B, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.8.3 RRC_CONNECTED state mobility

### A.8.3.1 Handover

#### A.8.3.1.1 E-UTRAN - NR handover in FR1

##### A.8.3.1.1.1 Test Purpose and Environment

This test shall verify the E-UTRAN to NR FR1 handover requirements as specified in clause 6.1.2.1 specified in clause 5.3.4 in TS 36.133 [15].

The test comprises of one E-UTRA carrier and one NR carrier. There are two cells and one cell on each carrier. Cell 1 is the E-UTRAN and Cell 2 is an inter-RAT NR neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement

report. Gap pattern configuration with id #0 as specified in table 8.1.2.1-1 of TS 36.133 [15] is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.8.3.1.1-1. General test parameters are provided in table A.8.3.1.1-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.8.3.1.1-3 and A.8.3.1.1-4 respectively.

**Table A.8.3.1.1-1: Supported test configurations for E-UTRAN inter-RAT NR handover**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 3: $\hat{E}_s/I_{ot}$, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.8.3.1.1.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 112 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in TS36.133.

$T_{interrupt}$ = 62 ms in the test; $T_{interrupt}$ is defined in TS36.133 clause 5.3.4.3.

This gives a total of 112 ms.

# A.8.4 Measurement procedure

## A.8.4.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay

### A.8.4.1.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay in non-DRX

#### A.8.4.1.1.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell in FR1 is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and no DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 1 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in table A.8.4.1.1.1-1 below. Test parameters and cell-specific parameters for the NR cell are provided in tables A.8.4.1.1.1-2 and A.8.4.1.1.1-3 below, respectively. Cell-specific parameters for the E-UTRA cell are provided in table A.3.7.2.1-1 in clause A.3.7.2.1.

**Table A.8.4.1.1.1-1: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

| Propagation Condition | | Config 1,2,3,4,5,6 | AWGN |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.8.4.1.1.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at $T_{RRC_procedure_delay} + T_{measure_SFTD1}$ after the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2\times TTI_{DCCH}$ longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.1.2 E-UTRA – NR Inter-RAT SFTD Measurement Delay in DRX

### A.8.4.1.2.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell in FR1 is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 1 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in table A.8.4.1.2.1-1 below. Test parameters are provided in tables A.8.4.1.2.1-2 below. Cell-specific parameters for the E-UTRA and NR cells are provided in table A.3.7.2.1-1 in clause A.3.7.2.1, and table A.8.4.1.1.1-3 in clause A.8.4.1.1.1, respectively.

**Table A.8.4.1.2.1-1: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test in DRX**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.8.4.1.2.1-2: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test in DRX**

| Parameter | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | Config 1,2,3,4,5,6 | 1 | | One E-UTRAN carrier frequencies is used. |
| NR RF Channel Number | | Config 1,2,3,4,5,6 | 1 | | One NR FR1 carrier frequencies is used. |
| Active cell | | Config 1,2,3,4,5,6 | Cell 1 | | Cell 1 is on E-UTRA RF channel number 1. |
| Neighbour cell | | Config 1,2,3,4,5,6 | Cell 2 | | Cell 2 is on NR RF channel number 1. |

| | | Config 3,6 | SSB.2 FR1 | | As specified in clause A.3.10.1 |
| CP length | | Config 1,2,3,4,5,6 | Normal | | Applicable to both cells. |

| | | | | | |
|---|---|---|---|---|---|
| DRX | | Config 1,2,3,4,5,6 | DRX.4 | | DRX configuration as specified in clause A.3.3.4 |
| Frame time offset between serving and neighbour cells | ms | Config 1,2,4,5 | 3 | 7 | Asynchronous cells.<br>The timing of Cell 2 relative to the timing of Cell 1. |
| | µs | Config 3,6 | 3 | | Synchronous cells. |
| SFN offset between serving and neighbour cells | | Config 1,2,3,4,5,6 | 0 | 1 | SFN of Cell 2 relative to SFN of Cell 1. |
| T1 | s | Config 1,2,3,4,5,6 | 1 | | |

#### A.8.4.1.2.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at the earliest DRX activity time following upon $T_{RRC_procedure_delay} + T_{measure_SFTD1}$ from the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2 \times TTI_{DCCH}$ longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2 E-UTRA – NR Inter-RAT Measurements

### A.8.4.2.1 NR Inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.8.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.1.1-1, A.8.4.2.1.1-2, A.8.4.2.1.1-3 and A.8.4.2.1.1-4.

Measurement gap pattern configuration is defined in table A.8.4.2.1.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1 | One E-UTRAcarrier frequency is used. |
| NR RF Chanel Number | | 1, 2, 3, 4, 5, 6 | 1 | One FR1 NR carrier frequency is used. |
| Active cell | | 1, 2, 3, 4, 5, 6 | E-UTRA cell 1 (PCell) | E-UTRA cell 1 is on E-UTRA RF channel number 1. |
| Neighbour cell | | 1, 2, 3, 4, 5, 6 | NR cell 2 | NR cell 2 is on NR RF channel number 1. |
| Gap Pattern Id | | 1, 2, 3, 4, 5, 6 | 0 | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2, 3, 4, 5, 6 | 39 | As specified in TS 36.331 [16]. |

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.8.4.2.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.2.2 NR Inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

#### A.8.4.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.2.1-1, A.8.4.2.2.1-2, A.8.4.2.2.1-3 and A.8.4.2.2.1-4.

In tests 1 and 2, measurement gap pattern configuration is defined in table A.8.4.2.2.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

| Antenna Configuration and Correlation Matrix | | 1, 2, 3, 4, 5, 6 | 1x2 Low | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.8.4.2.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.2.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

#### A.8.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.3.1-1, A.8.4.2.3.1-2, A.8.4.2.3.1-3 and A.8.4.2.3.1-4.

Measurement gap pattern configuration is defined in table A.8.4.2.3.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.3.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1 | One E-UTRA carrier frequency is used. |
| NR RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1 | One FR1 NR carrier frequency is used. |
| Active cell | | 1, 2, 3, 4, 5, 6 | E-UTRA cell 1 (PCell) | E-UTRA cell 1 is on E-UTRA RF channel number 1. |
| Neighbour cell | | 1, 2, 3, 4, 5, 6 | NR cell 2 | NR cell 2 is on NR RF channel number 1. |
| Gap Pattern Id | | 1, 2, 3, 4, 5, 6 | 0 | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2, 3, 4, 5, 6 | 39 | As specified in TS 36.331 [16]. |
| b2-Threshold1 | dBm | 1, 2, 3, 4, 5, 6 | Note 1 | E-UTRA RSRP threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16] |
| b2-Threshold2NR | dBm | 1, 2, 3, 4, 5, 6 | Note 2 | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B2 [16] |

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.8.4.2.3.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1040 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.2.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

#### A.8.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.4.1-1, A.8.4.2.4.1-2, A.8.4.2.4.1-3 and A.8.4.2.4.1-4.

In tests 1 and 2, measurement gap pattern configuration is defined in table A.8.4.2.4.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.4.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.4.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1 | | One E-UTRA carrier frequency is used. |
| NR RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1 | | One FR1 NR carrier frequency is used. |
| Active cell | | 1, 2, 3, 4, 5, 6 | E-UTRA cell 1 (PCell) | | E-UTRA cell 1 is on E-UTRA RF channel number 1. |
| Neighbour cell | | 1, 2, 3, 4, 5, 6 | NR cell 2 | | NR cell 2 is on NR RF channel number 1. |
| Gap Pattern Id | | 1, 2, 3, 4, 5, 6 | 0 | | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2, 3, 4, 5, 6 | 39 | | As specified in TS 36.331 [16]. |

### A.8.4.2.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2.5 NR Inter-RAT event triggered reporting tests for FR2 without SSB time index detection when DRX is not used

### A.8.4.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.5.1-1, A.8.4.2.5.1-2 and A.8.4.2.5.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.5.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

**Table A.8.4.2.5.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in non-DRX**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

| | |
|---|---|
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.5.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in non-DRX**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Number | | 1, 2 | 1 | One E-UTRA carrier frequency is used. |
| NR RF Channel Number | | 1, 2 | 1 | One FR2 NR carrier frequency is used. |

| Io Note3 | dBm/95.04 MHz | 1, 2 | -Infinity | -56.0 |
| Propagation Condition | | 1, 2 | AWGN | |

NOTE 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.8.4.2.5.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D2 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

**Table A.8.4.2.5.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in non-DRX**

| Test case | Measurement reporting delay (ms) | |
|---|---|---|
| | Test 1: D1 ms | Test 2: D2 ms |
| UE power class 3 | 3200 | 1600 |

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2.6 NR Inter-RAT event triggered reporting tests for FR2 without SSB time index detection when DRX is used

### A.8.4.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.6.1-1, A.8.4.2.6.1-2 and A.8.4.2.6.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.6.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

**Table A.8.4.2.6.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in DRX**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.6.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in DRX**

| Parameter | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | 1, 2 | 1 | | One E-UTRA carrier frequency is used. |
| NR RF Channel Number | | 1, 2 | 1 | | One FR2 NR carrier frequency is used. |
| Active cell | | 1, 2, 3, 4, 5, 6 | E-UTRA cell 1 (PCell) | | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2. |
| Neighbour cell | | 1, 2, 3, 4, 5, 6 | NR cell 2 | | NR cell 2 is on NR RF channel number 1. |
| Gap Pattern Id | | 1, 2, 3, 4, 5, 6 | 0 | | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2, 3, 4, 5, 6 | 39 | | As specified in TS 36.331 [16]. |
| b1-ThresholdNR | dBm | 1, 2 | Note 1 | | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16] |
| Hysteresis | dB | 1, 2, 3, 4, 5, 6 | 0 | | |
| CP length | | 1, 2, 3, 4, 5, 6 | Normal | | |
| TimeToTrigger | s | 1, 2, 3, 4, 5, 6 | 0 | | |
| Filter coefficient | | 1, 2, 3, 4, 5, 6 | 0 | | L3 filtering is not used |
| DRX | | 1, 2, 3, 4, 5, 6 | DRX.9 | DRX.12 | As specified in clause A.3.3 |
| Time offset between serving and neighbour cells | | 1 | 3 ms | | Asynchronous cells. The timing of Cell 2 is 3 ms later than the timing of Cell 1. |
| | | 2 | 3μs | | Synchronous cells. |
| T1 | s | 1, 2, 3, 4, 5, 6 | 5 | | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.8.4.2.6.2 Test Requirements

In test 1, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D3 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D2 ms and D4 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is not required to report SSB time index.

**Table A.8.4.2.6.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in DRX**

| Test case | Measurement reporting delay (ms) | | | |
|---|---|---|---|---|
| | D1 ms | D2 ms | D3 ms | D4 ms |
| UE power class 3 | 4800 | 51200 | 4800 | 51200 |

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2.7 NR Inter-RAT event triggered reporting tests for FR2 with SSB time index detection when DRX is not used

### A.8.4.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.7.1-1, A.8.4.2.7.1-2 and A.8.4.2.7.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.7.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.7.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR2 in non-DRX**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.7.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Numbers | | 1, 2 | 1 | One E-UTRA carrier frequency is used. |
| NR RF Channel Numbers | | 1, 2 | 1 | One FR2 NR carrier frequency is used. |
| Active cell | | 1, 2 | E-UTRA cell 1 (PCell) | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2. |
| Neighbour cell | | 1, 2 | NR cell 2 | NR cell 2 is on NR RF channel number 1. |
| Gap Pattern Id | | 1, 2 | 0 | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2 | 39 | As specified in TS 36.331 [16]. |
| b1-ThresholdNR | dBm | 1, 2 | Note 1 | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16] |
| Hysteresis | dB | 1, 2 | 0 | |
| CP length | | 1, 2 | Normal | |
| TimeToTrigger | s | 1, 2 | 0 | |
| Filter coefficient | | 1, 2 | 0 | L3 filtering is not used |
| DRX | | 1, 2 | OFF | DRX is not used |
| Time offset between serving and neighbour cells | | 1 | 3 ms | Asynchronous cells.<br>The timing of Cell 2 is 3 ms later than the timing of Cell 1. |
| | | 2 | 3μs | Synchronous cells. |
| T1 | s | 1, 2 | 5 | |
| T2 | s | 1, 2 | 5 | |
| NOTE 1: The value of b1-ThresholdNR is defined in table A.8.4.2.7.1-3 | | | | |

**Table A.8.4.2.7.1-3: NR neighbour cell specific test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX**

| Parameter | Unit | Test configuration | Cell 2 | |

| EPRE ratio of PDCCH to PDCCH DMRS | | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | | |
| EPRE ratio of PDSCH to PDSCH | | | | |
| EPRE ratio of OCNG DMRS to SSS (Note 1) | | | | |
| EPRE ratio of OCNG to OCNG DMRS (Note 1) | | | | |
| $\hat{N}$ Note2 | dBm/15kHz | 1, 2 | -104.7 | |
| $N_{oc}$ Note2 | dBm/SCS | 1, 2 | -95.7 | |
| SS-RSRP Note 3 | dBm/SCS | 1, 2 | -Infinity | -87.7 |
| $\hat{E}_s/I_{ot}$ | dB | 1, 2 | -Infinity | 8 |
| $\hat{E}_s/N_{oc}$ | dB | 1, 2 | -Infinity | 8 |
| Io Note3 | dBm/95.04 MHz | 1, 2 | -66.7 | -58. 0 |
| Propagation Condition | | 1, 2 | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.8.4.2.7.2 Test Requirements

the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D2 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

**Table A.8.4.2.7.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX**

| Test case | Measurement reporting delay (ms) | |
|---|---|---|
| | D1 ms | D2 ms |
| UE power class 3 | 4160 | 2080 |

## A.8.4.2.8 NR Inter-RAT event triggered reporting tests for FR2 with SSB time index detection when DRX is used

### A.8.4.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.8.1-1, A.8.4.2.8.1-2 and A.8.4.2.8.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.8.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.8.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR2 in DRX**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.8.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in DRX**

| Parameter | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | 1, 2 | 1 | | One E-UTRA carrier frequency is used. |
| NR RF Channel Number | | 1, 2 | 1 | | One FR2 NR carrier frequency is used. |
| Active cell | | 1, 2 | E-UTRA cell 1 (PCell) | | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2. |
| Neighbour cell | | 1, 2 | NR cell 2 | | NR cell 2 is on NR RF channel number 1. |
| Gap Pattern Id | | 1, 2 | 0 | | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2 | 39 | | As specified in TS 36.331 [16]. |
| b1-ThresholdNR | dBm | 1, 2 | Note 1 | | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16] |
| Hysteresis | dB | 1, 2 | 0 | | |

| $\hat{E}_s/N_{oc}$ | dB | 1, 2 | -Infinity | 8 |
| Io Note3 | dBm/95.04 MHz | 1, 2 | -66.7 | -58. 0 |
| Propagation Condition | | 1, 2 | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.8.4.2.8.2 Test Requirements

In test 1, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D3 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D2 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is required to report SSB time index.

**Table A.8.4.2.8.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in DRX**

| Test case | Measurement reporting delay (ms) | | | |
|---|---|---|---|---|
| | D1 ms | D2 ms | D3 ms | D4 ms |
| UE power class 3 | 6240 | 66560 | 6240 | 66560 |

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2.9 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection in DRX for UE configured with highSpeedInterRAT-NR-r16

### A.8.4.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements when UE is configured with *highSpeedInterRAT-NR-r16*.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.9.1-1, A.8.4.2.9.1-2, A.8.4.2.9.1-3 and A.8.4.2.9.1-4.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.9.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1 for UE configured with highSpeedInterRAT-NR-r16**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.2.9.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection for UE configured with highSpeedInterRAT-NR-r16**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.8.4.2.9.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 4.8 s from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.3 E-UTRAN - NR Inter-RAT event-triggered without measurement gaps

#### A.8.4.3.1 NR Inter-RAT event triggered reporting tests for FR2 without MG nor DRX

### A.8.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.29 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.30 of TS 36.133 [15] for E-UTRAN TDD-NR measurements, as well as the interruption requriements in clause 7.8.2.22.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.3.1.1-1, A.8.4.3.1.1-2 and A.8.4.3.1.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

No measurement gap is configured for the test. UE is continuously scheduled in DL in LTE PCell during the test.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

**Table A.8.4.3.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in non-DRX**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.3.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without MG nor DRX**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

| Io Note3 | dBm/95.04 MHz | 1, 2 | -Infinity | -56.0 |
| Propagation Condition | | 1, 2 | AWGN | |

NOTE 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.8.4.3.1.2 Test Requirements

In the test, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2, where D1 = 12.8 s for UE power class 3.

During the test, the interruption ratio (number of interrupted subframes over the number of total subframes) in LTE PCell shall be less than 1.25 %, and each interruption shall not exceed 1 subframe.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

In the test, the UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.3.2 NR Inter-RAT event triggered reporting tests for FR1 without gaps when DRX is not used

### A.8.4.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when performing inter-RAT NR measurements without gaps and with interruptions. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

The purpose of this test is also to verify that the interruption ratio does not exceed the limits for the LTE PCell during the inter-RAT NR measurement without gaps and with interruptions. This test will verify the interruption ratio for LTE PCell in standalone LTE specified in clause 7.8.2.22.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.3.2.1-1, A.8.4.3.2.1-2, A.8.4.3.2.1-3 and A.8.4.3.2.1-4.

The serving frequency should be selected for this test case should be one in which the UE reports UE capabilities interRAT-NeedForGapsNR-r16=FALSE and interRAT-NeedForInterruptionNR-r18=’nogap-interruption’ or interRAT-NeedForInterruptionNR-r18=’nogap-nointerruption’.

No measurement gap is configured for the test. UE is continuously scheduled in DL in LTE PCell during the test.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.3.2.1-1: NR inter-RAT event triggered reporting tests without gaps and with interruptions**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.8.4.3.2.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without gaps and with interruptions**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Number | | 1, 2, 3, 4, 5, 6 | 1 | One E-UTRAcarrier frequency is used. |
| NR RF Chanel Number | | 1, 2, 3, 4, 5, 6 | 1 | One FR1 NR carrier frequency is used. |

| Antenna Configuration and Correlation Matrix | | 1, 2, 3, 4, 5, 6 | 1x2 | |

NOTE 1: OCNG shall be used such that the cell is fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.8.4.3.2.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1 and T2. During both time durations the interruption ratio should not exceed 2.5 %.

In the test, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2.

- D1 = 1280 for a UE that supports interRAT-NeedForInterruptionNR-r18='nogap-interruption'
- D1 = 800 for a UE that supports interRAT-NeedForInterruptionNR-r18='nogap-nointerruption'

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.8.5 Measurement performance

## A.8.5.1 SFTD accuracy

### A.8.5.1.1 SFTD accuracy

#### A.8.5.1.1.1 Test Purpose

The purpose of this set of tests is to verify that the SFTD measurement accuracy is within the specified limits. This test will verify the requirements as specified in clause 9.1.27 in TS 36.133 [15] for inter-RAT FR1 SFTD measurements.

#### A.8.5.1.1.2 Test Environment

Supported test configurations are shown in table A.8.5.1.1.2-1. In this set of test cases there are two cells on different carriers. Cell 1 is E-UTRAN PCell and Cell 2 is inter-RAT NR FR1 target cell. The test parameters of cell 1 are given in clause A.8.5.1.1.2-2. The test parameters of cell 2 are given in table A.8.5.1.1.2-3. The SFTD between PCell and target cell shall be set by the test equipment to one of the time differences in table A.8.5.1.1.2-4.

**Table A.8.5.1.1.2-1: Supported test configurations for SFTD accuracy**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |

| Propagation condition | | 1~6 | | AWGN |
| Antenna configuration | | 1~6 | | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification

**Table A.8.5.1.1.2-4: Timing offsets for SFTD accuracy test**

| Condition | SFN offset between PCell and PSCell | Frame boundary offset between PCell and PSCell (Ts) |
|---|---|---|
| 1 | 100 | -122000 |

| | | |
|---|---|---|
| 2 | 300 | -60540 |
| 3 | 500 | 1000 |
| 4 | 700 | 62540 |
| 5 | 900 | 124000 |

#### A.8.5.1.1.3 Test Requirements

The SFTD reported by the UE consists of 2 elements, SFN offset and frame boundary offset between PCell and inter-RAT NR target cell. The reported SFTD accuracy shall fulfil the requirement in clause 9.1.27 in TS 36.133 [15].

## A.8.5.2 E-UTRA – NR Inter-RAT Measurement Performance requirements

### A.8.5.2.1 SS-RSRP

#### A.8.5.2.1.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

##### A.8.5.2.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.1 in TS 36.133 [15] for inter-RAT FR1 SS-RSRP measurements.

##### A.8.5.2.1.1.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.1.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in table A.8.5.2.1.1.2-2.

**Table A.8.5.2.1.1.2-1: SS-RSRP Inter-RAT SS-RSRP supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.8.5.2.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.1 in TS 36.133 [15].

### A.8.5.2.1.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

#### A.8.5.2.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.1 in TS 36.133 [15] for inter-RAT FR2 SS-RSRP measurements.

#### A.8.5.2.1.2.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.1.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-RSRP inter-RAT measurement are tested by using test setup in table A.8.5.2.1.2.2-2 and table A.8.5.2.1.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

| Parameter | Unit | Test 1 | Test 2 |
|---|---|---|---|
| | | Cell 2 | Cell 2 |
| Angle of arrival configuration | | Setup 1 according to A.3.15.1 | Setup 1 according to A.3.15.1 |
| Assumption for UE beams Note 10 | | Rough | Rough |
| $N_{oc}$ Note1 | dBm/15kHz Note4 | -105 | N/A |
| $N_{oc}$ Note1 | dBm/SCS Note4 | -96 | N/A |
| *Es* | dBm/SCS Note4 | | (Table B.2.3-2 Rx Beam Peak +1 dB) (Note 7) |
| $\hat{E}_s / N_{oc}$ | dB | 11 | N/A |

| Parameter | Unit | Test 1 | Test 2 |
|---|---|---|---|
| | | Cell 2 | Cell 2 |
| SSB_RP Note2 | dBm/SCS Note4 | -85 | (Table B.2.3-2 Rx Beam Peak +1 dB) (Note 7) |
| $\hat{E}_s/I_{ot}$ BB Note 2, Note 9 | dB | 9.97 | -3.81 |
| Io Note2 | dBm/95.04 MHz Note4 | -55.65 | (Table B.2.3-2 Rx Beam Peak +30 dB) (Note 8) |

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: Void
NOTE 6: Void
NOTE 7: SSB_RP is applied at 1 dB above the minimum level specified in table B.2.3-2 for beam peak.
NOTE 8: Io is applied at $10\log_{10}(792)$dB+1 dB above the minimum level specified in table B.2.3-2 for beam peak.
NOTE 9: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.
Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.

#### A.8.5.2.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.1 in TS 36.133 [15].

### A.8.5.2.2 SS-RSRQ

#### A.8.5.2.2.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

##### A.8.5.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.2 in TS 36.133 [15] for inter-RAT FR1 SS-RSRQ measurements.

##### A.8.5.2.2.1.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.2.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in table A.8.5.2.2.1.2-2.

**Table A.8.5.2.2.1.2-1: SS-RSRQ Inter-RAT SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.8.5.2.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.2 in TS 36.133 [15].

### A.8.5.2.2.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

#### A.8.5.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.2 in TS 36.133 [15] for inter-RAT FR2 SS-RSRQ measurements.

#### A.8.5.2.2.2.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.2.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-RSRQ inter-RAT measurement are tested by using test setup in table A.8.5.2.2.2.2-2 and table A.8.5.2.2.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

A.8.5.2.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.2 in TS 36.133 [15].

In this test case there are two cells on different carriers and measurement gaps are provided

## A.8.5.2.3 SS-SINR

### A.8.5.2.3.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

#### A.8.5.2.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS- SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.3 in TS 36.133 [15] for inter-RAT FR1 SS-SINR measurements.

#### A.8.5.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.3.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in table A.8.5.2.3.1.2-2.

**Table A.8.5.2.3.1.2-1: SS- SINR Inter-RAT SS- SINR supported test configurations**

| Config | Description |

| Antenna configuration | | | - | 1x2 | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.8.5.2.3.1.3 Test Requirements

The SS-SINR measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.3 in TS 36.133 [15].

### A.8.5.2.3.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

#### A.8.5.2.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS- SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.3 in TS 36.133 [15] for inter-RAT FR2 SS-SINR measurements.

#### A.8.5.2.3.2.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.3.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-SINR inter-RAT measurement are tested by using test setup in table A.8.5.2.3.2.2-2 and A.8.5.2.3.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

**Table A.8.5.2.3.2.2-1: SS-SINR Inter-RAT SS-SINR supported test configurations**

NOTE 5: Void
NOTE 6: Void
NOTE 7: $N_{oc}$ for SCS 15kHz is applied at -10log$_{10}$(8)+4 dB above the minimum level specified in table B.2.3-2 for beam peak. $N_{oc}$ for SCS 120kHz is applied at 4 dB above the minimum level specified in table B.2.3-2 for beam peak.
NOTE 8: SSB_RP is applied at 3 dB above the minimum level specified in table B.2.3-2 for beam peak.
NOTE 9: Io is applied at level 10log$_{10}$(792)+6.54 dB above the minimum level specified in table B.2.3-2 for beam peak.
Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.

#### A.8.5.2.3.2.3 Test Requirements

The SS-SINR measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.3 in TS 36.133 [15].

# A.9 V2X Tests

## A.9.1 V2X Tests in FR1

### A.9.1.1 Test for V2X UE Transmit Timing

#### A.9.1.1.1 Test for GNSS as Synchronization Reference Source

##### A.9.1.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE timing requirements as specified in clause 12.2.2, when the GNSS is used as timing reference. For this test, the UE is triggered by the test loop function to transmit for V2X sidelink communication.

Table A.9.1.1.1.1-1 defines test parameters for UE transmit timing accuracy tests for V2X. There is one GNSS based synchronization source during the test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1.

**Table A.9.1.1.1.1-1: V2X Sidelink Test Parameters for UE Transmit Timing Tests for GNSS as Timing Reference**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1 | HD carrier in Band n47 or n38 |
| Channel Bandwidth ($BW_{channel}$) Note 1 | MHz | 20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100) | |
| SCS | kHz | 30 | |
| Active cell | | None | |
| Active SyncRef UE | | None | |
| V2X sidelink communication preconfiguration | | As specified in section A.3.21.2 | IE values unless specified otherwise in this test. |

| | | | |
|---|---|---|---|
| PSCCH Reference Measurement Channel | | CC.1A HD | As specified in table A.3.21.3-1 |
| PSSCH Reference Measurement Channel | | CD.1A HD | As specified in table A.3.21.3-2 |
| Propagation condition | | AWGN | |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | | | |

#### A.9.1.1.1.2 Test requirements

For parameters specified in tables A.9.1.1.1-1, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.2. The timing accuracy is verified by using PSSCH transmissions.

### A.9.1.1.2 Test for SyncRef UE as Synchronization Reference Source

#### A.9.1.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for V2X sidelink transmissions specified in clause 12.2.5, when SyncRef UE is used as timing reference. For this test, the UE is triggered by the test loop function to transmit for V2X sidelink communication.

Table A.9.1.1.2.1-1 defines test parameters for UE transmit timing accuracy tests for V2X sidelink Communication. There is one active SyncRef UE in this test without either serving cell and or GNSS signals. Before the test starts, the UE has been synchronized to the SyncRef UE. The transmit timing accuracy is verified by using the transmission timing of PSSCH transmissions.

**Table A.9.1.1.2.1-1: General Test Parameters for V2X UE Transmit Timing Test for SyncRef UE as Timing Reference**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1 | HD carrier in Band n47 or n38 |
| Channel Bandwidth ($BW_{channel}$) Note 3 | | MHz | 20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100) | |
| SCS | | kHz | 30 | |
| Active cell | | | None | |
| Active SyncRef UE | | | SyncRef UE 1 | Transmitting S-SSB on RF channel number 1 |
| V2X sidelink communication preconfiguration | | | As specified in section A.3.21.2 | IE values unless specified otherwise in this test. |
| PSCCH Reference Measurement Channel | | | CC.1A HD | As specified in table A.3.21.3-1 |
| PSSCH Reference Measurement Channel | | | CD.1A HD | As specified in table A.3.21.3-2 |
| $N_{oc}$ Note1,2 | | dBm/30kHz | -95 | |

| | networkControlledSyncTx | | ON | |
| | V2X sidelink communication configuration | | As specified in section A.3.21.2 | IE values unless specified otherwise in this test. |
| | $\hat{E}_s / N_{oc}$ | | 3 | |
| | PSBCH-RSRP Note1, Note 2 | dBm/30kHz | -92 | |
| Propagation condition | | | AWGN | |
| NOTE 1: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>NOTE 2: S-PSS $E_s/N_{oc}$ and S-SSS $E_s/N_{oc}$ are set the same as PSBCH $E_s/N_{oc}$.<br>NOTE 3: The UE is only required to be tested in one of the supported test configurations. | | | | |

#### A.9.1.1.2.2 Test requirements

For parameters specified in tables A.9.1.1.2.1-1, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.5. The timing accuracy is verified by using PSSCH transmissions.

### A.9.1.1.3 Test for FR1 NR Cell as Synchronization Reference Source

#### A.9.1.1.3.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for V2X sidelink transmissions specified in clause 12.2.3, when the downlink timing of the serving cell (RRC_IDLE) or PCell (RRC_CONNECTED) on a non-V2X sidelink carrier is used as timing reference. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X sidelink communication.

This test is applicable for V2X sidelink communication capable UEs that support NR Uu and sidelink operation.

Table A.9.1.1.3.1-1, A.9.1.1.3.1-2 and A.9.1.1.3.1-3 define test parameters for UE transmit timing accuracy tests for V2X sidelink Communication. There is one active cell (PCell) in this test. The transmit timing accuracy is verified by using the transmission timing of PSSCH transmissions.

**Table A.9.1.1.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.9.1.1.3.1-2: V2X Sidelink Test Parameters for V2X UE Transmit Timing Accuracy Test for gNB as Timing Reference**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1 | HD carrier in Band n47 or n38 |
| Channel Bandwidth ($BW_{channel}$) Note 1 | MHz | 20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100) | |
| SCS | kHz | 30 | |

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.9.1.1.3.2 Test requirements

For parameters specified in tables A.9.1.1.3.1-1 A.9.1.1.3.1-2 and A.9.1.1.3.1-3, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.3. The timing accuracy is verified by using PSSCH transmissions.

### A.9.1.2 Test for Initiation/Cease of S-SSB Transmission with V2X Sidelink Communication

#### A.9.1.2.1 Test for FR1 NR Cell as synchronization reference source without gap under non-DRX

##### A.9.1.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the V2X UE meets the requirements related to the maximum evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.1, when the reference timing used for sidelink transmissions is a NR serving cell in FR1 on a non-V2X sidelink carrier.

This test is applicable for V2X sidelink communication capable UEs that support NR Uu and sidelink operation.

Supported test configurations for FR1 NR cell are shown in table A.9.1.2.1.1-1.

**Table A.9.1.2.1.1-1: Supported Test Configurations for FR1 NR cell as synchronization reference source**

| Configuration | Description |
|---|---|
| 1 | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE 1: The UE is only required to pass in one of the supported test configurations in FR1.<br>NOTE 2: For NR SL, SL BW is one between 20 MHz and 40 MHz, and SL SCS is 30kHz. | |

The test parameters are given in table A.9.1.2.1.1-2 and table A.9.1.2.1.1-3 below. There is one active cell in this test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the SS-RSRP of the PCell is above *syncTxThreshIC* and the UE is not expected to be transmitting S-SSB.

During T2, the SS-RSRP of the PCell is lowered below *syncTxThreshIC* and the UE is expected to initiate S-SSB transmissions.

During T3, the SS-RSRP of the PCell is increased back to be above *syncTxThreshIC* and the UE is expected to cease S-SSB transmissions.

**Table A.9.1.2.1.1-2: Test Parameters for Initiation/Cease of S-SSB Transmission Test for FR1 NR cell as synchronization reference source**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCS | kHz | 30 | |
| Active cell | | Cell 1 | Serving cell on RF channel number 1 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.9.1.2.1.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 0.56 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 0.56 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as: $T_{evaluate,SLSS}$ + S-SSB period,

Where:

$T_{evaluate,SLSS}$ = 0.4 sec (as specified in clause 12.3.1.1);

S-SSB period = 160 ms.

### A.9.1.2.2 Test for SyncRef UE as synchronization reference source

#### A.9.1.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE.

The test parameters are given in table A.9.1.2.2.1-1 and table A.9.1.2.2.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the V2X UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the V2X UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions.

**Table A.9.1.2.2.1-1: Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCS | kHz | 30 | |
| Active cell | | None | |
| Active SyncRef UE | | SyncRef UE 1 | Transmitting S-SSB on RF channel number 1(HD carrier in Band n47 or n38) |
| Active V2X UE | | V2X UE | Transmitting S-SSB on RF channel number 1(HD carrier in Band n47 or n38) |
| V2X sidelink communication preconfiguration | | As specified in table A.3.21.2-2 | IE values unless specified otherwise in this test |
| networkControlledSyncTx | | Not configured | |
| syncTxThreshOoC | dBm/30kHz | -100 | |
| T1 | s | 3 | |
| T2 | s | 5.24 | |
| T3 | s | 5.24 | |

| Io Note2 | dBm /18 MHz | -63.6 | -68.6 | -63.6 |
| | dBm/36 MHz | -60.6 | -65.6 | -60.6 |
| Propagation condition | | AWGN | | |
| NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 2: PSBCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for S-PSS/S-SSS/PSBCH symbols. | | | | |
| NOTE 3: The UE is only required to be tested in one of the supported test configurations. | | | | |
| NOTE 4: S-PSS Es/Noc and S-SSS Es/Noc are set the same as PSBCH Es/Noc. | | | | |

#### A.9.1.2.2.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 0.8 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 0.8 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as: $T_{evaluate,SLSS}$ + S-SSB period,

Where:

- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in clause 12.3.1.4);
- S-SSB period = 160 ms.

### A.9.1.2.3 Test for SyncRef UE as synchronization reference source when SL-DRX is used

#### A.9.1.2.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE and SL-DRX is used.

The test parameters are given in table A.9.1.2.3.1-1 and table A.9.1.2.3.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the V2X UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the V2X UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions.

**Table A.9.1.2.3.1-1: Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source when SL-DRX is used**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCS | kHz | 30 | |
| Active cell | | None | |
| Active SyncRef UE | | SyncRef UE 1 | Transmitting S-SSB on RF channel number 1(HD carrier in Band n47 or n38) |
| Active V2X UE | | V2X UE | Transmitting S-SSB on RF channel number 1(HD carrier in Band n47 or n38) |
| V2X sidelink communication preconfiguration | | As specified in table A.3.21.2-2 | IE values unless specified otherwise in this test |
| networkControlledSyncTx | | Not configured | |
| syncTxThreshOoC | dBm/30kHz | -97 | |
| SL-DRX | | SL-DRX.2 | SL-DRX configuration as specified in clause A.3.21.4 |
| T1 | s | 3 | |
| T2 | s | 5.24 | |
| T3 | s | 5.24 | |

**Table A.9.1.2.3.1-2: SyncRef UE Specific Test Parameters for Initiation/Cease of SLSS Transmission Test for SyncRef UE as synchronization reference source when SL-DRX is used**

| Parameter | Unit | Cell 1 | | |
|---|---|---|---|---|
| | | T1 | T2 | T3 |
| NR RF Channel Number | | 1 | | |
| V2X SL communication resource pool configuration | | As specified in table A.3.21.2-2 | | |
| Channel Bandwidth ($BW_{channel}$) Note3 | MHz | 20($N_{PRB,c}$ = 50) or 40($N_{PRB,c}$ = 100) | | |
| SLSSID | | 30 | | |
| inCoverage | | FALSE | | |
| networkControlledSyncTx | | ON | | |
| $N_{oc}$ Note1 | dBm/30 kHz | -98 | | |
| $\hat{E}_s/I_{ot}$ | dB | 5.5 | -3.5 | 5.5 |
| PSBCH $\hat{E}_s/N_{oc}$ | dB | 5.5 | -3.5 | 5.5 |
| PSBCH-RSRP Note2 | dBm/30 kHz | -92.5 | -101.5 | -92.5 |
| Io Note2 | dBm /3.96 MHz | -70.2 | -75.2 | -70.2 |
| Propagation condition | | AWGN | | |

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: PSBCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for PSPSS/PSSSS/PSBCH symbols.
NOTE 3: The UE is only required to be tested in one of the supported test configurations.
NOTE 4: PSSSS Es/Noc and PSPSS Es/Noc are set the same as PSBCH Es/Noc.

#### A.9.1.2.3.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 1.44 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 1.44 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as: $T_{evaluate,SLSS}$ + S-SSB period,

Where:

- $T_{evaluate,SLSS}$ = 1.28 sec (as specified in clause 12.3.1.4);
- S-SSB period = 160 ms.

### A.9.1.2.4 Test for SyncRef UE as synchronization reference source with CCA

#### A.9.1.2.4.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3A.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE.

The test parameters are given in table A.9.1.2.4.1-1 and table A.9.1.2.4.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the sidelink UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the sidelink UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Two counters, $l_{CCA_2}$ and $l_{CCA_3}$, as defined in A.3.26.4.1 will be used with time duration of T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions. The counter $l_{CCA_2}$ is initialized as 0 at the beginning of T2 and tracks the number of unavailable SSB periods as defined in A.3.26.4.1 until the end of T2.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions. The counter $l_{CCA_3}$ is initialized as 0 at the beginning of T3 and tracks the number of unavailable SSB periods as defined in A.3.26.4.1 until the end of T3.

**Table A.9.1.2.4.1-1: Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source with CCA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCS | kHz | 30 | |
| Active cell | | None | |
| Active SyncRef UE | | SyncRef UE 1 | Transmitting S-SSB on RF channel number 1 |
| Active sidelink UE | | Sidelink UE | Transmitting S-SSB on RF channel number 1 |

| PSBCH $\hat{E}_s / N_{oc}$ | dB | 5.5 | -3.5 | 5.5 |
| PSBCH-RSRP Note2 | dBm/30 kHz | -92.5 | -101.5 | -92.5 |
| Io Note2 | dBm/3.96 MHz | -70.2 | -75.2 | -70.2 |
| Propagation condition | | AWGN | | |

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: PSBCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for S-PSS/S-SSS/PSBCH symbols.
NOTE 3: The UE is only required to be tested in one of the supported test configurations.
NOTE 4: S-PSS Es/Noc and S-SSS Es/Noc are set the same as PSBCH Es/Noc.

### A.9.1.2.4.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than $T_{evaluate,SLSS_CCA}$ + S-SSB period.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than $T_{evaluate,SLSS_CCA}$ + S-SSB period.

Where:

- $T_{evaluate,SLSS_CCA}$ = (4+$L_{SLSS}$)$\times$ S-SSB periods [ms] (as specified in clause 12.3A.1.4) and $L_{SLSS}$ = $l_{CCA_2}$ or $l_{CCA_3}$, is the number of unavailable S-SSB period during time duration of T2 and T3 respectively;
- S-SSB period = 160 ms.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

# A.9.1.3 Test for V2X Synchronization Reference Selection/Reselection

## A.9.1.3.1 Test for GNSS configured as the highest priority

### A.9.1.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when GNSS is configured as the highest priority. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.3.1.1-1and A.9.1.3.1.1-2 below. There are no GNSS signals in this test. There are three active SyncRef UEs (SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3) in this test. The test system shall emulate SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is not synchronized to any SyncRef UE, then the V2X UE shall use the SLSS ID belonging to set id_oon. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 are all powered off before starting the test. During T1, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as synchronization source. During T2, SyncRef UE 2 is powered ON and the V2X UE will select SyncRef UE 2 as the synchronization source. During T3, SyncRef UE 3 is powered ON and the V2X UE will reselect to SyncRef UE 3 as the synchronization source.

**Table A.9.1.3.1.1-1: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for GNSS configured as the highest priority**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| SCS | | kHz | 30 | |
| Initial condition | Active synchronization source | | Sync Ref UE 1 | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 30 and in-coverage set as FALSE in MIB-SL. |
| T2 end condition | Active synchronization source | | Sync Ref UE 2 | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 336 and in-coverage set as FALSE in MIB-SL. |
| Final condition | Active synchronization source | | Sync Ref UE 3 | UE transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 0 and in-coverage set as FALSE in MIB-SL. |
| Active SyncRef UEs | | | SyncRef UE 1<br>SyncRef UE 2<br>SyncRef UE 3 | Transmitting S-SSB on RF channel number 1 (HD carrier in Band n47 or n38) |
| Timing offset among SyncRef UEs | | µs | CP/2 | Synchronous |
| Frequency offset of SyncRef UE 1,2,3 | | ppm | 0 | |
| V2X sidelink Communication configuration | | | As specified in table A. 3.21.2-2 | IE values unless specified otherwise in this test. |

| Propagation Condition | | AWGN | | | | | | | | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: Es/Iot, Io, PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

### A.9.1.3.1.2 Test Requirements

During T1, SyncRef UE selection delay is defined as the time from the beginning of T1 to the time UE is synchronized to SyncRef UE 1, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T1.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection delay can be expressed as:

SyncRef UE selection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T2, SyncRef UE reselection delay is defined as the time from the beginning of T2 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T2.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

3) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 2 to SyncRef UE 3, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 3 as the synchronization source. For the test configuration, the SLSS ID will still be 0 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T3.

The SyncRef UE reselection delay shall be less than 2.4 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 1.6 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 2.4 seconds.

The test system will verify that the V2X UE does not drop or delay more than 6 % of its V2X data and S-SSB transmissions during the duration of T2, and does not drop or delay more than 30 % of its S-SSB transmissions during the duration of T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

### A.9.1.3.2 Test for FR1 NR Cell configured as the highest priority

#### A.9.1.3.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when gNB is configured as the highest priority. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

This test is applicable for V2X sidelink communication capable UEs that support gNB as synchronization source and sidelink operation.

**Table A.9.1.3.2.1-1: Void**

The test parameters are given in table A.9.1.3.2.1-2 and A.9.1.3.2.1-3 below. There are no active cells and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1. There are two active SyncRef UEs (SyncRef UE 1 and SyncRef UE 2) in this test. The test system shall emulate SyncRef UE 1 and SyncRef UE 2 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, both SyncRef UE 1 and SyncRef UE 2 are powered off and the V2X UE will select GNSS as synchronization source. During T2, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as the synchronization source. During T3, a higher priority SyncRef UE 2 is additionally powered ON and the V2X UE will reselect to the higher priority SyncRef UE 2 as the synchronization source.

**Table A.9.1.3.2.1-2: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for FR1 NR Cell configured as the highest priority**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| SCS | | kHz | 30 | |
| Initial condition | Active synchronization source | | GNSS | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 0 and in-coverage set as TRUE in MIB-SL. |

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| T2 end condition | Active synchronization source | | Sync Ref UE 1 | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 336+59 and in-coverage set as FALSE in MIB-SL. |
| Final condition | Active synchronization source | | Sync Ref UE 2 | UE transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 30 and in-coverage set as FALSE in MIB-SL. |

| Propagation Condition | | AWGN | | | | | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: Es/Iot, Io, PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

### A.9.1.3.2.2 Test Requirements

1) During T2, SyncRef UE selection delay is defined as the time from the beginning of T2 to the time UE is synchronized to SyncRef UE 1 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336+59 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T2.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T3.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

The test system will verify that the V2X UE does not drop or delay more than 6 % of its V2X data and S-SSB transmissions during the duration of T2 and T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

### A.9.1.3.3 Test for GNSS configured as the highest priority under SL-DRX

#### A.9.1.3.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when GNSS is configured as the highest priority and SL-DRX is configured. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.3.3.1-1and A.9.1.3.3.1-2 below. There are no GNSS signals in this test. There are three active SyncRef UEs (SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3) in this test. The test system shall emulate SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is not synchronized to any SyncRef UE, then the V2X UE shall use the SLSS ID belonging to set id_oon. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 are all powered off before starting the test. During T1, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as synchronization source. During T2, SyncRef UE 2 is powered ON and the V2X UE will select SyncRef UE 2 as the synchronization source. During T3, SyncRef UE 3 is powered ON and the V2X UE will reselect to SyncRef UE 3 as the synchronization source. SL-DRX is configured during the entire test period.

**Table A.9.1.3.3.1-1: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for GNSS configured as the highest priority**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| SCS | | kHz | 30 | |
| Initial condition | Active synchronization source | | Sync Ref UE 1 | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 30 and in-coverage set as FALSE in MIB-SL. |
| T2 end condition | Active synchronization source | | Sync Ref UE 2 | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 336 and in-coverage set as FALSE in MIB-SL. |
| Final condition | Active synchronization source | | Sync Ref UE 3 | UE transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 0 and in-coverage set as FALSE in MIB-SL. |
| Active SyncRef UEs | | | SyncRef UE 1<br>SyncRef UE 2<br>SyncRef UE 3 | Transmitting S-SSB on RF channel number 1 (HD carrier in Band n47 or n38) |
| Timing offset among SyncRef UEs | | µs | CP/2 | Synchronous |
| Frequency offset of SyncRef UE 1,2,3 | | ppm | 0 | |

| Propagation Condition | | AWGN | | | | | | | | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

### A.9.1.3.3.2 Test Requirements

During T1, SyncRef UE selection delay is defined as the time from the beginning of T1 to the time UE is synchronized to SyncRef UE 1, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the

synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T1.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection delay can be expressed as:

SyncRef UE selection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T2, SyncRef UE reselection delay is defined as the time from the beginning of T2 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T2.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

3) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 2 to SyncRef UE 3, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 3 as the synchronization source. For the test configuration, the SLSS ID will still be 0 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T3.

The SyncRef UE reselection delay shall be less than 2.4 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 1.6 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 2.4 seconds.

The test system will verify that the V2X UE does not drop its V2X data and SLSS transmissions at most in an aggregated window of 480 ms during the duration of T2, and does not drop or delay at most an aggregated window of 24 ms of its S-SSB transmissions during the duration of T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

### A.9.1.3.4 Test for FR1 NR Cell configured as the highest priority under SL-DRX

#### A.9.1.3.4.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when gNB is configured as the highest priority and SL-DRX is configured. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

This test is applicable for V2X sidelink communication capable UEs that support gNB as synchronization source and sidelink operation.

The test parameters are given in table A.9.1.3.4.1-1 and A.9.1.3.4.1-2 below. There are no active cells and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1. There are two active SyncRef UEs (SyncRef UE 1 and SyncRef UE 2) in this test. The test system shall emulate SyncRef UE 1 and SyncRef UE 2 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, both SyncRef UE 1 and SyncRef UE 2 are powered off and the V2X UE will select GNSS as synchronization source. During T2, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as the synchronization source. During T3, a higher priority SyncRef UE 2 is additionally powered ON and the V2X UE will reselect to the higher priority SyncRef UE 2 as the synchronization source. SL-DRX is configured during the entire test period.

**Table A.9.1.3.4.1-1: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for FR1 NR Cell configured as the highest priority**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| SCS | | kHz | 30 | |
| Initial condition | Active synchronization source | | GNSS | DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 0 and in-coverage set as TRUE in MIB-SL. |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

### A.9.1.3.4.2 Test Requirements

1) During T2, SyncRef UE selection delay is defined as the time from the beginning of T2 to the time UE is synchronized to SyncRef UE 1 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336+59 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T2.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T3.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

The test system will verify that the V2X UE does not drop or delay its V2X data and SLSS transmissions at most in an aggregated window of 480 ms during the duration of T2 and T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

# A.9.1.4 Test for L1 SL-RSRP Measurement

## A.9.1.4.1 Test for V2X UE Autonomous Resource Selection/Reselection

### A.9.1.4.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.1.1-1and A. 9.1.4.1.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5 ms. At the beginning of whole test, the test equipment shall send one AT command to trigger the UE under test continuously transmits PSCCH/PSSCH.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipement are configured such that

- he measured PSSCH-RSRP for 20 active V2X sidelink UEs(UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedureDuring T2, the signal from Test Equipement are configured such that
- the measured PSSCH-RSRP or the 20 active V2X sidelink UEs(UE10~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

**Table A. 9.1.4.1.1-1: Test Parameters for V2X UE Autonomous Resource Selection/Reselection Tests for PSSCH-RSRP measurements**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| Antenna Configuration | - | 1x2 | |
| Propagation Condition | - | AWGN | |

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: Es/Iot, PSSCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: For UE 20 to 29, occupying subchannel #2
NOTE 4: For UE 0 to 19 and 30 to 49, occupying subchannel #0/1/3/4
NOTE 5: The UE is only required to be tested in one of the supported test configurations.

#### A.9.1.4.1.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2.

### A.9.1.4.2 Test for V2X UE Resource Pre-emption

#### A.9.1.4.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource pre-emption for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A. 9.1.4.2.1-1and A.12. 9.1.4.1-2 below. There is one active V2X sidelink UE in this test. Both the UE under test and the active V2X sidelink UE select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. At the beginning of whole test, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7], in order to make sure that the UE under test needs continuously transmit PSCCH/PSSCH.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipement are configured such that the active V2X sidelink UE is not transmitting. The UE under test shall transmit SL data and reserve future resources. The resource reservation is decoded by the active V2X sidelink UE. The point in time at which resource reservation from the UE under test is decoded by the active V2X sidelink UE defines the start of time period T2. During T2, the active V2X sidelink UE reserves the same resource as the UE under test with high priority data no later than slot n- $T_{pre\text{-}empt}$.

**Table A.9.1.4.2.1-1: Test Parameters for V2X UE Resource Pre-emption Tests for PSSCH-RSRP measurements**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | HD carrier in Band n47 and n38 |
| Channel Bandwidth ($BW_{channel}$) Note 1 | MHz | 20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100) | |
| SCS | kHz | 30 | |
| V2X sidelink communication pre-configuration | | As specified in table A.3.21.2-1 and A.3.21.2-3 | IE values unless specified otherwise in this test. |

| | |
|---|---|
| NOTE 1: | Interference from other Ues and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| NOTE 2: | Es/Iot, PSSCH-RSRP and Io have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| NOTE 3: | The UE is only required to be tested in one of the supported test configurations. |

#### A.9.1.4.2.2 Test Requirements

The test time T1 and T2 should be long enough. The UE under test is required to trigger resource reselection and not to transmit on the reserved resource at slot n when the high priority reservation is transmitted by the active V2X sidelink UE before n-$T_{pre\text{-}empt}$, where

$T_{pre\text{-}empt} = T_3 + T_{proc,0}$

$T_3$ = 5 slots and $T_{proc,0}$= 1 slot for FR1.

The rate of PSSCH transmissions on the resources at slot n shall be less than 10 % during repeated tests.

### A.9.1.4.3 Test for V2X UE Resource Re-evaluation

#### A.9.1.4.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource re-evaluation for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.3.1-1, A.9.1.4.3.1-2 and A.9.1.4.3.1-3 below. There are 130 active V2X sidelink UEs in this test. The first 100 active V2X sidelink UEs are scheduled with 50 ms periodicity. The last 30 active V2X sidelink Ues are aperiodic service UE with retransmission reservation period equaling 15 ms.

Both the UE under test and active V2X sidelink Ues select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink Ues. The test parameters for GNSS signals are defined in B.4.1.

The test consists of three duration T0, T1, T2.

During T0, the signal from Test Equipement are configured. The resource occupied by the active V2X sidelink UEs is expected to be excluded in the resource selection procedure such that the measured PSSCH-RSRP is above the measurement threshold. The test equipment shall just configure the resource pool for the test UE without the MAC PDU for transmission channel configuration.

During T1, the signal from Test Equipement are configured. Some of the resource occupied by the active V2X sidelink Ues is expected to be excluded in the resource selection procedure such that the measured PSSCH-RSRP is above the measurement threshold and some of the resource occupied by the active V2X sidelink Ues is expected to be included in the resource selection procedure such that the measured PSSCH-RSRP is below the measurement threshold. The test system shall emulate the active V2X sidelink Ues to transmit PSCCH/PSSCH every 50 ms according to the RSRP level specified in the Table A. 9.1.4.3.1-2, but UE #0~29 will be silent during T2.

At the end of T1, where slot index mod 100 = 99, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7], in order to make sure that the UE under test shall be scheduled to periodically transmit PSCCH/PSSCH.

During T2, the additional aperiodic active V2X sidelink UEs from Test Equipement are configured in the beginning 30 slots, and the resource occupied by these active V2X sidelink UEs is expected to be excluded in the resource re-evaluation procedure such that the measured PSSCH-RSRP is above the measurement threshold shown in table A. 9.1.4.3.1-2. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH with the maximum number of reserved PSCCH/PSSCH resources equalling n2 and time resource assignment interval as 15 ms.

During T2, the test UE is expeted to reselect the resources and transmit the PSCCH/PSSCH in the newly re-evaluated resources.

**Table A.9.1.4.3.1-1: Test Parameters for V2X UE Resource Selection Tests for Re-evaluation**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | | 1 | HD carrier in Band n47 and n38 |
| Channel Bandwidth ($BW_{channel}$) Note 2 | | MHz | 20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100) | |

| | dBm/36 MHz | -76.10 | [-73.14] |
| Antenna Configuration | - | 1x2 | |
| Propagation Condition | - | AWGN | |

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: Es/Iot, PSSCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: UE #100~129 will occupy the subchannels on the slots with "#slot index mod 100"= #0-29 during T2.
NOTE 4: The UE is only required to be tested in one of the supported configurations.
NOTE 5: Calculated on slot #0~29.
NOTE 6: Calculated on slot #30~49.
NOTE 7: Calculated on slot #50~59.

### A.9.1.4.3.2 Test Requirements

The rate of PSSCH transmissions on the resources of the subchannels which are occupied by UE #65-84 shall be more than 90 % during T2.

## A.9.1.4.4 Test for V2X UE Autonomous Resource Selection/Reselection with Periodic Sensing

### A.9.1.4.4.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 with partial sensing support defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.4.1-1and A. 9.1.4.4.1-2 below. There are 100 active V2X sidelink UEs (UE0~UE99) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 10 ms. At the beginning of whole test, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7] and ensure that the UE under test needs to continuously transmit PSCCH/PSSCH with 10 ms period. Upon receiving the MAC PDU, UE starts resource selection to transmit PSCCH/PSSCH based on the available sensing results.

The test consists of two duration T1 and T2. During T1, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for 40 active V2X sidelink UEs(UE20~UE59) is above the measurement threshold, and the resource occupied by the 40 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,

- the measured PSSCH-RSRP for other 60 active V2X sidelink UEs(UE0~UE19, UE60~UE99) is low the measurement threshold, and the resource occupied by the 60 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for the 40 active V2X sidelink UEs(UE20~UE59) is below the measurement threshold, and the resource occupied by the 40 active V2X sidelink UEs is expected to be included in the resource selection procedure and,

- the measured PSSCH-RSRP for other 60 active V2X sidelink UEs(UE0~UE19, UE60~UE99) is above the measurement threshold, and the resource occupied by the 60 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

### A.9.1.4.4.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2.

## A.9.1.4.5 Test for V2X UE Autonomous Resource Selection/Reselection with Contiguous Sensing

### A.9.1.4.5.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 performing contiguous sensing configured with M=31 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.5.1-1and A. 9.1.4.5.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5 ms. Starting from the beginning of whole test, the test equipment shall send a message with a SL-SCH MAC PDU every 5 ms as specified in clause 6.1.6 in TS 38.321[7] to schedule an aperiodic transmission and ensure that the UE under test needs continuously transmit PSCCH/PSSCH every 5 ms.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipment are configured such that

- the measured PSSCH-RSRP for 20 active V2X sidelink UEs (UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signal from Test Equipment are configured such that

- the measured PSSCH-RSRP for the 20 active V2X sidelink UEs(UE10~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

**Table A.9.1.4.5.1-1: Test Parameters for V2X UE Autonomous Resource Selection/Reselection Tests with Contiguous Sensing**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | TDD carrier in Band n47 or n38 |
| Channel Bandwidth ($BW_{channel}$) Note 2 | MHz | 20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100) | |

#### A.9.1.4.5.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2.

### A.9.1.4.6 Test for V2X UE Autonomous Resource Selection/Reselection in SL-DRX

#### A.9.1.4.6.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.6.1-1and A. 9.1.4.6.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) and another V2X sidelink UE as the receiver for the UE under test in this test. The UE under test, the receiver UE and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE, the receiver V2X sidelink UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5 ms. At the beginning of whole test, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7] and ensure that the UE under test needs continuously transmit PSCCH/PSSCH to the receiver SL UE.

The receiver UE runs one DRX cycle with 40 ms cycle length and 10 ms on time, 0 ms inactivity timer, and 10 ms offset. The UE under test and the 50 active UEs are in non-DRX mode.

The test consists of two duration T1 and T2. During T1, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for 20 active V2X sidelink UEs(UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for the 20 active V2X sidelink UEs(UE20~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

**Table A.9.1.4.6.1-1: Test Parameters for V2X UE Autonomous Resource Selection/Reselection Tests in SL-DRX**

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: Es/Iot, PSSCH-RSRP and SL-RSSI levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: For UE 10 to 29, occupying subchannel #1/2
NOTE 4: For UE 0 to 9 and 30 to 49, occupying subchannel #0/3/4
NOTE 5: The UE is only required to be tested in one of the supported test configurations.

### A.9.1.4.6.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2. The PSSCH transmission should happen only in the receiver SL UE SL-DRX active time.

## A.9.1.5 Test for Congestion Control Measurement

### A.9.1.5.1 Test Purpose and Environment

The purpose of this test is to verify the congestion control measurement requirements in section 12.6. For UE supporting NR Uu and sidelink operation, this test will also verify that V2X UE makes correct reporting of an event.

The test parameters are given in table A.9.1.5.1-1, Table A.9.1.5.1-2 , A.9.1.5.1-3 and A.9.1.5.1-4 below. There are 4 active V2X sidelink UEs in this test. The test system shall emulate the active sidelink UE to transmit PSCCH/PSSCH every 50 ms. Additionally, For UE supporting NR Uu and sidelink operation, there is an active Cell (Cell 1) in this test. For UE only supporting NR sidelink, There are no active cell and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During T1, all of active V2X sidelink UEs are configured to transmit PSCCH/PSSCH with lower transmission power every 50 ms. During T2, all of active V2X sidelink UEs are configured to transmit PSCCH/PSSCH with higher transmission power every 50 ms.

For UE supporting NR Uu and sidelink operation, the UE under test and all active sidelink UEs select PCell as synchonization source In the measurement control information it is indicated to the V2X UE that event-triggered reporting with Event C1 is used.

For UE only supporting NR sidelink, the UE under test and all active sidelink UEs select GNSS as synchonization source. The UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

For UE supporting NR Uu and sidelink operation, Supported test configurations for FR1 NR cell are shown in table A.9.1.5.1.1-1.

**Table A.9.1.5.1.1-1: Supported Test Configurations for FR1 NR cell (only for UE supporting both NR Uu and sidelink operation)**

| Configuration | Description |
|---|---|
| 1 | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.9.1.5.1-2: General test parameters for Congestion Control Measurement Test for V2X UE**

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.9.1.5.2 Test Requirements

For UEs that support NR Uu and sidelink operation, the UEs shall not send event C1 triggered measurement reports during T1 and shall send event C1 triggered measurement reports during T2.

For UEs that support sidelink operation only, the UE channel occupancy ratio shall be larger than 0.001 during T1, and the UE channel occupancy ratio shall be smaller than 0.001 curing T2.

The rate of correct events observed during repeated tests shall be at least 98 %.

## A.9.1.6 Test for Interruption

### A.9.1.6.1 Test for Interruption to WAN due to V2X Sidelink Communication

#### A.9.1.6.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to interruptions due to V2X sidelink communication defined in clause 12.7.1 under the following additional conditions:

- The UE is out of coverage on the V2X sidelink carrier and is associated with a serving cell on a non-V2X sidelink carrier

This test is applicable for V2X sidelink communication capable UEs that support inter-band concurrent V2X sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor V2X sidelink communication.

The test parameters are given in table A.9.1.6.1.1-1, table A.9.1.6.1.1-2, table A.9.1.6.1.1-3 and table A.9.1.6.1.1-4. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. On RF channel 2, the test consists of 8 active Sidelink UEs in this test transmitting V2X sidelink communication. The UE under test and all active sidelink UEs select the active cell as synchonization source.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC_IDLE and monitoring the V2X sidelink communication transmission from other active Sidelink UEs on the V2X sidelink communication resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE, and the UE is expected to transmit *SidelinkUEInformationNR* indicating *sl-RxInterestedFreqList*. On reception of *SidelinkUEInformationNR*, the test system shall send RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformationNR* for up to 2 second, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during V2X sidelink communication.

**Table A.9.1.6.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.9.1.6.1.1-2: Test Parameters for Interruptions due to V2X Sidelink Communication**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | - | 1, 2 | RF channel 1 is non-V2X sidelink carrier<br>RF channel 2 is V2X sidelink carrier |
| SCS | kHz | 30 | |
| Active cell | - | Cell 1 | PCell on RF channel number 1 |
| CP length of Cell 1 | - | Normal | |
| T1 | s | 5.12 | |
| T2 | s | Up to receiving RRC reconfiguration setup complete from the UE, or up to 2 second if UE does not transmit *SidelinkUEInformationNR* during this period. | |
| T3 | s | 10 | |

**Table A.9.1.6.1.1-3: Sidelink Communication Configuration for Interruptions due to V2X Sidelink Communication**

| Parameter | | Unit | Value | Comment |

| Propagation Condition | | | AWGN | | |

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.9.1.6.1.2 Test Requirements

The UE shall be continuously scheduled on PCell on RF channel 1 during T3. During T3, the interruption on PCell shall not be more than the values specified in clause 12.7.1..

## A.9.1.6.2 Test for interruption to WAN at transitions between active and non-active during SL-DRX in asynchronous case

### A.9.1.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that when V2X sidelink is in SL-DRX and NR PCell is in non-DRX, NR PCell interruptions due to transitions of V2X sidelink UE from active to non-active and from non-active to active do not exceed the limits in terms of missing ACK/NACK. This test will verify the missing ACK/NACK rate on NR PCell in clause 12.7.4 under the following additional conditions:

- The UE is out of coverage on the V2X sidelink carrier and is associated with a serving cell on a non-V2X sidelink carrier.
- The UE is in sidelink resource allocation mode 1.

This test is applicable for V2X sidelink communication capable UEs that support inter-band concurrent V2X sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor V2X sidelink communication.

The test parameters are given in table A.9.1.6.2.1-1, table A.9.1.6.2.1-2, and table A.9.1.6.2.1-3. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. The UE under test selects GNSS as the synchonization source.

The test consists of one time period, with duration of T1. During T1, NR PCell is continuously scheduled in DL while V2X sidelink is not scheduled and has SL-DRX configured. Prior to start of T1 the SL-DRX inactivity timer for the V2X sidelink has already expired. PDCCH indicating a new transmission on PCell shall be sent continuously during the entire time duration to ensure UE would not enter DRX state on PCell.

**Table A.9.1.6.2.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.9.1.6.2.2 Test Requirements

The UE shall be continuously scheduled on PCell on RF channel 1 during the entire length of T1. UE shall not be scheduled in V2X sidelink during T1. During the time duration T1 the UE shall transmit at least 99.375 % of ACK/NACK on NR PCell.

Interruption on NR PCell shall not exceed X as defined in table A.9.1.6.2.2-1.

**Table A.9.1.6.2.2-1: Interruption length X at transition between active and non-active during SL-DRX**

| $\mu$ | NR Slot length (ms) | Interruption length X |
|---|---|---|
| | | Async |
| 0 | 1 | 2 |
| 1 | 0.5 | 2 |
| 2 | 0.25 | 3 |

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.9.1.6.3 Test for Interruption at NR Sidelink Diccovery Configuration

### A.9.1.6.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to interruptions due to NR sidelink discovery configuration defined in clause 12.7.8 under the following additional conditions:

- The UE is out of coverage on the NR sidelink carrier and is associated with a serving cell on a NR non-sidelink carrier

This test is applicable for NR sidelink discovery capable UEs that support inter-band concurrent sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor NR sidelink discovery.

The test parameters are given in table A.9.1.6.3.1-1, table A.9.1.6.3.1-2, table A.9.1.6.3.1-3 and table A.9.1.6.3.1-4. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. On RF channel 2, the test consists of 8 active Sidelink UEs in this test transmitting sidelink discovery. The UE under test and all active sidelink UEs select the active cell as synchonization source.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC_IDLE and monitoring NR sidelink discovery announcements from other active Sidelink UEs on NR sidelink discovery resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE, and the UE is expected to transmit *SidelinkUEInformationNR* indicating *sl-RxInterestedFreqListDisc*. On reception of *SidelinkUEInformationNR*, the test system shall send RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformationNR* for up to 2 second, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during NR sidelink discovery.

**Table A.9.1.6.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.9.1.6.3.1-2: Test Parameters for Interruptions at NR Sidelink Discovery Configuration**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | - | 1, 2 | RF channel 1 is NR non-sidelink carrier<br>RF channel 2 is NR sidelink carrier |
| SCS | kHz | 30 | |
| Active cell | - | Cell 1 | PCell on RF channel number 1 |
| CP length of Cell 1 | - | Normal | |
| T1 | s | 5.12 | |

| | | | |
|---|---|---|---|
| T2 | s | Up to receiving RRC reconfiguration setup complete from the UE, or up to 2 second if UE does not transmit *SidelinkUEInformationNR* during this period. | |
| T3 | s | 5 | |

**Table A.9.1.6.3.1-3: Sidelink Discovery Configuration for Interruptions at NR Sidelink Discovery Configuration**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.9.1.6.3.2 Test Requirements

The UE shall be continuously scheduled on PCell on RF channel 1 during T3. During T3, the interruption on PCell shall not be more than the values specified in clause 12.7.8.

## A.9.1.7 Selection / Reselection of relay UE

### A.9.1.7.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to selection / reselection of relay UE defined in clauses 12.10. In the test, the UE under test is configured with PCell or an Sidelink UE but not both, based on the scenarios (U2N or U2U relay) UE supported, and is configured with resource pools for NR sidelink discovery message as required for remote UE operation.

This test is applicable to UEs capable of NR sidelink communication and sidelink discovery, and further support the optional feature of sidelink remote UE operation.

The test parameters are given in table A.9.1.7.1.1-1, table A.9.1.7.1-2, table A.9.1.7.1-3, table A.9.1.7.1-4, table A.9.1.7.1-5, and table A.9.1.7.1-6 below. The test consists of one active serving cell (cell 1, configured as Table A.9.1.7.1-5) or an Sidelink UE (Sidelink UE 1, configured as Table A.9.1.7.1-6), one remote UE and two active Sidelink relay UEs (Sidelink Relay UE 1, Sidelink Relay UE 2). The relay UEs are configured in mode 2 to be transmitting relay discovery messages every discovery period, which is determined by resource reservation period indicated by sl-ResourceReservePeriodList.

The test system shall ensure that the remote UE under test has transmitted *SidelinkUEInformationNR* message and has been configured with the sidelink discovery resource pool and sidelink communication resource pool respectively for relay operation prior to the start of the test.

The tests consist of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively.

During T1, RSRP of cell 1 or SL-RSRP of Sidelink UE 1 is kept higher than *threshHighRemote* (within *sl-remoteUE-Config*), and the remote UE is not required to perform relay UE selection.

During T2, RSRP of cell 1 or SL-RSRP of Sidelink UE 1 is configured to be lower than *threshHighRemote*. The UE is expected to start looking for relay UE. The test system shall ensure that the UE under test has been configured the resource pool prior to end of T2 duration. During T2, the SD-RSRP of Sidelink Relay UE 1 and Sidelink Relay UE 2 is configured to be lower than the detection threshold and no relay UE will be available for the remote UE under test.

During T3, the SD-RSRP of Sidelink Relay UE 1 is raised above the threshold *sl-RSRP-Thresh* and the UE is expected to perform relay selection to Sidelink Relay UE 1. The test system can determine that the remote UE has selected a relay by monitoring the configured sidelink communication resource for the ProSe direct link establishment request message to the relay UE.

During T4, the UE is expected to complete the sidelink connection establishment with the relay UE. Note that the RSRP of the serving cell (cell 1) or SL-RSRP of Sidelink UE 1 and the SD-RSRP of sidelink relay UEs are kept unchanged during T3 and T4. The period T4 ends when Sidelink Relay UE1 sends the sidelink communication response message back to the remote UE.

During T5, SD-RSRP of Sidelink Relay UEs are modified such that the remote UE is expected to reselect to Sidelink Relay UE2.

**Table A.9.1.7.1-1: Test parameters for selection / reselection of relay UE test for NR FR1**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | HD carrier in Band n47 or n38 |
| Channel Bandwidth ($BW_{channel}$) Note 1 | MHz | 20 ($N_{RB,c}$ = 50) or<br>40 ($N_{RB,c}$ = 100) | |
| SCS | kHz | 30 | |
| Traffic destination | | Cell 1 or Sidelink UE 1 | Serving NR cell will broadcast SIB12. Sidelink UE 1 will use the configuration in SL-PreconfigurationNR. |
| Active Relay UEs | | Relay UE 1, Relay UE 2 | Transmitting relay discovery message |
| CP length of Cell 1 and Sidelink UE 1 | | Normal | |
| T1 | ms | 100 | |
| T2 | s | Up to receiving RRC reconfiguration setup complete from the UE, or up to [1] sec if UE does not transmit *SidelinkUEInformationNR* during this period. | |
| T3 | s | 1 | |
| T4 | s | 2 | |
| T5 | s | 1 | |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | | | |

**Table A.9.1.7.1-2: Sidelink discovery configuration for selection / reselection of relay UE test for NR FR1**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | HD carrier in Band n47 or n38 |
| Channel Bandwidth ($BW_{channel}$) Note 1 | MHz | 20 ($N_{PRB,c}$ = 50) or<br>40 ($N_{PRB,c}$ = 100) | |
| Resource pool configuration for sidelink discovery | | As specified in table A.3.21.2-2 Note 2 | IE values unless specified otherwise in this test. |
| sl-TimeResource included in *sl-DiscTxPoolSelected-r17* and *sl-DiscRxPool-r17* | | 0000111100 | Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3]) |

| | | | |
|---|---|---|---|
| sl-NumSubchannel included in *sl-DiscTxPoolSelected-r17* and *sl-DiscRxPool-r17* | | 2 | Indicates the number of sub-channels for TX resource pool |
| sl-SubchannelSize included in *sl-DiscTxPoolSelected-r17* and *sl-DiscRxPool-r17* | | 10 | Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB |
| *sl-ResourceReservePeriodList* | s | 0.04 | Indicates the resource reservation period for discovery period |
| *threshHighRemote within sl-remoteUE-Config* | | -91 dBm | |
| *sl-RSRP-Thresh within sl-remoteUE-Config* | | -91 dBm | |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: This test is according to the principle defined in section A.3.21. | | | |

**Table A.9.1.7.1-3: Sidelink Communication configuration for selection / reselection of relay UE test**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | - | 1 | HD carrier in Band n47 or n38 |

## A.9.1.7.2 Test Requirements

Sidelink relay UE selection delay is defined as the time from the beginning of time period T3 to the moment when the UE selects the Sidelink Relay UE1 and transmits the PC5-SP direct communication setup message using Sidelink Communications.

The test system shall verify that the sidelink relay UE selection delay is less than 680 ms.

NOTE: The sidelink relay UE selection delay can be expressed as ($T_{evaluate, ProSe_Relay_intra}$ + 40 ms).

Sidelink relay UE reselection time is defined as the time from the beginning of time period T5 to the moment when the UE reselects to Sidelink relay UE2 and transmits the direct communication setup message using Sidelink Communications.

The test system shall verify that the sidelink relay UE reselection delay is less than 840 ms.

NOTE: The sidelink relay UE reselection delay can be expressed as ($T_{measure,ProSe_Relay_Intra}$ + $T_{evaluate,\ ProSe_Relay_intra}$ + 40 ms).

# A.9A Tests for NR Sidelink Measurements for Positioning

## A.9A.1 Tests for NR Sidelink Measurements for Positioning in FR1

### A.9A.1.1 Measurement delay tests

#### A.9A.1.1.1 NR SL RSTD measurement reporting delay test case in FR1 SA

##### A.9A.1.1.1.1 Test Purpose and Environment

The purpose of the test is to verify that the SL RSTD measurement meets the requirements specified in clause 12A.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL RSTD measurements.

The supported NR Uu test configurations are specified in table A.9A.1.1.1.1-1.

**Table A.9A.1.1.1.1-1: Supported test configurations for FR1 NR Cell 1**

| NR Uu configuration | Description |
|---|---|
| Uu_conf1 | NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| Uu_conf2 | NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| Uu_conf3 | NR Uu: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

The supported NR SL test configurations are specified in table A.9A.1.1.1.1-2.

**Table A.9A.1.1.1.1-2: Supported test configurations for NR SL UEs**

| NR SL configuration | Description |
|---|---|
| SL_conf1 | NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf2 | NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf3 | NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test, there is one target UE receiving SL-PRS and performing SL RSTD measurements and three anchor UEs (anchor UE 1, anchor UE 2, and anchor UE 3) transmitting SL-PRS for the SL RSTD measurements on NR SL RF channel 2. Anchor UE 1 is the reference anchor UE for the measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with duration of T1 and T2. Before T2 starts, the UEs have been synchronized to Cell 1. During time duration T1, the target UE shall not have any timing information of anchor UE 2 and anchor UE 3. All three anchor UEs transmit SL-PRS during T2.

The *SL-TDOA-ProvideAssistanceData* and *SL-TDOA-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *SL-TDOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.1.1.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.1.1.1-4 and A.9A.1.1.1.1-5, respectively. Anchor UE specific test parameters for SL RSTD measurement reporting delay during T1 and T2 are listed in table A.9A.1.1.1.1-6.

**Table A.9A.1.1.1.1-3: General test parameters for SL RSTD measurement reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Serving cell | | Cell 1 | NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2, anchor UE 3), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test. |
| CP length | | Normal | |
| DRX | | OFF | |
| Measurement gap | | OFF | |
| Target UE | | UE 0 | The performing SL RSTD measurements based on SL-PRS transmissions from anchor UEs |
| Reference anchor UE | | UE 1 | Reference anchor UE is the UE in the SL-TDOA assistance data with respect to which the SL RSTD measurement is defined, as specified in TS 38.215 [4] and TS 38.355 [37]. The reference anchor UE is UE 1 in this test case. |
| Other anchor UEs | | UE 2 and UE 3 | Anchor UE 2 and Anchor UE 3 appear at the first and second places in the anchor UE list SL-RTD-Info in the SL-TDOA assistance data. |
| Number of anchor UEs provided in SL-TDOA assistance data | | 4 | Including the reference anchor UE |
| Sidelink communication configuration | | As specified in table A.3.21.2-2 | |
| Target UE antenna configuration | | 1 x 2 | |
| Timing offset between the anchor UEs at the target UE antenna connector | µs | UE2 to UE1: 0<br>UE3 to UE1: 3 | Synchronous transmissions |
| T1 | s | 3 | The length of the time interval from the beginning of each test |
| T2 | s | 1.28 | The length of the time interval that follows immediately after time interval T1 |

NOTE 1: The resources for NR Uu uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other UEs and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SL PRS-RSRP, PSCCH Received Power (RP), and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.
NOTE 4: In symbols containing SL-PRS.
NOTE 5: In symbols containing PSCCH.
NOTE 6: Applicable only when *maxNumOfSlotsWithActiveSL-PRS-Resources* is larger than 2. If UE0 reports that *maxNumOfSlotsWithActiveSL-PRS-Resources* is 1, SL-PRS slot offset for anchor UE2 and anchor UE3 is *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 15kHz and 2**minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 30kHz. If UE0 reports that *maxNumOfSlotsWithActiveSL-PRS-Resources* is 2, SL-PRS slot offset is 1 slot for anchor UE2 and *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 15kHz and 2**minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 30kHz for anchor UE3.

#### A.9A.1.1.1.2 Test Requirements

The SL RSTD measurement time fulfils the requirements specified in clause 12A.2.5.

The UE shall perform and report to LMF the SL RSTD measurements for anchor UE 2 and anchor UE 3 with respect to the reference anchor UE 1, within the time duration specified in clause 12A.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL RSTD measurement for each correct event shall be within the SL RSTD reporting range specified in clause 10.4A.2.1.1, i.e., between SL_RSTD_000000 and SL_RSTD_492513.

### A.9A.1.1.2 SL Rx-Tx measurement delay tests

#### A.9A.1.1.2.1 Test Purpose and Environment

The purpose of the test is to verify that the SL Rx-Tx measurement meets the requirements specified in clause 12A.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL Rx-Tx measurements.

The supported NR Uu test configurations in FR1 are shown in table A.9A.1.1.2.1-1.

**Table A.9A.1.1.2.1-1: Supported Test Configurations for FR1 NR cell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: 15 kHz SSB SCS, 20 MHz BW, FDD duplex mode |
| 2 | NR Uu: 15 kHz SSB SCS, 20 MHz BW, TDD duplex mode |
| 3 | NR Uu: 30 kHz SSB SCS, 40 MHz BW, TDD duplex mode |
| Note 1: The UE is only required to pass in one of the supported test configurations in FR1. | |

The supported NR SL test configurations are specified in table A.9A.1.1.2.1-2.

**Table A.9A.1.1.2.1-2: Supported test configurations for NR SL UEs**

| NR SL configuration | Description |
|---|---|
| SL_conf1 | NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf2 | NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf3 | NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There is one NR active cell (Cell 1) and three active UEs (one target UE and two anchor UEs for SL positioning measurement) in this test. The target UE receives SL-PRS and performs the SL Rx-Tx time difference measurement. The two anchor UEs transmit the SL-PRS for the SL Rx-Tx time difference measurement on NR SL RF channel 2. The target UE and all anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. Before T2 starts, the UEs have been synchronized to the NR serving cell. And during T2, two anchor UEs transmit SL-PRS for positioning measurements.

The *SL-RTT-ProvideAssistanceData* and *SL-RTT-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to

the target UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the SL RTT assistance data and location information request.

The test parameters are given in table A.9A.1.1.2.1-3, A.9A.1.1.2.1-4, A.9A.1.1.2.1-5 and table A.9A.1.1.2.1-6 below.

**Table A.9A.1.1.2.1-3: General Test Parameters for SL Rx-Tx measurement reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Serving cell | | Cell 1 | NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test. |

NOTE 3: The UE is only required to be tested in one of the supported test configurations.

NOTE 4: In symbols containing SL-PRS.

NOTE 5: In symbols containing PSCCH.

### A.9A.1.1.2.2 Test Requirements

The SL Rx-Tx time difference measurement time fulfils the requirements specified in clause 12A.4.5.

The UE shall perform and report the SL Rx-Tx time difference measurements for anchor UE 1 and anchor UE 2 within the specified SL Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL Rx-Tx measurement for each correct event shall be within the SL Rx-Tx reporting range specified in clause 10.4A.4.1.

## A.9A.1.1.3 NR SL AoA measurements reporting delay test in FR1 SA

### A.9A.1.1.3.1 Test Purpose and Environment

The purpose of the test is to verify that the SL AoA measurement meets the requirements specified in clause 12A.6 in an environment with AWGN propagation conditions in FR1 in NR Uu standalone scenario, when a single frequency layer is configured for SL positioning.

The test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL AoA measurements.

The supported NR Uu test configurations are specified in table A.9A.1.1.3.1-1.

The supported NR SL test configurations are specified in table A.9A.1.1.3.1-2.

**Table A.9A.1.1.3.1-1: Supported Test Configurations for FR1 NR cell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: 15 kHz SSB SCS, 20 MHz BW, FDD duplex mode |
| 2 | NR Uu: 15 kHz SSB SCS, 20 MHz BW, TDD duplex mode |
| 3 | NR Uu: 30 kHz SSB SCS, 40 MHz BW, TDD duplex mode |
| NOTE 1: The UE is only required to pass in one of the supported test configurations in FR1. | |

**Table A.9A.1.1.3.1-2: Supported test configurations for NR SL UEs**

| NR SL configuration | Description |
|---|---|
| SL_conf1 | NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf2 | NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf3 | NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there is one target UE receiving SL-PRS and performing SL AoA measurements and two anchor UEs (anchor UE 1, anchor UE 2) transmitting SL-PRS for the SL AoA measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with the duration of T1 and T2. During the duration T1, the target UE shall not have any timing information of anchor UE 1 and anchor UE 2. All two anchor UEs transmit SL-PRS during T2.

The *SL-AOA-ProvideAssistanceData* and *SL-AOA-RequestLocationInformation* as defined in TS 38.355 [37], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-AOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.1.3.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.1.3.1-4 and A.9A.1.1.3.1-5, respectively. Anchor UE specific test parameters for SL AoA measurement reporting delay during T1 and T2 are listed in table A.9A.1.1.3.1-6.

NOTE 2: SL PRS-RSRP, PSCCH Received Power (RP) and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for SL PRS symbols.

NOTE 3: The UE is only required to be tested in one of the supported test configurations.

NOTE 4: In symbols containing SL-PRS.

NOTE 5: In symbols containing PSCCH.

### A.9A.1.1.3.2 Test Requirements

The SL AoA measurement time fulfils the requirements specified in clause 12A.6.5.

The UE shall perform and report to LMF the SL AoA measurements for the anchor UE 1 and anchor UE 2, within the time duration specified in clause 12A.6.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL AoA measurement for each correct event shall be within the SL AoA reporting range specified in clause 10.4A.6.1.1, i.e., between A_AoA_0 and SL_AoA_3599, and between Z_AoA_0 and Z_AoA_1799.

## A.9A.1.1.4 NR SL RTOA measurements reporting delay test in FR1 SA

### A.9A.1.1.4.1 Test Purpose and Environment

The purpose of the test is to verify that the SL RTOA measurement meets the requirements specified in clause 12A.7 in an environment with AWGN propagation conditions in FR1 in NR Uu standalone scenario, when a single frequency layer is configured for SL positioning.

The test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL AoA measurements.

The supported NR Uu test configurations are specified in table A.9A.1.1.4.1-1.

The supported NR SL test configurations are specified in table A.9A.1.1.4.1-2.

**Table A.9A.1.1.4.1-1: Supported test configurations for FR1 NR Cell 1**

| NR Uu configuration | Description |
|---|---|
| Uu_conf1 | NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| Uu_conf2 | NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| Uu_conf3 | NR Uu: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.9A.1.1.4.1-2: Supported test configurations for NR SL UEs**

| NR SL configuration | Description |
|---|---|
| SL_conf1 | NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf2 | NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf3 | NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there is one target UE transmitting SL-PRS and performing SL RTOA measurements and one anchor UE (anchor UE 1) receiving SL-PRS for the SL RTOA measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with the duration of T1 and T2. During the duration T1, the target UE shall not have any timing information of anchor UE 1 and anchor UE 2. All two anchor UEs transmit SL-PRS during T2.

The *SL-TOA-ProvideAssistanceData* and *SL-TOA-RequestLocationInformation* as defined in TS 38.355 [37], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-TOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.1.4.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.1.4.1-4 and A.9A.1.1.4.1-5, respectively. Anchor UE specific test parameters for SL RTOA measurement reporting delay during T1 and T2 are listed in table A.9A.1.1.4.1-6.

**Table A.9A.1.1.4.1-3: General test parameters for SL RTOA measurement reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

NOTE 1: The resources for NR Uu uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other UEs and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SL PRS-RSRP, PSCCH Received Power (RP) and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.
NOTE 4: In symbols containing SL-PRS.
NOTE 5: In symbols containing PSCCH.

### A.9A.1.1.4.2 Test Requirements

The SL RTOA measurement time fulfils the requirements specified in clause 12A.7.5.

The UE shall perform and report to LMF the SL RTOA measurements for the anchor UE 1, within the time duration specified in clause 12A.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL RTOA measurement for each correct event shall be within the SL RTOA reporting range specified in clause 10.4A.7.1.1, i.e., between SL_RTOA_0 and SL_RTOA_985024.

## A.9A.1.1.5 NR SL PRS-RSRP measurement reporting delay test case in FR1 SA

### A.9A.1.1.5.1 Test Purpose and Environment

The purpose of the test is to verify that the measurement time of both SL PRS PRS-RSRP and SL PRS RSTD measurements meet the requirements specified in clause 12A.3.5and 12A.2.5 respectively in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.1.1. And if UE passes this test case, then UE does not need to take the reporting delay test with RSTD measurement only defined in A.9A.1.1.1.

### A.9A.1.1.5.2 Test Requirements

The SL PRS-RSRP and SL RSTD measurement times fulfil the requirements specified in clause 12A.3.5 and 12A.2.5 respectively.

The UE shall perform and report to LMF the SL PRS-RSRP measurements for anchor UE 2 and anchor UE 3 within the time duration specified in clause 12A.3.5 starting from the beginning of time interval T2. UE also performs and report to LMF the SL RSTD measurements for anchor UE 2 and anchor UE 3 with respect to the reference anchor UE 1, within the time duration specified in clause 12A.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL PRS-RSRP measurement for each correct event shall be within the SL PRS-RSRP reporting range specified in clause 10.4A.3.1.1, i.e., between SL_PRS_RSRP_0 and SL_PRS_RSRP_126, and the reported SL RSTD measurement for each correct event shall be within the SL RSTD reporting range specified in clause 10.4A.2.1.1.

#### A.9A.1.1.6 NR SL PRS-RSRPP measurement reporting delay test case in FR1 SA

##### A.9A.1.1.6.1 Test Purpose and Environment

The purpose of the test is to verify that the measurement time of both SL PRS PRS-RSRPP and SL Rx-Tx measurements meet the requirements specified in clause 12A.5.5 and 12A.4.5 respectively in an environment with two-tap propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.1.2, except that the propagation shall be two-tap channel. And if UE passes this test case, then UE does not need to take the reporting delay test case with SL Rx-Tx measurement only defined in A.9A.1.1.2.

##### A.9A.1.1.6.2 Test Requirements

The SL PRS-RSRPP and SL Rx-Tx measurement times fulfil the requirements specified in clause 12A.5.5 and 12A.4.5, respectively.

The UE shall perform and report to LMF the SL PRS-RSRPP measurements for anchor UE 2 and anchor UE 3 within the time duration specified in clause 12A.5.5 starting from the beginning of time interval T2. UE also performs and report to LMF the SL Rx-Tx measurements for anchor UE 2 and anchor UE 3 within the time duration specified in clause 12A.4.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL PRS-RSRPP measurement for each correct event shall be within the SL PRS-RSRPP reporting range specified in clause 10.4A.5.1.1, i.e., between SL_PRS_RSRPP_0 and SL_PRS_RSRPP_126, and the reported SL Rx-Tx measurement for each correct event shall be within the SL Rx-Tx reporting range specified in clause 10.4A.4.1.1.

## A.9A.1.2 Measurement Accuracy Tests

### A.9A.1.2.1 NR SL RSTD measurement accuracy test case in FR1 SA

#### A.9A.1.2.1.1 Test Purpose and Environment

The purpose of the test is to verify that the SL RSTD measurement meets the accuracy requirements specified in clause 10.4A.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL RSTD measurements.

The supported NR Uu test configurations are specified in table A.9A.1.2.1.1-1.

**Table A.9A.1.2.1.1-1: Supported test configurations for FR1 NR Cell 1**

| NR Uu configuration | Description |
|---|---|
| Uu_conf1 | NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| Uu_conf2 | NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| Uu_conf3 | NR Uu: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

The supported NR SL test configurations are specified in table A.9A.1.2.1.1-2.

**Table A.9A.1.2.1.1-2: Supported test configurations for NR SL UEs**

| NR SL configuration | Description |
|---|---|
| SL_conf1 | NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf2 | NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf3 | NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test, there is one target UE receiving SL-PRS and performing SL RSTD measurements and two anchor UEs (anchor UE 1 and anchor UE 2) transmitting SL-PRS for the SL RSTD measurements on NR SL RF channel 2. Anchor UE 1 is the reference anchor UE for the measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with duration of T1 and T2. Before T2 starts, the UEs have been synchronized to Cell 1. During time duration T1, the target UE shall not have any timing information of anchor UE 2. All two anchor UEs transmit SL-PRS during T2.

The *SL-TDOA-ProvideAssistanceData* and *SL-TDOA-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-TDOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.2.1.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.2.1.1-4 and A.9A.1.2.1.1-5, respectively. Anchor UE specific test parameters for SL RSTD measurement accuracy during T1 and T2 are listed in table A.9A.1.2.1.1-6.

**Table A.9A.1.2.1.1-3: General test parameters for SL RSTD measurement accuracy test**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Serving cell | | Cell 1 | NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test. |
| CP length | | Normal | |
| DRX | | OFF | |
| Measurement gap | | OFF | |
| Target UE | | UE 0 | The UE performing SL RSTD measurements based on SL-PRS transmissions from anchor UEs |
| Reference anchor UE | | UE 1 | Reference anchor UE is the UE in the SL-TDOA assistance data with respect to which the SL RSTD measurement is defined, as specified in TS 38.215 [4] and TS 38.355 [37]. The reference anchor UE is UE 1 in this test case. |

| | | | |
|---|---|---|---|
| Other anchor UE | | UE 2 | Anchor UE 2 appears at the second place in the anchor UE list SL-RTD-Info in the SL-TDOA assistance data. |
| Number of anchor UEs provided in SL-TDOA assistance data | | 3 | Including the target UE |
| Sidelink communication configuration | | As specified in table A.3.21.2-2 | |
| Target UE antenna configuration | | 1 x 2 | |
| Timing offset between the anchor UEs at the target UE antenna connector | μs | UE 2 to UE 1: 3 | Synchronous transmissions |
| T1 | s | 3 | The length of the time interval from the beginning of each test |
| T2 | s | 1.28 | The length of the time interval that follows immediately after time interval T1 |

**Table A.9A.1.2.1.1-4: NR Uu specific test parameters for Cell 1**

| Parameter | | Unit | Value | Comment |

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 2: SL PRS-RSRP, PSCCH Received Power (RP) and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for SL PRS symbols.

NOTE 3: The UE is only required to be tested in one of the supported test configurations.

NOTE 4: In symbols containing SL-PRS.

NOTE 5: In symbols containing PSCCH.

#### A.9A.1.2.1.2 Test Requirements

In each test, the SL RSTD measurement for anchor UE 2 shall fulfil the absolute accuracy requirement in clause 10.4A.2.2.

### A.9A.1.2.2 SL Rx-Tx measurement accuracy test case in FR1

#### A.9A.1.2.2.1 Test Purpose and Environment

The purpose of the test is to verify that the SL Rx-Tx measurement meets the accuracy requirements specified in clause 10.4A.4 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL Rx-Tx measurements.

The supported NR Uu test configurations in FR1 are shown in table A.9A.1.2.2.1-1.

**Table A.9A.1.2.2.1-1: Supported Test Configurations for FR1 NR cell**

| Configuration | Description |
|---|---|
| 1 | NR Uu: 15 kHz SSB SCS, 20 MHz BW, FDD duplex mode |
| 2 | NR Uu: 15 kHz SSB SCS, 20 MHz BW, TDD duplex mode |
| 3 | NR Uu: 30 kHz SSB SCS, 40 MHz BW, TDD duplex mode |
| NOTE 1: The UE is only required to pass in one of the supported test configurations in FR1. | |

The supported NR SL test configurations are specified in table A.9A.1.2.2.1-2.

**Table A.9A.1.2.2.1-2: Supported test configurations for NR SL UEs**

| NR SL configuration | Description |
|---|---|

| | |
|---|---|
| SL_conf1 | NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf2 | NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode |
| SL_conf3 | NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There is one NR active cell (Cell 1) and three active UEs (one target UE and two anchor UEs for SL positioning measurement) in this test. The target UE receives SL-PRS and performs the SL Rx-Tx time difference measurement. The two anchor UEs transmit the SL-PRS for the SL Rx-Tx time difference measurement on NR SL RF channel 2. The target UE and all anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. Before T2 starts, the UEs have been synchronized to the NR serving cell. And during T2, two anchor UEs transmit SL-PRS for positioning measurements.

The *SL-RTT-ProvideAssistanceData* and *SL-RTT-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-RTT assistance* data and location information request.

The test parameters are given in table A.9A.1.2.2.1-3, A.9A.1.2.2.1-4, A.9A.1.2.2.1-5 and table A.9A.1.2.2.1-6 below.

**Table A.9A.1.2.2.1-3: General Test Parameters for SL Rx-Tx measurement reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Serving cell | | Cell 1 | NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test. |
| CP length | | Normal | |
| DRX | | OFF | |
| Measurement gap | | OFF | |
| Target UE | | UE 0 | The UE performing SL Rx-Tx measurements based on SL-PRS transmissions from anchor UEs |
| Other anchor UEs | | UE 1 and UE 2 | Anchor UE 1 and Anchor UE 2 appear at the first and second places in the anchor UE list SL-RTD-Info in the SL-RTT assistance data. |
| Number of anchor UEs provided in SL-RTT assistance data | | 3 | Including the target UE |
| Sidelink communication configuration | | As specified in table A.3.21.2-2 | |
| Target UE antenna configuration | | 1 x 2 | |
| Timing offset between the anchor UEs at the target UE antenna connector | μs | UE 2 to UE 1: 3 | Synchronous transmissions |
| T1 | s | 3 | The length of the time interval from the beginning of each test |
| T2 | s | 1.28 | The length of the time interval that follows immediately after time interval T1 |

NOTE 3: The UE is only required to be tested in one of the supported test configurations.
NOTE 4: In symbols containing SL-PRS.
NOTE 5: In symbols containing PSCCH.

#### A.9A.1.2.2.2 Test Requirements

The SL Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.4A.4.2 for both anchor UE 1 and anchor UE 2.

### A.9A.1.2.3 NR SL PRS-RSRP measurement accuracy test case in FR1 SA

#### A.9A.1.2.3.1 Test Purpose and Environment

The purpose of the test is to verify that the SL PRS PRS-RSRP measurement accuracy meets the requirements specified in clause 10.4A.3.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.2.1. During the test, both SL RSTD and SL PRS-RSRP measurements are requested by LMF.

#### A.9A.1.2.3.2 Test Requirements

In each test, the PRS-RSRP measurement accuracies shall fulfil the accuracy requirement defined in clause 10.4A.3.2.

### A.9A.1.2.4 NR SL PRS-RSRPP measurement accuracy test case in FR1 SA

#### A.9A.1.2.4.1 Test Purpose and Environment

The purpose of the test is to verify that the SL PRS PRS-RSRPP measurement accuracy meets the requirements specified in clause 10.4A.5.2 in an environment with two-tap propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.2.2, except that the propagation shall be two-tap channel. During the test, both SL Rx-Tx and SL PRS-RSRPP measurements are requested by LMF.

#### A.9A.1.2.4.2 Test Requirements

In each test, the PRS-RSRPP measurement accuracies shall fulfil the accuracy requirement defined in clause 10.4A.5.2.

# A.10 EN-DC Tests with NR PSCell under CCA and Other NR Cells in FR1

*Editor's note: Test cases for EN-DC with NR PSCell under CCA and SCell under CCA are also included here.*

## A.10.1 RRC_CONNECTED state mobility

### A.10.1.1 RRC connection mobility control

#### A.10.1.1.1 Random Access

##### A.10.1.1.1.1 4-step RA type contention-based random access for NR PSCell with CCA

###### A.10.1.1.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.1.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.1.1-2.

**Table A.10.1.1.1.1.1-1: Supported test configurations for contention based random access test in FR1 for PSCell with CCA**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$.
NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run.

#### A.10.1.1.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

#### A.10.1.1.1.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in clause 6.2.2A.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.10.1.1.1.1.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.

- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.1.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2A.2.1.4, the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.10.1.1.1.1.2.5 Contention Resolution Timer expiry

To test the UE behavior specified in clause 6.2.2A.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.10.1.1.1.2 4-step RA type non-contention based random access for NR PSCell with CCA

#### A.10.1.1.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.2.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.2.1-2.

**Table A.10.1.1.1.2.1-1: Supported test configurations for non-contention based random access test in FR1 for PSCell with CCA**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

| $W_{CCA_UL}$ Note 8 | | | | Inf | |
| Semi-static channel access config period Note 4, 6 | | | ms | 2 | |
| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$.
NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run.

### A.10.1.1.1.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

#### A.10.1.1.1.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in clause 6.2.2A.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.10.1.1.1.2.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.

- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.2.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.2.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

### A.10.1.1.1.3 2-step RA type contention-based random access for NR PSCell with CCA

#### A.10.1.1.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.3.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.3.1-2.

**Table A.10.1.1.1.3.1-1: Supported test configurations for 2-step RA type contention based random access test in FR1 for PSCell with CCA**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

**Table A.10.1.1.1.3.1-2: General test parameters for 2-step RA type contention based random access test in FR1 for PSCell with CCA**

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$.
NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run.

#### A.10.1.1.1.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.10.1.1.1.3.2.1 MsgA Transmission

To test the UE behaviour specified in clause 6.2.2A.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*, if the UL CCA is successful.

below are relevant for all cases of MsgA transmissions described within the clause A.10.1.1.1.3.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.

- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure. In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.3.2.2 MsgB Reception

To test the UE behaviour specified in clause 6.2.2A.3.1.2 the System Simulator shall transmit a MsgB with fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble .

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.1.3 the System Simulator shall transmit a MsgB with fallbackRAR containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

### A.10.1.1.1.4 2-step RA type non-contention based random access for NR PSCell with CCA

#### A.10.1.1.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.4.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.4.1-2.

**Table A.10.1.1.1.4.1-1: Supported test configurations for non-contention based random access test for 2-step RA type in FR1 for PSCell with CCA**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

**Table A.10.1.1.1.4.1-2: General test parameters for non-contention based random access test for 2-step RA type in FR1 for PSCell with CCA**

| Parameter | | | Unit | Test-1 | Comments |

| MsgA Configuration | | | FR1 MsgA configuration 2 under CCA | As defined in A.3.20A.2. |
| *msgA-RSRP-ThresholdSSB* | | dBm | RSRP_51 | The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2]. |
| DL CCA probability | Note 4, 6 | | 0.9375 | |
| $P_{CCA_DL}$ | Note 5, 6 | | 0.75/0.75 | |
| $L_{CCA_DL}$ Note 7 | | | 4 | |
| $W_{CCA_DL}$ Note 8 | | | Inf | |
| UL CCA probability | Note 4, 6 | | 0.87 | |
| $P_{CCA_UL}$ | Note 5, 6 | | 0.75 | |
| $L_{CCA_UL}$ Note 7 | | | 5 | |
| $W_{CCA_UL}$ Note 8 | | | Inf | |
| Semi-static channel access config period Note 4, 6 | | ms | 2 | |
| Propagation Condition | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$.
NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run.

#### A.10.1.1.1.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.10.1.1.1.4.2.1 MsgA Transmission

In Test-1, to test the UE behavior specified in clause 6.2.2A.3.2.1 for MsgA transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause A.10.1.1.1.4.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the

MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.

- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.4.2.2 MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.2 the System Simulator shall transmit a MsgB containing a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble after 5 MsgA transmissions have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB if the MsgB contains a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power if Random Access Responses Reception has not been considered as successful.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.10.1.1.1.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.3 the System Simulator shall transmit a MsgB corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA*.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

### A.10.1.2 Handover with PSCell from EN-DC to EN-DC with known target PSCell using CCA

### A.10.1.2.1 Test Purpose and Environment

This test is to verify the requirement for E-UTRA handover with NR PSCell change, where NR PSCell is on carrier with CCA. The requirements for EN-DC HO with PSCell change on CCA are specified in clause 5.9 in E-UTRA RRM specification [15] for the case when the target PSCell is on carrier with CCA. Supported test configurations are shown in table A.10.1.2.1-1.

Table A.10.1.2.1-1 gives general test configurations for Handover with PSCell from EN-DC to EN-DC, table A.10.1.2.1-2 provides general test parameters for Handover from E-UTRA to E-UTRA cell in EN-DC to EN-DC, table A.10.1.2.1-3 provides E-UTRAN cell specific test parameters for Handover with PSCell from EN-DC to EN-DC, table A.10.1.2.1-4 provides general test parameters for PSCell change from FR1 carrier under CCA to FR1 carrier under CCA, table A.10.1.2.1-5 provides cell specific test parameters for PSCell change from FR1 carrier under CCA to FR1 carrier under CCA.

In the test there are four cells: Cell 1 and Cell 2 are PCell and target PCell on E-UTRA carrier, Cell 3 and Cell 4 are PSCell and target PSCell on NR CCA carrier. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) and Cell 3 (NR PSCell) with EN-DC mode.

At the start of time duration T1, the UE do not have any information of cell 2 and cell 4. AT the end of T1, UE is configured with neighbour cell measurements on the Cell 3 and Cell 4 for Event A3 conditional measurement report.

During T2, UE acquires the timing information of Cell 3 and Cell 4 and performs L3-RSRP measurements on the configured neighbour cells. UE sends measurement report to the Cell 1 to indicate the event triggering condition A3 is satisfied for the configured for neighbour cells. By end of T2, E-UTRA PCell (Cell 1) shall send a RRC message implying handover with PSCell change.

The start of T3 is defined as the end of the last TTI containing the RRC message implying handover with PSCell. UE shall complete PRACH transmission to PCell and PSCell by end of T3.

**Table A.10.1.2.1-1: General test configurations for Handover with PSCell from EN-DC to EN-DC with CCA on NR Cell**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on the UE capability | |

**Table A.10.1.2.1-2: General test parameters for Handover from E-UTRA to E-UTRA cell in EN-DC to EN-DC**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | One is E-UTRA RF channel and one is NR RF channel |
| Initial conditions | Active PCell | | Cell 1 | On E-UTRA RF channel number 1. |
| | E-UTRA Neighbouring cell | | Cell 2 | On E-UTRA RF channel number 1. |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.10.1.2.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 60 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover requirements for handover with PSCell for EN-DC is defined in clause 5.9 in [15] as:

$D_{HOwithPSCel_PCell} = T_{RRC_delay} + T_{search} + T_{IU} + T_{processing}$

Where:

$T_{RRC_delay}$ = 20 ms for 'RRC connection reconfiguration (NR SCG establishment/ /modification/release)'.

$T_{search}$ = 0 ms for known cell.

$T_{IU}$ = 15 ms in the test configuration.

$T_{processing}$ = 25 ms for source Cell and target Cell are in the same FR.

This gives a total of 60 ms for handover delay.

The UE shall transmit the PRACH preamble to Cell 4 less than $D_{HOwithPSCell_PSCell}$ from the beginning of time period T3.

NOTE: The PSCell change delay for handover with PSCell for EN-DC is defined in clause 5.8 in [15] as:

$D_{HOwithPSCell_PSCell} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU_PSCell} + 2$ ms

Where:

$T_{RRC_delay}$ = 20 ms for 'RRC connection reconfiguration (NR SCG establishment/ /modification/release)'.

$T_{processing}$ = 25 ms for source Cell and target Cell are in the same FR.

$T_{search}$ = 0 ms for known cell.

$T_{\Delta} = (1+ L_2) *20$ ms.

$T_{IU} = (1+ L_3) *10 + 10$ ms

$L_2$ is the number of SMTC occasions not available at the UE during the time tracking period where $L_2 \leq L_{CCA_DL}$, and $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where $L_3 \leq L_{CCA_UL}$. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by $L_1$, $L_2$, $L_3$ and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2]. Test equipment should make sure that $L_{CCA_DL}$ and $L_{CCA_UL}$ are not exceeded during a test by monitoring the number of CCA failures and preventing additional CCA failures from happening after $L_{CCA_DL}$ or $L_{CCA_UL}$ is reached.

The rate of correct PSCell addition observed during repeated tests shall be at least 90 %.

# A.10.2 Timing

## A.10.2.1 UE transmit timing

### A.10.2.1.1 UE Transmit Timing Test with PSCell under DL CCA

#### A.10.2.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeb when PSCell is subject to DL CCA and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2. Supported test configurations are shown in table 10.2.1.1.1-1.

**Table A.10.2.1.1.1-1: Supported test configurations for UE transmit timing test**

| Config | Description |
|---|---|

| | |
|---|---|
| 1 | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

The test consists of E-UTRA PCell and NR PSCell, which is subject to DL CCA. The configuration for E-UTRA is given in A.3.7.2.1. Table A.10.2.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.10.2.1.1.1-3.

**Table A.10.2.1.1.1-2: Cell Specific Test Parameters for UE Transmit Timing test**

### A.10.2.1.1.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Set up E-UTRA PCell according to parameters given in table A.3.7.2.1-1 and setup NR PSCell according to parameters given in table A.10.2.1.1.1-1.

2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset})\times T_c \pm T_e$ of the first detected path of DL SSB.

   a. The $N_{TA}$ offset value (in $T_c$ units) is 25600

   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1

3) The test system shall adjust the timing of the DL path by values given in table A.10.2.1.1.2-1

**Table A.10.2.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 30 | $+32*64T_c$ | $+16*64T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.

5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.10.2.2 UE timing advance

### A.10.2.2.1 UE Timing Advance Adjustment Accuracy with PSCell under DL CCA

#### A.10.2.2.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

#### A.10.2.2.1.2 Test Parameters

Supported test configurations are shown in table A.10.2.2.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.10.2.2.1.2-2, A.10.2.2.1.2-3 and A.10.2.2.1.2-4. The configuration of Cell 1 (LTE PCell) is specified in clause A.3.7.2.1.

In all test cases, two cells are used. Cell 1 is the PCell in the primary Timing Advance Group (pTAG) and cell 2 is the PSCell which is subject to DL CCA is in the secondary Timing Advance Group (sTAG). Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands for sTAG are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.10.2.2.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured for PSCell in sTAG.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element for sTAG, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance for sTAG used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements for sTAG, with Timing Advance Command value specified in table A.10.2.2.1.2-2. This value shall result in changes of the timing advance for sTAG used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321, shall be configured so that it does not expire in the duration of the test.

**Table A.10.2.2.1.2-1: Supported test configurations for timing advance test**

| Config | Description |
|---|---|
| 1 | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: The UE supporting EN-DC only on NR band(s) with shared spectrum access is required to be tested | |

NOTE: For further information see clause 6.3.2 in TS 38.331 [2].

### A.10.2.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value for PSCell in sTAG to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command, where k=5.

The Timing Advance adjustment accuracy for PSCell in sTAG shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

## A.10.3 Signalling characteristics

## A.10.3.1 Radio link monitoring

### A.10.3.1.1 Introduction

In the test cases specified in clause A.10.3.1, any uplink signal transmitted by the UE is used for detecting the in-/out-of-sync state of the UE. In terms of measurement, the uplink signal is verified based on the UE output power:

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [20]) means uplink signal

- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [20]) means no uplink signal.

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

### A.10.3.1.2 Radio link monitoring out-of-sync test for PSCell configured with SSB-based RLM RS in non-DRX mode

#### A.10.3.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PSCell. This test will partly verify the FR1 PSCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.10.3.1.2.1-1. The test parameters are given in tables A.10.3.1.2.1-2, A.10.3.1.2.1-3, and A.10.3.1.2.1-4 below. There are two cells in the test: Cell 1 is the E-UTRAN PCell, and Cell 2 is the FR1 PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

The test consists of three successive time periods, with time duration of T1, T2 and T3, respectively. Figure A.10.3.1.2.1-1 shows the variation of the downlink SNR in the active Cell 2 to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in the test.

**Table A.10.3.1.2.1-1: Supported test configurations.**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

**Figure A.10.3.1.2.1-1: SNR variation for out-of-sync testing.**

### A.10.3.1.2.2 Test requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

- During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.
- The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.10.3.1.3 Radio link monitoring in-sync test for PSCell configured with SSB-based RLM RS in non-DRX mode

#### A.10.3.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell. This test will partly verify the FR1 PSCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.10.3.1.3.1-1. The test parameters are given in tables A.10.3.1.3.1-2, and A.10.3.1.3.1-3 below. There are two cells in the test: Cell 1 is the E-UTRAN PCell, and Cell 2 is the FR1 PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model.

**Table A.10.3.1.3.1-1: Supported test configurations.**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

## A.10.3.3 SCell activation and deactivation delay

### A.10.3.3.1 SCell Activation and Deactivation of known NR SCell with NR PSCell and NR SCell under CCA, 160 ms SCell measurement cycle

#### A.10.3.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in table A.10.3.3.1.1-1.

The test parameters are given in table A.10.3.3.1.1-2 and cell-specific parameters for NR cells are provided in table A.10.3.3.1.1-3 below. Cell-specific parameters for EUTRA PCell are provided in clause A.3.7.2.1.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in E-UTRA, Cell 2 (PSCell) on radio channel 2 (PSCC) in NR, and Cell 3 (SCell) on radio channel 3 (SCC) in NR. Before the test starts the UE is connected to Cell 1 and Cell 2, but is not aware of Cell 3, as the UE is only monitoring PCC and PSCC. The UE shall be continuously scheduled in the PCell and PSCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 3) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted *m*, defines the start of time period T2. The UE shall be able to report a valid CSI in PSCell for the activated SCell at latest in slot $m$ + ($T_{HARQ}$+ $T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, as defined in clause 8.3A.2. The UE shall start reporting CSI in PSCell in first available uplink resource for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting following slot $m+ \frac{T_{\mathrm{HARQ}}+3\ ms}{\mathrm{NR\ slot\ length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PSCell interruption shall fall within the time window specified in clause 8.3A.2.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted *n*, defines the start of time period T3. The UE shall complete the activation at latest in slot $n + \frac{T_{\mathrm{HARQ}}+3\ ms}{\mathrm{NR\ slot\ length}}$. Any PSCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PSCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.10.3.3.1.1-1: Supported test configurations for SCell Activation and Deactivation of known NR SCell with NR PSCell and SCell under CCA, 160 ms SCell measurement cycle**

| Configuration | Description |

NOTE 1: OCNG shall be used such that resources in the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.
NOTE 8: As specified in clause 8.3A for $L_{1,max}$, $L_{2,1,max}$, $L_{2,2,max}$, $L_{3,1,max}$, and $L_{3,2,max}$

### A.10.3.3.1.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot $m$ + ($T_{HARQ}$+ $T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA} = T_{FirstSSB} + L_1 * T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X = T_{FirstSSB}$.

During T3, interruption on PSCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

## A.10.3.3.2 SCell Activation and Deactivation of known NR SCell with NR PSCell and NR SCell under CCA, 640 ms SCell measurement cycle

### A.10.3.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 640 ms.

The supported test configurations are same as in table A.10.3.3.1.1-1 above.

The test parameters are same as in table A.10.3.3.1.1-2 above, except for parameters listed below in table A.10.3.3.2.1-1. The cell-specific parameters are same as in table A.10.3.3.1.1-3 above.

The test execution is the same as described in clause A.10.3.3.1 above.

**Table A.10.3.3.2.1-1: General test parameters for known NR SCell activation with NR PSCell and SCell under CCA, 640 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

### A.10.3.3.2.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot $m$ + ($T_{HARQ}$+ $T_{activation_time_withCCA}$ + $T_{CSI_reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA} = T_{FirstSSB_MAX} + L_{2,1} * T_{SMTC_MAX} + (1 + L_{2,2}) * T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X = T_{FirstSSB_MAX} + L_{2,1} * T_{SMTC_MAX}$.

During T3, interruption on PSCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

#### A.10.3.3.3 SCell Activation and Deactivation of unknown NR SCell with NR PSCell and NR SCell under CCA

##### A.10.3.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in table A.10.3.3.1.1-1 above.

The test parameters are same as in table A.10.3.3.1.1-2 above, except for parameters listed below in table A.10.3.3.3.1-1. The cell-specific parameters are same as in table A.10.3.3.1.1-3 above.

The test execution is the same as described in clause A.10.3.3.1 above.

**Table A.10.3.3.3.1-1: General test parameters for unknown NR SCell activation with NR PSCell and SCell under CCA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| T1 | s | 0.1 | During this time period PCell and PSCell shall be known and the SCell configured, but not detected. |

##### A.10.3.3.3.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot $m$ + ($T_{HARQ}$+ $T_{activation_time_withCCA}$ + $T_{CSI_reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA}$ = $T_{FirstSSB_MAX}$ + (1 + $L_{3,1}$)*$T_{SMTC_MAX}$ + (2 + $L_{3,2}$)*$T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X$ = $T_{FirstSSB_MAX}$ + $L_{3,1}$* $T_{SMTC_MAX}$.

During T3, interruption on PSCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

### A.10.3.4 Beam failure detection and link recovery procedures

#### A.10.3.4.1 EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in non-DRX mode

##### A.10.3.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in tables A.10.3.4.1.1-1, A.10.3.4.1.1-2, and A.10.3.4.1.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.4.1.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set $q_0$ in the active PSCell to emulate SSB based beam failure. Figure A.10.3.4.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA model. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.10.3.4.1.1-1: Supported test configurations for FR1 PSCell with CCA**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT window.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.4.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6A.
NOTE 10: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 11: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 12: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel occupancy only.
NOTE 13: As defined in table 8.5A.5.2-1.

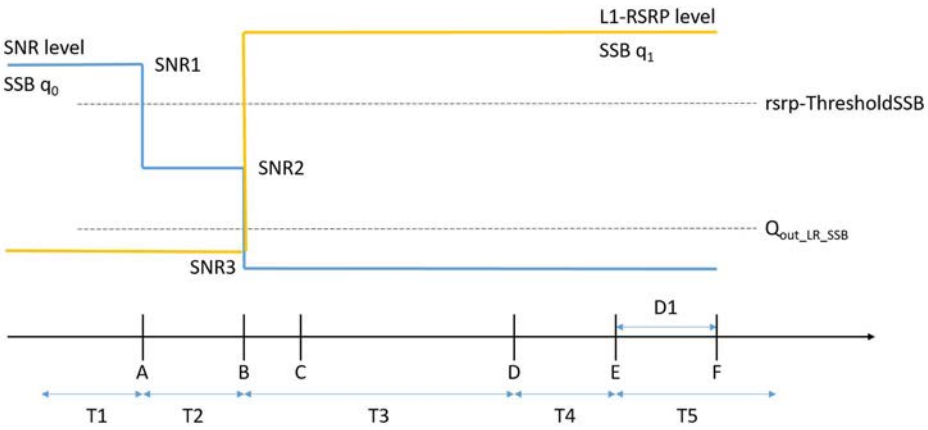

**Figure A.10.3.4.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.10.3.4.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 410 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

### A.10.3.4.2 EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in DRX mode

#### A.10.3.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in tables A.10.3.4.2.1-1, A.10.3.4.2.1-2, and A.4.5.5.2.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.4.2.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set $q_0$ in the active PSCell to emulate SSB based beam failure. Figure A.10.3.4.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA model. In the test, DRX configuration is enabled in PSCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.10.3.4.2.1-1: Supported test configurations for FR1 PSCell with CCA**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

| EPRE ratio of PDSCH DMRS to SSS | | dB | | | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | | | |
| SNR_SSB of set $q_0$ | Config 1, 2 | dB | 5 | -3 | -12 | -12 | -12 |
| SNR_SSB of set $q_1$ | Config 1, 2 | dB | -10 | -10 | 10 | 10 | 10 |
| SSB_RP of set $q_1$ | Config 1, 2 | dBm/SCS kHz | -105 | -105 | -85 | -85 | -85 |
| $N_{oc}$ | Config 1, 2 | dBm/15 KHz | -98 | | | | |
| Propagation condition | | | TDL-C 300 ns 100 Hz | | | | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT window.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.4.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6A.
NOTE 10: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 11: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 12: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel occupancy only.

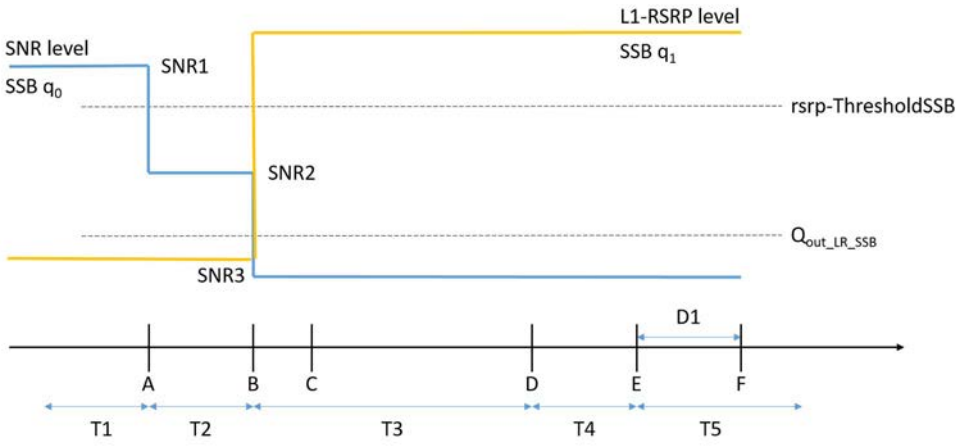

**Figure A.10.3.4.2.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in DRX mode**

#### A.10.3.4.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 3850 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.10.3.5 Active BWP switching

### A.10.3.5.1 UL active BWP switch delay with consistent UL LBT failure on PSCell subject to UL CCA in EN-DC

#### A.10.3.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the UL BWP switch delay requirement defined in clause 8.6.4.

The supported test configurations are shown in table A.10.3.5.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in A.10.3.5.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.10.3.5.1.1-2. SRS configuration used in the test is specified in table A.10.3.5.1.1-4.

The UE shall be configured with PRACH configuration on UL BWP on which the UE shall switch after the consistent UL LBT failure detection.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1 and Cell 2 on radio channel 2.
- UE is configured with 2 different UE-specific downlink and uplink bandwidth parts on Cell 2: DL BWP-1, DL BWP-2, UL BWP-1 and UL BWP-2 before starting the test. DL BWP-1 and DL BWP-2 always include bandwidth of the initial DL BWP and SSB. UL BWP-1 and UL BWP-2 always include bandwidth of the SRS.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is DL BWP-1.
- UE is indicated in *firstActiveUplinkBWP-Id* that the active UL BWP is UL BWP-1.
- UE is configured with *LBT-FailureRecoveryConfig* parameters for Cell 2.

The cell has constant signal levels throughout the test. The test consists of 2 successive time periods, with durations of T1 and T2, respectively.

During T1,

- Time period T1 starts when the UE has received the SRS configuration for periodic SRS transmission on active UL BWP-1.
- The UE shall perform UL CCA before SRS transmission.

- The parameter UL CCA probability $P_{CCA}$ is set to 0 during T1. This requires the test system to set energy level above the detection level during portion of the UL slot where the UE performs UL CCA. This in turn forces the UE to fail the UL CCA. The UE consistently fails UL CCA during T1 and is therefore unable to transmit SRS.

During T2,

- T2 starts when the UE detects consistent UL LBT failures i.e. when total number of UL LBT failures in Cell 2 on active UL BWP-1 exceeds *lbt-FailureInstanceMaxCount* during *lbt-FailureDetectionTimer.*

- The UE upon detected consistent UL LBT failure starts the LBT recovery mechanism, which requires the UE to switch to active UL BWP-2 in Cell 2 and to send PRACH in the active UL BWP-2.

- Staring from T2, the UE shall be able to send PRACH in the active UL BWP-2 within the delay specified in clause 8.6.4.

**Table A.10.3.5.1.1-1: Supported test configurations for UL BWP switch test in EN-DC**

| Config | Description |
|---|---|
| 1 | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

| Propagation Condition | | | AWGN | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].
NOTE 5: Parameters $P_{CCA_DL}$, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and $P_{CCA_UL}$ are defined in clause A.3.20.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

**Table A.10.3.5.1.1-4: Sounding Reference Symbol Configuration for UL BWP Switch Test in EN-DC**

| Field | Value | Comment |
|---|---|---|
| c-SRS | 24 | Frequency hopping is disabled |
| b-SRS | 0 | |
| b-hop | 0 | |
| freqDomainPosition | 0 | Frequency domain position of SRS |
| freqDomainShift | 0 | |
| groupOrSequenceHopping | neither | No group or sequence hopping |
| SRS-PeriodicityAndOffset | sl5=4 for SCS 30 kHz | Once every 5 slots |
| pathlossReferenceRS | ssb-Index=0 | SSB #0 is used for SRS path loss estimation |
| usage | Codebook | Codebook based UL transmission |
| startPosition | 0 | resourceMapping setting: SRS on last symbol of slot, and 1symbols for SRS without repetition. |
| nrofSymbols | n1 | |
| repetitionFactor | n1 | |
| combOffset-n2 | 0 | transmissionComb setting |
| cyclicShift-n2 | 0 | |
| nrofSRS-Ports | port1 | Number of antenna ports used for SRS transmission |

NOTE: For further information see clause 6.3.2 in TS 38.331 [2].

#### A.10.3.5.1.2 Test Requirements

The UE capable of *bwp-SwitchingDelay type1* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 2 (PSCell) less than 21.5 ms from the beginning of time period T1.

The UE capable of *bwp-SwitchingDelay type2* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 2 (PSCell) less than 23 ms from the beginning of time period T1.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The above delay is calculated as follows:'

The active UL BWP switch delay from UL BWP-1 to UL BWP-2 can be expressed as:

$$T_{BWPswitchDelay}*T_{slot} +1*T_{slot} + (1+ L_3)*T_{SSB,RO} + 10 \text{ ms}$$

Where:

- $T_{BWPswitchDelay}$ = 1 ms (2 slots) and 2.5 ms (5 slots) for *bwp-SwitchingDelay* [2] *type1* and *type2* UE capabilities according to clause 8.6.4.
- $T_{slot}$ = It is the slot length. It is 0.5 ms for 30 kHz.
- L3 = It is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. L3= 0 during T2 since $P_{CCA}$ = 1.
- $T_{SSB,RO}$ = 10 ms according to FR1 PRACH configuration 1.

This gives a total of 21.5 ms and 23 ms for *type1* and *type2* UE respectively.

### A.10.3.5.2 DCI-based and Timer-based Active BWP Switch

#### A.10.3.5.2.1 E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC

##### A.10.3.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in TS38.133 clause 8.6, and interruption requirement for E-UTRA victim cell defined in TS36.133 clause 7.32.2.7. Supported test configurations are shown in table A.10.3.5.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.10.3.5.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.10.3.5.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after DL slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after DL slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the beginning slot of the DL subframe immediately after the *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after DL slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after DL slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to E-UTRA PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of PSCell, respectively.

**Table A.10.3.5.2.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

| Propagation Condition | | | | AWGN |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for Noc to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].
NOTE 5: Parameters $P_{CCA_DL}$, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and $P_{CCA_UL}$ are defined in clause A.3.26.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.10.3.5.2.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell in the DL slot right after DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK for PSCell in the DL slot right after DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1, the start time of PCell interruption during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start time of PCell interruption of during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in TS36.133 clause 7.32.2.7.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

### A.10.3.5.2.2 E-UTRAN – NR PSCell FR1 DL active BWP switch with FR1 SCell in non-DRX in synchronous EN-DC

#### A.10.3.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirements for NR victim cell defined in clause 8.2.1.2.7 and interruption requirement for E-UTRA victim cell defined in clause 7.32.2.7 of TS 36.133 [15]. Supported test configurations are shown in table A.10.3.5.2.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in table A.10.3.5.2.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in table A.10.3.5.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 3) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for SCell, BWP-0 in Cell 3 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.

- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}$).

PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

SCell(Cell 3) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}$).

PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

SCell(Cell 3) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to E-UTRA PCell and NR SCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell and SCell during BWP switch of PSCell, respectively.

**Table A.10.3.5.2.2.1-1: DL BWP switch supported test configurations**

#### A.10.3.5.2.2.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell in the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK for PSCell in the DL slot right after slot ($j+T_{BWPswitchDelay}+k11$).

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 7.32.2.7 of TS 36.133 [15].

During T1, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.6.2.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

*Editor's note: FFS value of k1 for type 1 and type 2 UE.*

### A.10.3.5.3 RRC-based Active BWP Switch

#### A.10.3.5.3.1 E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC

#### A.10.3.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.10.3.5.3.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) as given in table A.10.3.5.3.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell are specified in table A.10.3.5.3.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

> Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$) as defined in clause 8.6.3 and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ($i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$).
>
> $T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when RRC Reconfiguration Complete message is received.

**Table A.10.3.5.3.1.1-1: DL BWP switch supported test configurations**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].
NOTE 5: Parameters $P_{CCA_DL}$, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and $P_{CCA_UL}$ are defined in clause A.3.26.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

A.10.3.5.3.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell in the beginning of the DL slot right after slot ($i+ T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$ ).

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.10.3.6 PSCell addition and release delay

### A.10.3.6.1 Addition and Release Delay of known NR PSCell on the carrier under CCA

#### A.10.3.6.1.1 Test purpose and environment

The purpose of this test is to verify that the NR PSCell addition and release delays on the carrier under CCA under EN-DC are within the requirements stated in clause 7.31A.2 [15] for the case when the PSCell is known by the UE at the time of addition.

Supported test configurations are shown in A.10.3.6.1.1-1. The test parameters for the E-UTRA cell are given in table A.3.7.2.1-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in tables A.10.3.6.1.1-2 and cell-specific parameters in A.10.3.6.1.1-3 below. The test consists of five successive time periods with duration of T1, T2, T3, T4 and T5 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell 1 is known to the UE.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event B1 is configured for neighbour cell (Cell 2). Before the start of T2 the UE is configured with the measurement gaps (gap pattern Id # 0). The Cell 2 becomes known to the UE during T2. Therefore, during T2 the UE shall report Event B1. The point in time at which the RRC message to release measurement gap is transmitted from the test system defines the start of period T3. During T3, after measurement gap is released, the test system transmits the RRC message to the UE to add PSCell on radio channel 2.

The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The point in time at which the RRC message to add PSCell (Cell 2) is received at the UE antenna connector defines the start of period T4.

The test system shall observe the periodic reporting of CSI for PSCell during T5. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of period T5.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell 2) shall be sent to the UE during period T5, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell 2) is received at the UE antenna connector defines the start of period T6.

**Table A.10.3.6.1.1-1: Supported test configurations for FR1 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD, NR SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.10.3.6.1.1-2: General Test Parameters for PSCell Addition and Release**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two radio channels are used for this test. One for E-UTRA cell and second for NR Cell on the carrier under CCA |
| Initial | Active PCell | | Cell 1 | PCell on RF channel number 1. |

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| | Neighbour cell | | Cell 2 | Neighbour cell on RF channel number 2. |
| Final | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Condition | Neighbour Cell | | Cell 2 | PSCell released on RF channel number 2. |
| B1 | Hysteresis | dB | 0 | Hysteresis for evaluation of event B1. |
| | Threshold RSRP | dBm | -93 | Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |

| Propagation condition | | 1,2 | AWGN | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during muted slots or during DBT windows.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.

NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.

| Parameter | Unit | Config | Test | | | | |
|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T4 | T5 |
| NOTE 7: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only. | | | | | | | |

#### A.10.3.6.1.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest $T_{config_PSCell_withCCA}$ [Note1] into T4.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T5.

The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T5

The UE shall stop sending CSI reports for PSCell in at latest 20 ms into T6.

All the above test requirements shall be fulfilled in order for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

NOTE 1: The PSCell addition delay can be expressed as follows as specified in clause 7.31A.2 [15]:

$$T_{config_PSCell_withCCA} = T_{RRC_delay} + T_{processing} + T_{search_withCCA} + T_{\Delta_withCCA} + T_{PSCell_DU_withCCA} + 2 \text{ ms}$$

Where:

$T_{RRC_delay}$ = 20 ms

$T_{processing}$ = 20 ms

$T_{search_withCCA}$ = 0

$T_{\Delta_withCCA}$ = (1+ $L_2$)*20 ms

$T_{PSCell_DU_withCCA}$ = 20 ms.

$L_2$ is the number of SMTC occasions not available at the UE for fine time tracking and acquiring full timing information, where $L_2 \leq L_{CCA_DL}$.

## A.10.3.7 Void

# A.10.4 Measurement procedure

## A.10.4.1 Intra-frequency measurements

### A.10.4.1.1 Event-triggered reporting tests on PSCC without gaps under non-DRX

#### A.10.4.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.10.4.1.1.2 Test parameters

Three cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and two cells on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model: PSCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.10.4.1.1.2-1 and A.10.4.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time

periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

**Table A.10.4.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

| NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. | | | | | | |
| NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration. | | | | | | |

#### A.10.4.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.5.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.5.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.1.2 Void

### A.10.4.1.3 Void

### A.10.4.1.4 Event-triggered reporting tests on PSCC with per-UE gaps under DRX

#### A.10.4.1.4.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.10.4.1.4.2 Test parameters

Three cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and two cells on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model: PSCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.10.4.1.4.2-1, A.10.4.1.4.2-2 and A.10.4.1.4.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

There are two BWPs configured in Cell 2, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 2. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.1.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

#### A.10.4.1.4.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.6.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.6.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.2.3 EN-DC event triggered reporting tests for FR1 with CCA cell without SSB time index detection when DRX is not used

#### A.10.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.3.1-1, A.10.4.2.3.1-2, and A.10.4.2.3.1-3.

In this test measurement gap pattern configuration # 0 as defined in table A.10.4.2.3.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.3.1-1.

**Table A.10.4.2.3.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|

| Propagation Condition | | Config 1,2 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

#### A.10.4.2.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.2.4 EN-DC event triggered reporting tests for FR1 cell with CCA without SSB time index detection when DRX is used

#### A.10.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.4.1-1, A.10.4.2.4.1-2, and A.10.4.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.10.4.2.4.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.4.1-1.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.4.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

## A.10.4.2.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.2.5 EN-DC event triggered reporting tests for FR1 cell with CCA with SSB time index detection when DRX is not used

#### A.10.4.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.5.1-1, A.10.4.2.5.1-2, and A.10.4.2.5.1-3.

In this test, measurement gap pattern configuration # 0 as defined in table A.10.4.2.5.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.5.1-1.

**Table A.10.4.2.5.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | E-UTRAN cell: LTE FDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | E-UTRAN cell: LTE TDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

#### A.10.4.2.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1, the UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.2.6 EN-DC event triggered reporting tests for FR1 cell with CCA with SSB time index detection when DRX is used

#### A.10.4.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.6.1-1, A.10.4.2.6.1-2, and A.10.4.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.10.4.2.6.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.6.1-1.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.6.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

## A.10.4.2.6.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_}$from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_}$from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.2.7 EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is not used

#### A.10.4.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.7.1-1, A.10.4.2.7.1-2, and A.10.4.2.7.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.10.4.2.7.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.7.1-1.

**Table A.10.4.2.7.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

#### A.10.4.2.7.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.2.8 EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is used

#### A.10.4.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.8.1-1, A.10.4.2.8.1-2, and A.10.4.2.8.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.10.4.2.8.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.8.1-1.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

## A.10.4.2.8.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index}$ = ($T_{PSS/SSS_sync_inter_cca}$ + $T_{SSB_measurement_period_inter_cca}$) ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.2.9 EN-DC event triggered reporting tests for FR1 cell with SSB time index detection when DRX is not used

### A.10.4.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.9.1-1, A.10.4.2.9.1-2, and A.10.4.2.9.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.10.4.2.9.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.9.1-1.

**Table A.10.4.2.9.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

### A.10.4.2.9.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.2.10 EN-DC event triggered reporting tests for FR1 cell with SSB time index detection when DRX is used

### A.10.4.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in tables A.10.4.2.10.1-1, A.10.4.2.10.1-2, and A.10.4.2.10.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.10.4.2.10.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.10.1-1.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.10.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Field | Value | Comment |
|---|---|---|
| TimeAlignmentTimer | ms500 | As specified in clause 6.3.2 in TS 38.331 [2] |

## A.10.4.2.10.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_}$from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_}$from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.3 L1-RSRP measurements for beam reporting

### A.10.4.3.1 SSB based L1-RSRP measurement on PSCC when DRX is not used

#### A.10.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.10.4.3.1.1-1.

**Table A.10.4.3.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.10.4.3.1.2 Test parameters

There are two cells in the test, E-UTRAN Pcell (Cell 1) and FR1 PSCell (Cell 2) which operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 are given in table A.10.4.3.1.2-1 and table A.10.4.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.10.4.3.1.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB GSCN | 1,2 | | freq1 |
| DL CCA model | 1,2 | | As specifieed in A.3.20.2.1 |
| UL CCA model | 1,2 | | As specified in A.3.20.2.2 |
| Duplex mode | 1,2 | | TDD |
| TDD Configuration | 1,2 | | TDDConf.1.1 CCA |
| $BW_{channel}$ | 1,2 | MHz | 40: $N_{PRB,c}$ = 106 |
| PDSCH Reference measurement channel | 1,2 | | SR.1.1 CCA |
| RMSI CORESET Reference Channel | 1,2 | | CR.1.1 CCA |
| Dedicated CORESET Reference Channel | 1,2 | | CCR.1.1 CCA |
| SSB configuration | 1,2 | | SSB.3 CCA for semi-static channel access<br>SSB.4 CCA for dynamic channel access |
| OCNG Patterns | 1,2 | | OP.1 |
| Initial BWP Configuration | 1,2 | | DLBWP.0.1 ULBWP.0.1 |
| Dedicated BWP configuration | 1,2 | | DLBWP.1.1 ULBWP.1.1 |

| Parameter | Config | Unit | Value |
|---|---|---|---|
| DBT Window Configuration | 1,2 | | DBT.1 |
| TRS Configuration | 1,2 | | TRS.1.2 TDD |
| DRX configuration | 1,2 | | Off |
| reportConfigType | 1,2 | | periodic |
| reportQuantity | 1,2 | | ssb-Index-RSRP |
| Number of reported RS | 1,2 | | 2 |
| L1-RSRP reporting period | 1,2 | slot | 80 |
| T1 | 1,2 | s | 5 |
| T2 | 1,2 | s | 1 |
| EPRE ratio of PSS to SSS | 1,2 | dB | 0 |
| EPRE ratio of PBCH DMRS to SSS | | | |
| EPRE ratio of PBCH to PBCH DMRS | | | |
| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| Propagation condition | 1,2 | | AWGN |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window. | | | |

**Table A.10.4.3.1.2-2: SSB specific test parameters**

| Parameter | Config | Unit | SSB#0 | | SSB#1 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| DL CCA Probability $P_{CCA_DL}$ Note 4,6 | 1,2 | | 0.9375 | 0.9375 | 0.9375 | 0.9375 |
| DL CCA Probability $P_{CCA_DL}$ Note 4.7 | 1,2 | | 0.75/0.75 | 0.75/0.75 | 0.75/0.75 | 0.75/0.75 |
| UL CCA probability $P_{CCA_UL}$ | 1,2 | | 1.0 | 1.0 | 1.0 | 1.0 |
| $N_{oc}$ Note2 | 1,2 | dBm/15 kHz | -94.65 | | | |
| $N_{oc}$ Note2 | 1,2 | dBm/SSB SCS | -91.65 | | | |
| $\hat{E}_s / I_{ot}$ | 1,2 | dB | 0 | 0 | -Infinity | 3 |
| SSB RSRP Note3 | 1,2 | dBm/SSB SCS | -91.65 | -91.65 | -Infinity | -88.65 |
| Io Note3 | 1,2 | dBm/38.16 MHz | -57.59 | -57.59 | -60.61 | -55.84 |
| $\hat{E}_s / N_{oc}$ | 1,2 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS Res when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

### A.10.4.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.3.2 SSB based L1-RSRP measurement on PSCC when DRX is used

### A.10.4.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.10.4.3.1.1-1.

**Table A.10.4.3.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.10.4.3.2.2 Test parameters

There are two cells in the test, E-UTRAN Pcell (Cell 1) and FR1 PSCell (Cell 2) which operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 are given in table A.10.4.3.2.2-1 and table A.10.4.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.10.4.3.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB GSCN | 1,2 | | freq1 |
| DL CCA model | 1,2 | | As specifieed in A.3.20.2.1 |

| Io Note3 | 1,2 | dBm/38.16 MHz | -57.59 | -57.59 | -60.61 | -55.84 |
| $\hat{E}_s / N_{oc}$ | 1,2 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

### A.10.4.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.3.3 SSB based L1-RSRP measurement on SCC when DRX is not used

### A.10.4.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.10.4.3.1.1-1.

**Table A.10.4.3.3.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.10.4.3.3.2 Test parameters

There are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2), and FR1 SCell (Cell 3). Cell 2 and Cell 3 operate on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 and Cell 3 are given in table A.10.4.3.3.2-1 and table A.10.4.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

| $\hat{E}_s / N_{oc}$ | 1, 2 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

### A.10.4.3.3.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 3.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.3.4 SSB based L1-RSRP measurement on SCC when DRX is used

### A.10.4.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.10.4.3.4.1-1.

**Table A.10.4.3.4.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.10.4.3.4.2 Test parameters

There are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2), and FR1 SCell (Cell 3). Cell 2 and Cell 3 operate on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 and Cell 3 are given in table A.10.4.3.4.2-1 and table A.10.4.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.10.4.3.4.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| Active PScell | 1,2 | | Cell 2 |
| Active Scell | 1,2 | | Cell 3 |
| RF Channel Number | 1,2 | | 1: Cell 2<br>2: Cell 3 |
| DL CCA model | 1,2 | | As specifieed in A.3.20.2.1 |
| UL CCA model | 1,2 | | As specified in A.3.20.2.2 |
| Duplex mode | 1,2 | | TDD |
| TDD Configuration | 1,2 | | TDDConf.1.1 CCA |
| $BW_{channel}$ | 1,2 | MHz | 40: $N_{PRB,c}$ = 106 |
| PDSCH Reference measurement channel | 1,2 | | SR.1.1 CCA |
| RMSI CORESET Reference Channel | 1,2 | | CR.1.1 CCA |
| Dedicated CORESET Reference Channel | 1,2 | | CCR.1.1 CCA |
| SSB configuration | 1,2 | | SSB.3 CCA for semi-static channel access<br>SSB.4 CCA for dynamic channel access |
| OCNG Patterns | 1,2 | | OP.1 |
| Initial BWP Configuration | 1,2 | | DLBWP.0.1 ULBWP.0.1 |
| Dedicated BWP configuration | 1,2 | | DLBWP.1.1 ULBWP.1.1 |
| DBT Window Configuration | 1,2 | | DBT.1 |
| TRS Configuration | 1,2 | | TRS.1.2 TDD |

| Parameter | Config | Unit | Value |
|---|---|---|---|
| DRX configuration | 1,2 | | DRX.3 |
| reportConfigType | 1,2 | | periodic |
| reportQuantity | 1,2 | | ssb-Index-RSRP |
| Number of reported RS | 1,2 | | 2 |
| L1-RSRP reporting period | 1,2 | slot | 80 |
| T1 | 1,2 | s | 5 |
| T2 | 1,2 | s | 1 |
| EPRE ratio of PSS to SSS | 1,2 | dB | 0 |
| EPRE ratio of PBCH DMRS to SSS | | | |
| EPRE ratio of PBCH to PBCH DMRS | | | |
| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| Propagation condition | 1,2 | | AWGN |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.

**Table A.10.4.3.4.2-2: SSB specific test parameters**

| Parameter | Config | Unit | SSB#0 | | SSB#1 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| DL CCA Probability $P_{CCA_DL}$ Note 4,6 | 1, 2 | | 0.9375 | 0.9375 | 0.9375 | 0.9375 |
| DL CCA Probability $P_{CCA_DL}$ Note 4.7 | 1, 2 | | 0.75/0.75 | 0.75/0.75 | 0.75/0.75 | 0.75/0.75 |
| UL CCA probability $P_{CCA_UL}$ | 1, 2 | | 1.0 | 1.0 | 1.0 | 1.0 |
| $N_{oc}$ Note2 | 1, 2 | dBm/15 kHz | -94.65 | | | |
| $N_{oc}$ Note2 | 1, 2 | dBm/SSB SCS | -91.65 | | | |
| $\hat{E}_s / I_{ot}$ | 1, 2 | dB | 0 | 0 | -Infinity | 3 |
| SSB RSRP Note3 | 1, 2 | dBm/SSB SCS | -91.65 | -91.65 | -Infinity | -88.65 |
| Io Note3 | 1, 2 | dBm/38.16 MHz | -57.59 | -57.59 | -60.61 | -55.84 |
| $\hat{E}_s / N_{oc}$ | 1, 2 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

### A.10.4.3.4.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 3.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.4 E-UTRAN–NR inter-RAT measurements on NR carrier frequency under CCA

### A.10.4.4.1 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.10.4.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements under CCA and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements under CCA.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.10.4.4.1.1-1, A.10.4.4.1.1-2, A.10.4.4.1.1-3 and A.10.4.4.1.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In this test, measurement gap pattern configuration # 0 as defined in table A.10.4.4.1.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.10.4.4.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| E-UTRA RF Channel Number | | | 1, 2 | 1 | One E-UTRAcarrier frequency is used. |
| NR RF Chanel Number | | | 1, 2 | 1,2 | Two FR1 NR carrier frequency under CCA is used. |
| DL CCA model | Dynamic channel access Note 3, 5 | | | As specified in clause A.3.26.2.1 | |
| | Semi-static channel access Note 4, 5 | | | | |
| UL CCA model | Dynamic channel access Note 3, 5 | | | As specified in clause A.3.26.2.2 | |
| | Semi-static channel access Note 4, 5 | | | | |
| $L_{CCA_DL}$ | | | 1, 2 | 12 | |

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| $W_{CCA_DL}$ | ms | 1, 2 | $T_{PSS/SSS_sync_irat_cca}$ | |
| Active cell | | 1, 2 | E-UTRA cell 1 (PCell) and NR cell 2 with CCA (PSCell) | E-UTRA cell 1 is on E-UTRA RF channel number 1. |
| Neighbour cell | | 1, 2 | NR cell 3 | NR cell 3 is on NR RF channel number 2. |
| Gap Pattern Id | | 1, 2 | 0 | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15]. |
| Measurement gap offset | | 1, 2 | 39 | As specified in TS 36.331 [16]. |
| b2-Threshold1 | dBm | 1, 2 | Note 1 | E-UTRA RSRP/RSRQ/SINR threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16] |
| b2-Threshold2NR | dBm | 1, 2 | Note 2 | SS-RSRP/ SS-RSRQ/ SS-SINR threshold measurement on cell 3 for event B2 [16] |
| Hysteresis | dB | 1, 2 | 0 | |
| CP length | | 1, 2 | Normal | |
| TimeToTrigger | s | 1, 2 | 0 | |
| Filter coefficient | | 1, 2 | 0 | L3 filtering is not used |
| DRX | | 1, 2 | OFF | DRX is not used |
| Time offset between serving and neighbour cells | | 1, 2 | 3μs | Synchronous cells. |
| T1 | s | 1, 2 | 5 | |
| T2 | s | 1, 2 | $\geq T_{identify_irat_cca_without_index}$ | $T_{identify_irat_cca_without_index}$ is defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133 |

NOTE 1: The value of b2-Threshold1 is defined in table A.10.4.4.1.1-3
NOTE 2: The value of b2-Threshold2NR is defined in table A.10.4.4.1.1-4
NOTE 3: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 4: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

| Antenna Configuration and Correlation Matrix | | 1, 2, | 1x2 Low | | 1x2 Low | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.10.4.4.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_without_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index. $T_{identify_irat_cca_without_index}$ is defined in defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.4.2 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

### A.10.4.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.10.4.4.2.1-1, A.10.4.4.2.1-2, A.10.4.4.2.1-3 and A.10.4.4.2.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in table A.10.4.4.2.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

| Propagation Condition | | 1, 2 | AWGN | | AWGN | |
| Antenna Configuration and Correlation Matrix | | 1, 2, | 1x2 Low | | 1x2 Low | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.10.4.4.2.2 Test Requirements

In test, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_without_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_without_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.4.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

#### A.10.4.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.10.4.4.3.1-1, A.10.4.4.3.1-2, A.10.4.4.3.1-3 and A.10.4.4.3.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In test 1 measurement gap pattern configuration # 0 as defined in table A.10.4.4.3.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.3.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.10.4.4.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| E-UTRA RF Channel Number | | | 1, 2 | 1 | One E-UTRAcarrier frequency is used. |
| NR RF Chanel Number | | | 1, 2 | 1,2 | Two FR1 NR carrier frequency under CCA is used. |
| DL CCA model | Dynamic channel access Note 3, 5 | | | As specified in clause A.3.26.2.1 | |
| | Semi-static channel access Note 4, 5 | | | | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.10.4.4.3.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_with_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.4.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

#### A.10.4.4.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.10.4.4.4.1-1, A.10.4.4.4.1-2, A.10.4.4.4.1-3 and A.10.4.4.4.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in table A.10.4.4.4.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.4.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.10.4.4.4.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter | | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|---|
| | | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | | 1, 2 | 1 | | One E-UTRAcarrier frequency is used. |
| NR RF Chanel Number | | | 1, 2 | 1,2 | | Two FR1 NR carrier frequency under CCA is used. |
| DL CCA model | Dynamic channel access Note 3, 5 | | | As specified in clause A.3.26.2.1 | | |
| | Semi-static channel access Note 4, 5 | | | | | |
| UL CCA model | Dynamic channel access Note 3, 5 | | | As specified in clause A.3.26.2.2 | | |

| Propagation Condition | | 1, 2 | AWGN | | AWGN | |
| Antenna Configuration and Correlation Matrix | | 1, 2, | 1x2 Low | | 1x2 Low | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.

#### A.10.4.4.4.2 Test Requirements

In test 1, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_with_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_with_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.5 Measurement performance

### A.10.5.1 SS-RSRP

#### A.10.5.1.1 Intra-frequency measurement accuracy on a CCA serving cell

### A.10.5.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.36.1.1 and 10.1.36.1.2 when the serving cell is subject to CCA.

### A.10.5.1.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell under CCA (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. Supported test configurations are shown in table A.10.5.1.1.1-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in table A.10.5.1.1.1-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell, and Cell 3 is the target cell.

**Table A.10.5.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description |

| NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy. | | | | | |
| NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. | | | | | |
| NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only. | | | | | |

#### A.10.5.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for cell 2 and cell 3 shall fulfil absolute requirement in clause 10.1.2.1.1 and relative requirement in clause 10.1.36.1.1 and 10.1.36.1.2.

### A.10.5.1.2 Inter-frequency measurement accuracy with FR1 CCA serving cell and FR1 CCA target cell

#### A.10.5.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.37.1.1 and 10.1.37.1.2 for inter-frequency measurements with the testing configurations in table A.10.5.1.2.1-1.

**Table A.10.5.1.2.1-1: Applicable NR configurations for FR1 inter-frequency SS-RSRP accuracy test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations on each supported band | |

#### A.10.5.1.2.2 Test parameters

In this set of test cases there are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2) and a FR1 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7A.2.1. The test parameters for the Cell 2 and Cell 3 are given in table A.10.5.1.2.2-1 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.10.5.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.10.5.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter | | Config | Unit | Test 1 | | Test 2 | |

| Propagation condition | | 1, 2 | - | AWGN | | AWGN | |
| Antenna configuration | | | | 1x2 | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

| Parameter | Config | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 2 | Cell 3 | Cell 2 | Cell 3 |
| NOTE 5: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. | | | | | | |

#### A.10.5.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil the Absolute requirement in clause 10.1.4.1.1 and Relative requirement in clause 10.1.37.1.1 and 10.1.37.1.2.

## A.10.5.2 SS-RSRQ

### A.10.5.2.1 Intra-frequency measurement accuracy with FR1 CCA serving cell and FR1 CCA target cell

#### A.10.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.29.1.1.

#### A.10.5.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.10.5.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is test by using the parameters in table A.10.5.2.1.2-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

**Table A.10.5.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.10.5.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

### A.10.5.2.2 Inter-frequency measurement accuracy with FR1 CCA serving cell and FR1 CCA target cell

#### A.10.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limitsThis test will verify the requirements in clause 10.1.30.1.1 and 10.1.30.1.2 for inter-frequency measurements with the testing configurations in table A.10.5.2.2.2-1.

### A.10.5.2.2.2 Test Parameters

In this set of test cases there are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2) and a FR1 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.4.7.1.2.2-1 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.10.5.2.2.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.10.5.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| Propagation condition | | | | AWGN | AWGN | AWGN | AWGN | AWGN | AWGN |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in section 3.5.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.10.5.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

## A.10.5.3 SS-SINR

### A.10.5.3.1 Intra-frequency measurement accuracy on PSCC

#### A.10.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.

#### A.10.5.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.10.5.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in table A.10.5.3.1.2-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell with CCA and Cell 3 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different $N_{oc}$ on Cells 2 and 3.

**Table A.10.5.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description |

#### A.10.5.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

### A.10.5.3.2 Inter-frequency measurement accuracy on PSCC

#### A.10.5.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.32.1.1 and 10.1.32.1.2 for inter-frequency measurement.

#### A.10.5.3.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.10.5.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in table A.10.5.3.2.2-2. In all test cases, Cell 2 is the PSCell with CCA and Cell 3 is target cell with CCA. Cell 1 is the E-UTRA cell of which specific test parameters for this test case are specified in table A.3.7A.2.1-1. Three sub-tests (Test 1, Test 2 and Test 3) are provided different $N_{oc}$ on Cells 2 and 3.

**Table A.10.5.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: NR operating band groups are as defined in clause 3.5.2.

NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration

NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.

### A.10.5.3.2.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.32.1.1 and 10.1.32.1.2.

## A.10.5.3.3 Intra-frequency measurement accuracy on SCC

### A.10.5.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.

### A.10.5.3.3.2 Test Parameters

In this test case, Cell 2 (PSCell) is on frequency 1 while Cell 3 (SCell) and Cell 4 (target cell) which are intra-frequency neighbors, are on frequency 2. Supported test configuration are shown in table A.10.5.3.3.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in table A.10.5.3.3.2-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell with CCA, Cell 3 is the SCell with CCA, and Cell 4 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different $N_{oc}$ on Cells 2, 3 and 4.

**Table A.10.5.3.3.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: NR operating band groups are as defined in clause 3.5.2.

NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration

NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.

NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.

NOTE 9: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.10.5.3.3.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

## A.10.5.4 L1-RSRP measurement for beam reporting with CCA serving cell

### A.10.5.4.1 SSB based L1-RSRP measurement

#### A.10.5.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.33.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.10.5.4.1.1-1.

**Table A.10.5.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD,<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD,<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

#### A.10.5.4.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell under CCA (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model.

Two sub-tests (Test 1 and Test 2) are provided with different $N_{oc}$ on Cell 2. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 are given in table A.10.5.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.10.5.4.1.2-1.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.10.5.4.1.2-1: FR1 SSB based L1-RSRP test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |

| Propagation condition | | 1,2 | | AWGN | AWGN |
| Antenna configuration | | 1,2 | | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification

#### A.10.5.4.1.3 Test Requirements

In both Test 1 and Test 2, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.33.1.

## A.10.5.5 RSSI

### A.10.5.5.1 RSSI measurement accuracy on PSCC with CCA

#### A.10.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.1.

### A.10.5.5.1.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. RSSI is measured on channel number 1. Supported test configurations are shown in table A.10.5.5.1.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.10.5.5.1.2-2 and A.10.5.5.1.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.5.1.2-1: RSSI supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

| ReportInterval | ms120 |

### A.10.5.5.1.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.10.5.5.2 RSSI measurement accuracy on SCC with CCA

### A.10.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.1.

### A.10.5.5.2.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, Cell 3 is SCell on a carrier frequency under CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.10.5.5.2.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.10.5.5.2.2-2 and A.10.5.5.2.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.5.2.2-1: RSSI supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

**Table A.10.5.5.2.2-2: RSSI test parameters**

### A.10.5.5.2.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.10.5.5.3 Inter-frequency RSSI measurement accuracy on a carrier with CCA

### A.10.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.2.

### A.10.5.5.3.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, and Cell 3 is the neighbour with CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.10.5.5.3.2-1. The accuracy of RSSI inter-frequency measurements is tested by using the parameters in A.10.5.5.3.2-2 and A.10.5.5.3.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.5.3.2-1: RSSI supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

### A.10.5.5.3.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.2. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

# A.10.5.6 Channel occupancy

## A.10.5.6.1 Channel occupancy measurement accuracy on PSCC with CCA

### A.10.5.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.1.

### A.10.5.6.1.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. Channel occupancy is measured on channel number 1. Supported test configurations are shown in table A.10.5.6.1.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.10.5.6.1.2-2 and A.10.5.6.1.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.6.1.2-1: CO supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

| ReportInterval | ms120 |

### A.10.5.6.1.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

## A.10.5.6.2 Channel occupancy measurement accuracy on SCC with CCA

### A.10.5.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.1.

### A.10.5.6.2.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, Cell 3 is SCell on a carrier frequency under CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.10.5.6.2.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.10.5.6.2.2-2 and A.10.5.6.2.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.6.2.2-1: CO supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

### A.10.5.6.2.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

## A.10.5.6.3 Inter-frequency channel occupancy measurement accuracy on a carrier with CCA

### A.10.5.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.2.

### A.10.5.6.3.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, and Cell 3 is the neighbour with CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.10.5.6.3.2-1. The accuracy of channel occupancy inter-frequency measurements is tested by using the parameters in A.10.5.6.3.2-2 and A.10.5.6.3.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.6.3.2-1: CO supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2 | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. | |

### A.10.5.6.3.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

# A.11 NR Standalone Tests with NR PCell under CCA and Other NR Cells in FR1

*Editor's note: Test cases for NR SA with NR PCell under CCA and SCell under CCA are also included here.*

## A.11.1 RRC_IDLE state mobility

### A.11.1.1 Cell re-selection with both source and target NR carrier frequencies under CCA

#### A.11.1.1.1 Cell reselection to FR1 intra-frequency NR cells when subject to CCA on the serving and target cell

##### A.11.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements subject to CCA specified in clause 4.2A.2.3. Supported test configurations are shown in table A.11.1.1.1.2-1.

##### A.11.1.1.1.2 Test Parameters

The test scenario comprises of 1 NR carrier that is subject to CCA and 2 cells as given in tables A.11.1.1.1.2-1, A.11.1.1.1.2-2 and A.11.1.1.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2.

**Table A.11.1.1.1.2-1: Supported test configurations**

| Configuration | Description |

| Propagation Condition | | 1 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.1.1.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than $(25 + M_d)*1.28 + T_{SI_CCA}$ s. $M_d$ is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{detect,NR_Intra_CCA}$. If $M_d > M_{d,max}$ the UE is required to restart the detection of Cell 2.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected cell shall be less than $(5+M_e)*1.28 + T_{SI_CCA}$ s. $M_e$ is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{evaluate,NR_Intra_CCA}$. If $M_e > M_{e,max}$ the UE is required to restart the evaluation of Cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $T_{detect,\ NR_Intra_CCA} + T_{SI_CCA}$, and to an already detected cell can be expressed as: $T_{evaluate,\ NR_\ intra_CCA} + T_{SI_CCA}$,

Where:

- $T_{detect,\ NR_Intra_CCA}$ See Table 4.2A.2.3-1 in clause 4.2A.2.3
- $T_{evaluate,\ NR_\ intra_CCA}$ See Table 4.2A.2.3-1 in clause 4.2A.2.3
- $T_{SI_CCA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

This gives a total of $(25 + M_d)*1.28 + T_{SI_CCA}$ s for the cell re-selection delay to a newly detectable cell and $(5+M_e)*1.28 + T_{SI_CCA}$ s for the cell re-selection delay to an already detected cell in the test case.

### A.11.1.1.2 Cell reselection to FR1 inter-frequency NR case when subject to CCA on the serving and target cell

#### A.11.1.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements subject to CCA specified in clause 4.2A.2.4. Supported test configurations are shown in table A.11.1.1.2.2-1.

#### A.11.1.1.2.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers that are subject to CCA respectively as given in tables A.11.1.1.2.2-1, A.11.1.1.2.2-2 and A.11.1.1.2.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

**Table A.11.1.1.2.2-1: Supported test configurations**

| Configuration | Description of Cell 1 with CCA | Description of Cell 2 with CCA |
|---|---|---|
| 1 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. | | | | | | | | |

#### A.11.1.1.2.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 60 + 1.28 x (5 + $M_e$) + $T_{SI_CCA}$ s. $M_e$ is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{evaluate,NR_Intra_CCA}$. If $M_e > M_{e,max}$ the UE is required to restart the evaluation of Cell 2.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to a lower priority cell shall be less than 1.28 x (5 + $M_e$) + $T_{SI_CCA}$ s. $M_e$ is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{evaluate,NR_Intra_CCA}$. If $M_e > M_{e,max}$ the UE is required to restart the evaluation of Cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search}$ + $T_{evaluate,\ NR_inter_CCA}$ + $T_{SI_CCA}$, and to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter_CCA}$ + $T_{SI_CCA}$,

Where:

- $T_{higher_priority_search}$ See clause 4.2.2.7
- $T_{evaluate,\ NR_\ inter_CCA}$ See Table 4.2A.2.4-1 in clause 4.2A.2.4
- $T_{SI_CCA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

This gives a total of 60 + 1.28 x (5 + $M_e$) + $T_{SI_CCA}$ s for the cell re-selection delay to a higher priority cell and 1.28 x (5 + $M_e$) + $T_{SI_CCA}$ s for the cell re-selection delay to a lower priority cell in the test case.

## A.11.1.2 Cell re-selection to NR with source NR carrier frequency under CCA

### A.11.1.2.1 Cell reselection to FR1 inter-frequency NR case when serving cell is subject to CCA

#### A.11.1.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2.2.4 when the serving cell is subject to CCA. Supported test configurations are shown in table A.11.1.2.1.2-1.

### A.11.1.2.1.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers where the first carrier is subject to CCA as given in tables A.11.1.2.1.2-1, A.11.1.2.1.2-2 and A.11.1.2.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

**Table A.11.1.2.1.2-1: Supported test configurations**

| Configuration | Description of a cell with CCA | Description of a cell without CCA |
|---|---|---|
| 1 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.11.1.2.1.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case when serving cell is subject to CCA**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 2 | The UE camps on Cell 2 which is subject to CCA in the initial phase and during T1 period the UE reselects to Cell 1 which is an inter-frequency NR cell |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 1 | The UE shall perform reselection to Cell 1 during T1 |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| T3 end condition | Active cell | | 1, 2, 3 | Cell 2 | The UE shall perform reselection to Cell 2 with higher priority during T3 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.1.2.1.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than $60 + 1.28 \times (5 + M_e) + T_{SI_CCA}$ s. $M_e$ is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{evaluate,NR_Intra_CCA}$. If $M_e > M_{e,max}$ the UE is required to restart the evaluation of Cell 2.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate,\ NR_inter_CCA} + T_{SI_CCA}$, and to a lower priority cell can be expressed as: $T_{evaluate,\ NR_inter} + T_{SI\text{-}NR}$.

Where:

- $T_{higher_priority_search}$ See clause 4.2.2.7
- $T_{evaluate,\ NR_inter_CCA}$ See Table 4.2A.2.4-1 in clause 4.2A.2.4
- $T_{SI_CCA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.
- $T_{evaluate,\ NR_inter}$ See Table 4.2.2.4-1 in clause 4.2.2.4
- $T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test cases.

This gives a total of $60 + 1.28 \times (5 + M_e) + T_{SI_CCA}$ s for the cell re-selection delay to a higher priority cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

## A.11.1.3 Cell re-selection from NR carrier with target NR carrier frequency under CCA

### A.11.1.3.1 Cell reselection to FR1 inter-frequency NR case when target cell is subject to CCA

#### A.11.1.3.1.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2A.2.4 when the target cell is subject to CCA. Supported test configurations are shown in table A. 11.1.3.1.2-1.

#### A.11.1.3.1.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers where the second carrier is subject to CCA as given in tables A.11.1.3.1.2-1, A.11.1.3.1.2-2 and A.11.1.3.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

**Table A.11.1.3.1.2-1: Supported test configurations**

| Configuration | Description of a cell without CCA | Description of a cell with CCA |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.11.1.3.1.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case when target cell is subject to CCA**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 2 | The UE camps on Cell 2 which is an inter-frequency NR cell in the initial phase and during T1 period the UE reselects to Cell 1 which is cell subject to CCA |
| | Neighbour cell | | 1, 2, 3 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 1 | The UE shall perform reselection to Cell 1 during T1 |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| T3 end condition | Active cell | | 1, 2, 3 | Cell 2 | The UE shall perform reselection to Cell 2 with higher priority during T3 |
| | Neighbour cell | | 1, 2, 3 | Cell 1 | |
| RF Channel Number | | | 1, 2, 3 | 1, 2 | |
| Time offset between cells | | | 1 | 3 ms | Asynchronous cells |
| | | | 2 | 3 μs | Synchronous cells |
| | | | 3 | 3 μs | Synchronous cells |
| Access Barring Information | | - | 1, 2, 3 | Not Sent | No additional delays in random access procedure. |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.1.3.1.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

$1.28 \times (5 + M_e) + T_{SI_CCA}$ s. Me is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{evaluate,NR_Intra_CCA}$. If $M_e > M_{e,max}$ the UE is required to restart the evaluation of Cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$, and to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$.

Where:

- $T_{higher_priority_search}$ See clause 4.2.2.7
- $T_{evaluate,\ NR_\ inter_CCA}$ See Table 4.2A.2.4-1 in clause 4.2A.2.4
- $T_{SI_CCA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.
- $T_{evaluate,\ NR_\ inter}$ See Table 4.2.2.4-1 in clause 4.2.2.4

- $T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority cell and 1.28 x (5 + $M_e$) + $T_{SI_CCA}$ s for the cell re-selection delay to a lower priority cell in the test case.

## A.11.1.4 Inter-RAT cell re-selection to E-UTRAN with source NR carrier frequency under CCA

### A.11.1.4.1 Cell reselection to higher priority E-UTRAN when serving cell is subject to CCA

#### A.11.1.4.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR cell subject to CCA to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2A.2.5 when the E-UTRAN cell is of higher priority.

#### A.11.1.4.1.2 Test Parameters

The test scenario comprises of one NR cell which is subject to CCA and one E-UTRAN cell as given in tables A.11.1.4.1.2-1, A.11.1.4.1.2-2, A.11.1.4.1.2-3 and A.11.1.4.1.2-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. NR Cell 1 is already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of higher priority than Cell 1.

**Table A.11.1.4.1.2-1: Supported test configurations**

| Configuration | Description of a cell with CCA | Description of a cell without CCA |
|---|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.11.1.4.1.2-2: General test parameters for NR cell subject to CCA to E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 1 | The UE camps on Cell 1 in the initial phase and during T2 period the UE reselects to Cell 2. |
| T2 end condition | Active cell | | 1, 2 | Cell 2 | The UE shall perform reselection to cell 2 during T2. |
| | Neighbour cells | | 1, 2 | Cell 1 | |
| T3 end condition | Active cell | | 1, 2 | Cell 1 | The UE shall perform reselection to cell 1 during T3 for iteration of the tests. |
| | Neighbour cells | | 1, 2 | Cell 2 | |
| Access Barring Information | | - | 1, 2 | Not Sent | No additional delays in random access procedure. |

### A.11.1.4.1.3 Test Requirements

The cell reselection delay to a higher priority E-UTRAN cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

- $T_{higher_priority_search}$ See clause 4.2.2.7
- $T_{evaluate, E-UTRAN}$ See Table 4.2.2.5-1 in clause 4.2.2.5
- $T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority E-UTRAN cell.

## A.11.1.4.2 Cell reselection to lower priority E-UTRAN when serving cell is subject to CCA

### A.11.1.4.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR cell subject to CCA to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2A.2.5 when the E-UTRAN cell is of lower priority.

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.11.1.4.2.1-1, A.11.1.4.2.1-2, A.11.1.4.2.1-3 and A.11.1.4.2.1-4. The test consists of three successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

**Table A.11.1.4.2.1-1: Supported test configurations**

| Configuration | Description of a cell with CCA | Description of a cell without CCA |
|---|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.11.1.4.2.1-2: General test parameters for NR cell subject to CCA to E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 1 | The UE camps on Cell 1 in the initial phase. |
| T1 end condition | Active cell | | 1, 2 | Cell 2 | The UE shall perform reselection to Cell 2 during T1. |
| | Neighbour cells | | 1, 2 | Cell 1 | |
| T2 end condition | Active cell | | 1, 2 | Cell 1 | The UE shall perform reselection to Cell 1 during T2 for iteration of the tests. |
| | Neighbour cells | | 1, 2 | Cell 2 | |
| Access Barring Information | | - | 1, 2 | Not Sent | No additional delays in random access procedure. |
| SMTC configuration | | | 1, 2 | SMTC.1 | |

### A.11.1.4.2.2 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

- $T_{evaluate, E-UTRAN}$ See Table 4.2.2.5-1 in clause 4.2.2.5

- $T_{SI\text{-}E\text{-}UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 7.68 s, allow 8 s for the cell re-selection delay to a lower priority E-UTRAN cell.

# A.11.2 RRC_CONNECTED state mobility

## A.11.2.1 Handover

### A.11.2.1.1 Intra-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA; known target cell

#### A.11.2.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR intra frequency handover requirements from FR1 carrier under CCA to FR1 carrier under CCA specified in clause 6.1B.1.2.

#### A.11.2.1.1.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.1.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.1.2-2, and A.11.2.1.1.2-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

NR shall send a RRC message implying handover to Cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.11.2.1.1.2-1: Intra-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA test configurations**

| Propagation condition | | - | AWGN | | | AWGN | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.11.2.1.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than $T_{interrupt}$ from the beginning of time period T3, where $T_{interrupt}$ is defined in clause 6.1B.1.2
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

$T_{search} = 0$.

$T_{processing} = 20$ ms.

$T_{margin} = 2$ ms.

$T_{\Delta} = (1+ L_2) *20$ ms.

$T_{IU} = (1+ L_3)*10 + 10$ ms

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2], $L_2$ is the number of SMTC occasions not available at the UE during the time tracking period where $L_2 \leq L_{CCA_DL}$, and $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where $L_3 \leq L_{CCA_UL}$. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by $L_1$, $L_2$ , $L_3$ and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2]. Test equipment should make sure that $L_{CCA_DL}$ and $L_{CCA_UL}$ are not exceeded during a test by monitoring the number of CCA failures and preventing additional CCA failures from happening after $L_{CCA_DL}$ or $L_{CCA_UL}$ is reached.

### A.11.2.1.2 Intra-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA; unknown target cell

#### A.11.2.1.2.1 Test Purpose and Environment

This test is to verify the requirement intra frequency handover requirements from FR1 carrier under CCA to FR1 carrier under CCA specified in clause 6.1B.1.2.

### A.11.2.1.2.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.2.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.2.2-2, and A.11.2.1.2.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.

NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.

NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.11.2.1.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than $T_{interrupt}$ from the beginning of time period T3, where $T_{interrupt}$ is defined in clause 6.1B.1.2
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

$T_{search} = (1+L_1)* 20$ ms.

$T_{processing} = 20$ ms.

$T_{margin} = 2$ ms.

$T_{\Delta} = (1+ L_2) *20$ ms.

$T_{IU} = (1+ L_3)*10 + 10$ ms

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2], $L_1$ is the number of SMTC occasions not available at the UE during the intra-frequency detection period, $L_2$ is the number of SMTC occasions not available at the UE during the time tracking period, where $L_1 + L_2 \leq L_{CCA_DL}$, and $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where $L_3 \leq L_{CCA_UL}$. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by $L_1$, $L_2$ , $L_3$ and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer.

### A.11.2.1.3 Inter-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA; unknown target cell

#### A.11.2.1.3.1 Test Purpose and Environment

This test is to verify the requirement for inter frequency handover requirements from FR1 carrier under CCA to FR1 carrier under CCA specified in clause 6.1B.1.2.

#### A.11.2.1.3.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.3.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.3.2-2, and A.11.2.1.3.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.11.2.1.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than $T_{interrupt}$ from the beginning of time period T3, where $T_{interrupt}$ is defined in clause 6.1B.1.2
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

$T_{search} = (3+L_1')* 20$ ms.

$T_{processing} = 20$ ms.

$T_{margin} = 2$ ms.

$T_{\Delta} = (1+ L_2) *20$ ms.

$T_{IU} = (1+ L_3)*10 + 10$ ms

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2], $L_1'$ is the number of SMTC occasions not available at the UE during the inter-frequency detection period, $L_2$ is the number of SMTC occasions not available at the UE during the time tracking period, where $L_1' + L_2 \leq L_{CCA_DL}$, and $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where $L_3 \leq L_{CCA_UL}$. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by , $L_1$, $L_2$ , $L_3$ and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer.

### A.11.2.1.4 Inter-frequency handover from FR1 carrier under CCA to FR1; known target cell

#### A.11.2.1.4.1 Test Purpose and Environment

This test is to verify the requirement for the NR with CCA FR1-NR FR1 handover requirements specified in clause 6.1.1.2.

#### A.11.2.1.4.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.4.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.4.2-2, and A.11.2.1.4.2-3.

The test consists of three successive time periods, with time durations of T1 T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

NR with CCA shall send a RRC message implying handover to Cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.11.2.1.4.2-1: Handover from NR with CCA FR1 to NR FR1 test configuration**

| Config | Description |
|---|---|
| 1 | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.2.1.4.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 112 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 102 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 112 ms.

### A.11.2.1.5 Inter-frequency handover from FR1 carrier under CCA to FR1; unknown target cell

#### A.11.2.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the NR with CCA FR1-NR FR1 handover requirements specified in clause 6.1.1.2.

#### A.11.2.1.5.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.5.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.5.2-2, and A.12.2.1.7.2-3.

The test scenario comprises of two carriers and one cell on each carrier. Cell 1 is the NR with CCA cell and Cell 2 is an NR neighbour cell. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2.

Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.11.2.1.5.2-1: Handover from NR with CCA FR1 to NR FR1 test configuration**

| Propagation condition | - | 1,2,3 | AWGN | | AWGN | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.2.1.5.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 122 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 132 ms.

### A.11.2.1.6 Inter-frequency handover from FR1 to FR1 carrier under CCA; unknown target cell

#### A.11.2.1.6.1 Test Purpose and Environment

This test is to verify the requirement for inter frequency handover requirements from FR1 to FR1 carrier under CCA specified in clause 6.1B.1.2.

#### A.11.2.1.6.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.6.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.6.2-2, and A.11.2.1.6.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.11.2.1.6.2-1: Inter-frequency handover from FR1 to FR1 carrier under CCA test configurations**

| Configuration | Description of a cell with CCA | Description of a cell without CCA |
|---|---|---|
| 1 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.2.1.6.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than $T_{interrupt}$ from the beginning of time period T3, where $T_{interrupt}$ is defined in clause 6.1B.1.2
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

$T_{search} = (3+L_1')* 20$ ms.

$T_{processing} = 20$ ms.

$T_{margin} = 2$ ms.

$T_{\Delta} = (1+ L_2) *20$ ms.

$T_{IU} = (1+ L_3)*10 + 10$ ms

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2], $L_1$' is the number of SMTC occasions not available at the UE during the inter-frequency detection period, $L_2$ is the number of SMTC occasions not available at the UE during the time tracking period, and $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by $L_1$, $L_1$´, $L_2$, $L_3$ and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

## A.11.2.1.7 SA NR FR1 carrier under CCA - E-UTRAN handover with known target cell

### A.11.2.1.7.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1 carrier under CCA. This test shall verify the NR to E-UTRAN handover requirements as specified in clause 6.1.2.1.

The test comprises of one NR carrier under CCA and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in table 9.1.2-1 is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the next instant after the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.11.2.1.7-1. General test parameters are provided in table A.11.2.1.7-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.11.2.1.7-3 and A.11.2.1.7-4 respectively.

**Table A.11.2.1.7-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description of a cell with CCA | Description of a cell without CCA |
|---|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: The UE supporting SA operation only on NR band(s) with shared spectrum access is required to be tested. | | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].
NOTE 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

#### A.11.2.1.7.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 85 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{interrupt}$ = 35 ms in the test; $T_{interrupt}$ is defined in clause 6.1.2.1.

This gives a total of 85 ms.

### A.11.2.1.8 SA NR FR1 carrier under CCA - E-UTRAN handover with unknown target cell

#### A.11.2.1.8.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1 carrier under CCA. This test shall verify the NR to E-UTRAN handover requirements for the case when the target E-UTRAN cell is unknown as specified in clause 6.1.2.1.

The test comprises of one NR carrier under CCA and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable. No Gap pattern shall be configured.

A RRC message implying handover shall be sent to the UE during period T1. The start of T2 is the next instant after the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.11.2.1.8-1. General test parameters are provided in table A.11.2.1.8-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.11.2.1.8-3 and A.11.2.1.8-4 respectively.

**Table A.11.2.1.8-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description of a cell with CCA | Description of a cell without CCA |
|---|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: The UE supporting SA operation only on NR band(s) with shared spectrum access is required to be tested. | | |

**Table A.11.2.1.8-2: General test parameters for SA inter-RAT E-UTRAN handover**

NOTE 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].
NOTE 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

### A.11.2.1.8.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 165 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{interrupt}$ = 115 ms in the test; $T_{interrupt}$ is defined in clause 6.1.2.1.

This gives a total of 165 ms.

### A.11.2.1.9 Handover with PSCell from NR SA to EN-DC with known target PSCell using CCA

#### A.11.2.1.9.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct SA inter-RAT handover from NR to E-UTRAN with FR1 PSCell addition when operating in standalone (SA) operation with PCell in FR1, for the case where the PSCell is known to the UE at the time of addition and SMTC of target known PSCell is not present in *RRCConnectionReconfiguration*. This test shall verify delay requirements of inter-RAT handover from NR to E-UTRAN and FR1 PSCell carrier with CCA addition as specified in clause 6.1.5.

The test comprises of two NR cells and one E-UTRA cell. Cell 1 is the NR PCell, Cell 2 is an inter-RAT E-UTRAN neighbour cell and Cell 3 is the target NR PSCell, which is on CCA, on radio channel 1 in FR1, radio channel 2 in E-UTRAN and radio channel 3 in FR1 with CCA, respectively.

In this test, inter-RAT handover from NR to E-UTRAN and FR1 PSCell addition are performed in parallel processing. The test consists of successive time periods for inter-RAT handover with time durations of T1, T2 and T3 respectively, and successive time periods for FR1 PSCell addition with time durations of T1', T2', T3'and T4' respectively.

At the start of time duration T1, the UE does not have any timing information of Cell 2, and the UE is only monitoring Cell 1. During T1, only Cell 1 is known to the UE.

Before the start of T2 or T2', the test system shall send measurement control information including measurement gap configuration and event-triggered reporting configuration with event B2 for neighbour Cell 2 and event B1 for Cell 3. Gap pattern configuration with id #0 as specified in table 9.1.2-1 is configured before T2 or T2' begins.

Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

During T3, the UE shall carry out random access (i.e., transmit the PRACH) towards the Cell 2. Reception by the test system of the PRACH preamble defines the end of T3.

Starting T2', the Cell 3 (PSCell-to-be) on radio channel 3 becomes known to the UE at the time of addition. Therefore, during T2' the UE shall report Event B1. After receiving the Event B1, the test system shall send a RRC message to the UE to release the measurement gaps. The test system shall send a RRC message to the UE to add PSCell (Cell 3) on radio channel 3. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T2', after the measurement gaps are released by the test system. The point in time at which the RRC message to add PSCell (Cell 3) is received at the UE antenna connector defines the start of period T3'.

During T3', the UE shall carry out random access (i.e., transmit the PRACH) towards the Cell 3. Reception by the test system of the PRACH preamble defines the start of period T4'.

During T4', the UE shall send periodic CSI reports in PSCell and the test system shall observe the periodic reporting of CSI for PSCell.

Supported test configurations are shown in table A.11.2.1.9.1-1. General test parameters are provided in table A.11.2.1.9.1-2. Cell specific test parameters for NR Cell 1, E-UTRAN PCell Cell 2 are provided in tables A.11.2.1.9.1-3, A.11.2.1.9.1-4 and A.11.2.1.xn-5 respectively. Table A.11.2.1.9.1-5 provides General test parameters for NR FR1 PSCell carrier with CCA addition, and table A.11.2.1.9.1-6 provides Cell specific test parameters for PSCell addition of FR1 carrier under CCA.

**Table A.11.2.1.9.1-1: Supported test configurations for SA inter-RAT E-UTRAN handover with FR1 PSCell addition tests**

| Config | Description | |
|---|---|---|
| | NR PCell and EUTRA PCell | NR PSCell on CCA |
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD, LTE FDD, | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

### A.11.2.1.9.2 Test Requirements

In this test, the UE shall start to transmit the PRACH to E-UTRA Cell 2 less than 55 ms [Note1] from the beginning of time period T3.

The above test requirements shall be fulfilled in order of T1, T2, T3 for the observed inter-RAT handover delay from NR to E-UTRAN to be counted as correct, and in order of T1, T2′, T3′, T4′ for the observed PSCell addition delay to be counted as correct.

The rate of correct handovers and correct PSCell addition delay during repeated tests shall be at least 90 %.

NOTE1: The handover delay can be expressed as specified in clause 6.1.5.2:

$D_{HOwithPSCell_PCell}$ = RRC procedure delay + $T_{interrupt}$,

Where RRC procedure delay = 50 ms, and

$T_{interrupt} = T_{search_HO} + T_{IU} + T_{processing}$ is defined in clause 6.1.5.2.1, where

$T_{search}$ = 0 ms

$T_{IU}$ = 10 ms,

$T_{processing}$ = 25 ms

$D_{HOwithPSCell_PCell}$ is equal to 85 ms.

The UE shall transmit the PRACH to PSCell no later than $D_{HOwithPSCell_PSCell}$ from the start of T3'. The UE shall send at least one CSI report for PSCell with non-zero CQI index during T4'. The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T4.

The PSCell addition delay can be expressed as follows as specified in clause 6.1.5.5.3:

$D_{HOwithPSCell_PSCell} = T_{RRC_delay} + T_{processing} + T_{search_PCell} + T_{search_PSCell} + T_{\Delta} + T_{IU_PSCell}$ + 2 ms

Where:

$T_{RRC_delay}$ = 20 ms

$T_{processing}$ = 25 ms

$T_{search_PCell}$ = 0

$T_{search_PSCell}$ = 0$T_{\Delta}$ = (1+ $L_2$) *20 ms.

$T_{IU_PSCell}$ = (1+ $L_3$) *10 + 10 ms

$L_2$ is the number of SMTC occasions not available at the UE during the time tracking period where $L_2 \leq L_{CCA_DL}$, and $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where $L_3 \leq L_{CCA_UL}$. $L_3$ = 0 for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by $L_1$, $L_2$, $L_3$ and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2]. Test equipment should make sure that $L_{CCA_DL}$ and $L_{CCA_UL}$ are not exceeded during a test by

monitoring the number of CCA failures and preventing additional CCA failures from happening after $L_{CCA_DL}$ or $L_{CCA_UL}$ is reached.

The rate of correct PSCell addition observed during repeated tests shall be at least 90 %.

## A.11.2.2 RRC connection mobility control

### A.11.2.2.1 RRC re-establishment

#### A.11.2.2.1.1 Intra-frequency RRC Re-establishment with CCA in FR1

##### A.11.2.2.1.1.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay with CCA in FR1 with known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.1.1-1, table A.11.2.2.1.1.1-2 and table A.11.2.2.1.1.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell with CCA, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.11.2.2.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| | | T1 | T2 | T3 | T1 | T2 | T3 |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window. | | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled. | | | | | | | |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | |
| NOTE 4: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy. | | | | | | | |
| NOTE 5: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy. | | | | | | | |
| NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only. | | | | | | | |

#### A.11.2.2.1.1.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to a known NR intra frequency cell with CCA shall be less than 1350 + MAX (200, $(5+K_1)$ x 20) ms.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish_delay_CCA} = T_{UE_re-establish_delay_CCA} + T_{UL_grant}$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay_CCA} = 50 \text{ ms} + T_{identify_intra_NR_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify_inter_NR_CCA,i} + T_{SI-NR_CCA} + T_{PRACH_CCA}$$

Where

$N_{freq} = 1$

$T_{identify_intra_NR_CCA}$ = MAX (200 ms, $(5+K_1)$ x $T_{SMTC}$), where

$K_1$ is the number of SMTC occasions not available at the UE due to DL CCA failures during RRC re-establishment period on the carrier with CCA.

$T_{SMTC}$ = 20 ms is the SMTC periodicity.

$T_{identify_inter_NR_CCA}$ = 0 ms

$T_{SI-NR_CCA}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target intra-frequency NR cell.

$T_{PRACH_CCA}$ = $T_{SSB,RO}$ + 10 ms, where:

- $T_{SSB,RO}$ is the SSB to PRACH occasion association period as defined in table 8.1-1 of TS 38.213 [39], which is $T_{SSB,RO}$=10 ms for FR1 PRACH configuration 1 under CCA.

This gives a total of 1350 + MAX (200, $(5+K_1)$ x 20) ms, allow 1870 + MAX (200, $(5+K_1)$ x 20) ms from the beginning of T2 in the test case.

### A.11.2.2.1.2 Inter-frequency RRC Re-establishment with CCA in FR1

#### A.11.2.2.1.2.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay with CCA in FR1 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.2.1-1, table A.11.2.2.1.2.1-2 and table A.11.2.2.1.2.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell with CCA, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of Cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of Cell 2 by the end of T1.

**Table A.11.2.2.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|

A.11.2.2.1.2.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less than $T_{re-establish_{delay_{CCA}}}$.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish_{delay_{CCA}}} = T_{UE_{re-establish_{delay_{CCA}}}} + T_{UL_{grant}}$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay_CCA} = 50 \text{ ms} + T_{identify_intra_NR_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify_inter_NR_CCA,i} + T_{SI-NR_CCA} + T_{PRACH_CCA}$$

Where

$T_{identify_intra_NR_CCA}$: 0 ms

$T_{identify_inter_NR_CCA,i}$: MAX (200 ms, ([6]+K2,i) x TSMTC, i),

where

K2,i is the number of SMTC not available at the UE during RRC re-establishment period on the “i” th carrier with CCA

$T_{SMTC,i}$: It is the periodicity of the SMTC occasion configured for the inter-frequency carrier *i*.

$N_{freq}$ = 2

$T_{SI-NR_CCA}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{PRACH_CCA}$ = (1+ $K_3$)*$T_{SSB,RO}$ + 10 ms, where:

- $T_{SSB,RO}$ is the SSB to PRACH occasion association period as defined in table 8.1-1 of TS 38.213 [3].
- $K_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $K_3$ = 0 for Type 2C UL channel access procedure as defined in TS 37.213 [33].

This gives a total of $T_{re-establish_{delay_{CCA}}}$ = 50 + MAX (200 ms, (6+K2,1) x TSMTC, 1) + 1280 + (1+ $K_3$)*$T_{SSB,RO}$ + 10 ms, allow 1860 + MAX (200 ms, (6+K2,1) x TSMTC, 1) + (1+ $K_3$)*$T_{SSB,RO}$ ms from the beginning of T2 in the test case.

### A.11.2.2.1.3 Intra-frequency RRC Re-establishment with CCA in FR1 without serving cell timing

#### A.11.2.2.1.3.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay with CCA in FR1 without serving cell timing is within the specified limits. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.3.1-1, table A.11.2.2.1.3.1-2 and table A.11.2.2.1.3.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell with CCA, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.11.2.2.1.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 5: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.11.2.2.1.3.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR intra frequency cell without serving cell timing shall be less than 1350 + MAX (800 ms, (10+ $K_1$) x 20) ms.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish_delay_CCA} = T_{UE_re-establish_delay_CCA} + T_{UL_grant}$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay_CCA} = 50 \text{ ms} + T_{identify_intra_NR_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify_inter_NR_CCA,i} + T_{SI-NR_CCA} + T_{PRACH_CCA}$$

Where,

$N_{freq}$ = 1

$T_{identify_intra_NR}$ = MAX (800 ms, (10+ $K_1$) x $T_{SMTC}$), where

$K_1$ is the number of SMTC occasions not available at the UE due to DL CCA failures during RRC re-establishment period on the carrier with CCA.

$T_{SMTC}$ is the SMTC periodicity which is 20 ms.

$T_{identify_inter_NR_CCA}$ = 0 ms

$T_{SI-NR_CCA}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target intra-frequency NR cell.

$T_{PRACH_CCA}$ = (1+ $K_3$)*$T_{SSB,RO}$ + 10 ms, where:

- $T_{SSB,RO}$ is the SSB to PRACH occasion association period as defined in table 8.1-1 of TS 38.213 [39]. It is 10 ms for FR1 PRACH configuration 1 under CCA.
- $K_3$ = 0.

This gives total $T_{UE_re-establish_delay_CCA}$=1350 + MAX (800 ms, (10+ $K_1$) x 20) ms, allow 1870 + MAX (800 ms, (10+ $K_1$) x 20) ms from the beginning of T2 in the test case.

### A.11.2.2.1.4 Inter-frequency RRC Re-establishment from NR FR1 carrier without CCA to NR FR1 carrier under CCA

#### A.11.2.2.1.4.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay requirement for RRC re-establishment from NR FR1 carrier without CCA to NR FR1 inter-frequency carrier under CCA with unknown target cell. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.4.1-1, table A.11.2.2.1.4.1-2 and table A.11.2.2.1.4.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of Cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of Cell 2 by the end of T1.

**Table A.11.2.2.1.4.1-1: Supported test configurations inter-frequency RRC re-establishment from NR FR1 without under CCA to NR FR1 inter-frequency carrier under CCA**

| Configuration | Source cell without CCA | Target cell with CCA |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

| Propagation Condition | | 1,2,3 | | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Parameters $P_{CCA_DL}$, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and $P_{CCA_UL}$ are defined in clause A.3.26.2.
NOTE 5: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

### A.11.2.2.1.4.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less $T_{UE_re-establish_delay_CCA}$.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish_delay_CCA} = T_{UE_re-establish_delay_CCA} + T_{UL_grant}$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay_CCA} = 50 \text{ ms} + T_{identify_intra_NR_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify_inter_NR_CCA,i} + T_{SI-NR_CCA} + T_{PRACH_CCA}$$

$N_{freq}$ = 2

$T_{identify_intra_NR_CCA}$ = MAX (800 ms, (10+ $K_1$) x 20) ms

$T_{identify_inter_NR_CCA}$ = MAX (800 ms, (13+$K_{2,2}$) x 20) ms

$T_{SI-NR_CCA}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{PRACH_CCA}$ = It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. $T_{PRACH_CCA}$ = (1+ $K_3$)*$T_{SSB,RO}$ + 10 ms; where $K_3$=0 and $T_{SSB,RO}$=10 ms for FR1 PRACH configuration 1 under CCA.

$K_1$ is the number of SMTC occasions not available at the UE due during RRC re-establishment period on the carrier with CCA and with RF channel number # 1.

$K_{2,2}$ is the number of SMTC occasions not available at the UE during RRC re-establishment period on the carrier with CCA and with RF channel number # 2.

This gives total $T_{UE_re-establish_delay_CCA}$=1350+MAX (800 ms, (10+ $K_1$) x 20) ms+MAX (800 ms, ([13]+$K_{2,2}$) x 20) ms, allow 1870 + MAX (800 ms, (10+ $K_1$) x 20) ms+MAX (800 ms, ([13]+$K_{2,2}$) x 20) ms from the beginning of T2 in the test case.

## A.11.2.2.2 Random Access

### A.11.2.2.2.1 4-step RA type contention-based random access for NR PCell with CCA

#### A.11.2.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in table A.11.2.2.2.1.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.11.2.2.2.1.1-2.

**Table A.11.2.2.2.1.1-1: Supported test configurations for contention based random access test for FR1 PCell with CCA**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: Void | |

| $W_{CCA_UL}$ Note 8 | | | | Inf | |
| Semi-static channel access config period Note 4, 6 | | | ms | 2 | |
| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$.

| Parameter | Unit | Test-1 | Comments |
|---|---|---|---|
| NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run. | | | |

#### A.11.2.2.2.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.11.2.2.2.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in clause 6.2.2A.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.11.2.2.2.1.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.

- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

##### A.11.2.2.2.1.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

##### A.11.2.2.2.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.11.2.2.2.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2A.2.1.4 the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.11.2.2.2.1.2.5 Reception of an Incorrect Message over Temporary C-RNTI

To test the UE behavior specified in clause 6.2.2A.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element *not* matching the CCCH SDU transmitted in msg3 uplink message.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

#### A.11.2.2.2.1.2.6 Reception of a Correct Message over Temporary C-RNTI

To test the UE behavior specified in clause 6.2.2A.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in the msg3 uplink message.

The UE shall send ACK if the Contention Resolution is successful.

#### A.11.2.2.2.1.2.7 Contention Resolution Timer expiry

To test the UE behavior specified in clause 6.2.2A.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.11.2.2.2.2 4-step RA type non-contention based random access for NR PSCell with CCA

#### A.11.2.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in table A.11.2.2.2.2.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.11.2.2.2.2.1-2.

**Table A.11.2.2.2.2.1-1: Supported test configurations for non-contention based random access test for FR1 PCell with CCA**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: Void | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$.
NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run.

#### A.11.2.2.2.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.11.2.2.2.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in clause 6.2.2A.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

The three requirements below are relevant for all cases of PRACH transmissions described within the clause A.11.2.2.2.2.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.

- In case of UL CCA failure The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.11.2.2.2.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.11.2.2.2.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

### A.11.2.2.2.3 2-step RA type contention-based random access for NR PCell with CCA

#### A.11.2.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the 2-step RA type random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in table A.11.2.2.2.3.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.11.2.2.2.3.1-2.

**Table A.11.2.2.2.3.1-1: Supported test configurations for 2-step RA type contention based random access with successRAR test for FR1 PCell with CCA**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.

NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.

| Parameter | Unit | Test-1 | Comments |
|---|---|---|---|
| NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required. | | | |
| NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy. | | | |
| NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$. | | | |
| NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration. | | | |
| NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$. | | | |
| NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run. | | | |

#### A.11.2.2.2.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.11.2.2.2.3.2.1 MsgA Transmission

To test the UE behavior specified in clause 6.2.2A.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause A.11.2.2.2.3.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.

- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble transmission shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

##### A.11.2.2.2.3.2.2 MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.1.2 the System Simulator shall transmit a MsgB containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit an ACK if the MsgB with a successRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble and if the Contention Resolution is successful and if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting ACK in the case of CCA UL failure. If ACK transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is

successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB(s) contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.11.2.2.2.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.1.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

### A.11.2.2.2.4 2-step RA type non-contention-based random access for NR PCell with CCA

#### A.11.2.2.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in table A.11.2.2.2.4.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.11.2.2.2.4.1-2.

**Table A.11.2.2.2.4.1-1: Supported test configurations for non-contention based random access test for FR1 PCell with CCA**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: Void | |

| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

| Parameter | Unit | Test-1 | Comments |
|---|---|---|---|
| NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration. | | | |
| NOTE 7: $L_{CCA_DL}$ and $L_{CCA_UL}$ are chosen such that preambleTransMax > 5 + $L_{CCA_DL}$ + $L_{CCA_UL}$. | | | |
| NOTE 8: A window $W_{CCA_DL}$=$W_{CCA_UL}$=Inf is used to indicate that $L_{CCA_DL}$ and $L_{CCA_UL}$ are considered during the entire duration of a test run. | | | |

#### A.11.2.2.2.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.11.2.2.2.4.2.1 MsgA Transmission

To test the UE behavior specified in clause 6.2.2A.3.2.1, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA PRACH on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause A.11.2.2.2.4.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.

- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

##### A.11.2.2.2.4.2.2 MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.2 the System Simulator shall transmit a MsgB containing a fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 containing the payload of MsgA PUSCH if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed. The UE shall monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the

backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

The system simulator shall implement the UL CCA model of A.3.26.2 for the MsgA occasions where MsgA System Simulator transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on a MsgA occasion that is expected to have UL CCA failure, the test is considered as failed.

In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power in case UL CCA failure.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA and msg3 transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.11.2.2.2.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

The System Simulator shall implement the UL CCA model of A.3.26.2 for the MsgA occasions where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on a MsgA occasion that is expected to have UL CCA failure, the test is considered as failed.

In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power in case UL CCA failure.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where $\mu$ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

## A.11.2.2.3 RRC connection release with redirection

### A.11.2.2.3.1 Redirection from NR FR1 carrier under CCA to NR FR1 carrier under CCA

#### A.11.2.2.3.1.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR FR1 carrier under CCA to NR FR1 carrier under CCA specified in clause 6.2.3.2.3.

#### A.11.2.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.11.2.2.3.1.2-1. The time delay is tested by using the parameters in table A.11.2.2.3.1.2-2, and A.11.2.2.3.1.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.11.2.2.3.1.2-1: Redirection from NR to NR test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.
NOTE 7: As defined in clause 6.2.3.2.3 for $T_{rs} \leq 40$ ms.

### A.11.2.2.3.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than $T_{connection_release_redirect_NR_CCA}$ ms from the beginning of time period T2, where $T_{connection_release_redirect_NR_CCA}$ is defined in clause 6.2.3.2.3.
The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90 %.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_NR_CCA} = T_{RRC_procedure_delay} + T_{identify\text{-}NR_CCA} + T_{SI\text{-}NR_CCA} + T_{RACH_CCA},$$

where:

$T_{RRC_procedure_delay}$ = 110 ms in the test.

$T_{identify\text{-}NR_CCA}$ = MAX (680 ms, ($L_1$+11) × 20 ms) in the test.

$T_{SI\text{-}NR}$ = 1280 ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{RACH_CCA}$ is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell.

$L_1$ is the number of SMTC occasions not available at the UE due to DL CCA failures. The test equipment ensure that number of $L_1$ in target cell does not exceed $L_{1,max}$ using the configured $L_{CCA_DL}$ as in clause A.3.26.2.1;

### A.11.2.2.3.2 Redirection from NR FR1 carrier without CCA to NR FR1 carrier with CCA

#### A.11.2.2.3.2.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR FR1 carrier without CCA to NR FR1 carrier with CCA specified in clause 6.2.3.2.3.

#### A.11.2.2.3.2.2 Test Parameters

Supported test configurations are shown in table A.11.2.2.3.2.2-1. The time delay is tested by using the parameters in table A.11.2.2.3.2.2-2, and A.11.2.2.3.2.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.11.2.2.3.2.2-1: Redirection from NR to NR test configurations**

| Configuration | Source cell without CCA | Target cell with CCA |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

**Table A.11.2.2.3.2.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter | | Unit | Value | Comment |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.
NOTE 7: As defined in clause 6.2.3.2.3 for $T_{rs} \leq 40$ ms.

### A.11.2.2.3.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than $T_{connection_release_redirect_NR_CCA}$ ms from the beginning of time period T2, where $T_{connection_release_redirect_NR_CCA}$ is defined in clause 6.2.3.2.3.
The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90 %.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_NR_CCA} = T_{RRC_procedure_delay} + T_{identify\text{-}NR_CCA} + T_{SI\text{-}NR_CCA} + T_{RACH_CCA},$$

where:

$T_{RRC_procedure_delay}$ = 110 ms in the test.

$T_{identify\text{-}NR_CCA}$ = MAX (680 ms, $(L_1+11) \times 20$ ms) in the test.

$T_{SI\text{-}NR_CCA}$ = 1280 ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{RACH_CCA}$ is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. $T_{RACH_CCA} = (1+L_2) \times T_{SSB,RO} + 10$ ms; where $T_{SSB,RO}$ = 10 ms for FR1 PRACH configuration 1.

$L_1$ is the number of SMTC occasions not available at the UE due to DL CCA failures. The test equipment shall ensure that $L_1$ does not exceed $L_{1,max}$. In the test $L_{1,max} = L_{CCA_DL}$ which is defined in clause A.3.26.2.1.

$L_2$ is the consecutive number of SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failures. $L_2 = 0$ in the test.

The total delay, $T_{connection_release_redirect_NR_CCA}$, shall be less than 1410 + MAX (680, ($L_1$+11)×20) ms.

# A.11.3 Timing

## A.11.3.1 UE transmit timing

### A.11.3.1.1 UE Transmit Timing Test with PCell under DL CCA

#### A.11.3.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeb when PCell is subject to DL CCA and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in table 11.3.1.1.1-1

**Table A.11.3.1.1.1-1: Supported test configuration for UE transmit timing test**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

For this test a single NR cell is used. Table A.11.3.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.11.3.1.1.1-3.

**Table A.11.3.1.1.1-2: Cell Specific Test Parameters for UE transmit timing test**

#### A.11.3.1.1.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Setup NR PCell according to parameters given in table A.11.3.1.1.1-1.
2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB.
   a. The $N_{TA}$ offset value (in $T_c$ units) is 25600
   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1
3) The test system shall adjust the timing of the DL path by values given in table A.11.3.1.1.2-1

**Table A.11.3.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (KHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 30 | $+32*64T_c$ | $+16*64T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.
5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment

## A.11.3.2 UE timing advance

### A.11.3.2.1 UE Timing Advance Adjustment Accuracy with PCell under DL CCA

#### A.11.3.2.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

#### A.11.3.2.1.2 Test Parameters

Supported test configurations are shown in table A.11.3.2.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.11.3.2.1.2-2, A.11.3.2.1.2-3 and A.11.3.2.1.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.11.3.2.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.11.3.2.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.11.3.2.1.2-1: Supported test configuration for timing advance test**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE supporting SA operation only on NR band(s) with shared spectrum access is required to be tested | |

### A.11.3.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command, where k=5.

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

# A.11.4 Signalling characteristics

## A.11.4.1 Radio link monitoring

### A.11.4.1.1 Introduction

In the test cases specified in clause A.11.4.1, any uplink signal transmitted by the UE is used for detecting the in-/out-of-sync state of the UE. In terms of measurement, the uplink signal is verified based on the UE output power:

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means uplink signal.
- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means no uplink signal.

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

### A.11.4.1.2 Radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode

#### A.11.4.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 PCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.11.4.1.2.1-1. The test parameters are given in tables A.11.4.1.2.1-2, A.11.4.1.2.1-3, and A.11.4.1.2.1-4 below. There is one cell (Cell 1), which is the active NR cell in FR1, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model.

The test consists of three successive time periods, with time duration of T1, T2 and T3, respectively. Figure A.11.4.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in the test.

**Table A.11.4.1.2.1-1: Supported test configurations.**

| Configuration | Description |
|---|---|
| 1 | TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

| $N_{oc}$ | Config 1 | dBm/SCS | -95 | | |
| Propagation condition | | | TDL-C 300 ns 100 Hz | | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during muted slots or during DBT windows.
NOTE 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 3: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT windows.
NOTE 4: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3, respectively, in figure A.10.4.1.2.1-1.
NOTE 5: The SNR values are specified for testing a UE which supports 2 RX on at least one band. For testing of a UE which supports 4 RX on all bands, the SNR during T3 is A.3.6.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

| NOTE: Ensure that RLM RS is partially overlapped with measurement gap0 | | |

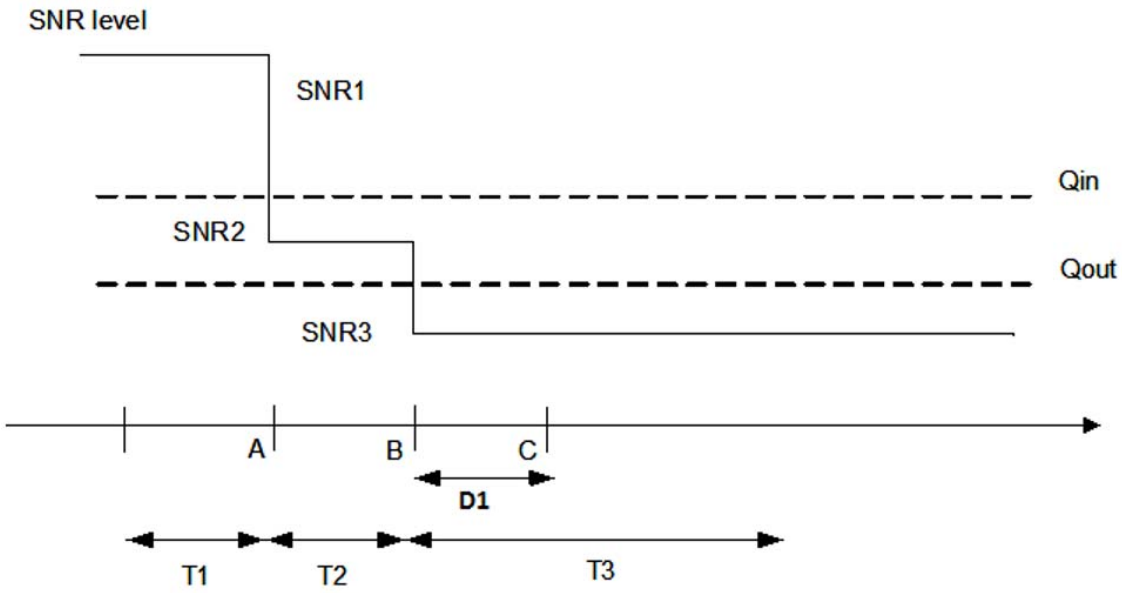

**Figure A.11.4.1.2.1-1: SNR variation for out-of-sync testing.**

#### A.11.4.1.2.2 Test requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

- During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.
- The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.11.4.1.3 Radio link monitoring in-sync test for PCell configured with SSB-based RLM RS in non-DRX mode

#### A.11.4.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 PCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.11.4.1.3.1-1. The test parameters are given in tables A.11.4.1.3.1-2, and A.11.4.1.3.1-3 below. There is one cell (Cell 1), which is the active NR cell in FR1, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model.

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5, respectively. Figure A.11.4.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model.

| EPRE ratio of OCNG to OCNG DMRS | | dB | | | | | |
| SNR on RLM-RS | Config 1 | dB | 1 | -7 | -15 | -4.5 | 1 |
| SNR on other channels and signals | Config 1 | dB | 1 | | | | |
| $N_{oc}$ | Config 1 | dBm/SCS | -95 | | | | |
| Propagation condition | | | TDL-C 300 ns 100 Hz | | | | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during muted slots or during DBT windows.
NOTE 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 3: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT windows.
NOTE 4: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure A.11.4.1.3.1-1.
NOTE 5: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4 RX on all bands, the SNR during T3 and T4 is modified as specified in clause A.3.6.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.
NOTE 9: As defined in table 8.1A.2.2-1.

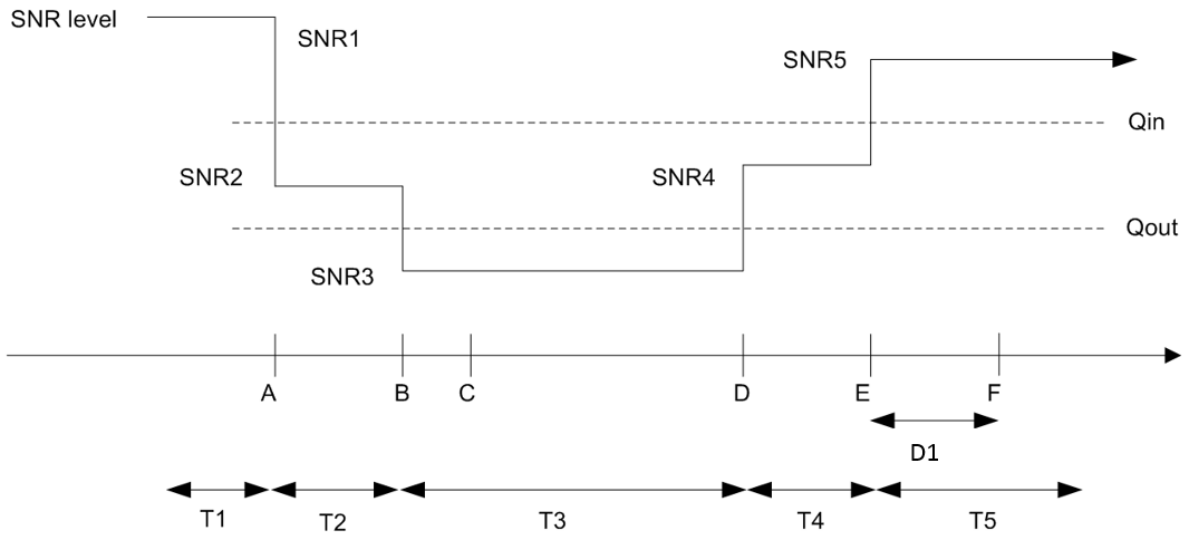

**Figure A.11.4.1.3.1-1: SNR variation for in-sync testing.**

### A.11.4.1.3.2 Test requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

- During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.11.4.2 Void

## A.11.4.3 SCell activation and deactivation delay

### A.11.4.3.1 SCell Activation and Deactivation of known SCell with PCell and SCell under CCA, 160 ms SCell measurement cycle

#### A.11.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell, with PCell and SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in table A.11.4.3.1.1-1.

The test parameters are given in table A.11.4.3.1.1-2 and cell-specific parameters in table A.11.4.3.1.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in NR with CCA, and Cell 2 (SCell) on radio channel 2 (SCC) in NR with CCA. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2, as the UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted *m*, defines the start of time period T2. The UE shall be able to report a valid CSI in PCell for the activated SCell at latest in slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, as defined in clause 8.3A.2. The UE shall start reporting CSI in PCell in first available uplink resource for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting following slot $m+ \frac{T_{\mathrm{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption shall fall within the time window specified in clause 8.3.2.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted *n*, defines the start of time period T3. The UE shall complete the activation at latest in slot $n + \frac{T_{\mathrm{HARQ}}+3\ ms}{\text{NR slot length}}$. Any PCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.11.4.3.1.1-1: Supported test configurations for SCell Activation and Deactivation of known SCell with PCell and SCell under CCA, 160 ms SCell measurement cycle**

| Configuration | Description |
|---|---|

NOTE 1: OCNG shall be used such that resources in the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.
NOTE 8: As specified in clause 8.3A for $L_{1,max}$, $L_{2,1,max}$, $L_{2,2,max}$, $L_{3,1,max}$, and $L_{3,2,max}$

#### A.11.4.3.1.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA}$ = $T_{FirstSSB}$ + $L_1$*$T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X$ = $T_{FirstSSB}$.

During T3, interruption on PCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

### A.11.4.3.2 SCell Activation and Deactivation of known SCell with PCell and SCell under CCA, 640 ms SCell measurement cycle

#### A.11.4.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell, with PCell and SCell under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 640 ms.

The supported test configurations are same as in table A.11.4.3.1.1-1 above.

The test parameters are same as in table A.11.4.3.1.1-2 above, except for parameters listed below in table A.11.4.3.2.1-1. The cell-specific parameters are same as in table A.11.4.3.1.1-3 above.

The test execution is the same as described in clause A.11.4.3.1 above.

**Table A.11.4.3.2.1-1: General test parameters for known SCell activation with PCell and SCell under CCA, 640 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

#### A.11.4.3.2.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA}$ = $T_{FirstSSB_MAX}$ + $L_{2,1}$*$T_{SMTC_MAX}$ + (1 +$L_{2,2}$)*$T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X$ = $T_{FirstSSB_MAX}$ + $L_{2,1}$* $T_{SMTC_MAX}$.

During T3, interruption on PCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

### A.11.4.3.3 SCell Activation and Deactivation of unknown SCell with PCell and SCell under CCA

#### A.11.4.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell, with PCell and SCell under CCA, are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in table A.11.4.3.1.1-1 above.

The test parameters are same as in table A.11.4.3.1.1-2 above, except for parameters listed below in table A.11.4.3.3.1-1. The cell-specific parameters are same as in table A.11.4.3.1.1-3 above.

The test execution is the same as described in clause A.11.4.3.1 above.

**Table A.11.4.3.3.1-1: General test parameters for unknown SCell activation with PCell ans SCell under CCA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| T1 | s | 0.1 | During this time period the PCell shall be known and the SCell configured, but not detected. |

#### A.11.4.3.3.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA}$ = $T_{FirstSSB_MAX}$ + (1 + $L_{3,1}$)*$T_{SMTC_MAX}$ + (2 + $L_{3,2}$)*$T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n$ + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X$ = $T_{FirstSSB_MAX}$ + $L_{3,1}$* $T_{SMTC_MAX}$.

During T3, interruption on PCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

## A.11.4.4 Beam failure detection and link recovery procedures

## A.11.4.4.1 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in non-DRX mode

### A.11.4.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in tables A.11.4.4.1.1-1, A.11.4.4.1.1-2, A.11.4.4.1.1-3 and A.11.4.4.1.1-4 below. There is one cell, Cell 1 which is the active cell, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.11.4.4.1.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.11.4.4.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA mode. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.11.4.4.1.1-1: Supported test configurations for FR1 PCell with CCA**

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio the transmitted SSS REs during DBT window.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.4.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6A.
NOTE 10: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 11: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 12: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel occupancy only.
NOTE 13: As defined in table 8.5A.5.2-1.

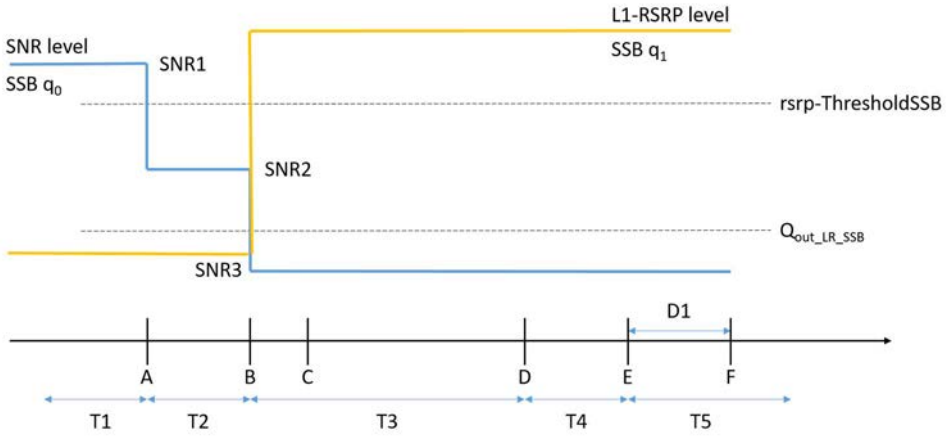

**Figure A.11.4.4.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.11.4.4.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 410 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.11.4.4.2 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in DRX mode

### A.11.4.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in tables A.11.4.4.2.1-1, A.11.4.4.2.1-2, and A.11.4.4.2.1-3 below. There is one cell, Cell 1 which is the active cell, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.11.4.4.2.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.11.4.4.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA mode. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

NOTE 10: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 11: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.
NOTE 12: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel occupancy only.

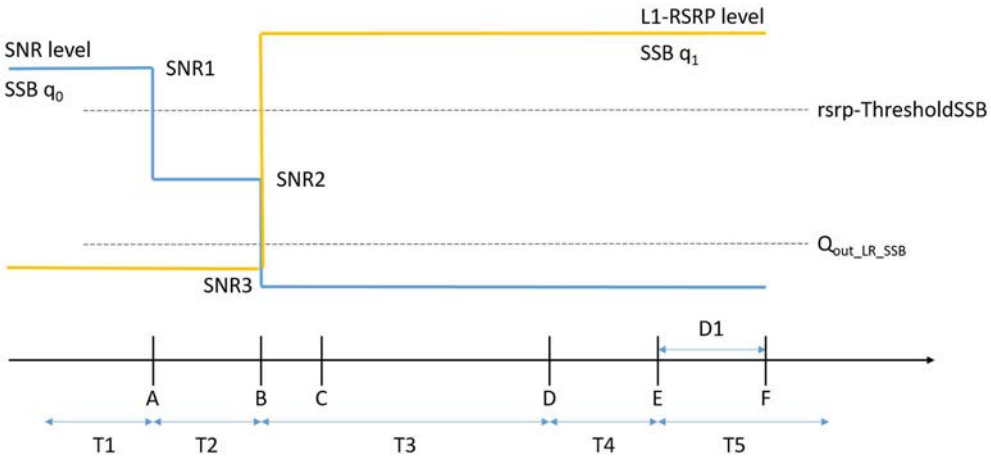

**Figure A.11.4.4.2.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.11.4.4.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 3850 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.11.4.5 Active BWP switching

### A.11.4.5.1 UL active BWP switch delay with consistent UL LBT failure on PCell subject to UL CCA

#### A.11.4.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the UL BWP switch delay requirement defined in clause 8.6.4.

The supported test configurations are shown in table A.11.4.5.1.1-1. The test scenario comprises of one cell (Cell 1), which is Pcell as given in table A.11.4.5.1.1-2. Cell-specific parameters of the cell are specified in table A.11.4.5.1.1-3 below. SRS configuration used in the test is specified in table A.11.4.5.1.1-4.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink and uplink bandwidth parts: DL BWP-1, DL BWP-2, UL BWP-1 and UL BWP-2 before starting the test. DL BWP-1 and DL BWP-2 always include bandwidth of the initial DL BWP and SSB. UL BWP-1 and UL BWP-2 always include bandwidth of the SRS.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is DL BWP-1.
- UE is indicated in *firstActiveUplinkBWP-Id* that the active UL BWP is UL BWP-1.
- UE is configured with *LBT-FailureRecoveryConfig* parameters for Cell 1.

The cell has constant signal levels throughout the test. The test consists of 2 successive time periods, with durations of T1 and T2, respectively.

During T1,

- Time period T1 starts when the UE has received the SRS configuration for periodic SRS transmission on active UL BWP-1.
- The UE shall perform UL CCA before SRS transmission.
- The parameter UL CCA probability $P_{CCA}$ is set to 0 during T1. This requires the test system to set energy level above the detection level during portion of the UL slot where the UE performs UL CCA. This in turn forces the UE to fail the UL CCA. The UE consistently fails UL CCA during T1 and is therefore unable to transmit SRS.

During T2,

- T2 starts when the UE detects consistent UL LBT failures i.e. when total number of UL LBT failures in Cell 1 on active UL BWP-1 exceeds *lbt-FailureInstanceMaxCount* during *lbt-FailureDetectionTimer*.
- The UE upon detected consistent UL LBT failure starts the LBT recovery mechanism, which requires the UE to switch to active UL BWP-2 in Cell 1 and to send PRACH in the active UL BWP-2.
- Staring from T2, the UE shall be able to send PRACH in the active UL BWP-2 within the delay specified in clause 8.6.4.

**Table A.11.4.5.1.1-1: Supported test configurations for UL BWP switch test in SA**

| NOTE: For further information see clause 6.3.2 in TS 38.331 [2]. | | |

### A.11.4.5.1.2 Test Requirements

The UE capable of *bwp-SwitchingDelay type1* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 1 (PCell) less than 21.5 ms from the beginning of time period T1.

The UE capable of *bwp-SwitchingDelay type2* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 1 (PCell) less than 23 ms from the beginning of time period T1.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The above delay is calculated as follows:'

The active UL BWP switch delay from UL BWP-1 to UL BWP-2 can be expressed as:

$$T_{BWPswitchDelay} * T_{slot} + 1 * T_{slot} + (1 + L_3) * T_{SSB,RO} + 10 \text{ ms}$$

Where:

$T_{BWPswitchDelay}$ = 1 ms (2 slots) and 2.5 ms (5 slots) for *bwp-SwitchingDelay* [2] *type1* and *type2* UE capabilities according to clause 8.6.4.

$T_{slot}$ = It is the slot length. It is 0.5 ms for 30 kHz.

L3 = It is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. L3= 0 during T2 since $P_{CCA}$ = 1.

$T_{SSB,RO}$ = 10 ms according to FR1 PRACH configuration 1.

This gives a total of 21.5 ms and 23 ms for *type1* and *type2* UE respectively.

## A.11.4.5.2 DCI-based and Timer-based Active BWP Switch

### A.11.4.5.2.1 NR FR1- NR FR1 DL active BWP switch of PCell with non-DRX in SA

#### A.11.4.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.11.4.5.2.1.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in table A.11.4.5.2.1.1-2. NR Cell-specific parameters are specified in table A.11.4.5.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 1 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PCell, BWP-1 and BWP-2, in Cell 1 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for SCell, BWP-0 in Cell 2 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.
>
> The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PCell no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).
>
> The starting time of SCell (Cell 2) interruption due to BWP switch on PCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PCell (Cell 1).

During T3,

> The time period T3 starts from the slot #*j*, where j is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of PCell's slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of SCell (Cell 2) interruption due to BWP switch of PCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to SCell is carried out in the correct time span by monitoring ACK/NACK sent in SCell during BWP switch of PCell, respectively.

**Table A.11.4.5.2.1.1-1: DL BWP switch supported test configurations**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3 SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

#### A.11.4.5.2.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, $k1$ is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of SCell interruption during PCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first DL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.11.4.5.2.2 NR FR1 DL active BWP switch with non-DRX in SA

#### A.11.4.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6.

The supported test configurations are shown in table A.11.4.5.2.2.1-1. The test scenario comprises of one cell (Cell 1) as given in table A.11.4.5.2.2.1-2. Cell-specific parameters of the cell are specified in table A.11.4.5.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell 1.

The cell has constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell 1's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.
>
> The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-2 starting from the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

During T2, the test equipment won't transmit DCI format for PDSCH reception on Cell 1.

During T3,

> The time period T3 starts from the slot #*j*, where j is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.
>
> The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

**Table A.11.4.5.2.2.1-1: DL BWP switch supported test configurations**

| Config | Description |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

A.11.4.5.2.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed Cell 1 active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

## A.11.4.5.3 RRC-based Active BWP Switch

### A.11.4.5.3.1 NR FR1 DL active BWP switch of Cell with non-DRX in SA

#### A.11.4.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.

The supported test configurations are shown in table A.11.4.5.3.1.1-1. The test scenario comprises of one Cell (Cell 1) as given in table A.11.4.5.3.1.1-2. Cell-specific parameters of Cell are specified in table A.11.4.5.3.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in Cell 1.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}}{\text{NR Slot length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}}{\text{NR Slot length}}$ + k1 on BWP-1 of final condition. The UE shall be continuously scheduled on PCell's BWP-1 of final condition starting from the first DL slot right after slot i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in Cell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when a vaild ACK/NACK is received is received.

**Table A.11.4.5.3.1.1-1: DL BWP switch supported test configurations in SA scenario**

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

#### A.11.4.5.3.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for the Cell from the first DL slot that occurs right after the begining of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed Cell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.11.4.6 Void

# A.11.5 Measurement procedure

## A.11.5.1 Intra-frequency measurements

### A.11.5.1.1 Event-triggered reporting tests on PCC without gaps under non-DRX

#### A.11.5.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.11.5.1.1.2 Test parameters

Two cells are deployed in the test, which are PCell (Cell 1) and a neighbour cell (Cell 2) on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model. The test parameters for the two cells are given in table A.11.5.1.1.2-1 and A.11.5.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

**Table A.11.5.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.5.1.1.2-2: General test parameters for intra-frequency event triggered reporting without gaps**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Active cell | | | 1 | Cell 1 | |
| Neighbour cell | | | 1 | Cell 2 | Cell to be identified. |
| RF Channel Number | | | 1 | 1: Cell 1 and Cell 2 | |
| DL CCA model | | | 1 | As specified in clause A.3.26.2.1 | |
| UL CCA model | | | 1 | As specified in clause A.3.26.2.2 | |
| SSB configuration | Semi-static channel access Note 1,3 | | 1 | SSB.1 CCA | |
| | Dynamic channel access Note 2,3 | | 1 | SSB.2 CCA | |
| SMTC configuration | | | 1 | SMTC.1 | |
| A3-Offset | | dB | 1 | -4.5 | |
| CP length | | | 1 | Normal | |
| Hysteresis | | dB | 1 | 0 | |
| Time To Trigger | | s | 1 | 0 | |
| Filter coefficient | | | 1 | 0 | L3 filtering is not used |
| DRX | | | 1 | OFF | DRX is not used |
| Time offset between serving and neighbour cells | | | 1 | 3 μs | Synchronous cells |
| T1 | | s | 1 | 5 | |
| T2 | | s | 1 | 5 | |

NOTE 1: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 2: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 3: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

**Table A.11.5.1.1.2-3: Cell-specific test parameters for intra-frequency event-triggered reporting without gaps**

| Parameter | Unit | Test configuration | Cell 1 | | Cell 2 | |

| Io | dBm/38.16 MHz | 1 | -58.50 | -56.16 | -58.50 | -56.16 |
| Propagation Condition | | 1 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.

#### A.11.5.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 840 ms from the beginning of time period T2.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.1.2 Event-triggered reporting tests on PCC without gaps under DRX

#### A.11.5.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.11.5.1.2.2 Test parameters

Two cells are deployed in the test, which are PCell (Cell 1) and a neighbour cell (Cell 2) on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model. The test parameters for the two cells are given in table A.11.5.1.2.2-1 and A.11.5.1.2.2-2 below. In the measurement control information, a measurement object

is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore, the UE is allocated with PUSCH resource at every DRX cycle.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

**Table A.11.5.1.2.2-1: Supported test configurations**

| Configuration | Description |

For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.

### A.11.5.1.2.3 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report with a measurement reporting delay less than 1200 ms from the beginning of time period T2.

In test 2, the UE shall send one Event A3 triggered measurement report with a measurement reporting delay less than 10240 ms from the beginning of time period T2.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.11.5.2.3 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is not used

##### A.11.5.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements for NR cell with CCA in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.11.5.2.3.1-1, A.11.5.2.3.1-2 and A.11.5.2.3.1-3.

In this test, measurement gap pattern configuration # 0 as defined in table A.11.5.2.3.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

| NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. | | | | | | |
| NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration. | | | | | | |

#### A.11.5.2.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2 UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.2.4 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is used

#### A.11.5.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 as PCell in FR1 with CCA on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.11.5.2.4.1-1, A.11.5.2.4.1-2 and A.11.5.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.11.5.2.4.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.4.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config | Description |
|---|---|
| 1 | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

### A.11.5.2.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.5 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is not used

### A.11.5.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 as PCell in FR1 with CCA on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.11.5.2.5.1-1, A.11.5.2.5.1-2 and A.11.5.2.5.1-3.

In this test, measurement gap pattern configuration # 0 as defined in table A.11.5.2.5.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

#### A.11.5.2.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.2.6 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is used

#### A.11.5.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 as PCell in FR1 with CCA on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in tables A.11.5.2.6.1-1, A.11.5.2.6.1-2 and A.11.5.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.11.5.2.6.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

## A.11.5.2.6.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of

## A.11.5.2.7 Event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

### A.11.5.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements for NR cell with CCA in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.11.5.2.7.1-1, A.11.5.2.7.1-2 and A.11.5.2.7.1-3.

In this test, measurement gap pattern configuration # 0 as defined in table A.11.5.2.7.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

**Table A.11.5.2.7.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config | Description |
|---|---|
| 1 | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.

NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.

NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

### A.11.5.2.7.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.8 Event triggered reporting tests for FR1 without SSB time index detection when DRX is used

### A.11.5.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.11.5.2.8.1-1, A.11.5.2.8.1-2 and A.11.5.2.8.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.11.5.2.8.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.8.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config | Description |

| TimeAlignmentTimer | ms500 | As specified in clause 6.3.2 in TS 38.331 [2] |

### A.11.5.2.8.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.9 Event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

### A.11.5.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.11.5.2.9.1-1, A.11.5.2.9.1-2 and A.11.5.2.9.1-3.

In this test, measurement gap pattern configuration # 0 as defined in table A.11.5.2.9.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

**Table A.11.5.2.9.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config | Description |
|---|---|
| 1 | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

### A.11.5.2.9.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.10 Event triggered reporting tests for FR1 with SSB time index detection when DRX is used

### A.11.5.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR Cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.11.5.2.10.1-1, A.11.5.2.10.1-2 and A.11.5.2.10.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.11.5.2.10.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.10.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config | Description |
|---|---|
| 1 | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

## A.11.5.2.10.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement

reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2, the UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1, DRX cycle = 40 ms and for test 2, DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.11.5.3 Inter-RAT E-UTRAN measurements

## A.11.5.3.1 SA NR - E-UTRAN event-triggered reporting in non-DRX in FR1

### A.11.5.3.1.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2 and 9.4.3.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell on a frequency carrier with CCA and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indictated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.11.5.3.1.1-1. General test parameters are provided in table A.11.5.3.1.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.11.5.3.1.1-3 and A.11.5.3.1.1-4, respectively.

**Table A.11.5.3.1.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 2 | NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.11.5.3.1.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | 1 NR carrier frequency is used in the test |
| LTE RF Channel Number | | 1 | 1 LTE carrier frequency is used in the test |

| Parameter | Unit | Test configuration | Cell 1 | |
|---|---|---|---|---|
| | | | T1 | T2 |
| Antenna Configuration and Correlation Matrix | | 1, 2 | 1x2 Low | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.11.5.3.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.11.5.3.2 SA NR - E-UTRAN event-triggered reporting in DRX in FR1

#### A.11.5.3.2.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1 when DRX is used. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2 and 9.4.3. There are two test cases. In test 1 the UE shall be configured with DRX cycle of 40 ms. In test 2 the UE shall be configured with DRX cycle of 640 ms.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell with CCA and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indctated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

In each test the UE shall be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore, the UE shall be allocated with PUSCH resource at every DRX cycle.

Supported test configurations are shown in table A.11.5.3.2.1-1. General test parameters are provided in table A.11.5.3.2.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.11.5.3.2.1-3 and A.11.5.3.2.1-4, respectively.

**Table A.11.5.3.2.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 2 | NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.11.5.3.2.2 Test Requirements

In test 1, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

In test 2, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 12.8 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

# A.11.5.4 L1-RSRP measurements for beam reporting

## A.11.5.4.1 SSB based L1-RSRP measurement when DRX is not used

### A.11.5.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.11.5.4.1.1-1.

**Table A.11.5.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.11.5.4.1.2 Test parameters

There is one cell in the test, the FR1 PCell (Cell 1). Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in table A.11.5.4.1.2-1 and table A.11.5.4.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.11.5.4.1.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1 | | freq1 |

| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |
| NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy. | | | | | | |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows. | | | | | | |
| NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy. | | | | | | |
| NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$. | | | | | | |

### A.11.5.4.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.4.2 SSB based L1-RSRP measurement when DRX is used

### A.11.5.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.11.5.4.2.1-1.

**Table A.11.5.4.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.11.5.4.2.2 Test parameters

There is one cell in the test, the FR1 PCell (Cell 1). Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in table A.11.5.4.2.2-1 and table A.11.5.4.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.11.5.4.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1 | | freq1 |

The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$. | | | | | | |

### A.11.5.4.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.4.3 SSB based L1-RSRP measurement on SCC when DRX is not used

### A.11.5.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.11.5.4.3.1-1.

**Table A.11.5.4.3.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.11.5.4.3.2 Test parameters

There are two cells in the test, the FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Both Cell 1 and Cell 2 operate on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in table A.11.5.4.3.2-1 and table A.11.5.4.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

| $\hat{E}_s / N_{oc}$ | 1 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

### A.11.5.4.3.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.4.4 SSB based L1-RSRP measurement on SCC when DRX is used

### A.11.5.4.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.11.5.4.4.1-1.

**Table A.11.5.4.4.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.11.5.4.4.2 Test parameters

There are two cells in the test, the FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Both Cell 1 and Cell 2 operate on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in table A.11.5.4.4.2-1 and table A.11.5.4.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.11.5.4.4.2-1: General test parameters**

| Parameter | Config | Unit | Value |

| $\hat{E}_s / N_{oc}$ | 1 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

#### A.11.5.4.4.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.6 Measurement performance

## A.11.6.1 SS-RSRP

### A.11.6.1.1 Intra-frequency measurement accuracy on a carrier frequency with CCA

#### A.11.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy on the carrier frequency with CCA is within the specified limits. This test will verify the requirements in clauses 10.1.36.1.1 and 10.1.36.1.2 for intra-frequency measurements under CCA.

### A.11.6.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model. Supported test configurations are shown in table A.11.6.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.11.6.1.1.2-2. In all test cases, Cell 1 is the PCell, and Cell 2 is the target cell.

| Antenna configuration | | | | 1x2 | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Subtest 1 is not used when testing with 30 kHz SSB SCS.
NOTE 6: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 9: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.11.6.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil absolute requirement in clause 10.1.36.1.1 and relative requirement in clause 10.1.36.1.2.

### A.11.6.1.2 Intra-frequency measurement accuracy on SCC on a carrier frequency with CCA

#### A.11.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy on the carrier frequency with CCA is within the specified limits. This test will verify the requirements in clauses 10.1.36.1.1 and 10.1.36.1.2 for intra-frequency measurements under CCA.

### A.11.6.1.2.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1) on the carrier frequency with CCA, and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). Supported test configurations are shown in table A.11.6.1.2.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.11.6.1.2.2-2.

**Table A.11.6.1.2.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Subtest 1 is not used when testing with 30 kHz SSB SCS.
NOTE 6: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 9: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.11.6.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil absolute requirement in clause 10.1.36.1.1 and relative requirement in clause 10.1.36.1.2.

## A.11.6.2 SS-RSRQ

### A.11.6.2.1 Intra-frequency measurement accuracy

#### A.11.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.29.1.1.

#### A.11.6.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.11.6.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in table A.11.6.2.1.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is the target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1 and 2.

**Table A.11.6.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| Antenna configuration | | | | 1x2 | 1x2 | 1x2 | 1x2 |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
Note 5: NR operating band groups are as defined in clause 3.5.2.
Note 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.
Note 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
Note 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
Note 9: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.11.6.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

### A.11.6.2.2 Inter-frequency measurement accuracy

#### A.11.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

#### A.11.6.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.11.6.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in table A.11.6.2.2.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1 and 2.

**Table A.11.6.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| NOTE 9: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. | | | | | | | |

### A.11.6.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

## A.11.6.2.3 Intra-frequency measurement accuracy on SCC

### A.11.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.29.1.1.

### A.11.6.2.3.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.11.6.2.3.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in table A.11.6.2.3.2-2. In all test cases, Cell 1 is the PCell with CCA, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1, 2, and 3.

**Table A.11.6.2.3.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Antenna configuration | | | | 1x2 | 1x2 | 1x2 | 1x2 |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

| | |
|---|---|
| Note 5: | NR operating band groups are as defined in clause 3.5.2. |
| Note 6: | For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. |
| Note 7: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy. |
| Note 8: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. |
| Note 9: | For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. |

#### A.11.6.2.3.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

### A.11.6.2.4 Inter-frequency measurement accuracy

#### A.11.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

#### A.11.6.2.4.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.11.6.2.4.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in table A.11.6.2.4.2-2 and A.11.6.2.4.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1 and 2.

**Table A.11.6.2.4.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.11.6.2.4.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

# A.11.6.3 SS-SINR

## A.11.6.3.1 Intra-frequency measurement accuracy

### A.11.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.1.

### A.11.6.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.11.6.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in table A.11.6.3.1.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different $N_{oc}$ on Cells 1 and 2.

**Table A.11.6.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.
NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 9: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.11.6.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

### A.11.6.3.2 Inter-frequency measurement accuracy

#### A.11.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.32.1.1 and 10.1.32.1.2.

#### A.11.6.3.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.11.6.3.2.2-1. Both absolute accuracy and relative accuracy

requirements of SS-SINR inter-frequency measurement are tested by using test parameters in table A.11.6.3.2.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1 and 2.

**Table A.11.6.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description |

#### A.11.6.3.2.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.32.1.1 and 10.1.32.1.2.

### A.11.6.3.3 Intra-frequency measurement accuracy on SCC

#### A.11.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.1.

#### A.11.6.3.3.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.11.6.3.3.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in table A.11.6.3.3.2-2. In all test cases, Cell 1 is the PCell with CCA, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different $N_{oc}$ on Cells 1, 2, and 3.

| | | NR_CCA_FR1_J | | | | -74.91 | |
| Propagation condition | | | - | AWGN | | | |
| Antenna configuration | | | - | 1x2 | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.
NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 9: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

#### A.11.6.3.3.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

### A.11.6.3.4 Inter-frequency measurement accuracy

#### A.11.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.32.1.1 and 10.1.32.1.2.

#### A.11.6.3.4.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.11.6.3.4.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in table A.11.6.3.4.2-2 and table A.11.6.3.4.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1 and 2.

**Table A.11.6.3.4.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.11.6.3.4.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.32.1.1 and 10.1.32.1.2.

## A.11.6.4 L1-RSRP measurement for beam reporting with CCA serving cell

### A.11.6.4.1 SSB based L1-RSRP measurement

#### A.11.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.33.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.11.6.4.1.1-1.

**Table A.11.6.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.11.6.4.1.2 Test parameters

In this set of test cases there one cell in the test, PCell under CCA (Cell 1). Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model.

Two sub-tests (Test 1 and Test 2) are provided with different $N_{oc}$ on Cell 1. The test parameters for the Cell 1 are given in table A.11.6.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.11.6.4.1.2-1.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

#### A.11.6.4.1.3 Test Requirements

In both Test 1 and Test 2, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 1 shall fulfil the requirements in clauses 10.1.33.1.

## A.11.6.5 RSSI

### A.11.6.5.1 Intra-frequency RSSI measurement accuracy on PCC with CCA

#### A.11.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.1.

#### A.11.6.5.1.2 Test parameters

In all test cases, Cell 1 is the PCell with CCA. RSSI is measured on channel number 1. Supported test configurations are shown in table A.11.6.5.1.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.11.6.5.1.2-2 and A.11.6.5.1.2-3.

**Table A.11.6.5.1.2-1: Intra frequency RSSI supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

### A.11.6.5.1.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.11.6.5.2 Intra-frequency RSSI measurement accuracy on SCC with CCA

### A.11.6.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.1.

### A.11.6.5.2.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is SCell operating on a carrier frequency under CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.11.6.5.2.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.11.6.5.2.2-2 and A.11.6.5.2.2-3.

**Table A.11.6.5.2.2-1: Intra frequency RSSI supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

### A.11.6.5.2.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.11.6.5.3 Inter-frequency RSSI measurement accuracy on a carrier with CCA

### A.11.6.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.2.

### A.11.6.5.3.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is neighbor cell operating on a carrier frequency under CCA. RSSI is measured on channel number 2. Supported test configurations are

shown in table A.11.6.5.3.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.11.6.5.3.2-2 and A.11.6.5.3.2-3.

**Table A.11.6.5.3.2-1: Inter frequency RSSI supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

| ReportInterval | ms120 |

#### A.11.6.5.3.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.2. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.11.6.6 Channel occupancy

### A.11.6.6.1 Intra-frequency channel occupancy measurement accuracy on PCC with CCA

#### A.11.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.1.

#### A.11.6.6.1.2 Test parameters

In all test cases, Cell 1 is the PCell with CCA. channel occupancy is measured on channel number 1. Supported test configurations are shown in table A.11.6.6.1.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.11.6.6.1.2-2 and A.11.6.6.1.2-3.

**Table A.11.6.6.1.2-1: Intra frequency CO supported test configurations**

| Configuration | Description |

| ref-SCS-CP-r16 | kHz15 |
| ReportInterval | ms120 |

### A.11.6.6.1.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

## A.11.6.6.2 Intra-frequency channel occupancy measurement accuracy on SCC with CCA

### A.11.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.1.

### A.11.6.6.2.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is SCell operating on a carrier frequency under CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.11.6.6.2.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.11.6.6.2.2-2 and A.11.6.6.2.2-3.

### A.11.6.6.2.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

### A.11.6.6.3 Inter-frequency channel occupancy measurement accuracy on a carrier with CCA

#### A.11.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.2.

#### A.11.6.6.3.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is neighbor cell operating on a carrier frequency under CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.11.6.6.3.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.11.6.6.3.2-2 and A.11.6.6.3.2-3.

**Table A.11.6.6.3.2-1: Inter frequency CO supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

# A.12 E-UTRA Standalone Tests with at Least One NR Cell under CCA

## A.12.1 RRC_IDLE state mobility

### A.12.1.1 Inter-RAT cell re-selection to NR on a carrier frequency with CCA

#### A.12.1.1.1 E-UTRA Cell reselection to higher priority NR target Cell in FR1 when target cell is subject to CCA

##### A.12.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell subject to CCA reselection requirements specified in clause 4.2.2.5.7 in TS 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell subject to CCA as given in tables A.12.1.1.1.1-1, A.8.2.1.1.1-2, A.8.2.1.1.1-3 and A.8.2.1.1.1-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. E-UTRA Cell 1 is already identified by the UE prior to the start of the test. Cell 2 is of higher priority than Cell 1.

**Table A.12.1.1.1.1-1: Supported test configurations**

| Configuration | Description of a cell without CCA | Description of a cell with CCA |
|---|---|---|
| 1 | LTE FDD | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

**Table A.12.1.1.1.1-2: General test parameters for E-UTRA cell re-selection FR1 NR cell subject to CCA test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 2 | The UE camps on Cell 2 in the initial phase |
| | Neighbour cell | | 1, 2 | Cell 1 | |
| T1 end condition | Active cell | | | Cell 1 | During T1 period the UE reselects to Cell 1 |
| | Neighbour cell | | | Cell 2 | |
| T3 end condition | Active cell | | 1, 2 | Cell 2 | The UE shall perform reselection to Cell 2 during T3 |
| | Neighbour cell | | 1, 2 | Cell 1 | |
| RF Channel Number | | | 1, 2 | 1, 2 | E-UTRAN radio channel (1) and NR radio channel (2) are used for this test |
| Time offset between cells | | | 1, 2 | 3 µs | Synchronous cells |
| Access Barring Information | | - | 1, 2 | Not Sent | No additional delays in random access procedure. |
| DBT Window Configuration | | | 1, 2 | DBT.1 | As specified in clause A.3.28.1. |

#### A.12.1.1.1.2 Test Requirements

The cell reselection delay to a higher priority NR cell subject to CCA is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration updateon Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 60 + 1.28 x (5 + $M_e$) + $T_{SI_CCA}$ s. $M_e$ is the number of DRX cycles with at least one SMTC where there are no SSBs available during the $T_{evaluate,NR_Intra_CCA}$. If $M_e > M_{e,max}$ the UE is required to restart the evaluation of Cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate,\ NR_ inter_CCA} + T_{SI_CCA,}$ and to a lower priority cell can be expressed as: $T_{evaluate,\ NR} + T_{SI\text{-}NR,}$

Where:

$T_{higher_priority_search}$ See clause 4.2.2 in TS 36.133 [15]

$T_{evaluate,\ NR_ inter_CCA}$ See Table 4.2.2.5.7-1 in clause 4.2.2.5.7

$T_{SI_CCA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

$T_{evaluate,\ NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority NR cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

# A.12.2 RRC_CONNECTED state mobility

## A.12.2.1 Handover

### A.12.2.1.1 E-UTRAN - NR with CCA handover

#### A.12.2.1.1.1 Test Purpose and Environment

This test shall verify the E-UTRAN to NR FR1 handover requirements specified in clause 5.3.4A in TS 36.133 [15].

The test comprises of one E-UTRA carrier and one NR carrier with CCA. There are two cells and one cell on each carrier. Cell 1 is the E-UTRAN cell and Cell 2 is an inter-RAT NR neighbour cell with CCA.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in table 8.1.2.1-1 of TS 36.133 [15] is configured before T2 begins to enable inter-RAT frequency monitoring. A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant

when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.12.2.1.1-1. General test parameters are provided in table A.12.2.1.1-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.12.2.1.1-3 and A.12.2.1.1-4 respectively.

**Table A.12.2.1.1-1: Supported test configurations for E-UTRAN inter-RAT NR handover**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.12.2.1.1-2: General test parameters for E-UTRAN inter-RAT NR handover**

For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window. | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | |
| NOTE 3: $\hat{E}_s/I_{ot}$, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | |
| NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy. | | | | | |
| NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. | | | | | |
| NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. | | | | | |

#### A.12.2.1.1.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 112 + ($L_1$´ + $L_3$)*20 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in TS36.331.

$T_{interrupt}$ = 62 + ( $L_1$´ + $L_3$) * $T_{SMTC}$; $T_{interrupt}$ is defined in TS36.133 clause 5.3.4A.3 where

- $L_1$´ is the number of SMTC occasions not available at the UE during the inter-RAT detection period.
- $L_3$ is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3$ = 0 for Type 2C UL channel access procedure as defined in TS 37.213 [33].

$T_{SMTC}$ = 20 ms is the SMTC periodicity ms in the test.

This gives a total of 112 +( $L_1$´ + $L_3$ )*20 ms.

## A.12.3 Void

## A.12.4 Measurement procedure

### A.12.4.1 E-UTRAN–NR inter-RAT SFTD measurements

#### A.12.4.1.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay with NR under CCA in non-DRX

#### A.12.4.1.1.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell under CCA is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and no DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier under CCA with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message

containing a measurement configuration for SFTD measurements on RF channel 2 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in table A.12.4.1.1.1-1 below. General test parameters and cell-specific parameters for the NR cell are provided in tables A.12.4.1.1.1-2 and A.12.4.1.1.1-3 below, respectively. Cell-specific parameters for the E-UTRA cell are provided in clause A.3.7.2.1.

**Table A.12.4.1.1.1-1: Applicable test configurations for inter-RAT SFTD measurement delay test with NR under CCA**

| Config | Description |
|---|---|
| 1 | LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.12.4.1.1.1-2: General test parameters for inter-RAT SFTD measurement delay test with NR under CCA**

| Parameter | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | Config 1,2 | 1 | | One E-UTRAN carrier frequencies is used. |
| NR RF Channel Number | | Config 1,2 | 1 | | One NR carrier frequencies is used. |
| Active cell | | Config 1,2 | Cell 1 | | Cell 1 is on E-UTRA RF channel number 1. |
| Neighbour cell | | Config 1,2 | Cell 2 | | Cell 2 is on NR RF channel number 1. |
| CP length | | Config 1,2 | Normal | | Applicable to both cells. |
| DRX | | Config 1,2 | OFF | | DRX is not used |
| Frame time offset between serving and neighbour cells | ms | Config 1 | 3 | 7 | Asynchronous cells. The timing of Cell 2 relative to the timing of Cell 1. |
| | µs | Config 2 | 3 | | Synchronous cells. |
| SFN offset between serving and neighbour cells | | Config 1,2 | 0 | 1 | SFN of Cell 2 relative to SFN of Cell 1. |
| SS-RSRP reporting | | Config 1,2 | No | | Only SFTD is reported. |
| T1 | s | Config 1,2 | 2 | | T1 shall exceed $T_{measure_SFTD_LBT_max}$ = 56 × SMTC |

**Table A.12.4.1.1.1-3: Cell specific test parameters for Cell 2 in inter-RAT SFTD measurement delay test with NR under CCA**

| Parameter | | Unit | Cell 2 |

| $\hat{E}_s/N_{oc}$ | dB | 4 |
| Io Note 3 | dBm/38.16 MHz | -58.50 |
| Propagation Condition | | AWGN |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel access only..

#### A.12.4.1.1.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at $T_{RRC_procedure_delay} + T_{measure_SFTD_LBT_max}$ after the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2\times TTI_{DCCH}$ longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

## A.12.4.2 E-UTRAN–NR inter-RAT measurements on NR carrier frequency under CCA

### A.12.4.2.1 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.12.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements under CCA and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements under CCA.

In this test, there are two cells: E-UTRA Cell 1 as PCell on E-UTRA RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in tables A.12.4.2.1.1-1, A.12.4.2.1.1-2, A.12.4.2.1.1-3 and A.12.4.2.1.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In this test, measurement gap pattern configuration # 0 as defined in table A.12.4.2.1.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.12.4.2.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.12.4.2.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Number | | 1, 2 | 1 | One E-UTRA carrier frequency is used. |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.12.4.2.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_without_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index. $T_{identify_irat_cca_without_index}$ is defined in defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.12.4.2.2 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

#### A.12.4.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA Cell 1 as PCell on E-UTRA RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in tables A.12.4.2.2.1-1, A.12.4.2.2.1-2, A.12.4.2.2.1-3 and A.12.4.2.2.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In this test, measurement gap pattern configuration # 0 as defined in table A.12.4.2.2.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.12.4.2.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

| Propagation Condition | | 1, 2 | AWGN | |
| Antenna Configuration and Correlation Matrix | | 1, 2, | 1x2 Low | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.12.4.2.2.2 Test Requirements

In test 1, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_without_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_without_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement

reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.12.4.2.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

#### A.12.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA Cell 1 as PCell on E-UTRA RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in tables A.12.4.2.3.1-1, A.12.4.2.3.1-2, A.12.4.2.3.1-3 and A.12.4.2.3.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In this test, measurement gap pattern configuration # 0 as defined in table A.12.4.2.3.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.12.4.2.3.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.12.4.2.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| E-UTRA RF Channel Number | | 1, 2 | 1 | One E-UTRAcarrier frequency is used. |
| NR RF Chanel Number | | 1, 2 | 1 | One FR1 NR carrier frequency under CCA is used. |

NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.12.4.2.3.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_with_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.12.4.2.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

#### A.12.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA Cell 1 as PCell on E-UTRA RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in tables A.12.4.2.4.1-1, A.12.4.2.4.1-2, A.12.4.2.4.1-3 and A.12.4.2.4.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In this test, measurement gap pattern configuration # 0 as defined in table A.12.4.2.4.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists

of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.12.4.2.4.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description |
|---|---|
| 1 | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2 | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 8: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.12.4.2.4.2 Test Requirements

In test 1, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_with_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than $T_{identify_irat_cca_with_index}$ ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.12.4.2.5 Void

#### A.12.4.2.6 Void

## A.12.5 Measurement performance

### A.12.5.1 E-UTRAN–NR SFTD

#### A.12.5.1.1 Inter-RAT SFTD accuracy with NR target cell under CCA

##### A.12.5.1.1.1 Test Purpose

The purpose of this set of tests is to verify that the SFTD measurement accuracy is within the specified limits. This test will verify the requirements as specified in clause 9.1.28 in TS 36.133 [15] for inter-RAT SFTD measurements between E-UTRA PCell and NR target cell under CCA.

##### A.12.5.1.1.2 Test Environment

Supported test configurations are shown in table A.12.5.1.1.2-1. In this set of test cases there are two cells on different carriers. Cell 1 is E-UTRAN PCell and Cell 2 is inter-RAT NR target cell under CCA. The test parameters of Cell 1 are given in clause A.12.5.1.1.2-2. The test parameters of Cell 2 are given in table A.12.5.1.1.2-3. The SFTD between PCell and NR target cell shall be set by the test equipment to one of the time differences in table A.12.5.1.1.2-4.

**Table A.12.5.1.1.2-1: Supported test configurations for SFTD accuracy with NR target cell under CCA**

| Config | Description |
|---|---|
| 1 | LTE FDD<br>NR with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD<br>NR with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

### A.13.2.1 Void

### A.13.2.2 SCell activation and deactivation delay

#### A.13.2.2.1 SCell Activation and Deactivation of known SCell under CCA, 160 ms SCell measurement cycle

##### A.13.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell on NR-U SCC with CCA are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in table A.13.2.2.1.1-1.

The test parameters are given in table A.13.2.2.1.1-2 and cell-specific parameters in table A.13.2.2.1.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in NR FR1, and Cell 2 (SCell) on radio channel 2 (SCC) in NR with CCA. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2, as the UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted *m*, defines the start of time period T2. The UE shall be able to report a valid CSI in PCell for the activated SCell at latest in slot $m + \frac{T_{\text{HARQ}}+T_{\text{activation_time_withCCA}}+T_{\text{CSI_Reporting_withCCA}}}{\text{NR slot length}}$, as defined in clause 8.3A.2. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $m+ \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption shall fall within the time window specified in clause 8.3A.2. At the end of T2 the test equipment sends a MAC message for deactivation of the SCell.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted *n*, defines the start of time period T3. The UE shall complete the activation at latest in slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$. Any PCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.13.2.2.1.1-1: Supported test configurations for SCell Activation and Deactivation of known SCell under CCA, 160 ms SCell measurement cycle**

| Configuration | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.13.2.2.1.1-2: General test parameters for known SCell activation with SCell under CCA, 160 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two radio channels (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| CQI/PMI periodicity and offset configuration index | | 0 | CQI reporting for SCell every fourth slot |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to Cell 1 | µs | 0 | |
| Time alignment error between Cell 2 and Cell 1 | µs | ≤ TAE as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1 | s | 7 | During this time the PCell shall be known and the SCell configured and detected. |
| T2 | s | 1 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| $T_{CSI_Reporting}$ | ms | $10 + 5 \cdot 2^{\mu_{DL}}$ | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2]<br>$\mu_{DL}$ is the subcarrier spacing configuration for DL |

NOTE 1: OCNG shall be used such that resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For Cell 2 with CCA model, OCNG is transmitted only in slots with downlink transmission bursts and is not transmitted during muted slots or during DBT windows.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.
NOTE 8: As specified in clause 8.3A for $L_{1,max}$, $L_{2,1,max}$, $L_{2,2,max}$, $L_{3,1,max}$, and $L_{3,2,max}$

### A.13.2.2.1.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $m+1+\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$.

During T2, conditioned on that downlink CCA failures $L_1$ and $L_{2,2}$ experienced in the SCell fulfill $L_1 \leq L_{1,max}$ and $L_{2,2} \leq L_{2,2,max}$ with $L_{1,max} = 2$ and $L_{2,2,max} = 2$, respectively, the UE shall send the first valid CSI report (non-zero CQI) for the SCell no later than slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA}$ = $T_{FirstSSB}$ + $L_1$*$T_{rs}$ + 5 ms and $T_{CSI_reporting_withCCA}$ = $T_{CSI_reporting}$ + $L_{2,2}$*$T_{CSI\text{-}RS}$ + $T_{CSI_ReportingDelay}$, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X$ = $T_{FirstSSB}$.

During T3, interruption on PCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

## A.13.2.2.2 SCell Activation and Deactivation of known SCell under CCA, 640 ms SCell measurement cycle

### A.13.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell on NR-U SCC with CCA are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 640 ms.

The supported test configurations are same as in table A.13.2.2.1.1-1 above.

The test parameters are same as in table A.13.2.2.1.1-2 above, except for parameters listed below in table A.13.2.2.2.1-1. The cell-specific parameters are same as in table A.13.2.2.1.1-3 above.

The test execution is the same as described in clause A.13.2.2.1 above, except that downlink CCA failures $L_{2,1}$ and $L_{2,2}$ with limits $L_{2,1} \leq L_{2,1,max}$ and $L_{2,2} \leq L_{2,2,max}$ replace $L_1$ as described in clause 8.3A.2 for activation of known SCell with a measurement cycle larger than 160 ms.

**Table A.13.2.2.2.1-1: General test parameters for known SCell activation with SCell under CCA, 640 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

### A.13.2.2.2.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $m+1+\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$.

During T2, conditioned on that downlink CCA failures $L_{2,1}$ and $L_{2,2}$ experienced in the SCell fulfill $L_{2,1} \leq L_{2,1,max}$ and $L_{2,2} \leq L_{2,2,max}$ with $L_{2,1,max} = 2$ and $L_{2,2,max} = 2$, respectively, the UE shall send the first valid CSI report (non-zero CQI) for the SCell no later than slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA} = T_{FirstSSB_MAX} + L_{2,1}*T_{SMTC_MAX} + (1 + L_{2,2})*T_{rs}$ + 5 ms and $T_{CSI_reporting_withCCA} = T_{CSI_reporting}$ + $T_{CSI_ReportingDelay}$, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot $m+1+\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m+1+\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X = T_{FirstSSB}$.

During T3, interruption on PCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

## A.13.2.2.3 SCell Activation and Deactivation of unknown SCell under CCA

### A.13.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell on NR-U SCC with CCA are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in table A.13.2.2.1.1-1 above.

The test parameters are same as in table A.13.2.2.1.1-2 above, except for parameters listed below in table A.13.2.2.3.1-1. The cell-specific parameters are same as in table A.13.2.2.1.1-3 above.

The test execution is the same as described in clause A.13.2.2.1 above, except that downlink CCA failures $L_{3,1}$ and $L_{3,2}$ with limits $L_{3,1} \leq L_{3,1,max}$ and $L_{3,2} \leq L_{3,2,max}$ replace $L_1$ as described in clause 8.3A.2 for activation of unknown SCell.

**Table A.13.2.2.3.1-1: General test parameters for unknown SCell activation with SCell under CCA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| T1 | s | 0.1 | During this time period the PCell shall be known and the SCell configured, but not detected. |

### A.13.2.2.3.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $m+1+\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$.

During T2, conditioned on that downlink CCA failures $L_{3,1}$ and $L_{3,2}$ experienced in the SCell fulfill $L_{3,1} \leq L_{3,1,max}$ and $L_{3,2} \leq L_{3,2,max}$ with $L_{3,1,max} = 2$ and $L_{3,2,max} = 2$, respectively, the UE shall send the first valid CSI report (non-zero CQI) for the SCell no later than slot $m$ + ($T_{HARQ}$+$T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA} = T_{FirstSSB_MAX} + (1 + L_{3,1})*T_{SMTC_MAX} + (2 + L_{3,2})*T_{rs}$ + 5 ms and $T_{CSI_reporting_withCCA} = T_{CSI_reporting} + T_{CSI_ReportingDelay}$, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot $m$ +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot $m$ +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X = T_{FirstSSB}$.

During T3, interruption on PCell shall not occur outside slot $n$ +1+$T_{HARQ}$/NR_slot_length to slot $n$+1+($T_{HARQ}$ +3 ms)/NR_slot_length.

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

## A.13.2.3 Void

# A.13.3 Measurement procedure

## A.13.3.1 Intra-frequency measurements

### A.13.3.1.1 Event-triggered reporting tests on SCC without gaps under non-DRX

#### A.13.3.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.13.3.1.1.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.13.3.1.1.2-1 and A.13.3.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

**Table A.13.3.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

| NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration. | | | | | | | | |

#### A.13.3.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.5.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.5.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.2 Event-triggered reporting tests on SCC without gaps under DRX

#### A.13.3.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.13.3.1.2.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.13.3.1.2.2-1 and A.13.3.1.2.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.13.3.1.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

#### A.13.3.1.2.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.5.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.5.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.3 Event-triggered reporting tests on SCC with per-UE gaps under non-DRX

#### A.13.3.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.13.3.1.3.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.13.3.1.3.2-1 and A.13.3.1.3.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that

event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There are two BWPs configured in Cell 1, BWP0 which contains the cell defining SSB, and BWP1 which does not contain any SSB of Cell 1. During the whole test, BWP1 is always scheduled as the active BWP for the UE.

**Table A.13.3.1.3.2-1: Supported test configurations**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

### A.13.3.1.3.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.6.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.6.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.4 Event-triggered reporting tests on SCC with per-UE gaps under DRX

#### A.13.3.1.4.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.13.3.1.4.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.13.3.1.4.2-1 and A.13.3.1.4.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There are two BWPs configured in Cell 1, BWP0 which contains the cell defining SSB, and BWP1 which does not contain any SSB of Cell 1. During the whole test, BWP1 is always scheduled as the active BWP for the UE.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.13.3.1.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.<br>NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.<br>NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.<br>NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.<br>NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration. | | | | | | | | |

#### A.13.3.1.4.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.6.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.6.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.6 Void

## A.13.3.2 Inter-frequency measurements

### A.13.3.2.1 Void

### A.13.3.2.2 Void

### A.13.3.2.3 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is not used

#### A.13.3.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements for NR cell with CCA in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR Cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in tables A.13.3.2.3.1-1, A.13.3.2.3.1-2 and A.13.3.2.3.1-3.

In this test, measurement gap pattern configuration # 0 as defined in table A.13.3.2.3.1-2 is provided

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

**Table A.13.3.2.3.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.

### A.13.3.2.3.2 Test Requirements

In this test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.2.4 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is used

#### A.13.3.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR Cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in tables A.13.3.2.4.1-1, A.13.3.2.4.1-2 and A.13.3.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.13.3.2.4.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.13.3.2.4.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config | Description |

### A.13.3.2.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_without_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2 UE is not required to report SSB time index.

$T_{identify_inter_cca_without_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1 DRX cycle = 40 ms and for test 2 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.13.3.2.5 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is not used

### A.13.3.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR Cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in tables A.13.3.2.5.1-1, A.13.3.2.5.1-2 and A.13.3.2.5.1-3.

Measurement gap pattern configuration # 0 as defined in table A.13.3.2.5.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration

#### A.13.3.2.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In this test UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.2.6 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is used

#### A.13.3.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR Cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in tables A.13.3.2.6.1-1, A.13.3.2.6.1-2 and A.13.3.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.13.3.2.6.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

### A.13.3.2.6.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_inter_cca_with_index}$ from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 1 and 2 UE is required to report SSB time index.

$T_{identify_inter_cca_with_index} = (T_{PSS/SSS_sync_inter_cca} + T_{SSB_measurement_period_inter_cca} + T_{SSB_time_index_inter_cca})$ ms, where

$T_{PSS/SSS_sync_inter_cca}$: it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB_time_index_inter_cca}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{SSB_measurement_period_inter_cca}$: equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

MGRP = 40 ms.

For test 1 DRX cycle = 40 ms and for test 2 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.13.3.3 L1-RSRP measurements for beam reporting

### A.13.3.3.1 SSB based L1-RSRP measurement when DRX is not used

#### A.13.3.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.13.3.3.1.1-1.

**Table A.13.3.3.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.13.3.3.1.2 Test parameters

There are two cells in the tests, FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 and Cell 2 are given in table A.13.3.3.1.2-1 and table A.13.3.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

| SSB RSRP Note3 | 1,2,3 | dBm/SSB SCS | -91.65 | -91.65 | -Infinity | -88.65 |
| Io Note3 | 1,2,3 | dBm/38.16 MHz | -57.59 | -57.59 | -60.61 | -55.84 |
| $\hat{E}_s / N_{oc}$ | 1,2,3 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS Res when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

### A.13.3.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to 2xTTI DCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.13.3.3.2 SSB based L1-RSRP measurement when DRX is used

### A.13.3.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in table A.13.3.3.1.1-1.

**Table A.13.3.3.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.13.3.3.2.2 Test parameters

There are two cells in the tests, FR1 Pcell (Cell 1) and FR1 Scell (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 and Cell 2 are given in table A.13.3.3.2.2-1 and table A.13.3.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.
NOTE 5: The signal levels apply for SSS Res when the discovery burst is transmitted during DBT windows.
NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA_DL1}$ and the second value corresponds to the $P_{CCA_DL2}$.

#### A.13.3.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to 2xTTI DCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.13.4 Measurement performance

## A.13.4.1 SS-RSRP

### A.13.4.1.1 Intra-frequency measurement accuracy on a carrier frequency with CCA

#### A.13.4.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy on the carrier frequency with CCA is within the specified limits. This test will verify the requirements in clauses 10.1.36.1.1 and 10.1.36.1.2 for intra-frequency measurements under CCA.

#### A.13.4.1.1.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). Supported test configurations are shown in table A.13.4.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.13.4.1.1.2-2.

**Table A.13.4.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Subtest 1 is not used when testing with 30 kHz SSB SCS.
NOTE 6: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 9: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

#### A.13.4.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil absolute requirement in clause 10.1.36.1.1 and relative requirement in clause 10.1.36.1.2.

## A.13.4.2 SS-RSRQ

### A.13.4.2.1 Intra-frequency measurement accuracy on SCC

#### A.13.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.29.1.1.

#### A.13.4.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.13.4.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in table A.13.4.2.1.2-2 and table A.13.4.2.1.2-3. In all test cases, Cell 1 is the PCell, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different $N_{oc}$ on Cells 1, 2, and 3.

**Table A.13.4.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description |

| Antenna configuration | | | - | 1x2 | 1x2 |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
Note 5: NR operating band groups are as defined in clause 3.5.2.
Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.13.4.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

## A.13.4.3 SS-SINR

### A.13.4.3.1 Intra-frequency measurement accuracy on SCC

#### A.13.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.1.

#### A.13.4.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.13.4.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in table A.13.4.3.1.2-2 and table A.13.4.3.1.2-3. In all test cases, Cell 1 is the PCell, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different $N_{oc}$ on Cells 1, 2, and 3.

**Table A.13.4.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Antenna configuration | | | - | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: NR operating band groups are as defined in clause 3.5.2.

NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.13.4.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

## A.13.4.4 L1-RSRP measurement for beam reporting with CCA serving cell

### A.13.4.4.1 SSB based L1-RSRP measurement

#### A.13.4.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.33.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.13.4.4.1.1-1.

**Table A.13.4.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3 | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.13.4.4.1.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a SCell under CCA (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model.

Two sub-tests (Test 1 and Test 2) are provided with different $N_{oc}$ on Cell 2. The test parameters for the Cell 1 and Cell 2 are given in table A.13.4.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.13.4.4.1.2-1.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. On Cell 2, UE is configured to perform L1-RSRP measurement based on the SSB resources 0 and 1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.13.4.4.1.3 Test Requirements

In both Test 1 and Test 2, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.33.1.

## A.13.4.5 RSSI

### A.13.4.5.1 Intra-frequency RSSI measurement accuracy on a carrier with CCA

#### A.13.4.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.1.

#### A.13.4.5.1.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the SCell with CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.13.4.5.1.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.13.4.5.1.2-2 and A.13.4.5.1.2-3.

**Table A.13.4.5.1.2-1: Intra frequency RSSI supported test configurations**

| Configuration | Description |
|---|---|

### A.13.4.5.1.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.13.4.5.2 Inter-frequency RSSI measurement accuracy on a carrier with CCA

### A.13.4.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in section 10.1.34.2.

### A.13.4.5.2.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the neighbour with CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.13.4.5.2.2-1. The accuracy of RSSI inter-frequency measurements is tested by using the parameters in A.13.4.5.2.2-2 and A.13.4.5.2.3.

**Table A.13.4.5.2.2-1: Inter frequency RSSI supported test configurations**

#### A.13.4.5.2.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.2. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.13.4.6 Channel occupancy

### A.13.4.6.1 Intra-frequency channel occupancy measurement accuracy on SCC with CCA

#### A.13.4.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.1.

#### A.13.4.6.1.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the SCell with CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.13.4.6.1.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.13.4.6.1.2-2 and A.13.4.6.1.2-3.

**Table A.13.4.6.1.2-1: Intra frequency CO supported test configurations**

| Configuration | Description |

### A.13.4.6.1.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

## A.13.4.6.2 Inter-frequency channel occupancy measurement accuracy on a carrier with CCA

### A.13.4.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in section 10.1.35.2.

### A.13.4.6.2.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the neighbour with CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.13.4.6.2.2-1. The accuracy of channel occupancy inter-frequency measurements is tested by using the parameters in A.13.4.6.2.2-2 and A.13.4.6.2.3.

**Table A.13.4.6.2.2-1: Inter frequency CO supported test configurations**

| Configuration | Description |
|---|---|
| 1 | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

#### A.13.4.6.2.3 Test Requirements

The nominal reported *channelOccupancy* shall be 100 %. At least 90 % of channel occupancy reports made by the UE shall indicate this value.

# A.14 NR standalone tests for Satellite access

## A.14.1 RRC_IDLE state mobility

### A.14.1.1 Cell reselection to FR1 intra-frequency NR case

#### A.14.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.3.

#### A.14.1.1.2 Test Parameters

The test scenario comprises of 2 cells on 1 NR carrier configured each in a different satellite as given in tables A.14.1.1.2-1, A.14.1.1.2-2 and A.14.1.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2.

**Table A.14.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.1.2-2: General test parameters for intra frequency NR cell re-selection test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial condition | Active cell | | Cell 1 | |
| T2 end condition | Active cell | | Cell 2 | |
| | Neighbour cells | | Cell 1 | |
| Final condition | Active cell | | Cell 1 | |
| | Neighbour cells | | Cell 2 | |
| RF Channel Number | | | 1 | |
| Time offset between cells | | | 3 ms | Asynchronous cells |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1.28 | The value shall be used for all cells in the test. |
| PRACH configuration index | | | 102 | The detailed configuration is specified in TS 38.211 [6] clause 6.3.3.2 |
| rangeToBestCell | | | Not configured | |
| T1 | | s | >7 | During T1, Cell 2 shall be powered off, and during the off time the physical cell identity shall be changed, The intention is to ensure that Cell 2 has not been detected by the UE prior to the start of period T2 |
| T2 | | s | 40 (NOTE 1) | T2 needs to be defined so that cell re-selection reaction time is taken into account. |
| T3 | | s | 15 (NOTE 1) | T3 needs to be defined so that cell re-selection reaction time is taken into account. |
| NOTE 1: If the test is performed in a NGSO configuration, and the scaling factor $K_{multi_SMTC}$ defined in clause 4.2C.2.3 is greater than 1, according to UE capabilities, the duration of times T2 and T3 shall be scaled for the same factor to allow the UE to complete the cell reselection within the duration of the test case. | | | | |

### A.14.1.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than:

34 s if $K_{multi_SMTC}$ is equal to 1 (see note on Table A.14.1.1.2-2); or

66 s if $K_{multi_SMTC}$ is equal to 2.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to an already detected cell shall be less than:

8 s if $K_{multi_SMTC}$ is equal to 1 (see note on Table A.14.1.1.2-2); or

14.5 s if $K_{multi_SMTC}$ is equal to 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $K_{multi_SMTC} * T_{detect, NR_Intra} + T_{SI-NR}$, and to an already detected cell can be expressed as: $K_{multi_SMTC} * T_{evaluate, NR_intra} + T_{SI-NR}$,

Where:

$T_{detect, NR_Intra}$ See Table 4.2C.2.3-1 in clause 4.2C.2.3

$T_{evaluate, NR_intra}$ See Table 4.2C.2.3-1 in clause 4.2C.2.3

$K_{multi_SMTC}$ is described in clause 4.2C.2.3

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case provided that SIB1 and SIB19 are scheduled with 20 ms period and 80 ms period, respectively.

If $K_{multi_SMTC} = 1$, $K_{multi_SMTC} * T_{evaluate, NR_Intra} + T_{SI-NR} = 7.68$ s; allow 8 s. And $K_{multi_SMTC} * T_{detect, NR_intra} + T_{SI-NR} = 33.28$ s, allow 34 s.

If K_multi_SMTC = 2, $K_{multi_SMTC} * T_{evaluate, NR_Intra} + T_{SI-NR} = 14.08$ s; allow 14.5 s. And $K_{multi_SMTC} * T_{detect, NR_intra} + T_{SI-NR} = 65.28$ s, allow 66 s.

## A.14.1.2 Cell reselection to FR1 intra-frequency NR cell for UE configured with the feature for enhanced requirements

### A.14.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.3.

### A.14.1.2.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.14.1.2.2-1, A.14.1.2.2-2 and A.14.1.2.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. The flag *enhancedMeasurementNGSO-r17* should be set.

**Table A.14.1.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.2.2-2: General test parameters for intra frequency NR cell re-selection test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial condition | Active cell | | Cell 1 | |

### A.14.1.2.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than:

11 s if $K_{multi_SMTC}$ is equal to 1 (see note on Table A.14.1.2.2-2); or

20 s if $K_{multi_SMTC}$ is equal to 2.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to an already detected cell shall be less than:

6 s if $K_{multi_SMTC}$ is equal to 1 (see note on Table A.14.1.2.2-2); or

9 s if $K_{multi_SMTC}$ is equal to 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $K_{multi_SMTC} * T_{detect,\ NR_Intra_enh} + T_{SI\text{-}NR}$, and to an already detected cell can be expressed as: $K_{multi_SMTC} * T_{evaluate,\ NR_intra_enh} + T_{SI\text{-}NR}$,

Where:

$T_{detect,\ NR_Intra_enh}$ See Table 4.2C.2.3-2 in clause 4.2C.2.3

$T_{evaluate,\ NR_Intra_enh}$ See Table 4.2C.2.3-2 in clause 4.2C.2.3

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case provided that SIB1 and SIB19 are scheduled with 20 ms period and 80 ms period, respectively.

If $K_{multi_SMTC} = 1$, $K_{multi_SMTC} * T_{evaluate,\ NR_Intra_enh} + T_{SI\text{-}NR} = 5.12$ s; allow 6 s. And $K_{multi_SMTC} * T_{detect,\ NR_Intra_enh} + T_{SI\text{-}NR} = 10.24$ s, allow 11 s.

If K_multi_SMTC = 2, $K_{multi_SMTC} * T_{evaluate,\ NR_Intra_enh} + T_{SI\text{-}NR} = 8.96$ s; allow 9 s. And $K_{multi_SMTC} * T_{detect,\ NR_Intra_enh} + T_{SI\text{-}NR} = 19.2$ s, allow 20 s.

## A.14.1.3 Time-based measurement initiation to FR1 intra-frequency NR cell reselection

### A.14.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.3.

### A.14.1.3.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.14.1.a3.2-1, A.14.1.a3.2-2 and A.14.1.a3.2-3. The test consists of two successive time periods, with time duration of T1 and T2, respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. t-Service broadcasted in SIB19 of Cell 1 is set to the time point that is 36 s after start of T2.

**Table A.14.1.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

### A.14.1.3.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than :

34 s if $K_{multi_SMTC}$ is equal to 1 (see note on Table A.14.1.3.2-2); or

66 s if $K_{multi_SMTC}$ is equal to 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $K_{multi_SMTC} * T_{detect,\ NR_Intra} + T_{SI-NR}$,

Where:

$T_{detect,\ NR_Intra}$ See Table 4.2C.2.3-1 in clause 4.2C.2.3

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case provided that SIB1 and SIB19 are scheduled with 20 ms period and 80 ms period, respectively.

If $K_{multi_SMTC} = 1$, $K_{multi_SMTC} * T_{detect,\ NR_intra} + T_{SI-NR} = 33.28$ s, allow 34 s.

If $K_{multi_SMTC} = 2$, $K_{multi_SMTC} * T_{detect,\ NR_intra} + T_{SI-NR} = 65.28$ s, allow 66 s.

## A.14.1.4 Location-based measurement initiation to FR1 intra-frequency NR cell reselection

### A.14.1.4.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.3.

### A.14.1.4.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.14.1.a4.2-1, A.14.1.a4.2-2 and A.14.1.a4.2-3. The test consists of two successive time periods, with time duration of T1 and T2, respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2.

At 4 s after the start of T2, the UE location is changed such that the distance to the reference location broadcasted in SIB19 of Cell 1 is exceeded by the configured value in *distanceThresh* plus 50m.

**Table A.14.1.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.4.2-2: General test parameters for intra frequency NR cell re-selection test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial condition | Active cell | | Cell 1 | |

### A.14.1.4.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than:

34 s if $K_{multi_SMTC}$ is equal to 1 (see note on Table A.14.1.3.2-2); or

66 s if $K_{multi_SMTC}$ is equal to 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $K_{multi_SMTC} * T_{detect,\ NR_Intra} + T_{SI-NR}$, and to an already detected cell can be expressed as: $K_{multi_SMTC} * T_{evaluate,\ NR_intra} + T_{SI-NR}$,

Where:

$T_{detect,\ NR_Intra}$ See Table 4.2C.2.3-1 in clause 4.2C.2.3

$T_{evaluate,\ NR_intra}$ See Table 4.2C.2.3-1 in clause 4.2C.2.3

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case provided that SIB1 and SIB19 are scheduled with 20 ms period and 80 ms period, respectively.

If $K_{multi_SMTC} = 1$, $K_{multi_SMTC} * T_{detect,\ NR_intra} + T_{SI-NR} = 33.28$ s, allow 34 s.

If $K_{multi_SMTC} = 2$, $K_{multi_SMTC} * T_{detect,\ NR_intra} + T_{SI-NR} = 65.28$ s, allow 66 s.

## A.14.1.5 Cell reselection to FR1 inter-frequency NR case

### A.14.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.4.

### A.14.1.5.2 Test Parameters

The test scenario comprises of 2 NR carriers and 2 cells as given in tables A.14.1.5.2-1, A.14.1.5.2-2 and A.14.1.5.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas

and Cell 2 is of higher priority than Cell 1. Furthermore, UE has not registered with network for the tracking area containing Cell 2.

**Table A.14.1.5.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.5.2-2: General test parameters for inter frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 1 | |

| Treselection | s | 1, 2 | 0 | 0 | 0 | 0 | 0 | 0 |
| $S_{nonIntraSearchP}$ | dB | 1, 2 | 50 | | | 50 | | |
| $Thresh_{x, highP}$ | dB | 1, 2 | 48 | | | 48 | | |
| $Thresh_{serving, lowP}$ | dB | 1, 2 | 44 | | | 44 | | |
| $Thresh_{x, lowP}$ | dB | 1, 2 | 50 | | | 50 | | |
| Propagation Condition | | 1, 2 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.1.5.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate, NR_ inter} + T_{SI-NR}$, and to a lower priority cell can be expressed as: $T_{evaluate, NR_ inter} + T_{SI-NR}$,

Where:

$T_{higher_priority_search}$ See clause 4.2C.2.9

$T_{evaluate, NR_ inter}$ See tables 4.2C.2.4-1 in clause 4.2C.2.4

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority

## A.14.1.6 Cell re-selection to FR1 inter-frequency NR cell for UE configured with feature for enhanced requirements

### A.14.1.6.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell re-selection requirements for satellite access specified in clause 4.2C.2.4.

### A.14.1.6.2 Test Parameters

The test scenario comprises of 2 NR carriers and 2 cells as given in tables A.14.1.6.2-1, A.14.1.6.2-2 and A.14.1.6.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3, respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1. Furthermore, UE has not registered with network for the tracking area containing cell 2. The flag *enhancedMeasurementNGSO-r17* should be set.

**Table A.14.1.6.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.6.2-2: General test parameters for inter frequency NR cell re-selection test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial condition | Active cell | | Cell 1 | |
| T2 end condition | Active cell | | Cell 2 | |
| | Neighbour cells | | Cell 1 | |
| Final condition | Active cell | | Cell 1 | |
| | Neighbour cells | | Cell 2 | |
| RF Channel Number | | | 1, 2 | |

| $Thresh_{x,lowP}$ | dB | 50 | | | 50 | | |
| Propagation Condition | | AWGN | | | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.1.6.3 Test Requirements

The cell re-selection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 66 s.

The cell re-selection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to a lower priority cell shall be less than 6 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate,\ NR_inter_enh} + T_{SI\text{-}NR}$, and to a lower priority cell can be expressed as: $T_{evaluate,\ NR_inter_enh} + T_{SI\text{-}NR}$,

Where:

$T_{higher_priority_search}$ See clause 4.2C.9

$T_{evaluate,\ NR_inter_enh}$ See tables 4.2C.2.4-2 in clause 4.2C.2.4

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 65.12 s, allow 66 s for the cell re-selection delay to a higher priority

## A.14.1.7 Time-based measurement initiation to FR1 inter-frequency cell reselection

### A.14.1.7.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.4.

### A.14.1.7.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.14.1.7.2-1, A.14.1.7.2-2 and A.14.1.7.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. t-Service broadcasted in SIB19 of Cell 1 is set to the time point that is 36 s after start of T2.

**Table A.14.1.7.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.7.2-2: General test parameters for inter frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 1 | |

### A.14.1.7.3 Test Requirements

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 36 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$,

Where:

$T_{evaluate,\ NR_\ inter}$ See Table 4.2C.2.4-1 in clause 4.2C.2.4

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case provided that SIB1 and SIB19 are scheduled with 80 ms period.

## A.14.1.8 Location-based measurement initiation to FR1 inter-frequency NR cell reselection

### A.14.1.8.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements for satellite access specified in clause 4.2C.2.4.

### A.14.1.8.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.14.1.8.2-1, A.14.1.8.2-2 and A.14.1.8.2-3. The test consists of two successive time periods, with time duration of T1and T2, respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2.At 4 s after the start of T2, the UE location is changed such that the distance to the reference location broadcasted in SIB19 of Cell 1 is exceeded by the configured value in *distanceThresh* plus 50m.

**Table A.14.1.8.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.8.2-2: General test parameters for inter frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 1 | |

### A.14.1.8.3 Test Requirements

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 36 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$,

Where:

$T_{evaluate,\ NR_\ inter}$ See Table 4.2C.2.4-1 in clause 4.2C.2.4

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case provided that SIB1 and SIB19 are scheduled with 80 ms period.

## A.14.1.9 Cell reselection to FR1 inter-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

### A.14.1.9.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2C.2.8, for UE fulfilling low mobility relaxed measurement criterion.

### A.14.1.9.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.14.1.9.2-1, A.14.1.9.2-2 and A.14.1.9.2-3. The test consists of two successive time periods, with time duration of T1 and T2, respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in TS 38.304 [1]. So, Cell 2 and Cell 1 configure the UE as follows:

*lowMobilityEvalutation* TS 38.331 [2] criterion is configured according to the parameters listed in table A.14.1.9.2-3;

*cellEdgeEvaluation* TS 38.331 [2] criterion is not configured;

*combineRelaxedMeasCondition* TS 38.331 [2] is not configured;

**Table A.14.1.9.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.9.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 2 | The UE camps on Cell 2 in the initial phase, it fulfills Low Mobility relaxation measurements criterion, and during T1 period the UE reselects to Cell 1 |
| | Neighbour cells | | 1, 2 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2 | Cell 1 | The UE shall perform reselection to Cell 1 during T1 |
| | Neighbour cells | | 1, 2 | Cell 2 | |
| T2 end condition | Active cell | | 1, 2 | Cell 2 | The UE shall perform reselection to Cell 2 with higher priority during T2 |
| | Neighbour cells | | 1, 2 | Cell 1 | |
| RF Channel Number | | | 1, 2 | 1, 2 | |
| Time offset between cells | | | 1, 2 | 3 ms | Asynchronous cells |
| Access Barring Information | | - | 1, 2 | Not Sent | No additional delays in random access procedure. |
| SSB Configuration | | | 1, 2 | SSB.1 FR1 | |
| SMTC configuration | | | 1, 2 | SMTC pattern 2 | Configured in SIB4 of Cell 1 |
| | | | | SMTC pattern 6 | Configured in SIB4 of Cell 2 |
| DRX cycle length | | s | 1, 2 | 0.64 | The value shall be used for all cells in the test. |
| PRACH configuration index | | | 1, 2 | 102 | The detailed configuration is specified in TS 38.211 [6] clause 6.3.3.2 |
| rangeToBestCell | | | 1, 2 | Not configured | |
| T1 | | s | 1, 2 | 25 s | T1 is defined so that cell re-selection reaction time is taken into account. |
| T2 | | s | 1, 2 | 25 s | T2 is defined so that cell re-selection reaction time is taken into account. |

**Table A.14.1.9.2-3: Cell specific test parameters for FR1 inter frequency NR cell re-selection test case in AWGN for UE fulfilling low mobility criterion**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.1.9.3 Test Requirements

The cell reselection delay to an already detected lower priority cell for UE fulfilling low mobility relaxed measurements is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to a lower priority cell for UE fulfilling low mobility relaxed measurements shall be less than 17 s.

The cell reselection delay to an already detected higher priority cell for UE fulfilling low mobility relaxed measurements is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRCSetupRequest message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected higher priority cell for UE fulfilling low mobility relaxed measurements shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a known lower priority cell can be expressed as: $T_{evaluate,NR_inter} + T_{SI-NR}$,

Where:

$T_{evaluate,NR_inter}$ See Table 4.2.2.10.2-1 in clause 4.2.2.10.2

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to an already detected lower priority cell and 16.64 s for the cell re-selection delay to an already detected higher priority cell, which we allow 17 s for UE fulfilling low mobility relaxed measurements in the test case.

## A.14.1.10 Cell reselection to FR1 inter-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

### A.14.1.10.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2C.2.8, for UE fulfilling not-at-cell edge relaxed measurement criterion.

### A.14.1.10.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.14.1.10.2-1, A.14.1.10.2-2 and A.14.1.10.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE not-at-cell edge as defined in clause 5.2.4.9.2 in TS 38.304 [1]. So, Cell 2 and Cell 1configures the UE as follows:

*cellEdgeEvaluation* TS 38.331 [2] criterion is configured according to the parameters listed in table A.14.1.9.2-3;

*lowMobilityEvalutation* TS 38.331 [2] criterion is not configured;

*combineRelaxedMeasCondition* TS 38.331 [2] is not configured;

**Table A.14.1.10.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.1.10.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 2 | The UE camps on Cell 2 in the initial phase, it fulfills Not-at-cell edge relaxation measurements criterion, and during T1 period the UE reselects to Cell 1 |

| Propagation Condition | | 1, 2 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.1.10.3 Test Requirements

The cell reselection delay to an already detected lower priority cell for UE fulfilling not-at-cell edge relaxed measurements is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected lower priority cell for UE fulfilling not-at-cell edge relaxed measurements shall be less than 17 s.

The cell reselection delay to an already detected higher priority cell for UE fulfilling not-at-cell-edge relaxed measurements is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRCSetupRequest message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected higher priority cell for UE fulfilling not-at-cell-edge relaxed measurements shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$,

Where:

$T_{evaluate,\ NR_\ inter}$ See Table 4.2.2.10.3-1 in clause 4.2.2.10

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to an already detected lower priority cell and 16.64 s for the cell re-selection delay to an already higher priority cell, which we allow 17 s for UE fulfilling not-at-cell edge relaxed measurements in the test case.

## A.14.1.11 Cell reselection to FR1 inter-RAT for NR NTN carrier

### A.14.1.11.1 Test purpose and Environment

This test is to verify the requirement for the NR NTN to E-UTRAN TN inter-RAT cell reselection requirements specified in clause 4.2C.3.1 when the E-UTRAN cell is of higher priority.

### A.14.1.11.2 Test parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.14.1.11.2-1, A.14.1.11.2-2, A.14.1.11.2-3 and A.14.1.11.2-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. NR Cell 1 is already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of higher priority than Cell 1.

**A.14.1.11.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.14.1.11.2-2: General test parameters for NR to E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1 | Cell 1 | The UE camps on Cell 1 in the initial phase and during T2 period the UE reselects to Cell 2. |
| T2 end condition | Active cell | | 1 | Cell 2 | The UE shall perform reselection to cell 2 during T2. |
| | Neighbour cell | | 1 | Cell 1 | |

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| T3 end condition | Active cell | | 1 | Cell 1 | The UE shall perform reselection to cell 1 during T3 for iteration of the tests. |
| | Neighbour cell | | 1 | Cell 2 | |
| Access Barring Information | | - | 1 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1 | 1.28 | The value shall be used for all cells in the test. |
| NR PRACH configuration index | | | 1 | 102 | The detailed configuration is specified in TS 38.211 [6] clause 6.3.3.2 |
| E-UTRAN PRACH configuration index | | | 1 | 53 | As specified in table 5.7.1-2 in TS 36.211 [23] |
| E-UTRAN PRACH | | | 1 | 53 | As specified in table 5.7.1-2 in |
| T1 | | s | 1 | >7 | During T1, Cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that Cell 2 has not been detected by the UE prior to the start of period T2. |
| T2 | | s | 1 | 40 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |
| T3 | | s | 1 | 15 | T3 needs to be defined so that cell re-selection reaction time is taken into account. |

**Table A.14.1.11.2-3: Cell specific test parameters for NR Cell 1**

| Parameter | Unit | Test configuration | Cell 1 | | |
|---|---|---|---|---|---|

| $Thresh_{serving, lowP}$ | dB | 44 | | |
| $Thresh_{x, lowP (Note 2)}$ | dB | 50 | | |
| Propagation Condition | | AWGN | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: This refers to the value of $Thresh_{x, Low}$ which is included in E-UTRA system information, and is a threshold for the NR target cell

## A.14.1.11.3 Test requirements

The cell reselection delay to a higher priority E-UTRAN cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{higher_priority_search}$ See clause 4.2.2.7

$T_{evaluate, NR_ inter}$ See Table 4.2C.2.4-1 in clause 4.2C.2.4

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority E-UTRAN cell.

## A.14.1.12 Cell re-selection to FR1 inter-frequency NR case with TN carrier

### A.14.1.12.1 Test purpose and Environment

This test is to verify the requirement for the inter frequency NR NTN to TN cell re-selection requirements specified in clause 4.2C.3.1.

### A.14.1.12.2 Test parameters

The test scenario comprises of 2 cells on 2 different NR carriers, including NR NTN cell/carrier and NR TN cell/carrier respectively as given in tables A.14.1.12.2-1, A.14.1.12.2-2 and A.14.1.12.3-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

**Table A.14.1.12.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

| Propagation Condition | | 1 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

## A.14.1.12.3 Test requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate,\ NR_inter} + T_{SI\text{-}NR}$, and to a lower priority cell can be expressed as: $T_{evaluate,\ NR_inter} + T_{SI\text{-}NR}$,

Where:

$T_{higher_priority_search}$ See clause 4.2.2.7

$T_{evaluate,\ NR_\ inter}$ See Table 4.2C.2.4-1 in clause 4.2C.2.4

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority

# A.14.2 RRC_CONNECTED state mobility

## A.14.2.1 Handover

### A.14.2.1.1 Intra-frequency SAN Handover from FR1 to FR1

#### A.14.2.1.1.1 Test Purpose and Environment

This test is to verify the requirement for Intra-frequency SAN Handover from FR1 to FR1 specified in clause 6.1C.1.

#### A.14.2.1.1.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells as given in table A.14.2.1.1.2-1, A.14.2.1.1.2-2, and A.14.2.1.1.2-3. Both handover delay and interruption length are tested.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure intra-frequency neighbour cell with Event A3 report.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1. The RRC message implying handover to Cell 2 shall be sent to the UE during period T2, after the UE has reported Event A3. The start of T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.14.2.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

**Table A.14.2.1.1.2-2: General test parameters Intra-frequency SAN handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1 | One NR NTN satellite RF channel |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.14.2.1.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2]. $T_{interrupt}$ is defined in clause 6.1C.1.2.2.

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Here: $T_{search}$ = 0; $T_{IU}$ = 20 ms; $T_{processing}$ = 20 ms; $T_{\Delta}$ = 20 ms; $T_{margin}$ = 2 ms.

This gives a total of 72 ms.

### A.14.2.1.2 Inter-frequency SAN Handover from FR1 to FR1

#### A.14.2.1.2.1 Test Purpose and Environment

This test is to verify the requirement for Inter-frequency SAN Handover from FR1 to FR1 specified in clause 6.1C.1.

#### A.14.2.1.2.2 Test Parameters

The test scenario comprises of 2 NR FDD carriers and one cell on each carrier as given in table A.14.2.1.2.2-1, A.14.2.1.2.2-2 and A.14.2.1.2.2-3. Both handover delay and interruption length are tested.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure inter frequency neighbour cell with Event A3 report and Gap Pattern 0 is configured in the test case.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1. The RRC message implying handover to Cell 2 shall be sent to the UE during period T2, after the UE has reported Event A3. The start of T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.14.2.1.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

**Table A.14.2.1.2.2-2: General test parameters Inter-frequency SAN handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two NR NTN satellite RF channel |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.14.2.1.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2]. $T_{interrupt}$ is defined in clause 6.1C.1.2.2.

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Here: $T_{search}$ = 0; $T_{IU}$ = 20 ms; $T_{processing}$ = 20 ms; $T_{\Delta}$ = 20 ms; $T_{margin}$ = 2 ms.

This gives a total of 72 ms.

### A.14.2.1.3 Intra-frequency SAN time-based conditional Handover from FR1 to FR1

#### A.14.2.1.3.1 Test Purpose and Environment

This test is to verify the requirement for intra-frequency SAN time-based conditional handover from FR1 to FR1 specified in clause 6.1C.2.

#### A.14.2.1.3.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells as given in table A.14.2.1.3.2-1, and A.14.2.1.3.2-2. Both handover delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. Immediately before the start of T1, the UE is configured to measure intra-frequency neighbour cell with a time-based handover trigger to Cell 2 with Event CondEvent T1 shall be sent to UE.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1 and time condition event t1-Threshold-r17 is fulfilled.

**Table A.14.2.1.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

**Table A.14.2.1.3.2-2: General test parameters for Intra-frequency SAN time-based conditional handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.14.2.1.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 872 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay is defined in clause 6.1C.2, can be expressed as:

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$$

where:

RRC procedure delay $T_{RRC}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{Event_DU}$ = start of T2

$T_{measure}$ = 600 + 200 ms; $T_{interrupt}$ = 62 ms; $T_{CHO_execution}$ = 10 ms.

This gives a total of 872 ms.

### A.14.2.1.4 Inter-frequency SAN time-based conditional Handover from FR1 to FR1

#### A.14.2.1.4.1 Test Purpose and Environment

This test is to verify the requirement for inter -frequency SAN time-based conditional handover from FR1 to FR1 specified in clause 6.1C.2.

#### A.14.2.1.4.2 Test Parameters

The test scenario comprises of 2 NR FDD carrier and one cell on each carrier as given in table A.14.2.1.4.2-1, and A.14.2.1.4.2-2. Both handover delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. Immediately before the start of T1, the UE is configured to measure inter-frequency neighbour cell with Gap pattern ID gp0 and time-based handover trigger to Cell 2 with Event CondEvent T1.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1 and after 1000 ms of T2, time condition event t1-Threshold-r17 is fulfilled.

**Table A.14.2.1.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

**Table A.14.2.1.4.2-2: General test parameters for Inter-frequency SAN time-based conditional handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |

| NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

### A.14.2.1.4.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 later than 1000 ms and less than 1072 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay is defined in clause 6.1C.2, can be expressed as:

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$$

where:

RRC procedure delay $T_{RRC}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{Event_DU}$ = start of T2

$T_{measure}$ = max(600 + 200, 1000) ms; $T_{interrupt}$ = 62 ms; $T_{CHO_execution}$ = 10 ms.

This gives a total of 1072 ms.

## A.14.2.1.5 Intra-frequency SAN distance-based conditional Handover from FR1 to FR1

### A.14.2.1.5.1 Test Purpose and Environment

This test is to verify the requirement for intra-frequency SAN distance-based conditional handover from FR1 to FR1 specified in clause 6.1C.2.

### A.14.2.1.5.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells as given in table A.14.2.1.5.2-1, and A.14.2.1.5.2-2. Both handover delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure intra-frequency neighbour cell. The RRC message implying distance-based handover to Cell 2 with Event D1 shall be sent to UE, at a time earlier than $T_{RRC}$ (10 ms) before the beginning of T2.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1 and location condition event condEventD1-r17 is fulfilled.

**Table A.14.2.1.5.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.14.2.1.5.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 872 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay is defined in clause 6.1C.2, can be expressed as:

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$$

where:

RRC procedure delay $T_{RRC}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{Event_DU}$ = start of T2

UE moving speed, v = (108km/h*1000/3600) = 30m/s.

At start of T2,

distance to source cell reference location is 30 m/s * 12 s – (-700)m = 1060m, and D1-1 = 1000m

distance to target cell reference location is 30 m/s * 12 s – 1300m = -940m, and D1-2 = 1000m

i.e. D1-1 and D1-2 conditions are fulfilled at start of T2 with >=50m location margin.

$T_{measure}$ = max(600 + 200 ms, 0) = 800 ms;

$T_{interrupt}$ = 62 ms; $T_{CHO_execution}$ = 10 ms.

This gives a total of 800 ms + 62 ms + 10 ms = 872 ms.

### A.14.2.1.6 Inter-frequency SAN distance-based conditional Handover from FR1 to FR1

#### A.14.2.1.6.1 Test Purpose and Environment

This test is to verify the requirement for inter -frequency SAN distance-based conditional handover from FR1 to FR1 specified in clause 6.1C.2.

#### A.14.2.1.6.2 Test Parameters

The test scenario comprises of 2 NR FDD carrier and one cell on each carrier as given in table A.14.2.1.6.2-1, and A.14.2.1.6.2-2. Both handover delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure inter-frequency neighbour cell and Gap pattern ID gp0. The RRC message implying distance-based handover to Cell 2 with Event D1 shall be sent to UE, at a time earlier than $T_{RRC}$ (10 ms) before the beginning of T2.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1 and after 11670 ms of T2, location condition event condEventD1-r17 is fulfilled.

**Table A.14.2.1.6.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.2.1.6.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 later than 11670 ms and less than 11741 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay is defined in clause 6.1C.2, can be expressed as:

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$$

where:

RRC procedure delay $T_{RRC}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{Event_DU}$ = start of T2

UE moving speed, v = (108km/h*1000/3600) = 30m/s.

At 11670 ms after start of T2,

distance to source cell reference location is 30 m/s * 11.67 s – (-700)m = 1050m, and D1-1 = 1000m

distance to target cell reference location is 30 m/s * 11.67 s – 1300m = -950m, and D1-2 = 1000m

i.e. D1-1 and D1-2 conditions are fulfilled at T2 + 11670 ms with >=50m location margin.

$T_{measure}$ = max(600 + 200 ms, 11670 ms) = 11670 ms;

$T_{interrupt}$ = 62 ms; $T_{CHO_execution}$ = 10 ms.

This gives a total of 11670 ms + 62 ms + 10 ms = 11741 ms.

### A.14.2.1.7 Intra-frequency intra-satellite Handover from FR2-NTN to FR2-NTN

#### A.14.2.1.7.1 Test Purpose and Environment

This test is to verify the requirement for intra-frequency intra-satellite handover from FR2-NTN to FR2-NTN specified in clause 6.1C.3.

#### A.14.2.1.7.2 Test Parameters

The test scenario comprises of one NR FDD carrier and 2 cells as given in table A.14.2.1.7.2-1, A.14.2.1.7.2-2, and A.14.2.1.7.2-3. Both handover delay and interruption length are tested.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure intra-frequency neighbour cell with Event A3 report. Starting T2, Cell 2 becomes detectable and offset better than Cell 1. The RRC message implying handover to Cell 2 shall be sent to the UE during period T2, after the UE has reported Event A3. The start of T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.14.2.1.7.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 120 kHz SSB SCS, 100 MHz BW |
| 2 | NGSO, NR FDD, 120 kHz SSB SCS, 100 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

| Propagation condition | | | - | AWGN | | | AWGN | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| Parameter | Test configuration | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T1 | T2 | T3 |
| NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>NOTE 4: Information about types of UE beam is given in [B.2.1.3], and does not limit UE implementation or test system implementation. | | | | | | | | |

#### A.14.2.1.7.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 no later than 72 ms from the beginning of T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2]. $T_{interrupt}$ is defined in clause 6.1C.1.3.2.

$$T_{interrupt_inter_sat} = T_{search} + T_{IU} + T_{processing} + T_{sat_beam} + T_{\Delta} + T_{margin}\ \text{ms}$$

Here: $T_{search}$ = 0; $T_{IU}$ = 20 ms; $T_{processing}$ = 20 ms; $T_{sat_beam}$ = 0; $T_{\Delta}$ = 20 ms; $T_{margin}$ = 2 ms.

This gives a total of 72 ms.

### A.14.2.1.8 Intra-frequency SAN Handover from FR1 to FR1

#### A.14.2.1.8.1 Test Purpose and Environment

This test is to verify the requirement for Intra-frequency SAN RACH-less Handover from FR1 to FR1 specified in clause 6.1C.1.1.

#### A.14.2.1.8.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells as given in table A.14.2.1.8.2-1, A.14.2.1.8.2-2, and A.14.2.1.8.2-3. Both handover delay and interruption length are tested.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure intra-frequency neighbour cell with Event A3 report.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1. The RRC message implying handover to Cell 2 shall be sent to the UE during period T2, after the UE has reported Event A3. The start of T3 is defined as the end of the last TTI containing the RRC message implying handover. During T3, Cell 2 continuously schedules PUSCH for the UE.

**Table A.14.2.1.8.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| 2 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

| NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | | |

### A.14.2.1.8.3 Test Requirements

The UE shall start to transmit the PUSCH to Cell 2 less than 52 + $T_{IU}$ ms from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2]. $T_{interrupt}$ is defined in clause 6.1C.1.2.2.2.

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Here: $T_{search}$ = 0; $T_{IU}$ is the interruption uncertainty in acquiring the first UL transmission resource for PUSCH, which is scheduled by Cell 2 at the fist DL slot not earlier than 52 ms after the beginning of T3; $T_{processing}$ = 20 ms; $T_{\Delta}$ = 20 ms; $T_{margin}$ = 2 ms.

This gives a total of 52 + $T_{IU}$ ms.

## A.14.2.1.9 Intra-frequency inter-satellite handover from FR2-NTN to FR2-NTN

### A.14.2.1.9.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR2-NTN – NR FR2-NTN intra-frequency handover requirements specified in clause 6.1C.1.3.

### A.14.2.1.9.2 Test Parameters

The test consists two sub-tests. Sub-test 1 is applicable for UE indicating 'electronic' via *ntn-VSAT-AntennaType-r18*, and sub-test 2 is applicable for UE indicating 'mechanical' via *ntn-VSAT-AntennaType-r18*. The test configurations are same for the two sub-tests unless specified otherwise.

Supported test configurations are shown in table A.14.2.1.9.2-1. Both handover delay and interruption length are tested by using the parameters in table A.14.2.1.9.2-2, and A.14.2.1.9.2-3.

The test scenario comprises of one carrier and two cells on the carrier. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network to handover from Cell 1 to Cell 2. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.14.2.1.9.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, 120 kHz SSB SCS, 100 MHz BW |

| | |
|---|---|
| 2 | NGSO, NR FDD, 120 kHz SSB SCS, 100 MHz BW |
| NOTE: If UE supports both NGSO and GSO, the GSO-based test cases can be skipped if the UE passes NGSO-based test cases. | |

**Table A.14.2.1.9.2-2: General test parameters**

| Parameter | | Unit | Value | Comment |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone

#### A.14.2.1.9.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than X ms from the beginning of time period T2.

X = 152 ms for sub-test 1, and

X = TBD ms for sub-test 2, and

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 142 ms in sub-test 1 and TBD in sub-test 2. $T_{interrupt}$ is defined in clause 6.1C.1.3.2.

This gives a total of 152 ms sub-test 1 and TBD in sub-test 2.

## A.14.2.2 RRC Connection Mobility Control

### A.14.2.2.1 SA: RRC Re-establishment for SAN

#### A.14.2.2.1.1 Intra-frequency RRC Re-establishment in FR1

##### A.14.2.2.1.1.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR1 with known target cell is within the specified limits. These tests will verify the requirements in clause 6.2C.1.

The test parameters are given in table A.14.2.2.1.1.1-1, table A.14.2.2.1.1.1-2 and table A.14.2.2.1.1.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

The UE shall be provided with the valid information about the SAN serving the each cell in the test before the test.

**Table A.14.2.2.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |

| | |
|---|---|
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| $\hat{E}_s/N_{oc}$ | dB | 1, 2 | 7 | -infinity | -infinity | 4 | 4 | 4 |
| SS-RSRP Note3 | dBm/SCS | 1, 2 | -91 | -infinity | -infinity | -94 | -94 | -94 |
| Io | dBm/9.36 MHz | 1, 2 | -60.74 | -64.59 | -64.59 | -60.74 | -64.59 | -64.59 |
| Propagation Condition | | 1, 2 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.14.2.2.1.1.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to a known NR intra frequency cell shall be less than 1.6 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50 \text{ ms} + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 1$

$T_{identify_intra_NR}$ = 200 ms

$T_{SI}$ = 1280 ms, provided that SIB1 and SIB19 are scheduled with 20 ms period; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target intra-frequency NR cell.

$T_{PRACH}$ = 15 ms; it is the additional delay caused by the random access procedure.

This gives a total of 1545 ms, allow 1.6 s in the test case.

### A.14.2.2.1.2 Inter-frequency RRC Re-establishment in FR1

#### A.14.2.2.1.2.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay in FR1 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2C.1.

The test parameters are given in table A.14.2.2.1.2.1-1, table A.14.2.2.1.2.1-2 and table A.14.2.2.1.2.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure.

During T1, the UE shall be configured with the carrier frequency of Cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of Cell 2 by the end of T1.

The UE shall be provided with the valid information about the SAN serving the each cell in the test before the test.

**Table A.14.2.2.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.2.2.1.2.1-2: General test parameters for NR inter-frequency RRC Re-establishment test case in FR1**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2 | Cell 1 | |
| | Neighbour cells | | 1, 2 | Cell 2 | |
| Final condition | Active cell | | 1, 2 | Cell 2 | |
| RF Channel Number | | | 1, 2 | 1, 2 | |
| Time offset between cells | | | 1, 2 | 3 ms | Asynchronous cells |

| Propagation Condition | | 1, 2 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.14.2.2.1.2.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less than 3 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50\ ms + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 2$

$T_{identify_intra_NR}$ = 800 ms

$T_{identify_inter_NR}$ = 800 ms

$T_{SI}$ = 1280 ms, provided that SIB1 and SIB19 are scheduled with 20 ms period; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{PRACH}$ = 15 ms; it is the additional delay caused by the random access procedure.

This gives a total of 2945 ms, allow 3 s in the test case.

## A.14.2.2.2 Random Access

### A.14.2.2.2.1 4-step RA type contention based random access test in FR1 for NR standalone

#### A.14.2.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in clause 6.2C.2.2 and clause 7.1C.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in table A.14.2.2.2.1.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.14.2.2.2.1.1-2.

**Table A.14.3.2.2.1.1-1: Supported test configurations for contention based random access test for satellite access**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.2.2.2.1.1-2: General test parameters for contention based random access test for satellite access**

| Parameter | | Unit | Test-1 | Comments |
|---|---|---|---|---|
| SSB Configuration | Config 1 | | SSB pattern 1 in FR1 | As defined in A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |

| ss-PBCH-BlockPower | | | dBm/ SCS | -5 | As defined in clause 6.3.2 in TS 38.331 [2]. |
| Configured UE transmitted power ($P_{CMAX,\ f,c}$) | | | dBm | 23 | As defined in clause 6.2.4 in TS 38.101-1. |
| PRACH Configuration | | | | FR1 PRACH configuration 1 | As defined in A.3.8. |
| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: Void
NOTE 4: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

#### A.14.2.2.2.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.14.2.2.2.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in clause 6.2C.2.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

##### A.14.2.2.2.1.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2C.2.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all

received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

#### A.14.2.2.2.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2C.2.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

#### A.14.2.2.2.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2C.2.2.1.4 the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.14.2.2.2.1.2.5 Reception of an Incorrect Message over Temporary C-RNTI

To test the UE behavior specified in clause 6.2C.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element *not* matching the CCCH SDU transmitted in msg3 uplink message.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

#### A.14.2.2.2.1.2.6 Reception of a Correct Message over Temporary C-RNTI

To test the UE behavior specified in clause 6.2C.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in the msg3 uplink message.

The UE shall send ACK if the Contention Resolution is successful.

#### A.14.2.2.2.1.2.7 Contention Resolution Timer expiry

To test the UE behavior specified in clause 6.2C.2.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.14.2.2.2.2 4-step RA type non-contention based random access test in FR1 for NR standalone

A.14.2.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in clause 6.2C.2.2 and clause 7.1C.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in table A.14.2.2.2.2.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.14.2.2.2.2.1-2 for SSB-based non-contention based random access test (Test 1) and CSI-RS-based non-contention based random access test (Test 2). Test 2 is only applicable to UE which supports csi-RSRP-AndRSRQ-MeasWithSSB or csi-RSRP-AndRSRQ-MeasWithoutSSB.

**Table A.14.2.2.2.2.1-1: Supported test configurations for non-contention based random access test for satellite access**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: Void
NOTE 4: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

#### A.14.2.2.2.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.14.2.2.2.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in clause 6.2C.2.2.2.1 for SSB-based Random Access Preamble tranmsision, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belongs to the PRACH occassions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

##### A.14.2.2.2.2.2.2 CSI-RS-based Random Access Preamble Transmission

In Test-2, to test the UE behavior specified in clause 6.2C.2.2.2.1 for CSI-RS-based Random Access Preamble tranmsision, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the CSI-RS configured.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the CSI-RS configured, and the selected PRACH occasion shall belongs to the PRACH occassions permitted by the restrictions given by the *ra-OccasionList*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

#### A.14.2.2.2.2.2.3 Random Access Response Reception

To test the UE behavior specified in clause 6.2C.2.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

#### A.14.2.2.2.2.2.4 No Random Access Response Reception

To test the UE behavior specified in clause 6.2C.2.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2C.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1C.2.

### A.14.2.2.3 RRC Connection Release with Redirection

#### A.14.2.2.3.1 Redirection from NR in FR1 to NR in FR1

##### A.14.2.2.3.1.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR to NR requirements specified in clause 6.2C.3.2.1.

##### A.14.2.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.14.2.2.3.1.2-1. The time delay is tested by using the parameters in table A.14.2.2.3.1.2-2, and A.14.2.2.3.1.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC

message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2. Cell 1 and Cell 2 belong to different tracking areas.

**Table A.14.2.2.3.1.2-1: Redirection from NR to NR test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.14.2.2.3.1.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | 2.3 | |

**Table A.14.2.2.3.1.2-3: Cell specific test parameters for Redirection from NR to NR test case**

| Parameter | | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| NR RF Channel Number | | | 1 | | 2 | |
| Duplex mode | Config 1, 2 | | FDD | | | |

| Propagation condition | | - | AWGN | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

#### A.14.2.2.3.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 2240 ms from the beginning of time period T2.
The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90 %.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_NR} = T_{RRC_procedure_delay} + T_{identify\text{-}NR} + T_{SI\text{-}NR} + T_{RACH},$$

Where:

$T_{RRC_procedure_delay}$ = 110 ms in the test.

$T_{identify\text{-}NR}$ = 680 ms in the test.

$T_{SI\text{-}NR}$ = 1280 ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{RACH}$ = 170 ms in the test.

This gives a total of 2240 ms.

### A.14.2.2.4 RACH-based Hard Satellite switching with re-synchronization from FR1 to FR1

#### A.14.2.2.4.1 Test Purpose and Environment

This test is to verify the requirement for RACH-based hard satellite switching with re-synchronization from SAN FR1 to SAN FR1 specified in clause 6.1C.3.

#### A.14.2.2.4.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells with same PCI as given in table A.14.2.2.4.2-1, A.14.2.2.4.2-2, A.14.2.2.4.2-3 and A.14.2.2.4.2-4. Both satellite switching delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively.

At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, The SIB19 implying *t-service-r17* and target satellite configuration *SatSwitchWithReSync-r18* shall be sent to UE. The target satellite configuration is in table A.14.2.2.4.2-3.

At the start of time duration T2, Cell 2 becomes detectable and *t-service-r17* of Cell 1 is fulfilled.

**Table A.14.2.2.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |

**Table A.14.2.2.4.2-2: General test parameters for RACH-based Hard Satellite switching with re-synchronization from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1 | One NR NTN satellite RF channel |
| Initial conditions | Active cell | | Cell 1 | |
| Final condition | Active cell | | Cell 2 | |
| UE position (N,S, H) | | | (0, 0, 0) | Set by AT command |
| Access Barring Information | | - | Not barred | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤5 | |

**Table A.14.2.2.4.2-3: Target Satellite configuration pattern for hard satellite switching scenario**

| EPRE ratio of PDSCH to PDSCH | | | | | |
| EPRE ratio of OCNG DMRS to SSS(Note 1) | | | | | |
| EPRE ratio of OCNG to OCNG DMRS (Note 1) | | | | | |
| $N_{oc}$ Note3 | dBm/ 15 kHz | -98 | | | |
| $N_{oc}$ Note3 | dBm/ SCS | -98 | | | |
| $\hat{E}_s / I_{ot}$ | dB | 8 | -Infinity | -Infinity | 8 |
| $\hat{E}_s / N_{oc}$ | dB | 8 | -Infinity | -Infinity | 8 |
| SSB_RP | dBm/ SCS | -90 | -Infinity | -Infinity | -90 |
| Io[Note4] | dBm/ 9.36 MHz | -61.41 | -61.41 | -61.41 | -61.41 |
| Propagation condition | - | AWGN | | | |

NOTE 1: Cell 1 and Cell 2 have same PCI. Satellite serving for Cell 1 and Satellite serving for Cell 2 are two different NGSO satellites.
NOTE 2: SSB transmit timing from TE should fit the SSB-timeOffset and the nominal propagation delay difference between serving satellite and target satellite. The nominal propagation delay is counted from the SSB-TimeOffset reference point to UE, which based on satellite locations and UE location known to the TE in this test case.
NOTE 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 5: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

#### A.14.2.2.4.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 52.5 ms from the beginning of time period T2.

The rate of correct satellite switch observed during repeated tests shall be at least 90 %.

NOTE: The hard satellite switch with re-sync delay $D_{switch_unchangedPCI}$ can be expressed as: $T_{interrupt}$, where:

$T_{interrupt}$ is defined in clause 6.1C.3.2.2.

$$D_{switch_unchangedPCI} = T_{interrupt} = T_{search} + T_{processing} + T_{\Delta} + T_{margin}\ \text{ms}$$

Here: $T_{search} = T_{first_SSB} = 0.5$ms; $T_{processing} = 10$ms; $T_{\Delta} = 20$ms; $T_{margin} = 2$ms.

Besides, interruption uncertainty $T_{IU} = 20$ms in acquiring the first PRACH transmission resource is needed.

This gives a total of 52.5 ms.

### A.14.2.2.5 RACH-less Soft Satellite switching with re-synchronization from FR1 to FR1

#### A.14.2.2.5.1 Test Purpose and Environment

This test is to verify the requirement for RACH-less soft satellite switching with re-synchronization from SAN FR1 to SAN FR1 specified in clause 6.1C.3.

#### A.14.2.2.5.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells with same PCI as given in tables A.14.2.2.5.2-1, A.14.2.2.5.2-2, A.14.2.2.5.2-3 and A.14.2.2.5.2-4. Satellite switching delay is tested.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively.

At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, The SIB19 implying *t-service-r17* and target satellite configuration *SatSwitchWithReSync-r18* shall be sent to UE. The target satellite configuration is in table A.14.2.2.5.2-3. The configured grant PUSCH transmission in the Cell 2 is configured in the RRC message from Cell 1.

At the start of time duration T2, Cell 2 becomes detectable and *t-ServiceStart-r18* is fulfilled.

At the start of time duration T3, *t-service-r17* of Cell 1 is fulfilled.

**Table A.14.2.2.5.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |

**Table A.14.2.2.5.2-2: General test parameters for RACH-less Soft Satellite switching with re-synchronization from FR1 to FR1**

| Parameter | | Unit | Value | Comment |

| Propagation condition | | - | AWGN | | | | | |

NOTE 1: Cell 1 and Cell 2 have same PCI. Satellite serving for Cell 1 and Satellite serving for Cell 2 are two different NGSO satellites.
NOTE 2: SSB transmit timing from TE should fit the SSB-timeOffset and the nominal propagation delay difference between serving satellite and target satellite. The nominal propagation delay is counted from the SSB-TimeOffset reference point to UE, which based on satellite locations and UE location known to the TE in this test case.
NOTE 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 5: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

### A.14.2.2.5.3 Test Requirements

The UE shall start to transmit the PUSCH to Cell 2 less than 130 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The satellite switch with re-sync delay $D_{switch_unchangedPCI}$ can be expressed as: $T_{soft_switch}$, where:

$$T_{soft_switch} = \max(t\text{-}service\text{-}t\text{-}seviceStart, T_{search} + T_{\Delta} + T_{margin}) + T_{IU} + T_{processing} \text{ ms}$$

Here: *t-service-t-seviceStart*= 100ms*;* $T_{search}$ = 10.5ms; $T_{\Delta}$ = 20ms; $T_{margin}$ = 2ms, $T_{processing}$ = 10ms.

Besides, interruption uncertainty $T_{IU}$ = 20ms in acquiring the first configured grant based PUSCH transmission resource is needed.

This gives a total of 130 ms.

## A.14.2.3 Intra-frequency SAN time-based conditional Handover without L3 measurement criteria from FR1 to FR1

### A.14.2.3.1 Test Purpose and Environment

This test is to verify the requirement for intra-frequency SAN time-based conditional handover without L3 measurement criteria from FR1 to FR1 specified in clause 6.1C.2.3.

### A.14.2.3.2 Test Parameters

The test scenario comprises of 1 NR FDD carrier and 2 cells as given in table A.14.2.3.2-1, and A.14.2.3.2-2. Both handover delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure intra-frequency neighbour cell. The RRC message implying time-based handover to Cell 2 with Event CondEvent T1 shall be sent to UE, at a time earlier than $T_{RRC}$ (10 ms) before the beginning of T2.

Starting T2, Cell 2 becomes detectable and time condition event t1-Threshold-r17 is fulfilled.

**Table A.14.2.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |

**Table A.14.2.3.2-2: General test parameters for Intra-frequency SAN time-based conditional handover without L3 measurement criteria from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1 | One NR NTN satellite RF channel |
| Initial conditions | Active cell | | Cell 1 | FDD duplex mode cell |
| | Neighbouring cell | | Cell 2 | FDD duplex mode cell |
| Final condition | Active cell | | Cell 2 | |
| Satellite configuration | Config 1 | | RMC in [A.x] | For NGSO satellite configuration |
| UE position (N,S, H) | | | [(0, 0, 0)] | Set by AT command |
| t1-Threshold-r17.condEventT1-r17 | | s | T2 | Entering condition |
| duration-r17.condEventT1-r17 | | slot | 1000 | Give 1 s search duration |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤ 2 | |

**Table A.14.2.3.2-3: Cell specific test parameters for Intra-frequency SAN time-based conditional handover without L3 measurement criteria from FR1 to FR1**

| Parameter | Test configuration | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| NR RF Channel Number | Config 1 | | 1 | | 1 | |
| $BW_{channel}$ | | MHz | 10: $N_{PRB,c}$ = 52 | | 10: $N_{PRB,c}$ = 52 | |
| BWP BW | | MHz | 10: $N_{PRB,c}$ = 52 | | 10: $N_{PRB,c}$ = 52 | |
| $TA_{Common}$ | Config 1 | s | 0 | | 0 | |

| Parameter | | Test configuration | Unit | Cell 1 | | Cell 2 | |

| $N_{oc}$ Note2 | | | dBm/ SCS | -98 | | | |
| $\hat{E}_s / I_{ot}$ | | | dB | 8 | -3.3 | -Infinity | 2.36 |
| $\hat{E}_s / N_{oc}$ | | | dB | 8 | 8 | -Infinity | 11 |
| SSB_RP | | | dBm/ SCS | -90 | -90 | -Infinity | -87 |
| Io Note3 | | | dBm/ 9.36 MHz | -61.41 | -57.06 | -61.41 | -57.06 |
| Propagation condition | | | - | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.2.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 92 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay is defined in clause 6.1C.2.3, can be expressed as:

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{interrupt} + T_{CHO_execution}$$

where:

RRC procedure delay $T_{RRC}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{Event_DU}$ = start of T2

$T_{interrupt}$ = 82 ms; $T_{CHO_execution}$ = 10 ms.

This gives a total of 92 ms.

## A.14.2.4 Inter-frequency SAN time-based conditional Handover without L3 measurement criteria from FR1 to FR1

### A.14.2.4.1 Test Purpose and Environment

This test is to verify the requirement for inter -frequency SAN time-based conditional handover without L3 measurement criteria from FR1 to FR1 specified in clause 6.1C.2.

### A.14.2.4.2 Test Parameters

The test scenario comprises of 2 NR FDD carrier and one cell on each carrier as given in table A.14.2.4.2-1, and A.14.2.4.2-2. Both handover delay and interruption length are tested.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. During T1, the UE is configured to measure inter-frequency neighbour cell and Gap pattern ID gp0. The RRC message implying time-based handover to Cell 2 with Event CondEvent T1 shall be sent to UE, at a time earlier than $T_{RRC}$ (10 ms) before the beginning of T2.

Starting T2, Cell 2 becomes detectable and time condition event t1-Threshold-r17 is fulfilled.

**Table A.14.2.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NGSO, NR FDD, 15 kHz SSB SCS, 10 MHz BW |

**Table A.14.2.4.2-2: General test parameters for Inter-frequency SAN time-based conditional handover from FR1 to FR1**

| Io Note3 | | | dBm/ 9.36 MHz | -64.59 | -64.59 | -70.05 | -60.53 |
| Propagation condition | | | - | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.14.2.4.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay is defined in clause 6.1C.2.3, can be expressed as:

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{interrupt} + T_{CHO_execution}$$

where:

RRC procedure delay $T_{RRC}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{Event_DU}$ = start of T2

$T_{interrupt}$ = 122 ms; $T_{CHO_execution}$ = 10 ms.

This gives a total of 132 ms.

# A.14.3 Timing for Satellite Access

## A.14.3.1 UE transmit timing for Satellite Access

### A.14.3.1.1 NR UE Transmit Timing Test for FR1

#### A.14.3.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the reference cell and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1C.2. Supported test configurations are shown in table A.14.3.1.1.1-1.

**Table A.14.3.1.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: If UE supports both NGSO and GSO, the test case Config 1 can be skipped if the UE passes test case Config 2. | |

The test consists a single NR cell (PCell). Table A.14.3.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.14.3.1.1.1-3.

**Table A.14.3.1.1.1-2: Cell Specific Test Parameters for UL Transmit Timing test**

### A.14.3.1.1.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Set up PCell according to parameters given in table A.14.3.1.1.1-2.

2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $\left(N_{\mathrm{TA}} + N_{\mathrm{TA\text{-}offset}} + N_{\mathrm{TA,adj}}^{\mathrm{common}} + N_{\mathrm{TA,adj}}^{\mathrm{UE}}\right) \times T_{\mathrm{c}} \pm \left(T_{\mathrm{e_NTN}} - T_{\mathrm{GNSS_margin}}\right)$ of the first detected path of DL SSB.

   a. The $N_{TA_offset}$ value (in $T_c$ units) is 25600

b. The $N_{\mathrm{TA,adj}}^{\mathrm{common}}$ value is derived from the higher-layer parameters *TACommon*, *TACommonDrift*, and *TACommonDriftVariation*.

c. The $N_{\mathrm{TA,adj}}^{\mathrm{UE}}$ value is computed by the UE based on UE position and serving-satellite-ephemeris-related higher-layers parameters.

d. The $T_{\mathrm{e_NTN}}$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1C.2-1

e. The $T_{\mathrm{GNSS_margin}}$ counts for the margin for the GNSS position definition error considered in the core requirement, which needs to be substracted for the test requirement, due to the usuage of AT commands in the test. $T_{\mathrm{GNSS_margin}} = 327{,}68 \times T_{\mathrm{c}}$

3) If the NTN parameters are configured as GSO scenario, the test system shall adjust the timing of the DL path by values given in table A.14.3.1.1.2-1. If the NTN parameters are configured as NGSO scenario, the test system shall adjust the timing of the DL path according to the serving-satellite-ephemeris-related higher-layers parameters.

**Table A.14.3.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 15 | +64*64$T_c$ | +32*64$T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1C.2 Table 7.1C.2.1-1 until the UE transmit timing offset is within $\left(N_{\mathrm{TA}} + N_{\mathrm{TA\text{-}offset}} + N_{\mathrm{TA,adj}}^{\mathrm{common}} + N_{\mathrm{TA,adj}}^{\mathrm{UE}}\right) \times T_{\mathrm{c}} \pm \left(T_{\mathrm{e_NTN}} - T_{\mathrm{GNSS_margin}}\right)$ respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.

5) The test system shall verify that the UE transmit timing offset stays within $\left(N_{\mathrm{TA}} + N_{\mathrm{TA\text{-}offset}} + N_{\mathrm{TA,adj}}^{\mathrm{common}} + N_{\mathrm{TA,adj}}^{\mathrm{UE}}\right) \times T_{\mathrm{c}} \pm \left(T_{\mathrm{e_NTN}} - T_{\mathrm{GNSS_margin}}\right)$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.14.3.1.2 NR UE Transmit Timing Test for FR2-NTN

### A.14.3.1.2.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the reference cell and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1C.2. Supported test configurations are shown in table A.14.3.1.2.1-1.

**Table A.14.3.1.2.1-1: Supported test configurations for FR2-NTN PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | NGSO, NR FDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 3 | GSO, NR FDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| NOTE: For mobile VSAT UE type, it is only requied to pass test config 3. | |

The test consists a single NR cell (PCell). Table A.14.3.1.2.1-2 and A.14.3.1.2.1-2A defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.14.3.1.2.1-3.

**Table A.14.3.1.2.1-2: Cell Specific Test Parameters for UL Transmit Timing test**

### A.14.3.1.2.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Set up PCell according to parameters given in table A.14.3.1.2.1-2.
2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $\left(N_{\mathrm{TA}} + N_{\text{TA-offset}} + N_{\mathrm{TA,adj}}^{\mathrm{common}} + N_{\mathrm{TA,adj}}^{\mathrm{UE}}\right) \times T_{\mathrm{c}} \pm \left(T_{\mathrm{e_NTN}} - T_{\mathrm{GNSS_margin}}\right)$ of the first detected path of DL SSB.
   a. The $N_{\mathrm{TA_offset}}$ value (in $T_c$ units) is 0
   b. The $N_{\mathrm{TA,adj}}^{\mathrm{common}}$ value is derived from the higher-layer parameters *TACommon*, *TACommonDrift*, and *TACommonDriftVariation*.
   c. The $N_{\mathrm{TA,adj}}^{\mathrm{UE}}$ value is computed by the UE based on UE position and serving-satellite-ephemeris-related higher-layers parameters.
   d. The $T_{\mathrm{e_NTN}}$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1C.2-2 and 7.1C.2-3
   e. The $T_{\mathrm{GNSS_margin}}$ counts for the margin for the GNSS position definition error considered in the core requirement, which needs to be subtracted for the test requirement, due to the usage of AT commands in the test. $T_{\mathrm{GNSS_margin}} = 98.304 \times T_{\mathrm{c}}$
3) If the NTN parameters are configured as GSO scenario, the test system shall adjust the timing of the DL path by values given in table A.14.3.1.2.2-1. If the NTN parameters are configured as NGSO scenario, the test system shall adjust the timing of the DL path according to the serving-satellite-ephemeris-related higher-layers parameters.

**Table A.14.3.1.2.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |

| | | |
|---|---|---|
| 120 | +[8]*64$T_c$ | +[4]*64$T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1C.2 Table 7.1C.2.1-1 until the UE transmit timing offset is within $\left(N_{\mathrm{TA}} + N_{\mathrm{TA\text{-}offset}} + N_{\mathrm{TA,adj}}^{\mathrm{common}} + N_{\mathrm{TA,adj}}^{\mathrm{UE}}\right) \times T_c \pm (T_{\mathrm{e_NTN}} - T_{\mathrm{GNSS_margin}})$ respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.

5) The test system shall verify that the UE transmit timing offset stays within $\left(N_{\mathrm{TA}} + N_{\mathrm{TA\text{-}offset}} + N_{\mathrm{TA,adj}}^{\mathrm{common}} + N_{\mathrm{TA,adj}}^{\mathrm{UE}}\right) \times T_c \pm (T_{\mathrm{e_NTN}} - T_{\mathrm{GNSS_margin}})$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.14.3.2 Timing advance for satellite access

### A.14.3.2.1 SA FR1 timing advance adjustment accuracy

#### A.14.3.2.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3C.

#### A.14.3.2.1.2 Test Parameters

Supported test configurations are shown in table A.14.3.2.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.14.3.2.1.2-2, A.14.3.2.1.2-3 and A.14.3.2.1.2-4.

In all test cases, single cell served by SAN is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.14.3.2.1.2-4, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

The UE shall be provided with the valid information about the SAN serving cell before the test.During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.14.3.2.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3C.2.1, the UE adjusts its uplink timing at slot n+k+$1+2^{\mu}\cdot K_{\mathrm{offset}}$ for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.14.3.2.1.2-1: Timing advance supported test configurations**

| Config | Description |
|---|---|
| 1 | GSO, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NGSO, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| NOTE: If UE supports both NGSO and GSO, the test case Config 1 can be skipped if the UE passes test case Config 2. | |

### A.14.3.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. k+$1+2^{\mu}\cdot K_{\text{offset}}$ slots after the reception of the timing advance command, where k=5.

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3C.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

## A.14.3.2.3 SA FR2-NTN timing advance adjustment accuracy

### A.14.3.2.3.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3C.

### A.14.3.2.3.2 Test Parameters

Supported test configurations are shown in table A.14.3.2.3.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.14.3.2.3.2-2, A.14.3.2.3.2-3 and A.14.3.2.3.2-4.

In all test cases, single cell served by SAN is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.14.3.2.3.2-4, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

The UE shall be provided with the valid information about the SAN serving cell before the test. During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in

clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.14.3.2.3.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3C.2.1, the UE adjusts its uplink timing at slot n+k+$1+2^{\mu}\cdot K_{\text{offset}}$ for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.14.3.2.3.2-1: Timing advance supported test configurations**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | NGSO, NR FDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 3 | GSO, NR FDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| NOTE: For mobile VSAT UE type, it is only requied to pass test config 3. | |

### A.14.3.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. $k+1+2^{\mu} \cdot K_{\text{offset}}$ slots after the reception of the timing advance command, where k=11.

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3C.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

## A.14.4 Signalling characteristics

## A.14.4.1 Radio link Monitoring

## A.14.4.1.1 Radio Link Monitoring Out-of-sync Test for FR1 SAN PCell configured with SSB-based RLM RS in non-DRX mode

### A.14.4.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the SAN PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1C.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.14.4.1.1.1-1. The test parameters are given in tables A.14.4.1.1.1-2, A.14.4.1.1.1-3, and A.14.4.1.1.1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.14.4.1.1.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in test 1.

The UE shall be provided with the valid information about the SAN serving the each cell in the test before the test.

**Table A.14.4.1.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.14.4.1.1.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.14.4.1.2 Radio Link Monitoring In-sync Test for FR1 SAN PCell configured with SSB-based RLM RS in non-DRX mode

### A.14.4.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the SAN PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1C.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.14.4.1.2.1-1. The test parameters are given in tables A.14.4.1.2.1-2, and A.14.4.1.2.1-3 below. There is one cell (Cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.14.4.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

The UE shall be provided with the valid information about the SAN serving the each cell in the test before the test.

**Table A.14.4.1.2.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| NOTE 5: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 and T4 is modified as specified in clause A.3.6. | | | | | | | |

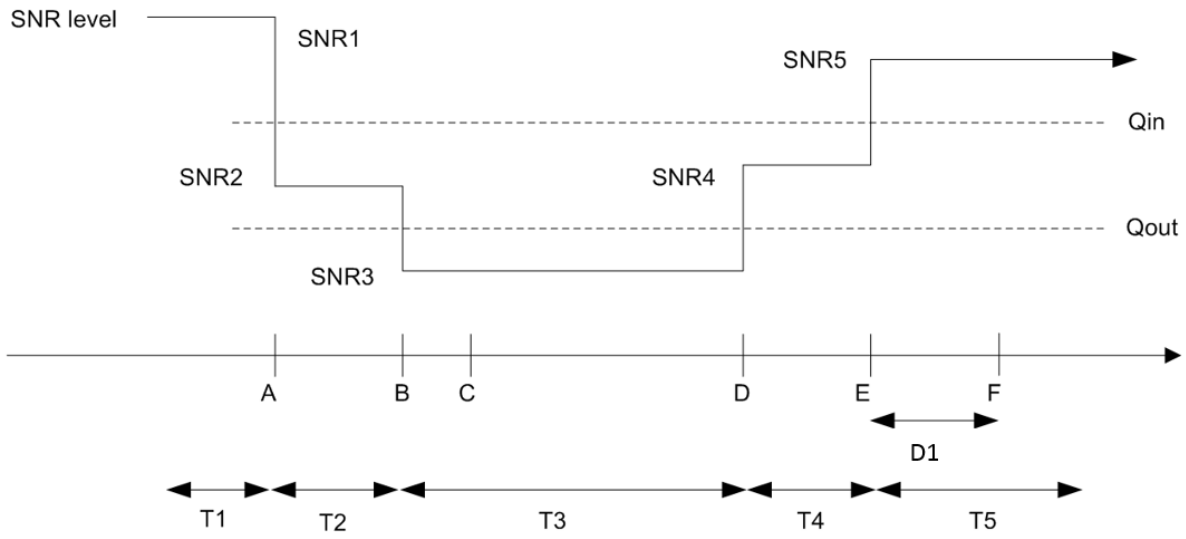

**Figure A.14.4.1.2.1-1: SNR variation for in-sync testing**

### A.14.4.1.2.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.14.4.1.3 Radio Link Monitoring Out-of-sync Test for FR1 SAN PCell configured with SSB-based RLM RS in DRX mode

#### A.14.4.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the SAN PCell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1C.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.14.4.1.3.1-1. The test parameters are given in tables A.14.4.1.3.1-2, and A.14.4.1.3.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.14.4.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

The UE shall be provided with the valid information about the SAN serving the each cell in the test before the test.

**Table A.14.4.1.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NGSO, NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

For testing of a UE which supports 4RX on all bands, the SNR during T3 is A.3.6. | | | | | |

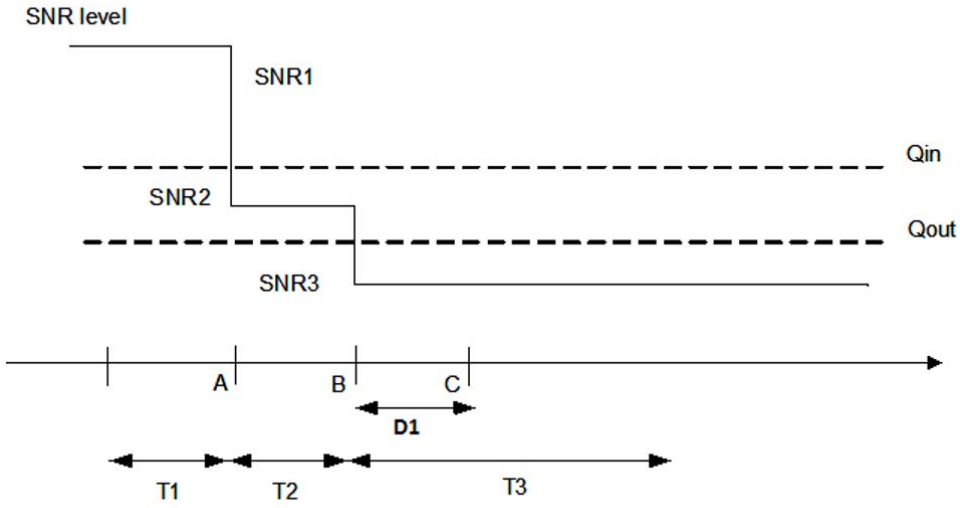

**Figure A.14.4.1.3.1-1: SNR variation for out-of-sync testing**

### A.14.4.1.3.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.14.4.1.4 Radio Link Monitoring In-sync Test for FR1 SAN PCell configured with SSB-based RLM RS in DRX mode

### A.14.4.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the SAN PCell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1C.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.14.4.1.4.1-1. The test parameters are given in tables A.14.4.1.4.1-2, and A.14.4.1.4.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.14.4.1.4.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

The UE shall be provided with the valid information about the SAN serving the each cell in the test before the test.

#### A.14.4.1.4.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.14.4.1.5 Radio Link Monitoring Out-of-sync Test for FR1 SAN PCell configured with CSI-RS-based RLM in non-DRX mode

#### A.14.4.1.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the SAN PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1C.

The test parameters are given in tables A.14.4.1.5.1-1, A.14.4.1.5.1-2, A.14.4.1.5.1-3, and A.14.4.1.5.1-3A below. There is one cell, Cell 1 which is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.14.4.1.5.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test. In the test, SSB0 is configured as the BFD-RS.

The UE shall be provided with the valid information about the SAN serving cells before the test.

**Table A.14.4.1.5.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | NGSO, FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| NOTE: If UE supports both NGSO and GSO, the test case Config 1 can be skipped if the UE passes test case Config 2. | |

**Figure A.14.4.1.5.1-1: SNR variation for CSI-RS out-of-sync testing**

### A.14.4.1.5.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.14.4.1.6 Radio Link Monitoring In-sync Test for FR1 SAN PCell configured with CSI-RS-based RLM in non-DRX mode

### A.14.4.1.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the SAN PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1C.

The test parameters are given in tables A.14.4.1.6.1-1, A.14.4.1.6.1-2, and A.14.4.1.6.1-3 below. There is one cells, Cell 1 which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.14.4.1.6.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. In the test, SSB0 is configured as the BFD-RS.

The UE shall be provided with the valid information about the SAN serving cells before the test.

**Table A.14.4.1.6.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | NGSO, FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| NOTE: If UE supports both NGSO and GSO, the test case Config 1 can be skipped if the UE passes test case Config 2. | |

**Figure A.14.4.1.6.1-1: SNR variation for CSI-RS in-sync testing**

### A.14.4.1.6.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.14.4.1.7 Radio Link Monitoring Out-of-sync Test for FR1 SAN PCell configured with CSI-RS-based RLM in DRX mode

### A.14.4.1.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the SAN PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1C.

The test parameters are given in tables A.14.4.1.7.1-1, A.14.4.1.7.1-2, and A.6.5.1.7C.1-3 below. There is one cell, Cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.14.4.1.7.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 is configured as the BFD-RS.

The UE shall be provided with the valid information about the SAN serving cells before the test.

**Table A.14.4.1.7.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | GSO, FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | NGSO, FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| NOTE: If UE supports both NGSO and GSO, the test case Config 1 can be skipped if the UE passes test case Config 2. | |

**Table A.14.4.1.7.1-2: General test parameters for FR1 PCell for CSI-RS out-of-sync testing in DRX mode**

| Parameter | | Unit | Value |
|---|---|---|---|

| SNR on RLM-RS | Config 1, 2 | dB | 1 | -7 | -15 |
| $N_{oc}$ | Config 1, 2 | dBm/15 kHz | -98 | | |
| Propagation condition | | | NTN-TDLC5-200 | | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.14.4.1.7.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is specified in clause A.3.6.1.1.

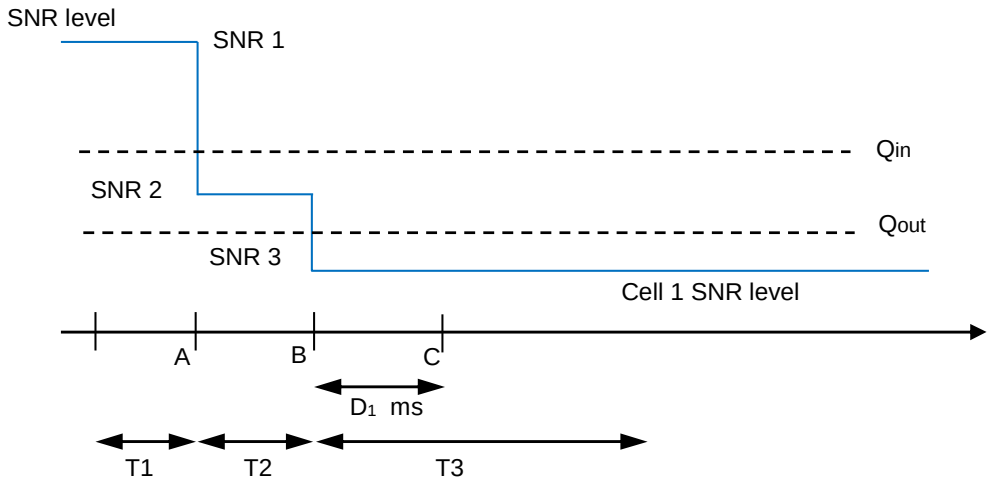

**Figure A.14.4.1.7.1-1: SNR variation for CSI-RS out-of-sync testing**

### A.14.4.1.7.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.14.4.1.8 Radio Link Monitoring In-sync Test for FR1 SAN PCell configured with CSI-RS-based RLM in DRX mode

### A.14.4.1.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the SAN PCell when DRX is used. This test will partly verify the FR1 Pcell CSI-RS In-sync radio link monitoring requirements in clause 8.1C.
