**Table A.5.7.9.1.2-3: CSI-SINR Intra frequency OTA related test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 2 | Cell 3 | Cell 2 | Cell 3 |
| Angle of arrival configuration | | Setup 1 according to clause A.3.15.1 | | Setup 1 according to clause A.3.15.1 | |
| Assumption for UE beams Note 7 | | Rough | | Rough | |
| $N_{oc}$ Note1 | dBm/15 kHz Note4 | -105 | | N/A | |
| $N_{oc}$ Note1 | dBm/SCS Note3 | -96 | | N/A | |
| $\hat{E}_s / N_{oc}$ for SSB | dB | 4.54 | 2.66 | -3 | -3 |
| $\hat{E}_s / N_{oc}$ for CSI-RS | dB | 4.54 | 2.66 | -3 | -3 |
| CSI-RSRP Note2 | dBm/SCS Note4 | -91.46 | -93.34 | -99 | -99 |
| CSI-SINR Note2 | dB | 0 | -3.2 | -4.76 | -4.76 |
| $\hat{E}_s / I_{ot}$ for SSB | dB | 0 | -3.2 | -4.76 | -4.76 |
| $\hat{E}_s / I_{ot}$ for CSI-RS | dB | 0 | -3.2 | -4.76 | -4.76 |
| Io Note2 | dBm/95.04 MHz Note4 | -59.2 | | -64 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-SINR and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.9.1.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+3 dB to Nominal CSI-SINR -4 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +3.5 dB to Nominal CSI-SINR -4.5 dB according to the requirements in clause 10.13.2 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. Nominal CSI-SINR is the value shown in table A.5.7.9.1.2-3.

## A.5.7.9.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

### A.5.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.2.1 and 10.1.15.2.2 for inter-frequency measurement.

### A.5.7.9.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.5.7.9.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test setup in table A.5.7.9.2.2-2 and table A.5.7.9.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.5.7.9.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.5.7.9.2.2-2: CSI-SINR Inter frequency general test parameters**

| Parameter | Unit | Test 1 | | Test 2 | | Test 3 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-SINR and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.9.2.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+3 dB to Nominal CSI-SINR -4 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR+3.5

dB to Nominal CSI-SINR -4.5 dB according to the requirements in clause 10.1.15.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. Nominal CSI-SINR is the value shown in table A.5.7.2.2.2-3

The CSI-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.2.2.

## A.5.8 Void

# A.6.6 Measurement procedure

## A.6.6.1 Intra-frequency Measurements

### A.6.6.1.1 SA event triggered reporting tests without gap under non-DRX

#### A.6.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

#### A.6.6.1.1.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.1.1.1-1 and A.6.6.1.1.1-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.1.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.1.1.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for FR1**

| Parameter | Unit | Test configuration | Value | Comment |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.1.2 SA event triggered reporting tests without gap under DRX

#### A.6.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

#### A.6.6.1.2.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.1.2.2-1, A.6.6.1.2.2-2 and A.6.6.1.2.2-3 below. In the measurement controlinformation, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.1.2.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for PCell in FR1 with DRX**

| Parameter | Unit | Test configuration | Value | | Comment |

### A.6.6.1.2.3 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.1.3 SA event triggered reporting tests with per-UE gaps under non-DRX

### A.6.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

### A.6.6.1.3.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.1.3.1-1 and A.6.6.1.3.1-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

**Table A.6.6.1.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.1.3.2-2: General test parameters for SA intra-frequency event triggered reporting with per-UE gaps for PCell in FR1**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.1.3.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.1.4 SA event triggered reporting tests with per-UE gaps under DRX

#### A.6.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

#### A.6.6.1.4.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.1.4.2-1, A.6.6.1.4.2-2 and A.6.6.1.4.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

### A.6.6.1.4.3 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.1.5 SA event triggered reporting tests without gap under non-DRX with SSB index reading

### A.6.6.1.5.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2.

### A.6.6.1.5.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for FDD PCell and neighbour cell are given in table A.6.6.1.5.2-1 and A.6.6.1.5.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.1.5.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.1.6 SA event triggered reporting tests with per-UE gaps under non-DRX with SSB index reading

#### A.6.6.1.6.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

#### A.6.6.1.6.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for FDD PCell and neighbour cell are given in table A.6.6.1.6.2-1 and A.6.6.1.6.2-2 below. In the measurement control information, a measurement object is configured for the frequency of

the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | --64.60 | -62.25 |
| Propagation Condition | | 1 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.1.6.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.1.7 SA event triggered reporting tests under DRX for UE configured with highSpeedMeasFlag-r16

### A.6.6.1.7.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for UE configured with highSpeedMeasFlag-r16. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

### A.6.6.1.7.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.1.7.2-1, A.6.6.1.7.2-2 and A.6.6.1.7.2-3 below. In the measurement controlinformation, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.7.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944 Hz.
NOTE 5: The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334 Hz.

#### A.6.6.1.7.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.1.8 SA event triggered reporting tests without gap under DRX for UE configured with highSpeedMeasCA-Scell-r17

#### A.6.6.1.8.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for UE configured with highSpeedMeasCA-Scell-r17. This test will partly verify the intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2.

#### A.6.6.1.8.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), a FR1 deactivated SCell (Cell 2) and a FR1 neighbour cell (Cell 3) on the same frequency as the SCell (Cell 2). The test parameters for PCell are given in table A.6.6.1.8.21, A.6.6.1.8.2-2 and A.6.6.1.8.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is

used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.8.2-1: Supported PCell test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

### A.6.6.1.8.3 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 5760 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.1.9 SA event triggered reporting tests with MUSIM gap configured

### A.6.6.1.9.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event on an intra-frequency layer based on measurement performed without measurement gaps when the UE is also configured with MUSIM gaps. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

### A.6.6.1.9.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.1.9.2-1 and A.6.6.1.9.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.1.9.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | --64.60 | -62.25 |
| | dBm/9.36 MHz | 2 | -64.60 | -62.25 | --64.60 | -62.25 |
| | dBm/38.16 MHz | 3 | -58.50 | -56.16 | --58.50 | -56.16 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.1.9.3 Test requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.1.10 SA event triggered reporting tests without gap under non-DRX when CD-SSB is outside active BWP

### A.6.6.1.10.1 Test purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of an event when CD-SSB is outside active BWP. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

The test environment is the same as in clause A.6.6.1.1 with following exceptions in table Table A.6.6.1.1.2-3.

**Table A.6.6.1.1.2-3: Test environment exceptions**

| Parameter | Unit | Test configuration | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| Initial BWP configuration | | 1, 2, 3 | DLBWP.0.1 ULBWP.0.1 | | - | |
| Active DL BWP configuration | | 1, 2, 3 | DLBWP.1.2 | | - | |
| Active UL BWP configuration | | 1, 2, 3 | ULBWP.1.2 | | - | |

### A.6.6.1.10.2 Test Requirements

The test requirements are the same as in clause A.6.6.1.1.3.

## A.6.6.1.11 SA event triggered reporting tests without gap under non-DRX with NCD-SSB

### A.6.6.1.11.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements when NCD-SSB is configured in clauses 9.2.5.1 and 9.2.5.2.

### A.6.6.1.11.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.1.11.1-1 and A.6.6.1.11.1-2 below. The CD-SSB is configured outside active DL BWP and NCD-SSB is configured fully within active DL BWP of FR1 PCell. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.1.11.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.1.11.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for FR1**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell to be identified. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |
| CD-SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| NCD-SSB configuration | | 1 | SSB.9 FR1 | |
| | | 2 | SSB.9 FR1 | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.1.11.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.1.12 SA event triggered reporting tests without gap under non-DRX with SSB index reading and 12 PRB SSB

### A.6.6.1.12.1 Test purpose and Environment

The purpose of this test is to verify that the UE supporting *support-3MHz-ChannelBW-r18* makes correct reporting of an event when the intra-frequency target cell is transmitting 12 PRB SSB. This test will partly verify the FDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2 for 3 MHz Channel Bandwidth configured without SSB time index detection when DRX is not used and with 15 PRB PDCCH configuration.

### A.6.6.1.12.2 Test parameters

The test procedure in clause A.6.6.1.5.2 applies for this test. Supported test configurations are specified in table A.6.6.1.12.2-1. General test parameters as specified in table A.6.6.1.5.2-2 with config 1 apply to this test, except those specified in table A.6.6.1.12.2-2. Cell specific test parameters as specified in table A.6.6.1.5.2-3 with config 1 apply to this test, except those specified in table A.6.6.1.12.2-3.

**Table A.6.6.1.12.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 3 MHz bandwidth, FDD duplex mode |

**Table A.6.6.1.12.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for FDD PCell in FR1 with SSB index reading**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| SSB configuration | | 1 | SSB.13 FR1 | |

**Table A.6.6.1.12.2-3: NR Cell specific test parameters for SA intra-frequency event triggered reporting without gap for FDD PCell in FR1 with SSB index reading**

| Io | dBm/2.7 MHz | 1 | -70.00 | -67.65 | -70.00 | -67.65 |

### A.6.6.1.12.3 Test Requirements

The test requirements in clause A.6.6.1.5.3 applies to this test, except that the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 940 ms from the beginning of time period T2.

## A.6.6.1.13 SA event triggered reporting tests without gap under Cell DTX

### A.6.6.1.13.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2 under Cell DTX configuration.

### A.6.6.1.13.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.1.13.2-1 and A.6.6.1.13.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two

successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. During time duration T2, NW triggers the Cell DTX.

UE is allocated with PUSCH resource at every Cell DTX cycle.

**Table A.6.6.1.13.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: The UE fulfils the requirements in this Cell DTX test case can skip the test case in A.6.6.1.2 DRX.1 configuration. | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.1.13.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 + 160 = 1080 ms from the beginning of time period T2, while 160 ms is the Cell DTX cycle length, which is the delay uncertainty for next available PUSCH for L3 MR reporting during cell DTX. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2 Inter-frequency Measurements

### A.6.6.2.1 SA event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.6.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.1.1-1, A.6.6.2.1.1-2 and A.6.6.2.1.1-3.

Measurement gap pattern configuration is defined in table A.6.6.2.1.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.6.6.2.1.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

#### A.6.6.2.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.2.2 SA event triggered reporting tests for FR1 without SSB time index detection when DRX is used

#### A.6.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.2.1-1, A.6.6.2.2.1-2 and A.6.6.2.2.1-3.

Measurement gap pattern configuration is defined in table A.6.6.2.2.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.2.2.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |

### A.6.6.2.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2, UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2.3 Void

## A.6.6.2.4 Void

## A.6.6.2.5 SA event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

### A.6.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.5.1-1, A.6.6.2.5.1-2 and A.6.6.2.5.1-3.

Measurement gap pattern configuration is defined in table A.6.6.2.5.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.6.6.2.6.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2, UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.2.7 Void

### A.6.6.2.8 Void

### A.6.6.2.9 SA event triggered reporting tests with additional mandatory gap pattern

#### A.6.6.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when mandatory gap pattern with 3 ms MGL is configured.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.9.1-1, A.6.6.2.9.1-2 and A.6.6.2.9.1-3.

Measurement gap pattern configuration defined in table A.6.6.2.9.1-2 does not depend on per-FR gap capability of UE.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.6.6.2.9.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.2.9.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2.10 SA event triggered reporting tests for FR1 when DRX is used

### A.6.6.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE which supports interFrequencyMeas-Nogap-r16 makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search without measurement gap requirements in clause 9.3.9.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The RBs containing SSB from Cell 1 and Cell 2 should be different in frequency location within the cell bandwidth. The test parameters are given in tables A.6.6.2.10.1-1, A.6.6.2.10.1-2 and A.6.6.2.10.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.2.10.1-1: SA event triggered reporting tests when DRX is used for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

|---|---|---|
| TimeAlignmentTimer | ms500 | As specified in clause 6.3.2 in TS 38.331 [2] |

### A.6.6.2.10.2 Test Requirements

In test config 1, UE is required to report SSB time index. UE is not required to report SSB time index. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test config 2 and 3, UE is not required to report SSB time index. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 900 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2.11 SA event triggered reporting tests for FR1 without gap when DRX is not used

### A.6.6.2.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.9.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The RBs containing SSB from Cell 1 and Cell 2 should be different in frequency location within the cell bandwidth. The test parameters are given in tables A.6.6.2.11.1-1, A.6.6.2.11.1-2 and A.6.6.2.11.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.6.6.2.11.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.2.11.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

The UE is not required to read the neighbour cell SSB index in this test.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2.12 SA event triggered reporting tests for FR1 without SSB time index detection when DRX is used for UE configured with highSpeedMeasInterFreq-r17

### A.6.6.2.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when UE is configured with *highSpeedMeasInterFreq-r17*. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.12.1-1, A.6.6.2.12.1-2 and A.6.6.2.12.1-3.

Measurement gap pattern configuration is defined in table A.6.6.2.12.1-2. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.2.12.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944 Hz.
NOTE 6: The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334 Hz.

#### A.6.6.2.12.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 2240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.2.13 SA event triggered reporting tests for FR1 with MUSIM gap configured

#### A.6.6.2.13.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event on an inter-frequency layer based on measurement performed within measurement gaps when UE is also configured with MUSIM gaps. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4. In addition, the test will verify that UE makes correct transmission/reception during occasions of measurement gaps and MUSIM gaps that are dropped due to collision handling as defined in clause 9.1.10.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.13.1-1, A.6.6.2.13.1-2 and A.6.6.2.13.1-3.

Measurement gap and MUSIM gap pattern configurations defined in table A.6.6.2.13.1-2 are provided to the UE.

NOTE: The signaling procedure to trigger the UE to request MUSIM gaps before the test equipment configures MUSIM gaps to the UE is left to comformance test implementation.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively. During T1 and T3, the UE shall not have any timing information of NR Cell 2. During T1 and T2, MUSIM gap is configured with lower priority than the measurement gap. At the beginning of T3, test equipment reconfigures the priority of MUSIM gap such that MUSIM gap is configured with higher priority than the measurement gap during T3 and T4.

The TE schedules continuous DL data on PCell throughout the test.

**Table A.6.6.2.13.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.2.13.2 Test Requirements

During T1 and T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the measurement gap occasions.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

During T3 and T4, after UE sends RRC ReconfigurationComplete message for the reconfiguration of MUSIM gap priority, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with

- MUSIM gap occasions, and
- measurement gap occasions that are not colliding with MUSIM gap.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T4. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2.14 SA event triggered reporting tests for FR1 measurement gap and periodic MUSIM gap with partially partial overlapping scenario for SSB-based measurements in inter-frequency layers

### A.6.6.2.14.1 Test Purpose and Environment

The purpose of this test is to verify that the MUSIM gap capable UE makes correct reporting of an event when MUSIM gap collides with measurement gaps without assigned priority. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4. This test is conducted assuming that the measurement gap is configured as Gap(s) configured via GapConfig without suffix, and the MUSIM gap parameters are configured as requested by UE.

NOTE: The signaling procedure to trigger the UE to request MUSIM gaps before the test equipment configures MUSIM gaps to the UE is left to comformance test implementation.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.2.14.1-1, A.6.6.2.14.1-2 and A.6.6.2.14.1-3.

Measurement gap pattern configuration defined in table A.6.6.2.14.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

**Table A.6.6.2.14.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

**Table A.6.6.2.14.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 measurement gap and periodic MUSIM gap with partially partial overlapping scenario for SSB-based measurements in inter-frequency layers**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1,2,3 | 1, 2 | Two FR1 NR carrier frequencies is used. |

| Propagation Condition | | Config 1,2,3 | AWGN | | AWGN | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.2.14.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.2.15 SA event triggered reporting tests for FR1 with 3 MHz Channel Bandwidth configured without SSB time index detection when DRX is used

#### A.6.6.2.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *support-3MHz-ChannelBW-r18* makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4 for 3 MHz Channel Bandwidth configured without SSB time index detection when DRX is used and with 15 PRB PDCCH configuration.

Supported test configurations are specified in table A.6.6.2.15.1-1. General test parameters as specified in table A.6.6.2.2.1-2 with config 1 apply to this test. Cell specific test parameters as specified in table A.6.6.2.2.1-3 with config 1 apply except those specified in table A.6.6.1.13.1-2. DRX-Configuration and *TimeAlignmentTimer* -Configuration specified in table A.6.6.2.2.1-4 and table A.6.6.2.2.1-5, respectively, apply to this test case.

The test environment specified in A.6.6.2.2.1 applies to this test.

**Table A.6.6.2.15.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 3 MHz bandwidth, FDD duplex mode |
| NOTE 1: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

**Table A.6.6.2.15.1-2: Cell specific test parameters for SA inter-frequency event triggered reporting for FR1 without SSB time index detection**

| Parameter | Unit | Test configuration | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| Duplex mode | | Config 1 | FDD | | | |
| $BW_{channel}$ | MHz | Config 1 | 3: $N_{PRB,c}$ = 15 | | | |
| BWP BW | MHz | Config 1 | 3: $N_{PRB,c}$ = 15 | | | |
| PDSCH Reference measurement channel | | Config 1 | SR.1.2 FDD | | NA | |
| RMSI CORESET Reference Channel | | Config 1 | CR.1.3 FDD | | NA | |
| Dedicated CORESET Reference Channel | | Config 1 | CCR.1.7 FDD | | NA | |
| SSB parameters | | Config 1 | SSB.13 FR1 | | SSB.13 FR1 | |
| $Io^{Note3}$ | dBm/3 MHz | Config 1 | -69.9 | -69.9 | -75.4 | -67.6 |

#### A.6.6.2.15.2 Test Requirements

Test requirements specified in clause A.6.6.2.2.2 apply to this test, except that the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1920 ms and 14720 ms from the beginning of time period T2 in test 1 and test, respectively.

## A.6.6.3 Inter-RAT Measurements

### A.6.6.3.1 SA NR - E-UTRAN event-triggered reporting in non-DRX in FR1

#### A.6.6.3.1.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2 and 9.4.3.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indictated to the UE that event-

triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.3.1.1-1. General test parameters are provided in table A.6.6.3.1.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.3.1.1-3 and A.6.6.3.1.1-4, respectively.

**Table A.6.6.3.1.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.6.3.1.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Antenna Configuration and Correlation Matrix | | 1, 2, 3, 4, 5, 6 | 1x2 | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.3.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.3.2 SA NR - E-UTRAN event-triggered reporting in DRX in FR1

### A.6.6.3.2.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1 when DRX is used. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2 and 9.4.3. There are two test cases. In test 1 the UE shall be configured with DRX cycle of 40 ms. In test 2 the UE shall be configured with DRX cycle of 640 ms.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indctated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

In each test the UE shall be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore the UE shall be allocated with PUSCH resource at every DRX cycle.

Supported test configurations are shown in table A.6.6.3.2.1-1. General test parameters are provided in table A.6.6.3.2.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.3.2.1-3 and A.6.6.3.2.1-4, respectively.

**Table A.6.6.3.2.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.6.3.2.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1**

| Parameter | Unit | Test 1 | Test 2 | Comment |
|---|---|---|---|---|
| | | Value | | |
| NR RF Channel Number | | 1 | | 1 NR carrier frequency is used in the test |
| LTE RF Channel Number | | 2 | | 1 LTE carrier frequency is used in the test |
| Channel Bandwidth | MHz | As specified in tables A.6.6.3.2.1-2 and A.6.6.3.2.1-3. | | |
| Active cell | | Cell 1 | | Cell 1 is on RF channel number 1 |
| Neighbour cell | | Cell 2 | | Cell 2 is on RF channel number 2 |
| Gap Pattern Id | | 0 | | As specified in clause Table 9.1.2-1. Per-UE gap pattern. |
| NR measurement quantity | | SS-RSRP | | Measurement quantity for Cell 1 |
| Inter-RAT E-UTRAN measurement quantity | | RSRP | | Measurement quantity for Cell 2 |

NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 6: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

#### A.6.6.3.2.2 Test Requirements

In test 1, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

In test 2, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 12.8 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.3.3 SA NR - E-UTRAN event-triggered reporting in DRX in FR1 for UE configured with highSpeedMeasFlag-r16

#### A.6.6.3.3.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements for UE configured with highSpeedMeasFlag-r16 in standalone (SA) operation with PCell in FR1 when DRX is used. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2 and 9.4.3.

In the test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

The UE shall be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore the UE shall be allocated with PUSCH resource at every DRX cycle.

Supported test configurations are shown in table A.6.6.3.3.1-1. General test parameters are provided in table A.6.6.3.3.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.3.3.1-3 and A.6.6.3.3.1-4, respectively.

**Table A.6.6.3.3.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1 for UE configured with highSpeedMeasFlag-r16**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |

| | |
|---|---|
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 6: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

### A.6.6.3.3.2 Test Requirements

In the test, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 4.8 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

# A.6.6.4 L1-RSRP measurement for beam reporting

## A.6.6.4.1 SSB based L1-RSRP measurement when DRX is not used

### A.6.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.6.6.4.1.1-1.

**Table A.6.6.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.4.1.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.4.1.2-1 and table A.6.6.4.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.6.6.4.1.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~3 | | freq1 |

| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.<br>NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

### A.6.6.4.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.4.2 SSB based L1-RSRP measurement when DRX is used

### A.6.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.6.6.4.2.1-1.

**Table A.6.6.4.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.4.2.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.4.2.2-1 and table A.6.6.4.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.6.6.4.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |

They are not settable parameters themselves. | | | | | | |

### A.6.6.4.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.4.3 CSI-RS based L1-RSRP measurement when DRX is not used

### A.6.6.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.6.6.4.3.1-1.

**Table A.6.6.4.3.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations

### A.6.6.4.3.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.4.3.2-1 and table A.6.6.4.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 80 ms from the beginning of the test, the DCI trigger comes in slot n (0 for Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in table A.6.6.4.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.6.6.4.3.2-1: General test parameters**

| Parameter | Config | Unit | Value |

| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |

### A.6.6.4.3.3 Test Requirements

After 80 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the absolute accuracy requirement in clause 10.1.20.1.1 and relative accuracy requirement in clause 10.1.20.1.2.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.4.4 CSI-RS based L1-RSRP measurement when DRX is used

### A.6.6.4.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.6.6.4.4.1-1.

**Table A.6.6.4.4.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.4.4.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.4.4.2-1 and table A.6.6.4.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 80 ms from the beginning of the test, the DCI trigger comes in slot n (0 for Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in table A.6.6.4.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.6.6.4.4.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|

| $\hat{E}_s / N_{oc}$ | 1~3 | dB | 0 | 3 |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |

### A.6.6.4.4.3 Test Requirements

After 80 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the absolute accuracy requirement in clause 10.1.20.1.1 and relative accuracy requirement in clause 10.1.20.1.2.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.4.5 SSB based L1-RSRP measurement when DRX is used for UE configured with *highSpeedMeasFlag-r16*

### A.6.6.4.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement when UE is configured with *highSpeedMeasFlag-r16*. This test will partly verify the L1-RSRP measurement requirements for UE configured with *highSpeedMeasFlag-r16* in clause 9.5.4.1, with the testing configurations for NR cells in table A.6.6.4.5.1-1.

**Table A.6.6.4.5.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.4.5.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.4.5.2-1 and table A.6.6.4.5.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.6.6.4.5.2-1: General test parameters for UE configured with *highSpeedMeasFlag-r16***

| Parameter | Config | Unit | Value |

| | 3 | dBm/38.16 MHz | -57.59 | -57.59 | -60.61 | -55.84 |
| $\hat{E}_s/N_{oc}$ | 1~3 | dB | 0 | 0 | -Infinity | 3 |
| Propagation conditions | 1,2 | | AWGN | | AWGN 1944 Hz | |
| | 3 | | AWGN | | AWGN 3334 Hz | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.4.5.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.4.6 Inter-cell SSB based L1-RSRP measurements on FR1 PCell when DRX is used

#### A.6.6.4.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement for SSB of a cell with additional PCI. This test will partly verify the L1-RSRP measurement requirements in clause 9.13.4.1, with the testing configurations for NR serving cells in table A.6.6.4.6.1-1.

**Table A.6.6.4.6.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.6.6.4.6.2 Test parameters

There are two cells in the test, the FR1 PCell (Cell 1) and a cell with additional PCI (Cell 2). The test parameters for the Cell 1 are given in table A.6.6.4.6.2-1. The test parameters for Cell 2 are given in table A.6.6.4.6.2-2 below.

SSB#0 and SSB#1 are transmitted on Cell 1 and Cell 2. In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSB#0 and report measurement results periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. At the beginning of T2, SSB#1 starts transmission and the UE is configured for L1-RSRP measurement on SSB#1. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured in CSI-ReportConfig and *additionalPCIList* configured in *CSI-SSB-ResourceSet.*

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the the SSB#0 for Cell 1.

**Table A.6.6.4.6.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| Active cell | 1~3 | | Cell 1 |
| A cell with additional PCI | 1~3 | | Cell 2 |
| RF Channel Number | 1~3 | | 1: Cell 1 and Cell 2 |

They are not settable parameters themselves. | | | | | | |

### A.6.6.4.6.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than X ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of SSB#1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2, where X is

- 680 for Config 1&2
- 660 for Config 3

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.4.7 SSB based L1-RSRP measurement when DRX is not used when CD-SSB is outside active BWP

### A.6.6.4.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.6.6.4.1.1-1.

The test environment is the same as in A.6.6.4.1 with following exceptions in table A.6.6.4.1.2-1.

**Table A.6.6.4.1.2-1**

| Parameter | Config | Unit | Value |
|---|---|---|---|

| | | | |
|---|---|---|---|
| Dedicated BWP configuration | 1~3 | | DLBWP.1.2<br>ULBWP.1.2 |

### A.6.6.4.7.2 Test Requirements

The test requirements are the same as in A.6.6.4.1.3.

## A.6.6.4.8 CSI-RS based L1-RSRP measurement when DRX is not used when CD-SSB is outside active BWP

### A.6.6.4.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.6.6.4.3.1-1.

The test is for UE supporting *rlm-BM-BFD-CSI-RS-OutsideActiveBWP-r18* and the UE is not required past legacy test in A.6.6.4.3.

The test environment is the same as in A.6.6.4.3.2 with following exceptions in table Table A.6.6.4.3.2-1.

The value of parameter “Dedicated BWP configuration” is DLBWP.1.2 and ULBWP.1.2.

NOTE: The starting PRB index of the SSB can be any possible PRB index of the RF channel BW occurring after the last PRB of the DL active BWP.

The test requirements are the same as in A.6.6.4.3.3.

## A.6.6.4.9 SSB based L1-RSRP measurement for UE supporting NCD-SSB based L1 measurement outside active BWP when DRX is not used

### A.6.6.4.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.6.6.4.9.1-1.

**Table A.6.6.4.9.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.4.9.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.4.9.2-1 and table A.6.6.4.9.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. During time duration T1, the UE shall not have any timing information of NR Cell 2.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.6.6.4.9.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|

They are not settable parameters themselves. | | | | | | |

### A.6.6.4.9.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than [620]ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.5 Inter-RAT UTRAN FDD measurements

### A.6.6.5.1 SA NR - UTRAN FDD event-triggered reporting in non-DRX in FR1

#### A.6.6.5.1.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT UTRAN FDD measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clause 9.4.6.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT UTRAN FDD neighbour cell. In the measurement control information from the PCell it is indictated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.5.1.1-1. General test parameters are provided in table A.6.6.5.1.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.5.1.1-3 and A.6.6.5.1.1-4, respectively.

**Table A.6.6.5.1.1-1: Supported test configurations in SA inter-RAT UTRAN FDD event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, UTRA FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, UTRA FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, UTRA FDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.6.5.1.1-2: General test parameters for SA inter-RAT UTRAN FDD event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| | | | |
|---|---|---|---|
| NR RF Channel Number | | 1 | 1 NR carrier frequency is used in the test |
| UTRA RF Channel Number | | 2 | 1 UTRA carrier frequency is used in the test |

| CPICH_Ec/Io | dB | -Infinity | -14 |
| Propagation Condition | | AWGN | |
| NOTE 1: The DPCH level is controlled by the power control loop. | | | |
| NOTE 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$. | | | |

### A.6.6.5.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 2.4 s from the start of period T2, i.e. when Cell 2 becomes detectable. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.6 CLI measurements

### A.6.6.6.1 SRS-RSRP measurement with DRX

#### A.6.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in table A.6.6.6.1.1-1.

**Table A.6.6.6.1.1-1: Applicable NR configurations for FR1 SRS-RSRP test**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SRS SCS, 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 30 kHz SRS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.6.1.2 Test Parameters

One cell is deployed in the test, which is FR1 PCell (Cell 1). The test parameters for PCell is given in table A.6.6.6.1.2-1 and A.6.6.6.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in table A.6.6.6.1.2-4 and the test parameters for the (virtual) neighbour cell UE in table A. 6.6.6.1.2-3. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 1 data symbol before SRS to be transmitted.

**Table A.6.6.6.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PCell in FR1**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2 | Cell 1 | |
| RF Channel Number | | 1, 2 | 1: Cell 1 | |

#### A.6.6.6.1.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 1920 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.6.2 CLI-RSSI measurement with DRX

#### A.6.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in table A.6.6.6.2.1-1.

**Table A.6.6.6.2.1-1: Applicable NR configurations for FR1 CLI-RSSI test**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SCS, 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 30 kHz SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.6.6.6.2.2 Test Parameters

One cell is deployed in the test, which are FR1 PCell (Cell 1). The test parameters for PCell is given in table A.6.6.6.2.2-1 and A.6.6.6.2.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 1 data symbol before. The CLI-RSSI measurement resource configuration is in table A.6.6.6.2.2-3.

**Table A.6.6.6.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PCell in FR1**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2 | NR Cell 1 | |

#### A.6.6.6.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 640 ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on Io.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.7 NR measurements with autonomous gaps

### A.6.6.7.1 SA intra-frequency CGI identification of NR neighbor cell in FR1

#### A.6.6.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of intra-frequency CGI identification of an NR neighbour cell in FR1 with autonomous gaps. This test shall partly verify the measurement requirements in clause 9.11.

#### A.6.6.7.1.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR1 PCell and Cell 2 is an FR1 neighbour cell on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.7.1.1-2 and A.6.6.7.1.3-2 below. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable. A measurement object is configured for the frequency of the PCell and it is indicated to the UE that event-triggered reporting with Event A3 is used. The UE is expected to detect and send a measurement report with Event A3.

A new RRC message triggering CGI identification shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *useAutonomousGaps* set to *setup*. The start of T3 is the instant when the last TTI containing the RRC message implying CGI identification is sent to the UE.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell during T3 untill a measurement report with CGI is sent.

**Table A.6.6.71.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.7.1.2-2: General test parameters for SA intra-frequency CGI identification of NR neighbor cell in FR1**

| Parameter | Unit | Test configuration | Value | Comment |

They are not settable parameters themselves. | | | | | | |

### A.6.6.7.1.3 Test Requirements

The UE shall send a measurement report containing the CGI of Cell 2 within 255 ms from the start of time period T3.

Test requirement = RRC Procedure delay + $T_{identify_CGI}$ + TTI insertion uncertainty.

= 10 + 240 + 2 ms from the start of T3

= 252 ms, allow 255 ms

The UE shall be scheduled continuously throughout the test. From the start of T3 until 252 ms, the interruption on PCell shall not be more than the values specified for SA in clause 8.2.2.2.14.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.7.2 Identification of a new CGI of inter-RAT E-UTRA cell using autonomous gaps in NR SA

### A.6.6.7.2.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in NR SA in clause 9.4.7.

The test scenario comprises of one NR carrier and an E-UTRA carrier and two cells as given in tables A.6.6.7.2.1-1, A.6.6.7.2.1-2, A.6.6.7.2.1-3 and A.6.6.7.2.1-4. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event B2. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *useAutonomousGaps* set to setup. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.6.6.7.2.1-1: Supported test configurations of inter-RAT E-UTRAN cell using autonomous gap in SA**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |

### A.6.6.7.2.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of Cell 2 within 200 milliseconds from the start of T3.

Test requirement = RRC Procedure delay with additional margin + $T_{identify_CGI,E\text{-}UTRAN}$ + TTI insertion uncertainty.

= 15 + 30 + 150 + 2 ms from the start of T3

= 197 ms, allow 200 ms.

- The UE shall be scheduled continuously throughout the test, and from the start of T3 until 200 ms at least the number of ACK/NACK specified in NOTE 2 shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The overall ACK/NACK number is caused by two parts. Firstly, at least X ACK/NACK shall be sent during identifying the cell global identifier of Cell 2, where X is defined in table 8.2.2.2.15-1. Secondly, given that continuous DL data allocation, additional 43, 14 and 34 ACK/NACK shall be sent for FDD 15 kHz, TDD 15 kHz and TDD 30 kHz, respectively, from the start of T3 until 200 ms excludes 150 ms for identifying the cell global identifier of Cell 2.

## A.6.6.8 L1-SINR measurement for beam reporting

### A.6.6.8.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is used

#### A.6.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in table A.6.6.8.1.1-1.

**Table A.6.6.8.1.1-1: Applicable NR configurations for FR1 CSI-RS based L1-SINR test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.6.6.8.1.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.8.1.2-1 and table A.6.6.8.1.2-2 below.

In the CSI-RS measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. After 80 ms from the beginning of the test, the DCI trigger comes in slot n (1 Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in table A.6.6.8.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.6.6.8.1.2-1: General test parameters**

| Propagation condition | 1~3 | | AWGN |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

**Table A.6.6.8.1.2-2: CSI-RS specific test parameters**

| Parameter | Config | Unit | CSI-RS#0 | CSI-RS#1 |
|---|---|---|---|---|
| $N_{oc}$ Note1 | 1~3 | dBm/15 kHz | -94.65 | |
| $N_{oc}$ Note1 | 1,2 | dBm/SSB SCS | -94.65 | |
| | 3 | | -91.65 | |
| $\hat{E}_s/I_{ot}$ | 1~3 | dB | 0 | 3 |
| CSI-RS RSRP Note3 | 1,2 | dBm/SSB SCS | -94.65 | -91.65 |
| | 3 | | -91.65 | -88.65 |
| Io Note2 | 1,2 | dBm/9.36 MHz | -63.69 | -61.93 |
| | 3 | dBm/38.16 MHz | -57.59 | -55.84 |
| $\hat{E}_s/N_{oc}$ | 1~3 | dB | 0 | 3 |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.8.1.3 Test Requirements

After 80 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the absolute accuracy requirement in clause 10.1.27.1.1 and relative accuracy requirement in clause 10.1.27.1.2.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.8.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is not used

### A.6.6.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in table A.6.6.8.2.1-1.

**Table A.6.6.8.2.1-1: Applicable NR configurations for FR1 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations

### A.6.6.8.2.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.8.2.2-1 and table A.6.6.8.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-RS resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

**Table A.6.6.8.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |

| $\hat{E}_s/N_{oc}$ | 1~3 | dB | 0 | 0 | -Infinity | 3 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.8.2.3 Test Requirements

The UE shall send L1-SINR report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-SINR report including results of both SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 while meeting the accuracy requirement in clause 10.1.27.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.8.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is not used

### A.6.6.8.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR cofigured in clause 9.8.4.3, with the testing configurations for NR cells in table A.6.6.8.3.1-1.

**Table A.6.6.8.3.1-1: Applicable NR configurations for FR1 L1-SINR test with CMR and dedicated IMR**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.8.3.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.6.8.3.2-1 and table A.6.6.8.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-IM as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. UE is also configured to measure L1-SINR based on SSB. After 80 ms from the beginning of the test, the DCI trigger comes in slot n (1 Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in table A.6.6.8.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-IM as IMR.

**Table A.6.6.8.3.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~3 | | freq1 |

| | 3 | | -91.65 | -88.65 |
| Io Note2 | 1,2 | dBm/9.36 MHz | -63.69 | -61.93 |
| | 3 | dBm/38.16 MHz | -57.59 | -55.84 |
| $\hat{E}_s/N_{oc}$ | 1~3 | dB | 0 | 3 |
| NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |

### A.6.6.8.3.3 Test Requirements

After 80 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-IM#0 as IMR and CSI-RS#1 as CMR + CSI-IM#1 as IMR while meeting the accuracy requirement in clause 10.1.27.3.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.6.6.9 Idle Mode CA/DC Measurements

## A.6.6.9.1 SA Idle mode CA/DC measurement for FR1

### A.6.6.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE performs the required measurements on the serving cell and the configured inter-frequency carrier for idle mode measurement reporting after the UE has entered Idle mode. This test will partly verify the Idle mode CA/DC measurements requirements in clause 4.4.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.9.1.1-1, A.6.6.9.1.1-2, A.6.6.9.1.1-3 and A.6.6.9.1.1-4.

The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. During T1, the UE is connected to Cell 1 only and shall not have any timing information of Cell 2. UE is configured with early measurement reporting with channel 2. Beam level reporting for early measurements is not configured. The connection is released at the end of T1. T2 starts when the connection is released. During the time periods T2 UE is in Idle mode. At T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

**Table A.6.6.9.1.1-1: supported test configuration**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

**Table A.6.6.9.1.1-2: General test parameters for SA Idle mode CA/DC measurement for FR1**

| Parameter | Unit | Test configuration | Value | Comment |

#### A.6.6.9.1.2 Test Requirements

The UE behaviour during time durations T2 and T3 shall be as follows:

During the time period T2 the UE is in Idle mode and the signal level of Cell 2 is changed. The UE shall not perform reselection. The UE shall perform Idle Mode CA measurement according to section 4.4.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for Cell 2. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for Cell 2 meets the requirements in section 10.1.4B for SS-RSRP and in section 10.1.8B for SS-RSRQ and test ends.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.9.2 Idle mode fast CA/DC eEMR measurement for FR1 without valid reporting

#### A.6.6.9.2.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportEMR-r18*. This test will partly verify the fast CA/DC measurement reporting requirements in clause 4.7 when *measIdleValidityDuration-r18* is configured for the test case when there are no measurement results to report at RRC connection setup.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as inter-frequency neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.9.2.1-1, A.6.6.9.2.1-2, A.6.6.9.2.1-3.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

During T1, the UE is connected to Cell 1 only and shall not have any timing information of Cell 2. UE is configured with early measurement reporting for Cell 2 in *measIdleCarrierListNR-r16*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode.

At the beginning of T2, Cell 2 becomes detectable however cell reselection shall not be performed. Signal level of Cell 2 is set to the value given in table A.6.6.9.2.1-3. The time when T331 timer expires defines the ending point of T2.

At the beginning of T3, the signal level of the neighbour cell is set to turned off. The duration of the T3 equals to *measIdleValidityDuration-r18.*

The time when TE sends the paging message is defined as the starting point of T4. During T4, in this test the UE shall not send measurement report.

**Table A.6.6.9.2.1-1: supported test configuration**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.6.6.9.2.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for Cell 2.

The UE shall NOT send early measurement report to the PCell in this test.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.9.3 Idle mode fast CA/DC cell reselection measurement for FR1 without valid reporting

#### A.6.6.9.3.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportReselectionMeasurements-r18*. This test will partly verify the fast CA/DC measurement reporting requirements in clause 4.7 when *measReselectionValidityDuration-r18* is configured for the test case when there are no measurement results to report at RRC connection setup.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as inter-frequency neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.9.3.1-1, A.6.6.9.3.1-2, A.6.6.9.3.1-3.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

During T1, the UE is connected to Cell 1 only and shall not have any timing information of Cell 2. UE is configured with inter-frequency measurement reporting for Cell 2 in *MeasReselectionCarrierListNR-r18*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode.

At the beginning of T2, Cell 2 becomes detectable however cell reselection shall not be performed. Signal level of Cell 2 is set to the value given in table A.6.6.9.3.1-3. The duration of T2 is set to fixed value according to the Table A.6.6.9.3.1-2.

At the beginning of T3, the signal level of Cell 2 is set to turned off. The duration of the T3 equals to *measReselectionValidityDuration-r18.*

The time when TE sends the paging message defined as the starting point of T4. During T4, in this test the UE shall not send measurement report.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.6.6.9.3.2 Test Requirements

During the period T2, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for Cell 2.

The UE shall NOT send early measurement report to the PCell in this test.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.9.4 Idle mode fast CA/DC cell reselection measurement for FR1 with valid reporting

#### A.6.6.9.4.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportReselectionMeasurements-r18* . This test will partly verify the m fast CA/DC measurement reporting requirements in clause 4.7 when *measReselectionValidityDuration-r18* is configured for the test case when there are measurement results to report at RRC connection setup.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.9.4.1-1, A.6.6.9.4.1-2, A.6.6.9.4.1-3.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

During T1, the UE is connected to Cell 1 only and shall not have any timing information of Cell 2. UE is configured with inter-frequency measurement reporting for Cell 2 in *MeasReselectionCarrierListNR-r18*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

At the beginning of T2, Cell 2 becomes detectable however cell reselection shall not be performed. Signal level of Cell 2 is set to the value given in table A.6.6.9.4.1-3. The duration of T2 is set to fixed value according to the Table A.6.6.9.4.1-2.

At the beginning of T3, the signal level of Cell 2 is set to another value according to the Table A.6.6.9.4.1-3. The duration of T3 equals to *measReselectionValidityDuration-r18* .

The time when TE sends the paging message is defined as the starting point of T4. During T4, in this test the UE shall send measurement report within the duration of T4.

### A.6.6.9.4.2 Test Requirements

During the period T2 and T3 the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for Cell 2.

The UE shall send early measurement report to the PCell with valid measurement results.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for Cell 2 meets the requirements in section 10.1.4B for SS-RSRP and in section 10.1.8B for SS-RSRQ and test ends. In the test case, the reported measurements are considered valid if they fulfil measurement accuracy requirements according to Cell 2 signal level during T3.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.10 CSI-RS based intra-frequency Measurements

### A.6.6.10.1 SA event triggered reporting tests without gap under non-DRX

#### A.6.6.10.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA CSI-RS based L3 intra-frequency requirements in clauses 9.10.2.

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.10.1.1-1 and A.6.6.10.1.1-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.10.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: CSI-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.10.1.2 Test Requirements

In this test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1600 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.11 CSI-RS based inter-frequency Measurements

### A.6.6.11.1 SA event triggered reporting tests with gap under DRX

#### A.6.6.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA CSI-RS based L3 inter-frequency measurement requirements in clause 9.10.3.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in tables A.6.6.11.1.1-1, A.6.6.11.1.1-2 and A.6.6.11.1.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.6.6.11.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in table A.6.6.11.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

UE is allocated with PUSCH resource at every DRX cycle.

NOTE: TAT= infinite based on the DRX configuration used in test.

**Table A.6.6.11.1.1-1: SA event triggered reporting tests for FR1-FR1**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.6.6.11.1.2 Test Requirements

In test 1 with per-UE gap and test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20480 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

The UE is required to read the SSB index indicated by associatedSSB in the neighbour cell in this test

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.12 RSTD measurements

### A.6.6.12.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA

#### A.6.6.12.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.6.6.12.1.1-1.

**Table A.6.6.12.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #0 before T2.

The general test parameters are listed in table A.6.6.12.1.1-2, and cell specific test parameters are listed in table A.6.6.12.1.1-3.

NOTE 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: SSB RP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.

### A.6.6.12.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049

## A.6.6.12.2 NR RSTD measurement reporting delay test case for dual positioning frequency layers in FR1 SA

### A.6.6.12.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR1 in standalone scenario when dual positioning frequency layers are configured.

The supported test configurations are specified in table A.6.6.12.2.1-1.

**Table A.6.6.12.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 3 is on a different RF channel with Cell 1 and Cell 2.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #0 before T2.

The general test parameters are listed in table A.6.6.12.2.1-2, and cell specific test parameters are listed in table A.6.6.12.2.1-3.

**Table A.6.6.12.2.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Reference cell | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |

| Parameter | | Unit | Value | Comment |

NOTE 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: SSB RP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.

#### A.6.6.12.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

### A.6.6.12.3 NR RSTD measurement reporting delay test case for single positioning frequency layer with reduced number of samples in FR1 SA

#### A.6.6.12.3.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement with the reduced samples meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.6.6.12.3.1-1.

**Table A.6.6.12.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #0 before T2.

The general test parameters are listed in table A.6.6.12.3.1-2, and cell specific test parameters are listed in table A.6.6.12.3.1-3.

**Table A.6.6.12.3.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the subframes with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

### A.6.6.12.3.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration X1 specified in section 9.9.2.5 starting from the beginning of time interval T2, where X1 is 320 ms.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049.

## A.6.6.12.4 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA without measurement gap

### A.6.6.12.4.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the gapless RSTD measurement period requirement specified in clause 9.9.2.7 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured. Reporting delay test for gapless PRS measurement is conducted assuming that the PRS has higher priority, i.e., state 1, than all other DL signals/channels and is transmitted within active DL BWP of UE. Two sub-tests are defined, sub-test 1 is for $N_{sample}$ = 4 and sub-test 2 is for $N_{sample}$ = 1. For sub-test 2 LMF indicates UE to perform PRS measurement with $N_{sample}$ = 1. The cell specific parameters for sub-test 1 and sub-test 2 are defined in table A.6.6.12.4.1-4.

The supported test configurations are specified in table A.6.6.12.4.1-1.

**Table A.6.6.12.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first PPW instance containing the PRS resources.

The UE is configured with PPW before start of T2.

The general test parameters are listed in table A.6.6.12.4.1-2, and cell specific test parameters are listed in table A.6.6.12.4.1-3.

**Table A.6.6.12.4.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.12.4.2 Test Requirements

The RSTD measurement time fulfils the gapless RSTD measurement period requirements specified in clause 9.9.2.7.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.2.7 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049.

## A.6.6.12.5 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_CONNECTED state with Rx TEG

### A.6.6.12.5.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the Rx TEG based measurement period requirements specified in clause 9.9.2.5 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.6.6.12.5.1-1.

**Table A.6.6.12.5.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #0 before T2.

The test applies to the UE supporting Rx TEG indicated via *NR-UE-TEG-Capability* and is requested to provide the Rx TEG in the test via *nr-UE-RxTEG-Request-r17* in *NR-TDOA-RequestLocationInformation*. In the location request *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* is set to n0. The UE shall perform and optionally report the Rx TEG based RSTD measurements.

The general test parameters are listed in table A.6.6.12.5.1-2, and cell specific test parameters are listed in table A.6.6.12.5.1-3.

**Table A.6.6.12.5.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |
| $BW_{channel}$ | Config 1 | MHz | 20: $N_{PRB,c}$ = 106 | |
| | Config 2 | | 20: $N_{PRB,c}$ = 106 | |

| NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. | | | | | |
| NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | |

### A.6.6.12.5.2 Test Requirements

The RSTD measurement time fulfils the Rx TEG based RSTD measurement period requirements specified in clause 9.9.2.5. The UE shall perform and report the Rx TEG based RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049.

## A.6.6.12.6 NR RSTD measurement reporting delay test case for PRS aggregation in FR1 SA in RRC_CONNECTED mode

### A.6.6.12.6.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement by aggregating PRS resources from multiple positioning frequency layers (PFLs) meets the measurement period requirements specified in clause 9.9.2.10 in an environment with AWGN propagation conditions in FR1.

The supported test configurations are specified in table A.6.6.12.6.1-1.

**Table A.6.6.12.6.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth per PFL, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth per PFL, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth per PFL, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS resources on multiple positioning frequency layers during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.10, shall be provided to the UE during T1. The UE is capable of performing RSTD measurements by aggregating PRS resources from multiple PFLs and is configured by the LMF to perform measurements by aggregating the PRS resources from multiple positioning frequency layers via *jointMeasurementsReq*. The resources to be aggregated for RSTD measurement are indicated by the LMF to the UE via *nr-DL-PRS-JointMeasurementRequestedPFL-List*.

The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first measurement gap instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or measurement gap pattern ID # 0 before T2.

The general test parameters are listed in table A.6.6.12.6.1-2, and cell specific test parameters are listed in table A.6.6.12.6.1-3.

**Table A.6.6.12.6.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |

Note 1: OCNG shall be used such that active cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 4: SSB RP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
Note 5: Carriers are intra-band and contiguous.

### A.6.6.12.6.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.10.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from multiple positioning frequency layers for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.2.10 starting from the beginning of time interval T2.

NOTE*: The actual overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.*

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3, i.e., between RSTD_000000000 and RSTD_126083073.

# A.6.6.13 PRS-RSRP measurements

## A.6.6.13.1 PRS-RSRP reporting delay test case for single positioning frequency layer

### A.6.6.13.1.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 9.9.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.6.13.1.1-1.

**Table A.6.6.13.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.6.13.1.1-2, and cell specific test parameters are listed in table A.6.6.13.1.1-3.

**Table A.6.6.13.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |
| $BW_{channel}$ | MHz | 1 | 20: $N_{PRB,c}$ = 106 | |
| | | 2 | 20: $N_{PRB,c}$ = 106 | |
| | | 3 | 50: $N_{PRB,c}$ = 133 | |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.13.1.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time limit above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.13.2 PRS-RSRP reporting delay test case for dual positioning frequency layer

### A.6.6.13.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 9.9.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.6.13.2.1-1.

**Table A.6.6.13.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR1. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.6.13.2.1-2, and cell specific test parameters are listed in table A.6.6.13.2.1-3.

**Table A.6.6.13.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.13.2.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time limit above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.13.3 PRS-RSRP reporting delay test case for reduced number of samples

#### A.6.6.13.3.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements for reduced number of samples specified in clause 9.9.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.6.13.3.1-1.

**Table A.6.6.13.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.6.13.3.1-2, and cell specific test parameters are listed in table A.6.6.13.3.1-3.

**Table A.6.6.13.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

### A.6.6.13.3.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit for reduced number of samples specified in clause 9.9.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.13.4 PRS-RSRP reporting delay test case for single positioning frequency layer outside MG

### A.6.6.13.4.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement outside MG meets the delay requirements specified in clause 9.9.3.6 in an environment with AWGN propagation conditions. There are two sub-tests in the test, sub-test 1 is to verify the delay requirements with Nsample=1, and sub-test 2 is to verify the delay requirements with Nsample=4.

The supported test configurations are specified in table A.6.6.13.4.1-1.

**Table A.6.6.13.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In sub-test 1, *reducedDL-PRS-ProcessingSamples* shall be included in the location information request and set to '*requested*'.

During T1, a PPW shall be configured for the PCell and be activated via DL MAC CE. The last PDSCH containing the MAC CE shall be transmitted before slot #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first PPW instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.6.13.4.1-2, and cell specific test parameters during T2 are listed in table A.6.6.13.4.1-3.

**Table A.6.6.13.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |
| $BW_{channel}$ | MHz | 1 | 20: $N_{PRB,c}$ = 106 | |
| | | 2 | 20: $N_{PRB,c}$ = 106 | |
| | | 3 | 50: $N_{PRB,c}$ = 133 | |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| SMTC configuration | | 1 | SMTC.2 | |
| | | 2 | SMTC.1 | |
| | | 3 | SMTC.1 | |
| PPW configuration | | 1 | PPW.1 | As defined in A.3.33 |
| | | 2 | PPW.1 | As defined in A.3.33 |
| | | 3 | PPW.1 | As defined in A.3.33 |
| CP length | | 1, 2, 3 | Normal | |
| DRX | | 1, 2, 3 | NA | OFF |
| Time offset between serving and neighbour cells | μs | 1 | 3 | |
| | | 2 | 3 | |
| | | 3 | 3 or 2.34 Note 1 | |
| Expected RSTD | μs | 1, 2, 3 | 0 | |
| Expected RSTD uncertainty | μs | 1, 2, 3 | Same as time offset between serving and neighbour cells | |
| Number of cells provided in assistance data | | 1, 2, 3 | 4 | Including the reference cell |
| T1 | s | 1, 2, 3 | 2 | |
| T2 | s | 1, 2, 3 | 5 | |
| NOTE 1: If UE indicates support of CP length for the receive time difference threshold, the time offset is set to 2.34 us, otherwise 3 us. | | | | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.13.4.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.3.6, starting from the beginning of time interval T2, with Nsample=1 for sub-test 1 and Nsample=4 for sub-test 2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.14 UE Rx-Tx time difference measurements

### A.6.6.14.1 UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA

#### A.6.6.14.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.6.14.1.1-1.

**Table A.6.6.14.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.14.1.1-2 and table A.6.6.14.1.1-3 respectively.

**Table A.6.6.14.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 20: $N_{PRB,c}$ = 106 | |
| | | 2 | 20: $N_{PRB,c}$ = 106 | |
| | | 3 | 50: $N_{PRB,c}$ = 133 | |

**Table A.6.6.14.1.1-4: Void**

### A.6.6.14.1.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.6.6.14.2 UE Rx-Tx time difference measurement for dual positioning frequency layers in FR1 SA

### A.6.6.14.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR1 in standalone scenario when dual positioning frequency layers are configured.

The supported test configurations in listed in table A.6.6.9.2.1-1.

**Table A.6.6.14.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Cell 1 and Cell 2 are on different RF channels in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.14.2.1-2 and table A.6.6.14.2.1-3 respectively.

**Table A.6.6.14.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

**Table A.6.6.14.2.1-4: Void**

### A.6.6.14.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.6.6.14.3 UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA with reduced sample number

#### A.6.6.14.3.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 with Nsample = 1 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.6.14.3.1-1.

**Table A.6.6.14.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. *reducedDL-PRS-ProcessingSamples* shall be included in the location information request and set to '*requested*'. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.14.3.1-2 and table A.6.6.14.3.1-3 respectively.

**Table A.6.6.14.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |

They are not settable parameters themselves. | | | | | | |

### A.6.6.14.3.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5 with Nsample=1.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.6.6.14.4 UE Rx-Tx time difference measurement without gaps in FR1 SA

### A.6.6.14.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.6 in AWGN propagation condition in FR1 in standalone scenario. There are two sub-tests in the test, sub-test 1 is to verify the delay requirements with Nsample=1, and sub-test 2 is to verify the delay requirements with Nsample=4.

The supported test configurations in listed in table A.6.6.14.4.1-1.

**Table A.6.6.14.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of PRS processing window containing the PRS resources.

The UE is configured with PRS processing window before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.14.4.1-2 and table A.6.6.14.4.1-3 respectively.

**Table A.6.6.14.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 20: $N_{PRB,c}$ = 106 | |
| | | 2 | 20: $N_{PRB,c}$ = 106 | |
| | | 3 | 50: $N_{PRB,c}$ = 133 | |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| SMTC configuration | | 1 | SMTC.2 | |
| | | 2 | SMTC.1 | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.14.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.6.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.6.6.14.5 UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA with multiple RxTx TEGs

### A.6.6.14.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured, and when UE is requested to measure a PRS resource with multiple RxTx TEGs.

The supported test configurations in listed in table A.6.6.14.4.1-1.

**Table A.6.6.14.4.11: Supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request. In *nr-Multi-RTT-RequestLocationInformation*, *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* shall be set to 'n2'.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.14.4.1-2 and table A.6.6.14.4.1-3 respectively.

**Table A.6.6.14.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.14.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5, with $k_{multiTEG}$=2 if UE does not support or indicate value 'n1' for *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*, and $k_{multiTEG}$=1 otherwise.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.6.6.14.6 UE Rx-Tx time difference measurements with PRS bandwidth aggregation in FR1 SA

### A.6.6.14.6.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 9.9.4.9 for UE Rx-Tx measurements with PRS bandwidth aggregation. The tests are conducted under AWGN propagation condition with the UE operating in FR1 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR1.

The supported test configurations in listed in table A.6.6.14.6.1-1.

**Table A.6.6.14.6.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The general test parameters and cell specific test parameters are as given in table A.6.6.14.6.1-2 and table A.6.6.14.6.1-3, respectively.

**Table A.6.6.14.6.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

| | | | | |
|---|---|---|---|---|
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel. |
| | | | 2 | For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel. |
| $BW_{channel}$ | MHz | 1 | 20: $N_{RB,c}$ = 106 | For both RF channels |
| | | 2 | 20: $N_{RB,c}$ = 106 | |
| | | 3 | 50: $N_{RB,c}$ = 133 | |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| SMTC configuration | | 1 | SMTC.2 | |
| | | 2 | SMTC.1 | |
| | | 3 | SMTC.1 | |
| Measurement gap | | 1, 2, 3 | GP#24 or GP#0 Note 1 | |
| CP length | | 1, 2, 3 | Normal | |
| DRX | | 1, 2, 3 | OFF | |
| Time offset between serving and neighbour cells | µs | 1, 2, 3 | 3 | Synchronous cells/TRPs |
| Expected RSTD | µs | 1, 2, 3 | 3 | |
| Expected RSTD uncertainty | µs | 1, 2, 3 | 5 | |
| T1 | s | 1, 2, 3 | 5 | |
| T2 | s | 1, 2, 3 | 10 | |
| NOTE 1: GP#24 is configured if the UE supports it, otherwise GP#0 is configured. | | | | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

### A.6.6.14.6.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.9.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25A.3.

## A.6.6.15 Idle Mode measurements of inter-RAT DC candidate cells for early reporting

### A.6.6.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly retains the detected cell status for the idle mode CA/DC measurement when UE transitions from RRC Connected mode to Idle mode, when the UE has entered Idle mode. Additionally, test that the UE performs the required measurements on the serving cell and the configured inter-RAT carrier for idle mode measurement reporting. This test will partly verify the Idle mode CA measurements in clause 4.4. In the test, connected mode DRX configuration is not configured in either PCell or PSCell.

Additionally, the purpose of this test is to verify that the SS-RSRP, SS-RSRQ, RSRP and RSRQ measurement accuracy is within the specified limits. This test will verify the accuracy requirements in sections 10.1.2B and 10.1.7B for intra-frequency measurements and section 10.2.2 and 10.2.3 for the inter-RAT measurements for the supported test configurations in tables A.6.6.15.1-4 and A.6.6.15.1-5.

The supported test configurations are given in table A.6.6.15.1-1. The test parameters are given in tables A.6.6.15.1-2, A.6.6.15.1-3, A.6.6.15.1-4 and A.6.6.15.1-5 below. In the test there are two cells, Cell 1, which is the PCell in connected, and serving cell in idle mode, on radio channel 1 in FR1, and Cell 2, which is the PSCell in connected, and measured LTE inter-RAT cell in idle mode, on radio channel 2 in LTE.

For the purpose of testing absolute accuracy in idle mode in this set of test cases the cells in idle mode are on different carrier frequencies (NR FR1 and LTE). The absolute accuracy of RSRP and RSRQ inter-RAT measurements are tested by using the parameters in table A.6.6.15.1-4 and table A.6.6.15.1-5. In all test cases, Cell 1 is the serving and Cell 2 the target cell.

The test consists of 5 successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. During T1 Cell 2, the PSCell, shall be configured.

Time duration T2 starts when UE has transmitted random access preamble on the PSCell. During T2, the UE is configured with idle mode CA measurements with the PSCell carrier as the target carrier. The connection is released 500 ms after T2 when the UE has sent random access preamble on the PSCell.

T3 starts when the connection is released. During the time periods T3 and T4 the UE is in Idle mode with the serving cell on the FR1 carrier. The UE is configured to perform inter-RAT idle mode CA/DC measurements on Cell 2 carrier. After the connection release and during T3, 1000 ms after T3 is started, the signal level of the inter-RAT carrier configured for idle mode CA/DC measurements is changed at which time T4 starts. T5 starts 65 s after T4, when the UE is paged for connection setup and UE is requested by the network to report idle mode CA/DC measurements.

**Table A.6.6.15.1-1: Supported test configurations for Idle Mode measurements of inter-RAT DC candidate cells for early reporting**

| Config | Description |
|---|---|
| 1 | FR1 FDD SSB SCS 15 kHz BW 10 MHz – LTE FDD 10 MHz |
| 2 | FR1 FDD SSB SCS 15 kHz BW 10 MHz – LTE TDD 10 MHz |
| 3 | FR1 TDD SSB SCS 30 kHz BW 40 MHz – LTE FDD 10 MHz |
| 4 | FR1 TDD SSB SCS 30 kHz BW 40 MHz – LTE TDD 10 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.6.15.1-2: General test parameters for Idle Mode measurements of inter-RAT DC candidate cells for early reporting**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2 | Two radio channels are used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1 in FR1 |

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| PSCell | | Cell 2 | PSCell on RF channel number 2 in LTE. Cell 2 is of higher priority. |
| DRX | | OFF | For both PCell and PSCell once configured |
| PRACH configuration in Cell 2 | | PRACH_2CE | PRACH configuration as specified in clause A.3.16 in TS 36.133 |
| T331 | s | 300 | |
| CSI reporting periodicity and offset configuration for Cell 2 | ms | 2 | |
| T1 | s | 0.5 | During this time the PCell is known and PSCell is configured. |
| T2 | s | 0.5 | PSCell access. |
| T3 + T4 | s | 66 | During this time the UE is configured to perform inter-RAT measurements in idle mode on the PSCell carrier. |
| T5 | s | 0.5 | UE is paged and connection is setup. Network requests measurement report from the UE. |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.15.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During time durations T1 the UE shall start transmitting preamble on PSCell. During T2 the UE perform intra-frequency measurements on the PCell and the PSCell.

During the time-period T3 the connection is released, and UE enters idle mode. During the time period T3 and T4 the UE is camped in Idle mode and at T4 the signal level of Cell 2 is changed. The UE shall not perform reselection. The UE shall perform Idle Mode CA measurement according to section 4.4.

At the start of T5 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell including idle mode CA/DC measurement from Cell 2.

After receiving the requested early measurement report, the test equipment verifies that the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in sections 10.1.2B and 10.1.7B and sections 10.2.4 and 10.2.5, respectively and test ends.

## A.6.6.16 PRS-RSRPP measurements

### A.6.6.16.1 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR1 in RRC_CONNECTED state

#### A.6.6.16.1.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRPP measurement meets the delay requirements specified in clause 9.9.6.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.6.16.1.1-1.

**Table A.6.6.16.1.11: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.6.16.1.1-2, and cell specific test parameters are listed in table A.6.6.16.1.1-3.

**Table A.6.6.16.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.16.1.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.6.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.16.2 PRS-RSRPP reporting delay test case with reduced number of samples for single positioning frequency layer in FR1 in RRC_CONNECTED state

### A.6.6.16.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRPP measurement meets the reduced sample measurement delay requirements specified in clause 9.9.6.5 in an environment with AWGN propagation conditions for reduced number of samples. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.6.6.16.2.1-1.

**Table A.6.6.16.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.6.16.2.1-2, and cell specific test parameters are listed in table A.6.6.16.2.1-3.

**Table A.6.6.16.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.16.2.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.6.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.16.3 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR1 in RRC_CONNECTED state without measurement gap

### A.6.6.16.3.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRPP measurement meets the delay requirements specified in clause 9.9.6.6 in an environment with AWGN propagation conditions. Reporting delay test for gapless PRS measurement is conducted assuming that the PRS has higher priority, i.e., state 1, than all other DL signals/channels and is transmitted within active DL BWP of UE. Two sub-tests are defined, sub-test 1 is for $N_{sample}$ = 4 and sub-test 2 is for $N_{sample}$ = 1. For sub-test 2 LMF indicates UE to perform PRS measurement with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*. The cell specific parameters for sub-test 1 and sub-test 2 are defined in table A.6.6.16.3.1-3.

The supported test configurations are specified in table A.6.6.16.3.1-1.

**Table A.6.6.16.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS processing window instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The UE is configured with PPW before start of T2.

The general test parameters are listed in table A.6.6.16.3.1-2, and cell specific test parameters are listed in table A.6.6.16.3.1-3.

**Table A.6.6.16.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |

They are not settable parameters themselves. | | | | | | |

### A.6.6.16.3.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.6.6, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.17 SA event triggered reporting tests with Pre-MG

### A.6.6.17.1 SA event triggered reporting tests with autonomous activation/deactivation Pre-MG

#### A.6.6.17.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3. And this test will also jointly verify Pre-configured measurement gap activation/deactivation delay in clause 8.19.2.

#### A.6.6.17.1.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.17.1.2-1 and A.6.6.17.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively.

During the duration of T1,

- UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.
- BWP-1 includes bandwidth of the initial DL BWP and SSB. UE is expected to deactivate the Pre-MG when this BWP is active.
- BWP-2 does not include bandwidth of the initial DL BWP and SSB. UE is expected to activate the Pre-MG when this BWP is active.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

- At the start of time duration T2, the serving gNB can trigger Pre-MG activation starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted i. The UE shall switch its bandwidth part from BWP-1 to BWP-2. And UE is expected to complete the Pre-MG activation within T2.
- At the start of time duration T3, the UE may not have any timing information of neighbor cell to be measured (e.g. Cell 2). And UE was expected to complete the measurements of SSBs with the activated Pre-MG within T3.

There are two BWPs configured in Cell 1, BWP-1 which contains the cell defining SSB, and BWP-2 which does not contain any SSB of Cell 1.

**Table A.6.6.17.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.17.1.2-2: General test parameters for SA intra-frequency event triggered reporting with per-UE gaps for PCell in FR1**

| Parameter | Unit | Test configuration | Value | Comment |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.17.1.3 Test Requirements

During T1 the UE shall report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 $s^t$ complete Pre-MG occasion after the beginning of PCell's DL slot $(i+T_{BWPswitchDelay})$ + 5 ms as defined in clause 8.19.2.

During T3, the UE shall NOT be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T3.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.17.2 SA event triggered reporting tests with pre-configured measurement gaps and network-controlled activation/deactivation

### A.6.6.17.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE correctly activates and deactivates the pre-MG and makes correct measurement and reporting of an event with activated and deactivated pre-MG. This test will partly verify the pre-MG activation and deactivation delay requirements in clause 8.19.2 and the intra-frequency cell search requirements in clause 9.2.6.2 and 9.3.4.

### A.6.6.17.2.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The supported test configurations are listed in table A.6.6.17.2.2-1, general test parameters are listed in table A.6.6.17.2.2-2, and cell specific test parameters are listed in table A.6.6.17.2.2-3.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. A pre-MG is configured before the test.

The UE is configured with 2 dedicated BWPs, BWP-1 and BWP-2. BWP-1 includes bandwidth of the SSB, and *preConfGapStatus* for BWP-1 is set to '0'; BWP-2 does not include bandwidth of the SSB, and *preConfGapStatus* for BWP-2 is set to '1'.

The test consists of 3 successive time periods, with time duration of T1, T2, and T3 respectively. Before the test starts, UE is switched to BWP-1.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2 and complete pre-MG activation during T2.

During T3, UE shall perform intra-frequency measurement with pre-MG activated.

During time duration T1 and T2, the UE shall not have any timing information of Cell 2.

**Table A.6.6.17.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2 and T4.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.17.2.3 Test Requirements

During T1, UE shall report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots overlapped with the pre-MG occasions.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T3. During T3, UE is not required to report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots overlapped with the pre-MG occasions.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.17.3 Void

#### A.6.6.17.3.1 Void

#### A.6.6.17.3.2 Void

#### A.6.6.17.3.3 Void

## A.6.6.18 SA event triggered reporting tests with concurrent gaps

### A.6.6.18.1 SA event triggered reporting tests for FR1 concurrent gaps with non-overalpping scenario for SSB-based measurements in both inter-frequency layers

#### A.6.6.18.1.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gaps capable UE makes correct reporting of events. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as neighbour cell in FR1 on NR RF channel 2, and NR cell 3 as neighbour cell in FR1 on NR RF channel 3. The test parameters are given in tables A.6.6.18.1.1-1, A.6.6.18.1.1-2 and A.6.6.18.1.1-3.

Two measurement gap patterns (MeasGapId #1 and MeasGapId #2) are configured with the gap pattern ID #0 and #1 as defined in table A.6.6.18.1.1-2. MeasGapId #2 is configured with a higher priority than MeasGapId #1. MeasGapId #1 and MeasGapId #2 are associated with the MOs for RF channel numbers #2 and #3, respectively.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used for both frequency layers. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2 and NR cell 3.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.18.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than 920 ms for Cell 2 and 1280 ms for cell 3 from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.18.2 SA event triggered reporting tests for FR1 concurrent gap with partially partial overalpping scenario for SSB-based measurements in both inter-frequency layers

### A.6.6.18.2.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gap capable UE makes correct reporting of events. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as neighbour cell in FR1 on NR RF channel 2, and NR cell 3 as neighbour cell in FR1 on NR RF channel 3. The test parameters are given in tables A.6.6.18.2.1-1, A.6.6.18.2.1-2 and A.6.6.18.2.1-3. The TE schedules continuous DL data on PCell throughout the test.

Two measurement gap patterns (MeasGapId #1 and MeasGapId #2) are configured with the gap pattern ID #0 and #1 as defined in table A.6.6.18.2.1-2. MeasGapId #2 is configured with a higher priority than MeasGapId #1. MeasGapId #1 and MeasGapId #2 are associated with the MOs for RF channel numbers #2 and #3, respectively.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used for both frequency layers. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2 and NR cell 3.

**Table A.6.6.18.2.1-1: SA event triggered reporting tests for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.18.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.18.3 SA NR - E-UTRAN and NR FR1 concurrent event-triggered reporting in non-DRX in FR1

### A.6.6.18.3.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of concurrent inter-RAT E-UTRAN and NR FR1 measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2, 9.4.3, 9.3.4 and 9.3.5.

In each test there are three cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the NR PCell, Cell 2 is an Inter-frequency NR FR1 neighbour cell on NR RF channel 2 and Cell 3 is an inter-RAT E-UTRAN neighbour cell on LTE RF channel 3.

In the measurement control information from the PCell it is indictated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used for the E-UTRAN cell (cell 3). In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used for the NR FR1 cell (Cell 2).

Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2 and Cell 3.

In the test two concurrent per-UE measurement gap pattern configurations # 0 as defined in table A.6.6.18.3.1-2 are provided for a UE. Two measurement gap patterns (MeasGapId #1 and MeasGapId #2) are configured with the gap pattern ID #1 as defined in table A.6.6.18.3.1-2. MeasGapId #2 is configured with a higher priority than MeasGapId #1. MeasGapId #1 and MeasGapId #2 are associated with the MOs for NR RF channel numbers #2 and LTE RF channel #3, respectively.

Supported test configurations are shown in table A.6.6.18.3.1-1. General test parameters are provided in table A.6.6.18.3.1-2 below. Test parameters for Cell 1, Cell 2 and Cell 3, valid for both time duration T1 and T2, are provided in tables A.6.6.18.3.1-3 and A.6.6.18.3.1-4, respectively.

The test parameters and configurations are given in tables A.6.6.18.3.1-1, A.6.6.18.3.1-2, and A.6.6.18.3.1-3.

**Table A.6.6.18.3.1-1: Supported test configurations in SA concurrent inter-RAT E-UTRAN and NR FR1 inter-frequency event triggered reporting in non-DRX with PCell in FR1**

NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.18.3.2 Test Requirements

In this test with per-UE gap, the UE shall send one Event A4 triggered measurement report for Cell 2, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE shall send one Event B2 triggered measurement report for Cell 3 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2.

The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.18.4 SA event triggered reporting tests for PRS and SSB measurement in FR1 without SSB time index detection when DRX is not used

### A.6.6.18.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA NR measurements with concurrent gaps requirements in clause 9.2.6(when one of concurrent gaps in same frequency layer of serving cells), 9.3.6(when one of concurrent gaps in the different frequency layer of serving cells) and 9.9.2(when one of concurrent gaps used for PRS measurement).

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as neighbour cell in FR1 on NR RF channel 2 and NR cell 3 as neighbor cell in FR1 on NR RF channel 1. The test parameters are given in tables A.6.6.18.4.1-1, A.6.6.18.4.1-2 and A.6.6.18.4.1-3.

Two measurement gap patterns (MeasGapId #1 and MeasGapId #2) are configured with the gap pattern ID #0 and #24 as defined in table A.6.6.18.4.1-2. MeasGapId #2 is configured with a higher priority than MeasGapId #1. MeasGapId #1 and MeasGapId #2 are associated with the MOs for RF channel numbers #1 and #2, respectively.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2 and NR cell 3. Cell 1 and cell 3 transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance of MeasGapId #2 containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

**Table A.6.6.18.4.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|

NOTE 7: Void

### A.6.6.18.4.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 2, with a measurement reporting delay less than 1840 ms from the beginning of time period T2.

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 3 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in section 9.9.3.5 starting from the beginning of time interval T2.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

IUE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.6.6.19 SA event triggered reporting tests with NCSG

## A.6.6.19.1 SA event triggered reporting tests with NCSG under non-DRX in FR1

### A.6.6.19.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clause 9.2.7.1 and 9.2.7.2, and also verify the scheduling availability during intra-frequency measurement with NCSG in clause 9.2.7.3.

The serving frequency should be selected for which UE reports 'ncsg'.

### A.6.6.19.1.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.19.1.2-1, A.6.6.19.1.2-2 and A.6.6.19.1.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

During T2, the UE is continuously scheduled with data on the PCell.

The UE is capable of NCSG and report '*ncsg*' through *NeedForGapNCSG-InfoNR* for PCell.

NCSG pattern configuration # 0 as defined in table A.6.6.19.1.2-2 is provided for UE regardless of UE capable or incapable of supporting per-FR NCSG.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

**Table A.6.6.19.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.19.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

During T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.19.2 SA event triggered reporting tests for FR1 with NCSG for inter-frequency measurement

### A.6.6.19.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.10.

The serving frequency and the target frequency should be selected such that UE reports ‘ncsg’ for the target frequency given the serving frequency.

### A.6.6.19.2.2 Test parameters

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. NR RF channel 1 and NR RF channel 2 should be selected such that UE reports ‘ncsg’ for the target frequency on NR RF channel 2.

The test parameters are given in tables A.6.6.19.2.2-1, A.6.6.19.2.2-2 and A.6.6.19.2.2-3.

NCSG pattern configuration # 0 as defined in table A.6.6.19.2.2-2 is provided for UE regardless of UE capable or incapable of supporting per-FR NCSG.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

During T2, the UE is continuously scheduled with data on the PCell.

**Table A.6.6.19.2.2-1: SA event triggered reporting tests for FR1 with NCSG for inter-frequency measurement**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

**Table A.6.6.19.2.2-2: General test parameters for event triggered reporting for FR1 with NCSG for inter-frequency measurement**

| Propagation Condition | | Config 1,2,3 | AWGN | | AWGN | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.19.2.3 Test Requirements

In test 1 and 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

During T2, UE shall send HARQ-ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern.

The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.19.3 SA NR - E-UTRAN event-triggered reporting in non-DRX in FR1 with NCSG

### A.6.6.19.3.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements based on NCSG when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clauses 9.4.2 and 9.4.3.

The serving frequency and the target frequency should be selected such that UE reports ‘ncsg’ for the target frequency given the serving frequency.

### A.6.6.19.3.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indictated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.19.3.2-1. General test parameters are provided in table A.6.6.19.3.2-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.19.3.2-3 and A.6.6.19.3.2-4, respectively.

**Table A.6.6.19.3.2-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.19.3.3 Test Requirements

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

During T2, UE shall send HARQ-ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.19.4 Event triggered reporting on SCC with deactivated SCell test with per-UE NCSG under non-DRX

#### A.6.6.19.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the cell search requirements on SCC with deactivated SCell in clauses 9.2.7.1 and 9.2.7.2.

### A.6.6.19.4.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), FR1 SCell (Cell 2) and FR1 neighbour cell (Cell 3) on the same frequency as the SCell. The SCell is deactivated during the test. The test parameters for PCell, the SCell and the neighbour cell are given in table A.6.6.19.4.2-1 and A.6.6.19.4.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3. The PCell shall continuously scheduled with data in the DL starting from T1 until the UE has sent the measurement report during T2.

**Table A.6.6.19.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.19.4.2-2: General test parameters for event triggered reporting on SCC with deactivated SCell with per-UE NCSG for FR1**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | |
| Configured deactivated SCell | | 1, 2, 3 | Cell 2 | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.19.4.3 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1600 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

For a test to be considered successful requirements on both Event A6 detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.20 UE Rx-Tx time difference measurement for propagation delay compensation

### A.6.6.20.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement for RTT-based PDC meets the requirements specified in clause 9.12.4.1 for measurement delay and clause 10.1.39.2 for measurement accuracy in AWGN propagation condition in FR1 in standalone scenario.

The supported test configurations in listed in table A.6.6.20.1-1.

**Table A.6.6.20.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

The test is considered with one cell (Cell 1) in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. If the test is based on PRS, the Cell 1 mutes PRS transmission during T1 and transmits PRS during T2.

If the test is based on PRS, the *MeasObjectRxTxDiff-r17* with *prs-Ref-r17* , *measObject* with *measObjectRxTxDiff-17,* and *NR-DL-PRS-PDC-Info as defined in TS 38.331* shall be provided to the UE during T1.

The last TTI containing the RRC configuration shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 10 ms.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS resources.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.20.1-2. The test parameters for PRS are given Table A.6.6.20.1-3.

**Table A.6.6.20.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value |

They are not settable parameters themselves. | | | | |

### A.6.6.20.2 Test requirements

If the test is based on PRS, the UE Rx-Tx time difference measurement time fulfils the requirements specified in 9.12.4.1.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.39.2 for Cell 1.

## A.6.6.21 UE Rx-Tx time difference measurement with TRS for RTT-based PDC in FR1 SA

### A.6.6.21.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement with TRS for RTT-based PDC meets the requirements specified in clause 9.12.4.2 for measurement delay and clause 10.1.39.3 for measurement accuracy in AWGN propagation condition in FR1 in standalone scenario.

The supported test configurations in listed in table A.6.6.21.1-1.

**Table A.6.6.21.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There is a single cell in the test: PCell (Cell 1) on RF channel 1 in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 does not have TRS transmission during T1 and transmits TRS during T2.

The measurement control information with *MeasObjectRxTxDiff* set to ‘csi-RS-Ref’ as defined in TS 38.331 [2], shall be provided to the UE during T1. The last TTI containing the RRC message shall be provided to the UE ΔT ms before the start of T2, where ΔT = 10 ms is the maximum processing time of the measurement request.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.6.21.1-2 and table A.6.6.21.1-3 respectively. The test consists two sub-tests with different TRS BW.

**Table A.6.6.21.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

They are not settable parameters themselves. | | | | |

### A.6.6.21.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.12.4.2.

The UE shall perform and report the UE Rx-Tx time difference measurement for Cell 1 within the specified UE Rx-Tx time difference measurement time starting from the beginning of T2.

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.39.3

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%.

## A.6.6.22 SA event triggered reporting tests for concurrent measurement gaps with Pre-MG

### A.6.6.22.1 SA event triggered reporting tests for FR1 concurrent gap with Pre-MG with partially partial overalpping scenario for SSB-based measurements in both intra-frequency and inter-frequency layers

#### A.6.6.22.1.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gap with Pre-MG capable UE makes correct reporting of events. This test will partly verify the SA intra-frequency and inter-frequency NR cell search requirements in clauses 9.2.6 and 9.3.4/9.3.5, respectively. Also, this test will also jointly verify pre-configured measurement gap autonomous activation/deactivation delay in clause 8.19.2.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as intra-frequency neighbour cell in FR1 on the same frequency as the PCell, and NR cell 3 as neighbour cell in FR1on NR RF channel 3. There are two BWPs configured in Cell 1, BWP-1 which contains the cell defining SSB, and BWP-2 which does not contain any SSB of Cell 1. The test parameters are given in tables A.6.6.22.1.1-1, A.6.6.22.1.1-2 and A.6.6.22.1.1-3. The TE schedules continuous DL data on PCell throughout the test.

The test consists of four successive time periods, with time durations of T1, T2 and T3 respectively.

Before the test starts,

- For Cell 1, the UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.
  - BWP-1 includes bandwidth of the initial DL BWP and SSB. UE is expected to deactivate the Pre-MG when this BWP is active.
  - BWP-2 does not include bandwidth of the initial DL BWP and SSB. UE is expected to activate the Pre-MG when this BWP is active.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of 2 successive time periods, with durations of T1 and T2, respectively. Before the test starts, the UE shall not have any timing information of NR Cell 2 or NR Cell 3.

During T1, UE active DL BWP is BWP-1, and the pre-configured gap (MeasGapId #1) is deactivated. Cell 3 is switched ON from the beginning of T1, and UE is expected to search for Cell 3 in MeasGapId #2.

At the start of time duration T2, the serving gNB can trigger Pre-MG activation starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted i. The UE shall switch its bandwidth part from BWP-1 to BWP-2. The UE is expected to complete the Pre-MG activation within T2. Cell 2 is switched ON from the beginning of T2, and UE is expected to search for Cell 2 in MeasGapId #1.

Two measurement gap patterns (MeasGapId #1 (Pre-MG) and MeasGapId #2) are configured with the gap pattern ID #0 and #1 as defined in table A.6.6.22.1.1-2. MeasGapId #1 is configured with a higher priority than MeasGapId #1. MeasGapId #1 and MeasGapId #2 are associated with the MOs for RF channel numbers #1 and #2, respectively.

**Table A.6.6.22.1.1-1: SA event triggered reporting tests for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: Target NR cells have the same SCS, BW and duplex mode as NR serving cells | |

**Table A.6.6.22.1.1-2: General test parameters for SA intra-frequency and inter-frequency event triggered reporting for FR1 concurrent gap with Pre-MG with partially partial overalpping scenario for SSB-based measurements in both intra-frequency and inter-frequency layers**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1,2,3 | 1, 2 | Three FR1 NR carrier frequencies are used. |
| Active cell | | Config 1,2,3 | NR Cell 1 (PCell) | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell | | Config 1,2,3 | NR cells 2 and 3 | NR Cell 2 is on NR RF channel number 1. NR cell 3 is on the NR RF channel 2. |
| Gap Pattern Id | | Config 1,2,3 | 1 for MeasGapId #1 (80 ms MGRP)<br>0 for MeasGapId #2 (40 ms MGRP) | As specified in clause 9.1.2-1. |
| Measurement gap offset | ms | Config 1,2,3 | 79 for MeasGapId #1<br>4 for MeasGapId #2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.22.1.2 Test Requirements

For UE supporting *dynamicCollision-r18*:

During T1, the UE shall report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the MeasGapId#2 occasions. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms for cell 3 from the beginning of time period T1. The measurement reporting delay is derived based on the requirements for inter-frequency measurement in clause 9.3.4 and 9.3.5.

For UE not supporting *dynamicCollision-r18*:

During T1, the UE shall report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the non-dropped MeasGapId#2 occasions. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms for cell 3 from the beginning of time period T1. The measurement reporting delay is derived based on the requirements for inter-frequency measurement in clause 9.3.4 and 9.3.5.

For both UE supporting *dynamicCollision-r18* and not supporting *dynamicCollision-r18*:

During T2, the UE shall report ACK/NACK for PDSCHs scheduled in the slots that are not overlapped with the MeasGapId #1 occasions or non-dropped MeasGapId #2 occasions after MeasGapId #1 is activated, i.e. starting from the 1 s$^{t}$ complete MeasGapId #1 occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than 1280 ms for Cell 2 from the beginning of time period T2. The measurement reporting delay is derived based on the requirements for intra-frequency measurement in clause 9.2.6 plus 80 ms, considering that the frist MeasGapId #1 occasion in T2 may collide with the pre-configured gap activation delay.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. UE is not required to report SSB time index.

NOTE 1: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.22.2 SA event triggered reporting tests for concurrent gap with pre-configured gaps and network-controlled activation/deactivation

### A.6.6.22.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE correctly activates and deactivates the pre-MGs and makes correct measurement and reporting of an event with activated and deactivated pre-MG. This test will partly verify the multiple Pre-MG activation/deactivation delay in clause 8.19.5.2, the intra-frequency cell search requirements in clause 9.2.6 and inter-frequency cell search requirements in clause 9.3.4 and 9.3.5..

### A.6.6.22.2.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1) in FR1 on NR RF channel 1 and a neighbour cell (Cell 2) in FR1 on NR RF channel 1 and a neighbour cell (Cell 3) in FR1 on NR RF channel 2. The supported test configurations are listed in table A.6.6.22.2.2-1, general test parameters are listed in table A.6.6.22.2.2-2, and cell specific test parameters are listed in table A.6.6.22.2.2-3.

Two Pre-MG gaps (MeasGapId #1 and MeasGapId #2) are configured with the Pre-MG gap pattern ID #0 and #1 as defined in table A.6.6.22.2.2-2. MeasGapId #2 is configured with a higher priority than MeasGapId #1.

In the measurement control information, two measurement objects (MOs) are configured, the measurement object #1 (MO1) for NR RF channel 1 is associated with MeasGapId #1, and measurement object #2 (MO2) for NR RF channel 2 is associated with MeasGapId #2. And it is indicated to the UE that event-triggered reporting with Event A3 is used.

Before the test, UE is connected to Cell 1 (PCell) on radio channel 1. The UE is configured with two dedicated BWPs for Cell 1 (PCell), BWP-1 and BWP-2. BWP-1 includes bandwidth of the SSB, and *preConfGapStatus* of the pre-MG (MeasGapId #1) for measurements on BWP-1 is set to '0', *preConfGapStatus* of the pre-MG (MeasGapId #2) for measurements on BWP-1 is set to '1'; BWP-2 does not include bandwidth of the SSB, and *preConfGapStatus* of the pre-MG (MeasGapId #1) for measurements on BWP-2 is set to '1', *preConfGapStatus* of the pre-MG (MeasGapId #2) for measurements on BWP-2 is set to '0'.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively.

During T1, UE active DL BWP is BWP-1, and the pre-configured gap (MeasGapId #1) is deactivated, pre-configured gap (MeasGapId #2) is activated. Cell 3 is switched ON from the beginning of T1, and UE is supposed to search Cell 3 in MeasGapId #2.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall switch its DL active BWP from BWP-1 to BWP-2, and the pre-configured gap (MeasGapId #1) is activated and pre-configured gap (MeasGapId #2) is deactivated.

At the beginning of T3, Cell 2 is switched ON, and UE is supposed to search Cell 2 in MeasGapId#1.

During T1, UE shall perform inter-frequency measurement with pre-MG (MeasGapId #2) activated.

During T3, UE shall perform intra-frequency measurement with pre-MG (MeasGapId #1) activated.

The TE schedules continuous DL data on PCell throughout the test.

**Table A.6.6.22.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2 and T4.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.22.2.3 Test Requirements

During T1, UE shall report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the pre-MG occasions of MeasGapId #2; and

The UE shall send one Event A3 triggered measurement report of cell 3 on RF channel 2, with a measurement reporting delay less than 1280 ms from the beginning of time period T1.

During T2 and starting from the 1 s$^t$ complete Pre-MG occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms + 2 ms as defined in clause 8.19.5.2, the UE shall report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the pre-MG occasions of MeasGapId #1.

The UE shall send one Event A3 triggered measurement report of Cell 2 on RF channel 1, with a measurement reporting delay less than 800 ms from the beginning of time period T3.

During T3, the UE shall report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the pre-MG occasions of MeasGapId #1.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.23 SA event triggered reporting tests for concurrent measurement gaps with NCSG

### A.6.6.23.1 SA event triggered reporting tests for FR1 concurrent gaps with NCSG for partially partial overalpping scenario for SSB-based measurements in both inter-frequency layers [one MG + one NCSG]

#### A.6.6.23.1.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gaps with NCSG capable UE makes correct reporting of events. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.10.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as neighbour cell in FR1 on NR RF channel 2, and NR cell 3 as neighbour cell in FR1 on NR RF channel 3. The test parameters are given in tables A.6.6.23.1.1-1, A.6.6.23.1.1-2 and A.6.6.23.1.1-3.

One measurement gap and one NCSG are configured to UE with measurement gap pattern #0 and NCSG pattern #1 respectively. Measurement gap with pattern #0 is associated with intra-frequency measurement on NR Cell 2, and NCSG with pattern #1 is associated with inter-frequency measurement on NR cell 3 as defined in table A.6.6.23.1.1-2.

NCSG is configured with higher priority than measurement gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used for both frequency layers. The test consists of two successive time periods, with time duration of T1, and T2 respectively.

During time duration T1, the UE shall not have any timing information of NR Cell 2 and NR cell 3.

During T2, the UE is continuously scheduled with data on the PCell.

**Table A.6.6.23.1.1-1: SA event triggered reporting tests for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: Target NR cells have the same SCS, BW and duplex mode as NR serving cells | |

**Table A.6.6.23.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 concurrent NCSGs with partially partially overalpping scenario for SSB-based measurements in both inter-frequency layers**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1,2,3 | 1, 2, 3 | Three FR1 NR carrier frequencies are used. |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.23.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than [1280] ms for Cell 2 and [1280 ms] for cell 3 from the beginning of time period T2.

During T2, UE shall send HARQ-ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern after considering the collision between NCSGs.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.23.2 SA event triggered reporting tests for FR1 concurrent gaps with NCSG for partially partial overalpping scenario for SSB-based measurements in both inter-frequency layers [two NCSG]

#### A.6.6.23.2.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gaps with NCSG capable UE makes correct reporting of events. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.10.

In this test, there are three cells: NR Cell 1 as PCell in FR1 on NR RF channel 1, NR Cell 2 as neighbour cell in FR1 on NR RF channel 2, and NR cell 3 as neighbour cell in FR1 on NR RF channel 3. The test parameters are given in tables A.6.6.23.2.1-1, A.6.6.23.2.1-2 and A.6.6.23.2.1-3.

Two NCSG patterns (NCSGId #0 and NCSGId #1) are configured with the NCSG pattern ID #0 and #1 as defined in table A.6.6.23.2.1-2. NCSGId #1 is configured with a higher priority than NCSGId #0.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used for both frequency layers. The test consists of two successive time periods, with time duration of T1, and T2 respectively.

During time duration T1, the UE shall not have any timing information of NR Cell 2 and NR cell 3.

During T2, the UE is continuously scheduled with data on the PCell.

**Table A.6.6.23.2.1-1: SA event triggered reporting tests for FR1-FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.23.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than [1280] ms for Cell 2 and [1280 ms] for cell 3 from the beginning of time period T2.

During T2, UE shall send HARQ-ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern after considering the collision between NCSGs.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.23.3 Event triggered reporting on SCC with deactivated SCell test with per-UE Con-NCSG under non-DRX

### A.6.6.23.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the cell search requirements on SCC with deactivated SCell in clauses 9.2.7.1 and 9.2.7.2.

### A.6.6.23.3.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1) on NR RF channel 1, FR1 SCell (Cell 2) and FR1 neighbour cell (Cell 3) on the same frequency as the SCell on NR RF channel 2.

The SCell is deactivated during the test. The test parameters for PCell, the SCell and the neighbour cell are given in table A.6.6.23.3.2-1 and A.6.6.23.3.2-2 below.

One measurement gap patterns (MeasGapId #1) and one NCSG pattern (NCSGId #1) are configured with the gap pattern ID #0 and NCSG pattern ID #0 as defined in table A.6.6.x.1.1-2. [NCSGId #1 is associated with the MO for RF channel numbers #2, respectively.]

In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3. The PCell shall continuously scheduled with data in the DL starting from T1 until the UE has sent the measurement report during T2.

**Table A.6.6.23.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.6.23.3.2-2: General test parameters for event triggered reporting on SCC with deactivated SCell with per-UE Con-NCSG for FR1**

They are not settable parameters themselves. | | | | | | | | |

#### A.6.6.23.3.3 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than [6400] ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern and MGL of MG pattern.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

For a test to be considered successful requirements on both Event A6 detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.24 SA event triggered reporting tests with NeedForGap in FR1

### A.6.6.24.1 SA event triggered reporting tests without gaps, with interruptions, under non-DRX

#### A.6.6.24.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event, and to verify that the interruption ratio does not exceed the limits for the NR PCell during the measurement without gaps and with interruptions. This test will partly verify the cell search requirements in clauses 9.2.5.1 and 9.2.5.2 for measurements performed without gaps and with interruptions. This test will also verify the interruption ratio for PCell in standalone NR specified in clause 8.2.2.2.19. The test will measure that the measurement delay is within the specified boundaries.

The serving frequency should be selected for which UE reports ‘no-gap’ in NeedForGapsIntraFreq-r16 and ‘no-gap-with-interruption’ in interruptionIndication-r18.

#### A.6.6.24.1.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in table A.6.6.24.1.2-1, A.6.6.24.1.2-2 and A.6.6.24.1.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

The UE is capable of measurements without gaps with interruption and report ‘no-gap’ through NeedForGapsIntraFreq-r16 and ‘no-gap-with-interruption’ in interruptionIndication-r18 for PCell. UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment.

**Table A.6.6.24.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.24.1.3 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1 and T2.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

During 1000 ms from the beginning of time period T2, the UE shall transmit ACK/NACK in PCell and the rate of missed ACK/NACK shall no more than 2.5%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.24.2 SA event triggered reporting tests for FR1 without gap with interruption for inter-frequency measurement with SSB time index detection when DRX is not used

### A.6.6.24.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.9 and interruption requirements during measurement without gap in clause 8.2.2.2.19.

The serving frequency and the target frequency should be selected such that UE reports 'no-gap' via needForGapsInfoNR-r16 and 'no-gap-with-interruption' via NeedForInterruptionNR-r18 for the target frequency given the serving frequency.

### A.6.6.24.2.2 Test parameters

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. NR RF channel 1 and NR RF channel 2 should be selected such that UE reports 'no-gap-with-interruption' for the target frequency on NR RF channel 2. The test parameters are given in tables A.6.6.24.2.2-1, A.6.6.24.2.2-2 and A.6.6.24.2.2-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

During T2, the UE is continuously scheduled with data on the PCell.

### A.6.6.24.2.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1520 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

During 1520 ms from the beginning of time period T2, the UE shall transmit ACK/NACK in PCell and the rate of missed ACK/NACKs shall no more than 2.5%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.24.3 SA event triggered reporting tests for FR1 with 'no-gap-with-interruption', without measurement gap or DRX

### A.6.6.24.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

The serving frequency and the target frequency should be selected such that UE reports 'no-gap-with-interruption' for the target frequency given the serving frequency.

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. Supported test configurations are shown in table A.6.6.24.3.1-1. The general test parameters are given in tables A.6.6.24.3.1-2, and cell specific test parameters are given in table A.6.6.24.3.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

The TE schedules continuous DL data on PCell during the test duration.

**Table A.6.6.24.3.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config | Description |
|---|---|

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.6.6.24.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 2560 ms from the beginning of time period T2, where 2560 ms is derived based on inter-frequency measurement requirements in clause 9.3.4.

In the test, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots with an interruption ratio between number of interrupted slot over the total number of slots no larger than 1.25%.

In the test UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.24.4 SA event triggered reporting tests for FR1 NeedForGaps without gap without interruption when DRX is not used

#### A.6.6.24.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.9 and also verify the interruption during inter-frequency measurement with NeedForGaps.

The serving frequency and the target frequency should be selected for which UE supports *NeedForInterruptionInfoNR-R18* measurements and indicates '*no-gap-no-interruption*' for the target frequency given the serving frequency.

#### A.6.6.24.4.2 Test parameters

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The test parameters are given in tables A.6.6.24.4.1-1, A.6.6.24.4.1-2 and A.6.6.24.4.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

During T2, the UE is continuously scheduled with data on the PCell.

### A.6.6.24.4.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than [200] ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

During T2, UE shall send HARQ-ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots.

The rate of correct events observed during repeated tests shall be at least 90%.

The UE is not required to read the neighbour cell SSB index in this test.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.24.5 SA event triggered reporting tests without gap under non-DRX for UE indicating *no-gap-no-interruption*

### A.6.6.24.5.1 Test purpose and Environment

The purpose of this test is to verify that the UE which supports '*no-gap*' makes correct reporting of an event and the UE performs intra-frequency measurement without gap without interuption when the UE indicates '*no-gap*' via *intraFreq-needForGap* and the UE indicates *no-gap-no-interruption* via *NeedForInterruptionInfoNR-r18*. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

### A.6.6.24.5.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in table A.6.6.24.5.2-2 and A.6.6.24.5.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.24.5.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

| | |
|---|---|
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.24.5.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

UE is not allowed to cause interruption during intra-frequency measurement without gap.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.25 SA NR - E-UTRAN event-triggered without measurement gaps

### A.6.6.25.1 SA NR - E-UTRAN event-triggered reporting in non-DRX in FR1

#### A.6.6.25.1.1 Test Purpose and Environment

The purpose of this set of tests is to verify that if UE reports "*nogap-noncsg*" via *NeedForGapNCSG-InfoEUTRA-r17*, the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clause 9.4.8.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. In the measurement control information from the PCell it is indictated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.25.1.1-1. General test parameters are provided in table A.6.6.25.1.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.25.1.1-3 and A.6.6.25.1.1-4, respectively.

**Table A.6.6.25.1.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.25.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria are not fulfilled.

During the T1 and T2, UE shall be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those symbles as defined in 9.4.8.3.5 or 9.4.8.4.5.

The rate of correct events observed during repeated tests shall be at least 90%

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.25.2 SA NR - E-UTRAN event-triggered reporting without gap under non-DRX in FR1

### A.6.6.25.2.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements without gap as there are vacant RF chains available for UE measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clauses 9.4.8, and also verify the scheduling availability during inter-RAT measurement without gap in clause 9.4.8.3.5.

The serving frequency and the target frequency should be selected such that UE reports '*nogap-noncsg*' via *NeedForGapNCSG-InfoEUTRA-r17* for the target frequency given the serving frequency and '[*32-6 to supportEMWconifugation*]'.

### A.6.6.25.2.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indictated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are given in Table A.6.6.3.2.1-1 and for EMW configuration in table A.6.6.25.2.2-1. General test parameters are provided in Table A.6.6.25.2.2-2. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.3.2.1-3 and A.6.6.3.2.1-4, respectively.

**Table A.6.6.25.2.2-1: EMW confiugation test parameters for SA inter-RAT E-UTRA without gap event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Unit | Configuration | EMW confiutation |
|---|---|---|---|
| **EMW configuration** | | **1, 2, 3, 4, 5, 6** | **TBD** |

**Table A.6.6.25.2.2-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Unit | Test 1 | Test 2 | Comment |
|---|---|---|---|---|
| | | Value | | |
| NR RF Channel Number | | 1 | | 1 NR carrier frequency is used in the test |
| LTE RF Channel Number | | 2 | | 1 LTE carrier frequency is used in the test |
| Channel Bandwidth | MHz | As specified in tables A.6.6.3.2.1-2 and A.6.6.3.2.1-3. | | |
| Active cell | | Cell 1 | | Cell 1 is on RF channel number 1 |
| Neighbour cell | | Cell 2 | | Cell 2 is on RF channel number 2 |
| Gap Pattern Id | | 0 | | As specified in clause Table 9.1.2-1. Per-UE gap pattern. |
| NR measurement quantity | | SS-RSRP | | Measurement quantity for Cell 1 |
| Inter-RAT E-UTRAN measurement quantity | | RSRP | | Measurement quantity for Cell 2 |
| b2-Threshold1 | dBm | Note 1 | | SS-RSRP threshold for SS-RSRP measurement on cell1 for event B2 |
| b2-Threshold2EUTRA | dBm | -95 | | E-UTRAN RSRP threshold for RSRP measurement on cell 2 for event B2 |
| Hysteresis | dB | 0 | | |
| TimeToTrigger | s | 0 | | |
| Filter coefficient | | 0 | | L3 filtering is not used |
| DRX | | OFF | OFF | Non-DRX |
| T1 | s | 5 | | |
| T2 | s | 5 | 15 | |
| NOTE 1: Values are defined in table A.6.6.3.2.1-3 | | | | |

### A.6.6.25.2.3 Test Requirements

The actual overall measurement delay requiremetns can refere to the requirements in A.6.6.3.1.2. And during T1 and T2, for the two subtests regarding to EMW conifuation, UE shall or not send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell based on the requirements defined in 9.4.8.3.5.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.25.3 SA NR - E-UTRAN event-triggered reporting in non-DRX in FR1 for UE capable of inter-RAT EUTRAN measurement without gap when CRS is contained within UE's active DL BWP

### A.6.6.25.3.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE which supports inter-RAT EUTRAN measurement without gap when CRS is contained within UE's active DL BWP makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in clauses 9.4.8, and also verify the scheduling availability during inter-RAT EUTRAN in clause 9.4.8.3.5 and 9.4.8.4.5.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. The CRS of Cell 2 is completely within UE's active BWP BW.

In the measurement control information from the PCell, it is indictated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.25.3.1-1. General test parameters are provided in table A.6.6.25.3.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in tables A.6.6.25.3.1-3 and A.6.6.25.3.1-4, respectively.

**Table A.6.6.25.3.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.6.25.3.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | 1 NR carrier frequency is used in the test |
| LTE RF Channel Number | | 1 | 1 LTE carrier frequency is used in the test |
| Channel Bandwidth | MHz | As specified in tables A.6.6.3.1.1-2 and A.6.6.3.1.1-3. | |

NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.25.3.2 Test Requirements

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84 s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

During T2, UE does not cause interruption due to inter-RAT EUTRAN measurement without gap.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.6.6.26 LTM Intra-frequency L1-RSRP measurement

## A.6.6.26.1 Intra-frequency SSB based L1-RSRP measurement in FR1

### A.6.6.26.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SSB based intra-frequency L1-RSRP measurement on neighbor cell in FR1. This test will partly verify the requirements for SSB based intra-frequency L1-RSRP measurement on neighbor cell specified in clause 9.14, with the testing configurations for NR cells in table A.6.6.26.1.1-1.

**Table A.6.6.26.1.1-1: Applicable NR configurations for SSB based intra-frequency L1-RSRP LTM measurement test in FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.6.26.1.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Measurement period [and measurement accuracy] is tested by using the parameters in table A.6.6.26.1.2-1, and A.6.6.26.1.2-2.

There are two tests in the test case, test 1 and test 2:

In test 1, time offset between cells is within CP length.

In test 2, time offset between cells is larger than CP length.

If a UE does not support *multiCellL1-measRTD-greaterThan-CP-r18*, it is only required to pass test 1. Otherwise, it is only required to pass test 2.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. No gap patterns are configured in the test case.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.

- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1. T2 starts at the beginning of a frame with an odd SFN.

**Table A.6.6.26.1.2-1: General test parameters for SSB based intra-frequency L1-RSRP LTM measurement test in FR1**

| Parameter | | Unit | Value | | Comment |
|---|---|---|---|---|---|

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.26.1.3 Test Requirements

The UE shall send L1-RSRP report every 20 slots. The UE shall start to report a larger L1-RSRP value of Cell 2 in no later than 20 ms plus 20 slots from the beginning of time period T2. UE shall send L1-RSRP report including results of Cell 2 while meeting the L1-RSRP absolute accuracy requirement in clause 10.1.19D.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.27 LTM Inter-frequency L1-RSRP measurement with measurement gap

### A.6.6.27.1 Inter-frequency SSB based L1-RSRP measurement with measurement gap

#### A.6.6.27.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of inter-frequency L1-RSRP measurement with measurement gap on candidate neighbour cell. This test will partly verify the L1-RSRP measurement requirements in clause 9.15.5, with the testing configurations for NR cells in table A.6.6.27.1.1-1.

**Table A.6.6.27.1.1-1: Applicable NR configurations for SSB based inter-frequency L1-RSRP LTM measurement with MG test in FR1**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: Target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

## A.6.6.27.1.2 Test parameters

There are two carriers and one cell on each carrier in the test, NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters for the Cell 1 and Cell 2 are given in table A.6.6.27.1.2-1 and table A.6.6.27.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform inter-frequency L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively.

Measurement gap pattern configuration defined in table A.6.6.27.1.2-1 is provided.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the RF channel 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1.

**Table A.6.6.27.1.2-1: General test parameters for SSB based inter-frequency L1-RSRP LTM measurement with MG test in FR1**

| Parameter | | Unit | Value | Comment |

| NOTE 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 4: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.. | | | | | | |

### A.6.6.27.1.3 Test Requirements

During T1 The UE shall send inter-frequency L1-RSRP report every 80 slots. No later than 80 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report of Cell 2. The RSRP report during T2 shall be larger than that during T1. These reported measurement report shall meet the absolute accuracy requirement in clause 10.1.19E. The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.28 LTM Inter-frequency L1-RSRP measurement without measurement gap

### A.6.6.28.1 Inter-frequency SSB based L1-RSRP measurement without measurement gap

#### A.6.6.28.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting inter-frequency L1-RSRP measurements without gap makes correct reporting of inter-frequency L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.15.6, with the testing configurations for NR serving cells in table A.6.6.28.1.1-1.

**Table A.6.6.28.1.1-1: Applicable NR configurations for SSB based inter-frequency L1-RSRP measurement without measurement gap in test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |
| NOTE 2: Target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

#### A.6.6.28.1.2 Test parameters

There are two cells in the test, the FR1 PCell (Cell 1) on NR RF channel 1 and Cell 2 as neighbour cell in FR1 on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The RBs containing SSB from Cell 1 and Cell 2 should be different in frequency location within the cell bandwidth. The test parameters are given in table A.6.6.28.1.2-1 and table A.6.6.28.1.2-2 below.

There are two tests in the test case, test 1 and test 2:

In test 1, time offset between cells is within CP length.

In test 2, time offset between cells is larger than CP length.

UE not capable of *multiCellL1-measRTD-greaterThan-CP-r18* is only required to pass test 1. Otherwise, it is only required to pass test 2.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. There is no measurement gap configured in the test.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for RF channel 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1. T2 starts at the beginning of a frame with an even SFN.

**Table A.6.6.28.1.2-1: General test parameters for SSB based inter-frequency L1-RSRP measurement without measurement gap in test**

| Parameter | | Unit | Value | | Comment |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.6.28.1.3 Test Requirements

The UE shall send L1-RSRP report every 20 slots. No later than 20 ms plus 20 slots from the beginning of time period T2, UE shall send L1-RSRP report of Cell 2 while meeting the absolute accuracy requirement in clause 10.1.19E.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.6.6.29 RSCPD Measurements

## A.6.6.29.1 NR RSCPD with RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_CONNECTED state

### A.6.6.29.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD measurement reported together with the RSTD measurement meets the requirements specified in clause 9.9.7 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured to the UE.

The supported test configurations are specified in table A.6.6.29.1.1-1.

**Table A.6.6.29.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.10, shall be provided to the UE during T1. In *NR-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources to be measured within the configured time window.

The UE is configured with measurement gap pattern ID # 24 or # 0 before T2.

The general test parameters are listed in table A.6.6.29.1.1-2, and cell specific test parameters are listed in table A.6.6.29.1.1-3.

**Table A.6.6.29.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSCPD and RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted. | | | | | |

### A.6.6.29.1.2 Test Requirements

The RSCPD reported together with RSTD measurement time fulfils the requirements specified in the clause 9.9.7.

The UE shall perform and report the RSCPD and RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.7 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for DL RSCPD measurement for each neighbour cell observed during the repeated tests shall be at least 90%. The reported DL RSCPD measurement shall be within the DL RSCPD reporting range specified in the clause 10.1.43 and the reported RSTD measurement shall be within the RSTD reporting range specified in the clause 10.1.23.

## A.6.6.30 RSCP Measurements

### A.6.6.30.1 DL RSCP with UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA

#### A.6.6.30.1.1 Test purpose and environment

The purpose of the test is to verify that the DL RSCP and UE Rx-Tx time difference measurements meet the requirements specified in clause 9.9.8.5 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured for both DL RSCP measurement and UE Rx-Tx time difference measurement.

The supported test configurations are listed in table A.6.6.30.1.1-1.

**Table A.6.6.30.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE during T1. In *NR-Multi-RTT-RequestLocationInformation*, the UE is configured to perform DL RSCP measurement via *nr-DL-PRS-RSCP-Request*. The UE is configured to perform both DL RSCP and UE Rx-Tx time difference measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources to be measured within the configured time window.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are listed in table A.6.6.30.1.1-2 and table A.6.6.30.1.1-3.

**Table A.6.6.30.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.6.30.1.2 Test requirements

The DL RSCP with UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.8 with Nsample=4 for UE Rx-Tx time difference.

The UE shall perform and report the DL RSCP and UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified DL RSCP with UE Rx-Tx time difference measurement time specified in clause 9.9.8 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%. The reported DL RSCP measurement shall be within the DL RSCP reporting range specified in clause 10.1.44 and the reported UE Rx-Tx measurement shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.

## A.6.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in clause 10 for at least 90% of the reported cases.
- Measurements are performed in RRC_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

### A.6.7.1 SS-RSRP

#### A.6.7.1.1 SA: intra-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

##### A.6.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.2.1.1 and 10.1.2.1.2 for intra-frequency measurements.

##### A.6.7.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.6.7.1.1.2-2. In all test cases, Cell 1 is the PCell, and Cell 2 is the target cell.

**Table A.6.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description |
|---|---|

| | |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| Propagation condition | | | - | AWGN | | | | | |
| Antenna configuration | | | | 1x2 | | | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | | | | |

| Parameter | Unit | Test 1 | | Test 2 | | Test 3 | |
|---|---|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | | |
| NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | |
| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | | | |
| NOTE 5: Subtest 1 is not used when testing with 30 kHz SSB SCS. | | | | | | | |
| NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification | | | | | | | |

#### A.6.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil absolute requirement in clause 10.1.2.1.1 and relative requirement in clause 10.1.2.1.2.

### A.6.7.1.2 SA inter-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.4.1.1 and 10.1.4.1.2 for inter-frequency measurements with the testing configurations for NR cells in table A.6.7.1.2.1-1.

**Table A.6.7.1.2.1-1: Applicable NR configurations for FR1 inter-frequency SS-RSRP accuracy test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.1.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.6.7.1.2.2-1 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.6.7.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.6.7.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

#### A.6.7.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirement in clause 10.1.4.1.1 and relative requirement in clause 10.1.4.1.2.

### A.6.7.1.3 Void

## A.6.7.2 SS-RSRQ

### A.6.7.2.1 SA: Intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.7.1.1.

#### A.6.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.6.7.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in table A.6.7.2.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Antenna configuration | | | | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.7.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.7.1.1.

### A.6.7.2.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.1.1 and 10.1.9.1.2.

#### A.6.7.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.6.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in table A.6.7.2.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Antenna configuration | | | | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.9.1.1 and 10.1.9.1.2.

## A.6.7.3 SS-SINR

### A.6.7.3.1 SA intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.12.1.1.

#### A.6.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.6.7.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in table A.6.7.3.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.12.1.1.

### A.6.7.3.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.14.1.1 and 10.1.14.1.2.

### A.6.7.3.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.6.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in table A.6.7.3.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Propagation condition | | | - | AWGN | | | | | |
| Antenna configuration | | | - | 1x2 | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: NR operating band groups are as defined in clause 3.5.2.

| Parameter | Unit | Test 1 | | Test 2 | | Test 3 | |
|---|---|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification. | | | | | | | |

#### A.6.7.3.2.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.14.1.1 and 10.1.14.1.2.

## A.6.7.4 L1-RSRP measurement for beam reporting

### A.6.7.4.1 SSB based L1-RSRP measurement

#### A.6.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.5.2 and clause 10.1.19.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.6.7.4.1.1-1.

**Table A.6.7.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.4.1.2 Test parameters

In this set of test cases there one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.6.7.4.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

#### A.6.7.4.1.3 Test Requirements

The L1-RSRP measurement accuracy for SSB resource reported by UE in L1-RSRP report (SSB#0 or SSB#1) of Cell 2 shall fulfil the requirements in clauses 10.1.19.1.

### A.6.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

#### A.6.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.5.3 and clause 10.1.19.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in table A.6.7.4.2.1-1.

**Table A.6.7.4.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.4.2.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.4.2.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.6.7.4.2.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.6.7.4.2.2-1: FR1 CSI-RS based L1-RSRP test parameters**

| Propagation condition | | 1~3 | | AWGN | AWGN |
| Antenna configuration | | 1~3 | | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.4.2.3 Test Requirements

The L1-RSRP measurement accuracy for CSI-RS resource reported by UE in L1-RSRP report (CSI-RS#0 or CSI-RS#1) of Cell 1 shall fulfil the requirements in clause 10.1.19.2.

## A.6.7.5 E-UTRAN RSRP

### A.6.7.5.1 SA: inter-RAT measurement accuracy with FR1 serving cell

#### A.6.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.2.2 for SA inter-RAT E-UTRAN RSRP measurements.

#### A.6.7.5.1.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an E-UTRAN inter-RAT neighbour cell. Supported test configurations are shown in table A.6.7.5.1.2-1. The measurement accuracy of SA inter-RAT E-UTRAN RSRP are tested by using the parameters in A.6.7.5.1.2-2 and A.6.7.5.1.2-3.

**Table A.6.7.5.1.2-1: Inter-RAT E-UTRAN RSRP supported test configurations with FR1 serving cell**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN FDD |

| NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23]. | | | |
| NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively. | | | |
| NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |
| NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |
| NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | |
| NOTE 6: E-UTRA operating band groups are as defined in clause 3.5 of TS 36.133 [15]. | | | |
| NOTE 7: For Band 26, the tests shall be performed with the carrier frequency of assigned E-UTRA channel bandwidth within 865-894 MHz. | | | |
| NOTE 8: Except Band 29. | | | |
| NOTE 9: Except Band 32, Band 75 and Band 76. | | | |
| NOTE 10: For Band 74, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 1475.9-1510.9 MHz. | | | |

#### A.6.7.5.1.3 Test Requirements

The SA inter-RAT E-UTRAN RSRP measurement accuracy for Cell 2 shall fulfil absolute requirement in clause 10.2.2.

## A.6.7.6 E-UTRAN RSRQ

### A.6.7.6.1 SA: inter-RAT measurement accuracy with FR1 serving cell

#### A.6.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.2.3 for SA inter-RAT E-UTRAN RSRQ measurements.

#### A.6.7.6.1.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an E-UTRAN inter-RAT neighbour cell. Supported test configurations are shown in table A.6.7.6.1.2-1. The measurement accuracy of SA inter-RAT E-UTRAN RSRQ are tested by using the parameters in A.6.7.6.1.2-2 and A.6.7.6.1.2-3.

**Table A.6.7.6.1.2-1: Inter-RAT E-UTRAN RSRQ supported test configurations with FR1 serving cell**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, RSRQ and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 6: E-UTRA operating band groups are as defined in clause 3.5 of TS 36.133 [15].
NOTE 7: For Band 26, the tests shall be performed with the carrier frequency of assigned E-UTRA channel bandwidth within 865-894 MHz.
NOTE 8: Except Band 29.
NOTE 9: Except Band 32, Band 75 and Band 76.
NOTE 10: For Band 74, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 1475.9-1510.9 MHz.

#### A.6.7.6.1.3 Test Requirements

The SA inter-RAT E-UTRAN RSRQ measurement accuracy for Cell 2 shall fulfil absolute requirement in clause 10.2.3.

## A.6.7.7 E-UTRAN RS-SINR

### A.6.7.7.1 SA: inter-RAT measurement accuracy with FR1 serving cell

#### A.6.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN RS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.2.4 for SA inter-RAT E-UTRAN RS-SINR measurements.

#### A.6.7.7.1.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an E-UTRAN inter-RAT neighbour cell. Supported test configurations are shown in table A.6.7.7.1.2-1. The measurement accuracy of SA inter-RAT E-UTRAN RS-SINR are tested by using the parameters in A.6.7.7.1.2-2 and A.6.7.7.1.2-3.

**Table A.6.7.7.1.2-1: Inter-RAT E-UTRAN RS-SINR supported test configurations with FR1 serving cell**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 4a: Void.
NOTE 5: CRS $\hat{E}_s/I_{ot}$, RSRP, RS-SINR and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 6: E-UTRA operating band groups are as defined in clause 3.5 of TS 36.133 [15].
NOTE 7: For Band 26, the tests shall be performed with the carrier frequency of assigned E-UTRA channel bandwidth within 865-894 MHz.
NOTE 8: Except Band 29.
NOTE 9: Except Band 32, Band 75 and Band 76.

| Parameter | Unit | Cell 2 | | |
|---|---|---|---|---|
| | | Test 1 | Test 2 | Test 3 |
| NOTE 10: For Band 74, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 1475.9-1510.9 MHz. | | | | |

#### A.6.7.7.1.3 Test Requirements

The SA inter-RAT E-UTRAN RS-SINR measurement accuracy for Cell 2 shall fulfil absolute requirement in clause 10.2.4.

## A.6.7.8 CLI measurements

### A.6.7.8.1 SA SRS-RSRP measurement accuracy with FR1 serving cell

#### A.6.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.1.1 with the testing configurations for NR cells in table A.6.7.8.1.1-1.

**Table A.6.7.8.1.1-1: Applicable NR configurations for FR1 SRS-RSRP accuracy test**

| Config | Description |
|---|---|
| 1 | 15 kHz SRS SCS, 10 MHz bandwidth, TDD duplex mode |
| 2 | 30 kHz SRS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.8.1.2 Test parameters

In this set of test cases there is one cell in the test, FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.8.1.2-1 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in table A.6.7.8.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in table A.6.7.8.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 1 data symbol before SRS to be transmitted.

#### A.6.7.8.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the requirements in clauses 10.1.22.1.1.

### A.6.7.8.2 SA CLI-RSSI measurement accuracy with FR1 serving cell

#### A.6.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.2.1 with the testing configurations for NR cells in table A.6.7.8.2.1-1.

**Table A.6.7.8.2.1-1: Applicable NR configurations for FR1 CLI-RSSI accuracy test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SRS SCS, 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 30 kHz SRS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.8.2.2 Test parameters

In this set of test cases there is one cell in the test, the FR1 PSCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.8.2.2-1 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 1 data symbol before. The CLI-RSSI measurement resource configuration is in table A.6.7.8.2.2-2.

**Table A.6.7.8.2.2-1: FR1 test parameters for CLI-RSSI accuracy**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |

| $\hat{E}_s / N_{oc}$ on CLI-RSSI measurement resource | 1~2 | dB | -Infinity |
| Propagation condition | 1~2 | | AWGN |
| Antenna configuration | 1~2 | | 1x2 |

NOTE 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification
NOTE 6: OCNG is not transmitted in the CLI-RSSI measurement resources.

**Table A.6.7.8.2.2-2: CLI-RSSI measurement resource configuration for FR1 CLI-RSSI accuracy**

| | Field | Config | SRSConf.1 |
|---|---|---|---|
| CLI-RSSI measurement resource | rssi-ResourceId | 1~2 | 0 |

| | | | |

| | rssi-PeriodicityAndOffset | 1 | sl20, 9 |
| | | 2 | sl40, 19 |

#### A.6.7.8.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the requirements in clauses 10.1.22.2.1.

## A.6.7.9 L1-SINR measurement for beam reporting

### A.6.7.9.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

#### A.6.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.8.4.1 and clause 10.1.27.1 for L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in table A.6.7.9.1.1-1.

**Table A.6.7.9.1.1-1: Applicable NR configurations for FR1 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured**

| Config | Description |
|---|---|
| 1 | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.9.1.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.9.1.2-1 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.6.7.9.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.6.7.9.1.2-1: FR1 CSI-RS based L1-SINR test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | |
| NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification. | | | | |

#### A.6.7.9.1.3 Test Requirements

The L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.27.1.

### A.6.7.9.2 L1-SINR measurement with SSB based CMR and dedicated IMR

#### A.6.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.8.4.2 and clause 10.1.27.2 for L1-SINR measurements with SSB based CMR and dedicated CSI-RS based IMR, with the testing configurations for NR cells in table A.6.7.9.2.1-1.

**Table A.6.7.9.2.1-1: Applicable NR configurations for FR1 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.9.2.2 Test parameters

In this set of test cases there one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.9.2.2-1 below. The absolute accuracy of L1-SINR measurements are tested by using the parameters in table A.6.7.9.2.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-RS resource set with two CSI-RS resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

| Propagation condition | | 1~3 | | AWGN | AWGN |
| Antenna configuration | | 1~3 | | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.9.2.3 Test Requirements

The L1-SINR measurement accuracy for SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 of Cell 1 shall fulfil the requirements in clauses 10.1.27.2.

### A.6.7.9.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

#### A.6.7.9.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in clauses 9.8.4.3 and clause 10.1.27.3 for L1-SINR measurements based on CSI-RS as CMR and CSI-IM as IMR with the testing configurations for NR cells in table A.6.7.9.3.1-1.

**Table A.6.7.9.3.1-1: Applicable NR configurations for FR1 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR**

| Config | Description |
|---|---|
| 1 | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.6.7.9.3.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.9.3.2-1 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.6.7.9.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources and one CSI-IM resource set with two CSI-IM resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as CMR and CSI-IM as IMR.

| Propagation condition | | 1~3 | | AWGN | AWGN |
| Antenna configuration | | 1~3 | | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.9.3.3 Test Requirements

The L1-SINR measurement accuracy for CSI-RS#0+CSI-IM#0 and CSI-RS#1+CSI-IM# of Cell 1 shall fulfil the requirements in clause 10.1.27.3.

## A.6.7.10 CSI-RSRP

### A.6.7.10.1 SA: intra-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.9.10.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.2.3.1 and 10.1.2.3.2 for CSI-RS intra-frequency measurements.

#### A.6.7.9.10.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.10.1.2-1. Both absolute and relative accuracy of CSI-RSRP intra-frequency measurements are tested by using the parameters in A.6.7.10.1.2-2. In all test cases, Cell 1 is the PCell, and Cell 2 is the target cell.

**Table A.6.7.10.1.2-1: CSI-RSRP intra frequency supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |

| | |
|---|---|
| 2 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification | | | | | | | |

### A.6.7.10.1.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil absolute requirement in clause 10.1.2.3.1 and relative requirement in clause 10.1.2.3.2.

## A.6.7.10.2 SA inter-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

### A.6.7.9.10.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.4.3.1 and 10.1.4.3.2 for CSI-RS inter-frequency measurements with the testing configurations for NR cells in table A.6.7.9.2.1-1.

**Table A.6.7.10.2.1-1: Applicable NR configurations for FR1 inter-frequency CSI-RSRP accuracy test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.6.7.10.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.6.7.10.2.2-1 below. Both absolute and relative accuracy of CSI-RSRP inter-frequency measurements are tested by using the parameters in table A.6.7.10.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.6.7.10.2.2-1: CSI-RSRP inter-frequency test parameters**

| Propagation condition | 1~3 | - | AWGN | | AWGN | |
| Antenna configuration | 1~3 | | 1x2 | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.10.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirement in clause 10.1.4.3.1 and relative requirement in clause 10.1.4.3.2.

## A.6.7.11 CSI-RSRQ

### A.6.7.11.1 SA: Intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.7.2.

#### A.6.7.11.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.6.7.11.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is tested by using the parameters in table A.6.7.11.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.11.1.2-1: Intra frequency CSI-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.6.7.11.1.3 Test Requirements

The CSI-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.7.2.

### A.6.7.11.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.11.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.2.1 and 10.1.9.2.2.

#### A.6.7.11.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.6.7.11.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test parameters in table A.6.7.11.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.11.2.2-1: CSI-RSRQ Inter frequency CSI-RSRQ supported test configurations**

| Config | Description |
|---|---|

| Antenna configuration | | | | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRQ/CSI-RSRQ, SS-RSRP/CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRQ/CSI-RSRQ, SS-RSRP/CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.7.11.2.3 Test Requirements

The CSI-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.9.2.1 and 10.1.9.2.2.

# A.6.7.12 CSI-SINR

## A.6.7.12.1 SA intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

### A.6.7.12.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.12.2.1.

### A.6.7.12.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.6.7.11.1.2-1. The absolute accuracy of CSI-SINR intra-frequency measurement is tested by using the parameters in table A.6.7.11.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.12.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Propagation condition | | | - | AWGN | | | |
| Antenna configuration | | | - | 1x2 | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: CSI-SINR, CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: NR operating band groups are as defined in clause 3.5.2.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.7.12.1.3 Test Requirements

The CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.12.2.1.

## A.6.7.12.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

### A.6.7.12.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.14.2.1 and 10.1.14.2.2.

### A.6.7.12.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.6.7.12.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test parameters in table A.6.7.12.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.12.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

| Antenna configuration | | | - | 1x2 | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| Parameter | Unit | Test 1 | | Test 2 | | Test 3 | |
|---|---|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| NOTE 3: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | |
| NOTE 4: CSI-SINR, CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | | | |
| NOTE 5: NR operating band groups are as defined in clause 3.5.2. | | | | | | | |
| NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification. | | | | | | | |

#### A.6.7.12.2.3 Test Requirements

The CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.14.2.1 and 10.1.14.2.2.

## A.6.7.13 RSTD measurements

### A.6.7.13.1 RSTD measurement accuracy test case for single positioning frequency layer

#### A.6.7.13.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.7.13.1.1-1.

**Table A.6.7.13.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR1. GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

| | | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification. | | | | | | |

### A.6.7.13.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

## A.6.7.13.2 RSTD measurement accuracy test case for dual positioning frequency layer

### A.6.7.13.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.7.13.2.1-1.

**Table A.6.7.13.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR1. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR1. GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

**Table A.6.7.13.2.1-2: RSTD accuracy test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

| Antenna configuration | 1~3 | | 1x2 | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.6.7.13.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.7.13.3 RSTD measurement accuracy test case with reduced number of samples for single positioning frequency layer in FR1 in RRC_CONNECTED state

#### A.6.7.13.3.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements for reduced number of samples specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. In this test UE that supports *supportedDL-PRS-ProcessingSamples* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.6.7.13.3.1-1.

**Table A.6.7.13.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR1. GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be longer than the UE measurement period as defined in clause 9.9.2.7.

**Table A.6.7.13.3.1-2: RSTD accuracy test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.7.13.3.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

## A.6.7.13.4 RSTD measurement accuracy test case with Rx TEG

### A.6.7.13.4.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement when the measurements of reference cell and neighbor cell are within the same Rx TEG meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.7.13.4.1-1.

**Table A.6.7.13.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. GP#24 is configured if UE supports GP#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

The UE is requested to provide the Rx TEG in the test via *nr-UE-RxTEG-Request-r17* in *NR-TDOA-RequestLocationInformation*.

The test applies to the UE supporting *Rx TEG* defiend in *NR-UE-TEG-Capability* and reporting the same Rx TEG for the measurements of reference cell and neighbour cell.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.7.13.4.2 Test Requirements

The RSTD measurement for Cell 1 and Cell 2 should fulfil the absolute accuracy requirements with same Rx TEG in clause 10.1.23.2.

## A.6.7.13.5 NR RSTD measurement accuracy test case for PRS aggregation in FR1 SA in RRC_CONNECTED mode

### A.6.7.13.5.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement by aggregating PRS resoureces from multiple positioning frequency layers (PFLs) meets the measurement accuracy requirements specified in clause 10.1.23A.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.7.13.5.1-1.

**Table A.6.7.13.5.1-1: Supported test configurations for PRS aggregation**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth per PFL, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth per PFL, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth per PFL, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations.

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

**Table A.6.7.13.5.1-2: RSTD accuracy test parameters for PRS aggregation**

| Parameter | Config | Unit | Cell 1 | Cell 2 |
|---|---|---|---|---|

### A.6.7.13.5.2 Test Requirements

The RSTD measurement accuracy shall fulfil the requirements defined in clause 10.1.23A.2.

## A.6.7.14 PRS-RSRP measurements

### A.6.7.14.1 SA: measurement accuracy with PRS in FR1

#### A.6.7.14.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.6.7.14.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.14.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in A.6.7.14.1.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.7.14.1.2-1: PRS-RSRP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| Antenna configuration | | | | 1x2 | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Void.
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification
NOTE 7: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

#### A.6.7.14.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

### A.6.7.14.2 SA: measurement accuracy with PRS in FR1 with reduced sample number

#### A.6.7.14.2.1 Test Purpose and Environment

The purpose of this test is to verify that the accuracy of PRS-RSRP measurement with reduced sample number is within the specified limits provided that PRS is transmitted within the active BWP of the UE. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.6.7.14.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.14.2.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in A.6.7.14.2.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.7.14.2.2-1: PRS-RSRP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Void.
NOTE 6: Void.
NOTE 7: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

#### A.6.7.14.2.3 Test Requirements

In the test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

#### A.6.7.14.3.2 Void

#### A.6.7.14.3.3 Void

## A.6.7.15 UE Rx-Tx time difference measurements

### A.6.7.15.1 UE Rx-Tx time difference measurement accuracy for single positioning frequency layer in FR1 SA

#### A.6.7.15.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.7.15.1.1-1.

**Table A.6.7.15.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #0 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.6.7.15.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.6.7.15.1.2-1.

**Table A.6.7.15.1.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

**Table A.6.7.15.1.2-2: Void**

### A.6.7.15.1.3 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

## A.6.7.15.2 UE Rx-Tx time difference measurement accuracy with reduced number of samples in FR1 SA

### A.6.7.15.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy with reduced number of samples is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.7.15.2.1-1.

**Table A.6.7.15.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test.

The UE is configured to measure UE Rx-Tx time difference using reduced number of samples via *requestedDL-PRS-ProcessingSamples* in *NR-Multi-RTT-RequestLocationInformation* during the test.

The UE is configured with measurement gap pattern ID #0 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.6.7.15.2.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.6.7.15.2.2-1.

**Table A.6.7.15.2.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |

| Propagation Condition | | 1, 2, 3 | AWGN | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

### A.6.7.15.2.3 Test requirements

The UE Rx-Tx time difference measurement with reduced number of samples fulfils the UE Rx-Tx measurement accuracy.

## A.6.7.15.3 UE Rx-Tx time difference measurement accuracy with RxTx TEG

### A.6.7.15.3.1 Test purpose and environment

The purpose of the test is to verify that the relative UE Rx-Tx time difference measurement accuracy when the two measurements are within the same RxTx TEG is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations is listed in table A.6.7.15.3.1-1.

**Table A.6.7.15.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test.

The UE is requested to provide the RxTx TEG in the test via *nr-UE-RxTxTEG-Request-r17* in *NR-Multi-RTT-RequestLocationInformation*.

The test applies to the UE supporting *RxTx TEG* defiend in *NR-UE-TEG-Capability* and reporting the same RxTx TEG for the two UE Rx-Tx measurements.

The UE is configured with measurement gap pattern ID #0 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The UE Rx-Tx time difference is derived by the difference of the receiving timing and the transmit timing for each cell.

### A.6.7.15.3.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.6.7.15.3.2-1. y requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

**Table A.6.7.15.3.2-2: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| RF Channel Number | | 1,2,3 | 1 | 1 | 1 | 1 |

NOTE 1: Void.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

### A.6.7.15.3.3 Test requirements

The relative accuracy is derived by the difference of the UE Rx-Tx measurements on the two cells.

The UE Rx-Tx time difference measurements for Cell 1 and Cell 2 fulfil the relative UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.x.

## A.6.7.15.4 UE Rx-Tx time difference measurement accuracy with PRS bandwidth aggregation in FR1 SA

### A.6.7.15.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25A. The tests are conducted under AWGN propagation condition with the UE operating in FR1 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR1.

The supported test configurations are listed in table A.6.7.15.4.1-1.

**Table A.6.7.15.4.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* 37.355 [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE before the start of the test.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured with measurement gap pattern ID #0 or ID #24 before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

The general test parameters and cell specific test parameters are as given in table A.6.7.15.4.1-2 and table A.6.7.15.4.1-3 respectively.

**Table A.6.7.15.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel. |
| | | | 2 | For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel. |
| $BW_{channel}$ | MHz | 1 | 20: $N_{RB,c}$ = 106 | For both RF channels |
| | | 2 | 20: $N_{RB,c}$ = 106 | |
| | | 3 | 50: $N_{RB,c}$ = 133 | |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

### A.6.7.15.4.2 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25A for both Cell 1 and Cell 2.

## A.6.7.16 PRS-RSRPP measurements

### A.6.7.16.1 SA: measurement accuracy with PRS in FR1

#### A.6.7.16.1.1 Test Purpose and Environment

The purpose of this test is to verify that the accuracy of PRS-RSRPP measurement in RRC_CONNECTED is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

#### A.6.7.16.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.16.1.2-1. Both absolute accuracy of PRS-RSRPP measurements are tested by using the parameters in A.6.7.16.1.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.7.16.1.2-1: PRS-RSRPP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRPP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Void.
NOTE 6: Void.
NOTE 7: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

### A.6.7.16.1.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2.

## A.6.7.16.2 SA: measurement accuracy with reduced PRS samples in FR1

### A.6.7.16.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy with $N_{sample}$ = 1 in FR1 is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

The UE under test should support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the TE indicates the UE to perform positioning measurements with reduced number of samples. The PRS bandwidth is contained within the active BWP and the power difference between the serving cell SS-RSRP and neighbour cell PRS-RSRP is within 6 dB, so that $N_{sample}$ = 1 is assumed.

### A.6.7.16.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.16.2.2-1. In all test cases, Cell 1 is the PCell.

**Table A.6.7.16.2.2-1: PRS-RSRPP supported test configurations**

| Config | Description |
|---|---|

| | |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| Antenna configuration | | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.
NOTE 6: The two-tap channel model is defined in 38.101-4 annex B.2.4 (a = 1, $\tau_d$=0.45 μs and $f_D$=5 Hz).

#### A.6.7.16.2.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2.

## A.6.7.17 LTM L1-RSRP measurement

### A.6.7.17.1 Inter-frequency L1-RSRP accuracy requirements for neighbour cell in FR1

#### A.6.7.17.1.1 Test Purpose and Environment

The purpose of this test is to verify that the inter-frequency L1-RSRP measurement accuracy on neigbor cell is within the specified limits. This test will verify the requirements in clause 9.15.5 and clause 10.1.19E for inter-frequency L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.6.7.17.1.1-1.

**Table A.6.7.17.1.1-1: Applicable NR configurations for FR1 SSB based inte-frequency L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE 1: The UE is only required to be tested in one of the supported test configurations in each supported band
NOTE 2: Target NR cell has the same SCS, BW and deplex mode as NR serving cell.

#### A.6.7.17.1.2 Test parameters

In this set of test cases there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters for the Cell 2 are given in table A.6.7.17.1.2-1 below. The absolute accuracy of L1-RSRP measurements are tested by using the parameters in table A.6.7.17.1.2-1.

Measurement gap pattern configuration defined in table A.6.7.17.1.2-1 is provided. Before the test,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC)
- UE is configured one SSB resource set with one SSB resource on Cell 2
- A measurement object is configured for the RF channel 2, and it is indicated to the UE to reprort periodica reporting with with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

| Propagation condition | | 1~3 | | AWGN | | AWGN | |
| Antenna configuration | | 1~3 | | 1x2 | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.7.17.1.3 Test Requirements

The inter-frequency L1-RSRP measurement accuracy for SSB resource reported by UE in L1-RSRP report (SSB#0 of Cell 2) shall fulfil the requirements in clauses 10.1.19E.

# A.6.7.18 TDCP amplitude measurement accuracy

## A.6.7.18.1 TDCP amplitude measurement accuracy in FR1

### A.6.7.18.1.1 Test Purpose and Environment

The purpose of this test is to verify that the TRS based TDCP amplitude measurement accuracy is within the specified limits in the test requirements section. The cofigurations for the test are specified in table A.6.7.18.1.1-1.

The test consists of two tests, Test 1 and Test 2. Each test further consists of two subtests Test 1A, 1B and Test 2A, 2B.

Test 1A: 10 Hz doppler + 15 kHz SCS FDD + 20 dB SNR

Test 1B: 10 Hz doppler + 30 kHz SCS TDD + 20 dB SNR

Test 2A: 300 Hz doppler + 15 kHz SCS FDD + 10 dB SNR

Test 2B: 300 Hz doppler + 30 kHz SCS TDD + 10 dB SNR

Relevant parmeters for each test are provided in the table A.6.7.18.1.2-1. UE needs to pass Test 1A, 1B, 2A, 2B.

**Table A.6.7.18.1.1-1: Applicable NR configurations for FR1 TRS based TDCP test**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

### A.6.7.18.1.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.6.7.18.1.2-1. Ampliutude of TDCP is tested by using the parameters in table A.6.7.18.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured with 1 TRS set with the TRS resources in the set are configured in adjacent slot. UE is configured to perform L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.6.7.18.1.2-1: FR1 TRS based TDCP test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |

### A.6.7.18.1.3 Test Requirements

For Test 1A, the reported TDCP index shall be smaller than or equal to 6 for the 80% of the times over repeated tests

For Test 1B: the reported TDCP index shall be smaller than or equal to 5 for the 80% of the times over repeated tests

For Test 2A: the reported TDCP index shall be lrager than 8 for the 80% of the times over repeated tests

For Test 2B: the reported TDCP index shall be larger than 6 for the 80% of the times over repeated tests

## A.6.7.19 RSCPD Measurements

### A.6.7.19.1 RSCPD with RSTD measurement accuracy in FR1 SA in RRC_CONNECTED

#### A.6.7.19.1.1 Test purpose and environment

The purpose of the test is to verify that accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.6.7.19.1.1-1.

**Table A.6.7.19.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP [34] as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC CONNECTED, shall be provided to the UE before the start of the test. The UE is configured with measurement gap pattern ID #0 or ID #24 before the test.

### A.6.7.19.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.6.7.19.1.2-1.

**Table A.6.7.19.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | Cell 1 | Cell 2 |
| PRS ARFCN | 1,2,3 | | Freq1 | Freq1 |
| $BW_{channel}$ | 1 | MHz | 20: $N_{RB,c}$ = 106 | |

| EPRE ratio of OCNG DMRS to SSS Note 1 | | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | | |
| EPRE ratio of PRS to SSS | 1,2,3 | dB | 0 | 0 |
| $N_{oc}$ Note2 | 1,2 | dBm/ SCS | -98 | |
| | 3 | | -95 | |
| PRS $\hat{E}_s/I_{ot}$ | 1,2,3 | dB | -6 | -13 |
| PRP Note3 | 1,2 | dBm/ SCS | -103.7 | -109.9 |
| | 3 | | -100.7 | -106.9 |
| Io Note3 | 1,2 | dBm/ 19.08 MHz | -65.70 | -65.70 |
| | 3 | dBm/ 47.88 MHz | -61.72 | -61.72 |
| PRS $\hat{E}_s/N_{oc}$ | 1,2,3 | dB | -5.7 | -11.9 |
| SSB $\hat{E}_s/N_{oc}$ | 1,2,3 | dB | -5.7 | |
| Propagation condition | 1,2,3 | - | AWGN | |
| Antenna configuration | 1,2,3 | | 1x2 | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.

#### A.6.7.19.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy requirements specified in clause 10.1.43.2 for Cell 2.

## A.6.7.20 RSCP Measurements

### A.6.7.20.1 RSCP with UE Rx-Tx time difference measurement accuracy in FR1 SA

#### A.6.7.20.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCP measurement with UE Rx-Tx time difference measurement is within the specified limits. This test will verify the requirements in clause 10.1.44.2. The test is

conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.7.20.1.1-1.

**Table A.6.7.20.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* , *NR-Multi-RTT-RequestLocationInformation* with *nr-DL-PRS-RSCP-Request* from LMF via LPP and *NR-Multi-RTT-MeasurementCapability* as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCP in RRC CONNECTED, shall be provided to the UE before the start of the test. The UE is configured with measurement gap pattern ID #0 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.6.7.20.1.2 Test parameters

The RSCP with UE Rx-Tx time difference accuracy test parameters are given in table A.6.7.20. 1.2-1.

**Table A.6.7.20.1.2-1: RSCP with UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |
|---|---|---|---|---|
| | | | Cell 1 | Cell 2 |

| | dBm/47.88 MHz | 3 | -57.73 | -57.73 |
| Propagation Condition | | 1, 2, 3 | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

#### A.6.7.20.1.3 Test requirements

The RSCP reported with UE Rx-Tx time difference measurement fulfils RSCP measurement accuracy specified in clause 10.1.44.2 for both Cell 1 and Cell 2.

## A.6.8 Measurement procedure in RRC_INACTIVE

### A.6.8.1 RSTD measurements

### A.6.8.1.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_INACTIVE state

#### A.6.8.1.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2.5 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.6.8.1.1.1-1.

**Table A.6.8.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2 and Cell 3. During T2 UE shall be in RRC_INACTIVE state and all three cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s).

The UE is configured with DRX cycle of 1.28 s.

The general test parameters are listed in table A.6.8.1.1.1-2, and cell specific test parameters are listed in table A.6.8.1.1.1-3 and table A.6.8.1.1.1-4.

**Table A.6.8.1.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| **Reference cell** | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| **Neighbor cells** | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |
| SSB configuration | Config 1 | | SSB.1 FR1 | |
| | Config 2 | | SSB.1 FR1 | |
| | Config 3 | | SSB.2 FR1 | |

| | Config 3 | dBm/ 47.88 MHz | -61.44 | -61.44 | -61.44 |
| PRS $\hat{E}_s/I_{ot}$ | | dB | -6 | -13 | -13 |
| Propagation Condition | | | AWGN | | |

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T2) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the subframes with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

### A.6.8.1.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049.

### A.6.8.1.2 NR RSTD measurement reporting delay test case with reduced number of samples in RRC_INACTIVE, FR1 SA

#### A.6.8.1.2.1 Test Purpose and Environment

#### A.6.8.1.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations are specified in table A.6.8.1.2.1-1.

**Table A.6.8.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2. PRS resources from all three cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The *nr-DL-TDOA-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to *requested*.

The general test parameters are listed in table A.6.8.1.2.1-2, and cell specific test parameters are listed in table A.6.8.1.2.1-3 and table A.6.8.1.2.1-4.

| Propagation Condition | | | AWGN | | |

NOTE 1: OCNG shall be used such that all active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols, except for slots where PRS is transmitted by any of the cells.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: Io levels apply only for symbols where PRS is transmitted.

#### A.6.8.1.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

### A.6.8.1.3 NR RSTD measurement reporting delay test case for PRS aggregation in FR1 SA in RRC_INACTIVE state

#### A.6.8.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation in RRC_INACTIVE state meets the requirements specified in clause 5.6.2.6 in AWGN propagation condition in FR1 in standalone scenario when two intra-band contiguous positioning frequency layers (PFL) are configured.

The supported test configurations are listed in table A.6.8.1.3.1-1.

**Table A.6.8.1.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are 6 synchronous cells in the test: Cell 1, Cell 2, Cell 3 Cell 4, Cell 5 and Cell 6. Cell 1 is the PCell on NR RF channel 1 in FR1. Cell 2 and Cell 3 are neighbour cells on the same RF channel as Cell 1. Cell 4, Cell 5 and Cell 6 are the neighbour cells on a different NR RF channel, i.e., RF channel 2, in FR1. Cell 1 and Cell 4, Cell 2 and Cell 5, Cell 3 and Cell 6 are respectively intra-band contiguous and PRS resources are transmitted by the same Tx chain for each combination.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2, Cell 3, Cell 4, Cell 5 and Cell 6. During T2 UE shall be in RRC_INACTIVE state and all 6 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

In *NR-TDOA-ProvideAssistanceData*, there are three *NR-linkedDL-PRS-ResourceSetID-PRS-AggregationList*. The first list indicates aggregation of PRS resource sets from Cell 1 and Cell 4, and the second list indicates aggregation of PRS resource sets from Cell 2 and Cell 5. The third list indicates aggregation of PRS resource sets from Cell 3 and Cell 6. In *NR-TDOA-RequestLocationInformation*, the IE *nr-DL-PRS-JointMeasurementRequestedPFL-List* is included and indicates aggregation of PFLs on RF channel 1 and RF channel 2.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s).

The UE is configured with DRX cycle of 1.28s.

The general test parameters are given in table A.6.8.1.3.1-2, and cell specific test parameters for T1 and T2 are listed in tables A.6.8.1.3.1-3 and A.6.8.1.3.1-4, respectively.

### A.6.8.1.3.2 Test requirements

The RSTD measurement time with PRS aggregation in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.2.6.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from Cell 2 and Cell 5, Cell 3 and Cell 6 respectively with respect to the Cell 1 and Cell 4 from which the transmitted PRS resources are also aggregated, within the time duration specified in section 5.6.2.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events observed during repeated tests shall be at least 90%, where the reported RSTD measurement with PRS aggregation for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3.

## A.6.8.1.4 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_INACTIVE state when eDRX cycle > 10.24s for non-RedCap UE

### A.6.8.1.4.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2.5 when the configured eDRX cycle is longer than 10.24s in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.6.8.1.4.1-1.

**Table A.6.8.1.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2 and Cell 3. During T2 UE shall be in RRC_INACTIVE state and all three cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.10, shall be provided to the UE during T1. The UE is configured to report positioning measurements every 20s via *reportingInterval* in *nr-DL-TDOA-RequestLocationInformation* such the value of *reportingInterval* is set to "*ri20*". The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 is not limited to PTW.

The UE is configured with eDRX cycle of 40.96s.

The general test parameters are listed in table A.6.8.1.4.1-2, and cell specific test parameters are listed in table A.6.8.1.4.1-3 and table A.6.8.1.4.1-4.

**Table A.6.8.1.4.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

| Note 2: | The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting. |
| Note 3: | Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |

### A.6.8.1.4.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

A test is considered complete after the UE reports the first set of positioning measurements based on the configured *reportingInterval*.

The rate of the correct events for each neighbour cell observed during the repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in the clause 10.1.23.3, i.e., between RSTD_000000000 and RSTD_126083073.

## A.6.8.2 PRS-RSRP measurements

### A.6.8.2.1 PRS-RSRP reporting delay test case for single positioning frequency layer in RRC_INACTIVE

#### A.6.8.2.1.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_INACTIVE meets the delay requirements specified in clause 5.6.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.8.2.1.1-1.

**Table A.6.8.2.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.8.2.1.1-2, and cell specific test parameters are listed in table A.6.8.2.1.1-3.

**Table A.6.8.2.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.8.2.1.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.8.2.2 PRS-RSRP reporting delay test case with reduced number of samples in RRC_INACTIVE

#### A.6.8.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 5.6.3.5 in an environment with AWGN propagation conditions when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive* .

The supported test configurations are specified in table A.6. 8.2.2.1-1.

**Table A.6. 8.2.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2. PRS resources from both cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-AoD assistance* data and location information request.

The *nr-DL-AoD-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The general test parameters are listed in table A.6.8.2.2.1-2, and cell specific test parameters are listed in table A.6.8.2.2.1-3.

**Table A.6.8.2.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |
| $BW_{channel}$ | MHz | 1 | 20: $N_{PRB,c}$ = 106 | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io levels apply only for symbols where PRS is transmitted.
NOTE 4: OCNG shall be used such that all active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols, except for slots where PRS is transmitted by any of the cells.
NOTE 5: Void.

#### A.6.8.2.2.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.8.2.3 PRS-RSRP reporting delay test case in RRC_INACTIVE state in FR1 with eDRX cycle > 10.24s

#### A.6.8.2.3.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_INACTIVE with eDRX meets the delay requirements specified in clause 5.6.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.8.2.3.1-1.

**Table A.6.8.2.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.8.2.3.1-2, and cell specific test parameters are listed in table A.6.8.2.3.1-3.

**Table A.6.8.2.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.8.2.3.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

A test is considered complete after the UE reports the first set of positioning measurements based on the configured *reportingInterval*.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.8.3 UE Rx-Tx time difference measurements

### A.6.8.3.1 UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA

### A.6.8.3.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement in RRC_INACTIVE state meets the requirements specified in clause 5.6.4 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.8.3.1.1-1.

**Table A.6.8.3.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.8.3.1.1-2 and table A.6.8.3.1.1-3 respectively.

**Table A.6.8.3.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

| NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. | | | | | | |

#### A.6.8.3.1.2 Test requirements

The UE Rx-Tx time difference measurement time in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.4.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.6.8.3.2 UE Rx-Tx time difference measurement with reduced number of samples in RRC_INACTIVE, FR1 SA

#### A.6.8.3.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 5.6.4.5 in AWGN propagation condition in FR1 in standalone scenario when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations in listed in table A.6.8.3.2.1-1.

**Table A.6.8.3.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2. PRS resources from both cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The *nr-Multi-RTT-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.6.8.3.2.1-2 and table A.6.8.3.2.1-3 respectively.

**Table A.6.8.3.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io levels apply only for symbols where PRS is transmitted.
NOTE 4: OCNG shall be used such that all active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols, except for slots where PRS is transmitted by any of the cells.
NOTE 5: Void.

### A.6.8.3.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.6.8.3.3 UE Rx-Tx time difference measurement for single positioning frequency layer with eDRX > 10.24s in FR1 SA

#### A.6.8.3.3.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.4.5 for UE Rx-Tx measurements in RRC_INACTIVE with eDRX. The tests are conducted under AWGN propagation condition with the UE operating in FR1 stand-alone mode and configured to perform UE Rx-Tx measurements on a single positioning frequency layer (PFL) in FR1.

The supported test configuration in listed in table A.6.8.3.3.1-1.

**Table A.6.8.3.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB and PRS SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB and PRS SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB and PRS SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The general test parameters and cell specific test parameters are as given in table A.6.8.3.3.1-2 and table A.6.8.3.3.1-3, respectively.

**Table A.6.8.3.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 20: $N_{RB,c} = 106$ | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

#### A.6.8.3.3.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is considered complete after the UE reports the first set of positioning measurements based on the configured *reportingInterval*.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.6.8.3.4 UE Rx-Tx time difference measurements with PRS bandwidth aggregation in FR1 SA

#### A.6.8.3.4.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.4.6 for UE Rx-Tx measurements with PRS bandwidth aggregation. The tests are conducted under AWGN propagation condition with the UE operating in FR1 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR1.

The supported test configurations in listed in table A.6.8.3.4.1-1.

**Table A.6.8.3.4.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* TS 37.355 [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The general test parameters and cell specific test parameters are as given in table A.6.8.3.4.1-2 and table .6.8.3.4.1-3 respectively.

**Table A.6.8.3.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

| | dBm/47.88 MHz | 3 | | -61.06 | | -61.06 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

#### A.6.8.3.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.6.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25A.2.

## A.6.8.4 PRS-RSRPP measurements

### A.6.8.4.1 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR1 in RRC_INACTIVE state

#### A.6.8.4.1.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRPP measurement meets the delay requirements specified in clause 5.6.5.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.8.4.1.1-1.

**Table A.6.8.4.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and all both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.8.4.1.1-2, and cell specific test parameters are listed in table A.6.8.4.1.1-3.

**Table A.6.8.4.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |
| $BW_{channel}$ | MHz | 1 | 20: $N_{PRB,c}$ = 106 | |
| | | 2 | 20: $N_{PRB,c}$ = 106 | |

NOTE 1: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.8.4.1.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.5.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.8.4.2 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR1 in RRC_INACTIVE state for reduced number of samples

### A.6.8.4.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRPP measurement meets the delay requirements specified in clause 5.6.5.5 in an environment with AWGN propagation conditions for reduced number of samples. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.6.8.4.2.1-1.

**Table A.6.8.4.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.8.4.2.1-2, and cell specific test parameters are listed in table A.6.8.4.2.1-3.

**Table A.6.8.4.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |

NOTE 1: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.8.4.2.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.5.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.8.4.3 PRS-RSRPP reporting delay in RRC_INACTIVE with eDRX

#### A.6.8.4.3.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRPP measurement meets the delay requirements specified in clause 5.6.5.5 in an environment with a 2-tap channel propagation conditions in RRC_INACTIVE when configured with eDRX. The supported test configurations are specified in table A.6.8.4.3.1-1.

**Table A.6.8.4.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and all both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.8.4.3.1-2, and cell specific test parameters are listed in table A.6.8.4.3.1-3.

**Table A.6.8.4.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |

| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| Note 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

#### A.6.8.4.3.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.5.5 with $T_{available_PRS}$ = 1.28s, starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The test is considered complete after the UE reports the first set of positioning measurements based on the configured reportingInterval.

A test is considered complete after the UE reports the first set of positioning measurements based on the configured *reportingInterval*.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.8.5 RSCPD Measurements

### A.6.8.5.1 DL RSCPD reported with RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_INACTIVE state

#### A.6.8.5.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD reported with RSTD measurement meets the requirements specified in clause 5.6.7.5 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The test environment is the same as in clause A.6.8.1.1 with the following additional configuration in table A.6.8.5.1.1-1 and description.

In *NR-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE also is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s) to be measured within the configured time window.

**Table A.6.8.5.1.1-1: Time window configuration**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Indicated time window configuration | Config 1,2,3 | | MTW.1 | As specified in clause A.3.38 |

#### A.6.8.5.1.2 Test Requirements

The DL RSCPD reported with RSTD measurement time fulfils the requirements specified in clause 5.6.7.5.

The UE shall perform and report the DL RSCPD and DL RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3 and the reported RSCPD measurement for each correct event shall be within the RSCPD reporting range specified in clause 10.1.43.3.

## A.6.8.6 RSCP Measurements

### A.6.8.6.1 DL RSCP with UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA

#### A.6.8.6.1.1 Test purpose and environment

The purpose of the test is to verify that the DL RSCP and UE Rx-Tx time difference measurements in RRC_INACTIVE state meet the requirements specified in clause 5.6.8.5 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured for both DL RSCP measurement and UE Rx-Tx time difference measurement.

The supported test configurations are listed in table A.6.8.6.1.1-1.

**Table A.6.8.6.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE during T1. In *NR-Multi-RTT-RequestLocationInformation*, the UE is configured to perform DL RSCP measurement via *nr-DL-PRS-RSCP-Request*. The UE is configured to perform both DL RSCP and UE Rx-Tx time difference measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig* but the time window periodicity is not configured. The last slot containing the two messages for the multi-RTTI assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 shall be aligned with the start of the configured time window containing the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are listed in table A.6.8.6.1.1-2 and table A.6.8.6.1.1-3.

**Table A.6.8.6.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 20: $N_{RB,c}$ = 106 | |
| | | 2 | 20: $N_{RB,c}$ = 106 | |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

### A.6.8.6.1.2 Test requirements

The DL RSCP with UE Rx-Tx time difference measurement time in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.8.

The UE shall perform and report the DL RSCP and UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified DL RSCP with UE Rx-Tx time difference measurement time specified in clause 5.6.8 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported DL RSCP measurement for each correct event shall be within the DL RSCP reporting range specified in clause 10.1.44 and the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.

# A.6.9 Measurement performance requirements in RRC_INACTIVE

## A.6.9.1 RSTD measurements

### A.6.9.1.1 RSTD measurement accuracy test case for single positioning frequency layer in FR1 in RRC_INACTIVE state

#### A.6.9.1.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_INACTIVE state meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.9.1.1.1-1.

**Table A.6.9.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The UE is configured with DRX cycle of 1.28 s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

**Table A.6.9.1.1.1-2: RSTD accuracy test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Void.

### A.6.9.1.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.9.1.2 RSTD measurement accuracy test case with reduced number of samples for single positioning frequency layer in FR1 in RRC_INACTIVE state

#### A.6.9.1.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_INACTIVE state meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.6.9.1.2.1-1.

**Table A.6.9.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The UE is configured with DRX cycle of 1.28 s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

**Table A.6.9.1.2.1-2: RSTD accuracy test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

| Propagation condition | 1~3 | - | AWGN | | AWGN | |
| Antenna configuration | 1~3 | | 1x2 | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Void.

### A.6.9.1.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.9.1.3 RSTD measurement accuracy for PRS aggregation in FR1 in RRC_INACTIVE state

#### A.6.9.1.3.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation on two PFLs meets the accuracy requirements specified in clause 10.1.23A.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.9.1.3.1-1.

**Table A.6.9.1.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are four synchronous cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR1. Cell 2 is a neighbour cell on the same NR RF channel as Cell 1. Cell 3 and Cell 4 are neighbor cells in a different NR RF channel #2 in FR1. Cell 1 and Cell 3 are intra-band contiguous, and PRS resources from Cell 1 and Cell 3 are transmitted by the same Tx chain. Cell 2 and Cell 4 are intra-band contiguous, and PRS resources from Cell 2 and Cell 4 are transmitted by the same Tx chain.

GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

In *NR-TDOA-ProvideAssistanceData*, there are two *NR-linkedDL-PRS-ResourceSetID-PRS-AggregationList*. The first list indicates aggregation of resource sets from Cell 1 and Cell 3, and the second list indicates aggregation of resource sets from Cell 2 and Cell 4. In *NR-TDOA-RequestLocationInformation*, *nr-DL-PRS-JointMeasurementRequestedPFL-List* is included, and indicates aggregation of PFLs on NR RF channel #1 and NR RF channel #2.

**Table A.6.9.1.3.1-2: RSTD accuracy test parameters**

| Parameter | Config | Unit | Cell 1 | Cell 2 | Cell 3 | Cell 4 |
|---|---|---|---|---|---|---|

| Propagation condition | 1,2,3 | - | AWGN | | AWGN | |
| Antenna configuration | 1,2,3 | | 1x2 | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

### A.6.9.1.3.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

## A.6.9.2 PRS-RSRP measurements

### A.6.9.2.1 SA: measurement accuracy with PRS in FR1 in RRC_INACTIVE

#### A.6.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy in RRC_INACTIVE is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.6.9.2.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.9.2.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in A.6.9.2.1.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.9.2.1.2-1: PRS-RSRP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: Void.

NOTE 6: Void

#### A.6.9.2.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

### A.6.9.2.2 SA: measurement accuracy with PRS in FR1 with reduced number of samples in RRC_INACTIVE state

#### A.6.9.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits provided that PRS is transmitted within the initial BWP of the UE. UE can support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.6.9.2.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.9.2.2.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in A.6.9.2.2.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.9.2.2.2-1: PRS-RSRP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | |

#### A.6.9.2.2.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

## A.6.9.3 UE Rx-Tx time difference measurements

### A.6.9.3.1.1 UE Rx-Tx time difference measurement accuracy in FR1 SA

#### A.6.9.3.1.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario.

The supported test configurations in listed in table A.6.9.3.1.1.1-1.

**Table A.6.9.3.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test.

The UE is configured to transmit SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

#### A.6.9.3.1.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.6.9.3.1.1.1-1.

**Table A.6.9.3.1.1.1-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| RF Channel Number | | 1,2,3 | 1 | 1 | 1 | 1 |

NOTE 1: Void.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.9.3.1.1.3 Test requirements

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

### A.6.9.3.2 UE Rx-Tx time difference measurement accuracy with reduced number of samples

#### A.6.9.3.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy with reduced number of samples in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.9.3.2.1-1.

**Table A.6.9.3.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test. The UE is configured to measure UE Rx-Tx time difference using reduced number of samples via *requestedDL-PRS-ProcessingSamples* in *NR-Multi-RTT-RequestLocationInformation*.

UE shall be configured to enter into RRC_INACTIVE state before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.6.9.3.2.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.6.9.3.2.2-1.

**Table A.6.9.3.2.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |

| | dBm/19.08 MHz | 2 | -61.71 | -61.71 |
| | dBm/47.88 MHz | 3 | -57.73 | -57.73 |
| Propagation Condition | | 1, 2, 3 | AWGN | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.9.3.2.3 Test requirements

The UE Rx-Tx time difference measurement with reduced number of samples in RRC_INACTIVE state fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

### A.6.9.3.3 UE Rx-Tx time difference measurement accuracy with PRS bandwidth aggregation in FR1 SA

#### A.6.9.3.3.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25A. The tests are conducted under AWGN propagation condition with the UE operating in FR1 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR1.

The supported test configurations are listed in table A.6.9.3.3.1-1.

**Table A.6.9.3.3.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* TS 37.355 [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE before the start of the test.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

The general test parameters and cell specific test parameters are as given in table A.6.9.3.3.1-2 and table A.6.9.3.3.1-3, respectively.

**Table A.6.9.3.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1, 2, 3 | 1 | For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel. |
| | | | 2 | For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel. |
| $BW_{channel}$ | MHz | 1 | 20: $N_{RB,c}$ = 106 | For both RF channels |
| | | 2 | 20: $N_{RB,c}$ = 106 | |
| | | 3 | 50: $N_{RB,c}$ = 133 | |
| SSB configuration | | 1 | SSB.1 FR1 | |

| | | | | |

| Propagation Condition | | 1, 2, 3 | AWGN | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

#### A.6.9.3.3.2 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25A for both Cell 1 and Cell 2.

## A.6.9.4 PRS-RSRPP measurements

### A.6.9.4.1 SA: PRS-RSRPP measurement accuracy in FR1 in RRC INACTIVE

#### A.6.9.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy in FR1 in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

#### A.6.9.4.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.9.4.1.2-1. In all test cases, Cell 1 is the PCell.

**Table A.6.9.4.1.2-1: PRS-RSRPP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| | Config 3 | | dBm/47.88 MHz | -60.59 | | -60.59 | |
| Propagation condition | | | | Two-tap channel Note 7 | | | |
| Antenna configuration | | | | 1x2 | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Void.
NOTE 6: Void
NOTE 7: The two-tap channel model is defined in 38.101-4 annex B.2.4 (a = 1, $\tau_d$=0.45 μs and $f_D$=5 Hz).

#### A.6.9.4.1.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2.

### A.6.9.4.2 SA: measurement accuracy with reduced PRS samples in FR1 in RRC INACTIVE

#### A.6.9.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy with $N_{sample}$ = 1 in FR1 in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.The UE under test should support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*, and the TE indicates the UE to perform positioning measurements with reduced number of samples. The PRS bandwidth is contained within the initial DL BWP and the power difference between the serving cell SS-RSRP and neighbour cell PRS-RSRP is within [6]dB, so that $N_{sample}$ = 1 is assumed.

### A.6.9.4.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.9.4.2.2-1. Both absolute and relative accuracy of PRS-RSRPP measurements are tested by using the parameters in A.6.9.4.2.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.9.4.2.2-1: PRS-RSRPP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

| | Config 3 | dBm/47.88 MHz | -57.73 | |
| Propagation condition | | | Two-tap channel Note5 | |
| Antenna configuration | | | 1x2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: PRS-RSRP, SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: The two-tap channel model is defined in 38.101-4 annex B.2.4 (a = 1, $\tau_d$=0.45 μs and $f_D$=5 Hz).

#### A.6.9.4.2.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2.

## A.6.9.5 RSCPD Measurements

### A.6.9.5.1 RSCPD with RSTD measurement accuracy in FR1 SA in RRC_INACTIVE

#### A.6.9.5.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement accuracy in RRC_INACTIVE. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.6.9. 5.1.1-1.

**Table A.6.9. 5.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_INACTIVE shall be provided to the UE before the start of the test. The UE is configured with DRX cycle of 1.28s.

### A.6.9.5.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.6.9.5.1.2-1.

**Table A.6.9. 5.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | Cell 1 | Cell 2 |
| PRS ARFCN | 1,2,3 | | Freq1 | Freq1 |

| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | | |
| EPRE ratio of PRS to SSS | 1,2,3 | dB | 0 | 0 |
| $N_{oc}$ Note2 | 1,2 | dBm/ SCS | -98 | |
| | 3 | | -95 | |
| PRS $\hat{E}_s/I_{ot}$ | 1,2,3 | dB | -6 | -13 |
| PRP Note3 | 1,2 | dBm/ SCS | -103.7 | -109.9 |
| | 3 | | -100.7 | -106.9 |
| Io Note3 | 1,2 | dBm/ 19.08 MHz | -65.70 | -65.70 |
| | 3 | dBm/ 47.88 MHz | -61.72 | -61.72 |
| PRS $\hat{E}_s/N_{oc}$ | 1,2,3 | dB | -5.7 | -11.9 |
| SSB $\hat{E}_s/N_{oc}$ | 1,2,3 | dB | -5.7 | |
| Propagation condition | 1,2,3 | - | AWGN | |
| Antenna configuration | 1,2,3 | | 1x2 | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.

#### A.6.9.5.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy requirements specified in clause 10.1.43.2 for Cell 2.

## A.6.9.6 RSCP Measurements

### A.6.9.6.1 RSCP with UE Rx-Tx time difference measurement accuracy in FR1 SA

#### A.6.9.6.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCP measurement reported with UE Rx-Tx time difference measurement in RRC_INACTIVE is within the specified limits. This test will verify the requirements in clause

10.1.44.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.6.9. 6.1.1-1.

**Table A.6.9. 6.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* , *NR-Multi-RTT-RequestLocationInformation* with *nr-DL-PRS-RSCP-Request* from LMF via LPP and *NR-Multi-RTT-MeasurementCapability* as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCP in RRC INACTIVE, shall be provided to the UE before the start of the test. The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.6.9.6.1.2 Test parameters

The RSCP with UE Rx-Tx time difference accuracy test parameters are given in table A.6.9. 6.1.2-1.

**Table A.6.9. 6.1.2-1: RSCP with UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |
|---|---|---|---|---|

| | dBm/19.08 MHz | 2 | -61.71 | -61.71 |
| | dBm/47.88 MHz | 3 | -57.73 | -57.73 |
| Propagation Condition | | 1, 2, 3 | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.

### A.6.9.6.1.3 Test requirements

The RSCP with UE Rx-Tx time difference measurement fulfils RSCP measurement accuracy specified in clause 10.1.44.2 for both Cell 1 and Cell 2.

# A.6.10 Measurement Procedure in RRC_IDLE

## A.6.10.1 RSTD Measurements

### A.6.10.1.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_IDLE state for non-RedCap UE

#### A.6.10.1.1.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 4.5.2.5 for RSTD measurements in RRC_IDLE without eDRX. The tests are conducted under AWGN propagation condition with the UE operating in FR1 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR1.

The supported test configurations are listed in table A.6.10.1.1.1-1.

**Table A.6.10.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_IDLE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_IDLE.

The general test parameters are listed in table A.6. 10.1.1.1-2 and cell specific test parameters are listed in table A.6.10.1.1.1-3 and table A.6.10.1.1.1-4.

**Table A.6.10.1.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

#### A.6.10.1.1.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 4.5.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

### A.6.10.1.2 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_IDLE state with eDRX cycle > 10.24s for non-RedCap UE

#### A.6.10.1.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_IDLE state meets the requirements specified in clause 4.5.2.5 when eDRX cycle is longer than 10.24s in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.6.10.1.2.1-1.

**Table A.6.10.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2 and Cell 3. During T2 UE shall be

in RRC_IDLE state and all three cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.10, shall be provided to the UE during T1. The UE is configured to report positioning measurements every 20s by setting the value of *reportingInterval* to "*ri20*" in *nr-DL-TDOA-RequestLocationInformation*. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 is not limited to PTW.

The general test parameters are listed in table A.6.10.1.2.1-2, and cell specific test parameters are listed in table A.6.10.1.2.1-3 and table A.6.10.1.2.1-4.

**Table A.6.10.1.2.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

### A.6.10.1.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 4.5.2.5. The test is considered complete after the UE reports the first set of positioning measurements based on the configured *reportingInterval.*

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 4.5.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during the repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in the clause 10.1.23.3, i.e., between RSTD_000000000 and RSTD_126083073.

#### A.6.10.1.3 NR RSTD measurement reporting delay test case for PRS aggregation in FR1 SA in RRC_IDLE state

##### A.6.10.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation in RRC_IDLE state meets the requirements specified in clause 4.5.2.6 in AWGN propagation condition in FR1 in standalone scenario when two intra-band contiguous positioning frequency layers (PFLs) are configured.

The test environment and configurations reuse the test case for RRC_INACTIVE state defined in clause A.6.8.1.3 except that UE shall be in RRC_IDLE state and all 6 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP during T2.

##### A.6.10.1.3.2 Test requirements

The RSTD measurement time with PRS aggregation in RRC_IDLE state fulfils the requirements specified in clause 4.5.2.6.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from Cell 2 and Cell 5, Cell 3 and Cell 6 respectively with respect to the Cell 1 and Cell 4 from which the transmitted PRS resources are also aggregated, within the time duration specified in clause 4.5.2.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events observed during repeated tests shall be at least 90%, where the reported RSTD measurement with PRS aggregation for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3.

### A.6.10.2 PRS-RSRP Measurements

#### A.6.10.2.1 PRS-RSRP reporting delay test case for single positioning frequency layer in RRC_IDLE state for non-RedCap UE in FR1

##### A.6.10.2.1.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_IDLE state meets the delay requirements specified in clause 4.5.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.10.2.1.1-1.

**Table A.6.10.2.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_IDLE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in table A.6.10.2.1.1-2, and cell specific test parameters are listed in table A.6.10.2.1.1-3.

**Table A.6.10.2.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1, 2, 3 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.10.2.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 4.5.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in section 4.5.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

### A.6.10.2.2 PRS-RSRP reporting delay test case in RRC_IDLE state in FR1 when eDRX cycle > 10.24s

#### A.6.10.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_IDLE with eDRX meets the delay requirements specified in clause 4.5.3.5 in an environment with AWGN propagation conditions.

The supported test configurations in table A.6.8.2.3.1-1 apply for this test.

The test procedure in clause A.6.8.2.3.1 apply for this test, except that during T2, UE is in RRC_IDLE state.

The general test parameters as specified in table A.6.8.2.3.1-2 apply for this test, except those specified in table A.6.10.2.2.1-1.

The cell specific test parameters as specified in table A.6.8.2.3.1-3 apply for this test.

**Table A.6.10.2.2.1-1: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| eDRX cycle length (for CN eDRX) | s | 1, 2, 3 | 40.96 | |

### A.6.10.2.2.2 Test Requirements

The test requirements in clause A.6.8.2.3.2 apply for this test, except that the time limits are specified in clause 4.5.3.5.

## A.6.10.3 RSCPD Measurements

### A.6.10.3.1 DL RSCPD reported with RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA in RRC_IDLE state

#### A.6.10.3.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD reported with RSTD measurement meets the requirements specified in clause 5.6.7.5 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The test environment is the same as in A.6.8.1.1 with the following additional configuration in table A.6. 10.3.1.1-1 and description.

In *NR-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE also is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s) to be measured within the configured time window.

**Table A.6.10.3.1.1-1: Time window configuration**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Indicated time window configuration | Config 1,2,3 | | MTW.1 | As specified in clause A.3.38 |

#### A.6.10.3.1.2 Test Requirements

The DL RSCPD reported with RSTD measurement time fulfils the requirements specified in clause 5.6.7.5.

The UE shall perform and report the DL RSCPD and DL RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in

clause 10.1.23.3 and the reported RSCPD measurement for each correct event shall be within the RSCPD reporting range specified in clause 10.1.43.3.

# A.6.11 Measurement Performance Requirements in RRC_IDLE

## A.6.11.1 RSTD Measurements

### A.6.11.1.1 NR RSTD measurement accuracy test case for single positioning frequency layer in FR1 SA in RRC_IDLE state for non-RedCap UE

#### A.6.11.1.1.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement in RRC_IDLE state without eDRX meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are listed in table A.6.11.1.1.1-1.

**Table A.6.11.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The UE is configured with DRX cycle of 1.28s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

The RSTD accuracy test parameters are listed in table A.6.11.1.1.1-2.

**Table A.6.11.1.1.1-2: RSTD accuracy test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| PRS ARFCN | 1,2,3 | | freq1 | Freq1 | freq1 | Freq1 |

| Antenna configuration | 1,2,3 | | 1x2 | | 1x2 | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| | |
|---|---|
| Note 3: | RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. |

#### A.6.11.1.1.2 Test requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.11.1.2 RSTD measurement accuracy test case for single positioning frequency layer in FR1 in RRC_IDLE state with eDRX>10.24s for non-RedCap UE

#### A.6.11.1.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement performed by UE in RRC_IDLE state with eDRX > 10.24s meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.6.11.1.2.1-1.

**Table A.6.11.1.2.1-1: Supported test configurations.**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The UE is configured with eDRX cycle of 40.96s. The UE is configured to report positioning measurements every 20s by setting the value of *reportingInterval* to "*ri20*" in *nr-DL-TDOA-RequestLocationInformation.* The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 4.5.2.5.

**Table A.6.11.1.2.1-2: RSTD accuracy test parameters.**

| Parameter | Config | Unit | Test 1 | |

| Propagation condition | 1,2,3 | - | AWGN | |
| Antenna configuration | 1,2,3 | | 1x2 | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over sub-carriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.6.11.1.2.2 Test Requirements

The test is considered complete after the UE reports the first set of positioning measurements based on the configured *reportingInterval*. The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.11.1.3 NR RSTD measurement accuracy test case for PRS aggregation in FR1 SA in RRC_IDLE state

#### A.6.11.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement results with PRS aggregation in RRC_IDLE state meets the requirements specified in clause 10.1.23A.2 in AWGN propagation condition in FR1 in standalone scenario when two intra-band contiguous positioning frequency layers (PFLs) are configured.

The test environment and configurations reuse the test case for RRC_INACTIVE state defined in clause A.6.9.1.3, except that UE shall be in RRC_IDLE state and all 4 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP during T2.

#### A.6.11.1.3.2 Test requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

## A.6.11.2 PRS-RSRP measurements

### A.6.11.2.1 PRS-RSRP measurement accuracy test case for non-RedCap UE in FR1 in RRC_IDLE state

#### A.6.11.2.1.1 Test Purpose and Environment

The purpose of this test is to verify accuracy of PRS-RSRP measurement performed by UE in RRC_IDLE mode in FR1.

#### A.6.11.2.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.11.2.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in A.6.11.2.1.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.11.2.1.2-1: PRS-RSRP supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band | |

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over sub-carriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

#### A.6.11.2.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

### A.6.11.2.2 PRS-RSRP measurement accuracy test case in RRC_IDLE state in FR1 when eDRX cycle > 10.24s

#### A.6.11.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_IDLE with eDRX meets the accuracy requirements specified in clauses 10.1.24.2.1 and 10.1.24.2.2 in an environment with AWGN propagation conditions.

#### A.6.11.2.2.2 Test parameters

The supported test configurations in table A.6.9.2.1.2-1 apply for this test.

The test procedure in clause A.6.9.2.1.2 apply for this test, except that UE is in RRC_IDLE state.

The test parameters as specified in table A.6.9.2.1.2-2 apply for this test, except those additionally specified in table A.6.11.2.2.2-1.

**Table A.6.11.2.2.2-1: PRS-RSRP test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| eDRX cycle length (for CN eDRX) | s | 1, 2, 3 | 40.96 | |
| PTW window length | s | 1, 2, 3 | 1.28 | |

#### A.6.11.2.2.3 Test Requirements

The test requirements in clause A.6.9.2.1.3 apply for this test.

## A.6.11.3 RSCPD Measurements

### A.6.11.3.1 RSCPD with RSTD measurement accuracy in FR1 SA in RRC_IDLE

#### A.6.11.3.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement in RRC_IDLE. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.6.11.3.1.1-1.

**Table A.6.11.3.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 50 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR1.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_IDLE shall be provided to the UE before the start of the test. The UE is configured with DRX cycle of 1.28s.

#### A.6.11.3.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.6.11.3.1.2.-1.

**Table A.6.11.3.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | Cell 1 | Cell 2 |
| PRS ARFCN | 1,2,3 | | Freq1 | Freq1 |
| $BW_{channel}$ | 1 | MHz | 20: $N_{RB,c}$ = 106 | |

| Propagation condition | 1,2,3 | - | AWGN | |
| Antenna configuration | 1,2,3 | | 1x2 | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| | |
|---|---|
| Note 3: | PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted. |

### A.6. 11.3.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

# A.7.5 Signaling characteristics

## A.7.5.1 Radio link Monitoring

In the following clause, any uplink signal transmitted by the UE is used for detecting the In-/Out-of-Sync state of the UE. In terms of measurement, the uplink signal is verified on the basis of the UE output power:

*Editor note: The metric for the detection of the UE UL transmitted signal by the TE is FFS.*

### A.7.5.1.1 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode

#### A.7.5.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.7.5.1.1.1-1. The test parameters are given in Tables A.7.5.1.1.1-2, A.7.5.1.1.1-3, and A.7.5.1.1.1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.1.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states, and Figure A.7.5.1.1.1-2 shows the Time multiplexed downlink transmissions from each Angle of Arrival. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In addition to RLM-RS radio link monitoring using SSB index 0 and SSB index 1, the UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in test 1.

### A.7.5.1.1.2 Test Requirements

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.1.2 Radio Link Monitoring In-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode

#### A.7.5.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.7.5.1.2.1-1.The test parameters are given in Tables A.7.5.1.2.1-2, and A.7.5.1.2.1-3 below. There is one cell (Cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states, and Figure A.7.5.1.2.1-2 shows the Time multiplexed downlink transmissions from each Angle of Arrival. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

## A.7.5.1.2.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.1.3 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in DRX mode

#### A.7.5.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.7.5.1.3.1-1. The test parameters are given in Tables A.7.5.1.3.1-2, and A.7.5.1.3.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

### A.7.5.1.3.2 Test Requirements

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.1.4 Radio Link Monitoring In-sync Test for FR2 PCell configured with SSB-based RLM RS in DRX mode

### A.7.5.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.7.5.1.4.1-1. The test parameters are given in Tables A.7.5.1.4.1-2, and A.7.5.1.4.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.4.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

## A.7.5.1.4.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.1.5 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with CSI-RS-based RLM in non-DRX mode

#### A.7.5.1.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR2 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.5.1-1, A.7.5.1.5.1-2, A.7.5.1.5.1-3 and A.7.5.1.5.1-4 below. There is one cell, cell 1 which is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.5.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test. In the test, SSB0 and SSB1 are configured as BFD-RS.

### A.7.5.1.5.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 no later than time point C ($D_1$ second after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.1.6 Radio Link Monitoring In-sync Test for FR2 PCell configured with CSI-RS-based RLM in non-DRX mode

### A.7.5.1.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR2 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.6.1-1, A.7.5.1.6.1-2 and A.7.5.1.6.1-3 below. There is one cells, cell 1which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.6.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. In the test, DRX configuration is not enabled. In the test, SSB0 and SSB1 are configured as BFD-RS.

| NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband. | | | | | | | | | | | |

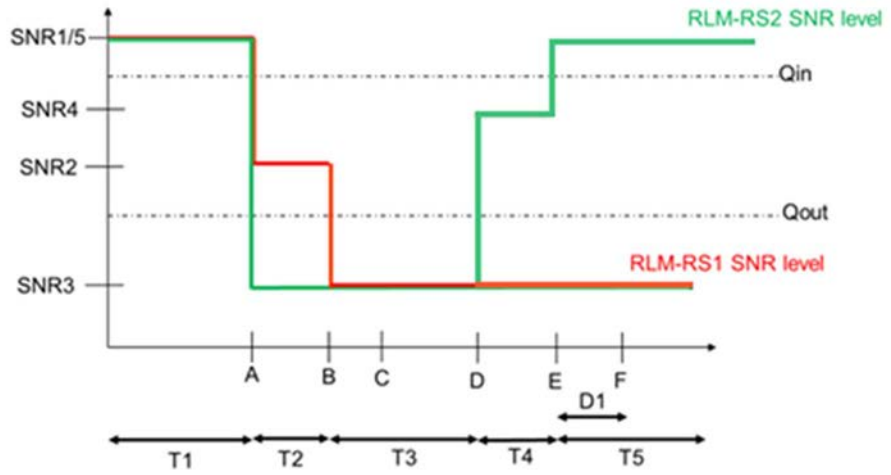

**Figure A.7.5.1.6.1-1: SNR variation for CSI-RS in-sync testing**

### A.7.5.1.6.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.1.7 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with CSI-RS-based RLM in DRX mode

### A.7.5.1.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR2 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.7.1-1, A.7.5.1.7.1-2, and A.7.5.1.7.1-3 below. There is one cell, cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.7.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. In the test, DRX configuration is enabled in

PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 and SSB1 are configured as BFD-RS.

**Table A.7.5.1.7.1-1: Supported test configurations for FR2 PCell**

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.1.7.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband.

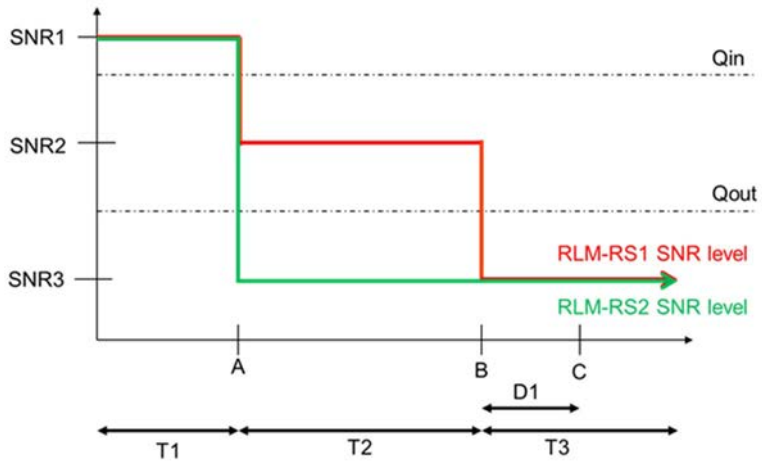

**Figure A.7.5.1.7.1-1: SNR variation for CSI-RS out-of-sync testing**

### A.7.5.1.7.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ($D_1$ secondafter the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.1.8 Radio Link Monitoring In-sync Test for FR2 PCell configured with CSI-RS-based RLM in DRX mode

### A.7.5.1.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR2 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.8.1-1, A.7.5.1.8.1-2, A.7.5.1.8.1-3 and A.7.5.1.8.1-4 below. There is one cells, cell 1which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.8.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test. In the test, SSB0 and SSB1 are configured as BFD-RS.

**Table A.7.5.1.8.1-1: Supported test configurations for FR2 PSCell**

### A.7.5.1.8.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.1.9 UE Radio Link Monitoring Scheduling Restrictions on FR2

### A.7.5.1.9.1 Test Purpose and Environment

The purpose is to verify that the NR UE correctly follows the RLM scheduling restrictions requirements defined in clause 8.1.7. This test verifies that the UE correctly receive the PDCCH scheduled on the symbols right before the RLM SSB symbols without overlap so that it sends ACK/NACK correctly. The test case is only applicable to UE which supports pdcch-MonitoringAnyOccasions or pdcch-MonitoringAnyOccasionsWithSpanGap.

The test parameters are given in table A.7.5.1.9.1-1, table A.7.5.1.9.1-2 and table A.7.5.1.9.1-3 below. The UE is required during time period T1 to transmit ACK/NACK correctly upon scheduling of PDSCH.

**Table A.7.5.1.9.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 120 kHz RMC SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.1.9.1-2: General test parameters for NR RLM scheduling restriction test case in FR2**

| Parameter | Unit | Test configuration | Value | Comment |

| Time multiplexing of the downlink transmissions from each AoA | | 1 | Defined in Figure A.7.5.1.9.1-1 | |
| Propagation Condition | | 1 | AWGN | AWGN |

NOTE 1: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

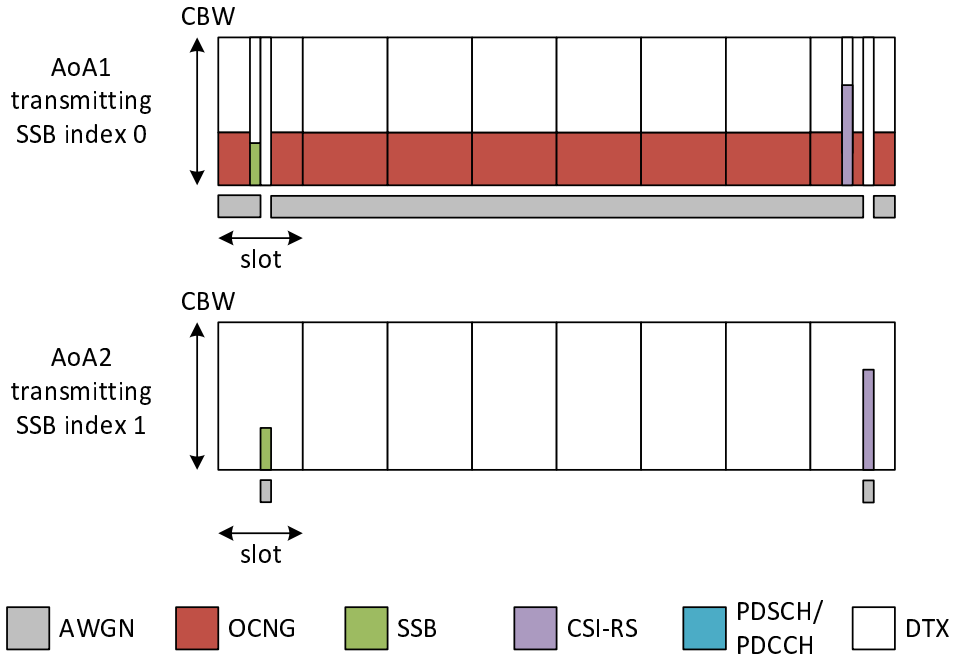

**Figure A.7.5.1.9.1-1: Time multiplexed downlink transmissions**

### A.7.5.1.9.2 Test Requirements

The UE behaviour follows the requirements defined in clause 8.1.7.3.

The UE shall be continuously scheduled by PDCCH on the symbols right before each SSB which is not covered by SMTC during the entire length of T1. The UE shall transmit ACK/NACK for every scheduled PDCCH during the time duration T1.

## A.7.5.1.10 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode for UE supporting fast beam sweeping in multi-Rx

### A.7.5.1.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.7.5.1.10.1-1. The test parameters are given in Tables A.7.5.1.10.1-2, and A.7.5.1.10.1-3below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.10.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states, and Figure A.7.5.1.10.1-2 shows the Time multiplexed downlink transmissions from each Angle of Arrival. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In addition to RLM-RS radio link monitoring using SSB index 0 and SSB index 1.

| Propagation condition | | | TDL-A 30 ns 75 Hz | | | TDL-A 30 ns 75 Hz | | |

NOTE 1: OCNG shall be used such a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 4: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is A.3.6.
NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 6: This value allows up to 1 dB degradation from applied SNR to UE baseband

**Table A.7.5.1.10.1-4: Measurement gap configuration for out-of-sync tests in non-DRX mode**

| Field | Test 1 |
|---|---|

**Figure A.7.5.1.10.1-2: Time multiplexed downlink transmissions**

### A.7.5.1.10.2 Test Requirements

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.1.11 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with CSI-RS-based RLM in non-DRX mode when CD-SSB is outside active BWP

### A.7.5.1.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used and when CD-SSB is outside active BWP. This test will partly verify the FR2 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test is for UE supporting *rlm-BM-BFD-CSI-RS-OutsideActiveBWP-r18* and the UE is not required past legacy test in A.7.5.1.5.

The test environment is the same as in A.7.5.1.5.

NOTE: The starting PRB index of the SSB can be any possible PRB index of the RF channel BW occurring after the last PRB of the DL active BWP.

The test requirements are the same as in A.7.5.1.5.2.

## A.7.5.1.12 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode when CD-SSB is outside active BWP

### A.7.5.1.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when CD-SSB is outside active BWP. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

The test environment is the same as in A.7.5.1.1 with following exceptions in Table A.7.5.1.1.1-2.

| Parameter | | Unit | Value |
|---|---|---|---|
| | | | Test 1 |
| DL dedicated BWP configuration | Config 1 | | DLBWP.1.5 |
| UL dedicated BWP configuration | Config 1 | | ULBWP.1.5 |

### A.7.5.1.12.2 Test Requirements

The test requirements are the same as in A.7.5.1.1.2.

## A.7.5.1.13 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode for UE supporting NCD-SSB based measurement outside active BWP

### A.7.5.1.13.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.7.5.1.13 .1-1. The test parameters are given in Tables A.7.5.1.13 .1-2, A.7.5.1.13 .1-3, and A.7.5.1.13 .1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.13 .1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states, and Figure A.7.5.1.13 .1-2 shows the Time multiplexed downlink transmissions from each Angle of Arrival. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In addition to RLM-RS radio link monitoring using SSB index 0 and SSB index 1, the UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in test 1.

**Figure A.7.5.1.13 .1-2: Time multiplexed downlink transmissions**

#### A.7.5.1.13.2 Test Requirements

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.2 Interruption

### A.7.5.2.1 Interruptions during measurements on deactivated NR SCC in FR2

#### A.7.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE missed ACK/NACK rate does not exceed the limits at NR PSCell interruptions during the measurement on the deactivated NR SCC. This test will verify the missed ACK/NACK rate for PCell in standalone NR specified in clause 8.2.2.2. Supported test configurations are shown in table A.7.5.2.1.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.7.5.2.1.1-2 and A.7.5.2.1.1-3 below. In the test there are two cells: Cell 1 and Cell 2. Cell 1 is PCell, Cell 2 is an NR deactivated SCell. Cell 1 shall be configured as PCell and Cell 2 shall be configured as SCell.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The point in time at which the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCells is received at the UE antenna connector, defines the start of time period T1. During T1, PCell is continuously scheduled in DL.

**Table A.7.5.2.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD – TDD duplex mode |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.2.1.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5 % of ACK/NACK on PCell.

If the NR PCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in Table A.7.5.2.1.2-1.

If the NR PCell is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on PCell no earlier than 4 slots before an SMTC and no later than 4 slots after the SMTC. the interruption on NR PCell shall not exceed the value defined in Table A.7.5.2.1.2-2.

**Table A.7.5.2.1.2-1: Interruption duration if the PCell is not in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slot) |
|---|---|---|
| 3 | 0.125 | 4 |

**Table A.7.5.2.1.2-2: Interruption duration if the PCell is in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slot) |
|---|---|---|
| 3 | 0.125 | 8 + SMTC duration |

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.2.2 SA interruptions at NR SRS carrier-based switching

### A.7.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that when a UE needs to transmit aperiodic SRS, the UE can perform SRS carrier-based switching to a carrier not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission. The test will partly verify the interruption requirements on PCell in clause 8.2.2.2.9.

### A.7.5.2.2.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR2 PCell. Cell 2 is an activated FR2 SCell on the TDD SCC which operats in downlink without PUCCH/PUSCH. The UE is configured with the SRS switching between PCell and SCell.The test parameters for PCell and SCell are given in Tables A.7.5.2.2.2-2, A.7.5.2.2.2-3, and A.7.5.2.2.2-4 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. Immediately at the beginning of T2, the UE is triggered for SRS switching by DCI 2_3 scheduling. After T2, the UE is expected to transmit aperiodic SRS on a special slot in the configured TDD UL/DL configuration, as scheduled by DCI 2_3. The UE shall be scheduled on PCell continuously throughout the test.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell.

**Table A.7.5.2.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.7.5.2.2.2-2: General test parameters for SA interruptions at NR SRS carrier-based switching**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2 | Two NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1 |
| Configured SCell | | Cell 2 | Activated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of PCell |
| T1 | s | 5 | |
| T2 | ms | 100 | UE shall perform SRS switching during T2 |

**Table A.7.5.2.2.2-3: Cell-specific test parameters for SA interruptions at NR SRS carrier-based switching**

| Parameter | | Unit | Cell 1 | Cell 2 |
|---|---|---|---|---|

| $\hat{E}_s/N_{oc}$ | | dB | 17 | |
| Propagation Condition | | | AWGN | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | |

**Table A.7.5.2.2.2-4: OTA related test parameters**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | T1 | T2 |
| Angle of arrival configuration | | Setup 1 according to clause A.3.15.1 | |
| Assumption for UE beams Note 6 | | Fine | |
| $N_{oc}$ Note 1 | dBm/15kHz Note 4 | -112 | |
| $N_{oc}$ Note 1 | dBm/SCS Note 3 | -103 | |
| $\hat{E}_s / N_{oc}$ | dB | 4 | |
| SS-RSRP Note 2 | dBm/SCS Note 4 | -99 | |
| $\hat{E}_s / I_{ot}$ | dB | 4 | |
| Io Note2 | dBm/95.04 MHz Note 4 | -68.5 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

#### A.7.5.2.2.3 Test Requirements

During T2, interruption on PCell due to SRS carrier-based switching between Cell 1 and Cell 2 shall not exceed the required values specified in clause 8.2.2.2.9.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.3 SCell Activation and Deactivation Delay

### A.7.5.3.1 SCell Activation and deactivation for SCell in FR2 intra-band in non-DRX

### A.7.5.3.1.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.6.5.3.1.1 except the PCell and SCell are in FR2 intra-band.

The supported test configurations are shown in table A.7.5.3.1.1-1 below. The general test parameters are the same as defined in Table A.6.5.3.1.1-2 except those described in Tables A.7.5.3.1.1-2, and cell specific test parameters are described in Tables A.7.5.3.1.1-3. OTA related test parameters are shown in table A.7.5.3.1.1-4 below.

**Table A.7.5.3.1.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|

NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.3.1.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except $T_{activation_time}$ will be replaced with the value $T_{FirstSSB}$ + 5 ms as defined in clause 8.3.

## A.7.5.3.2 SCell Activation and deactivation for FR1+FR2 inter-band with target SCell in FR2

### A.7.5.3.2.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.1.1 except the PCell is in FR1 and SCell is in FR2.

The supported test configurations are defined in Table A.7.5.3.2.1-1. The general test parameters are the same as defined in Table A.6.5.3.1.1-2 except that the length of T2 is 2 s. And cell specific test parameters are described in Tables A.7.5.3.2.1-2. OTA related test parameters are defined in Table A.7.5.3.2.1-3.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100 ms after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2.

During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot $m+T_{L1\text{-}RSRP}$. In the next DL slot after slot $m+T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell 1 deactivation command is sent until CSI reporting for SCell 1 is discontinued.

**Table A.7.5.3.2.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not imit UE implementation or test system implementation.

#### A.7.5.3.2.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot (m+k). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than

3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, $T_{FirstSSB_MAX}$=$T_{SMTC_MAX}$=$T_{rs}$=20 ms; $T_{L1\text{-}RSRP,\ measure}$=160 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ 680 ms.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.5.5.3.1.1-2

- $T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 710 ms

- $T_{CSI_Reporting}$ = 10 ms

- NR slot length is 0.125 ms for this test case.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption of PCell due to activation of SCell shall not be more than the values specified for SA in Clause 8.2.2.2.7.

### A.7.5.3.3 SCell Activation and deactivation for SCell in FR2 inter-band in non-DRX

#### A.7.5.3.3.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.1.1 except the PCell and SCell are in FR2 inter-band.

The supported test configurations are shown in table A.7.5.3.3.1-1 below. The general test parameters are described in Tables A.7.5.3.3.1-2, and cell specific test parameters are described in Tables A.7.5.3.3.1-3. OTA related test parameters are shown in table A.7.5.3.3.1-4 below.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell. A MAC message for activation of SCell is sent by the test equipment 100 ms after the RRC message, in a slot # denoted m.

The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 is increased to same level as for PCell. During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot m+$T_{L1\text{-}RSRP}$. In the next DL slot after slot m+$T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell 1 deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.7.5.3.3.1-1: Supported test configurations for FR2 SCell activation in FR2 inter-band**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.3.3.1-2: General test parameters for FR2 SCell activation in FR2 inter-band**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channels are used for this test. RF channel number 1 is in band 1 and RF channel number 2 is in band 2, where bands 1 and 2 are inter-band CA operating bands in FR2 as specified in Table 5.2A.2-1 in TS 38.101-2 [19]. |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| CQI/PMI periodicity and offset configuration index | | 0 | CQI reporting for SCell every second subframe |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to cell1 | μs | ≤8 | A random value from 0μs to 8μs |
| T1 | s | 7 | During this time the PCell shall be known and the SCell configured and detected. |
| T2 | s | 2 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |

**Table A.7.5.3.3.1-3: Cell specific test parameters for FR2 SCell activation in FR2 inter-band**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: CSI-RS for CSI measurement is (re)configured in the next DL slot after slot m+$T_{L1\text{-}RSRP}$ during T2.
NOTE 3: L1-RSRP measurement and reporting are configured to the the UE prior to the start of time period T1.

**Table A.7.5.3.3.1-4: OTA related test parameters for FR2 SCell activation in FR2 inter-band**

| Parameter[Note 6] | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T1 | T2 | T3 | T1 | T2 | T3 |
| AoA setup | | Setup 3 as specified in clause A.3.15 | | | | | |
| | | AoA1 | | | AoA2 | | |
| Assumption for UE beams [Note 7] | | Rough | | | Rough | | |
| $N_{oc}$ [Note1] | dBm/15kHz[Note4] | -92.1 | | | -92.1 | | |
| $N_{oc}$ [Note1] | dBm/SCS[Note3] | -83.1 | | | -83.1 | | |
| $\hat{E}_s / N_{oc}$ | dB | 0 | | | 0 | | |
| SS-RSRP[Note2] | dBm/SCS [Note4] | -83.1 | | | -83.1 | | |
| $\hat{E}_s / I_{ot}$ | dB | 0 | | | 0 | | |
| Io[Note2] | dBm/95.04 MHz [Note4] | -51.1 | | | -51.1 | | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: All parameters apply for configuration 1
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

#### A.7.5.3.3.2 Test Requirements

During T2 the UE shall start sending CSI report for the SCell in the configured slots for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k). UE shall send the first CSI report for SCell after receiving at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k), or in the next available uplink resource for CSI reporting if the slot was subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2. For this test case, $T_{FirstSSB_MAX}$=$T_{SMTC_MAX}$=$T_{rs}$=20 ms; $T_{L1\text{-}RSRP,\ measure}$=480 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ =1000 ms.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.7.5.3.3.1-2
- $T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 1030 ms
- $T_{CSI_Reporting}$ = 10 ms
- NR slot length is 0.125 ms for this test case.

During T2, the interruption of PCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, where $T_X$ =20 ms.

During T3, the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T3, the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$ as defined in clause 8.3.

### A.7.5.3.4 Direct SCell activation at SCell addition of known SCell in FR2

#### A.7.5.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the delay and interruption for direct SCell activation delay at SCell addition are within the requirements stated in clause 8.3.4.

The supported test configurations are shown in Table A.7.5.3.4.1-1 below. The general test parameters are given in Table A.7.5.3.4.1-2 and cell-specific test parameters in Table A.7.5.3.4.1-3. OTA related test parameters are shown in Table A.7.5.3.4.1-4.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two FR2 carriers and two NR cells. Before the test starts the UE is connected to Cell 1 (PCell) on carrier #1, but is not aware of Cell 2 on NR carrier #2. Cell 1 and Cell 2 have constant signal levels throughout the test. The UE is monitoring the PCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 is monitored by the UE. During T1, Cell 2 should be detected and measured by the UE such that it meets the condition for known cell defined in clause 8.3.4 for direct SCell activation.

Time period T2 starts when the *RRCReconfiguration* message for the configuration and activation of Cell 2 (the SCell), which is sent from the test equipment, is received at the UE antenna connector in a slot # denoted m. The test equipment shall set the parameter *sCellState* to *activated* for the SCell, which causes Cell 2 to become configured and activated.

Time period T3 starts at (m + $N_{direct}$), at which point UE shall be reporting a valid CQI for both PCell and SCell.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during the activation of SCell. The test equipment verifies the activation time by counting the slots from the time when the SCell activation message is sent until a CQI report with other than CQI index 0 is received.

**Table A.7.5.3.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.7.5.3.4.1-2: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channels (1,2) in FR2 are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured and activated SCell | | Cell 2 | Configured and activated SCell on NR RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| T1 | s | 7 | During this time the measurement for Cell 2 is configured, and Cell 2 is detected. |
| T2 | s | $N_{direct}$ | During this time the UE shall configure and activate Cell 2 as SCell. |
| T3 | ms | 100 | During this time the UE shall report valid CQI for both PCell and SCell. |
| A3-offset | dB | -15 | |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by *dl-DataToUL-ACK* if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| k | slot | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe},\ \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3] |

| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | | |

### A.7.5.3.4.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after slot (m+k). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{N_{direct}}{NR\ slot\ length}$, where

$$N_{direct} = T_{RRC_Process} + T_1 + T_{activation_time} + T_{CSI_Reporting} - 3 \text{ ms},$$

- $T_{RRC_Process}$ = 16 ms, which is the RRC procedure delay defined for SCell addition in clause 12 of TS 38.331 [2],

- $T_1$ is the delay from slot m + $T_{RRC_Process}$ until the transmission of *RRCReconfigurationComplete* message,

- $T_{activation_time} = T_{FirstSSB}$ + 5 ms = 25 ms,

- $T_{CSI_Reporting}$ = 10 ms

This gives a total of $N_{direct} = 16 + T_1 + 25 + 10 - 3 = (48 + T_1)$ ms, and NR slot length is 0.125 ms.

During T3 the UE shall send CSI reports for SCell with non-zero CQI index and continue to send CSI reports for SCell with non-zero CQI index until the end of T3.

During T2 interruption of PSCell during SCell activation shall not happen outside the window from slot *m*+1 to slot $m+1+\frac{T_{RRC_Process}+T_1+T_X}{NR\,slot\,length}$ as defined in clause 8.3.4, where $T_X$ =20 ms.

The interruption of PCell due to activation of SCell shall not be more than the values specified for NR SA in clause 8.2.2.2.11.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot m + $\frac{N_{direct}}{NR\,slot\,length}$ as defined in clause 8.3.4 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.7.5.3.5 Direct SCell activation at handover with known SCell in FR2

### A.7.5.3.5.1 Test Purpose and Environment

This test is to verify the requirements specified in sub clause 8.3.5 for the FR2 intra-frequency handover with direct SCell activation.

The test scenario comprises of three FR2 cells, one source PCell (Cell 1), one target PCell (Cell 2) and one SCell (Cell 3). The test consists of three successive time periods, with time durations of T1, T2, and T3 respectively.

At the start of time duration T1, the UE is in connected mode with PCell (Cell 1). Both Cell 2 and Cell 3 are known to UE and UE is reporting CQI for all Cell 1.

Time period T2 starts when UE receives a handover command that initiate handover of UE to Cell 2 and also activates Cell 3. This is done using an *RRCConnectionReconfiguration* message with parameter *sCellState* set to *activated* for the Cell 3. The message is sent from the test equipment to the UE and is received in a slot number n at the UE antenna connector. The UE shall accomplish the handover, addition and activation of the SCell no later than slot (n $+\frac{N_{direct}}{NR\,slot\,length}$).

Time period T3 starts at (n $+\frac{N_{direct}}{NR\,slot\,length}$), at which point UE shall be reporting a valid CSI for both Cell 2 and Cell 3 as given in tables A.7.5.3.5.1-1 and A.7.5.3.5.1-2.

**Table A.7.5.3.5.1-1: Supported test configurations for FR2 handover with direct SCell activation case**

| Configuration | Description |
|---|---|
| 1 | SCell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Source cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.3.5.1-2: General test parameters for FR2 handover with direct SCell activation case**

| Parameter | | Unit | Value | Comment |

### A.7.5.3.5.2 Test Requirements

The UE shall be capable to transmit valid CSI report for PCell (Cell 2) and to the directly activated SCell 1 no later than in slot n+ $N_{direct}$.

The SCell activation delay, $N_{direct}$, can be expressed as: $N_{direct} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{activation_time} + T_{CSI_Reporting}$ - 3 ms; Where:

- $T_{RRC_Process}$: RRC procedure delay defined in clause 12 of TS 38.331 and it is equal to 16 ms,
- $T_{interrupt}$: Interruption time during handover as specified in clause 6.1.1. The value to be verified in the test is 52 ms ($T_{interrupt}$ = 0 ms for $T_{search}$ + 10 ms for $T_{IU}$ + 20 ms for $T_{processing}$ + 20 ms for $T_{\Delta}$ + 2 ms for $T_{margin}$ ms) by assuming known SCell and SMTC.1 configuration.
- $T_2$: Delay from slot $n + \frac{T_{RRC_Process} + T_{interrupt}}{\text{NR slot length}}$ until UE has obtained a valid TA command for the target PCell,
- $T_3$: Delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to k+1 slot, where k is defined in clause 4.2 in TS 38.213,
- $T_{activation_time}$ and $T_{CSI_Reporting}$ are specified in clause 8.3.2, where the following definitions of $T_{FirstSSB}$ and $T_{FirstSSB_MAX}$ as defined in clause 8.3.5 shall apply:

During time period T2 of the test, the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot n + $\frac{T_{HARQ} + T_{activtion_time} + T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{SMTC_SCell}$ + 5 ms, as defined in clause 8.3.

During time period T3 of the test, the UE shall stop sending CSI reports for SCell at latest in a slot m + $\frac{T_{HARQ} + 3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During time period T2 of the test, interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ} + 3\ ms + T_X}{\text{NR slot length}} + N_{interruption}$, as defined in clause 8.3.

During time period T3 of the test, the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot m + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During time period T2 of the test, if there are no uplink resources for reporting the valid CSI in a slot $\frac{\mathrm{T_{HARQ}}+T_{\mathrm{activtion_time}}+T_{\mathrm{CSI_Reporting}}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.7.5.3.6 PUCCH SCell activation and deactivation for FR1+FR2 inter-band with target SCell in FR2 and known

### A.7.5.3.6.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3.12 and 8.3.14, when the PUCCH SCell in FR2 is known by the UE at the time of activation.

The supported test configurations are shown in table A.7.5.3.6.1-1 below. The test parameters are given in Tables A.7.5.3.6.1-2 and cell-specific parameters in A.7.5.3.6.1-3 below. The test consists of four successive time periods, with duration of T1, T2 T3, and T4 respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the PUCCH SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI for the activated PUCCH SCell at latest in slot $n$+ $\frac{T_{HARQ}+T_{delay_\mathrm{multiple_SCells_PUCCH_SCell}}}{NR\ slot\ length}$, and report valid CSI for the activated DL SCell at latest in slot $n$+$\frac{T_{HARQ}+T_{delay_\mathrm{multiple_SCells_other_SCell}}}{NR\ slot\ length}$, as defined in clause 8.3.13. In this test case, both valid TA and invalid TA cases shall be tested.

Test for case when UE has valid TA: the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running, and $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + [X]*T_{target_PL_RS} + T_{CSI_Reporting}$.

Test for case when UE do not have valid TA: $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), [X]*T_{target_PL_RS}, (T1+T2+T3)) + T_{CSI_reporting_after}$

$T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in clause 8.3.7

Any PCell interruption due to activation of PUCCH SCell shall occur in the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2

Time period T3 starts when a MAC message for deactivation of PUCCH SCell abd DL SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.14and the starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.7.5.3.6.1-1: Supported test configurations for FR2 SCell activation case**

### A.7.5.3.6.2 Test Requirements

By end of T2 the UE shall finish the DL activation for the PUCCH SCell. Assuming the periodic CSI reporting is used and assuming periodic CSI activation and TCI state is sent along with SCell activation MAC CE, UE shall finish the DL activation by slot n+ 10 ms + $T_{HARQ}$ + $T_{FineTiming}$

With SSB periodicity of 20 ms, UE shall complete DL activation of PUCCH SCell with in 30 ms after transmitting HARQ message for SCell activation command.

During T2 the UE shall start sending PRACH preamble to TE and shall obtain the TA command from TA and shall be ready to send valid CSI report to the TE. CSI report shall be transmitted within 30 ms + [X=0] + max (($T_{First_available_CSI}$ + $T_{CSI_processing}$), (T1+T2+T3)) + $T_{CSI_reporting_after}$ from the transmission of HARQ feedback of SCell activation command as specified in the 8.3.12.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot n + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $m + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to n + 1 + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption of PCell due to activation of SCell shall not be more than the values specified for SA in Clause 8.2.2.2.7.

## A.7.5.3.7 PUCCH SCell activation and deactivation delay requirements of FR2 unknown cell with FR1 PCell

### A.7.5.3.7.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.7.1 except the PUCCH SCell in FR2 is unknown.

The supported test configurations and the general test parameters are defined in Table A.7.5.3.7.1-1 and Table A.7.5.3.7.1-2, respectively. And cell specific test parameters are described in Tables A.7.5.3.7.1-3. OTA related test parameters are defined in Table A.7.5.3.7.1-4. In all test cases, two cells are used. Cell 1 is the FR1 PCell in the primary Timing Advance Group (pTAG) and cell 2 is the FR2 PUCCH SCell in the secondary Timing Advance Group (sTAG).

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment T1 after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. At the time of T2, the UE does not have a valid TA for the SCell in sTAG. Immediately at the beginning of T2 the transmission power of Cell 2 is increased to same level as for cell 2

During T2, the test equipment monitors the L1-RSRP measurement result for the SCell reported on the PCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot m+$T_{L1\text{-}RSRP}$. In the next DL slot after slot m+$T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell and PUCCH-SpatialRelation of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell. $T_{HARQ}$ + $T_{activation_time}$ after slot m, the UE shall be able to monitor PDCCH on the SCell that triggers PDCCH order-based contention-free PRACH. The test equipment receives the PRACH and sends random access response with Timing Advance Command MAC Control Elements for sTAG, with Timing Advance Command value estimated from the PRACH. The UE shall start reporting CSI of the SCell with non-zero CQI index via PUCCH on the SCell no later than slot m + ($T_{HARQ}$ + $T_{delay_PUCCH_SCell}$)/NR slot length. Here, $T_{activation_time}$ is the SCell activation delay defined in 8.3.2 for FR2 unknown SCell with periodic CSI-RS used for CSI reporting, and $T_{delay_PUCCH_SCell}$ is the PUCCH SCell activation delay defined in 8.3.12 for an invalid TA scenario.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during the activation of the SCell.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting on the SCell is discontinued.

**Table A.7.5.3.7.11: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

| | |
|---|---|
| | Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

**Table A.7.5.3.7.1-2: General test parameters for unknown FR2 PUCCH SCell activation case**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated PUCCH SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to cell1 | μs | ≤25 | A random value from 0μs to 25μs |
| T1 | s | 7 | During this time the PCell shall be known and the SCell configured and detected. |
| T2 | s | 2 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| $T_{HARQ}$ | ms | Config 1: 2<br>Config 2: 3<br>Config 3: 2.5 | $k_1$×NR slot length<br><br>$k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] that will meet the timing constraints of this test case. |
| $T_{CSI_Reporting}$ | ms | 15 | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] and TS 38.213 [3]. |

### A.7.5.3.7.2 Test Requirements

During T2 the UE shall start sending a valid L1-RSRP report of the SCell to the PCell in the configured slots for CSI reporting after slot ($m+T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2.

During T2 the UE shall start sending CSI reports of the SCell with non-zero CQI index via PUCCH on the SCell in the configured slots for CSI reporting no later than slot $m + \frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$ as defined in clause 8.3.12.

During T3 the UE shall stop sending CSI reports on the SCell no later than slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

During T2 interruption of PCell during the SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms. If the UE is not capable of parallelTxPRACH-SRS-PUCCH-PUSCH additional interruption can be allowed as defined in Clause 8.2.2.2.18.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to $n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

The interruption of PCell due to activation of SCell shall not be more than the values specified for SA in Clause 8.2.2.2.18.

### A.7.5.3.8 SCell Activation and deactivation for known PUCCH SCell in FR2 inter-band in non-DRX

### A.7.5.3.8.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements specified in clause 8.3, when PUCCH for a being activated SCell is configured on the SCell. The PCell and SCell are inter-band in FR2 and the SCell is known by a UE. The test shall be performed for the cases respectively where UE has valid TA and where UE does not have valid TA for an sTAG which the SCell belongs to at the time of activation.

The supported test configurations are shown in table A.7.5.3.8.11-1 below. The general test parameters are described in Tables A.7.5.3.8.1-2, and cell specific test parameters are described in Tables A.7.5.3.8.1-3. OTA related test parameters are shown in table A.7.5.3.8.1-4 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. The UE shall be continuously scheduled in the PCell (Cell 1) throughout the whole test.

Before the test starts, the UE is connected to the Cell 1 (PCell) on radio channel 1 but is not aware of Cell 2 (SCell) on radio channel 2. The PCell is in the pTAG and the SCell is in an sTAG. The UE is only monitoring the PCell.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured with PUCCH on radio channel 2. The UE now starts monitoring the Cell 2. During T1, Cell 2 should be detected and measured by the UE such that it meets the condition for known cell defined in clause 8.3.2 for SCell activation.

A MAC message for activation of SCell is sent by the test equipment in a slot # denoted m. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2.

During T2,

- When the UE has a valid TA, the UE shall be able to report valid CSI for the activated SCell no later than in slot $n+\frac{T_{HARQ}+T_{activation_time}+[X]*T_{target_PL-RS}+T_{CSI_Reporting}}{NR\ slot\ length}$, as defined in clause 8.3.12.
- When the UE does not have a valid TA, the test equipment should send a PDCCH order to the UE to initiate RA procedure on the PUCCH SCell no later than in slot $n+\frac{T_{HARQ}+T_{activation_time}}{NR\ slot\ length}$, and the UE shall be able to report valid CSI for the activated SCell no later than in slot $n+\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.12.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot $n+\frac{T_{HARQ}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and the starting point of any PCell interruption due to the deactivation shall occur in the slot $m+1+\frac{T_{HARQ}}{NR\ slot\ length}$ to $m+1+\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and the deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received from the PUCCH SCell.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting from the PUCCH SCell is discontinued.

NOTE 6: All parameters apply for configuration 1
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.3.8.2 Test Requirements

During T2, when the UE has valid TA, the UE shall start sending CSI report for the SCell with non-zero CQI index on the PUCCH SCell no later than in slot $n+\frac{T_{HARQ}+T_{activation_time}+\lceil X \rceil * T_{target_PL-RS}+T_{CSI_Reporting}}{NR\ slot\ length}$, where $T_{activation_time}$ is $\max(T_{uncertainty_MAC} + 5\ ms + T_{FineTiming}, T_{uncertainty_RRC} + T_{RRC_delay} - T_{HARQ})$ as defined in clause 8.3.2, which allows 5 ms.

If the UE has a valid TA for transmitting on the SCell, during T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting on PUCCH SCell no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+[X]*T_{target_PL-RS}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.4.5.3.1.1-2
- $T_{activation_time}$ = max($T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$-$T_{HARQ}$), which allows 5 ms
- $T_{CSI_Reporting}$ = 10 ms
- NR slot length is 0.125 ms for this test case.

If the UE does not have a valid TA for transmitting on the SCell, during T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.4.5.3.1.1-2
- $T_{delay_PUCCH_SCell}$ = $T_{activation_time}$ + max (($T_{First_available_CSI}$ + $T_{CSI_processing}$), (T1+T2+T3), [X]*$T_{target_PL-RS}$) + $T_{CSI_reporting_after}$
- FFS the value of T1+T2+T3 and $T_{CSI_reporting_after}$
- NR slot length is 0.125 ms for this test case.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for SCell at latest in a slot n+ $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

## A.7.5.3.9 PUCCH SCell Activation and deactivation of unknown SCell in FR2

### A.7.5.3.9.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation are done within the required time period defined in clause 8.3.12, when PUCCH for a being activated SCell is configured on the NR FR2 SCell. The PCell and SCell are in different FR2 band. The SCell is unknown by the UE and the UE does not have valid TA for a sTAG which the SCell belongs to at the time of activation. Supported test configurations are shown in table A.7.5.3.9.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.7.5.3.9.1-2 and A.7.5.3.9.1-3 below. OTA related test parameters are shown in table A.7.5.3.9.1-4 below.

In the test there are two cells: Cell 1 and Cell 2. Cell 1 is PCell, Cell 2 is the PUCCH SCell being activated and deactivated. The test consists of three successive time periods with duration of T1, T2 and T3, respectively. The UE shall be continuously scheduled in Cell 1 (PCell) throughout the test.

Before the test starts, the UE is connected to the PCell (Cell 1) on NR radio channel 1 (PCC), but is not aware of SCell (Cell 2) on NR radio channel 2 (SCC). The PCell is in the pTAGs and the SCell is in a sTAG. The UE is only monitoring the PCC.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) gets configured with PUCCH on NR radio channel 2 (SCC). The UE now starts monitoring the SCC2 also. Test equipment sends a MAC message for activation of the SCell. The MAC message for the activation is received at the UE antenna connector at slot # denoted m, which is defined as the start of time period T2.

Immediately at beginning of T2 the transmission power of Cell 2 is increased to same level as for Cell 1. During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot m+$T_{L1\text{-}RSRP}$. In the next DL slot after slot m+$T_{L1\text{-}RSRP}$, the test equipment sends a

MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell. During T2, the test equipment should send a PDCCH order to the UE to initiate RA procedure on the PUCCH SCell at slot $(m+\frac{T_{HARQ}+T_{activation_time}}{NR\ slot\ length})$ after UE report on PCell.

Time period T3 starts when a MAC message for deactivation of the PUCCH SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.7.5.3.9.1-1: PUCCH SCell Activation and deactivation test configurations in FR2 inter-band**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.5.3.9.2 Test Requirements

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.12. For this test case, $T_{FirstSSB_MAX}$=$T_{SMTC_MAX}$=$T_{rs}$=20 ms; $T_{L1\text{-}RSRP,\ measure}$=480 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ =1000 ms.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.7.5.3.3.1-2
- $T_{delay_PUCCH_SCell}$ = $T_{activation_time}$ + max (($T_{First_available_CSI}$ + $T_{CSI_processing}$), (T1+T2+T3), $T_{meas}$) + $T_{CSI_reporting_after}$
- $T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 1030 ms
- $T_{meas}$ = 5* $T_{rs}$ = 100 ms
- NR slot length is 0.125 ms for this test case.

During T2, the interruption of PCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $m + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}}$, where $T_X$ =20 ms.

During T3, the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

During T3, the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$ as defined in clause 8.3.14.

## A.7.5.3.10 SCell Activation and deactivation of FR2 known PUCCH SCell and one FR2 unknown SCell with FR2 PCell

### A.7.5.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that when a PUCCH SCell and DL SCell are activated using the same MAC CE command, the PUCCH SCell, and DL SCell activation and deactivation delays are within the requirements stated in clause 8.3.13 and 8.3.15. When UE receive the MAC CE activation command, PUCCH SCell in FR2 is known to UE and DL SCell in FR2 is unknown to the UE.

The supported test configurations are provided in table A.7.5.3.10.1-1 below. The general test parameters are given in Tables A.7.5.3.10.1-2 and cell-specific test parameters are given in A.7.5.3.10.1-3. OTA related test parameters are given in A.7.5.3.10.1-4.

The test consists of two sub tests, one with valid timing advance (TA), and other with invalid TA. The test consists of six successive time periods, with duration of T1, T2, and T3 respectively. There are two NR carriers, and PCC has two cell and SCC has one cells. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 but is not aware of Cell 2 (PUCCH SCell) and Cell 3 (DL SCell). Cell 1 and Cell 3 are configured on primary timing advance group (pTAG). Cell 2 is on different band than Cell 1 and Cell 3. For valid TA case, Cell 1, Cell 2 and Cell 3 are on same TAG. For invalid TA case Cell 2 is on different TAG than Cell 1 and Cell 3. At the start of the test, the UE is monitoring PCC and not SCC.

At the beginning of T1, the UE receives an RRC message by which the PUCCH SCell (Cell 2) and DL SCell (Cell 3) becomes configured on radio channel 2 and 1 respectively. In T1, the UE starts measuring PUCCH SCell 1 and DL SCell is not detectable. During the duration of T1, the time alignment timer is running on and pTAG, and the TA is maintained on PCell. At the end of T1, the test equipment sends a MAC CE message for activation of the PUCCH SCell and DL SCell simultaneously.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI for the activated PUCCH SCell at latest in slot $n1+\frac{T_{HARQ}+T_{delay_\text{multiple}_SCells_PUCCH_SCell}}{NR\ slot\ length}$, and report valid CSI for the activated DL SCell at latest in slot $n1+\frac{T_{HARQ}+T_{delay_\text{multiple}_SCells_other_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.13. In this test case, both valid TA and invalid TA cases shall be tested.

Test for case when UE has valid TA (i.e., the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running), $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + [X]*T_{target_PL_RS} + T_{CSI_Reporting}$.

Test for case when UE do not have valid TA: $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), [X]*T_{target_PL_RS}, (T1+T2+T3)) + T_{CSI_reporting_after}$

$T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in clause 8.3.7

In case of valid TA, for Cell 2 activation, the UE shall start reporting CSI in PUCCH SCell in slot $n1 + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the PUCCH SCell activation has been completed.

For Cell 3 activation, the UE shall start reporting CSI in PCell in slot $n1 + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the DL SCell activation has been completed.

Any PCell interruption due to activation of PUCCH SCell or DL SCell shall occur in the slot $n1 + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n1 + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.13, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.2.2.7.

Time period T3 starts when a MAC message for deactivation of PUCCH SCell and DL SCell, sent from the test equipment to the UE in a slot # denoted n2, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot $n2 + \frac{T_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.15, and the starting point of any PCell interruption due to the deactivation shall occur in the slot $n2 + 1 + \frac{T_{\text{HARQ}}}{NR\ slot\ length}$ to $n2 + 1 + \frac{T_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell and DL SCell, respectively.

The test equipment verifies the PUCCH SCell activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received. The test equipment verifies the DL SCell activation time by counting the slots from the time when the DL SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the PUCCH SCell deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for PUCCH SCell is discontinued. The test equipment verifies the DL SCell deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for DL SCell is discontinued.

**Table A.7.5.3.10.1-1: Supported test configurations for FR2 SCell activation in FR2 inter-band**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode for PCell<br>NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode for PUCCH SCell and DL SCell |

**Table A.7.5.3.10.1-2: General test parameters for FR2 SCell activation in FR2 inter-band**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channels are used for this test. RF channel number 1 is in band 1 and RF channel number 2 is in band 2, where bands 1 and 2 are inter-band CA operating bands in FR2 as specified in Table 5.2A.2-1 in TS 38.101-2 [19]. |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated PUCCH SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2. |
| Configured deactivated SCell | | Cell 3 | Configured deactivated secondary cell on NR RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| CQI/PMI periodicity and offset configuration index | | 0 | CQI reporting for SCell every second subframe |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 and Cell 3 timing offset to cell1 | µs | ≤8 | A random value from 0µs to 8µs |
| T1 | s | 6 | During this time the PUCCH SCell shall be known and the DL SCell configured and detected. |
| T2 | s | 2 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| T4 | s | 6 | During this time the PUCCH SCell shall be known and the DL SCell configured and detected. |
| T5 | s | 2 | During this time the UE shall activate the PUCCH SCell and DL SCell. |
| T6 | s | 1 | During this time the UE shall deactivate the PUCCH SCell and DL SCell. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |

### A.7.5.3.10.2 Test Requirements

When UE receive SCell activation command at slot n1, during T2 the UE shall start sending CSI reports for SCell 2 with non-zero CQI index in the configured slots for CSI reporting no later than slot n1 + $\frac{T_{HARQ}+T_{delay_multiple_SCells_PUCCH_SCell}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.5.5.3.x6.1-2

- $T_{delay_multiple_SCells_PUCCH_SCell}$ is defined in clause 8.13.13.1. In this test case, both valid TA and invalid TA cases shall be tested.

  - Test for case when UE has valid TA: the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running, and $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + [X]*T_{target_PL_RS} + T_{CSI_Reporting}$.

    - Test for case when UE do not have valid TA: $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), [X]*T_{target_PL_RS}, (T1+T2+T3)) + T_{CSI_reporting_after.}$

    - $T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in clause 8.3.7.

- $T_{CSI_Reporting}$ = 10 ms

- NR slot length is 0.125 ms.

During T2 the UE shall start sending CSI reports for SCell 3 with non-zero CQI index in the configured slots for CSI reporting no later than slot n1 + $\frac{T_{HARQ}+T_{delay_multiple_SCells_other_SCell}}{NR\ slot\ length}$where

- $T_{HARQ}$ is defined in Table A.5.5.3.x6.1-2

- $T_{delay_multiple_SCells_other_SCell} = T_{activation_time_multiple_scells} + T_{CSI_Reporting}$.

  - $T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in clause 8.3.7

- $T_{CSI_Reporting}$ = 10 ms

- NR slot length is 0.125 ms.

Any PCell interruption due to activation of PUCCH SCell or DL SCell shall occur in the slot $n1 + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n1 + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3.13, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2.2.2.7.

During T3, when UE receives deactivation MAC CE at n2 slot, the UE shall stop sending CSI reports for both PUCCH SCell and DL SCell no later than slot n2 + $\frac{T_{\mathrm{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3. The starting point of any PCell

interruption due to the deactivation shall occur in the slot $n2 + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to $n2 + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $n1 + \frac{T_{HARQ}+T_{delay_multiple_SCells_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.13 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.7.5.3.11 PUCCH SCell activation and deactivation delay requirements of FR2 unknown cell with FR2 PCell

### A.7.5.3.11.1 PUCCH SCell activation with non-PUCCH SCell in a secondary PUCCH Group

#### A.7.5.3.11.1.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.11 except the PUCCH SCell in FR2 is unknown and another to-be-activated FR2 non-PUCCH SCell in parallel with the PUCCH SCell belongs to the secondary PUCCH group.

The supported test configurations and the general test parameters are defined in Table A.7.5.3.11.1.1-1 and Table A.7.5.3.11.1.1-2, respectively. And cell specific test parameters are described in Tables A.7.5.3.11.1.1-3. OTA related test parameters are defined in Table A.7.5.3.11.1.1-4. In all test cases, three cells are used. Cell 1 is the FR2 PCell, and Cell 2 and Cell 3 are SCells in a different band from Cell 1. Cell 2 is PUCCH SCell and Cell 3 is non-PUCCH SCell belonging to the secondary PUCCH group.

In the test configuration 1, the UE is configured with a single Timingi Advance Group (TAG) for all cells, whereas UE is configured with a primary TAG (pTAG) for Cell 1 and a secondary TAG (sTAG) for Cell 2 and Cell 3 in the test configuration 2. The test configuration 1 and 2 are to verify the UE performance for the case where the UE has a valid TA for the PUCCH SCell and the case where the UE does not have a valid TA for the PUCCH SCell, respectively.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell) and the non-PUCCH SCell (Cell 3) become configured on NR. During T1 the SCells are powered off and UE is not aware of the SCells.

A MAC message for activation of SCells is sent by the test equipment T1 after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of SCells is received at the UE antenna connector defines the start of time period T2. Immediately at the beginning of T2 the transmission power of Cell 2 is increased to same level as for cell 2 At the time of T2, the UE has a valid TA in the test configuration 1 while the UE does not have a valid TA for the SCell in sTAG in the test configuration 2. During the test for the test configuration 1, the UE needs to be provided with a new Timing Advance Command MAC control element at least once during each time alignment timer period.

During T2, the test equipment monitors the L1-RSRP measurement result for the PUCCH SCell reported on the PCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot $m+T_{L1\text{-}RSRP}$. In the next DL slot after slot $m+T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCells and PUCCH-SpatialRelation of the PUCCH SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for the SCells.

During the test for the test configuration 1, the UE shall start reporting CSI of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the SCell no later than slot $m + (T_{HARQ} + T_{delay_multiple_SCells_PUCCH_SCell})$/NR slot length and slot $m + (T_{HARQ} + T_{delay_multiple_SCells_other_SCell})$/NR slot length, respectively. Here, $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for a valid TA scenario.

During the test for the test configuration 2, $T_{HARQ} + T_{activation_time}$ after slot m, the UE shall be able to monitor PDCCH on the PUCCH SCell that triggers PDCCH order-based contention-free PRACH. The test equipment receives the PRACH and sends random access response with Timing Advance Command MAC Control Elements for sTAG, with Timing Advance Command value estimated from the PRACH. The UE shall start reporting CSI of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the SCell no later than slot $m + (T_{HARQ} + T_{delay_multiple_SCells_PUCCH_SCell})$/NR slot length and slot $m + (T_{HARQ} + T_{delay_multiple_SCells_other_SCell})$/NR slot length, respectively.

Here, $T_{activation_time}$ is the SCell activation delay defined in 8.3.2 for FR2 unknown SCell with periodic CSI-RS used for CSI reporting, and $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for an invalid TA scenario.

Time period T3 starts when a MAC message for deactivation of the SCells, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during the activation of the SCells.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting on the PUCCH SCell is discontinued.

**Table A.7.5.3.11.1.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target SCells: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target SCells: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is required to pass both of the supported test configurations. The UE will be configured with a single Timing Advance Group (TAG) in the test configuration 1 whearas two TAGs are used in the test configuration 2. | |

**Table A.7.5.3.11.1.1-2: General test parameters for unknown FR2 PUCCH SCell activation case**

| Parameter | Unit | Value | Comment |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: All parameters apply for configuration 1 and 2
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.5.3.11.1.2 Test Requirements

During T2 the UE shall start sending a valid L1-RSRP report of the SCell to the PCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2.

During T2, if the test is based on the test configuration 1, the UE shall start sending CSI reports of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the SCell no later than slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_PUCCH_SCell}$)/NR slot length and slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_other_SCell}$)/NR slot length, respectively. Here, $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for a valid TA scenario.

During T2, if the test is based on the test configuration 2, the UE shall start sending CSI reports of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the SCell (Cell 2) no later than slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_PUCCH_SCell}$)/NR slot length and slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_other_SCell}$)/NR slot length, respectively. Here, $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for an invalid TA scenario.

During T3 the UE shall stop sending CSI reports on the PUCCH SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

During T2 interruption of PCell during the SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms. If the UE is not capable of parallelTxPRACH-SRS-PUCCH-PUSCH additional interruption can be allowed as defined in Clause 8.2.2.2.18.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

The interruption of PCell due to activation of SCells shall not be more than the values specified for SA in Clause 8.2.2.2.18.

### A.7.5.3.11.2 PUCCH SCell activation with non-PUCCH SCell in a primary PUCCH Group

#### A.7.5.3.11.2.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.11 except the PUCCH SCell in FR2 is unknown and another to-be-activated FR2 non-PUCCH SCell in parallel with the PUCCH SCell belongs to the primary PUCCH group.

The supported test configurations and the general test parameters are defined in Table A.7.5.3.11.2.1-1 and Table A.7.5.3.11.2.1-2, respectively. And cell specific test parameters are described in Tables A.7.5.3.11.2.1-3. OTA related test parameters are defined in Table A.7.5.3.11.2.1-4. In all test cases, three cells are used. Cell 1 and Cell 3 are FR2 PCell and FR2 non-PUCCH SCell in the same band, respectively, and Cell 2 is PUCCH SCells in a different band from Cell 1 and Cell 3. Cell 3 belongs to the primary PUCCH group.

In the test configuration 1, the UE is configured with a single Timingi Advance Group (TAG) for all cells, whereas UE is configured with a primary TAG (pTAG) for Cell 1 and a secondary TAG (sTAG) for Cell 2 and Cell 3 in the test configuration 2. The test configuration 1 and 2 are to verify the UE performance for the case where the UE has a valid TA for the PUCCH SCell and the case where the UE does not have a valid TA for the PUCCH SCell, respectively.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell) and the non-PUCCH SCell (Cell 3) become configured on NR. During T1 the SCells are powered off and UE is not aware of the SCells.

A MAC message for activation of SCells is sent by the test equipment T1 after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of SCells is received at the UE antenna connector defines the start of time period T2. Immediately at the beginning of T2 the transmission power of Cell 2 is increased to same level as for cell 2 At the time of T2, the UE has a valid TA in the test configuration 1 while the UE does not have a valid TA for the SCell in sTAG in the test configuration 2. During the test for the test configuration 1, the UE needs to be provided with a new Timing Advance Command MAC control element at least once during each time alignment timer period.

During T2, the test equipment monitors the L1-RSRP measurement result for the PUCCH SCell reported on the PCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot m+$T_{L1\text{-}RSRP}$. In the next DL slot after slot m+$T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCells and PUCCH-SpatialRelation of the PUCCH SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for the SCells.

During the test for the test configuration 1, the UE shall start reporting CSI of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the PUCCH SCell (Cell 2) and PCell (Cell 1), respectively, no later than slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_PUCCH_SCell}$)/NR slot length and slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_other_SCell}$)/NR slot length, respectively. Here, $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for a valid TA scenario.

During the test for the test configuration 2, $T_{HARQ}$ + $T_{activation_time}$ after slot m, the UE shall be able to monitor PDCCH on the PUCCH SCell that triggers PDCCH order-based contention-free PRACH. The test equipment receives the PRACH and sends random access response with Timing Advance Command MAC Control Elements for sTAG, with Timing Advance Command value estimated from the PRACH. The UE shall start reporting CSI of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the PUCCH SCell (Cell 2) and PCell (Cell 1), respectively, no later than slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_PUCCH_SCell}$)/NR slot length and slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_other_SCell}$)/NR slot length, respectively. Here, $T_{activation_time}$ is the SCell activation delay defined in 8.3.2 for FR2 unknown SCell with periodic CSI-RS used for CSI reporting, and $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for an invalid TA scenario.

Time period T3 starts when a MAC message for deactivation of the SCells, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during the activation of the SCells.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting on the PUCCH SCell is discontinued.

**Table A.7.5.3.11.2.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target SCells: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: All parameters apply for configuration 1 and 2
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.5.3.11.2.2 Test Requirements

During T2 the UE shall start sending a valid L1-RSRP report of the SCell to the PCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than 3 ms + $T_{FirstSSB_MAX}$ + 15*$T_{SMTC_MAX}$ + 8*$T_{rs}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2.

During T2, if the test is based on the test configuration 1, the UE shall start sending CSI reports of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the PUCCH SCell (Cell 2) and PCell (Cell 1), respectively, no later than slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_PUCCH_SCell}$)/NR slot length and slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_other_SCell}$)/NR slot length, respectively. Here, $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for a valid TA scenario.

During T2, if the test is based on the test configuration 2, the UE shall start sending CSI reports of the PUCCH SCell (Cell 2) and the non-PUCCH SCell (Cell 3) with non-zero CQI index via PUCCH on the PUCCH SCell (Cell 2) and PCell (Cell 1), respectively, no later than slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_PUCCH_SCell}$)/NR slot length and slot m + ($T_{HARQ}$ + $T_{delay_multiple_SCells_other_SCell}$)/NR slot length, respectively. Here, $T_{delay_multiple_SCells_PUCCH_SCell}$ and $T_{delay_multiple_SCells_other_SCell}$ are the PUCCH SCell activation delay and other SCell activation delay defined in 8.3.13 for an invalid TA scenario.

During T3 the UE shall stop sending CSI reports on the PUCCH SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

During T2 interruption of PCell during the SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms. If the UE is not capable of parallelTxPRACH-SRS-PUCCH-PUSCH additional interruption can be allowed as defined in Clause 8.2.2.2.18.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

The interruption of PCell due to activation of SCells shall not be more than the values specified for SA in Clause 8.2.2.2.18.

## A.7.5.3.12 Void

## A.7.5.3.13 SCell Activation for SCell in FR2 intra-band in non-DRX

### A.7.5.3.13.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.5.5.3.8.1, PCell and SCell are in FR2 intra-band.

The supported test configurations are shown in table A.5.5.3.8.1-1 below. The general test parameters are the same as defined in Table A.5.5.3.8.1-2 except those described in Tables A.7.5.3.13.1-2, and cell specific test parameters are described in Tables A.7.5.3.13.1-3. OTA related test parameters are shown in table A.7.5.3.13.1-4 below.

**Table A.7.5.3.13.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|

NOTE 5: Void
NOTE 6: Void
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.3.13.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $(n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length})$. UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstATRS} + 5$ ms, as defined in TS 38.133 [6] clause 8.3.16.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{interruption}$, as defined in TS 38.133 [6] clause 8.3.16.

The interruption on any activated serving cell shall not be more than the values specified for SA in TS 38.133 [6] clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in TS 38.133 [6] clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.7.5.3.14 SCell Activation for known SCell in FR2 inter-band

### A.7.5.3.14.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.13.1 except the PCell and SCell are in FR2 inter-band, when the SCell in FR2 is known by the UE at the time of activation.

The supported test configurations are shown in table A.7.5.3.14.1-1 below. The general test parameters are described in Tables A.7.5.3.14.1-2, and cell specific test parameters are described in Tables A.7.5.3.14.1-3. OTA related test parameters A.7.5.3.14.1 are shown in table A.7.5.3.14.1-4 below.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. The UE now starts monitoring the SCell. The test equipment sends a MAC message for activation of the SCell triggering the aperiodic CSI-RS for fast SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted m (where m mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PSCell for the activated SCell at latest in slot $m + \frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{\text{NR slot length}}$, as defined in clause 8.3.6. The UE shall start reporting CSI in PSCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PSCell interruption due to

activation of SCell shall occur in the slot $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to slot $m + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PSCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

**Table A.7.5.3.14.1-1: Supported test configurations for FR2 SCell activation in FR2 inter-band**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.3.14.1-2: General test parameters for FR2 SCell activation in FR2 inter-band**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channels are used for this test. RF channel number 1 is in band 1 and RF channel number 2 is in band 2, where bands 1 and 2 are inter-band CA operating bands in FR2 as specified in Table 5.2A.2-1 in TS 38.101-2 [19]. |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| CQI/PMI periodicity and offset configuration index | | 0 | CQI reporting for SCell every second subframe |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to cell1 | µs | ≤8 | A random value from 0µs to 8µs |
| A3-offset | dB | -15 | |
| T1 | s | 7 | During this time the PCell shall be known and the SCell configured and detected. |
| T2 | s | 2 | During this time the UE shall activate the SCell. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |

NOTE 6: All parameters apply for configuration 1
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.3.14.2 Test Requirements

During T2 the UE shall start sending CSI report for the SCell in the configured slots for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k). UE shall send the first CSI report for SCell after receiving at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k), or in the next available uplink resource for CSI reporting if the slot was subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.7.5.3.14.1-2
- $T_{activation_time}$ = max($T_{FirstATRS}$ + 5 ms, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$-$T_{HARQ}$)
- $T_{CSI_Reporting}$ = 10 ms
- NR slot length is 0.125 ms for this test case.

During T2, the interruption of PCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, where $T_X$ =4 ms.

## A.7.5.3.15 PUCCH SCell activation and deactivation with FR1 PCell based on L3 reporting after SCell activation command

### A.7.5.3.15.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3.12 for UE capable of l3-MeasUnknownSCellActivation-r18.

The supported test configurations are shown in table A.7.5.3.15.1-1 below. The test parameters are given in Tables A.7.5.3.15.1-2 and cell-specific parameters in A.7.5.3.15.1-3 and A.7.5.3.15.1-4 below. The test consists of Three successive time periods, with duration of T1, T2 and T3 respectively. There are three NR carriers, each with one cell. Before the test starts the UE is connected to Cell 1 and Cell 2 but is not aware of Cell 3, and UE is configured with MeasObjectNR on carriers of Cell 1 and Cell 2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 3) becomes configured on radio channel 3, and one measID is associated with *reportOnActivation*. The UE now starts monitoring the Cell 3. The test equipment sends a MAC message for activation of the PUCCH SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI for the activated PUCCH SCell at latest in slot $n$+ $\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.12.

There are two sub-tests in the test. In sub-test 1, TE shall transmit DCI 0-1 to PSCell at slot $n + \frac{T_{HARQ}+7\ ms}{\text{NR slot length}}$, and the UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{HARQ}+7\ ms+k2}{\text{NR slot length}}$, where k2 =1. In sub-test 2, TE shall transmit DCI 0-1 to PSCell at slot $n + \frac{T_{HARQ}+7\ ms+M-k2}{\text{NR slot length}}$, where k2=1 and M is defined in 8.3.12. The UE shall be able to send L3 measurements report of the SCell at+ $\frac{T_{HARQ}+7\ ms+M}{\text{NR slot length}}$.

Any PCell interruption due to activation of PUCCH SCell shall occur in the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2

Time period T3 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{T_{HARQ}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.14and the starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to m + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.7.5.3.15.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|

### A.7.5.3.15.2 Test Requirements

By end of T2 the UE shall finish the DL activation for the PUCCH SCell. Assuming the periodic CSI reporting is used and assuming periodic CSI activation and TCI state is sent along with SCell activation MAC CE, UE shall finish the DL activation by slot n+ $\frac{T_{HARQ}+T_{activation_time}}{NR\ slot\ length}$ as defined in clause 8.3.12.

During T2 the UE shall start sending PRACH preamble to TE and shall obtain the TA command from TE and shall be ready to send valid CSI report to the TE. CSI report shall be transmitted within $T_{activation_time}$ + Max (($T_{First_available_CSI}$ + $T_{CSI_processing}$), (T1+T2+T3)) + $T_{CSI_reporting_after}$ from the transmission of HARQ feedback of SCell activation command as specified in the 8.3.12.

In sub-test 1, $T_{activation_time}$ = 7 ms + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.12.

In sub-test 2, $T_{activation_time}$ = 7 ms + M+ max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.12.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot m + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot m + $1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to m + $1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption of PCell due to activation of SCell shall not be more than the values specified for SA in Clause 8.2.2.2.7.

## A.7.5.3.16 PUCCH SCell activation and deactivation with FR2 PCell based on L3 reporting after SCell activation command

### A.7.5.3.16.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3.12 for UE capable of l3-MeasUnknownSCellActivation-r18.

The supported test configurations are shown in table A.7.5.3.16.1-1 below. The test parameters are given in Tables A.7.5.3.16.1-2 and cell-specific parameters in A.7.5.3.16.1-3 below. The test consists of Three successive time periods, with duration of T1, T2 and T2 respectively. There are two NR carriers, each with one cell. Before the test starts the UE is connected to Cell 1 but is not aware of Cell 2, and UE is configured with MeasObjectNR on carrier of Cell 1 and Cell 2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 2) becomes configured on radio channel 2, and one measID is associated with *reportOnActivation*. The UE now starts monitoring the Cell 2. The test equipment sends a MAC message for activation of the PUCCH SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI for the activated PUCCH SCell at latest in slot $n+\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.12.

There are two sub-tests in the test. In sub-test 1, TE shall transmit DCI 0-1 to PSCell at slot $n+\frac{T_{\mathrm{HARQ}}+7\ ms}{\mathrm{NR\ slot\ length}}$, and the UE shall be able to send L3 measurements report of the SCell at slot $n+\frac{T_{\mathrm{HARQ}}+7\ ms+\mathrm{k2}}{\mathrm{NR\ slot\ length}}$, where k2 =1. In sub-test 2, TE shall transmit DCI 0-1 to PSCell at slot $n+\frac{T_{\mathrm{HARQ}}+7\ ms+\mathrm{M}-\mathrm{k2}}{\mathrm{NR\ slot\ length}}$, where k2=1 and M is defined in 8.3.12. The UE shall be able to send L3 measurements report of the SCell at$+\frac{T_{\mathrm{HARQ}}+7\ ms+\mathrm{M}}{\mathrm{NR\ slot\ length}}$.

Any PCell interruption due to activation of PUCCH SCell shall occur in the slot $n+1+\frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n+1+\frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}}+N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2

Time period T3 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot $\mathrm{m}+\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.14and the starting point of any PCell interruption due to the deactivation shall occur in the slot $\mathrm{m}+1+\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to $\mathrm{m}+1+\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.7.5.3.16.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.5.3.16.2 Test Requirements

By end of T2 the UE shall finish the DL activation for the PUCCH SCell. Assuming the periodic CSI reporting is used and assuming periodic CSI activation and TCI state is sent along with SCell activation MAC CE, UE shall finish the DL activation by slot n+ $\frac{T_{HARQ}+T_{activation_time}}{NR\ slot\ length}$ as defined in clause 8.3.12.

During T2 the UE shall start sending PRACH preamble to TE and shall obtain the TA command from TE and shall be ready to send valid CSI report to the TE. CSI report shall be transmitted within $T_{activation_time}$ + Max (($T_{First_available_CSI}$ + $T_{CSI_processing}$), (T1+T2+T3)) + $T_{CSI_reporting_after}$ from the transmission of HARQ feedback of SCell activation command as specified in the 8.3.12.

In sub-test 1, $T_{activation_time}$ = 7 ms + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.12.

In sub-test 2, $T_{activation_time}$ = 7 ms + M+ max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.12.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption of PCell due to activation of SCell shall not be more than the values specified for SA in Clause 8.2.2.2.7.

## A.7.5.3.17 SCell Activation and deactivation for SCell in FR2 inter-band in DRX for UE capable of small beam sweeping factors and/or short measurement interval

### A.7.5.3.17.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.1.1 except the PCell (Cell 1) and SCell (Cell 2) are in FR2 inter-band. The test will also verify that the SSB-based L1-RSRP measurement accuracy is within the specified limits as stated in clause 10.1.20.1.

The supported test configurations are shown in table A.7.5.3.17.1-1 below. The general test parameters are described in Tables A.7.5.3.17.1-2, and cell specific test parameters are described in Tables A.7.5.3.17.1-3. OTA related test parameters are shown in table A.7.5.3.17.1-4 below.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell. A MAC message for activation of SCell is sent by the test equipment 100 ms after the RRC message, in a slot # denoted m. The UE shall be continuously scheduled within on-duration based on DRX configuration in the PCell throughout the whole test. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 is increased to same level as for Cell 1. During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot m+$T_{L1\text{-}RSRP}$. In the next DL slot after slot m+$T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received. In this test the allowed time for SCell activation depends on the UE reported capabilities regarding small beam sweeping factors (beamSweepingFactorReduction-r18) and short measurement intervals (shortMeasInterval-r18).

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

The test equipment verifies the absolute accuracy of SSB-based L1-RSRP measurements during T2 by using the parameters in Table A.7.5.3.17.1-3 and Table A.7.5.3.17.1-4.

**Table A.7.5.3.17.1-1: Supported test configurations for FR2 SCell activation in FR2 inter-band**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.3.17.1-2: General test parameters for FR2 SCell activation in FR2 inter-band**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channels are used for this test. RF channel number 1 is in band 1 and RF channel number 2 is in band 2, where bands 1 and 2 are inter-band CA operating bands in FR2 as specified in Table 5.2A.2-1 in TS 38.101-2 [19]. |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2. |
| CP length | | Normal | |
| DRX | | DRX.8 | DRX Configuration 8: DRX cycle = 320 ms and TAT = infinity as specified in A.3.3.8 |
| CQI/PMI periodicity and offset configuration index | | 0 | CQI reporting for SCell every second subframe |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to cell1 | ms | ≤8 | A random value from 0 ms to 8 ms |
| T1 | ms | 100 | During this time the PCell shall be known and the SCell is configured but not detected. |
| T2 | s | 2 or 12 | During this time the UE shall activate the SCell. Depends on the UE capability, T2= 2 s for the case where DRX is not applicable. T2= 12 s for the case where DRX is applicable. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| X1 | | 1,2,4,6 (Default 8) | Optionally signaled by the UE capabilities as part of beamSweepingFactorReduction-r18: |
| X2 | | 0,1,2,3,4,5,6,7 (Default 8) | Optionally signaled by the UE capabilities as part of beamSweepingFactorReduction-r18: |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: All parameters apply for configuration 1
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.3.17.2 Test Requirements

During T2 the UE shall start sending CSI report for the SCell in the configured slots for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k). UE shall send the first CSI report for SCell after receiving at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k), or in the next available uplink resource for CSI reporting if the slot was subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

For UE capable of *beamSweepingFactorReduction-r18* and *shortMeasInterval-r18* capabilities:

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than:

3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, UE supports short measurement interval hence $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ =$T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ enhanced\ measure}$=X2/8 *480 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ according to table A.7.5.17.2-1. $T_{L1\text{-}RSRP}$ =968 ms if X1 and X2 use the default value and a minimum of 348 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $_{TL1\text{-}RSRP}$ shall be adopted from table A.7.5.17.2-1:

**Table A.7.5.3.17.2-1: $T_{L1\text{-}RSRP}$ for different X1/X2 capabilities (ms)**

| | X1=1 | X1=2 | X1=4 | X1=6 |
|---|---|---|---|---|
| X2=0 | 348 | 368 | 408 | 448 |
| X2=1 | 408 | 428 | 468 | 508 |
| X2=2 | 468 | 488 | 528 | 568 |
| X2=3 | 528 | 548 | 588 | 628 |
| X2=4 | 588 | 608 | 648 | 688 |
| X2=5 | 648 | 668 | 708 | 748 |
| X2=6 | 708 | 728 | 768 | 808 |
| X2=7 | 768 | 788 | 828 | 868 |

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{5092ctivation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.7.5.3.3.1-2
- $T_{activation_time}$ = 3 ms $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 1000 ms in case of no X1/X2 capability and a minimum of 380 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $_{TL1\text{-}RSRP}$ shall be adopted.

For UE capable of *beamSweepingFactorReduction-r18* but not *shortMeasInterval-r18* capabilities, the cell specific test parameters are described in table A.7.5.3.17.1-3 except that SMTC value is SMTC.1:

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than:

3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, UE supports short measurement interval hence $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ =20 ms; $T_{L1\text{-}RSRP,\ enhanced\ measure}$=X2/8 *11520 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ = 12008 ms if X1 and X2 are absent. Value of $T_{L1\text{-}RSRP}$ for various X1/X2 capabilities is obtained from table A.7.53.17.2-2.

**Table A.7.5.3.17.2-2: $T_{L1\text{-}RSRP}$ for different X1/X2 capabilities (ms)**

| | X1=1 | X1=2 | X1=4 | X1=6 |
|---|---|---|---|---|
| X2=0 | 348 | 368 | 408 | 448 |
| X2=1 | 1788 | 1808 | 1848 | 1888 |
| X2=2 | 3228 | 3248 | 3288 | 3328 |
| X2=3 | 4668 | 4688 | 4728 | 4768 |
| X2=4 | 6108 | 6128 | 6168 | 6208 |
| X2=5 | 7548 | 7568 | 7608 | 7648 |
| X2=6 | 8988 | 9008 | 9048 | 9088 |
| X2=7 | 10428 | 10448 | 10488 | 10528 |

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.7.5.3.3.1-2

- $T_{activation_time}$ = 3 ms $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 12040 ms in case of no X1/X2 capability and a minimum of 380 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $T_{L1\text{-}RSRP}$ shall be adopted.

For UE capable of *shortMeasInterval-r18* but not *beamSweepingFactorReduction-r18* capabilities, the general test parameters are described in table A.7.5.3.17.1-2, except that the default value for X1=X2=8 is chosen.

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than:

3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + 8*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, UE supports short measurement interval hence $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ =$T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ enhanced\ measure}$=480 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ =968 ms.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

-$T_{HARQ}$ is defined in table A.7.5.3.3.1-2

-$T_{activation_time}$ = 3 ms $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + 8*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 1000 ms.

-$T_{CSI_Reporting}$ = 10 ms

-NR slot length is 0.125 ms for this test case.

The L1-RSRP measurement accuracy for SSB resource reported by UE in L1-RSRP report (SSB#0 or SSB#1) of Cell 3 shall fulfil the accuracy requirements in clauses 10.1.20.1 provided the side condition is -2 dB as defined in clause 8.3.2.

During T3, the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

## A.7.5.3.18 SCell Activation and deactivation for FR1+FR2 inter-band with target SCell in FR2, in DRX, for UE capable of small beam sweeping factors and/or short measurement interval

### A.7.5.3.18.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.1.1 except the PCell is in FR1 and SCell is in FR2.

The supported test configurations are defined in table A.7.5.3.18.1-1. The general test parameters are the same as defined in table A.7.5.3.18.1-2. And cell specific test parameters are described in Tables A.7.5.3.18.1-2. OTA related test parameters are defined in table A.7.5.3.18.1-3. The test will also verify that the SSB-based L1-RSRP measurement accuracy is within the specified limits as stated in clause 10.1.20.1.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100 ms after the RRC message, in a slot # denoted m. The UE shall be continuously scheduled within on-duration based on DRX configuration in the PCell throughout the whole test. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2.

During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot m+$T_{L1\text{-}RSRP}$. In the next DL slot after slot m+$T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell 1 deactivation command is sent until CSI reporting for SCell 1 is discontinued.

The test equipment verifies the absolute accuracy of SSB-based L1-RSRP measurements during T2 by using the parameters in table A.7.5.3.18.1-3 and table A.7.5.3.18.1-4.

**Table A.7.5.3.18.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 6: Void
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not imit UE implementation or test system implementation.

## A.7.5.3.18.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

For UE capable of *beamSweepingFactorReduction-r18* and *shortMeasInterval-r18* capabilities:

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than

3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ = $T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ enhanced_measure}$= (X2/8)*160 ms and $T_{L1\text{-}RSRP,reprt}$=5 ms, which allows $T_{L1\text{-}RSRP}$ = 680 ms if X1 and X2 use the default value. Value of $T_{L1\text{-}RSRP}$ for various X1/X2 capabilities is obtained from table A.7.5.3.18.2-1.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.7.5.3.18.1-2

- $T_{activation_time}$ = 3 ms $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 710 ms in case of no X1/X2 capability and a minimum of 380 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $T_{L1\text{-}RSRP}$ shall be adopted from table A.7.5.3.18.2-1.

**Table A.7.5.3.18.2-1: $T_{L1\text{-}RSRP}$ for different X1/X2 capabilities (ms)**

| | X1=1 | X1=2 | X1=4 | X1=6 |
|---|---|---|---|---|
| X2=0 | 348 | 368 | 408 | 448 |
| X2=1 | 368 | 388 | 428 | 468 |
| X2=2 | 388 | 408 | 448 | 488 |
| X2=3 | 408 | 428 | 468 | 508 |
| X2=4 | 428 | 448 | 488 | 528 |
| X2=5 | 448 | 468 | 508 | 548 |
| X2=6 | 468 | 488 | 528 | 568 |
| X2=7 | 488 | 508 | 548 | 588 |

For UE capable of beamSweepingFactorReduction-r18 but not shortMeasInterval-r18 capabilities, the cell specific test parameters are described in table A.7.5.3.18.1-3 except that SMTC value is SMTC.1:

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than

3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ = $T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ enhanced_measure}$= (X2/8)*3840 ms and $T_{L1\text{-}RSRP,5097ctiva}$=5 ms, which allows $T_{L1\text{-}RSRP}$ = 4328 ms if X1 and X2 use the default value. Value of $T_{L1\text{-}RSRP}$ for various X1/X2 capabilities is obtained from table A.7.5.3.18.2-2.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{5097ctivation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.5.5.3.1.1-2

- $T_{activation_time}$ = 3 ms $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 4360 ms in case of no X1/X2 capability and a minimum of 380 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $T_{L1\text{-}RSRP}$ shall be adopted from table A.7.5.3.18.2-2.

**Table A.7.5.3.18.2-2: $T_{L1\text{-}RSRP}$ for different X1/X2 capabilities (ms)**

| | X1=1 | X1=2 | X1=4 | X1=6 |
|---|---|---|---|---|
| X2=0 | 348 | 368 | 408 | 448 |
| X2=1 | 828 | 848 | 888 | 928 |
| X2=2 | 1308 | 1328 | 1368 | 1408 |
| X2=3 | 1788 | 1808 | 1848 | 1888 |
| X2=4 | 2268 | 2288 | 2328 | 2368 |
| X2=5 | 2748 | 2768 | 2808 | 2848 |
| X2=6 | 3228 | 3248 | 3288 | 3328 |
| X2=7 | 3708 | 3728 | 3768 | 3808 |

For UE capable of *shortMeasInterval-r18* but not *beamSweepingFactorReduction-r18* capabilities, the general test parameters are described in table A.7.5.3.18.1-2, except that the default value for X1=X2=8 is chosen.

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than:

3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + 8*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$

as defined in clause 8.3.2. For this test case, UE supports short measurement interval hence $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ =$T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ enhanced\ measure}$=160 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ =680 ms.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

-$T_{HARQ}$ is defined in table A.7.5.3.3.1-2

-$T_{activation_time}$ = 3 ms $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + 8*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max {($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)}, which allows 710 ms.

- $T_{CSI_Reporting}$ = 10 ms

- NR slot length is 0.125 ms for this test case.

The L1-RSRP measurement accuracy for SSB resource reported by UE in L1-RSRP report (SSB#0 or SSB#1) of Cell 3 shall fulfil the accuracy requirements in clauses 10.1.20.1 provided the side condition is -2 dB as defined in clause 8.3.2.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

## A.7.5.3.19 SCell Activation and deactivation of FR2 unknown SCell with FR1 PCell in non-DRX with L3 reporting during activation

### A.7.5.3.19.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3.17, when the SCell is unknown in FR2 by the UE at the time of activation. In this test, UE shall perform two sub-tests where two different UL resource locations are configured.

The supported test configurations are shown in table A.7.5.3.19.1-1 below. The test parameters are the same as in clause A.4.5.3.3.1 except those described in the following clause. The general test parameters are given in table A.7.5.3.19.1-2 and cell-specific test parameters in table A.7.5.3.19.1-3 below. In this case, OTA related test parameters are shown in table A.7.5.3.19.1-4 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, PCell (Cell 1) in FR1 and SCell (Cell 2) in FR2. Cell 1 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) but is not aware of Cell 2 (SCell). The UE is monitoring the PCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. In the measurement control information for Cell 2, it is indicated to the UE that event-triggered reporting with Event A2 and reportOnActivation is used. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{\text{NR slot length}}$, as defined in clause 8.3.

In sub-test1, TE shall transmit DCI 0-1 to PCell at slot $n + \frac{T_{HARQ}+7\ ms}{\text{NR slot length}}$. The UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{HARQ}+7\ ms+0.125\ \text{ms}}{\text{NR slot length}}$ for sub-test 1.

In sub-test2, TE shall transmit DCI 0-1 to PCell at slot $n + \frac{T_{HARQ}+3\ ms+\text{M}-0.125\ \text{ms}}{\text{NR slot length}}$. The UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{HARQ}+7\ ms+\text{M}}{\text{NR slot length}}$ for sub-test 2. TE will send TCI activation command after receiving L3 measurement report of the SCell.

The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PSCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.7.5.3.19.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

**Table A.7.5.3.19.1-2: General test parameters for FR2 SCell activation case with FR1 PSCell**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2 |
| T1 | s | 16 | During this time the PCell shall be known and the SCell configured and detected. |
| T2 | s | 1 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| Hysteresis | dB | 0 | |
| a2-Threshold | dBm | -100 | |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| $T_{CSI_Reporting}$ | ms | 15 | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |

### A.7.5.3.19.2 Test Requirements

During T2, the UE shall be able to send a valid L3-RSRP report for the SCell in the configured slots for CSI reporting at slot n + $\frac{T_{HARQ}+7ms+0.125ms}{NR\ slot\ length}$ for sub-test 1. For sub-test2, the UE shall be able to send a valid L3-RSRP for the SCell at slot n + $\frac{T_{HARQ}+7ms+M}{NR\ slot\ length}$ . The UE is not required to send L3-RSRP report after slot n + $\frac{T_{HARQ}+3ms+M}{NR\ slot\ length}$, where M is defined in 8.3.17.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ and $T_{CSI_Reporting}$ are defined in table A.7.5.3.16.1-2.
- In this case, $T_{SSB}$=$T_{SMTC}$ = 20 ms and $T_{L1\text{-}RSRP,report}$ = 5 ms.
- For sub-test1, $T_{activation_time}$ = 7 ms + 0.125 ms + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$).
- For sub-test2, $T_{activation_time}$ = 3 ms + M + max ($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$)
- NR slot length is 0.125 ms for this test case.

During T3 the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 interruption of PCell / PSCell during SCell activation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.7.5.3.20 SCell Activation and Deactivation of FR2 unkown SCell with FR2 PCell in non-DRX with L3 reporting during activation

### A.7.5.3.20.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3.17, when the SCell is unknown in FR2 by the UE at the time of activation. In this test, UE shall perform two sub-tests where two different UL resource locations are configured.

The supported test configurations are shown in table A.7.5.3.20.1-1 below. The test parameters are the same as in clause A.4.5.3.3.1 except those described in the following clause. The general test parameters are given in table A.7.5.3.20.1-2 and cell-specific test parameters in table A.7.5.3.20.1-3 below. In this case, OTA related test parameters are shown in table A.7.5.3.20.1-4 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, PCell (Cell 1) in FR2 and SCell (Cell 2) in FR2. Cell 1 has constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) but is not aware of Cell 2 (SCell). The UE is monitoring the PCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. In the measurement control information for Cell 2, it is indicated to the UE that event-triggered reporting with Event A2 and reportOnActivation is used. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3.

In sub-test1, TE shall transmit DCI 0-1 to PCell at slot $n + \frac{T_{\text{HARQ}}+7\ ms}{\text{NR slot length}}$. The UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{\text{HARQ}}+7\ ms+0.125\ \text{ms}}{\text{NR slot length}}$ for sub-test 1.
In sub-test2, TE shall transmit DCI 0-1 to PCell at slot $n + \frac{T_{\text{HARQ}}+3\ ms+\text{M}-0.125\ \text{ms}}{\text{NR slot length}}$. The UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{\text{HARQ}}+7\ ms+\text{M}}{\text{NR slot length}}$ for sub-test 2. TE will send TCI activation command after receiving L3 measurement report of the SCell.

The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PSCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.7.5.3.20.1-1: Supported test configurations for FR2 SCell activation case**

### A.7.5.3.20.2 Test Requirements

During T2, the UE shall be able to send a valid L3-RSRP report for the SCell in the configured slots for CSI reporting at slot n + $\frac{T_{HARQ}+7ms+0.125ms}{NR\ slot\ length}$ for sub-test 1. For sub-test2, the UE shall be able to send a valid L3-RSRP for the SCell at slot n + $\frac{T_{HARQ}+7ms+M}{NR\ slot\ length}$. The UE is not required to send L3-RSRP report after slot n + $\frac{T_{HARQ}+3ms+M}{NR\ slot\ length}$, where M is defined in 8.3.17.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ and $T_{CSI_Reporting}$ are defined in table A.7.5.3.16.1-2.
- In this case, $T_{SSB}$=$T_{SMTC}$ = 20 ms and $T_{L1\text{-}RSRP,report}$ = 5 ms.
- For sub-test1, $T_{activation_time}$ = 7 ms + 0.125 ms + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$).
- For sub-test2, $T_{activation_time}$ = 3 ms + M + max ($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$)
- NR slot length is 0.125 ms for this test case.

During T3 the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 interruption of PCell / PSCell during SCell activation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.7.5.4 Void

## A.7.5.5 Beam Failure Detection and Link recovery procedures

### A.7.5.5.1 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with SSB-based BFD and LR in non-DRX mode

#### A.7.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.1.1-1, A.7.5.5.1.1-2, A.7.5.5.1.1-3 and A.7.5.5.1.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.1.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.7.5.5.1.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.7.5.5.1.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description |
|---|---|
| 1 | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

| | |
|---|---|
| 2 | TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR2 | |

### A.7.5.5.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 960+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.2 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with SSB-based BFD and LR in DRX mode

### A.7.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.2.1-1, A.7.5.5.2.1-2, A.7.5.5.2.1-3, A.7.5.5.2.1-4 and A.7.5.5.2.1-5 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.2.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.7.5.5.2.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.5.5.2.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description |
|---|---|
| 1 | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR2 | |

### A.7.5.5.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 560+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.3 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with CSI-RS-based BFD and LR in non-DRX mode

### A.7.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.3.1-1, A.7.5.5.3.1-2, and A.7.5.5.3.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.3.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.3.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

### A.7.5.5.3.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.4 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with CSI-RS-based BFD and LR in DRX mode

### A.7.5.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.4.1-1, A.7.5.5.4.1-2, A.7.5.5.4.1-3, and A.7.5.5.4.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.4.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.4.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.4.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband

**Figure A.7.5.5.4.1-2: CSI-RS_RP level variation for CSI-RS based beam failure detection and link recovery testing in DRX mode**

### A.7.5.5.4.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.5 Scheduling availability restriction during Beam Failure Detection and Link Recovery for FR2 PCell configured with SSB-based BFD and LR in non-DRX mode

### A.7.5.5.5.1 Test Purpose and Environment

The purpose is to test scheduling availability restrictions when the UE is performing beam failure detection or when the UE is performing L1-RSRP measurement for candidate beam detection, when no DRX is used. This test will verify the scheduling availability restriction requirements in clause 8.5.7 and 8.5.8.

The test parameters are given in Tables A.7.5.5.5.1-1, A.7.5.5.5.1-2 and A.7.5.5.5.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.5.1-1 shows the variation of the downlink SNR of the SSB index 0 in the active cell to emulate SSB based beam failure. Figure A.7.5.5.5.1-2 shows the variation of the downlink L1-RSRP of the SSB index 1 used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. This test will focus on the scheduling availability during beam failure detection) and candidate beam detection. In the test, DRX configuration is not enabled. Test is to test the scheduling availability restriction of UE performing beam failure detection and candidate beam detection when SSB RS configured for Beam failure detection and candidate beam detection. During the test the UE is scheduled to transmit continuously in UL.

**Table A.7.5.5.5.1-1: Supported test configurations for FR2 PCell**

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.5.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam given in clause B.2.1.3 and does not limit UE implementation or test system implementation
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband.
NOTE 12: BFD RS ($q_0$) is configured as SSB index 0 at the start of T3, and it is reconfigured by RRC as SSB index 1 after the UE transmits the preamble on a beam associated with the candidate beam set $q_1$.

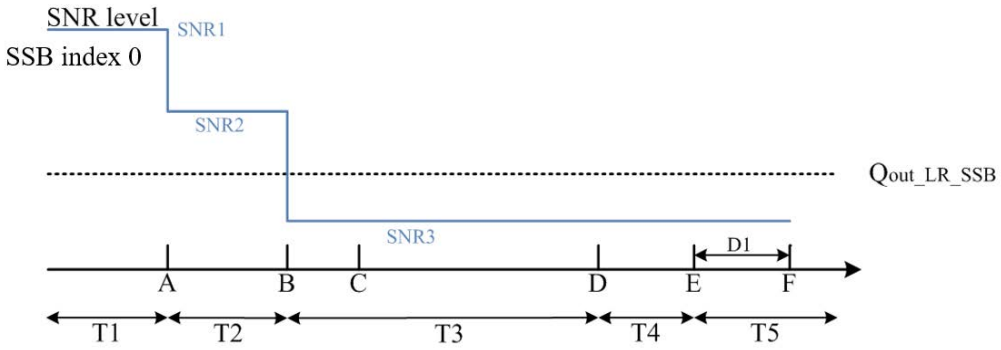

**Figure A.7.5.5.5.1-1: SNR variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

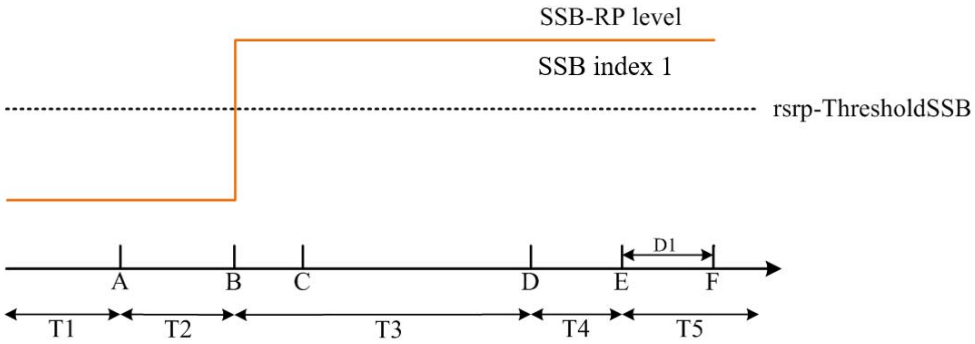

**Figure A.7.5.5.5.1-2: SSB_RP level variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.7.5.5.5.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

## A.7.5.5.6 Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in non-DRX mode

### A.7.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.6.1-1, A.7.5.5.6.1-2 and A.7.5.5.6.1-3. There are two cells, cell 1 is the active PCell and cell 2 is the active SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.6.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active SCell to emulate CSI-RS based beam failure. Figure A.7.5.5.6.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.6.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

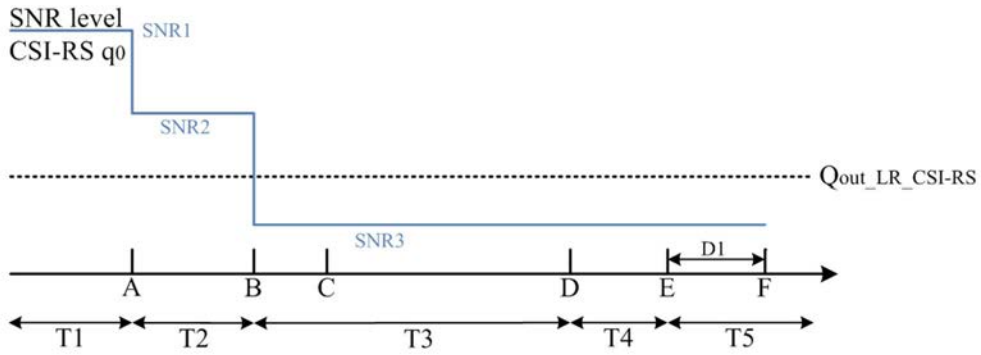

**Figure A.7.5.5.6.1-1: SNR variation for beam failure detection and link recovery testing for SCell in non-DRX mode**

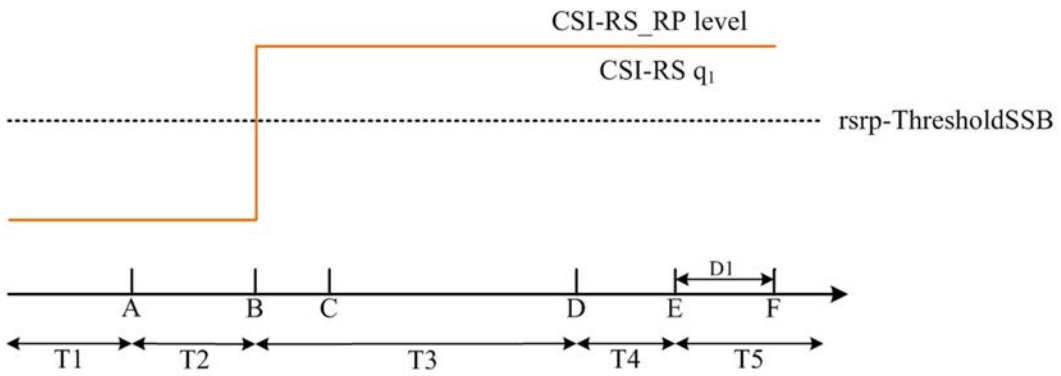

**Figure A.7.5.5.6.1-2: CSI-RS_RP level variation for CSI-RS based beam failure detection and link recovery testing for SCell in non-DRX mode**

### A.7.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.6.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.7 Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

### A.7.5.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.7.1-1, A.7.5.5.7.1-2 and A.7.5.5.7.1-3. There are two cell, cell 1 is the active PCell and cell 2 is the active SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.7.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active SCell to emulate CSI-RS based beam failure. Figure A.7.5.5.7.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

### A.7.5.5.7.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 in A.7.5.5.7.1 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.8 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with CSI-RS-based BFD and LR in DRX mode for UE fulfilling relaxed measurement criterion

### A.7.5.5.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.3.4 for UE fulfilling good serving cell quality relaxed measurement criteria. The test parameters are given in Tables A.7.5.5.8.1-1, A.7.5.5.8.1-2, A.7.5.5.8.1-3, and A.7.5.5.8.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.8.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.8.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for both low mobility and good serving cell quality defined in clause 5.7.13.2 in TS 38.331 [2]. At the beginning of T1, the UE has fulfilled the good serving cell quality relaxation measurements criterion and is performing relaxed measurements for beam failure detection.

- *goodServingCellEvaluationBFD* [2] criterion is configured according to the parameters listed in table A.7.5.5.8.1-2;
- *lowMobilityEvalutationcConnected* [2] criterion is configured according to the parameters listed in table A.7.5.5.8.1-2.

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.4.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband

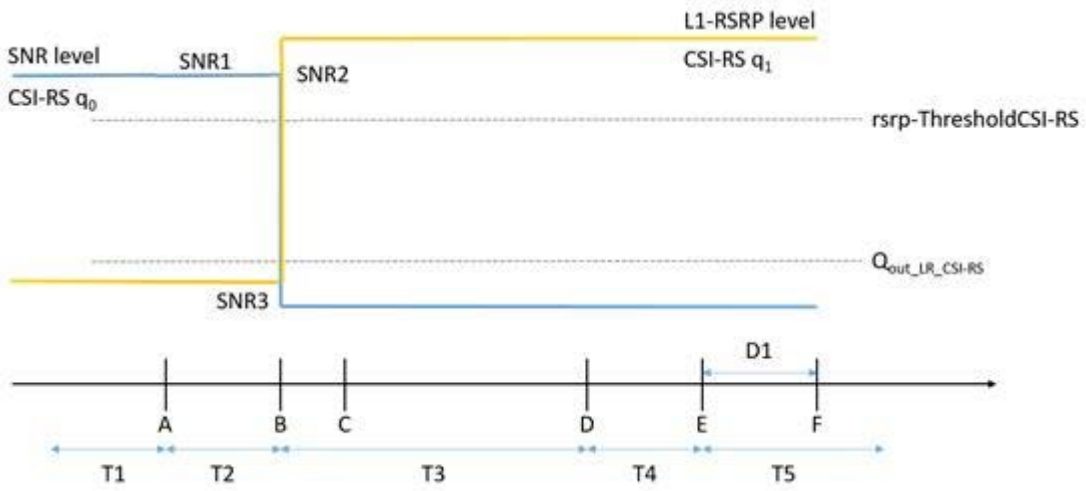

**Figure A.7.5.5.8.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode**

### A.7.5.5.8.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery, and exit from relaxed measurements. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.9 TRP specific Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

### A.7.5.5.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects TRP specific CSI-RS-based beam failure and link recovery in the sets $\bar{q}_{0,0}$ and $\bar{q}_{1,0}$ for TRP0 when DRX is used for an FR2 active SCell requirements in clause 8.18.

The test parameters are given in Tables A.7.5.5.9.1-1, A.7.5.5.9.1-2 and A.7.5.5.9.1-3. There are two cell, cell 1 is the active PCell and cell 2 is the active SCell, in the test. SCell is configured with two TRPs. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.9.1-1 shows the variation of the downlink SNR of the CSI-RS in set $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ in the active SCell for TRP0 and TRP1 respectively. Figure A.7.5.5.9.11-1additionally shows the variation of the downlink L1-RSRP of the CSI-RS in $\bar{q}_{1,0}$ for TPR0. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Figure A.7.5.5.9.1-1: SNR and L1-RSRP variation for beam failure detection and link recovery testing for SCell in DRX mode**

### A.7.5.5.9.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.9.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 for TRP1 and TRP2.

During the period from time point A to time point B the UE shall transmit uplink signal in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3, T4, T5, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 for TRP2.

During T3 the UE shall detect beam failure and initiate link recovery for TRP1. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_{0,1}$.

No later than time point F occurring no later than D1 = [520]+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{0,1}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{0,1}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.10 TRP specific Beam Failure Detection and Link Recovery Test for FR2 PCell configured with SSB-based BFD and LR in non-DRX mode

### A.7.5.5.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects TRP specific SSB-based beam failure and link recovery in the sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ for TRP1 with *schedulingRequestID-BFR-r17* configured, when no DRX is used for an FR2 serving cell requirements in clause 8.18.

The test parameters are given in Tables A.7.5.5.10.1-1, A.7.5.5.10.1-2, A.7.5.5.10.1-3 and A.7.5.5.10.1-4 below. There is one active serving cell configured with two TRPs in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.10.1-1 shows the variation of the downlink SNR of the SSB in set $\bar{q}_{0,0}$ and $\bar{q}_{1,0}$ for TRP1 and TRP2 respectively. Figure A.7.5.5.10.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $\bar{q}_{0,1}$ for TPR1.

Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.7.5.5.10.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description |
|---|---|
| 1 | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR2 | |

**Figure A.7.5.5.10.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.7.5.5.10.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 for TRP 0 and TRP1.

During the period from time point A to time point B the UE shall transmit uplink signal for TRP 0 and TRP1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3, T4, T5, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission for TRP 1.

During T3 the UE shall detect beam failure and initiate link recovery for TRP 0. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_{1,0}$.

No later than time point F occurring no later than D1 = 960+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{1,0}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{1,0}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.11 Beam Failure Detection and Link Recovery Test for FR2-2 PCell configured with CSI-RS-based BFD and LR in non-DRX mode

### A.7.5.5.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2-2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.11.1-1, A.7.5.5.11.1-2, and A.7.5.5.11.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.11.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.11.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time

duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

**Table A.7.5.5.11.1-1: Supported test configurations for FR2-2 PCell**

| Configuration | Description |
|---|---|
| 1 | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | TDD duplex mode, 480 kHz SSB SCS, 400 MHz bandwidth |
| 3 | TDD duplex mode, 960 kHz SSB SCS, 400 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR2-2 | |

**Figure A.7.5.5.11.1-1: SNR and L1-RSRP variation for CSI-RS based beam failure detection and link recovery testing in non-DRX mode**

## A.7.5.5.11.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.5.12 Beam Failure Detection and Link Recovery Test for FR2-2 PCell configured with CSI-RS-based BFD and LR in DRX mode

### A.7.5.5.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2-2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.12.1-1, A.7.5.5.12.1-2, A.7.5.5.12.1-3, and A.7.5.5.12.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.12.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.12.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.5.5.12.1-1: Supported test configurations for FR2-2 PCell**

| Configuration | Description |
|---|---|
| 1 | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | TDD duplex mode, 480 kHz SSB SCS, 400 MHz bandwidth |

## A.7.5.5.12.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.5.13 Scheduling availability restriction during Beam Failure Detection and Link Recovery for FR2-2 PCell configured with SSB-based BFD and LR in non-DRX mode

#### A.7.5.5.13.1 Test Purpose and Environment

The purpose is to test scheduling availability restrictions when the UE is performing beam failure detection or when the UE is performing L1-RSRP measurement for candidate beam detection, when no DRX is used. This test will verify the scheduling availability restriction requirements in clause 8.5.7 and 8.5.8.

The test parameters are given in Tables A.7.5.5.13.1-1, A.7.5.5.13.1-2 and A.7.5.5.13.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.13.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.7.5.5.13.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. This test will focus on the scheduling availability during beam failure detection) and candidate beam detection. In the test, DRX configuration is not enabled. Test is to test the scheduling availability restriction of UE performing beam failure detection and candidate beam detection when SSB RS configured for Beam failure detection and candidate beam detection. During the test the UE is scheduled to transmit continuously in UL.

**Table A.7.5.513.1-1: Supported test configurations for FR2-2 PCell**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.13.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam given in clause B.2.1.3 and does not limit UE implementation or test system implementation
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband.

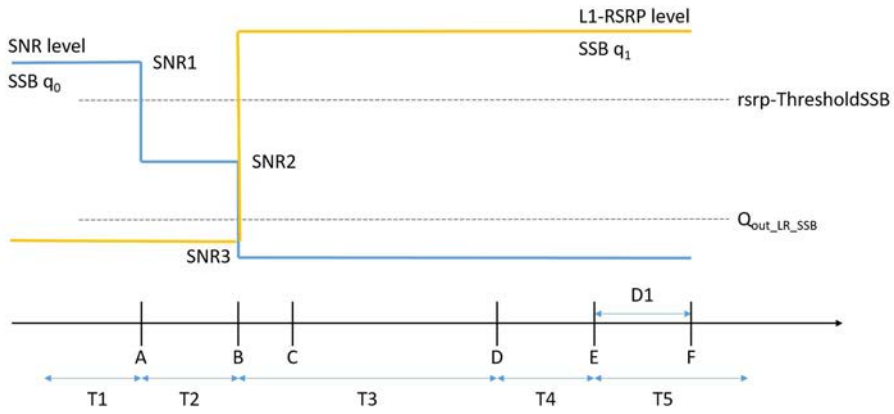

**Figure A.7.5.5.13.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

## A.7.5.5.13.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

## A.7.5.5.14 TRP specific Beam Failure Detection and Link Recovery for FR2 PCell configured with CSI-RS-based BFD and LR and multi-Rx operation in DRX mode

### A.7.5.5.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects TRP specific CSI-RS-based beam failure and link recovery in the sets $\bar{q}_{0,0}$ and $\bar{q}_{1,0}$ for TRP0 and sets $\bar{q}_{0,1}$ and $\bar{q}_{1,1}$ for TRP1 when DRX is used for an FR2 PCell requirements in clause 8.18.

The test parameters are given in Tables A.7.5.5.14.1-1, A.7.5.5.14.1-2 and A.7.5.5.14.1-3. Cell 1 is the active PCell in the test. PCell is configured with two TRPs. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.14.1-3 shows the variation of the downlink SNR of the CSI-RS in set $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ in the PCell for TRP0 and TRP1 respectively. Figure A.7.5.5.14.1-3 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in $\bar{q}_{1,0}$ for TPR0. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms.

In the test, UE is capable of multi-Rx operation and configured with group-based beam reporting (GBBR) on the cell 1. During T1, UE shall be able to report via beam pair associated with sets $\bar{q}_{0,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1. After T5, UE shall be able to report via new beam pair associated with sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1

During T2 and T3, for beam failure detection, CSI-RS resources in the two sets $\bar{q}_{0,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1 are overlapped on the same OFDM symbol according to CSI-RS configuration in table A.7.5.5.14.1-2 and A.3.14.2-3, and the conditions in clause 8.18.3.2 are met, at least including:

- Both CSI-RSs are not in any CSI-RS resource set with repetition ON
- The CSI-RS in set $\bar{q}_{0,0}$ has same QCL source as the active TCI state of one PDSCH, and the CSI-RS in set $\bar{q}_{0,1}$ has same QCL source as the active TCI state of the other PDSCH
- Resources of the active TCI states for the two PDSCHs have been reported as a resource group in Rel-17 group-based RSRP report.

During T4 and T5, for candidate beam detection, CSI-RS resources in the two sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1 are also overlapped according to CSI-RS configuration in table A.7.5.5.14.1-2 and and A.3.14.2-3.

In addition, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

NOTE 11: AoA1 and AoA3 are for TRP0 of PCell, AoA2 is for TRP1 of PCell. AoA1 and A0A2 are from the set of qualified AoA pairs according to A.3.15.5.

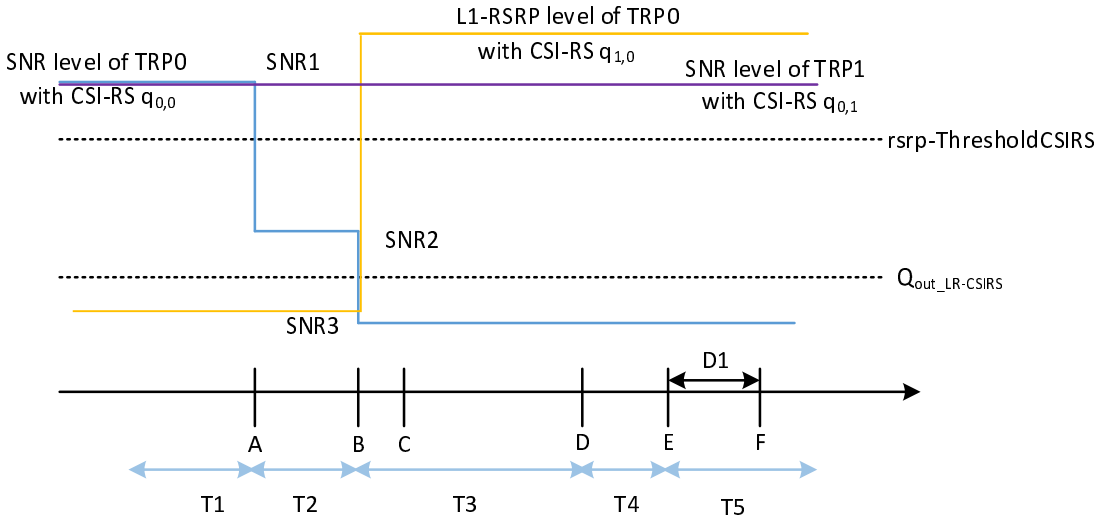

**Figure A.7.5.5.14.1-1: SNR and L1-RSRP variation for beam failure detection and link recovery testing for PCell in DRX mode**

### A.7.5.5.14.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.14.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 with sets $\bar{q}_{0,0}$ for TRP0 and sets $\bar{q}_{0,1}$ for TRP1. During T1, UE reports via beam pair assoiated with sets $\bar{q}_{0,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1.

During the period from time point A to time point B the UE shall transmit uplink signal in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3, T4, T5, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 with sets $\bar{q}_{0,1}$ for TRP1.

During T3 the UE shall detect beam failure and initiate link recovery for TRP0. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1.

No later than time point F occurring no later than D1 after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing beam associated with the candidate beam with sets $\bar{q}_{1,0}$ for TRP0. The UE shall not transmit PUCCH with an LRR with candidate beam set $\bar{q}_{1,0}$ for TRP0 earlier than time point B.

After T5, UE shall be able to report via new beam pair associated with sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.6 Active BWP switch

### A.7.5.6.1 DCI-based and Timer-based Active BWP Switch

#### A.7.5.6.1.1 NR FR2- NR FR2 DL active BWP switch of SCell with non-DRX in SA

##### A.7.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.1.1.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.1.1.1-2. NR Cell-specific parameters are specified in table A.7.5.6.1.1.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.1.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PSCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

### A.7.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the first UL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

### A.7.5.6.1.2 NR FR1- NR FR2 DL active BWP switch of SCell with non-DRX in SA

#### A.7.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.1.2.1-1 below. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2). The general parameters are given in table A.7.5.6.1.2.1-2. NR Cell-specific parameters are specified in table A.7.5.6.1.2.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.2.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the begining of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay if the UE doesn't support per-FR gap, otherwise no interruption due to BWP switch on PCell is allowed.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell (Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay if the UE doesn't support per-FR gap, otherwise no interruption due to BWP switch on PCell is allowed.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

**Table A.7.5.6.1.2.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | PCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>SCell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

If the UE doesn't support per-FR gap,

- During T1 and T3, the start time of SCell interruption during PCell active BWP switch shall not happen outside the BWP switch delay.
- The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

Otherwise no interruption due to BWP switch on SCell is allowed.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.7.5.6.1.3 NR FR2 DL active BWP switch with non-DRX in SA

#### A.7.5.6.1.3.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6. Supported test configurations are shown in table A.7.5.6.1.3.1-1.

The test scenario comprises of one cell (Cell 1) as given in table A.7.5.6.1.3.1-2. Cell-specific parameters of NR PCell is specified in table A.7.5.6.1.3.1-3 below. The OTA related test parameters for FR2 is shown in table A.7.5.6.1.3.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell 1.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell 1's slot # denoted *i*. The UE should switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-2 starting from the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

During T2, the test equipment won't transmit DCI format for PDSCH reception on Cell 1.

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

**Table A.7.5.6.1.3.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: Void.<br>NOTE 2: A UE which fulfils the requirements in test case A.7.5.6.1.1 or A.7.5.6.1.2 can skip the test cases in A.7.5.6.1.3. | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.6.1.3.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.7.5.6.1.4 NR FR2-2- NR FR2-2 DL active BWP switch of SCell with non-DRX in SA

#### A.7.5.6.1.4.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.1.4.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.1.4.1-2. NR Cell-specific parameters are specified in table A.7.5.6.1.4.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.4.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PSCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

**Table A.7.5.6.1.4.1-1: DL BWP switch supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |

#### A.7.5.6.1.4.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

### A.7.5.6.2 RRC-based Active BWP Switch

#### A.7.5.6.2.1 NR FR2 DL active BWP switch of PCell with non-DRX in SA

#### A.7.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.7.5.6.2.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.6.2.1.1-2. Cell-specific parameters of PCell are specified in table A.7.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PCell's BWP-1 starting from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.6.2.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.6.2.1.1-2: General test parameters for DL BWP switch in SA**

#### A.7.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.6.2.2 NR FR2-2 DL active BWP switch of PCell with non-DRX in SA

#### A.7.5.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.7.5.6.2.2.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.6.2.2.1-2. Cell-specific parameters of PCell are specified in table A.7.5.6.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

> Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PSCell's BWP-1 starting from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.6.2.2.1-1: DL BWP switch supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |

| NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |

NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

#### A.7.5.6.2.2.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

#### A.7.5.6.3.1 Active BWP switch on multiple SCells with non-DRX in SA

##### A.7.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of DL BWP switch delay requirement defined in clauses 8.6.2A.1 and 8.6.2B.1, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.3.1.1-1 below. The test scenario comprises one PCell (Cell 1) and two SCells (Cell 2 and Cell 3) as given in table A.7.5.6.3.1.1-2. NR cell-specific parameters are provided in table A.7.5.6.3.1.1-3, and OTA related test parameters in table A.7.5.6.3.1.1-4 below.

The test consists of three consecutive time periods with durations T1, T2 and T3, respectively.

PDCCHs indicating new transmissions shall be transmitted in PCell, SCell 1 and SCell 2 throughout time periods T1 and T3 to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell 1 and SCell 2. During T2, there shall be scheduling on PDSCH in PCell only.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (SCell 1) on radio channel 2 (SCC1), and Cell 3 (SCell 2) on radio channel 3 (SCC2).

UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1 (PCell). BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is configured with two different UE-specific downlink bandwidth parts, BWP-1 and BWP-2, for Cell 2 (SCell 1). BWP-1 and BWP-2 include the bandwidth of the initial DL BWP and SSB.

UE is configured with two different UE-specific downlink bandwidth parts, BWP-3 and BWP-4, for Cell 3 (SCell 2). BWP-3 and BWP-4 include the bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell 1.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-3 in SCell 2.

UE is configured with a *bwp-InactivityTimer* timer value for SCell 1 and SCell 2, respectively.

All cells have constant signal levels throughout the test.

Time period T1 starts when the UE simultaneously receives DCI format 1_1 commands for DL BWP switch in SCell 1 and SCell 2, respectively, in a slot # denoted *m*. The UE shall switch its SCell 1 bandwidth part from BWP-1 to BWP-2, and its SCell 2 bandwidth part from BWP-3 to BWP-4. The UE shall be able to receive PDSCH in SCell 1 and SCell 2 starting from the first DL slot that occurs after slot ($m+T_{MultipleBWPswitchDelay}$) as defined in clause 8.6.2A.1, and to transmit ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after ($m+T_{BWPswitchDelay}+k1$) where *k1* is specified in [7]. The UE shall be continuously scheduled in SCell 1 BWP-2 and SCell 2 BWP-4 no later than in the first DL slot that occurs after slot ($m+T_{MultipleBWPswitchDelay}$). The starting time of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall occur within the BWP switching delay. The length of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall fulfill requirements in clause 8.2.2.2.5.

Time period T2 starts when the test equipment ceases to schedule the UE on PDSCH in SCell 1 and SCell 2, thereby causing the *bwp-InactivityTimer* timers for SCell 1 and SCell 2 to be running until expiry.

Time period T3 starts at the beginning of the first DL half-subframe immediately after the earliest of the *bwp-InactivityTimer* timers expires, in a slot # denoted *n*. The UE shall switch its SCell 1 bandwidth part from BWP-2 to BWP-1, and its SCell 2 bandwidth part from BWP-4 to BWP-3. The UE shall be able to receive PDSCH in SCell 1 and SCell 2 starting from the first DL slot that occurs after slot ($n+T_{MultipleBWPswitchDelay}$) as defined in clause 8.6.2B.1, and to transmit ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after slot ($n+T_{MultipleBWPswitchDelay}+k1$). The UE shall be continuously scheduled in SCell 1 BWP-1 and SCell 2 BWP-3 no later than in the first DL slot that occurs after slot ($n+T_{MultipleBWPswitchDelay}$). The starting time of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall occur within the BWP switching delay. The length of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall fulfill requirements in clause 8.2.2.2.5.

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch commands are received or *bwp-InactivityTimer* timers expire until ACK/NACKs are sent in SCell 1 and SCell 2, respectively.

The test equipment verifies that potential interruptions of PCell due to DL BWP switching on SCell 1 and SCell 2 are carried out within the correct time span, and are within the correct length, by monitoring ACK/NACKs sent in PCell for PCell.

**Table A.7.5.6.3.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD -TDD duplex mode |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB-RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after the beginning of DL slot ($m+T_{MultipleBWPswitchDelay}+k1$).

During T3, the UE shall start to send ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after the beginning of DL slot ($n+T_{MultipleBWPswitchDelay}+k1$).

During T1 and T3, the start of any interruption on PCell due to active BWP switching on SCell 1 and SCell 2 shall not happen outside the BWP switching delay $T_{MultipleBWPswitchDelay}$, and the length of any interruption shall not exceed the length specified in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed active BWP switch delays in SCell 1 and SCell 2 to be considered correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.6.4 SCell dormancy switch

### A.7.5.6.4.1 NR FR2 PCell SCell dormancy switch of single FR2 SCell inside active time

#### A.7.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the Dormant SCell BWP switch delay requirements are within the requirements stated in clause 8.6 for UE configured with a single downlink SCell, when the dormancy indication is received in any of the first 3 OFDM symbols or is received after the first 3 OFDM symbols.

The Supported test configurations are given in table A.7.5.6.4.1.1-1. The test parameters are given in Tables A.7.5.6.4.1.1-2 and cell-specific parameters in A.7.5.6.4.1.1-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. There are two carriers both in FR2, with one cell on the PCC and 2 cells on SCC. Cell 1, Cell 2 and Cell 3 operate in either FDD or TDD duplex mode according to test configuration. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) with configured and activated SCell (SCell 1) on radio channel 2 (SCC1). The UE is not aware of Cell 3 on radio channel 2 (SCC1). The UE is reporting CSI and shall not report CQI index 0 (out-of-range) in the available uplink resources to report CQI for the SCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

The UE receives a DCI-based BWP switch command by which the SCell 1 (Cell 2) is requested to switch the active BWP to the dormant BWP.

The point in time at which the DCI message is received at the UE antenna connector, in a subframe # denoted n, defines the start of time period T1. The UE shall accomplish the BWP switch to the dormant BWP latest in subframe (n + $T_{BWPswitchDelay}$ + X). The UE shall continue to shall report valid CQI if the UE has available uplink resources to report CQI for the dormant SCell. The UE shall continue to shall report L1-RSRP if the UE has available uplink resources to report L1-RSRP for the Dormant SCell. Any PCell interruption due to BWP switch on the SCell shall occur in the subframes n to (n+ $T_{BWPswitchDelay}$ + X).

Time T2 start at T1 + ($T_{BWPswitchDelay}$ + X). During T2 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell.

Time T3 starts at T2 + 500 ms. During T3 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell.

Starting at T4 = T3 + 500 ms, Cell 3 becomes detectable. During T3 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell. The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T4. The UE is not required to read the neighbour cell SSB index in this test.

At time T5 starting at T4 + 1500 ms a a DCI-based BWP switch command by which the SCell 1 (Cell 2) is requested to switch the active BWP to the non-dormant BWP.

The point in time at which the DCI message is received at the UE antenna connector, in a subframe # denoted n, defines the start of time period T6. The UE shall accomplish the BWP switch to the non-dormant BWP latest in subframe (n + $T_{BWPswitchDelay}$ + X). The UE shall continue to shall report valid CQI if the UE has available uplink resources to report CQI for the non-dormant SCell. The UE shall continue to shall report L1-RSRP if the UE has available uplink resources to report L1-RSRP for the non-dormant SCell. Any PCell interruption due to BWP switch on the SCell shall occur in the subframes n to (n+ $T_{BWPswitchDelay}$ + X).

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%.

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from L1-RSRP measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%.

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%

During T1, T2, T3, T4, T5 and T6, the UE shall be continuously scheduled in the SCell 1.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: OCNG shall be used such that the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols

A.7.5.6.4.1.2 Test Requirements

During T1 the UE shall switch to the dormant BWP.

During T2, T3, T4 and T5 the UE shall not send ACK/NACK for the PDSCH data scheduled on the SCell.

During T2, T3, T4 and T5 the UE shall continue to send CSI reports for SCell 1 with non-zero CQI index.

During T2, T3, T4 and T5 the UE shall continue to send L1-RSRP reports for SCell.

During T4 the UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T4.

During T2, T3, T4 and T5, the missing ACK/NACK sent in PCell shall be less than 1.5 % of the total number of the expected ACK/NACK.

During T6, the UE shall send ACK/NACK for the PDSCH data scheduled after subframe (n+ $T_{BWPswitchDelay}$ + X) for the SCell 1.

All of the above test requirements shall be fulfilled in order for the observed SCell 1 BWP switch delays, PCell interruption rate, correct CSI and L1-RSRP reporting and event triggeres reporting. The rate of correct observed SCell 1 hibernation delay, activation delay and SCell 1 deactivation delay during repeated tests shall be at least 90 %.

### A.7.5.6.4.2 NR FR1 PCell SCell dormancy switch of two FR2 SCells outside active time

#### A.7.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of SCell dormancy switching delay requirements in clause 8.6.2A when the UE is triggered to switch between non-dormancy and dormancy outside DRX active time. In the tested scenario, the UE is connected to PCell in FR1and two SCells in FR2, and the SCells are switched from non-dormancy to dormancy, and vice versa, at a point in time before start of *onDuration*. The UE is configured to monitor PDCCH for DCI format 2_6 at *ps-Offset* before the start of *onDuration*. Two tests are specified, where a UE that only supports triggering within the first three OFDM symbols of a slot shall undergo Test1 only, and a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo both Test1 and Test2. In the tested scenario, *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.2A.

The supported test configurations are provided in table A.7.5.6.4.2.1-1 below. General test parameters are provided in table A.7.5.6.4.2.1-2, and cell-specific parameters are provided in table A.7.5.6.4.2.1-3 below. OTA-related test parameters are provided in table A.7.5.6.4.2.1-4.

The tests consist of four consecutive time periods, T1, T2, T3 and T4, respectively.

Three carriers are used in the test. Cell 1 (PCell) is on RF channel 1 (PCC) in FR1, and Cell 2 (SCell 1) and Cell 3 (SCell 2) are on RF channels 2 (SCC1) and 3 (SCC2) in FR2, respectively. All three cells have constant signal levels throughout the test.

Before the test starts,

- UE is connected to Cell 1 (PCell), Cell 2 (SCell 1) and Cell 3 (SCell 2).
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 2 and Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 1 is BWP-0.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 2 is BWP-0.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.
- UE is configured with DRX.
- UE is configured to monitor DCI format 2_6, and to be active during *onDuration* even when no DCI format 2_6 is detected (*ps-WakeUp*).

Time period T1 starts when the UE at *ps-Offset* before *onDuration* detects a DCI format 2_6 carrying dormancy indication that indicates that SCell 1 and SCell 2 are to be switched from non-dormancy to dormancy. The UE shall switch active bandwidth parts for SCell 1 and SCell 2, respectively, from non-dormant BWP-0 to dormant BWP-1. The UE shall complete the switching before the start of *onDuration*. The test equipment schedules the UE continuously with new data indications in PCell starting from beginning of *onDuration*. The test equipment verifies that the UE is transmitting HARQ feedback for PCell from the beginning of *onDuration* and thus verifies that the UE has completed interruptions due to dormancy switching before the start of *onDuration.*

Time period T2 starts when T1 is completed. The test equipment continues to schedule the UE continuously in PCell. The UE shall carry out CSI and RRM measurements on the dormant SCells. The UE shall report ACK/NACK in PCell in response to scheduled PDSCH, with the maximum loss of transmitted ACK/NACKs fulfilling the requirement in clause 8.2.2.2.12. The test equipment verifies that the loss of ACK/NACKs is no larger than 1.5 %.

Time period T3 starts when T2 is completed. During T3, the test equipment does not schedule the UE, by which the inactivity timer expires and the UE stops monitoring PDCCH except for signalling using DCI format 2_6 at wake-up signalling occasions.

Time period T4 starts when the UE at *ps-Offset* before *onDuration* detects a DCI format 2_6 carrying dormancy indication that indicates that SCell 1 and SCell 2 are to be switched from dormancy to non-dormancy. The UE shall switch active bandwidth parts for SCell 1 and SCell 2, respectively, from dormant BWP-1 to non-dormant BWP-0. The UE shall complete the switching before the start of *onDuration*. The test equipment schedules the UE with new data indication in PCell, SCell 1 and SCell 2 during *onDuration*. The UE shall receive in PCell, SCell 1 and SCell 2 and send HARQ feedback for PCell, SCell 1 and SCell 2 via PCell. The test equipment verifies that the UE is transmitting HARQ feedback for PCell, SCell 1 and SCell 2 from the beginning of *onDuration*, and thus verifies that the UE has completed interruptions due to dormancy switching before the start of *onDuration*.

**Table A.7.5.6.4.2.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | PCell: 15kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 15kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to undergo test for one of the supported test configurations. | |

**Table A.7.5.6.4.2.1-2: General test parameters**

| Parameter | Unit | Value | | Comment |
|---|---|---|---|---|
| | | Test1 | Test2 | |
| NR RF Channel Number | | 1, 2, 3 | | Three NR radio channels are used for this test |
| Active PCell | | Cell 1 | | PCell on RF channel number 1 in FR1 |
| Active SCell 1 | | Cell 2 | | SCell 1 on RF channel number 2 in FR2 |
| Active SCell 2 | | Cell 3 | | SCell 2 on RF channel number 3 in FR2 |
| CSI reporting periodicity, Non-dormant BWP | ms | 2 | | CSI reporting periodicity for periodic reporting of CQI for PCell and non-dormant SCells |
| CSI reporting periodicity, Dormant BWP | ms | 40 | | CSI reporting periodicity for periodic reporting of CQI for dormant SCells |
| CP length | | Normal | | |
| DRX | | DRX.8 | | For both PCell and SCells. See clause A.3.3.8. |
| ps-Offset | | Depending on UE capability | | Monitoring of DCI 2_6 ahead of start of drx-onDurationTimer. Value of ps-Offset shall correspond to SCell dormancy switching time for switching of two SCells, as specified in clause 8.6.2A. Actual value depends on reported UE capabilities. |
| ps-WakeUp | | true | | Wake up for onDuration in case DCI format 2_6 is not detected. |
| Cell 2 timing offset to Cell 1 | µs | <24 | | Timing offset shall be less than MRTD for FR1-FR2 CA, and leave margin for timing difference between Cell 2 and Cell 3. |
| Cell 3 timing offset to Cell 2 | ns | <260 | | Timing offset shall be less than MRTD for FR2 intra-band non-contiguous CA. |
| OFDM symbol range in slot for transmission of DCI with dormancy indication | | 0 – 2 | 3 – 11 | Test1 is based on that triggering DCI is received within the first three OFDM symbols of a slot.Test2 is based on that the triggering DCI is received later than within the first three OFDM symbols of a slot. |

| Parameter | Unit | Value | | Comment |
|---|---|---|---|---|
| | | Test1 | Test2 | |
| T1 | s | 0.2 | | During this time the SCells are switched from non-dormancy to dormancy. |
| T2 | s | 10 | | During this time the SCells are dormant. |
| T3 | s | 0.2 | | During this time the UE is not scheduled in PCell. |
| T4 | s | 0.2 | | During this time the SCells are switched from dormancy to non-dormancy. |

#### A.7.5.6.4.2.2 Test Requirements

Starting from *onDuration* in time period T1, the UE shall transmit ACK/NACK in response to scheduling in PCell. There shall be no loss of ACK/NACK.

During time period T2, the UE shall transmit ACK/NACKs in response to scheduling in PCell and the rate of missed ACK/NACKs shall be no more than 1.5 %.

Starting from *onDuration* in time period T4, the UE shall transmit ACK/NACK in response to scheduling in PCell, SCell 1 and SCell 2. There shall be no loss of ACK/NACK.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

#### A.7.5.6.5.1 Active BWP switch on multiple SCells with non-DRX in SA

##### A.7.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A.

The supported test configurations are shown in table A.7.5.6.5.1.1-1. The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.5.1.1-2. NR cell-specific parameters are provided in table A.7.5.6.5.1.1-3, and OTA related test parameters in table A.7.5.6.5.1.1-4.

PDCCHs indicating new transmissions shall be transmitted in PCell and SCell throughout to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell), Cell 2 (SCell).

- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition on Cell 1 (PCell), Cell 2 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell 1 and Cell 2, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell 1 and Cell 2.

The UE shall be able to receive PDSCH on Cell 1 and Cell 2 at the beginning of the DL slot right after PCell's DL slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PCell no later than at the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$). The UE shall be continuously scheduled on Cell 1's BWP-1and Cell 2's BWP-1 starting from the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

$T_{RRCprocessingDelay}$ , $T_{BWPswitchDelayRRC}$ and $D_{RRC}$ are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 1 and Cell 2 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.6.5.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD -TDD duplex mode |

**Table A.7.5.6.5.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2, 3 | Three NR radio channels are used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Active SCell | | Cell 2 | SCell on RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | |
| Cell 2 timing offset to Cell 1 | µs | 0 | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. |
| T1 | s | 0.2 | During T1, RRC-based simultaneous BWP switching of PCell and SCell is carried out. |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB-RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the center of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell and SCell in the beginning of the DL slot right after slot $(i+\frac{T_{RRC processing Delay}+T_{BWP switch Delay RRC}+D_{RRC}}{NR\ slot\ length})$.

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.6.5.2 NR FR2-2 Active BWP switch on multiple SCells with non-DRX in SA

### A.7.5.6.5.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A.

The supported test configurations are shown in table A.7.5.6.5.2.1-1. The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.5.2.1-2. NR cell-specific parameters are provided in table A.7.5.6.5.2.1-3, and OTA related test parameters in table A.7.5.6.5.2.1-4.

PDCCHs indicating new transmissions shall be transmitted in PCell and SCell throughout to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell), Cell 2 (SCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition on Cell 1 (PCell), Cell 2 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell 1 and Cell 2, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell 1 and Cell 2.

The UE shall be able to receive PDSCH on Cell 1 and Cell 2 at the beginning of the DL slot right after PCell's DL slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PCell no later than at the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$). The UE shall be continuously scheduled on Cell 1's BWP-1and Cell 2's BWP-1 starting from the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

$T_{RRCprocessingDelay}$, $T_{BWPswitchDelayRRC}$ and $D_{RRC}$ are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 1 and Cell 2 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.6.5.2.1-1: DL BWP switch supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | NR TDD, SSB SCS 480 kHz, data SCS 480 kHz, BW 400 MHz |
| 3 | NR TDD, SSB SCS 960 kHz, data SCS 960 kHz, BW 400 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.7.5.6.5.2.1-2: General test parameters for DL BWP switch in SA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |

#### A.7.5.6.5.2.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell and SCell in the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.7 PSCell addition and release delay

### A.7.5.7.1 Addition and Release Delay of known NR PSCell

#### A.7.5.7.1.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is known to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.1.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.7.1.1-2, A.7.5.7.1.1-3 and A.7.5.7.1.1-4 below. The test consists of six time periods with durations T1, T2, T3, T4, T5 and T6, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. Before the start of T2, the test system shall send

measurement control information including measurement gap configuration and event-triggered reporting configuration for measurements on radio channel 2.

During T2, the Cell 2 becomes known to the UE. Therefore, during T2 the UE shall report Event triggered report.

The point in time at which the RRC message to release measurement gap is transmitted from the test system defines the start of period T3. During T3, after measurement gap is released, the test system transmits the RRC message to the UE to add PSCell on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added.

The point in time at which the RRC message to add PSCell (Cell 2) is received at the UE antenna connector defines the start of period T4.

During T4, the UE shall carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T5.

During T5, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T6.

During T6, the UE shall release the PSCell.

**Table A.7.5.7.1.1-1: Supported test configurations for FR2 PSCell**

| Config | Description |
|---|---|
| 1 | FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz |
| 2 | FR1 TDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz |
| 3 | FR1 TDD SSB SCS 30kHz BW 40 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

NOTE 2: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.7.5.7.1.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest 112 ms into T4.

The UE shall transmit at least one periodic CSI report for PSCell during T5.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T6.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.7.2 Addition and Release Delay of unknown NR PSCell in

#### A.7.5.7.2.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is unknown to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.2.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.7.2.1-2, A.7.5.7.2.1-3 and A.7.5.7.2.1-4 below. The test consists of four time periods with durations T1, T2, T3 and T4, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. At the end of T1, the test system shall send a RRC message instructing the UE to add PSCell (Cell 2), and further instructing the UE to report CSI periodically in the PSCell once it has been added. Reception by the UE of this RRC message defines the start of T2.

During T2, the UE shall identify PSCell and carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

**Table A.7.5.7.2.1-1: Supported test configurations for FR2 PSCell**

### A.7.5.7.2.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest 572 ms into T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.7.3 Addition and Release Delay of known NR PSCell in FR2-2

### A.7.5.7.3.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is known to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.3.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2-2, respectively. Test parameters are given in Tables A.7.5.7.3.1-2, A.7.5.7.3.1-3 and A.7.5.7.3.1-4 below. The test consists of five time periods with durations T1, T2, T3, T4 and T5, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. Before the start of T2, the test system shall send measurement control information including measurement gap configuration and event-triggered reporting configuration for measurements on radio channel 2.

During T2, the Cell 2 becomes known to the UE. Therefore, during T2 the UE shall report Event triggered report.

The point in time at which the RRC message to release measurement gap is transmitted from the test system defines the start of period T3. During T3, after measurement gap is released, the test system transmits the RRC message to the UE to add PSCell on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added.

The point in time at which the RRC message to add PSCell (Cell 2) is received at the UE antenna connector defines the start of period T4.

During T4, the UE shall carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T4.

During T5, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T6

During T6, the UE shall release the PSCell.

**Table A.7.5.7.3.1-1: Supported test configurations for FR2-2 PSCell**

| Config | Description |
|---|---|
| 1 | FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2-2 TDD SSB SCS 120kHz BW 100 MHz |
| 2 | FR1 TDD SSB SCS 15kHz BW 10 MHz – FR2-2 TDD SSB SCS 120kHz BW 100 MHz |
| 3 | FR1 TDD SSB SCS 30kHz BW 40 MHz – FR2-2 TDD SSB SCS 120kHz BW 100 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

### A.7.5.7.3.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest TBD ms into T3.

The UE shall transmit at least one periodic CSI report for PSCell during T4.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T5.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.7.4 Addition and Release Delay of unknown NR PSCell in FR2-2

### A.7.5.7.4.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is unknown to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.4.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2-2, respectively. Test parameters are given in Tables A.7.5.7.4.1-2, A.7.5.7.4.1-3 and A.7.5.7.4.1-4 below. The test consists of four time periods with durations T1, T2, T3 and T4, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. At the end of T1, the test system shall send a RRC message instructing the UE to add PSCell (Cell 2), and further instructing the UE to report CSI periodically in the PSCell once it has been added. Reception by the UE of this RRC message defines the start of T2.

During T2, the UE shall identify PSCell and carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

**Table A.7.5.7.4.1-1: Supported test configurations for FR2-2 PSCell**

| Config | Description |
|---|---|
| 1 | FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2-2 TDD SSB SCS 120kHz BW 100 MHz |

#### A.7.5.7.4.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest TBD ms into T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.8 Active TCI state switch delay

### A.7.5.8.1 MAC-CE based active TCI state switch

#### A.7.5.8.1.1 NR PCell FR2 active TCI state switch for a known TCI state

##### A.7.5.8.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configuration is shown in table A.7.5.8.1.1.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.8.1.1.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.1.1.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCIstate 1 (QCL'd to SSB1), in Cell 1 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state
- Target TCI state is not in the active TCI state list.

The test consists of two time periods, T1 and T2. Figure A.7.5.8.1.1.1-1 and Figure A.7.5.8.1.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PCell on TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$ + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$)/*NR slot length*.

NOTE 7: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

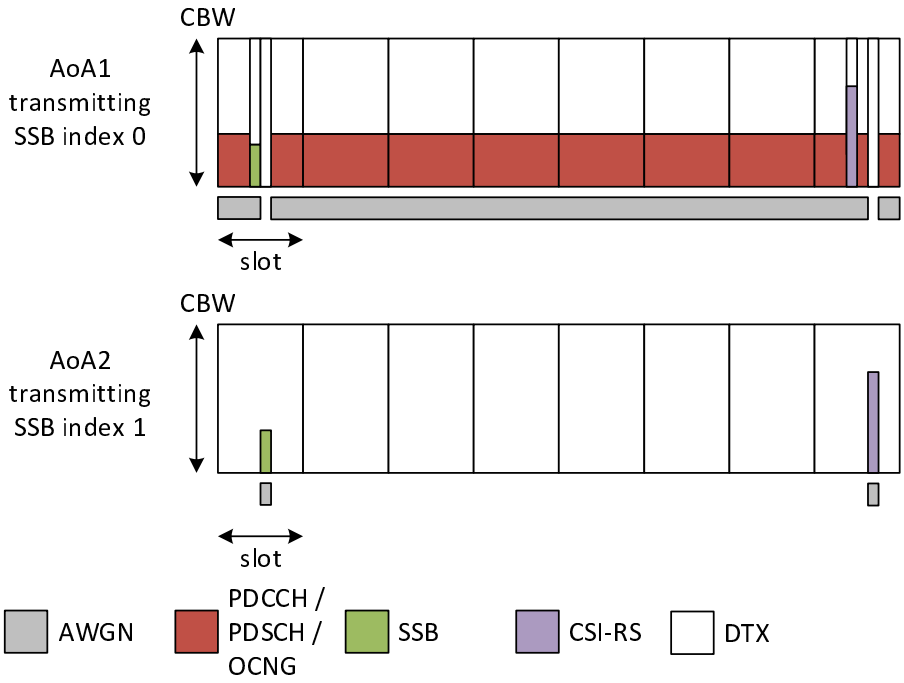

**Figure A.7.5.8.1.1.1-1: Time multiplexed downlink transmissions during T1**

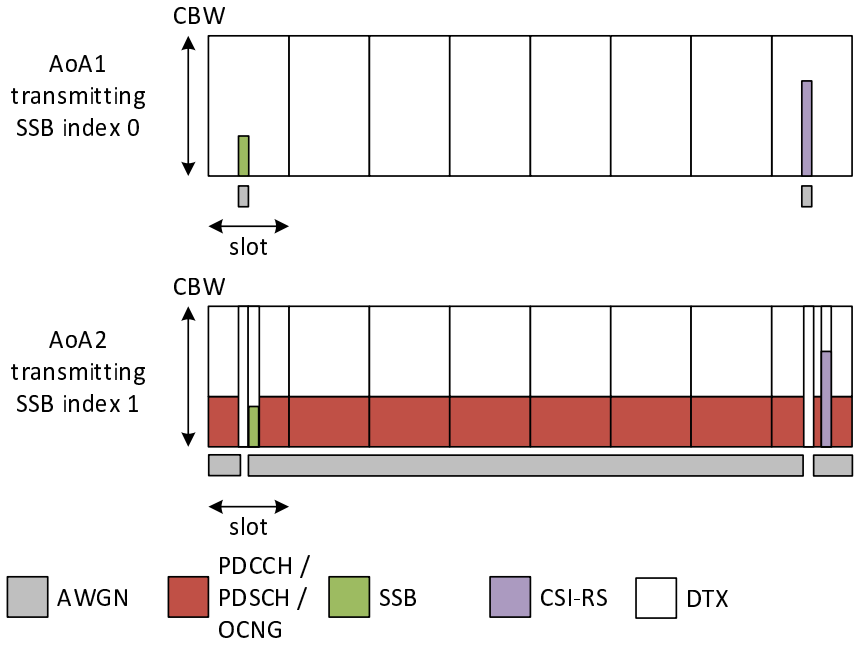

**Figure A.7.5.8.1.1.1-2: Time multiplexed downlink transmissions during T2**

#### A.7.5.8.1.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$
- be able to start receiving on TCI state 1 after slot n+ $T_{HARQ}$ +5$N_{slot}^{subframe,\mu}$ + $T_{first\text{-}SSB}$/*NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.8.2 RRC based active TCI state switch

#### A.7.5.8.2.1 NR PCell FR2 active TCI state switch for a known TCI state

#### A.7.5.8.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configuration is shown in table A.7.5.8.2.1.1-1.

The test scenario comprises of one NR PCell as given in table A.7.5.8.2.1.1-2. Cell-specific parameters of NR PCell is specified in table A.7.5.8.2.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.7.5.8.2.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 TCI state for PCell, PDCCH-TCI-state0 (QCL'd to SSB0)
- UE is indicated in TCI state0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.8.2.1.1-1 and Figure A.7.5.8.2.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI-state1 starts

transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to TCI-state1.

The test equipment verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n+ $(T_{RRC_processing} + T_{first\text{-}SSB})/NR\ slot\ length + 2N_{slot}^{subframe,\mu}$.

**Figure A.7.5.8.2.1.1-2: Time multiplexed downlink transmissions during T2**

#### A.7.5.8.2.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with both SSB0 and SSB1.

After receiving RRC command in slot n, UE shall be able to start receiving on TCI state 1 after slot n+ ($T_{RRC_processing}$ + $T_{first\text{-}SSB}$) / *NR slot length* + $2N_{slot}^{subframe,\mu}$.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.8.3 MAC-CE based active TCI state switch for HST FR2 scenario

#### A.7.5.8.3.1 NR PCell FR2 HST active TCI state switch for a known TCI state

#### A.7.5.8.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3A for FR2 power class 6 UE. Supported test configuration is shown in table A.7.5.8.3.1.1-1. Furthermore, the purpose of this test is also to verify the one shot large timing adjustment requirement specified in clause 7.1.2.3 provided *highSpeedMeasFlagFR2-r17* is configured and *highSpeedLargeOneStepUL-TimingFR2-r17* is enabled for UE supporting FR2 power class 6 and *largeOneStepUL-timingFR2-r17* capability.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.8.3.1.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.3.1.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.3.1.1-4. During the test, *highSpeedMeasFlagFR2-r17* is configured to be *set2* and broadcast to UE.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), in Cell 1 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.8.3.1.1-1 and Figure A.7.5.8.3.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting, which has the relative timing delay compared to TCI state 0 by the absolute value of the one-way differential propagation time $|T_{old} - T_{new}| = 2.33\ \mu s$. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state. After the TCI state switch, the UE transmit timing accuracy shall be measured by the test equipment by using the SRS defined in table A.7.5.8.3.1-5.

The test equipment verifies that

- UE can be scheduled on PCell on TCI state 0 till n+ $T_{HARQ}$ +3 ms.
- the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n + $T_{HARQ}$ + 3 ms + $T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$ + $T_{rs}$ + $T_{rs\text{-}proc}$.
- the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

**Figure A.7.5.8.3.1.1-2: Time multiplexed downlink transmissions during T2**

### A.7.5.8.3.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After the TCI state switch, the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till n + $T_{HARQ}$ + 3 ms
- be able to start receiving on TCI state 1 after n + $T_{HARQ}$ + 7 ms + $T_{first\text{-}SSB}$ + $T_{rs}$

### A.7.5.8.3.2 NR PCell FR2 HST active TCI state switch for PC6 UE supporting *tci-StateSwitchInd-r18* for a known TCI state

#### A.7.5.8.3.2.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3 applicable for FR2 power class 6 UE. Supported test configuration is shown in table A.7.5.8.3.2.1-1. Furthermore, the purpose of this test is also to verify the timing adjustment requirement specified in clause 7.1.2.3. In the test, *highSpeedMeasFlagFR2-r17* is configured and cross-RRH TCI state indicator for UE-specific PDCCH MAC *CE* as specified in Clause 6.1.3.77 of TS 38.321 [7] is set to '0' for the TCI state switch for FR2 power class 6 UE supporting *tci-StateSwitchInd-r18* capability.

The test scenario comprises of one NR PCell (Cell 1) and the general test parameters are specified in table A.7.5.8.3.2.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.3.2.1-3 below. The OTA related test parameters for FR2 are specified in table A.7.5.8.3.2.1-4. During the test, *highSpeedMeasFlagFR2-r17* is configured to be *set2*.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 2 different TCI states for PCell: PDCCH TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), and TCI state 0 is indicated as the active PDCCH TCI state.

The test consists of two time periods: T1 and T2. Figure A.7.5.8.3.2.1-1 and A.7.5.8.3.2.1-2 show the time multiplexed (allocation in frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. From the beginning of T2, the SSB corresponding to TCI state 1 is transmitted. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1 with cross-RRH TCI state indicator for UE-specific PDCCH *MAC CE* set as '0'. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state. After the TCI state switch, the UE transmit timing accuracy shall be measured by the test equipment by using the SRS defined in table A.7.5.8.3.2-5. TCI state 1 has relative timing delay of $4*64*T_c$ compared to TCI state 0.

The test equipment verifies that

- UE can be scheduled on PCell on TCI state 0 till n+ $T_{HARQ}$ +3 ms.
- the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n + $T_{HARQ}$ + 3 ms + $T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$.
- the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

**Figure A.7.5.8.3.2.1-2: Time multiplexed downlink transmissions during T2**

#### A.7.5.8.3.2.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After the TCI state switch, the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

After receiving TCI state switch command with cross-RRH TCI state indicator for UE-specific PDCCH MAC CE set to '0' in slot n, UE shall:

- be able to continue to receive on TCI state 0 till n+ $T_{HARQ}$ +3 ms
- be able to start receiving on TCI state 1 after n+ $T_{HARQ}$ +5 ms + $T_{first\text{-}SSB.}$

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.8.4 DCI based active TCI state switch with m-DCI for simultaneous reception

#### A.7.5.8.4.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10E.4.2. Supported test configuration is shown in table A.7.5.8.4.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.8.4.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.4.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.4.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- The UE is configured with the following TCI states: TCI state 0 (QCL'd to SSB0), TCI state 1 (QCL'd to SSB1), TCI state 2 (QCL'd to SSB2) and TCI state 3 (QCL'd to SSB3).
- UE is indicated with the following TCI states for Cell 1 (PCell):
  - PDCCH TCI state 0 (QCL'd to SSB0), PDSCH TCI state 0 (QCL'd to SSB0) for CORESETPoolIndex 0, and
  - PDCCH TCIstate 1 (QCL'd to SSB1), PDSCH TCI state 1 (QCL'd to SSB1) for CORESETPoolIndex 1.
- UE is configured with groupBasedBeamReporting-r17 for SSB index 3 and SSB index 4.
- tci-PresentInDCI is configured in the PDSCH configuration.

The test consists of two time periods, T1 and T2. During T1, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions are scheduled from each Angle of Arrival (AoA1, AoA2 and AoA3) as shown in Figure A.7.5.8.4.1-1. UE is configured to transmit periodic L1-RSRP group-based beam reports on SSB index 2 and SSB index 3. After UE transmits the first L1-RSRP group-based beam report with SSB index 2 and SSB index 3 as a beam pair, TE sends TCI state activation MAC-CEs to activate TCI state 2 and TCI state 3 for PDSCHs.

T2 starts at a time that is not earlier than active TCI state list update delay (as defined in section 8.10E.6.2) from the time UE has received the TCI state activation MAC-CEs. At the beginning of T2, at slot n, UE receives DCI to switch PDSCH TCI state on CORESETPoolIndex 0 for indicating the TCI state switch of PDSCH to TCI state 2. At slot n+1, UE receives DCI to switch PDSCH TCI state on CORESETPoolIndex 1 for indicating the TCI state switch of PDSCH to TCI state 3. During T2, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival is shown in Figure A.7.5.8.4.1-2.

The test equipment verifies the TCI state switch time in PCell by scheduling the UE on TCI state 2 and TCI state 3 simultaneously after slot n + 1 + timeDurationForQCL

NOTE 7: Calculation of Es/Iot$_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 8: Three probes are used to test dual to dual TCI state switch. One probe shall be used to emulate two different SSBs i.e SSB0 and SSB3. SSB3 is transmitted with same AoA as SSB0 with a time offset (x) and a different power from SSB0.

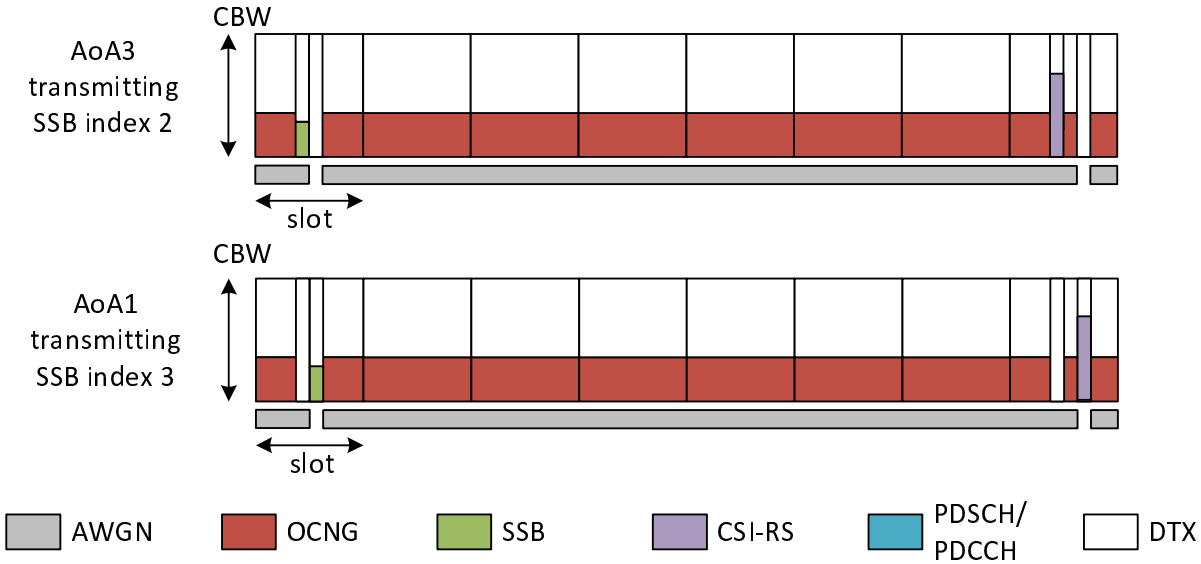

**Figure A.7.5.8.4.1-1: Time multiplexed downlink transmissions during T1**

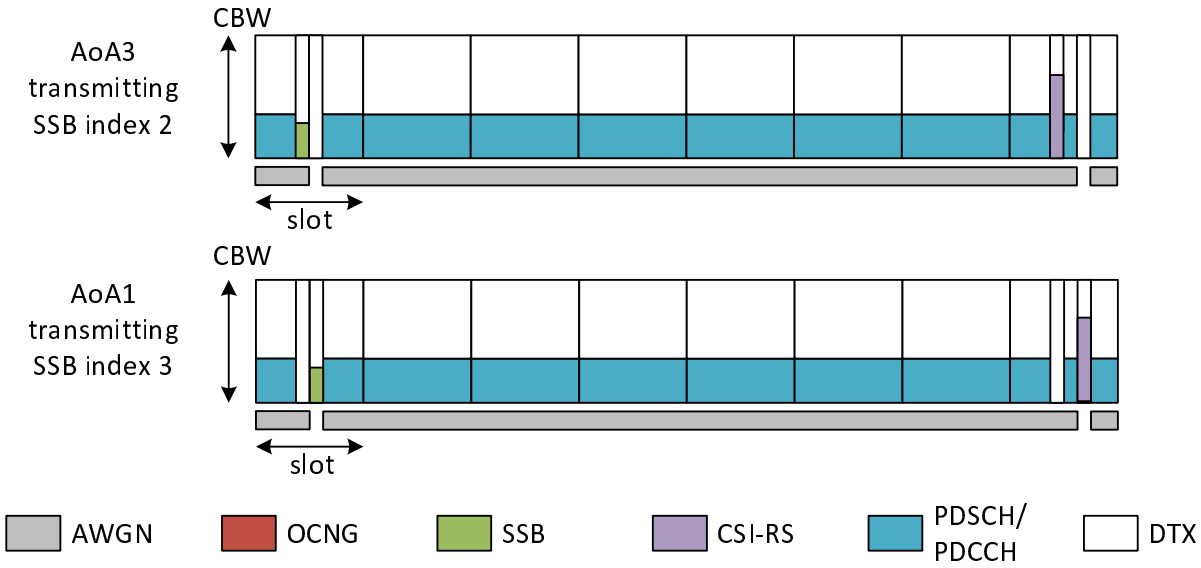

**Figure A.7.5.8.4.1-2: Time multiplexed downlink transmissions during T2**

### A.7.5.8.4.2 Test Requirements

After receiving two DCIs in slot n and slot n+1 during T2, UE shall:

- be able to start receiving on TCI state 2 and TCI state 3 simultaneously after slot n + *timeDurationForQCL*

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.8.5 Single-DCI FR2 DCI based active TCI state switch with known target TCI states for simultaneous reception

### A.7.5.8.5.1 Test Purpose and Environment

The purpose of this test is to verify the DCI based active TCI state switch delay requirement defined for sDCI in clause 8.10E.4.1 for simultaneous reception in DL, while also verifying that the UE can complete active TCI state list update within the delay requirement defined in 8.10E.6.1. Supported test configuration is shown in table A.7.5.8.5.1-1.

The test scenario comprises of one NR PCell (Cell 1) in FR2-1 as given in table A.7.5.8.5.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.5.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.5.1-4.

PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with *groupBasedBeamReporting-r17* for SSB index 0 and SSB index 1
- UE is configured with 3 different TCI states for PCell in Cell 1 before starting the test:
  - PDCCH TCI state 0 (QCL'd to SSB0),
  - PDSCH TCI state 0 (QCL'd to SSB0),
  - PDSCH TCI state 1 (QCL'd to SSB1)
- UE is indicated TCI state 0 as the active PDCCH and PDSCH TCI state at the beginning of the test.
  - TCI state 1, which is one of the target TCI states, is not in the active TCI state list.

The test consists of two time periods, T1 and T2.

During T1, only SSBs to which PDCCH TCI state 0 and PDSCH TCI state 0 are QCL'd is transmitted (SSB0). During T1, SSB0 is transmitted on AoA1.

At the beginning of T2, the SSB corresponding to PDSCH TCI state 1 starts transmitting on AoA2. The UE is configured with *groupBasedBeamReporting-r17* to provide periodic group-based L1-RSRP reports for SSB0 and SSB1. In slot n, which is within 1280 ms of UE providing group-based L1-RSRP report with results for SSB0 and SSB1 as a beam pair, UE receives a MAC-CE command indicating activation of TCI state 0 and TCI state 1 in a single codepoint. *Tci-PresentInDCI* is configured as enabled in the PDSCH configuration.

After a time that equals to the active TCI state list update delay defined in section 8.10F.6.1 for sDCI, UE receives a DCI indicating TCI state 0 and TCI state 1 for PDSCH scheduling. The TE verifies that the UE can start receiving PDSCH with TCI state 0 (in AoA1) and TCI state 1 (in AoA2) simultaneously after *timeDurationForQCL* from receiving the DCI.

#### A.7.5.8.5.1.2 Test Requirements

During T2, UE shall send group-based L1-RSRP report with results for SSB0 and SSB1.

After receiving DCI indicating TCI state 0 and TCI state 1 for PDSCH in slot n, UE shall be able to start receiving TCI state 0 and TCI state 1 simultaneously after n + *timeDurationForQCL*.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.9 Uplink spatial relation switch delay

### A.7.5.9.1 MAC-CE based Spatial Relation switch

#### A.7.5.9.1.1 NR PCell FR2 spatial relation associated with known DL-RS

##### A.7.5.9.1.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of the uplink spatial relation switch delay requirement defined in clause 8.12.3 by a UE capable of beam correspondence without the need for UL beam sweeping. The supported test configurations are shown in table A.7.5.9.1.1.1-1.

The test scenario comprises one PCell (Cell 1) as outlined in table A.7.5.9.1.1.1-2. Cell-specific parameters are provided in table A.7.5.9.1.1.1-3. OTA-related test parameters are provided in table A.7.5.9.1.1.1-4.

Throughout the test, PDCCH indicating new transmissions shall ge sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with a single TCI state, TCI State-0, which is QCLed with SSB0.

- UE is configured with two spatial relation information configurations Spatial Relation Info-0 and Spatial Relation Info-1 for PUCCH, each associated with SSB0 and SSB1, respectively.

- UE is indicated via MAC-CE activation of *PUCCH-SpatialRelationInfoId* corresponding to Spatial Relation Info-0

- UE is configured with a CSI measurement configuration indicating L1-RSRP measurements on SSB0 and SSB1 with periodic reporting. The L1-RSRP measurement period is influenced by the following: the higher layer parameter *timeRestrictionForChannelMeasurement* is configured, measured SSBs are fully overlapping with SMTC window, and there are no conflicts with measurement gaps.

The test consists of two time periods, T1 and T2. During T1 only the SSB associated with PDCCH TCI state-0 and PUCCH Spatial Relation Info-0 is transmitted. At the beginning of T2, transmission of the SSB associated with PUCCH Spatial Relation Info-1 starts. The UE conducts periodic L1-RSRP measurements and *SSB-Index-RSRP* reporting for SSB0 and SSB1. In slot *n*, which is within 1280 ms after UE receiving both SSB0 and SSB1, and after reporting valid results for both the SSB0 and the SSB1, the UE receives a MAC-CE indicating a switch of spatial relation to PUCCH Spatial Relation Info 1.

The test equipment verifies that the UE transmits according to PUCCH Spatial Relation Info 0 up until slot $n$ + $T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$, and according to PUCCH Spatial Relation Info 1 from slot $n$ + $T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$ + 1 and onwards.

#### A.7.5.9.1.1.2 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot *n*, the UE shall:

- Continue transmitting using PUCCH spatial relation associated with SSB0 up to and including slot *n* + $T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$
- Start transmitting using PUCCH spatial relation associated with SSB1 from slot *n* + $T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$ + 1 and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.9.2 RRC based spatial relation switch

#### A.7.5.9.2.1 NR PCell FR2 spatial relation switch associated with a known DL-RS

#### A.7.5.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the RRC based spatial relation switch delay requirement defined in clause 8.12.5 by a UE capable of beam correspondence without the need for UL beam sweeping. In the test the higher layer parameter *timeRestrictionForChannelMeasurements* is configured. Supported test configuration is shown in table A.7.5.9.2.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.9.2.1.1-2. Cell-specific parameters of PCell is specified in table A.7.5.9.2.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.7.5.9.2.1.1-4.

Periodic SRS is transmitted on PCell (Cell 1), and the SRS configuration is SRSConf.1 given in table A.5.4.1.1.1-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 SRS-SpatialRelation0 associated with SSB0.
- UE is indicated SRS-SpatialRelation0 as the active SRS spatial relation.

The test consists of two time periods, T1 and T2. During T1 only SSB0 to which SRS-SpatialRelation0 associated is transmitted. UE shall transmit periodic SRS with SRS-SpatialRelation0 on the UL of the PCell.

T2 start when the tester initiates transmission of SSB1 corresponding to SRS-SpatialRelation1. The UE is configured to transmit periodic L1-RSRP reports.

In slot n, which is within 1280ms of UE providing the L1-RSRP report with results for both SSB0 and SSB1, the UE receives an RRC command indicating a switch to transmit periodic SRS with target SRS-SpatialRelation1. The UE shall be able to transmit periodic SRS with target spatial relation (SRS-SpatialRelation1) on PCell in slot n + $T_{RRC_processing}$/NR slot length +1.

### A.7.5.9.2.1.2 Test Requirements

During T1 UE shall send L1-RSRP report with SSB0 to which SRS-SpatialRelation0 is associated. During T2, UE shall send L1-RSRP report with SSB1 to which SRS-SpatialRelation1 is associated.

After receiving RRC command in slot n, UE shall be able to transmit target periodic SRS with SRS-SpatialRelation1 on the PCell in the slot $n + T_{RRC_processing}/NR\ slot\ length + 1$.

The rate of correct events observed during repeated tests shall be at least 90 %.

# A.7.5.10 UE specific CBW change

## A.7.5.10.1 NR FR2 UE specific CBW change of PCell with non-DRX in SA

### A.7.5.10.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE specific CBW change delay requirement defined in clause 8.13. Supported test configurations are shown in table A.7.5.10.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.10.1.1-2. Cell-specific parameters of PCell are specified in table A.7.5.10.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK transmission.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 of initial condition in PCell.
- UE has been configured with UE-specific CBW (CBW-1)
- UE is indicated in SCS-SpecificCarrier [2] that the UE-specific CBW is CBW-1 as the initial condition in Cell 1 (PCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated CBW configuration, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its CBW with the updated CBW of final condition (CBW-2).

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.13.2 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PCell's BWP-1 on CBW-2 starting from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{CBWchangeDelayRRC}$ are defined in clause 8.13.

The test equipment verifies the UE specific CBW switch time in PCell by counting the time from the time when the RRC Reconfiguration message including updated CBW configurations sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.10.1.1-1: UE specific CBW change supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Table A.7.5.10.1.1-2: General test parameters for UE specific CBW change in NR SA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| | | | |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| CP length | | Normal | |
| DRX | | OFF | |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on PCC. |
| T1 | s | 0.2 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

### A.7.5.10.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell UE specific CBW change delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.11 UE UL carrier RRC reconfiguration Delay

### A.7.5.11.1 UE UL carrier RRC reconfiguration Delay

#### A.7.5.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that when the UE receives a RRC message implying NR UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within the time limits specified in clause 8.4.2 and 8.4.3 for configuring and deconfiguring, respectively. The test will also verify the interruption at UL carrier configuration requirements on PCell in clause 8.2.2.2.4.

There are two cells: FR2 PCell (Cell 1) on NR RF channel 1 and FR2 SCell (Cell 2) on NR RF channel 2. NR uplink is broadcast by *ServingCellConfigCommonSIB.* The test parameters for PCell and SCell are given in table A.7.5.11.1.1-1, table A.7.5.11.1.1-2 and table A.7.5.11.1.1-3 below. The test consists of three time periods, with duration of T1, T2 and T3 respectively. During time duration T1, NR uplink of Cell 2 is not configured to UE. At the start of T2, a NR uplink of Cell 2 is configured to UE through *RRCReconfiguration*, then UE shall start transmission on the NR uplink of Cell 2. At the start of T3, the NR uplink is released through *RRCReconfiguration*.

The test equipment also verifies that potential interruption of PCell due to UL carrier configuration on SCell is carried out within the correct time span and within the correct length by monitoring ACK/NACK sent in PCell.

**Table A.7.5.11.1.1-1: Supported test configurations**

| Configuration | PCell (Cell 1) | SCell (Cell 2) |
|---|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | DL and UL: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.5.11.1.2 Test Requirements

The UE shall be ready to start transmission on the NR uplink carrier on SCell within 20 ms from the start of T2.

The UE shall stop the transmission on the NR uplink carrier on SCell within 20 ms from the start of T3.

During T2 and T3, the start of interruption of PCell due to UL carrier configuration or de-configuration on SCell shall not happen outside the UL carrier configuration delay which is 20 ms in this test, and the length of interruption shall not exceed the length specified in clause 8.2.2.2.4.

All of the above test requirements shall be fulfilled in order for the observed UE UL carrier configuration delay and UE UL carrier release delay to be counted as correct. The rate of correct observed UE UL carrier configuration delay and UE UL carrier release delay during repeated tests shall be at least 90 %.

## A.7.5.12 Conditional PSCell addition and release delay (FR2 SA)

### A.7.5.12.1 Addition and Release Delay of PSCell

#### A.7.5.12.1.1 Test purpose and environment

The purpose of this test is to verify that the conditional PSCell addition and release delays under SA are within the requirements stated in clause 8.9A.2.

### A.7.5.12.1.2 Test Parameters

The supported test configurations are given in table A.7.5.12.1.2-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.12.1.2-2 and A.7.5.12.1.2-3 below. The test consists of four successive time periods, with time durations of T1, T2, T3, T4, respectively.

At the start of time duration T1, the UE does not have any timing information of cell 2. NR shall configure a condition implying addition to cell 2 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2.

At the start of T2, cell 2 becomes detectable and meets the addition condition. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send an RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

**Table A.7.5.12.1.2-1: Supported test configurations for FR2 PSCell**

| Config | Description |
|---|---|
| 1 | FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz |
| 2 | FR1 TDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz |
| 3 | FR1 TDD SSB SCS 30kHz BW 40 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Table A.7.5.12.1.2-2: General test parameters for conditional PSCell addition and release delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two radio channels are used for this test |
| Active PCell | | | Cell 1 | PCell on RF channel number 1 in FR1 |
| Neighbour cell | | | Cell 2 | Neighbour cell (PSCell-to-be) on RF channel number 2 in FR2 |
| A4 | Hysteresis | dB | 0 | Hysteresis for event A4 |
| | Threshold RSRP | dBm | -118 | Threshold for event A4 |
| | Time to Trigger | s | 0 | Time to trigger for event A4 |
| DRX | | | OFF | For both PCell and PSCell once activated |
| Measurement gap pattern ID | | | 0 | Gaps are configured before T2 and released before T3. |
| PRACH configuration in Cell 2 | | | FR2 PRACH configuration 2 | PRACH configuration as specified in Clause A.3.8.3.2. |
| CSI reporting periodicity and offset configuration for Cell 2 | | ms | 2 | |
| T1 | | s | 5 | During this time the PCell is known and Cell 2 is unknown. |
| T2 | | s | ≤7 | During this time Cell 2 meets the addition condition and UE adds this PSCell. |
| T3 | | s | 1 | During this time the UE sends CSI reports for Cell 2. |
| T4 | | s | 1 | During this time the UE releases the Cell 2. |

| NOTE 1: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | |
| NOTE 2: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. | | | | | | | |
| NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation. | | | | | | | |
| NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | | |

#### A.7.5.12.1.3 Test Requirements

$T_{RRC_delay} + T_{Event_DU}$ occurs during T1 as the addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms = 6720+10+62 ms=6792 ms (power class 1) or 4160+10+62 ms =4232 ms (power classes 2,3 and 4) from the start of T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed conditional PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.13 Unified TCI state switching delay

### A.7.5.13.1 MAC-CE based active joint TCI state switching

#### A.7.5.13.1.1 NR PCell FR2 active joint TCI state switch for a known TCI state

##### A.7.5.13.1.1.1 Test Purpose and Environment

The purpose of this test is to verify both active downlink and uplinke TCI state switch delay requirement defined in clause 8.15 and 8.16, respectively, by using joint TCI state of unified TCI state switch framework. In this test, the target TCI state is not in the active TCI state list for PDSCH/PDCCH, and UE is capable of beam correspondence without the need for UL beam sweeping, i.e. *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1. Supported test configuration is shown in table A.7.5.13.1.1.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.13.1.1.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.13.1.1.1-1 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.1.1.1-2.

**Table A.7.5.13.1.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.13.1.1.1-2: General test parameters for TCI state switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| CP length | | Normal | |
| DRX | | OFF | |
| L1-RSRP reporting period | slot | 160 | Periodic L1-RSRP reporting configured |
| Number of RS for L1-RSRP reporting | | 2 | Two source RSs in TCI state 0 and 1. |

| | | | |
|---|---|---|---|
| T1 | s | 0.2 | |
| T2 | s | 2 | |

#### A.7.5.13.1.1.2 Test parameters

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *joint*;
- UE is configured with 2 different joint TCI states for PCell, TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), and the TCI state 1 is not in the active TCI state list for PDSCH/PDCCH.
- UE is indicated TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. During T1 only source RS in TCI state 0 is transmitted. At the beginning of T2, source RS in TCI state 1 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for both source RSs in TCI state 0 and 1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies the following UE behavior for joint TCI state switch:

- UE shall be able to receive and transmit with TCI state 0 until slot slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$, and
- receive and transmit with TCI state 1 from slot $n+T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length*

#### A.7.5.13.1.1.3 Test Requirements

The test verifies that UE can be scheduled by PCell on TCI state 0 and TCI state 1.

During T2, UE shall send L1-RSRP report with results for source RSs in both TCI state 0 and 1.

After receiving MAC-CE command in slot n, UE shall:

- be able to receive and transmit with TCI state 0 until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$
- be able to start receiving and transmitting with TCI state 1 after slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2\ ms)$ / *NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.13.2 MAC-CE based active uplink TCI state switch

#### A.7.5.13.2.1 NR FR2 PCell uplink TCI state switch for a known TCI state

#### A.7.5.13.2.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of the uplink TCI switch delay requirement defined in clause 8.16.3 by a UE capable of beam correspondence without the need for UL beam sweeping. The test scenario comprises one PCell (Cell 1).

Throughout the test, PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with a unified DL TCI state, TCI State-0, and SSB0 is configured as QCL source for the TCI state. At the start of test UE is connected to DL TCI state 0.
- UE is configured with 2 UL TCI states, UL TCI state 0 and UL TCI state 1. QCL info to UL TCI state 0 and 1 is provided by SSB0 and SSB1, respectively. Initially only UL TCI 0 is in the active TCI states.
- PL-RS is configured for each of the UL TCI states. CSI-RS 0 and CSI-RS 1 are associated with UL TCI state 0 and 1 respectively as PL-RS.
- AT the start of the test UE connected to DL TCI state 0 and UL TCI state 0.

Index of CSI-RS#1 is configured for UE as PUSCH-PathlossReferenceRS-Id-r17 which is indicated in TCI-UL-State-r17 of uplink TCI state 1. CSI-RS#1 is QCLed typeD with SSB#1. UE does not maintain CSI-RS#1 as pathloss RS before the uplink TCI state switching.

The test consists of two time periods, T1 and T2. During T1, only the SSB associated with DL TCI state-0 and UL TCI state 0 is transmitted. At the beginning of T2, transmission of the SSB 1 associated with UL TCI state 1 starts. The UE conducts periodic L1-RSRP (i.e., *SSB-Index-RSRP)* reporting for SSB0 and SSB1. In slot *n*, which is within 1280 ms after UE receiving both SSB0 and SSB1, and after reporting valid results for both the SSB0 and the SSB1, the UE receives a MAC-CE indicating a TCI state switch to UL TCI state 1.

The test equipment verifies that the UE transmits according to UL TCI state 0 up until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$, and according to UL TCI state 1 from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + NM^* (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length* and onwards. NM is equal to 1. Where, $T_{HARQ}$ (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

#### A.7.5.13.2.1.2 Test parameters

The supported test configurations are provided in table A.7.5.13.2.1.2-1.

General test parameters are provided in table A.7.5.13.2.1.2-2.

Cell-specific parameters are provided in table A.7.5.13.2.1.2-3.

OTA-related test parameters are provided in table A.7.5.13.2.1.2-4.
