#### A.7.5.13.2.1.3 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot *n*, the UE shall:

- Continue transmitting using UL TCI state 0 up to and including slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$
- Start transmitting using UL TCI state 1, from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length* and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %

### A.7.5.13.3 MAC-CE based active downlink TCI state switch

#### A.7.5.13.3.1 NR PCell FR2 active downlink TCI state switch to cell with additional PCI for a known TCI state

##### A.7.5.13.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based active downlink TCI state switch delay requirement defined in clause 8.15.3. Supported test configuration is shown in table A.7.5.13.3.1.1-1.

**Table A.7.5.13.3.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

##### A.7.5.13.3.1.2 Test Parameters

The test scenario comprises of one NR PCell (Cell 1) and one NR cell as the cell with additional PCI (Cell 2), as given in table A.7.5.13.3.1.2-1. Cell-specific parameters of NR PCell and the cell with additional PCI are specified in table A.7.5.13.3.1.2-2 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.3.1.2-3.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *separate*.
- UE is configured with SSB-based L1-RSRP measurements on cell with additional PCI (Cell 2)
- UE is configured with 2 different TCI states for PCell, TCI state 0 (QCL'd to TRS resource set 1, TCI state of which is QCLed to SSB0 of Cell 1) and TCI state 1 (QCL'd to TRS resource set 2, TCI state of which is QCLed to SSB1 of Cell 2), in Cell 1 before starting the test.

- UE is indicated in TCI state 0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.13.3.1.2-1 and Figure A.7.5.13.3.1.2-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 of Cell 1 and SSB1 of Cell 2, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PCell on TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$ + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$)/*NR slot length*.

**Table A.7.5.13.3.1.2-1: General test parameters for TCI state switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |

**Figure A.7.5.13.3.1.2-1: Time multiplexed downlink transmissions during T1**

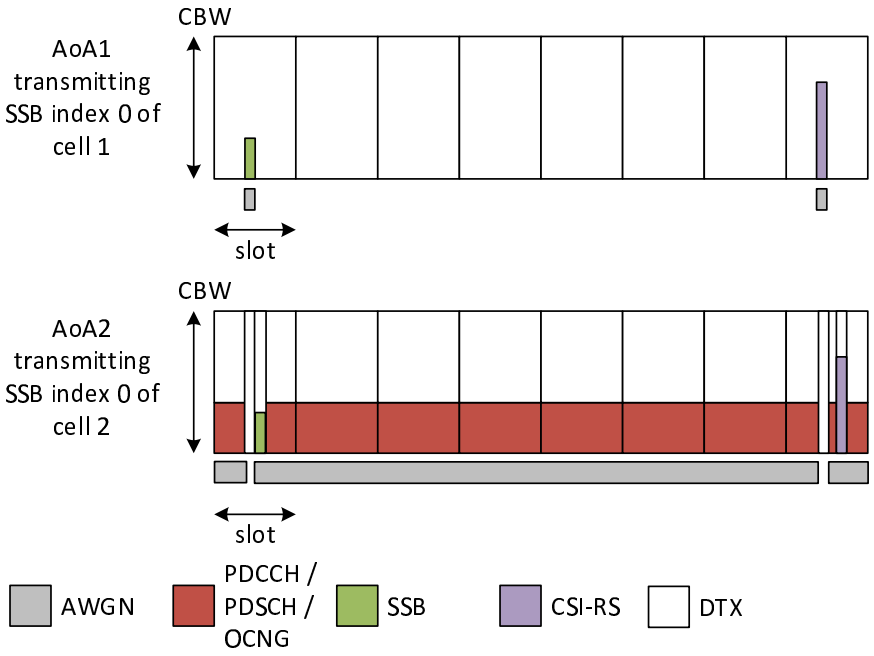

**Figure A.7.5.13.3.1.2-2: Time multiplexed downlink transmissions during T2**

#### A.7.5.13.3.1.3 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 of Cell 1 and SSB1 of Cell 2.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on DL TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$
- be able to start receiving on DL TCI state 1 after slot n+ $T_{HARQ}$ + (5 ms + $T_{first\text{-}SSB}$) / *NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.5.13.4 sDCI MAC-CE based joint TCI state switching

#### A.7.5.13.4.1 NR PCell FR2 dual downlink and uplink TCI state switch in sDCI for known case

#### A.7.5.13.4.1.1 Test Purpose and Environment

The purpose of this test is to verify both active downlink and uplink TCI state switch delay requirement defined in clause 8.21 and 8.23, respectively, by using joint TCI state of unified TCI state switch framework when *tci-JointTCI-UpdateSingleActiveTCI-PerCC-r18* is supported and when *tci-SeparateTCI-UpdateSingleActiveTCI-PerCC-r18* is not supported. Supported test configuration is shown in table A.7.5.13.4.1.1-1.

**Table A.7.5.13.4.1.1-1: Supported test configurations**

| Config | Description |
|---|---|

| Number of RS for L1-RSRP reporting | | 4 | SSB0, SSB1, SSB2 and SSB3 in Joint TCI state 0, 1, 2, and 3. |
| Cell 2 timing offset to cell1 | us | <CP | |
| T1 | s | 0.2 | |
| T2 | s | 1 | UE is required to activate dual joint TCI states (TCI state 2 and TCI state 3). |

#### A.7.5.13.4.1.2 Test parameters

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.13.4.1.2-1. Cell-specific parameters of NR PCell are specified in table A.7.5.13.4.1.2-2 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.4.1.2-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- PDCCHs indicating new transmissions shall be sent continuously on Pcell to ensure that the UE would have ACK/NACK sending.
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *joint*.
- applyIndicatedTCI-State-r18 is set as {first} for TRP0 (CORESET index p associated with Joint TCI state 0 and Joint TCI state 2) and as {second} for TRP1 (CORESET index q associated with Joint TCI state 1 and Joint TCI state 3).
- tci-SelectionPresentInDCI-r18 is configured in the BWP configuration, i.e. TCI state for the PDSCH is indicated by DCI format 1_1 and PDSCHs on two TRPs are scheduled in TDM manner.
- UE is configured with two joint TCI states (TCI state 0 and TCI state 2) for TRP0 and two joint TCI states (TCI state 1 and TCI state 3) for TRP1. QCL info to Joint TCI state 0,1,2 and 3 are provided by SSB0, SSB1, SSB2 and SSB3, respectively.
- UE is indicated in TCI state 0 and TCI state 1 as the active TCI state for TRP0 and TRP1.

The test consists of two time periods, T1 and T2. During T1, SSB0 in joint TCI state 0 and SSB1 in joint TCI state 1 are transmitted.

At the beginning of T2, SSB2 in joint TCI state 2 and SSB3 in joint TCI state 3 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for SSB2 and SSB3 in joint TCI state 2 and joint TCI state 3, UE receives a MAC-CE command indicating a switch to dual joint TCI state 2 and TCI state 3 for two TRPs.

The test equipment verifies that UE can be scheduled by two TRPs on joint TCI state 0 and joint TCI state 1 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time for two TRPs by scheduling the UE on joint TCI state 2 and joint TCI state 3 after slot n+$T_{HARQ}$ + 3$N_{slot}^{subframe,\mu}$ + max{NM1* ($T_{first_target\text{-}PL\text{-}RS1}$ + 4*$T_{target_PL\text{-}RS1}$ + 2 ms), NM2* ($T_{first_target\text{-}PL\text{-}RS2}$ + 4*$T_{target_PL\text{-}RS\ 2}$+ 2 ms) }/ *NR slot length*.

**Table A.7.5.13.4.1.2-1: General test parameters for dual TCI state switch**

| Parameter | Unit | Value | Comment |

#### A.7.5.13.4.1.3 Test Requirements

During T2, the test verifies that UE can be scheduled by two TRPs on joint TCI state 2 and joint TCI state 3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive and transmit with joint TCI state 0 and joint TCI state 1 till slot n+ $T_{HARQ}$ $+3N_{slot}^{subframe,\mu}$
- be able to start receiving and transmitting with joint TCI state 2 and joint TCI state 3 after slot n+$T_{HARQ}$ + $3N_{slot}^{subframe,\mu}$ + max{NM1* ($T_{first_target\text{-}PL\text{-}RS1}$ + 4*$T_{target_PL\text{-}RS1}$ + 2 ms), NM2* ($T_{first_target\text{-}PL\text{-}RS2}$ + 4*$T_{target_PL\text{-}RS\ 2}$+ 2 ms) }/ *NR slot length*.
  - where NM1=1, NM2=1.

The rate of correct events observed during repeated tests shall be at least 90 %.

#### A.7.5.13.5.1 NR PCell FR2 dual downlink TCI state switch in sDCI for known case

##### A.7.5.13.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based dual downlink TCI state switch delay requirement defined in clause 8.21.3 when *tci-SeparateTCI-UpdateSingleActiveTCI-PerCC-r18* is supported. Supported test configuration is shown in table A.7.5.13.5.1.1-1.

**Table A.7.5.13.5.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

##### A.7.5.13.5.1.2 Test Parameters

There is one active serving cell (Cell 1) configured with two TRPs in the test. Cell-specific parameters of Cell 1 are specified in table A.7.5.13.5.1.2-2 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.5.1.2-3.

PDCCHs indicating new transmissions shall be sent continuously on TRP0 to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1 (PCC).
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *separate*.

- UE is configured with SSB-based L1-RSRP measurements on Cell 1
- UE is configured with two TCI states (TCI state 0 and TCI state 2) for TRP0 and two TCI states(TCI state 1 and TCI state 3) for TRP1. QCL info to DL TCI state 0, 1 , 2 and 3 are provided by SSB0, SSB1, SSB2 and SSB3, respectively.
- UE is indicated in TCI state 0 and TCI state 1 as the active TCI state for TRP0 and TRP1

The test consists of two time periods, T1 and T2. During T1, source RS in TCI state 0 and TCI state 1 are transmitted. At the beginning of T2, source RS in TCI state 2 and source RS in TCI state 3 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for source RSs in TCI state 2 and 3, UE receives a MAC-CE command indicating a switch to TCI state 2 and 3 for two TRPs. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled by two TRPs on TCI state 0 and TCI state 1 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time for two TRPs by scheduling the UE on TCI state 2 and TCI state 3 after slot after slot n+ $T_{HARQ}$ + 3$N_{slot}^{subframe,\mu}$+ max{$TO_{k1}$*($T_{first\text{-}SSB1}$ + $AD_1$*$T_{SSB1}$ + $T_{SSB\text{-}proc}$), $TO_{k2}$*($T_{first\text{-}SSB2}$ + $AD_2$*$T_{SSB2}$ + $T_{SSB\text{-}proc}$)} / NR slot length.

**Table A.7.5.13.5.1.2-1: General test parameters for TCI state switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| CP length | | Normal | |
| DRX | | OFF | |
| L1-RSRP reporting period | slot | 160 | Periodic L1-RSRP reporting configured |
| L1-RSRP measured RS | | SSB0 and SSB2 of TRP0, SSB1 and SSB3 of TRP1 | L1-RSRP measurements of SSB0, SSB1 SSB2 and SSB3. |
| Number of RS for L1-RSRP reporting | | 4 | four source RSs in TCI state 0,1, 2,3. |
| Cell 2 timing offset to cell1 | us | <CP | |
| T1 | s | 0.2 | |
| T2 | s | 1 | |

### A.7.5.13.5.1.3 Test Requirements

During T2, the test verifies that UE can be scheduled by two TRPs on TCI state 2 and TCI state 3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on DL TCI state 0 and DL TCI state 1 till slot $n+ T_{HARQ} +3N_{slot}^{subframe,\mu}$
- be able to start receiving on DL TCI state 2 and DL TCI state 3 after slot $n+ T_{HARQ} + 3N_{slot}^{subframe,\mu}+ \max\{TO_{k1}*(T_{first\text{-}SSB1} + AD_1*T_{SSB1} + T_{SSB\text{-}proc}), TO_{k2}*(T_{first\text{-}SSB2} + AD_2*T_{SSB2} + T_{SSB\text{-}proc})\}$ / NR slot length

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.13.6 MAC-CE based active uplink TCI state switch for single-DCI mTRP

### A.7.5.13.6.1 NR FR2 PCell uplink TCI state switch for two known TCI states

#### A.7.5.13.6.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of the uplink TCI switch delay requirement defined in clause 8.23.3 by a UE capable of beam correspondence without the need for UL beam sweeping when *tci-SeparateTCI-UpdateSingleActiveTCI-PerCC-r18* is supported. The test scenario comprises one PCell (Cell 1) with two TRPs.

Throughout the test, PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with a unified DL TCI state, TCI State-0, and SSB0 is configured as QCL source for the TCI state. At the start of test UE is connected to DL TCI state 0.
- UE is configured with 4 UL TCI states, UL TCI state 0, UL TCI state 1, UL TCI state 2, and UL TCI state 3. QCL info to UL TCI state 0, 1, 2, and 3 is provided by SSB0, SSB1, SSB2, and SSB3, respectively. Initially only UL TCI 0 is in the active TCI state list.
- PL-RS is configured for each of the UL TCI states. CSI-RS 0, CSI-RS 1, CSI-RS 2, and CSI-RS 3 are associated with UL TCI state 0, 1, 2, and 3 respectively as PL-RS.
- At the start of the test UE is connected to DL TCI state 0, UL TCI state 0, and UL TCI state 1.

Index of CSI-RS#1 is configured for UE as PUSCH-PathlossReferenceRS-Id-r17 which is indicated in TCI-UL-State-r17 of uplink TCI state 1. CSI-RS#1 is QCLed typeD with SSB#1. UE does not maintain CSI-RS#1 as pathloss RS before the uplink TCI state switching.

Index of CSI-RS#2 is configured for UE as PUSCH-PathlossReferenceRS-Id-r17 which is indicated in TCI-UL-State-r17 of uplink TCI state 2. CSI-RS#2 is QCLed typeD with SSB#2. UE does not maintain CSI-RS#2 as pathloss RS before the uplink TCI state switching.

The test consists of two time periods, T1 and T2. During T1, only the SSBs associated with DL TCI state-0, UL TCI state 0, and UL TCI state 1 are transmitted. At the beginning of T2, transmission of the SSB 2 associated with UL TCI state 2 and transmission of the SSB 3 associated with UL TCI state 3 start. The UE conducts periodic L1-RSRP (i.e., *SSB-Index-RSRP)* reporting for SSB0, SSB1, SSB2, and SSB3. In slot *n*, which is within 1280 ms after UE receiving SSB0, SSB1, SSB2, and SSB3, and after reporting valid results for the SSB0, the SSB1, the SSB2 and the SSB3, the UE receives a MAC-CE indicating a TCI state switch to UL TCI state 2 and to UL TCI state 3.

The test equipment verifies that the UE transmits according to UL TCI state 0 and UL TCI state 1 up until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$, and according to UL TCI state 2 and to UL TCI state 3 from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + \max\{NM1^* (T_{first_target\text{-}PL\text{-}RS1} + 4^*T_{target_PL\text{-}RS1} + 2 \text{ ms}), NM2^* (T_{first_target\text{-}PL\text{-}RS2} + 4^*T_{target_PL\text{-}RS2} + 2 \text{ ms})\}$ / *NR slot length* and onwards. NM1 is equal to 1. NM2 is equal to 1. Where, $T_{HARQ}$ (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

#### A.7.5.13.6.1.2 Test parameters

The supported test configurations are provided in table A.7.5.13.6.1.2-1.

General test parameters are provided in table A.7.5.13.6.1.2-2.

Cell-specific parameters are provided in table A.7.5.13.6.1.2-3.

OTA-related test parameters are provided in table A.7.5.13.6.1.2-4.

**Table A.7.5.13.6.1.2-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: As observed with 0 dBi gain antenna at the center of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

#### A.7.5.13.6.1.3 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot *n*, the UE shall:

- Continue transmitting using UL TCI state 0 and UL TCI state 1 up to and including slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$

- Start transmitting using UL TCI state 2 and UL TCI state 3, from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + \max\{T_{first_target\text{-}PL\text{-}RS1} + 4*T_{target_PL\text{-}RS1} + 2\text{ ms}, T_{first_target\text{-}PL\text{-}RS2} + 4*T_{target_PL\text{-}RS2} + 2\text{ ms}\}$ / *NR slot length* and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.5.14 PSCell RACH-less based Activation and deactivation for FR1+FR2 inter-band with target PSCell in FR2

### A.7.5.14.1 Test Purpose and Environment

The purpose of this test case is to test the activation PSCell delay for a UE configured with one deactivated SCG in NR-DC and when PSCell in one SCG is being activated. The test also tests the deactivation delay. The test case tests the requirements within which the UE shall be able to activate the deactivated SCG in clause 8.17.2 for RACH-less based conditions when PSCell and TCI state are known. The PCell is in NR FR1 and the PSCell is in NR FR2.

The supported test configurations are defined in table A.7.5.14.1-1. The test parameters for NR cell are given in Tables A.7.5.14.1-2. And cell specific test parameters are described in Tables A.7.5.14.1-3. OTA related test parameters are defined in table A.7.5.14.1-4.

At the beginning of T1 the UE is configured with a PSCell which is activated. At T1 the PSCell is deactivated. PSCell is configured with *bfd-and-RLM* with value *true*.

An RRC message for activation of PSCell is sent by the test equipment 1 s after the RRC message deactivating the PSCell, in a slot # denoted m. The point in time at which the RRC message for activation of PSCell is received at the UE defines the start of time period T2.

During T2, the test equipment monitors for SR from the UE on the PSCell. The time when test equipment receives a scheduling request from the UE is denoted as slot T3.

Time period T4 starts when a RRC message for deactivation of the PSCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of the PSCell, respectively.

The test equipment verifies the activation time by when the SR from the UE is received in the activated PSCell.

The test equipment verifies the deactivation time by counting the slots from the time when the PSCell deactivation command is sent until UL transmission from the PSCell is discontinued.

**Table A.7.5.14.1-1: Supported test configurations for FR2 PSCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

### A.7.5.14.2 Test Requirements

During T2 the UE shall send the first SR on PSCell in the first available uplink SR resource no later than T3 which is:

$T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU} + 2$ ms

as defined on clause 8.17.2. In this test case:

$T_{processing}$ = 5 ms (no RRC parameter has been modified),

$T_{search}$ = 0 ms (RACH-less based PSCell activation, with RLM and BFD are configured, PSCell and TCI state are known), and

$T_{\Delta}$ = 20 ms.

This allows T3 of $[T_{RRC_delay} + T_{IU} + 27]$ms

During T4 the UE shall stop all transmissions on the PSCell no later than in slot n + $\frac{T_{RRC_delay}}{NR\ slot\ length}$ as defined in 8.17.3.

During T2 the interruption of PCell during PSCell activation shall not happen outside the slot $m + T_{RRC_delay}$.

During T4 the interruption of PCell during PSCell deactivation shall not happen outside the slot $n + T_{RRC_delay}$.

The interruption duration on PCell due to activation and deactivation of PSCell shall not be more than the values specified for in Clause 8.17.2 and 8.17.3.

## A.7.5.15 Void

## A.7.5.16 UE L1-RSRP Scheduling and Measurement Restrictions on FR2-1

### A.7.5.16.1 Test Purpose and Environment

The purpose of this test is to verify that the NR UE correctly follows the L1-RSRP scheduling restrictions requirements defined in clause 9.5.6.3 and measurement restrictions defined in clause 9.5.5.2.

There is no measurement gap and no DRX configured in the test. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. The test is for sDCI based sceneriao and consists of two time periods, T1 and T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with *groupBasedBeamReporting-r17* for SSB index 0 and SSB index 1.
- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL-ed to SSB0) and TCI state 1 (QCL-ed to SSB1).
- *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.During T1, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival (AoA1 and AoA2) is shown in Figure A.7.5.16.1-1. UE transmits

periodic L1-RSRP group-based beam reports for SSB index 0 and SSB index 1. After UE transmits first valid L1-RSRP group-based beam report, TCI state 0 and TCI state 1 are activated for CORESET index p and CORSET index q which indicates for 2 PDSCH reception.

During T2, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival is shown in Figure A.7.5.16.1-2. At the beginning of T2, the CSI-RS resource index 0 and CSI-RS resource index 1 are configured for measurement resources for L1-RSRP. CSI-RS resource 0 is QCL-ed to SSB index 0, and CSI-RS resource 1 is QCL-ed to SSB index 1. During T2, CSI-RS resource 0 is transmitted on AoA1 and CSI-RS resource 1 is transmitted on AoA2. During T2, after the CSI-RS configuration, PDSCH is always scheduled on the symbols overlapping with CSI-RS resource symbols.

For scheduling restriction relaxation, the UE is required to receive both PDSCHs on the symbols overlapped with CSI-RS configured for L1-RSRP and sends ACK correctly.

For measurement restriction relaxation, the UE is required to measure both CSI-RS resource index 0 and CSI-RS resource index 1 at the same time from the beginning of T2.

The test parameters are given in table A.7.5.16.1-1, table A.7.5.16.1-2, table A.7.5.16.1-3 and table A.7.5.16.1-4 below.

**Table A.7.5.16.1-1: Supported test configurations**

| Configuration | Description |

**Figure A.7.5.16.1-2: Time multiplexed downlink transmissions during T2**

### A.7.5.16.2 Test Requirements

The UE behaviour follows the requirements defined in clause 9.5.6.3 and 9.5.5.2.

During T2,

- UE is required to receive both PDSCHs and send ACK correctly.
- No later than Y + 80 slot from the beginning of time period T2, UE shall send L1-RSRP report including the valid results for both CSI-RS resource 0 and CSI-RS resource 1 while meeting the accuracy requirements defined in clause 10.1.X.
  - Y is the RRC processing delay, which is 10 ms

## A.7.5.17 SCG Activation and deactivation for FR1+FR1 inter-band with target PSCell in FR1

### A.7.5.17.1 Test Purpose and Environment

The purpose of this test case is to test the PSCell activation delay for a UE configured with one deactivated SCG in NR-DC and when PSCell in one SCG is being activated. The test also tests the deactivation delay. The test case tests the requirements within which the UE shall be able to activate the deactivated SCG in clause 8.17.2 for when PSCell is known and TCI state is known. The PCell is in NR FR1 and the PSCell is in NR FR1.

The supported test configurations are defined in table A.7.5.17.1-1. The test parameters for NR cell are given in Tables A.7.5.17.1-2. And cell specific test parameters are described in Tables A.7.5.17.1-3.

During T1 the PSCell is configured in deactivated state. The TE ensures that the deactivated PSCell remain known until the PSCell is activated.

At T2 an RRC message for activation of PSCell is sent by the test equipment.The point in time at which the RRC message, for activating of the PSCell , is received at the UE in slot n defines as the starting point of T2

During T2, the test equipment monitors for PRACH preamble from the UE on the PSCell. The time when TE receives a preamble from the UE is denoted as starting point of T3.

During T3 the TE monitoris the msg3, and after sending the msg4, the TE sends the RRC deactivation command to the UE. The point in time at which the RRC message for deactivating the PSCell is received at the UE in slot n defines the starting time of T4.

During the time period T4, the UE is configured with measCyclePscell , *bfd-and-RLM* with value true . And the TE sends the 2nd RRC activation command.

The time when UE receives the 2nd RRC activation command in slot n , defines as the starting time of T5.

During T5, the test equipment monitors for SR from the UE on the PSCell. The time when test equipment receives a scheduling request from the UE is denoted as the ending point of the test.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of the PSCell, respectively.

For 1 st time activation during T2, the test equipment verifies the activation time by when the Random Access preamble from the UE is received in the activated PSCell.

During T4 and T5 the TE ensures that that TCI state is known.

For the 2nd time activation during T5, the test equipment verifies the activation time by when the SR from the UE is received in the activated PSCell. The TE verifies the deactivation time by counting the slots from the time when the PSCell deactivation command is sent until UL transmission from the PSCell is discontinued.

**Table A.7.5.17.1-1: Supported test configurations for FR1 PSCell activation case**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

**Table A.7.5.17.1-2: General Test Parameters for FR1FR1 PSCell activation and deactivation**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two NR radio channels are used for this test, cell 1 and cell2 use RF channel 1 and 2, respectively. |
| Initial Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Deactivated PSCell | | Cell 2 | To be activated PSCell on RF channel number 2. |
| Final Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Activated PSCell | | Cell 2 | PSCell activated on RF channel number 2. |
| DRX | | | OFF | Continuous monitoring of primary cell |
| Scheduling request resource priodicity | | | 20 ms | At the starting of period T6, UE sends a SR on PUCCH for PSCell |
| T1 | | s | 1 | During this time the PSCell is deactivated |
| T2 | | s | 1 | During this time the TE activated the PSCell |
| T3 | | s | 0.5 | During this time the PSCell is activated |
| T4 | | s | 0.5 | During this time the TE deactivate the PSCell |
| T5 | | s | 1 | During this time, PSCell and TCI state shall be known the TE activate the Pscell |

### A.7.5.17.2 Test Requirements

RRC message for activation of the PSCell is received in slot *n* at the UE and denotes the starting point of T2. During T2 the UE shall send the first preamble on PSCell in the first available PRACH occation no later than:

$T_{activation_time} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU} + 2$ ms

After T2 as defined on clause 8.17.2.

In this test case:

$T_{processing} = 5$ ms

$T_{search} = 0$ ms PSCell and TCI state are known, and

$T_{\Delta} = 20$ ms.

Tiu = 10 ms.

This allows T2 of $T_{activation_time} = T_{RRC_delay} + 37$ ms

The UE shall stop all transmissions on the PSCell no later than in slot n + $\frac{T_{RRC_delay}}{NR\ slot\ length}$ after T4, as defined in 8.17.3.

The 2nd RRC activation command is received in slot *n* at the UE as the starting time of T5. During T5 the UE shall send the first SR on PSCell in the first available uplink SR resource no later than T5 which is :

$T_{activation_time} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU} + 2$ ms

as defined on clause 8.17.2. In this test case:

$T_{processing} = 5$ ms (no RRC parameter has been modified)

$T_{search} = 0$ ms (RACH-less activation PSCell and TCI state are known), and

$T_{\Delta} = 20$ ms.

Tiu = 10 ms.

This allows T5 PSCell activation time of $T_{activation_time} = T_{RRC_delay} + 37$ ms

During T2 and T5 the interruption of PCell during PSCell activation shall not happen outside the slot $m + T_{RRC_delay}$.

During T4 the interruption of PCell during PSCell deactivation shall not happen outside the slot $n + T_{RRC_delay}$.

The interruption duration on PCell due to activation and deactivation of PSCell shall not be more than the values specified for in Clause 8.17.2 and 8.17.3.

## A.7.5.18 Subsequent conditional PSCell addition/change

### A.7.5.18.1 Intra-frequency subsequent CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC

#### A.7.5.18.1.1 Test purpose and environment

The purpose of this test is to verify that the subsequent conditional NR PSCell change under NR-DC is within the requirements stated in clause 8.11E.2.

For UE supporting subsequent conditional PSCell addition/change, UE only needs to pass either intra-frequency CPC from FR1-FR1 NR-DC to FR1-FR1 NR-DC defined in clause or intra-frequency CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC defined in clause A.6.5.12.1.

For UE which can pass this test, test of conditional PSCell addition and release delay defined in A.7.5.12 can be skipped.

Supported test configurations are shown in A.7.5.18.1.1-1. The test scenario comprises three NR cells, Cell 1, Cell 2 and Cell 3. Cell 1 is on radio channel 1 in FR1. Cell 2 and Cell 3 are on radio channel 2 in FR2. The test parameters for the NR Cell 1 are given in table A.3.7A. The NR Cell 1 once set up is not changed across time. The test parameters for NR Cell 2 and Cell 3 are given in Tables A.7.5.18.1.1-2, cell-specific parameters in A.7.5.18.1.1-3 and OTA parameters in A.7.5.18.1.1-4 below.

The test consists of three successive time periods with duration of T1, T2, and T3 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (NR PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell 1) and Cell 3 (NR PSCell 2) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell 1 is known to the UE.

At the start of time duration T1, the UE does not have any timing information of Cell 2. The TE shall configure subsequent conditional PSCell addition/change with Cell 2 and Cell 3 as target PSCells during T1, at a time earlier than $T_{RRC_delay}$ before the beginning of T2.

At the start of T2, Cell 2 becomes detectable and meets the PSCell addition condition. UE shall be able to measure and detect that the condition is fulfilled, after which it will transmit the PRACH preamble to Cell 2 during T2.

Upon PSCell addition complete (UE transmits SN RRCReconfigurationcomplete message), T3 starts. At the start of T3, Cell 3 becomes detectable and meets the PSCell change condition. UE shall be able to measure and detect that the condition is fulfilled, after which it will transmit the PRACH preamble to Cell 3 during T3.

**Table A.7.5.18.1.1-1: Supported test configurations for Intra-frequency Subsequent CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC**

| Configuration | Description |
|---|---|
| 1 | PCell (Cell 1): NR FDD, 15 kHz SSB SCS, 10 MHz bandwidth<br>PSCell (Cell 2 and Cell 3):<br>NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz bandwidth |
| 2 | PCell (Cell 1): NR TDD, 15 kHz SSB SCS, 10 MHz bandwidth<br>PSCell (Cell 2 and Cell 3):<br>NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz bandwidth |
| 3 | PCell (Cell 1): NR TDD, 30 kHz SSB SCS, 40 MHz bandwidth<br>PSCell (Cell 2 and Cell 3):<br>NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz bandwidth |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.7.5.18.1.1-2: General Test Parameters for subsequent CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Three radio channels are used for this test. One for NR Cell 1, second for NR Cell 2 and Cell 3 |
| Initial Condition | Active PCell | | Cell 1, Cell 2 | Cell 1: NR PCell on RF channel number 1.<br>Cell 2: NR PSCell on RF channel number 2 |
| | Neighbour cell | | Cell 3 | Neighbour cell on RF channel number 2. |
| Final Condition | Active PCell | | Cell 1, Cell 3 | Cell 1: PCell on RF channel number 1.<br>Cell 3:NR PSCell on RF channel number 2 |
| | Neighbour Cell | | Cell 2 | PSCell changed on RF channel number 2. |
| A4 | Hysteresis | dB | 0 | Used to trigger conditional PSCell addition of Cell 2 |
| | Threshold RSRP | dBm | -118 | |
| | Time to Trigger | s | 0 | |
| A3 | | dB | 0 | Used to trigger conditional PSCell change from Cell 2 to Cell 3 |

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| DRX | | OFF | Continuous monitoring of primary cell |
| Gap pattern ID | | gp0 | Gaps are configured during T1, T2 and released upon T3 starts. |
| PRACH configuration on cell2 | | FR2 configuration 2 | Captured in A.3.8.3.2 |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on primary component carrier. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for cells on carrier frequency of cell2. |
| Cell-individual offset for cells on RF channel number 3 | dB | 0 | Individual offset for cells on carrier frequency of cell3. |
| T1 | s | 1 | During this time the PCell is known and Cell 2 is unknown. |
| T2 | s | ≤5 | During this time Cell 2 meets the PSCell addition condition and UE adds this PSCell. |
| T3 | s | ≤5 | During this time Cell 3 meets the PSCell change condition and UE sends PRACH to Cell 3. |

NOTE 7: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.5.18.1.2 Test Requirements

$T_{RRC_delay}$ +$T_{Event_DU}$ for PSCell addition (Cell 2) occurs during T1 as the PSCell addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms from the start of T2.

The UE shall transmit the PRACH to Cell 3 less than $T_{config_PSCell_Subsequent_Change_Conditional}$ Note1 from the start of T3.

All the above test requirements shall be fulfilled for the observed PSCell change delay to be counted as correct. The rate of correct observed PSCell change delay during repeated tests shall be at least 90 %.

NOTE 1: The subsequent Conditional PSCell change delay during T3 can be expressed as follows:

$$T_{config_PSCell_Subsequent_Change_Conditional} = T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}$$

Where:

$T_{Event_DU}$ = 0 ms

$T_{measure}$ = 6720 ms for power class 1 or 4160 for power class 2/3/4

$T_{UE_preparation}$ = 10 ms

$T_{processing}$ = 40 ms

$T_{\Delta}$ = 20 ms

$T_{PSCell_DU}$ = 1*10+10 = 20 ms

## A.7.5.18.2 Inter-frequency subsequent CPA from FR1-FR2 NR-DC to FR1-FR2 NR-DC

### A.7.5.18.2.1 Test Purpose and Environment

The purpose of this test is to verify that the subsequent conditional NR PSCell addition under NR-DC is within the requirements stated in clause 8.9C.2.

For UE supporting subsequent conditional PSCell addition/change, UE only needs to pass either inter-frequency CPA from FR1-FR1 NR-DC to FR1-FR1 NR-DC defined in clause or inter-frequency CPA from FR1-FR2 NR-DC to FR1-FR2 NR-DC defined in clause A.6.5.12.2.

For UE which can pass this test, test of conditional PSCell addition and release delay defined in A.7.5.12 can be skipped.

Supported test configurations are shown in A.7.5.18.2.1-1. The test parameters for the NR cell 1 are given in table A.3.7A. The NR cell 1 once set up is not changed across time.

The test parameters for NR cell 2, NR cell 3 are given in Tables A.7.5.18.2.1-2, cell-specific parameters in A.7.5.18.2.1-3 and OTA parameters in A.7.5.18.2.1-4 below. The test comprises of three NR carrier. There are three cells and one cell on each carrier. Before the test starts the UE is connected to Cell 1 (NR PCell) on radio channel 1, but is not aware of Cell 2 (NR candidate NR PSCell 1) on radio channel 2 and Cell 3 (NR candidate PSCell 2) on radio channel 3. The test consists of four successive time periods with duration of T1, T2, T3, T4.

During T1, the UE does not have any timing information of Cell 2 and Cell 3. The TE shall configure subsequent conditional PSCell addition/change with Cell 2 and Cell 3 as target PSCells during T1, at a time earlier than $T_{RRC_delay}$ before the beginning of T2.

At the start of T2, Cell 2 becomes detectable and meets the PSCell addition condition. UE shall be able to measure and detect that the condition is fulfilled, after which the UE shall transmit the PRACH preamble to Cell 2. Upon PSCell addition complete (UE transmits SN RRCReconfigurationcomplete message), T3 starts.

During T3, the TE shall send a RRCRconfiguration message to the UE to release PSCell (Cell 2) on radio channel 2. Upon PSCell release complete (UE transmits SN RRCReconfigurationcomplete message), T4 starts.

At the start of T4, Cell 3 becomes detectable and meets the addition condition. UE shall be able to measure and detect that the condition is fulfilled, after which UE shall send PRACH to the PSCell (Cell 3).

**Table A.7.5.18.2.1-1: Supported test configurations for Inter-frequency Subsequent CPA from FR1-FR2 NR-DC to FR1-FR2 NR-DC**

| Configuration | Description |
|---|---|
| 1 | Cell 1: FDD15 kHz SSB SCS, 10 MHz bandwidth,<br>Cell 2: TDD 120kHz SSB SCS, 100 MHz bandwidth<br>Cell 3: TDD 120kHz SSB SCS, 100 MHz bandwidth |
| 2 | Cell 1: TDD 15 kHz SSB SCS, 10 MHz bandwidth,<br>Cell 2: TDD 120kHz SSB SCS, 100 MHz bandwidth<br>Cell 3: TDD 120kHz SSB SCS, 100 MHz bandwidth |
| 3 | Cell 1: TDD 30 kHz SSB SCS, 40 MHz bandwidth,<br>Cell 2: TDD 120kHz SSB SCS, 100 MHz bandwidth<br>Cell 3: TDD 120kHz SSB SCS, 100 MHz bandwidth |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.5.18.2.2 Test Requirements

$T_{RRC_delay} + T_{Event_DU}$ for PSCell addition (Cell 2) occurs during T1 as the PSCell addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall transmit the PRACH to PSCell (Cell 2) less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2$ msfrom the start of T2.

The UE shall transmit the PRACH to PSCell (Cell 3) less than $T_{config_PSCell_Addition_Conditional}$ Note1 from the start of T4.

All the above test requirements shall be fulfilled for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

NOTE 1: The PSCell addition delay during T2 can be expressed as follows:

$$T_{config_PSCell_Addition_Conditional} = T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}$$

Where:

$T_{Event_DU} = 0$

$T_{measure}$ = 6720 ms for power class 1 or 4160 for power class 2/3/4

$T_{UE_preparation}$ = 10 ms

$T_{processing}$ = 40 ms

$T_{\Delta}$ = 20 ms

$T_{PSCell_DU}$ = 1*10+10 = 20 ms

# A.7.6 Measurement procedure

## A.7.6.1 Intra-frequency Measurements

### A.7.6.1.1 SA event triggered reporting test without gap under non-DRX

#### A.7.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.1.1-1.

**Table A.7.6.1.1.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.1.1-2, A.7.6.1.1.1-3 and A.7.6.1.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2 | PCell (Cell 1) | |
| Neighbour cell | | 1, 2 | Cell 2 | Cell to be identified. |
| RF Channel Number | | 1, 2 | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| SMTC configuration | | 1, 2 | SMTC.1 | |
| A3-Offset | dB | 1, 2 | -11 | |
| CP length | | 1, 2 | Normal | |
| Hysteresis | dB | 1, 2 | 0 | |
| Time To Trigger | s | 1, 2 | 0 | |
| Filter coefficient | | 1, 2 | 0 | L3 filtering is not used |
| DRX | | 1, 2 | OFF | |
| Time offset between Cell 1 and Cell 2 | | 1, 2 | 3 μs | Synchronous cells |
| T1 | s | 1, 2 | 5 | |
| T2 | s | 1, 2 | 5 | |

**Table A.7.6.1.1.1-3: NR Cell specific test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter | Unit | Config | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |

**Figure A.7.6.1.1.1-1: Time multiplexed downlink transmissions (Config 1 example)**

### A.7.6.1.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4 s for a UE supporting power class 1,
- 1.44 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.2 SA event triggered reporting test without gap under DRX

### A.7.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.2.1-1.

**Table A.7.6.1.2.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.2.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

**Table A.7.6.1.2.1-5: Void**

**Table A.7.6.1.2.1-6: Void**

### A.7.6.1.2.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2 s for a UE supporting power class 1,
- 4.32 s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.3 SA event triggered reporting test with per-UE gaps under non-DRX

### A.7.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.3.1-1.

**Table A.7.6.1.3.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.3.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.3.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 with per-UE gaps without DRX**

| Parameter | Unit | Config | Value | Comment |

**Figure A.7.6.1.3.1-1: Time multiplexed downlink transmissions (Config 1 example)**

### A.7.6.1.3.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2 s for a UE supporting power class 1,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.4 SA event triggered reporting test with per-UE gaps under DRX

### A.7.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.4.1-1.

**Table A.7.6.1.4.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.4.1-2, A.7.6.1.4.1-3 and A.7.6.1.4.1-4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.1.4.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 with per-UE gaps with DRX**

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

**Table A.7.6.1.4.1-5: Void**

**Table A.7.6.1.4.1-6:Void**

### A.7.6.1.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2 s for a UE supporting power class 1,
- 4.32 s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.1.5 SA event triggered reporting test without gap under non-DRX for UE configured with *highSpeedMeasFlagFR2-r17*

#### A.7.6.1.5.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17* in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.5.1-1.

**Table A.7.6.1.5.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.5.1-2, A.7.6.1.5.1-3 and A.7.6.1.5.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.5.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

**Figure A.7.6.1.5.1-1: Time multiplexed downlink transmissions (Config 1 example)**

### A.7.6.1.5.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1140 ms from the beginning of time period T2.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.6 SA event triggered reporting test without gap under non-DRX for FR2-2

### A.7.6.1.6.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.6.1-1.

**Table A.7.6.1.6.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.6.1-2, A.7.6.1.6.1-3 and A.7.6.1.6.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.6.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2-2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |

**Figure A.7.6.1.6.1-1: Time multiplexed downlink transmissions (Config 1 example)**

## A.7.6.1.6.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 2.4 s (60*20 ms+60*20 ms)for a UE supporting power class 1,

- 1.44 s (36*20 ms+36*20 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 3.6 s (120*20 ms+60*20 ms) for a UE supporting power class 1,
- 2.16 s (72*20 ms+36*20 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 4.8 s (180*20 ms+60*20 ms) for a UE supporting power class 1,
- 2.88 s (108*20 ms+36*20 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.7 SA event triggered reporting test without gap under DRX for FR2-2

### A.7.6.1.7.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.7.1-1.

**Table A.7.6.1.7.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.7.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.1.7.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2-2 without gap with DRX**

| Parameter | Unit | Config | Value | | Comment |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.1.7.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 7.2 s (60*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 4.32 s (36*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 2,

- 10.8 s (120*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 6.48 s (72*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 3,

- 14.4 s (180*40 ms*1.5 + 60*40 ms*1.5) for a UE supporting power class 1,
- 8.64 s (108*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 76.8 s (60*640 ms +60*640 ms) for a UE supporting power class 1,
- 46.08 s (36*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 115.2 s (120*640 ms +60*640 ms) for a UE supporting power class 1,
- 69.12 s (72*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 153.6 s (180*640 ms + 60*640 ms) for a UE supporting power class 1,
- 92.16 s (108*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.8 SA event triggered reporting test with per-UE gaps under non-DRX for FR2-2

### A.7.6.1.8.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.8.1-1.

**Table A.7.6.1.8.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.8.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.8.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2-2 with per-UE gaps without DRX**

| Parameter | Unit | Config | Value | Comment |

**Figure A.7.6.1.8.1-1: Time multiplexed downlink transmissions (Config 1 example)**

### A.7.6.1.8.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 4.8 s (60*40 ms+60*40 ms) for a UE supporting power class 1,
- 2.88 s (36*40 ms+36*40 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 7.2 s (120*40 ms+60*40 ms) for a UE supporting power class 1,
- 4.32 s (72*40 ms+36*40 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 9.6 s (180*40 ms+60*40 ms) for a UE supporting power class 1,
- 5.76 s (108*40 ms+36*40 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.9 SA event triggered reporting test with per-UE gaps under DRX for FR2-2

### A.7.6.1.9.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.9.1-1.

**Table A.7.6.1.9.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.9.1-2, A.7.6.1.9.1-3 and A.7.6.1.9.1-4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.1.9.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2-2 with per-UE gaps with DRX**

### A.7.6.1.9.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 7.2 s (60*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 4.32 s (36*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 2,

- 10.8 s (120*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 6.48 s (72*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 3,

- 14.4 s (180*40 ms*1.5 + 60*40 ms*1.5) for a UE supporting power class 1,
- 8.64 s (108*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 76.8 s (60*640 ms +60*640 ms) for a UE supporting power class 1,
- 46.08 s (36*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 115.2 s (120*640 ms +60*640 ms) for a UE supporting power class 1,
- 69.12 s (72*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 153.6 s (180*640 ms + 60*640 ms) for a UE supporting power class 1,
- 92.16 s (108*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.10 SA event triggered reporting test with SSB time index detection without gap under non-DRX for FR2-2

### A.7.6.1.10.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.10.1-1.

**Table A.7.6.1.10.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.10.1-2, A.7.6.1.10.1-3 and A.7.6.1.10.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.10.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2-2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | PCell (Cell 1) | |
| Neighbour cell | | 1 | Cell 2 | Cell to be identified. |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Void
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

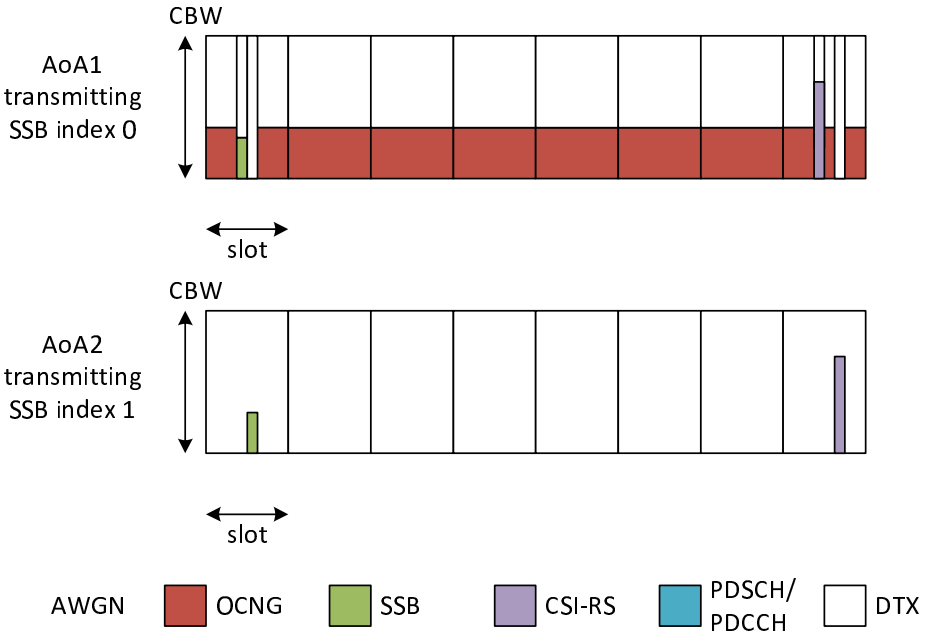

**Figure A.7.6.1.10.1-1: Time multiplexed downlink transmissions (Config 1 example)**

### A.7.6.1.10.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 6.24 s (180*20 ms + 60*20 ms +72*20 ms) for a UE supporting power class 1,
- 3.84 s (108*20 ms + 36*20 ms +48*20 ms) for a UE supporting power class 2 and 3

The UE is required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.11 SA event triggered reporting test with SSB time index detection with per-UE gaps under non-DRX for FR2-2

### A.7.6.1.11.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.11.1-1.

**Table A.7.6.1.11.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.11.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.11.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2-2 with per-UE gaps without DRX**

| Parameter | Unit | Config | Value | Comment |

**Figure A.7.6.1.11.1-1: Time multiplexed downlink transmissions (Config 1 example)**

#### A.7.6.1.11.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 12.48 s (180*40 ms +60*40 ms) for a UE supporting power class 1,
- 7.68 s (108*40 ms + 36*40 ms) for a UE supporting power class 2 and 3

The UE is required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.1.12 SA event triggered reporting test without gap under non-DRX when CD-SSB is outside active BWP

#### A.7.6.1.12.1 Test purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of an event when CD-SSB is outside active BWP. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.1.1-1.

The test environment is the same as in A.7.6.1.1 with following exceptions in table A.7.6.1.1.1-3.

**Table A.7.6.1.12.1-1: NR Cell specific test parameters for intra-frequency event triggered reporting without gap under non-DRX when CD-SSB is outside active BWP**

| Parameter | Unit | Config | Cell 1 | | Cell 2 | |

| Active UL BWP configuration | | 1, 2 | ULBWP.1.5 | | - | |

#### A.7.6.1.12.2 Test Requirements

The test requirements are the same as in A.7.6.1.1.2.

### A.7.6.1.13 SA event triggered reporting test without gap under non-DRX with NCD-SSB

#### A.7.6.1.13.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements when NCD-SSB is configured in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.13.1-1.

**Table A.7.6.1.13.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.13.1-2, A.7.6.1.13.1-3 and A.7.6.1.13.1-4 below.

The CD-SSB is configured outside active DL BWP and NCD-SSB is configured fully within active DL BWP of FR1 PCell. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.13.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2 | PCell (Cell 1) | |
| Neighbour cell | | 1, 2 | Cell 2 | Cell to be identified. |
| RF Channel Number | | 1, 2 | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| SMTC configuration for CD-SSB | | 1, 2 | SMTC.1 | |
| SMTC configuration for NCD-SSB | | 1, 2 | SMTC.10 | |
| A3-Offset | dB | 1, 2 | -11 | |

NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

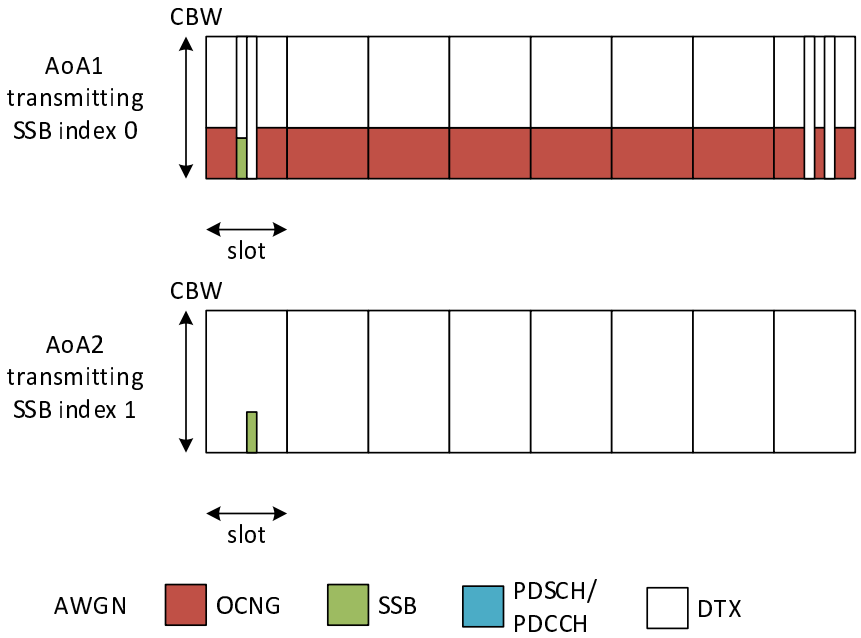

**Figure A.7.6.1.13.1-1: Time multiplexed downlink transmissions (Config 1 example)**

## A.7.6.1.13.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 9.6s for a UE supporting power class 1,
- 5.76s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.14 SA event triggered reporting test without gap under non-DRX for power class 6 UE supporting measEnhCAInterFreqFR2-r18

### A.7.6.1.14.1 Test Purpose and Environment

The purpose of this test is to verify that the FR2 power class 6 UE makes correct reporting of an event. This test will partly verify the SA SCC intra-frequency NR cell measurement requirements specified in clause 9.2.5 for FR2 power class 6 UE supporting *measEnhCAInterFreqFR2-r18* and configured with *highSpeedMeasFlagFR2-r17*.

Three cells are deployed in the test: one FR2 PCell (Cell 1) on NR RF channel 1, one FR2 SCell (Cell 2) on NR RF channel 2, and one neighbouring cell (Cell 3) on NR RF channel 2. The supported test configurations are given in table A.7.6.1.14.1.1-1. The test parameters are given in tables A.7.6.1.14.1.1-2 and cell-specific parameters in A.7.6.1.14.1.1-3 below.

In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used.

This test consists of two successive time periods, with time durations of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.7.6.1.14.1-1 Test configuration**

| Config | Description |

NOTE 1: The configuration for AoA1 and AoA2 can refer to Figure A.7.6.1.5.1.-1
NOTE 2: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 3: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.

#### A.7.6.1.14.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2 Inter-frequency Measurements

### A.7.6.2.1 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is not used (PCell in FR2)

#### A.7.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.1.1-1, A.7.6.2.1.1-2, and A.7.6.2.1.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.1.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.1.1-1.

**Table A.7.6.2.1.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.7.6.2.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.2 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is used (PCell in FR2)

#### A.7.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.2.1-1, A.7.6.2.2.1-2, and A.7.6.2.2.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.2.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.2.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.2.1-1: SA event triggered reporting tests without SSB index reading for FR2-FR2**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.2.2.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.3 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is not used (PCell in FR2)

#### A.7.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.3.1-1, A.7.6.2.3.1-2, and A.7.6.2.3.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.3.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.3.1-1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SBRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.7.6.2.3.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.4 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is used (PCell in FR2)

#### A.7.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.4.1-1, A.7.6.2.4.1-2, and A.7.6.2.4.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.4.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.4.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.4.1-1: SA event triggered reporting tests with SSB index reading for FR2-FR2**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.2.4.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.5 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is not used (PCell in FR1)

#### A.7.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.5.1-1, A.7.6.2.5.1-2, and A.7.6.2.5.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.5.1-2 is provided for a UE that does not support per-FR gap and in test 2 no gap pattern is configured as defined in table A.7.6.2.5.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.5.1-1.

**Table A.7.6.2.5.1-1 SA event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

**Table A.7.6.2.5.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | | Comment |

NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.7.6.2.5.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

In test 2, without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

2560 for UE supporting power class 1, or

1600 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.6 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is used (PCell in FR1)

#### A.7.6.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.6.1-1, A.7.6.2.6.1-2, and A.7.6.2.6.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.6.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 no gap pattern is configured as defined in table A.7.6.2.6.1-2. If a UE supports per-FR gap it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.6.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.6.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

**Table A.7.6.2.6.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | | | | Comment |
|---|---|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | Test 3 | Test 4 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone

### A.7.6.2.6.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.7 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is not used (PCell in FR1)

### A.7.6.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

n this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.7.1-1, A.7.6.2.7.1-2, and A.7.6.2.7.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.7.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement no gap pattern is configured as defined in table A.7.6.2.7.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.7.1-1.

**Table A.7.6.2.7.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

### A.7.6.2.7.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

In test 2 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

3360 for UE supporting power class 1, or

2080 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.8 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is used (PCell in FR1)

### A.7.6.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.8.1-1, A.7.6.2.8.1-2, and A.7.6.2.8.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.8.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement no gap pattern is configured as defined in table A.7.6.2.8.1-2.If a UE supports per-FR gap , it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.8.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.8.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.6.2.8.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.9 SA event triggered reporting tests For FR2 without SSB time index detection when DRX is not used (PCell in FR2) (rel16 additional mandatory gap pattern 17)

### A.7.6.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.9.1-1, A.7.6.2.9.1-2, and A.7.6.2.9.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.9.1-1.

**Table A.7.6.2.9.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

### A.7.6.2.9.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120 ms (PC1) or 3200 ms (other than PC1) from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.10 SA event triggered reporting test without gap under non-DRX

### A.7.6.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that if UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the network, the UE makes correct reporting of an event. This test will partly verify the inter-frequency without gap cell search requirements in clause 9.3.9. Supported test configurations are shown in table A.7.6.2.10.1-1.

**Table A.7.6.2.10.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test, NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The PRBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.2.10.1-2, A.7.6.2.10.1-3 and A.7.6.2.10.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.2.10.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |
|---|---|---|---|---|

### A.7.6.2.10.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4 s for a UE supporting power class 1,
- 1.44 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.11 SA event triggered reporting test without gap under DRX

### A.7.6.2.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD inter-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.2.11.1-1.

**Table A.7.6.2.11.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test: PCell (Cell 1) on NR RF channel 1 and a FR2 neighbour cell (Cell 2) on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The PRBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.2.11.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.11.1-2: General test parameters for inter-frequency event triggered reporting for SA with TDD PCell in FR2 without gap with DRX**

| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.<br>NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>NOTE 3: SSB_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.<br>NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | |

### A.7.6.2.11.2 Test Requirements

In test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4est

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.12 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is not used (PCell in FR2-2)

### A.7.6.2.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.1.12-1, A.7.6.2.12.1-2, and A.7.6.2.12.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.12.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.12.1-1.

**Table A.7.6.2.12.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.7.6.2.12.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2-2 without SSB time index detection**

| Parameter | Unit | Test configuration | Value | Comment |

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.7.6.2.12.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

7.68 s (96*40 ms + 96*40 ms) for UE supporting power class 1, or

4.8 s (60*40 ms +60*40 ms) for UE supporting other power class.

For Configuration 2,

11.52 s (192*40 ms + 96*40 ms) for UE supporting power class 1, or

7.2 s (120*40 ms +60*40 ms) for UE supporting other power class.

For Configuration 3,

15.36 s (288*40 ms + 96*40 ms) for UE supporting power class 1, or

9.6 s (180*40 ms +60*40 ms) for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.13 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is used (PCell in FR2-2)

#### A.7.6.2.13.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.63.2.13.1-1, A.7.6.2.13.1-2, and A.7.6.2.13.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.13.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2132.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.13.1-1: SA event triggered reporting tests without SSB index reading for FR2-FR2**

| Config | Description |
|---|---|

#### A.7.6.2.13.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,

11.52 s (96*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

7.2 s (60*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 2,

17.28 s (192*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

10.80 s (120*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 3,

23.04 s (288*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

14.40 s (180*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuratiojn 1,

122.88 s (96*640 ms + 96*640 ms) for UE supporting power class 1, or

76.80 s (60*640 ms + 60*640 ms) for UE supporting other power class.

For Configuratiojn 2,

184.32 s (192*640 ms + 96*640 ms) for UE supporting power class 1, or

115.20 s (120*640 ms + 60*640 ms) for UE supporting other power class.

For Configuratiojn 3,

245.76 s (288*640 ms + 96*640 ms) for UE supporting power class 1, or

153.60 s (180*640 ms + 60*640 ms) for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.14 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is not used (PCell in FR2-2)

#### A.7.6.2.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.14.1-1, A.7.6.2.14.1-2, and A.7.6.2.14.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.14.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.14.1-1.

**Table A.7.6.2.14.1-1: SA event triggered reporting tests with SSB index reading for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |
| NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | |
| NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40]. | | | | | | |

### A.7.6.2.14.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

10.56 s (96*40 ms + 96*40 ms+72*40 ms) for UE supporting power class 1, or

6.72 s (60*40 ms+60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 2,

14.4 s (192*40 ms + 96*40 ms+72*40 ms) for UE supporting power class 1, or

9.12 s (120*40 ms+60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 3,

18.24 s (288*40 ms + 96*40 ms+72*40 ms) for UE supporting power class 1, or

11.52 s (180*40 ms+60*40 ms+48*40 ms) for UE supporting other power class.

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.15 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is used (PCell in FR2-2)

### A.7.6.2.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.15.1-1, A.7.6.2.15.1-2, and A.7.6.2.15.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.15.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.15.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.15.1-1: SA event triggered reporting tests with SSB index reading for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

### A.7.6.2.15.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,

15.84 s (96*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

10.08 s (60*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 2,

21.6 s (192*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

13.68 s (120*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 3,

27.36 s (288*40 ms*1.5+96*40 ms*1.5+48*40 ms*1.5) for UE supporting power class 1, or

17.28 s (180*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuration 1,

168.96 s (96*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

107.52 s (60*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 2,

230.4 s (192*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

145.92 s (120*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 3,

291.84 s (288*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

184.32 s (180*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.16 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is not used (PCell in FR1)

### A.7.6.2.16.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.16.1-1, A.7.6.2.16.1-2, and A.7.6.2.16.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.16.1-2 is provided for a UE that does not support per-FR gap and in test 2 no gap pattern is configured as defined in table A.7.6.2.16.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.16.1-1.

**Table A.7.6.2.16.1-1 SA event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

### A.7.6.2.16.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

7.68 s (96*40 ms+96*40 ms) for UE supporting power class 1, or

4.8 s (60*40 ms + 60*40 ms) for UE supporting other power class.

For Configuration 4,5,6

11.52 s (192*40 ms+96*40 ms) for UE supporting power class 1, or

7.2 s (120*40 ms + 60*40 ms) for UE supporting other power class.

For Configuration 7,8,9

15.36 s (288*40 ms+96*40 ms) for UE supporting power class 1, or

9.6 s (180*40 ms + 60*40 ms) for UE supporting other power class.

In test 2, without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

3.84 s (96*20 ms+96*20 ms) for UE supporting power class 1, or

2.4 s (60*20 ms + 60*20 ms) for UE supporting other power class.

For Configuration 4,5,6

5.76 s (192*20 ms+96*20 ms) for UE supporting power class 1, or

3.6 s (120*20 ms + 60*20 ms) for UE supporting other power class.

For Configuration 7,8,9

7.68 s (288*20 ms+96*20 ms) for UE supporting power class 1, or

4.8 s (180*20 ms + 60*20 ms) for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.17 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is used (PCell in FR1)

### A.7.6.2.17.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.17.1-1, A.7.6.2.17.1-2, and A.7.6.2.17.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.17.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 no gap pattern is configured as defined in table A.7.6.2.17.1-2. If a UE supports per-FR gap it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.17.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.17.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 7 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 8 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 9 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone

### A.7.6.2.17.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,2,3

11.52 s (96*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

7.2 s (60*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 4,5,6

17.28 s (192*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

10.80 s (120*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 7,8,9

23.04 s (288*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

14.40 s (180*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuration 1,2,3

122.80 s (96*640 ms + 96*640 ms) for UE supporting power class 1, or

76.80 s (60*640 ms + 60*640 ms) for UE supporting other power class.

For Configuration 4,5,6

184.32 s (192*640 ms + 96*640 ms) for UE supporting power class 1, or

115.20 s (120*640 ms + 60*640 ms) for UE supporting other power class.

For Configuration 7,8,9

245.76 s (288*640 ms + 96*640 ms) for UE supporting power class 1, or

153.60 s (180*640 ms + 60*640 ms) for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.18 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is not used (PCell in FR1)

### A.7.6.2.18.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

n this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.18.1-1, A.7.6.2.18.1-2, and A.7.6.2.18.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.18.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement no gap pattern is configured as defined in table A.7.6.2.18.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.18.1-1.

**Table A.7.6.2.18.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|

| | | |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 7 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 8 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 9 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

### A.7.6.2.18.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

10.56 s (96*40 ms+96*40 ms+72*40 ms) for UE supporting power class 1, or

6.72 s (60*40 ms + 60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 4,5,6

14.4 s (192*40 ms+96*40 ms+72*40 ms) for UE supporting power class 1, or

9.12 s (120*40 ms + 60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 7,8,9

18.24 s (288*40 ms+96*40 ms+72*40 ms) for UE supporting power class 1, or

11.52 s (180*40 ms + 60*40 ms+48*40 ms) for UE supporting other power class.

In test 2 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

5.28 s (96*20 ms+96*20 ms+72*20 ms)for UE supporting power class 1, or

3.36 s (60*20 ms + 60*20 ms+48*20 ms) for UE supporting other power class.

For Configuration 4,5,6

7.2 s (192*20 ms+96*20 ms+72*20 ms) for UE supporting power class 1, or

4.56 s (120*20 ms + 60*20 ms+48*20 ms) for UE supporting other power class.

For Configuration 7,8,9

9.12 s (288*20 ms+96*20 ms+72*20 ms) for UE supporting power class 1, or

5.76 s (180*20 ms + 60*20 ms+48*20 ms) for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.19 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is used (PCell in FR1)

### A.7.6.2.19.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.19.1-1, A.7.6.2.19.1-2, and A.7.6.2.19.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.19.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement no gap pattern is configured as defined in table A.7.6.2.19.1-2. If a UE supports per-FR gap , it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.19.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.19.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 7 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 8 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 9 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

### A.7.6.2.19.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,2,3

15.84 s (96*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

10.08 s (60*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 4,5,6

21.6 s (192*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

13.68 s (120*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 7,8,9

27.36 s (288*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

17.28 s (180*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuration 1,2,3

168.69 s (96*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

107.52 s (60*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 4,5,6

230.4 s (192*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

145.92 s (120*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 7,8,9

291.84 s (288*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

184.32 s (180*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.20 SA event triggered reporting tests for FR2 with a measurement gap and two periodic MUSIM gaps configured

### A.7.6.2.20.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event on an inter-frequency layer based on measurement performed within a measurement gap when the UE is configured with two periodic MUSIM gaps. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.20.1-1, A.7.6.2.20.1-2, and A.7.6.2.20.1-3.

The three gaps, including a measurement gap and two periodic MUSIM gaps, are configured with different priority levels. In this test, the measurement gap has the lowest priority level, and the 2nd MUSIM gap has the highest priority level (i.e., priority of 2nd MUSIM gap > 1 st MUSIM gap > measurement gap) as defined in table A.7.6.2.20.1-2.

NOTE: the signaling procedure to trigger the UE to request MUSIM gaps before the test equipment configures MUSIM gaps to the UE is left to comformance test implementation.

Measurement gap pattern configuration defined in table A.7.6.2.20.1-2 is provided for a UE.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.20.1-1.

**Table A.7.6.2.20.1-1: Supported test configurations.**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.7.6.2.20.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.21 SA event triggered reporting tests for FR2 with MUSIM gap partially partial overlapping scenario configured (PCell in FR2)

#### A.7.6.2.21.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event on an inter-frequency layer based on measurement performed within measurement gaps, when UE is also configured with MUSIM gaps. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.2.21.1-1, A.7.6.2.21.1-2 and A.7.6.2.21.1-3.

Measurement gap and MUSIM gap pattern configurations defined in table A.7.6.2.21.1-2 are provided to the UE. When UE does not support per-FR gap, measurement gap pattern configuration is provided for a per-UE gap. When UE supports per-FR gap, measurement gap pattern configuration is provided for a per-FR2 gap. MUSIM gap is configured with shorter MGRP than the configured measurement gap.

NOTE: The interaction between the test equipment and UE before configuring the MUSIM gap to the UE is left to comformance test implementation.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.7.6.2.21.1-1 Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.2.21.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- [10240] for a UE supporting power class 1,
- [6400] for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.22 SA event triggered reporting tests with SSB time index detection when DRX is not used (PCell in FR2) for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

### A.7.6.2.22.1 Test Purpose and Environment

The purpose of this test is to verify that the PC6 UE makes correct reporting of an event when UE supporting *measEnhCAInterFreqFR2-r18* is configured with *highSpeedMeasInterFreq-r17*. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR carrier 1(RF channel 1) and NR cell2 as neighbor cell in FR2 on NR carrier 2(RF channel 2). The test parameters and configurations are given in tables A.7.6.2.22.1-1, A.7.6.2.22.1-2, and A.7.6.2.22.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.22.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

Supported test configurations are shown in table A.7.6.2.22.1-1.

**Table A.7.6.2.22.1-1: SA event triggered reporting tests with SSB index reading for FR2 power class 6 UE configured with highSpeedMeasFlagFR2-r17**

### A.7.6.2.22.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is 2160 ms according to the requirements defiend in table 9.3.4-9 and table 9.3.4-10 in clause 9.3.4

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2.23 SA event triggered reporting tests without SSB time index detection when DRX is not used (PCell in FR2) for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

### A.7.6.2.23.1 Test Purpose and Environment

The purpose of this test is to verify that the FR2 power class 6 UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements specified in clause 9.3.4 for a FR2 power class 6 UE supporting *measEnhCAInterFreqFR2-r18* and configured with *highSpeedMeasFlagFR2-r17*.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.23.1-1, A.7.6.2.23.1-2, and A.7.6.2.23.1-3.

The measurement gap pattern configuration defined in table A.7.6.2.23.1-2 applies to a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured to a UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are specified in table A.7.6.2.23.1-1.

**Table A.7.6.2.23.1-1 Test configuration**

| Config | Description |
|---|---|
| | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

| Propagation Condition | | | AWGN | | AWGN 19444 Hz [Note 3] | |

NOTE 1: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

NOTE 2: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

NOTE 3: The AWGN 19444 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 19444 Hz.

#### A.7.6.2.23.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1 s from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.3 L1-RSRP measurement for beam reporting

### A.7.6.3.1 SSB based L1-RSRP measurement when DRX is not used

#### A.7.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.3.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.7.6.3.1.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.1.2-1 and table A.7.6.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.7.6.3.1.2-1: General test parameters**

| Parameter | Config | Unit | Value |

| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.6.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 1680 for UE supporting power class 1
- 1200 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.3.2 SSB based L1-RSRP measurement when DRX is used

### A.7.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.3.2.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.3.2.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.2.2-1 and table A.7.6.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.7.6.3.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |
| Duplex mode | 1~2 | | TDD |
| TDD Configuration | 1~2 | | TDDConf.3.1 |
| $BW_{channel}$ | 1~2 | MHz | 100: $N_{PRB,c}$ = 66 |
| Data PRBs allocated | 1~2 | | 66 |
| PDSCH Reference measurement channel | 1 | | SR.3.2 TDD |
| | 2 | | SR.3.3 TDD |
| RMSI CORESET Reference Channel | 1 | | CR.3.1 TDD |
| | 2 | | CR.3.2 TDD |
| Dedicated CORESET Reference Channel | 1 | | CCR.3.1 TDD |
| | 2 | | CCR.3.7 TDD |
| SSB configuration | 1 | | SSB.1 FR2 |

| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |
| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |
| NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |

### A.7.6.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4**.**

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.3.3 CSI-RS based L1-RSRP measurement when DRX is not used

### A.7.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.7.6.3.3.1-1.

**Table A.7.6.3.3.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.3.3.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.3.2-1 and table A.7.6.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 480 ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.3.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.7.6.3.3.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1 | | freq1 |
| Duplex mode | 1 | | TDD |
| TDD Configuration | 1 | | TDDConf.3.1 |
| $BW_{channel}$ | 1 | MHz | 100: $N_{PRB,c}$ = 66 |
| PDSCH Reference measurement channel | 1 | | SR.3.1 TDD |

| EPRE ratio of PBCH to PBCH DMRS | | | |
| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |

**Table A.7.6.3.3.2-1: CSI-RS specific test parameters**

| Parameter | Config | Unit | CSI-RS#0 | CSI-RS#1 |
|---|---|---|---|---|
| Angle of arrival configuration | 1 | | Setup 1 according to A.3.15.1 | |
| Beam Assumption Note 4 | 1 | | Rough | Rough |
| $N_{oc}$ Note1 | 1 | dBm/15 kHz | -105 | |
| $N_{oc}$ Note1 | 1 | dBm/SSB SCS | -95.97 | |
| $\hat{E}_s / I_{ot}$ | 1 | dB | 0 | 9 |
| CSI-RS RSRP Note2 | 1 | dBm/SSB SCS | -95.97 | -86.97 |
| Io Note2 | 1 | dBm/95.04 MHz | -63.97 | -57.47 |
| $\hat{E}_s / N_{oc}$ | 1 | dB | 0 | 9 |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.6.3.3.3 Test Requirements

After 480 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.6.3.3.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.7.6.3.3.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + $G_{max}$ |

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test
NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

## A.7.6.3.4 CSI-RS based L1-RSRP measurement when DRX is used

### A.7.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.7.6.3.4.1-1.

**Table A.7.6.3.4.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.3.4.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.4.2-1 and table A.7.6.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 1440 ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.3.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.7.6.3.4.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1 | | freq1 |
| Duplex mode | 1 | | TDD |
| TDD Configuration | 1 | | TDDConf.3.1 |
| $BW_{channel}$ | 1 | MHz | 100: $N_{PRB,c}$ = 66 |
| PDSCH Reference measurement channel | 1 | | SR.3.1 TDD |

| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |

**Table A.7.6.3.4.2-1: CSI-RS specific test parameters**

| Parameter | Config | Unit | CSI-RS#0 | CSI-RS#1 |
|---|---|---|---|---|
| Angle of arrival configuration | 1 | | Setup 1 according to A.3.15.1 | |
| Beam Assumption Note 4 | 1 | | Rough | Rough |
| $N_{oc}$ Note1 | 1 | dBm/15 kHz | -105 | |
| $N_{oc}$ Note1 | 1 | dBm/SSB SCS | -95.97 | |

| Parameter | Config | Unit | CSI-RS#0 | CSI-RS#1 |
|---|---|---|---|---|
| $\hat{E}_s/I_{ot}$ | 1 | dB | 0 | 9 |
| CSI-RS RSRP Note2 | 1 | dBm/SSB SCS | -95.97 | -86.97 |
| Io Note2 | 1 | dBm/95.04 MHz | -63.97 | -57.47 |
| $\hat{E}_s/N_{oc}$ | 1 | dB | 0 | 9 |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

#### A.7.6.3.3.3 Test Requirements

After 1440 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.6.3.4.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.7.6.3.4.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + $G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

### A.7.6.3.5 SSB based L1-RSRP measurement when DRX is used for power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

#### A.7.6.3.5.1 Test Purpose and Environment

The purpose of this test is to verify that the power class 6 UE makes correct reporting of L1-RSRP measurement when *highSpeedMeasFlagFR2-r17* is configured. This test will partly verify the L1-RSRP measurement requirements for power class 6 UE configured with *highSpeedMeasFlagFR2-r17* in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.5.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.3.5.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test for power class 6 UE configured with *highSpeedMeasFlagFR2-r17***

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.3.5.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.5.2-1 and table A.7.6.3.5.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.7.6.3.5.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| highSpeedMeasFlagFR2-r17 | 1~2 | | Set 1 |

| $\hat{E}_s/N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.3.5.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than 480 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -5 to [+44] dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.6.3.6 Inter-cell SSB based L1-RSRP measurements on FR2 SCell when DRX is not used

#### A.7.6.3.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.13.4.1, with the testing configurations for NR serving cell in table A.7.6.3.6.1-1.

The AoA setup of FR2 cell for this test is Setup 3 as defined in clause A.3.15.

**Table A.7.6.3.6.1-1: Applicable NR configurations for inter-cell SSB based L1-RSRP test in FR2**

| Config | Description |
|---|---|
| 1 | NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>NR SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | NR PCell 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR SCell 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 5 | NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>NR SCell 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 6 | NR PCell 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR SCell 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.7.6.3.6.2 Test parameters

There are two cells in the test, Cell 1 is the serving cell in CA, including a FR1 PCC and FR2 SCC. Cell 2 is a FR2 cell with different PCI from Cell 1. The test parameters for Cell 1 are given in table A.7.6.3.6.2-1. The test parameters for FR2 Cell (Cell 2) are given in table A.7.6.3.6.2-2 and table A.7.6.3.6.2-3.

SSB#0 and SSB#1 is transmitted on Cell 1 FR2 SCC and Cell 2.In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on SSB#0, and report measurement results periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. At the beginning of T2, SSB#1 starts transmission and the UE is configured for L1-RSRP measurement on SSB#1. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured in CSI-ReportConfig and *additionalPCIList* configured in *CSI-SSB-ResourceSet*.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD on Cell 1 in FR1 and perform L1-RSRP measurements on the SSB#0in FR2.

**Table A.7.6.3.6.2-1: Cell specific test parameters for FR1 PCell**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~6 | | freq1 |
| Duplex mode | 1,4 | | FDD |
| | 2,5 | | TDD |
| | 3,6 | | TDD |

| $\hat{E}_s/N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.6.3.6.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2160 for UE supporting power class 1
- 1680 for UE supporting power class 2, 3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.3.7 SSB based L1-RSRP measurement for FR2-2 when DRX is used

### A.7.6.3.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.7.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.3.7.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| 3 | NR 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.3.7.2 Test parameters

There is one cells in the test, the FR2-2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.7.2-1 and table A.7.6.3.7.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.7.6.3.7.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~3 | | freq1 |

| $\hat{E}_s/N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.6.3.7.3 Test Requirements

The UE shall send L1-RSRP report every TBD slots. No later than X ms plus TBD slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- TBD for UE supporting power class 1
- TBD for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.3.8 CSI-RS based L1-RSRP measurement when DRX is not used and when CD-SSB is outside active BWP

### A.7.6.3.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.7.6.3.3.1-1.

The test is for UE supporting *rlm-BM-BFD-CSI-RS-OutsideActiveBWP-r18* and the UE is not required past legacy test in A.7.6.3.3.

The test environment is the same as in A.7.6.3.3 with following exceptions in table A.7.6.3.3.2-1.

The value of parameter “Dedicated BWP configuration” is DLBWP.1.2 and ULBWP.1.2.

NOTE: The starting PRB index of the SSB can be any possible PRB index of the RF channel BW occurring after the last PRB of the DL active BWP.

The test requirements are the same as in A.7.6.3.3.3.

### A.7.6.3.9 SSB based L1-RSRP measurement when DRX is not used when CD-SSB is outside active BWP

#### A.7.6.3.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.1.1-1.

The test environment is the same as in A.7.6.3.1 with following exceptions in table A.7.6.3.1.2-1.

| Parameter | Config | Unit | Value |
|---|---|---|---|
| Dedicated BWP configuration | 1~2 | | DLBWP.1.5<br>ULBWP.1.5 |

#### A.7.6.3.9.2 Test Requirements

The test requirements are the same as in A.7.6.3.1.3.

### A.7.6.3.10 SSB based L1-RSRP measurement for UE supporting NCD-SSB based L1 measurement outside active BWP when DRX is not used

#### A.7.6.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.10.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.3.10.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.7.6.3.10.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.10.2-1 and table A.7.6.3.10.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. During time duration T1, the UE shall not have any timing information of NR cell 2.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.7.6.3.10.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |
| Duplex mode | 1~2 | | TDD |
| TDD Configuration | 1~2 | | TDDConf.3.1 |

| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

| Parameter | Config | Unit | SSB#0 | | SSB#1 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |

### A.7.6.3.10.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- [3360] for UE supporting power class 1
- [2080] for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.3.11 SSB based L1-RSRP measurement when DRX is used for power class 6 UE supporting simultaneousReceptionTwoQCL-r18

### A.7.6.3.11.1 Test Purpose and Environment

The purpose of this test is to verify that the power class 6 UE supporting *simultaneousReceptionTwoQCL-r18* makes correct reporting of L1-RSRP measurement when *highSpeedMeasFlagFR2-r17* is configured, and when *highSpeedDeploymentTypeFR2-r17* is configured as bidirectional. This test will partly verify the L1-RSRP measurement requirements for power class 6 UE configured with *highSpeedMeasFlagFR2-r17* for FR2 in clause 9.5.4.1 with the testing configurations for NR cells in table A.7.6.3.11.1-1.

**Table A.7.6.3.11.1-1: Test configurations**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.3.11.2 Test parameters

There is one cell in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.11.2-1 and table A.7.6.3.11.2-2 below.

There are two SSBs configured in Cell 1. In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on two different QCL Type D SSBs simultaneously and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.7.6.3.11.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| highSpeedMeasFlagFR2-r17 | 1~2 | | Set 2 |
| highSpeedDeploymentTypeFR2-r17 | 1~2 | | bidirectional |

They are not settable parameters themselves.<br>NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |

#### A.7.6.3.11.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than 880 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0, SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -5 to +44 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.4 CLI measurements

### A.7.6.4.1 SRS-RSRP measurement with non-DRX

#### A.7.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in table A.7.6.4.1.1-1.

**Table A.7.6.4.1.1-1: Applicable NR configurations for FR2 SRS-RSRP test**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.6.4.1.2 Test Parameters

One cell is deployed in the test, which is FR2 PCell (Cell 1). The test parameters for PCell is given in table A.7.6.4.1.2-1 ~ A.7.6.4.1.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in table A.7.6.4.1.2-4 and the test parameters for the (virtual) neighbour cell UE in table A. 7.6.4.1.2-3. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

**Table A.7.6.4.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PCell in FR2**

| Parameter | Unit | Test configuration | Value | Comment |

| | sequenceId | 0 | Any 10 bit number |

#### A.7.6.4.1.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 60 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.4.2 CLI-RSSI measurement with non-DRX

#### A.7.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in table A.7.6.4.2.1-1.

**Table A.7.6.4.2.1-1: Applicable NR configurations for FR2 CLI-RSSI test**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.6.4.2.2 Test Parameters

One cell is deployed in the test, which is FR2 PCell (Cell 1). The test parameters for PCell is given in table A.7.6.4.2.2-1 ~ A.7.6.4.2.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 2 data symbols before. The CLI-RSSI measurement resource configuration is in table A.7.6.4.2.2-4.

**Table A.7.6.4.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PCell in FR2**

| Parameter | Unit | Test configuration | Value | Comment |

| | startPosition | 3 |
| | nrofSymbols | 11 |
| | rssi-PeriodicityAndOffset | sl40, 25 |

#### A.7.6.4.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 5 ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on Io.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.5 NR Measurements with autonomous gaps

### A.7.6.5.1 SA interfrequency CGI reporting in autonomous gaps test (PCell in FR2)

#### A.7.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an CGI. This test will partly verify the SA inter-frequency NR cell search requirements in clause 8.2.1.2.16 and 9.11

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.5.1.1-1, A.7.6.5.1.1-2, and A.7.6.5.1.1-3.

Measurement gap patterns are configured. During T1 the UE shall report event A3 for cell 2. Within 3 seconds of the event report, the test equipment shall add a measurement reporting configuration using *ReportConfigNR* which containsa ReportCGI IE with cellForWhichToReportCGI set to the physical Cell ID of cell 2 and including the optional IE useAutonomousGaps-r16

In the measurement control information, it is indicated to the UE to decode the CGI of the neighbour cell using autonomous gaps. The test consists of two time phases, T1 and T2. Time period T2 begins when the last TTI containing the RRC message implying SI reading is sent to the UE.

Supported test configurations are shown in table A.7.6.5.1.1-1.

**Table A.7.6.5.1.1-1 SA interfrequency CGI reporting test in autonomous gaps**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.6.5.1.1-2: General test parameters for SA interfrequency CGI reporting in autonomous gaps**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1 | 1, 2 | Two FR2 NR carrier frequencies is used. |
| Active cell | | Config 1 | NR cell 1 (PCell) | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell | | Config 1 | NR cell 2 | NR cell 2 is on NR RF channel number 2. |
| Gap Pattern Id | | Config 1 | 13 | As specified in clause 9.1.2-1. |

| $N_{oc}$ Note2 | dBm/SCS Note 4 | Config 1 | -90 | | -90 | |
| SS-RSRP Note 3 | dBm/SCS Note 5 | Config 1 | -87 | | -93 | |
| $\hat{E}_s/I_{ot}$ | dB | Config 1 | 3 | | -3 | |
| $\hat{E}_s/N_{oc}$ | dB | Config 1 | 3 | | -3 | |
| Io Note3 | dBm/95.04 MHz Note 5 | Config 1 | -56.25 | | -59.25 | |
| Propagation Condition | | Config 1 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.5.1.2 Test Requirements

The UE shall report the CGI of cell 2 within 10 + 25*$T_{smtc}$ + 6* $T_{RMSI\text{-}scheduling}$ +20 ms +2 ms= 652 ms from the start of T2, allow 655 ms. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 655 ms the number of interrupted slots shall not exceed the allowed number as defined in clause 8.2.2.2.14.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.6 L1-SINR measurement for beam reporting

### A.7.6.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is not used

#### A.7.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in table A.7.6.6.1.1-1.

**Table A.7.6.6.1.1-1: Applicable NR configurations for FR2 CSI-RS based L1-SINR test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.6.1.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.6.1.2-1 and table A.7.6.6.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. After 160 ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.6.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.7.6.6.1.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|

| $\hat{E}_s / N_{oc}$ | 1 | dB | 0 | 9 |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.6.6.1.3 Test Requirements

After 160 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.1.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is used

### A.7.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in table A.7.6.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-IM based IMR**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.7.6.6.2.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.6.2.2-1 and table A.7.6.6.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-IM resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-IM resources as IMR.

**Table A.7.6.6.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |
| Duplex mode | 1~2 | | TDD |

| | 2 | | -64 | -64 | -67 | -57.5 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 0 | -Infinity | 9 |
| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 3: SSB RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |
| NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |

#### A.7.6.6.2.3 Test Requirements

The UE shall send L1-SINR report every 640 slots. No later than X ms plus 640 slots from the beginning of time period T2, UE shall send L1-SINR report including the results for both SSB#0+CSI-IM#0 and SSB#1+CSI-IM#1 while meeting the accuracy requirements defined in clause 10.1.28.2, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is used

#### A.7.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR cofigured in clause 9.8.4.3, with the testing configurations for NR cells in table A.7.6.6.3.1-1.

**Table A.7.6.6.3.1-1: Applicable NR configurations for FR2 L1-SINR test with CMR and dedicated IMR**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.7.6.6.3.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.6.3.2-1 and table A.7.6.6.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-RS as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources and the associated IMR. UE is also configured to measure L1-SINR based on SSB. After 1440 ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.6.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-RS as IMR.

**Table A.7.6.6.3.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1 | | freq1 |
| Duplex mode | 1 | | TDD |
| TDD Configuration | 1 | | TDDConf.3.1 |
| $BW_{channel}$ | 1 | MHz | 100: $N_{PRB,c}$ = 66 |

| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| Propagation condition | 1 | | AWGN |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

**Table A.7.6.6.3.2-2: CSI-RS specific test parameters**

| Parameter | Config | Unit | CSI-RS#0 | CSI-RS#1 |
|---|---|---|---|---|
| Angle of arrival configuration | 1~2 | | Setup 1 according to A.3.15.1 | |
| Assumption for UE beams Note 3 | 1~2 | | Rough | |
| $N_{oc}$ Note1 | 1~2 | dBm/15 kHz | -105 | |
| $N_{oc}$ Note1 | 1~2 | dBm/SSB SCS | -95.97 | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 0 | 9 |
| CSI-RS RSRP Note2 | 1~2 | dBm/SSB SCS | -95.97 | -86.97 |
| Io Note2 | 1~2 | dBm/95.04 MHz | -63.97 | -57.47 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 9 |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.6.3.3 Test Requirements

After 1440 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-RS#0 as IMR and CSI-RS#1 as CMR + CSI-RS#1 as IMR while meeting the accuracy requirement in clause 10.1.28.3. The reported L1-SINR value shall consider the Rx antenna gain in the range of [-10 ~ +20] dB when calculated.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.7 CSI-RS based intra-frequency Measurements

### A.7.6.7.1 SA event triggered reporting test without gap under DRX for CSI-RS based intra-frequency measurement

#### A.7.6.7.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency measurement requirements in clause 9.10.2 and 9.10.3. Supported test configurations are shown in table A.7.6.7.1.1-1.

**Table A.7.6.7.1.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.7.1.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.7.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap with DRX**

| Parameter | Unit | Config | Value | Comment |
|---|---|---|---|---|
| | | | Test 1 | |
| Active cell | | 1 | PCell (Cell 1) | |
| Neighbour cell | | 1 | Cell 2 | Cell to be identified. |
| RF Channel Number | | 1 | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| CSI-RS resource configuration | | 1 | CSI-RS.RRM.FR2.1 TDD | |
| A3-Offset | dB | 1 | -6 | |

| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.<br>NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>NOTE 3: CSI-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>NOTE 4: Information about types of UE beam is given in B.2.1, and does not limit UE implementation or test system implementation. | | | | | | |

### A.7.6.7.1.2 Test Requirements

In this test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

- 9.6 s for a UE supporting power class 1,
- 5.76 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.8 CSI-RS based inter-frequency Measurements

### A.7.6.8.1 SA event triggered reporting tests for FR2 CSI-RS based measurement when non-DRX is used (PCell in FR2)

#### A.7.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for CSI-RS based L3 measurement. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.10.3.5.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.8.1.1-1, A.7.6.8.1.1-2, and A.7.6.8.1.1-3.

In test measurement gap pattern configuration # 13 as defined in table A.7.6.8.1.1-2 is provided for UE.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.8.1.1-1.

**Table A.7.6.8.1.1-1: SA event triggered reporting tests for CSI-RS based L3 measurement for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.6.8.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 CSI-RS based L3 measurement**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

### A.7.6.8.1.2 Test Requirements

In the test the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10880 for UE supporting power class 1, or

6720 for UE supporting other power class

The UE is required to read the SSB index indicated by associatedSSB in the neighbour cell in this test

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.9 RSTD measurements

### A.7.6.9.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA

#### A.7.6.9.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.7.1.1-1. The test parameters are as given in table 7.6.7.1.1-2, table A.7.6.9.1.1-3 and , table A.7.6.9.1.1-4.

**Table A.7.6.9.1.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

**Table A.7.6.9.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |
| SSB configuration | Config 1 | | SSB.3 FR2 | |

NOTE 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

**Table A.7.6.9.1.-5: Void**

### A.7.6.9.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

## A.7.6.9.2 NR RSTD measurement reporting delay test case for dual positioning frequency layers in FR2 SA

### A.7.6.9.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when dual positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.2.1-1. The test parameters are as given in table 7.6.7.2.1-2, table A.7.6.9.2.1-3 and table A.7.6.9.2.1-4.

**Table A.7.6.9.2.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the 2 RF channels distributed in dual positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

**Table A.7.6.9.2.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first place in the respective neighbour cell list in the DL-TDOA assistance data for two positioning frequency layers. |

NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

**Table A.7.6.9.2.1-5: Void**

### A.7.6.9.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

## A.7.6.9.3 NR RSTD measurement reporting delay test case for single positioning frequency layer with reduced number of samples in FR2 SA

### A.7.6.9.3.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured. In this test PRS is transmitted within the active BWP of the UE.

Supported test configurations are shown in table A.7.6.9.3.1-1. The test parameters are as given in table 7.6.9.3.1-2, table A.7.6.9.3.1-3 and table A.7.6.9.3.1-4.

**Table A.7.6.9.3.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layer.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

**Table A.7.6.9.3.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the subframes with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.9.3.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.1.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

## A.7.6.9.4 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA without measurement gap

### A.7.6.9.4.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the gapless RSTD measurement requirements specified in clause 9.9.2.7 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured. Reporting delay test for gapless PRS measurement is conducted assuming that the PRS has higher priority, i.e., state 1, than all other DL signals/channels and is transmitted within active DL BWP of UE. Two sub-tests are defined, sub-test 1 is for $N_{sample}$ = 4 and sub-test 2 is for $N_{sample}$ = 1. For sub-test 2 LMF indicates UE to perform PRS measurement with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*.

Supported test configurations are shown in table A.7.6.9.4.1-1. The test parameters are as given in table A.7.6.9.4.1-2, table A.7.6.9.4.1-3, and table A.7.6.9.4.1-4.

**Table A.7.6.9.4.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS processing window instance containing the PRS resources.

The UE is configured with PPW before T2.

**Table A.7.6.9.4.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.9.4.2 Test Requirements

The RSTD measurement time fulfils the gapless RSTD measurement reporting delay requirements specified in clause 9.9.2.7.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.7 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

### A.7.6.9.5 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_CONNECTED state with Rx TEG

#### A.7.6.9.5.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the Rx TEG based measurement period requirements specified in clause 9.9.2.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.5.1-1. The test parameters are as given in table A7.6.9.5.1-2, table A.7.6.9.5.1-3 and, table A.7.6.9.5.1-4.

**Table A.7.6.9.5.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layer.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

The test applies to the UE supporting Rx TEG indicated via *NR-UE-TEG-Capability* and is requested to provide the Rx TEG in the test via *nr-UE-RxTEG-Request-r17* in *NR-TDOA-RequestLocationInformation*. In the location request *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* is set to n0. The UE shall perform and optionally report the Rx TEG based RSTD measurements.

The UE is capable of performing Rx TEG based RSTD measurements. UE may or may not be able to receive same DL PRS resource from the same TRP simultaneously from multiple Rx TEGs.

**Table A.7.6.9.5.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |
| $BW_{channel}$ | Config 1 | MHz | 200: $N_{PRB,c}$ = 132 | |
| SSB configuration | Config 1 | | SSB.3 FR2 | |
| SMTC configuration | Config 1 | | SMTC.1 | |
| PDSCH RMC configuration | Config 1 | | SR.1.1 FDD | |
| RMSI CORESET RMC configuration | Config 1 | | CR.3.1 TDD | As specified in clause A.3.1.2.1 |
| Dedicated CORESET RMC configuration | Config 1 | | CR.1.1 FDD | |
| PRS Configuration | Config 1 | | PRS.1.4. FR2 | As specified in clause A.3. 31 |
| Physical cell ID PCI | | | (PCI of Cell 1 – PCI of Cell 2)mod6=0 and (PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters |
| CP length | | | Normal | |
| DRX | | | OFF | |
| Measurement gap | | | GP#24 or GP#13 | GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured |
| Radio frame receive time offset between the cells at the UE antenna connector | | µs | Cell 2 to Cell 1: 0<br>Cell 3 to Cell 1: 3 | PRS are transmitted from synchronous cells |
| Expected RSTD | | µs | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells: randomly between -3 and 3 | The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD indicator |
| Expected RSTD uncertainty for all neighbour cells | | µs | 5 | The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD-Uncertainty index |
| Number of cells provided in DL-TDOA assistance data | | | 4 | Including the reference cell |
| PRS muting info | | | Cell 1: ‘10’<br>Cell 2: ‘01’<br>Cell 3: ‘10’ | Correponds to prs-MutingInfo defined in TS 37.355 [34] |
| PRS resource RE offset | | | Cell 1: 0<br>Cell 2: 0<br>Cell 3: 1 | Cell 1 and Cell 3 are configured with different resource offsets |
| T1 | | s | 3 | The length of the time interval from the beginning of each test |
| T2 | | s | 1.28*$k_{multiTEG}$ Note 1 | The length of the time interval that follows immediately after time interval T1 |
| AoA setup | | | Setup 1 | As defined in A.3.15.1 |

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Beam assumption | | Rough | Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation |

NOTE 1: $k_{multiTEG}=\left\lceil \frac{N_{TEG}}{k_{TEG,simul}} \right\rceil$ if UE is capable of receiving the same DL PRS resource from the same TRP simultaneously from multiple Rx TEGs, where $N_{TEG}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource, and $k_{TEG,simul}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

**Table A.7.6.9.5.1-3: Cell-specific test parameters for RSTD measurement reporting delay during T1**

| Parameter | | Unit | Cell 1 | Cell 2 | Cell 3 |
|---|---|---|---|---|---|
| NR RF Channel Number | | | 1 | 1 | 1 |

| PRP Note 4 | | dBm/SCS | -94.44 | -100.67 | -100.67 |

| Parameter | Unit | Cell 1 | Cell 2 | Cell 3 |
|---|---|---|---|---|
| | | T2 | T2 | T2 |
| Propagation Condition | | AWGN | | |

NOTE 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the subframes with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.9.5.2 Test Requirements

The RSTD measurement time fulfils the Rx TEG based RSTD measurement period requirements specified in clause 9.9.2.5. The UE shall perform and report the Rx TEG based RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049.

## A.7.6.9.6 NR RSTD measurement reporting delay test case for PRS aggregation in FR2 SA in RRC_CONNECTED mode

### A.7.6.9.6.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement performed by UE by aggregating PRS resources from multiple positioning frequency layers (PFLs) meets the requirements specified in clause 9.9.2.10 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.6.1-1.

**Table A.7.6.9.6.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth per PFL, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS resources on multiple positioning frequency layers during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The UE is capable of performing RSTD measurements by aggregating PRS resources from multiple PFLs and is configured by the LMF to perform measurements by aggregating

the PRS resources from multiple positioning frequency layers via *jointMeasurementsReq*. The resources to be aggregated for RSTD measurement are indicated by the LMF to the UE via *nr-DL-PRS-JointMeasurementRequestedPFL-List*.

The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first measurement gap instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

The general test parameters are listed in table A.7.6.9.6.1-2, and cell specific test parameters are listed in table A.7.6.9.6.1-3 during T1 and table A.7.6.9.6.1-4 during T2.

**Table A.7.6.9.6.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.

Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

Note 6: Carriers are intra-band and contiguous to each other.

#### A.7.6.9.6.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.10.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.10 starting from the beginning of time interval T2.

***NOTE**: The actual overall delays measured in the test may be up to 2×$TTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.*

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.2, i.e., between RSTD_000000000 and RSTD_126083073.

## A.7.6.10 PRS-RSRP measurements

### A.7.6.10.1 PRS-RSRP reporting delay test case for single positioning frequency layer

#### A.7.6.10.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 9.9.3.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.1.1-2, and table A.7.6.10.1.1-3.

**Table A.7.6.10.1.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 3: SSB_RP/PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |
| NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | | |
| NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone | | | | | | |
| NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone | | | | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |
| NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | |

### A.7.6.10.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5.The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

## A.7.6.10.2 PRS-RSRP reporting delay test case for dual positioning frequency layer

### A.7.6.10.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 9.9.3.5 for dual positioning frequency layers under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.2.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the different frequency from the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.2.1-2, and table A.7.6.10.2.1-3.

**Table A.7.6.10.2.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.7.6.10.2.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5.The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

### A.7.6.10.3 PRS-RSRP reporting delay test case for reduced number of samples

### A.7.6.10.3.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements for reduced number of samples specified in clause 9.9.3.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.3.1-1. In this test PRS is transmitted within the active BWP of the UE.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples.*

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.3.1-2, and table A.7.6.10.3.1-3.

**Table A.7.6.10.3.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

### A.7.6.10.3.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

## A.7.6.10.4 PRS-RSRP reporting delay test case for single positioning frequency layer outside MG

### A.7.6.10.4.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement outside MG requirements specified in clause 9.9.3.6 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. There are two sub-tests in the test, sub-test 1 is to verify the delay requirements with Nsample=1, and sub-test 2 is to verify the delay requirements with Nsample=4.

Supported test configurations are shown in table A.7.6.10.4.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In sub-test 1, *reducedDL-PRS-ProcessingSamples* shall be included in the location information request and set to '*requested*', and *lowerRxBeamSweepingThan8-FR2* shall be included.

During T1, a PPW shall be configured for the PCell and be activated via DL MAC CE. The last PDSCH containing the MAC CE shall be transmitted before slot #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first PPW instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are as given in table A.7.6.10.4.1-2, and cell specific test parameters during T2 are listed in table A.7.6.10.4.1-3.

**Table A.7.6.10.4.1-1: supported test configurations for PRS RSRP measurement for FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

**Table A.7.6.10.4.1-2: General test parameters for PRS RSRP measurement reporting delay**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1 | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| Active cell | | Config 1 | NR Cell 1 (PCell) | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | Config 1 | NR Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| PPW configuration | | Config 1 | PPW.1 | As specified in clause A.3.33 |
| SMTC parameters | | Config 1 | SMTC.1 | As specified in clause A.3.11 |
| SSB parameters | | Config 1 | SSB.3 FR2 | As specified in clause A.3.10.2 |
| CP length | | Config 1 | Normal | |
| DRX | | Config 1 | OFF | DRX is not used |
| Time offset between serving and neighbour cells | µs | Config 1 | 0.58, 2.0 or 3 Note 1 | |
| Expected RSTD | µs | Config 1 | 0 | |
| Expected RSTD uncertainty | µs | Config 1 | Same as time offset between serving and neighbour cells | |
| Number of cells provided in assistance data | | Config 1 | 4 | Including the reference cell |
| T1 | s | Config 1 | 5 | |
| T2 | s | Config 1 | 7 | |
| NOTE 1: If UE indicates support of CP length for the receive time difference threshold, the time offset is set to 0.58 us; If UE indicates support of 1/4 symbol length for the receive time difference threshold, the time offset is set to 2.0 us, otherwise 3 us. | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.10.4.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.6, with Nsample=1 for sub-test 1 and Nsample=4 for sub-test 2. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

# A.7.6.11 UE Rx-Tx time difference measurements

## A.7.6.11.1 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

### A.7.6.11.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.7.6.11.1.1-1.

**Table A.7.6.11.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.1.1-2 and table A.7.6.11.1.1-3 respectively.

**Table A.7.6.11.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |

NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

**Table Table A.7.6.11.1.1-4: Void**

#### A.7.6.11.1.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.7.6.11.2 UE Rx-Tx time difference measurement period for dual positioning frequency layers in FR2 SA

#### A.7.6.11.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when dual positioning frequency layers are cnfigured.

The supported test configurations in listed in table A.7.6.11.2.1-1.

**Table A.7.6.11.2.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on different RF channels in FR2.

transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.2.1-2 and table A.7.6.11.2.1-3 respectively.

**Table A.7.6.11.2.1-2: General test parameters**

**Table Table A.7.6.11.1.1-4: Void**

### A.7.6.11.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.6.11.3 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA with reduced sample number

### A.7.6.11.3.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 with Nsample = 1 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured. In this test PRS is transmitted within the active BWP of the UE. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*.

The supported test configurations are listed in table A.7.6.11.3.1-1.

**Table A.7.6.11.3.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.3.1-2 and table A.7.6.11.3.1-3 respectively.

**Table A.7.6.11.3.1-2: General test parameters**

NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.11.3.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5 with Nsample=1.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.6.11.4 UE Rx-Tx time difference measurements without gaps in FR2 SA

### A.7.6.11.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.6 in AWGN propagation condition in FR2 in standalone scenario. There are two sub-tests in the test, sub-test 1 is to verify the delay requirements with Nsample=1, and sub-test 2 is to verify the delay requirements with Nsample=4.

The supported test configurations are listed in table A.7.6.11.4.1-1.

**Table A.7.6.11.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of PRS processing window containing the PRS resources.

The UE is configured with PRS processing window before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.4.1-2 and table A.7.6.11.4.1-3 respectively.

**Table A.7.6.11.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| RF Channel Number | | 1 | 1 | For both Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 200: $N_{PRB,c}$ = 132 | |
| SSB configuration | | 1 | SSB.3 FR2 | |
| SMTC configuration | | 1 | SMTC.1 | |
| PRS processing window | | 1 | Table A.3.33-1: Reference PPW configuration | As defined in A.3.33 |
| CP length | | 1 | Normal | |
| DRX | | 1 | OFF | |
| Time offset between serving and neighbour cells | µs | 1 | 0.58, 2.25 or 3 Note 1 | |
| Expected RSTD | µs | 1 | 0 | |
| Expected RSTD uncertainty | µs | 1 | Same as time offset between serving and neighbour cells | |
| Number of cells provided in assistance data | | 1 | 4 | Including the reference cell |
| T1 | s | 1 | 5 | |
| T2 | s | 1 | 20 | |
| NOTE 1: The value is up to the UE capability. The possible UE capability value: (1/4 symbol, 1/2 symbol, CP length, half of slot). When the UE reported value is > 3 us, the time offset between serving and neighbour cells is set to 3 us; when the UE reported value is < 3 us, the time offset between serving and neighbour cells is set to the UE reported value. | | | | |

| Propagation Condition | | 1 | AWGN | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.11.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.6.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.6.11.5 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA with RxTx TEG

### A.7.6.11.5.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured, and when UE is requested to measure a PRS resource with RxTx TEG.

The supported test configurations are listed in table A.7.6.11.5.1-1.

**Table A.7.6.11.5.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The test applies to the UE supporting RxTx TEG indicated via *NR-UE-TEG-Capability* and is requested to provide the RxTx TEG in the test via *nr-UE-RxTxTEG-Request-r17* in *nr-Multi-RTT-RequestLocationInformation*. The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request. In *nr-Multi-RTT-RequestLocationInformation, measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* shall be set to 'n2'.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.5.1-2 and table A.7.6.11.5.1-3 respectively.

**Table A.7.6.11.5.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| RF Channel Number | | 1 | 1 | For both Cell 1 and Cell 2 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.11.5.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5, with $k_{multiTEG}$=2 if UE does not support or indicate value 'n1' for *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*, and $k_{multiTEG}$=1 otherwise.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.6.11.6 UE Rx-Tx time difference measurements with PRS bandwidth aggregation in FR2 SA

### A.7.6.11.6.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 9.9.4.9 for UE Rx-Tx measurements with PRS bandwidth aggregation. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations in listed in table A.7.6.11.6.1-1.

**Table A.7.6.11.6.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel

#1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.6.1-2 and table A.7.6.11.6.1-3 respectively.

**Table A.7.6.11.6.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1 | 1 | For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel. |
| | | | 2 | For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel. |
| $BW_{channel}$ | MHz | 1 | 200: $N_{RB,c}$ = 132 | For both RF channels |
| SSB configuration | | 1 | SSB.2 FR2 | |

| Note 8: | As observed with 0 dBi gain antenna at the centre of the quiet zone. |

#### A.7.6.11.6.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.9.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.

## A.7.6.12 PRS-RSRPP measurements

### A.7.6.12.1 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR2 in RRC_CONNECTED state

#### A.7.6.12.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 9.9.6.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.12.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.12.1.1-2, and table A.7.6.12.1.1-3.

**Table A.7.6.12.1.1-1: supported test configurations for PRS RSRPP measurement for FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

**Table A.7.6.12.1.1-2: General test parameters for PRS RSRPP measurement reporting delay**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1 | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| Active cell | | Config 1 | NR cell 1 (PCell) | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | Config 1 | NR cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| Gap Pattern Id | | Config 1 | GP#13 or GP#24[Note1] | As specified in clause 9.1.2-1. |
| Measurement gap offset | | Config 1 | 39 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.12.1.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 9.9.6.5.The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.6.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.38, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

## A.7.6.12.2 PRS-RSRPP reporting delay test case for reduced number of samples for single positioning frequency layer in FR2 in RRC_CONNECTED state

### A.7.6.12.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 9.9.6.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.12.2.1-1. In this test PRS is transmitted within the active BWP of the UE. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.12.2.1-2, and table A.7.6.12.2.1-3.

**Table A.7.6.12.2.1-1: supported test configurations for PRS RSRPP measurement for FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

### A.7.6.12.2.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 9.9.6.5. The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.6.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.38, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

## A.7.6.12.3 PRS-RSRPP reporting delay test case for gapless measurement in FR2

### A.7.6.12.3.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 9.9.6.6 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Reporting delay test for gapless PRS measurement is conducted assuming that the PRS has higher priority, i.e., state 1, than all other DL signals/channels and is transmitted within active DL BWP of UE. Two sub-tests are defined, sub-test 1 is for $N_{sample} = 4$ and sub-test 2 is for $N_{sample} = 1$. For sub-test 2 LMF indicates UE to perform PRS measurement with reduced number of samples $N_{sample}$ via *reducedDL-PRS-ProcessingSamples*.

The supported test configurations are shown in table A.7.6.12.3.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS processing window instance containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T = 50$ ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.12.3.1-2, and table A.7.6.12.3.1-3.

**Table A.7.6.12.3.1-1: supported test configurations for PRS RSRPP measurement for FR2-FR2**

| Config | Description |
|---|---|

| | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.12.3.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.6.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %.

# A.7.6.13 UE Rx-Tx time difference measurements for PDC

## A.7.6.13.1 UE Rx-Tx time difference measurement for propagation delay compensation using PRS in FR2

### A.7.6.13.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement for RTT-based PDC meets the requirements specified in clause 9.12.4.1in AWGN propagation condition in FR2 in standalone scenario.

The supported test configurations in listed in table A.7.6.13.1.1-1.

**Table A.7.6.13.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode |

The test is considered with one cell (Cell 1) in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. If the test is based on PRS, the Cell 1 mutes PRS transmission during T1 and transmits PRS during T2.

The *MeasObjectRxTxDiff-r17* with *prs-Ref-r17* , *measObject* with *measObjectRxTxDiff-17,* and *NR-DL-PRS-PDC-Info as defined in TS 38.331* shall be provided to the UE during T1.

The last TTI containing the RRC configuration shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 10 ms.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS resources.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.13.1.1-2. The test parameters for PRS are given Table A.7.6.13.1.1-3.

**Table A.7.6.13.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value |
|---|---|---|---|
| Active cell | | 1 | Cell 1 |
| RF Channel Number | | 1 | 1 |
| $BW_{channel}$ | MHz | 1 | 100: $N_{PRB,c}$ = 66 |
| SSB configuration | | 1 | SSB.2 FR2 |
| SMTC configuration | | 1 | SMTC.1 |
| Measurement gap | | 1 | GP#24 or GP#13 Note 1 |
| CP length | | 1 | Normal |
| DRX | | 1 | OFF |
| T1 | s | 1 | 5 |
| T2 | s | 1 | 20 |
| NOTE 1: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured. | | | |

**Table A.7.6.13.1.1-3: Cell specific test parameters**

| Parameter | Unit | Test configuration | Cell 1 | |
|---|---|---|---|---|
| | | | T1 | T2 |

| $N_{oc}$ Note 2 | dBm/15 kHz | 1 | -98 | |
| PRS $\hat{E}_s / I_{ot}$ | dB | 1 | -Infinity | -2.41 |
| PRS $\hat{E}_s / N_{oc}$ | dB | 1 | -Infinity | -2 |
| PRS-RSRP Note 3 | dBm/SCS kHz | 1 | -Infinity | -91 |
| Io | dBm/95.04 MHz | 1 | N/A | -57.63 |
| Propagation Condition | | 1 | AWGN | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.13.1.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in 9.12.4.1.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1, for k=5.

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.39.2 for Cell 1.

### A.7.6.13.2 UE Rx-Tx time difference measurement for propagation delay compensation using TRS in FR2

#### A.7.6.13.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement with TRS for RTT-based PDC meets the requirements specified in clause 9.12.4.2 for measurement delay and clause 10.1.39.3 for measurement accuracy in AWGN propagation condition in FR2 in standalone scenario.

The supported test configurations in listed in table A.7.6.13.2.1-1.

**Table A.7.6.13.2.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode |

The test is considered with one cell (Cell 1) in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 does not have TRS transmission during T1 and transmits TRS during T2.

The *MeasObjectRxTxDiff-r17* with *csi-RS-Ref-r17*, and *measObject* with *measObjectRxTxDiff-17 as defined in TS 38.331* shall be provided to the UE during T1.

The last TTI containing the RRC configuration shall be provided to the UE ΔT ms before the start of T2, where ΔT = [10] ms is the maximum processing time of the measurement request.

The beginning of the time interval T2 shall be aligned with the beginning of the first TRS resources.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.13.2.1-2. The test parameters for PRS are given Table A.7.6.13.2.1-3.

**Table A.7.6.13.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value |
|---|---|---|---|
| Active cell | | 1 | Cell 1 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: TRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: TRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.13.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in 9.12.4.2.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.39.3.

The reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1, for k=5.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %.

## A.7.6.14 SA event triggered reporting tests with Pre-MG

### A.7.6.14.1 Intra-frequency measurement test with SA event triggered reporting tests: with autonomous activation/deactivation of Pre-MG in FR2

#### A.7.6.14.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with autonomous activation/deactivation of Pre-MG. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

#### A.7.6.14.1.2 Test parameters

Supported test configurations are shown in table A.7.6.14.1.2-1. There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.14.1.2-2, A.7.6.14.1.2-3 and A.7.6.14.1.2-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A4 is used.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSB.

BWP-2 does not include bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules ontinuous DL data on PCell throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2 and T3, respectively.

During time period T1, BWP-1 is the active BWP. The Pre-MG is expected to be deactivated. UE shall be able to measure neighbor cell without gap.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

During time period T3, BWP-2 is the active BWP. The Pre-MG is expected to be activated. UE shall be able to measure neighbor cell within Pre-MG.

**Table A.7.6.14.1.2-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

They are not settable parameters themselves.<br>NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation<br>NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | | |

### A.7.6.14.1.3 Test Requirements

During T1, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions.

During T2 and T3, the UE shall not report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 $s^t$ complete Pre-MG occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

The UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than Y ms from the beginning of time period T3, where Y is

- 3.2 s for a UE supporting power class 1 and 5,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.14.2 Intra-frequency measurement test with SA event triggered reporting tests: with network-controlled activation/deactivation of Pre-MG in FR2

### A.7.6.14.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with network-controlled activation/deactivation of Pre-MG. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

### A.7.6.14.2.2 Test parameters

Supported test configurations are shown in table A.7.6.14.2.2-1. There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.14.2.2-2, A.7.6.14.2.2-3 and A.7.6.14.2.2-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘deactivated’.

BWP-2 does not include bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘activated’.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules continuous DL data on PCell throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2 and T3, respectively.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell’s slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The time period T3 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell’s slot # denoted *j*. The UE shall switch its bandwidth part from BWP-2 to BWP-1.

**Table A.7.6.14.2.2-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.6.14.2.3 Test Requirements

During T2, the UE shall not report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 $s^t$ complete Pre-MG occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

During T3, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 $s^t$ complete Pre-MG occasion after the beginning of PCell's DL slot ($j+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T3, where X is

- 1.6 s for a UE supporting power class 1 and 5,
- 0.96 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.15 SA event triggered reporting tests with concurrent gaps

### A.7.6.15.1 SA event triggered reporting tests For FR2 with fully non-overlapping concurrent MGs for SSB-based inter-frequency measurements

#### A.7.6.15.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with fully non-overlapping concurrent MGs for SSB-based inter-frequency measurements. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2, and NR cell 3 as neighbour cell in FR2 on NR RF channel 3. The test parameters and configurations are given in tables A.7.6.15.1.1-1, A.7.6.15.1.1-2, and A.7.6.15.1.1-3.

Two measurement gaps with pattern configuration # 14 as defined in table A.7.6.15.1.1-2 are provided for UE. The measurement object for NR RF channel 2 is associated with MG#1, and measurement object for NR RF channel 3 is associated with MG#2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 or NR cell 3.

Supported test configurations are shown in table A.7.6.15.1.1-1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 6: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

### A.7.6.15.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.15.2 SA event triggered reporting tests For FR2 with concurrent measurement gaps without SSB time index detection when DRX is not used (PCell in FR2)

### A.7.6.15.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for each neighbour cell. This test will partly verify the SA inter-frequency NR cell search requirements and collision handling between two partially-partial overlapping gaps in clause 9.1.8.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2 and NR cell 3 as another neighbour cell in FR2 on NR RF channel 3. The test parameters and configurations are given in tables A.7.6.15.2.1-1, A.7.6.15.2.1-2, and A.7.6.15.2.1-3.

Two measurement gaps are configured to UE with measurement gap pattern configuration #13 and #14 respectively. Measurement gap with pattern #13 is associated with inter-frequency measurement on NR cell 2, and measurement gap with pattern #14 is associated with inter-frequency measurement on NR cell 3. Measurement gap pattern configuration # 13 and #14 as defined in table A.7.6.15.2.1-2 are provided to for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 and NR cell 3.

Supported test configurations are shown in table A.7.6.15.2.1-1.

**Table A.7.6.15.2.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

### A.7.6.15.2.2 Test Requirements

For both NR cell 2 and NR cell 3, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.15.3 SA event triggered reporting tests for FR2 concurrent gap with partially partial overlapping scenario for SSB-based measurements and PRS-based measurement

### A.7.6.15.3.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gap capable UE makes correct reporting of events. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4 and PRS-RSRP measurement delay requirements specified in clause 9.9.3.5.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2, and NR cell 3 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.7.6.15.3.1-1, A.7.6.15.3.1-2 and A.7.6.15.3.1-3.

Two measurement gap patterns (MeasGapId #0 and MeasGapId #1) are configured with the gap pattern ID #0 and #1 as defined in table A.7.6.15.3.1-2. MeasGapId #1 is configured with a higher priority than MeasGapId #0. MeasGapId #0 and MeasGapId #1 are associated with the MOs for RF channel numbers #1 and #2, respectively.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used for carrier 2. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 and NR cell 3. Cell 1 and cell 3 transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance of MeasGapId #1 containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

| Propagation Condition | | Config 1 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io values were derived for symbols without PRS.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.15.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 3 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

IUE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.16 SA event triggered reporting tests with NCSG

### A.7.6.16.1 SA event triggered reporting test with per-UE NCSG under non-DRX

#### A.7.6.16.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.7.1 and 9.2.7.2, and also verify the scheduling availability during intra-frequency measurement with NCSG in clause 9.2.7.3. Supported test configurations are shown in table A.7.6.16.1.1-1.

The serving frequency should be selected for which UE reports ‘ncsg’.

**Table A.7.6.16.1.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.16.1.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

During T2, the UE is continuously scheduled with data on the PCell.

The UE is capable of NCSG and report ‘*ncsg*’ through *NeedForGapNCSG-InfoNR* for PCell.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.16.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 with per-UE NCSG without DRX**

NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

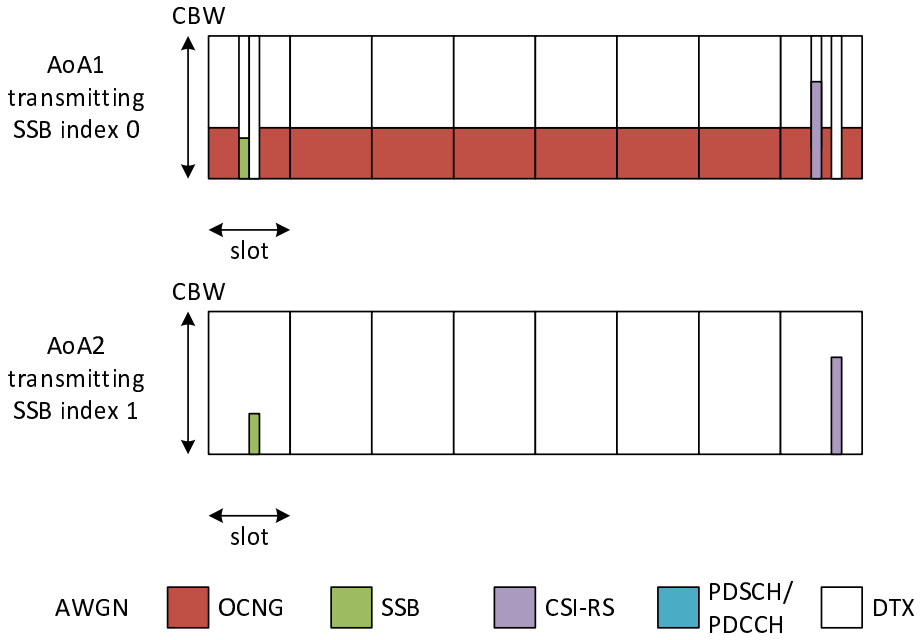

**Figure A.7.6.16.1.1-1: Time multiplexed downlink transmissions (Config 1 example)**

## A.7.6.16.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2 s for a UE supporting power class 1 and 5,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.16.2 SA event triggered reporting tests on inter-frequency measurement with NCSG for FR2 when DRX is not used (PCell in FR2)

### A.7.6.16.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.10. The test will partly verify the interruption requirements on PCell in clause 9.1.9.1.

The serving frequency and the target frequency should be selected such that UE reports 'ncsg' for the target frequency given the serving frequency.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.16.2.1-1, A.7.6.16.2.1-2, and A.7.6.16.2.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.16.2.1-1.

**Table A.7.6.16.2.1-1 SA event triggered reporting tests with NCSG without SSB index reading for FR2-FR2**

| Config | Description |

NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.16.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1 and 5, or

3200 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall be scheduled on PCell continuously throughout the test. During the time duration T2, the interruption on PCell shall not be more than the values specified for SA in clause 9.1.9.1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE: For a UE that supports per-FR NCSG, it only needs to pass test case with per-FR NCSG, otherwise, it only needs to pass test case with per-UE NCSG.

## A.7.6.16.3 Event triggered reporting test on deactivated SCell measurement via NCSG in FR2 in non-DRX

### A.7.6.16.3.1 Test Purpose and Environment

The purpose of this test is to verify that the delay and interruption requirements for deactived SCell measurement stated in clause 9.2.7 and 8.2 respectively, when both PCell and SCell are in FR2.

The supported test configurations are shown in table A.7.6.16.3.1-1 below. The general test parameters are defined in table A.7.6.16.3.1-2. Three cells are deployed in the test, which are one FR2 PCell (Cell 1) on frequency 1 and one FR2 SCell (Cell 2) on frequency 2 and one neighboring cell (Cell 3) on frequency 2. The cell-specific test parameters are given in A.7.6.16.3.1-3 below. OTA related test parameters are shown in table A.7.6.16.3.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used. The test consists of 2 successive time periods, with duration of T1 and T2, respectively.

Before the test starts the UE is connected to PCell (Cell 1) but is not aware of SCell (Cell 2) nor the neighboring cell (Cell 3). The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the deactivated SCC.

NCSG is configured with the NCSG pattern ID #0 as defined in table A.7.6.16.3.1-2.

**Table A.7.6.16.3.1-1: Supported test configurations for FR2 deactivated SCell measurement via NCSG**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: Same configuration applies to both PCell and SCell | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4

## A.7.6.16.3.2 Test Requirements

UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

12.8 s for UE supporting power class 1 and 5, or

7.68 s for UE supporting other power class.

UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

During the T1 and T2, UE be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those slots overlapped with

VIL1, ML and VIL2 of NCSG for intra-band FR2 CA

VIL1 and VIL2 of NCSG for inter-band FR2 CA

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.7.6.17 SA event triggered reporting tests for concurrent measurement gaps with Pre-MG in FR2

## A.7.6.17.1 SA event triggered reporting test for FR2 with one pre-configured gap and one measurement gap

### A.7.6.17.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with with one pre-configured gap and one measurement gap for SSB-based measurements. This test will partly verify the SA NR cell search requirements in clause 9.2.5 and 9.3.4, pre-configured gap activation delay in clause 8.19 and measurement gap collision handling in clause 9.1.12.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as intra-frequency neighbour cell in FR2 on NR RF channel 1, and NR cell 3 as inter-frequency neighbour cell in FR2 on NR RF channel 2.

Two measurement gaps with pattern configuration # 13 and 14 as defined in table A.7.6.17.1.1-2 are provided for UE. The measurement object #1 for NR RF channel 1 is associated with MG#1, and measurement object #2 for NR RF channel 2 is associated with MG#2. MG#1 is a pre-configured measurement gap, and with higher priority than MG#2.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘deactivated’ (*preConfGapStatus* of the pre-MG on BWP-1 is set to ‘0’).

BWP-2 does not include bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘activated’ (*preConfGapStatus* of the pre-MG on BWP-2 is set to ‘1’).

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules continuous DL data on PCell throughout the test.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of 2 successive time periods, with durations of T1 and T2, respectively. Before the test starts, the UE shall not have any timing information of NR Cell 2 or NR Cell 3.

During T1, UE active DL BWP is BWP-1, and the pre-configured gap (MG#1) is deactivated. Cell 3 is switched ON from the beginning of T1, and UE is expected to search for Cell 3 in MG#2.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell’s slot # denoted by *i*. The UE shall switch its DL active BWP from BWP-1 to BWP-2, and the pre-configured gap shall be activated. Cell 2 is switched ON from the beginning of T2, and UE is expected to search for Cell 2 in MG#1.

Supported test configurations are shown in table A.7.6.17.1.1-1. The general and cell specific test parameters are given in tables A.7.6.17.1.1-2, and A.7.6.17.1.1-3.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.17.1.2 Test Requirements

For UE supporting FG 32-2:

During T1, the UE shall report ACK/NACK for PDSCHs scheduled in the slots that are not overlapped with the MG#2 occasions. The UE shall send one Event A3 triggered measurement report for Cell 3, with a measurement reporting delay less than X ms from the beginning of time period T1, where X is

5120 for UE supporting power class 1 and 5, or

3200 for UE supporting other power class.

X is derived based on the requirements for inter-frequency measurement in clause 9.3.4 and 9.3.5.

For UE not supporting FG 32-2:

During T1, the UE shall report ACK/NACK at least for PDSCHs scheduled in the slots that are not overlapped with the non-dropped MG#2 occasions. The UE shall send one Event A3 triggered measurement report for Cell 3, with a measurement reporting delay less than X ms from the beginning of time period T1, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

X is derived based on the requirements for inter-frequency measurement in clause 9.3.4 and 9.3.5.

For both UE supporting FG 32-2 and not supporting FG 32-2:

During T2, the UE shall report ACK/NACK for PDSCHs scheduled in the slots that are not overlapped with the MG#1 occasions or non-dropped MG#2 occasions after MG#1 is activated, i.e. starting from the 1 $s^t$ complete MG#1 occasion after the beginning of PCell's DL slot $(i+T_{BWPswitchDelay})$ + 5 ms as defined in clause 8.19.2. The UE shall send one Event

A3 triggered measurement report for Cell 2, with a measurement reporting delay less than Y ms from the beginning of time period T2, where Y is

6480 for UE supporting power class 1 and 5, or

3920 for UE supporting other power class.

Y is derived based on the requirements for intra-frequency measurement in clause 9.2.6 plus 80 ms, considering that the frist MG#1 occasion in T2 may collide with the pre-configured gap activation delay.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.17.2 Inter-frequency measurement test with SA event triggered reporting tests: with autonomous activation/deactivation of Pre-MGs in FR2

### A.7.6.17.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with autonomous activation/deactivation of Pre-MGs within FR2 concurrent gaps. This test will partly verify the TDD inter-frequency cell search requirements in clause 9.2.6.and 9.3.4. Also, this test will also jointly verify pre-configured measurement gap activation/deactivation delay in clause 8.19.2.

### A.7.6.17.2.2 Test parameters

Two cells are deployed in the test, which are FR2 PCell (Cell 1) in FR1 on NR RF channel 1 and a neighbour cell (Cell 2) in FR2 on NR RF channel 2. The supported test configurations are shown in table A.7.6.18.1.2-1. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.17.2.2-2, A.7.6.17.2.2-3 and A.7.6.17.2.2-4 below.

Two pre-configured measurement gaps with same pattern (# 13) but different offset as defined in table A.7.6.18.1.1-2 are provided for UE. The measurement object for NR RF channel 1 is associated with MG#1, and measurement object for NR RF channel 2 is associated with MG#2.

In the measurement control information, two measurement object is configured for the frequency of the PCell and neihghbour cell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSBs.

BWP-2 does not include bandwidth of the initial either switched DL BWP and SSBs.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules continuous DL data on PCell throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2 and T3, respectively.

During time period T1, BWP-1 is the active BWP. The Pre-MG#1 is expected to be deactivated and the Pre-MG#2 is expected to be activated. UE shall be able to measure Cell 1 without gap but Cell 2 with the activated Pre-MG#2.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*.

During time period T3, BWP-2 is the active BWP. Both Pre-MG#1 and Pre-MG#2 expected to be activated. UE shall be able to measure Cell 1 and Cell 2 with the activated Pre-MG#1 and Pre-MG#2 respectively.

NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.17.2.3 Test Requirements

During T1, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the Pre-MG#2 occasions.

During T2 and T3, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the Pre-MG#1 or Pre-MG#2 occasions, starting from the 1 $s^t$ complete Pre-MG#1 occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.5.

The UE shall send one Event A3 triggered measurement report for measurements on cell 2, with a measurement reporting delay less than Y ms from the beginning of time period T3, where Y is

- 5120 ms for a UE supporting power class 1 and 5,
- 3200 ms for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.7.6.18 SA event triggered reporting tests with concurrent gaps and NCSG

## A.7.6.18.1 SA event triggered reporting tests For FR2 with concurrent measurement gaps and NCSG without SSB time index detection when DRX is not used (PCell in FR2)

### A.7.6.18.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for each neighbour cell. This test will partly verify the SA inter-frequency NR cell search requirements and collision handling between partially-partial overlapped concurrent gaps and NCSG in clause 9.1.13.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2 and NR cell 3 as another neighbour cell in FR2 on NR RF channel 3. The test parameters and configurations are given in tables A.7.6.18.1.1-1, A.7.6.18.1.1-2, and A.7.6.18.1.1-3.

During T2, the UE is continuously scheduled with data on the PCell when measuring within NCSG.

One measurement gap and one NCSG are configured to UE with measurement gap pattern #13 and NCSG pattern #14 respectively. Measurement gap with pattern #13 is associated with inter-frequency measurement on NR cell 2, and NCSG with pattern #14 is associated with inter-frequency measurement on NR cell 3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 and NR cell 3.

Supported test configurations are shown in table A.7.6.18.1.1-1.

**Table A.7.6.18.1.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.6.18.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 partially overlapped concurrent gap and NCSG for SSB-based measurements without SSB time index detection**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SSBRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.7.6.18.1.2 Test Requirements

For both NR cell 2 and NR cell 3, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

During the T1 and T2, UE shall be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those slots overlapped with

VIL1 and VIL2 of NCSG

Measurement gap

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.7.6.19 SA event triggered reporting tests with NeedForGap in FR2

## A.7.6.19.1 SA event triggered reporting test for UE indicating *NeedforInterruptionInfoNR* under non-DRX and no interruption outside configured measurement gaps

### A.7.6.19.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test partly verifies the TDD intra-frequency cell search and measurement requirements in clause 9.2.6.1 and 9.2.6.2. This test also verifies that the UE does not cause interruption outside measurement gap when SMTC occasions overlap with measurement gap occassions. Supported test configurations are shown in table A.7.6.19.1.1-1.

The UE who passes this test can skip the corresponding Rel-15 test cases.

**Table A.7.6.19.1.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test, a FR2 PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.19.1.1-2, A.7.6.19.1.1-3 and A.7.6.19.1.1-4 below. The serving frequency selected for this test case should be one in which the UE reports *NeedForGapsInfoNR-r16* = 'no-gap' and *NeedForInterruptionInfoNR-r18* = 'no-gap-with-interruption' for the PCell.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

The UE operates in an active BWP which does not contain cell-defined SSB so that the UE uses configured measurement gaps to measure on the intra-frequency target SSB.

The TE schedules continuous DL data on PCell throughout the test.

**Table A.7.6.19.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2**

NOTE 2: Void
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

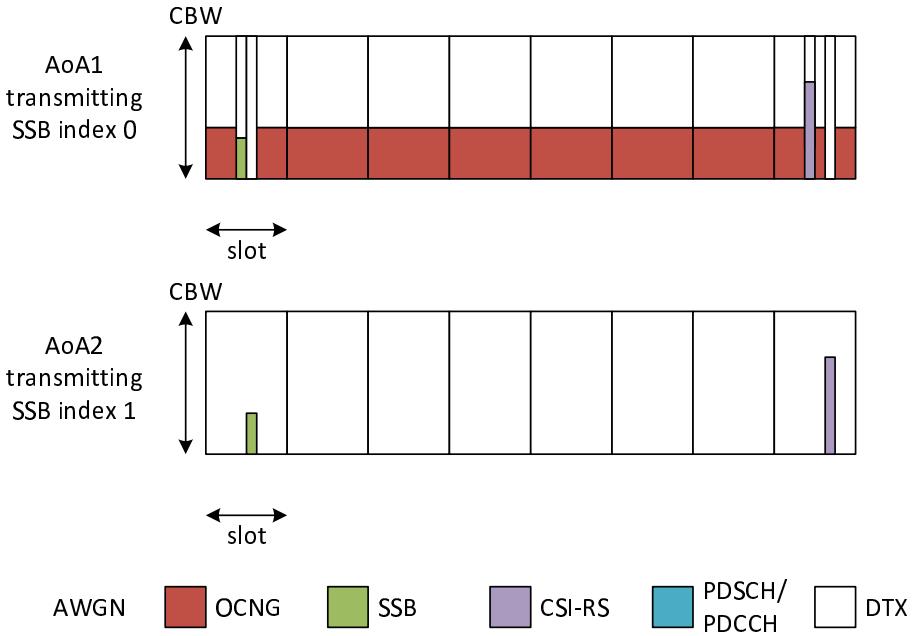

**Figure A.7.6.19.1.1-1: Time multiplexed downlink transmissions (Config 1 example)**

### A.7.6.19.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3200 ms for a UE supporting power class 1 and 5,
- 1920 ms for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

UE shall report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the measurement gap. UE is not allowed to cause any interruption outside the configured measurement gap occasions.

## A.7.6.19.2 SA event triggered reporting test without gap under non-DRX

### A.7.6.19.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.19.2.1-1.

**Table A.7.6.19.2.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.19.2.1-2, A.7.6.19.2.1-3 and A.7.6.19.2.1-4 below. The serving frequency selected for this test case should be one in which the UE reports *NeedForGapsInfoNR-r16* = 'no-gap' and *NeedForInterruptionInfoNR-r18* = 'no-gap-no-interruption' for the PCell.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

The TE schedules continuous DL data on PCell throughout the test.

**Table A.7.6.19.2.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |

**Figure A.7.6.19.2.1-1: Time multiplexed downlink transmissions (Config 1 example)**

## A.7.6.19.2.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 1.6 s for a UE supporting power class 1 and 5,
- 1.08 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

UE shall report corresponding HARQ-ACK/NACK for all PDSCHs scheduled during the test.

## A.7.6.19.3 SA event triggered reporting test without gap without interruption under non-DRX

### A.7.6.19.3.1 Test Purpose and Environment

The purpose of this test is to verify that if UE reports "*no-gap*" via *interFreq-needForGap-r16* and reports "*no-gap-no-interruption*" via *interFreq-needForInterruption-r18*, the UE makes correct reporting of an event. This test will partly verify the inter-frequency without gap cell search requirements in clause 9.3.9. Supported test configurations are shown in table A.7.6.19.3.1-1.

**Table A.7.6.19.3.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test, NR cell 1 as PCell in FR2 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters for the Cell 1 and Cell 2 are given in tables A.7.6.19.3.1-2, A.7.6.19.3.1-3 and A.7.6.19.3.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the neighbour cell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.19.3.1-2: General test parameters for inter-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without interruption**

| $N_{oc}$ Note 2 | dBm/SCS | 1 | -93 | | | |
| SS-RSRP | dBm/SCS | 1 | -89 | -89 | -Infinity | -85 |
| $\hat{E}_s / N_{oc}$ | dB | 1 | 4 | 4 | -Infinity | 8 |
| $Io$ | dBm/95.04MHz | 1 | -58.56 | | -55.38 | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: Information about types of UE beam is given in annex B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.6.19.3.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4s for a UE supporting power class 1,
- 1.44s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

During the T1 and T2, UE shall be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those symbles as defined in clause 9.3.9.4.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.20 LTM Intra-frequency L1-RSRP measurement

### A.7.6.20.1 Intra-frequency SSB based L1-RSRP measurement in FR2

#### A.7.6.20.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SSB based intra-frequency L1-RSRP measurement on neighbor cell in FR2. This test will partly verify the L1-RSRP measurement requirements in clause 9.14, with the testing configurations for NR cells in table A.7.6.20.1.1-1.

The AoA setup of FR2 cell for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.6.20.1.1-1: Applicable NR configurations for SSB based Intra-frequency L1-RSRP LTM measurement with activated TCI state test in FR2**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.7.6.20.1.2 Test parameters

There are two cells in the test, which are FR2 PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

Measurement period and measurement accuracy is tested by using the parameters in table A.7.6.20.1.2-1 and table A.7.6.20.1.2-2.

There are two tests in the test case, test 1 and test 2:

- In test 1, time offset between cells is within CP length.
- In test 2, time offset between cells is larger than CP length.

If a UE does not support *multiCellL1-measRTD-greaterThan-CP-r18*, it is only required to pass test 1. Otherwise, it is only required to pass test 2.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs, and report measurement results periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. No gap patterns are configured in the test case.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- The UE has performed L3 measurement on Cell 2.

At the beginning of T2, SSB_RP of Cell 2 change to different values from T1. T2 starts at the beginning of a frame with an odd SFN.

| NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | |

### A.7.6.20.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots in T2. The UE shall start to report a larger L1-RSRP value of Cell 2 in no later than 960 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the valid results for Cell 2 while meeting the accuracy requirements defined in clause 10.1.20A. The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.21 LTM Inter-frequency L1-RSRP measurement with measurement gap

### A.7.6.21.1 Inter-frequency SSB-based L1-RSRP measurement with measurement gap for LTM in FR2

### A.7.6.21.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of inter-frequency L1-RSRP measurement with MG for LTM. This test will partly verify the L1-RSRP measurement requirements in clause 9.15.5, with the testing configurations in tables A.7.6.21.1.1-1, A.7.6.21.1.2-1, A.7.6.21.1.2-2 and A.7.6.21.1.2-3.

The AoA setup of FR2 cell for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.6.21.1.1-1: Applicable NR configurations for SSB based inter-frequency L1-RSRP measurement with measurement gap for LTM**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: Target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

### A.7.6.21.1.2 Test parameters

There are two cells in the test, Cell 1 is the PCell on NR RF channel number 1 and Cell 2 is a neighbor cell NR RF channel number 2. The test parameters for Cell 1 and Cell 2 are given in table A.7.6.21.1.2-2 and table A.7.6.21.1.2-3.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. Measurement gap is configured in the test.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the RF channel 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1.

**Table A.7.6.21.1.2-1: General test parameters for SSB based inter-frequency L1-RSRP LTM measurement with measurement gap test in FR2**

| Parameter | | Unit | Value | Comment |

#### A.7.6.21.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots in T2. The UE shall start to report a larger L1-RSRP value of Cell 2 in no later than 1280 ms plus 320 slots from the beginning of time period T2. UE shall send L1-RSRP report including the valid results for Cell 2 while meeting the accuracy requirements defined in clause 10.1.20B.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.22 LTM Inter-frequency L1-RSRP measurement without measurement gap

### A.7.6.22.1 Inter-frequency SSB based L1-RSRP measurement without measurement gap in FR2

#### A.7.6.22.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *interFreqSSB-L1-MeasWithoutGaps-r18* makes correct reporting of inter-frequency L1-RSRP measurement without gap for LTM. This test will partly verify the L1-RSRP measurement requirements in clause 9.15.6, with the testing configurations in tables A.7.6.22.1.1-1, A.7.6.22.1.2-1, A.7.6.22.1.2-2, A.7.6.22.1.2-3 and A.7.6.22.1.2-4.

The AoA setup of FR2 cell for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.6.22.1.1-1: Applicable NR configurations for SSB based inter-frequency L1-RSRP LTM measurement without gap in FR2**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |
| NOTE 2: Target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

#### A.7.6.22.1.2 Test parameters

There are two cells in the test, Cell 1 is the PCell on NR RF channel number 1 and Cell 2 is a neighbor cell NR RF channel number 2. The SSB of Cell 2 is completely within UE's active BWP BW. The PRBs containing SSB from Cell 1 and Cell 2 should be different in frequency location within the cell bandwidth. The test parameters for Cell 1 are given in table A.7.6.22.1.2-1. The test parameters for Cell 2 are given in table A.7.6.22.1.2-2 and table A.7.6.22.1.2-3.

There are two tests in the test case, test 1 and test 2:

- In test 1, time offset between cells is within CP length.
- In test 2, time offset between cells is larger than CP length.

UE not capable of *multiCellL1-measRTD-greaterThan-CP-r18* is only required to pass test 1. Otherwise, it is only required to pass test 2.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. No measurement gap is configured in the test.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the RF channel 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1. T2 starts at the beginning of a frame with an odd SFN.

**Table A.7.6.22.1.2-1: General test parameters for SSB based inter-frequency L1-RSRP LTM measurement test in FR2**

| Parameter | | Unit | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| Active cell | | | Cell 1 | | |

They are not settable parameters themselves.<br>NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation<br>NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | | |

### A.7.6.22.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots in T2. No later than 960 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the valid results for Cell 2 while meeting the accuracy requirements defined in clause 10.1.20B.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.23 Idle Mode CA/DC Measurements

### A.7.6.23.1 Test case for Idle mode fast CA/DC eEMR measurement for FR2 without valid reporting

### A.7.6.23.1.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportEMR-r18*. This test will partly verify the fast CA/DC measurement reporting requirements in clause 4.7 when *measIdleValidityDuration* is configured for the test case when there are no measurement results to report at RRC connection setup.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as inter-frequency neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.23.1.1-1, A.7.6.23.1.1-2, A.7.6.23.1.1-3 and A.7.6.23.1.1-4.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

Before T1, the UE is connected to cell 1 and configured with inter-frequency measurement on cell 2 with periodic reporting. The time when a valid measurement report is received at TE defines the starting point of T1.

During T1, the UE is configured with early measurement reporting for cell 2 in *measIdleCarrierListNR-r16*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode. The time when T331 timer expires defines the ending point of T2.

At the beginning of T2, cell 2 becomes detectable however cell reselection shall not be performed. Signal level of cell 2 is set to the value given in table A.7.6.23.1.1-3. The time when T331 timer expires defines the ending point of T2.At the beginning of T3, the signal level of the neighbour cell is set to turned off. The duration of the T3 equals to *measIdleValidityDuration*.

The time when TE sends the paging message is defined as the starting point of T4. During T4, in this test the UE shall not send measurement report.

**Table A.7.6.23.1.1-1: supported test configuration**

| Config | Description for serving cell | Description for neighbor cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | | |

### A.7.6.23.1.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2.

The UE shall NOT send early measurement report to the PCell in this test.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.23.2 Test case for Idle mode fast CA/DC cell reselection measurement for FR2 without valid reporting

### A.7.6.23.2.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportReselectionMeasurements-r18* This test will partly verify the fast CA/DC measurement reporting requirements in clause 4.7 when *measReselectionValidityDuration-r18* is configured for the test case when there are no measurement results to report at RRC connection setup.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as inter-frequency neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.23.2-1, A.7.6.23.2-2, A.7.6.23.2-3 and A.7.6.23.2-4.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

Before T1, the UE is connected to cell 1 and configured with inter-frequency measurement on cell 2 with periodic reporting. The time when a valid measurement report is received at TE defines the starting point of T1.

During T1, the UE is configured with early measurement reporting for cell 2 in *MeasReselectionCarrierListNR-r18*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode.

At the beginning of T2, cell 2 becomes detectable however no cell reselection is being performed. Signal level of cell 2 is set to the level according to Table A.7.6.23.2-3. The duration of T2 is set to fixed value according to the Table A.7.6.23.2-2.

At the beginning of T3, the signal level of the neighbour cell is set to turned off. The duration of the T3 equals to *measReselectionValidityDuration-r18.*

The time when TE sends the paging message defined as the starting point of T4.

During T4, UE shall not send measurement report.

**Table A.7.6.23.2-1: supported test configuration**

### A.7.6.23.2.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2.

The UE shall NOT send early measurement report to the PCell in this test.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.23.3 Test case for Idle mode fast CA/DC cell reselection measurement for FR2 with valid reporting

### A.7.6.23.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE performs the required measurements on the serving cell and the configured inter-frequency carrier for idle mode measurement reporting after the UE has entered Idle mode when the UE supports *measValidationReportReselectionMeasurements-r18*. This test will partly verify the fast CA/DC

measurement reporting requirements in clause 4.7 when *measReselectionValidityDuration-r18* is configured for the test case when there are measurement results to report at RRC connection setup.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.23.3.1-1, A.7.6.23.3.1-2, A.7.6.23.3.1-3 and A.7.6.23.3.1-4.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

During T1, the UE is connected to cell 1 only and shall not have any timing information of cell 2. UE is configured with early measurement reporting for cell 2 in *MeasReselectionCarrierListNR-r18*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines as the starting point of T2.

During T2, cell 2 becomes detectable however no cell reselection is being performed. Signal level of cell 2 is set to fixed value according to Table A.7.6.23.3-2. The duration of T2 is set to fixed value according to the Table A.7.6.23.3-2.

The duration of the T3 equals to the configured value *measReselectionValidityDuration-r18.* During T3, the signal level of cell 2 is set to another value according to the Table A.7.6.23.3-2.

The time when TE sends the paging message defines the starting point of T4.

During T4, UE shall send measurement report within the duration of T4.

**Table A.7.6.23.3-1: supported test configuration**

| Config | Description for serving cell | Description for neighbor cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | | |

#### A.7.6.23.3.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2.

The UE shall send early measurement report to the PCell with valid measurement results.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for Cell 2 meets the requirements in clause 10.1.4B for SS-RSRP and in clause 10.1.8B for SS-RSRQ and test ends. In the test case, the reported measurements are considered valid if they fulfil measurement accuracy requirements according to Cell 2 signal level during T3.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.7.6.24 RSCPD measurements

### A.7.6.24.1 NR RSCPD with RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_CONNECTED state

#### A.7.6.24.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD measurement reported together with the RSTD measurement meets the requirements specified in clause 9.9.7 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.24.1.1-1.

**Table A.7.6.24.1.1-1: Supported test configurations for NR DL RSCPD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layer.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. In *NR-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

The general test parameters are listed in table A.7.6.24.1.1-2. Cell specific parameters during T1 are listed in table A.7.6.24.1.1-3. Cell specific parameters during T2 are listed in table A.7.6.24.1.1-4.

**Table A.7.6.24.1.1-2: General test parameters for RSCPD with RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |
| SSB configuration | Config 1 | | SSB.3 FR2 | |
| SMTC configuration | Config 1 | | SMTC.1 | |
| PDSCH RMC configuration | Config 1 | | SR.1.1 FDD | |
| RMSI CORESET RMC configuration | Config 1 | | CR.3.1 TDD | As specified in clause A.3.1.2.1 |
| Dedicated CORESET RMC configuration | Config 1 | | CCR.1.1 FDD | |
| PRS Configuration | Config 1 | | PRS.1.2 FR2 | As specified in clause A.3.31 |
| Physical cell ID PCI | | | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters |
| CP length | | | Normal | |
| DRX | | | OFF | |
| Measurement gap | | | GP#24 or GP#13 | GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured |
| Time window configuration | | | MTW.1 | As specified in clause A.3.38 |
| Radio frame receive time offset between the cells at the UE antenna connector | | µs | Cell 2 to Cell 1: 0<br>Cell 3 to Cell 1: 3 | PRS are transmitted from synchronous cells |
| Expected RSTD | | µs | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells: randomly between -3 and 3 | The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD indicator |

| | | | |
|---|---|---|---|
| Expected RSTD uncertainty for all neighbour cells | μs | 5 | The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD-Uncertainty index |
| Number of cells provided in DL-TDOA assistance data | | 3 | Including the reference cell |
| PRS muting info | | Cell 1: '10'<br>Cell 2: '01'<br>Cell 3: '10' | Correponds to prs-MutingInfo defined in TS 37.355 [34] |
| PRS resource RE offset | | Cell 1: 0<br>Cell 2: 0<br>Cell 3: 1 | Cell 1 and Cell 3 are configured with different resource offsets |
| T1 | s | 3 | The length of the time interval from the beginning of each test |
| T2 | s | 1.28 | The length of the time interval that follows immediately after time interval T1 |
| AoA setup | | Setup 1 | As defined in clause A.3.15.1 |
| Beam assumption | | Rough | Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation |

**Table A.7.6.24.1.1-3: Cell-specific test parameters for RSTD measurement reporting delay during T1**

| Parameter | | Unit | Cell 1 | Cell 2 | Cell 3 |

| | | | | | |
|---|---|---|---|---|---|
| SSB $\hat{E}_s/N_{oc}$ | Config 1 | dB | 0 | -Infinity | -Infinity |
| Propagation Condition | | | AWGN | | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 4: SSB_RP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.

**Table A.7.6.24.1.1-4: Cell-specific test parameters for RSTD measurement reporting delay during T2**

| Parameter | | Unit | Cell 1 | Cell 2 | Cell 3 |

| Propagation Condition | | | AWGN | | |

Note 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over sub-carriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.

Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

#### A.7.6.24.1.2 Test Requirements

The RSCPD reported together with RSTD measurement time fulfils the requirements specified in the clause 9.9.7.

The UE shall perform and report the RSCPD and RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.7 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2\times TTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The reported DL RSCPD measurement shall be within the DL RSCPD reporting range specified in the clause 10.1.43.3 and the reported RSTD measurement shall be within the RSTD reporting range specified in the clause 10.1.23.

## A.7.6.25 RSCP measurements

### A.7.6.25.1 DL RSCP with UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

#### A.7.6.25.1.1 Test purpose and environment

The purpose of the test is to verify that the DL RSCP and UE Rx-Tx time difference measurements meet the requirements specified in clause 9.9.8.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured for both DL RSCP measurement and UE Rx-Tx time difference measurement.

The supported test configurations are listed in table A.7.6.25.1.1-1.

**Table A.7.6.25.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE during T1. In *NR-Multi-RTT-RequestLocationInformation*, the UE is configured to perform DL RSCP measurement via *nr-DL-PRS-RSCP-Request*. The UE is configured to perform both DL RSCP and UE Rx-Tx time difference measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources to be measured within the configured time window.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are listed in table A.7.6.25.1.1-2 and table A.7.6.25.1.1-3.

**Table A.7.6.25.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |

| Io | dBm/190.08 MHz | 1 | N/A | -54.62 | N/A | -54.62 |
| Propagation Condition | | 1 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

Note 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.

Note 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Note 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

### A.7.6.25.1.2 Test requirements

The DL RSCP with UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.8 with Nsample=4 for UE Rx-Tx time difference.

The UE shall perform and report the DL RSCP and UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified DL RSCP with UE Rx-Tx time difference measurement time specified in clause 9.9.8 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%. The reported DL RSCP measurement shall be within the DL RSCP reporting range specified in clause 10.1.44 and the reported UE Rx-Tx measurement shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.

## A.7.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in clause 10 for at least 90 % of the reported cases.
- Measurements are performed in RRC_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

### A.7.7.1 SS-RSRP

#### A.7.7.1.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

##### A.7.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

##### A.7.7.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in table A.7.7.1.1.2-2 and A.7.7.1.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1. The test consists of two time phases T1 and T2.

**Table A.7.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Configuration | Description |

| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

#### A.7.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

During T2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

During T1 and T2:

Relative accuracy of Cell 1 during T2 compared with Cell 1 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

**Table A.7.7.1.1.3-1: SS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | $SSB_RP1 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP1 + \delta + G_{max}$ |
| Cell 2 | $SSB_RP2 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP2 + \delta + G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

### A.7.7.1.2 SA inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 and 10.1.5.1.2 for intrer-frequency measurements with the testing configurations for NR cells in table A.7.7.1.2.1-1.

**Table A.7.7.1.2.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.1.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.1.2.2-1 and table A.7.7.1.2.2-2 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.7.7.1.2.2-1 and table A.7.7.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.7.7.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

| ($Io_{freq\ 1}$ – $Io_{freq\ 2}$) | 1~2 | dB | 0 | | 19.55 | |

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB_RP, Es/Iot, Io, ($SSB_RP_{Cell\ 2}$ – $SSB_RP_{Cell\ 1}$) and ($Io_{freq\ 2}$ – $Io_{freq\ 1}$) levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ or $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: The value in table B.2.3-2 is the Minimum SSB_RP for $SCS_{SSB}$ = 120 kHz, selected according to the operating band of Cell 2 and UE power class, without $\Delta MB_{P,n}$ adjustment.

### A.7.7.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirements in clause 10.1.5.1.1 and the relative requirements in clause 10.1.5.1.2.

Test 1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.7.7.1.2.3-2.

Test 2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.7.7.1.2.3-2.

**Table A.7.7.1.2.3-1: SS-RSRP absolute accuracy test requirement**

| | **Test requirement** Notes1,2,3,4 |
|---|---|
| Cell 1 | $SSB_RP1 - \delta + G_{min} + X \le$ Reported RSRP(dBm) $\le SSB_RP1 + \delta + G_{max}$ |
| Cell 2 | $SSB_RP2 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP2 + \delta + G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |
| NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |

**Table A.7.7.1.2.3-2: SS-RSRP relative accuracy test requirement**

| | **Test requirement** Notes1,2,3,4, 5, 6, 7 |
|---|---|
| Cell 2 – Cell 1 | $SSB_RP2 - SSB_RP1 - \delta - D - G_{inter} \le$ Reported RSRP(dB) $\le SSB_RP2 - SSB_RP1 + \delta + G_{inter} - (X) + E$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1 | |
| NOTE 3: Void | |
| NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |
| NOTE 5: D is the margin due to mis-alignment between fine beam and rough beam. D is the Rough Beam gain reduction in Rx beam peak direction from Table B.2.1.5.3-1, selected according to the UE power class. D is always a positive value. | |
| NOTE 6: $G_{inter}$ is the margin due to different antenna gain caused by frequency separation. $G_{inter}$ is from Table B.2.1.5.2-1, selected according to the UE power class, and is always a positive value | |
| NOTE 7: E = 3 (dB) is an additional margin to account for the actual gain difference between peak direction and spherical coverage using rough beams. | |

## A.7.7.1.3 SA inter-frequency measurement accuracy with FR1 serving cell and FR2 target cell

### A.7.7.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 for inter-frequency measurements with the testing configurations in table A.7.7.1.3.1-1.

**Table A.7.7.1.3.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |

### A.7.7.1.3.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) in FR1 and Cell 2 in FR2 . The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.1.3.2-1 and table A.7.7.1.3.2-2 below. Absolute accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.7.7.1.3.2-1 and table A.7.7.1.3.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.7.7.1.3.2-1: SS-RSRP inter-frequency test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

| NOTE 2: Void | | | | | | |
| NOTE 3: No additional noise is added by the test system in Test 2. | | | | | | |
| NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |
| NOTE 5: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | |

### A.7.7.1.3.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the Absolute requirement in clause 10.1.5.1.1.

Test 1:

Absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.3.3.

Test 2:

Absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.3.3.

**Table A.7.7.1.3.3: SS-RSRP absolute accuracy test requirement**

| | **Test requirement** Notes1,2,3,4 |
|---|---|
| Cell 2 | SSB_RP1 -δ +$G_{min}$ +X ≤ Reported RSRP(dBm) ≤ SSB_RP1 +δ +$G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |
| NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |

## A.7.7.2 SS-RSRQ

### A.7.7.2.1 SA intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8.1.1.

#### A.7.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.2.1.2-1. . The absolute accuracy of SS-RSRQ intra-frequency measurement is test by using the parameters in table A.7.7.2.1.2-2 and table A.7.7.2.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.7.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

| Io Note2 | dBm/95.04 MHz Note4 | -50 | | -54 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRQ, SSB_RP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Void
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.7.2.1.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5 dB to Nominal SS-RSRQ-2.5 dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal RSRQ+3.5 dB to Nominal RSRQ-3.5 dB according to the requirements in clause 10.1.8.1.1.Nominal RSRQ is the value shown in table A.7.7.2.1.2-3.

### A.7.7.2.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.1.1 and 10.1.9.1.2 for inter-frequency measurement.

#### A.7.7.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in table A.7.7.2.2.2-2 and table A.7.7.2.2.2-3.. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A. 7.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

They are not settable parameters themselves.<br>NOTE 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.<br>NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone<br>NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone<br>NOTE 6: Void<br>NOTE 7: Void<br>NOTE 8: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

#### A.7.7.2.2.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5 dB to Nominal SS-RSRQ -2.5 dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ +3.5 dB to Nominal SS-RSRQ -3.5 dB according to the requirements in clause 10.1.10.1.1.

The SS-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.1.2.

## A.7.7.3 SS-SINR

### A.7.7.3.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.1.1.

### A.7.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.3.1.2-1. . The absolute accuracy of SS-SINR intra-frequency measurement is test by using the parameters in table A.7.7.3.1.2-2 and table A.7.7.3.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-SINR, SSB_RP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-SINR and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Void
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.7.3.1.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3B to Nominal SS-SINR -3 dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5 dB to Nominal SS-SINR -3.5 dB according to the requirements in clause 10.1.10.13.1.

### A.7.7.3.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.1.1 and 10.1.15.1.2 for inter-frequency measurement.

#### A.7.7.3.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in table A.7.7.3.2.2-2 and table A.7.7.3.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.7.3.2.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR +3 dB to Nominal SS-SINR -3 dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5 dB to Nominal SS-SINR -3.5 dB according to the requirements in clause 10.1.15.1.1.

The SS-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.1.2.

## A.7.7.4 L1-RSRP measurement for beam reporting

### A.7.7.4.1 SSB based L1-RSRP measurement

#### A.7.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.7.7.4.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.4.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.7.7.4.1.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.4.1.2-1 and table A.7.7.4.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.7.7.4.1.2-1 and table A.7.7.4.1.2-2.

Here is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.7.7.4.1.2-1: FR2 SSB based L1-RSRP general test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 | freq1 |
| Duplex mode | 1~2 | | TDD | TDD |

| $\hat{E}_s/N_{oc}$ | 1~2 | dB | 10 | -2 | n.a. | |

NOTE 1: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: Void
NOTE 3: No additional noise is added by the test system in Test 2.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.4.1.3 Test Requirements

After 320 ms from the beginning of the test, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 1 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB resource reported by UE in L1-RSRP report (SSB0 or SSB1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

**Table A.7.7.4.1.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| SSB0 | $SSB_RP0 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP0 + \delta + G_{max}$ |
| SSB1 | $SSB_RP1 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP1 + \delta + G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.7.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

### A.7.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in table A.7.7.4.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.4.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.4.2.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.4.2.2-1 and table A.7.7.4.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.7.7.4.2.2-1 and table A.7.7.4.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.7.7.4.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1 | | freq1 | freq1 |
| Duplex mode | 1 | | TDD | TDD |
| TDD Configuration | 1 | | TDDConf.3.1 | TDDConf.3.1 |
| $BW_{channel}$ | 1 | MHz | 100: $N_{PRB,c} = 66$ | 100: $N_{PRB,c} = 66$ |
| PDSCH Reference measurement channel | 1 | | SR.3.1 TDD | SR.3.1 TDD |
| RMSI CORESET Reference Channel | 1 | | CR.3.1 TDD | CR.3.1 TDD |

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| Dedicated CORESET Reference Channel | 1 | | CCR.3.1 TDD | CCR.3.1 TDD |

| EPRE ratio of PDSCH to PDSCH DMRS | | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

**Table A.7.7.4.2.2-2: FR2 CSI-RS based L1-RSRP OTA related test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 NOTE 3 | |
|---|---|---|---|---|---|---|
| | | | CSI-RS0 | CSI-RS1 | CSI-RS0 | CSI-RS1 |
| Angle of arrival configuration | | | Setup 1 according to A.3.15.1 | | Setup 1 according to A.3.15.1 | |
| Assumption for UE beams Note 4 | | | Rough | | Rough | |
| $N_{oc}$ | 1~2 | dBm/15 kHz | -100 | | n.a. | |
| $N_{oc}$ | 1~2 | dBm/SSB SCS | -91 | | n.a.<br>n.a. | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 10 | -2 | n.a. | |
| CSI-RS-RSRP Note1 | 1~2 | dBm/SCS | -81 | -93 | As in table B.2.4-2 | |
| Io Note1 | 1~2 | dBm/ 95.04 MHz | -59.86 | | SS-RSRP+28.98 | |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | -51.57 | -2 | n.a. | |

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: No additional noise is added by the test system in Test 2.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.4.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS resource reported by UE in L1-RSRP report (CSI-RS0 or CSI-RS1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.7.7.4.2.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + $G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

# A.7.7.5 CLI measurements

## A.7.7.5.1 SA SRS-RSRP measurement accuracy with FR2 serving cell

### A.7.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.1.1 with the testing configurations for NR cells in table A.7.7.5.1.1-1.

**Table A.7.7.5.1.1-1: Applicable NR configurations for FR2 SRS-RSRP accuracy test**

| Config | Description |
|---|---|
| 1 | 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.7.7.5.1.2 Test parameters

In this set of test cases there is one cell in the test, FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.5.1.2-1 and A.7.7.5.1.2-2 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in table A.7.7.5.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in table A.7.7.5.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

**Table A.7.7.5.1.2-1: FR2 test parameters for SRS-RSRP accuracy**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1 | | freq1 | freq1 |
| Duplex mode | 1 | | TDD | TDD |
| TDD configuration | 1 | | TDDConf.3.1 | TDDConf.3.1 |

### A.7.7.5.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.1.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.7.7.5.1.3-1.

During T2:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.7.7.5.1.3-1.

**Table A.7.7.5.1.3-1: SRS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| SRS | SRS_RP -δ +$G_{min}$ ≤ Reported SRS-RSRP(dBm) ≤SRS_RP +δ +$G_{max}$ |
| NOTE 1: SRS_RP is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.7.7.5.2 SA CLI-RSSI measurement accuracy with FR2 serving cell

### A.7.7.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.2.1 with the testing configurations for NR cells in table A.7.7.5.2.1-1.

**Table A.7.7.5.2.1-1: Applicable NR configurations for FR2 CLI-RSSI accuracy test**

| Config | Description |
|---|---|
| 1 | 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.7.7.5.2.2 Test parameters

In this set of test cases there is one cell in the test, FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.5.2.2-1 and A.7.7.5.2.2-2 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 2 data symbol before. The CLI-RSSI measurement resource configuration is in table A.7.7.5.2.2-3.

**Table A.7.7.5.2.2-1: FR2 test parameters for CLI-RSSI accuracy**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|

### A.7.7.5.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.2.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.7.7.5.2.3-1.

During T2:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.7.7.5.2.3-1.

**Table A.7.7.5.2.3-1: CLI-RSSI absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| | Io -δ +$G_{min}$ ≤ Reported CLI-RSSI(dBm) ≤Io +δ +$G_{max}$ |
| NOTE 1: Io is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for 1.08 MHz | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.7.7.6 L1-SINR measurement for beam reporting

### A.7.7.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

### A.7.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.1 and clause 10.1.28.1 for L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in table A.7.7.6.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.6.1.1-1: Applicable NR configurations for FR2 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.6.1.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.6.1.2-1 and table A.7.7.6.1.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.7.7.6.1.2-1 and table A.7.7.6.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.7.7.6.1.2-1: FR2 CSI-RS based L1-SINR general test parameters**

| $N_{oc}$ | 1~2 | dBm/SSB SCS | -91 | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 10 | -2 |
| CSI-RS-RSRP[Note1] | 1~2 | dBm/SCS | -81 | -93 |
| Io[Note1] | 1~2 | dBm/ 95.04 MHz | -51.57 | -59.86 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 10 | -2 |

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: Void.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.6.1.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clauses 10.1.28.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.7.7.6.1.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.7.7.6.1.3-1.

**Table A.7.7.6.1.3-1: L1-SINR absolute accuracy test requirement**

| | Test requirement [Notes1,2] |
|---|---|
| CSI-RS0 | L1-SINR0-δ≤ Reported SINR(dB) ≤L1-SINR0+δ |

NOTE 1: L1-SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS 0 under consideration
NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-1, selected according to the Io used in the test

**Table A.5.7.6.1.3-2: L1-SINR relative accuracy test requirement**

| | Test requirement [Notes1,2] |
|---|---|
| CSI-RS0 - CSI-RS1 | L1-SINR0 - L1-SINR1 - σ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ |

NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration
NOTE 2: σ is the SINR relative requirement from Table 10.1.28.1.2-1, selected according to the Io used in the test

## A.7.7.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR

### A.7.7.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.2 and clause 10.1.28.2 for L1-SINR measurements with SSB based CMR and CSI-IM based IMR, with the testing configurations for NR cells in table A.7.7.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-IM based IMR**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.7.7.6.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.6.2.2-1 and table A.7.7.6.2.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.7.7.6.2.2-1 and table A.7.7.6.2.2-2.

Here is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-IM resource set with two CSI-IM resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-IM resources as IMR.

**Table A.7.7.6.2.2-1: FR2 L1-SINR general test parameters with SSB based CMR and CSI-IM based IMR**

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |
| Duplex mode | 1~2 | | TDD |
| TDD Configuration | 1~2 | | TDDConf.3.1 |
| $BW_{channel}$ | 1~2 | MHz | 100: $N_{PRB,c}$ = 66 |
| PDSCH Reference measurement channel | 1~2 | | SR.3.1 TDD |
| RMSI CORESET Reference Channel | 1~2 | | CR.3.1 TDD |
| Dedicated CORESET Reference Channel | 1~2 | | CCR.3.1 TDD |
| SSB configuration | 1 | | SSB.1 FR2 |

| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.<br>NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |

**Table A.7.7.6.2.2-2: FR2 L1-SINR SSB specific test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | SSB0 | SSB1 |
| Angle of arrival configuration | | | Setup 1 according to A.3.15.1 | |
| Assumption for UE beams[Note 3] | | | Rough | |
| $N_{oc}$ | 1~2 | dBm/15 kHz | -100 | |
| $N_{oc}$ | 1 | dBm/SSB SCS | -91 | |
| | 2 | | -88 | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 10 | -2 |
| SS-RSRP[Note1] | 1 | dBm/SCS | -81 | -93 |
| | 2 | | -78 | -90 |
| Io[Note1] | 1~2 | dBm/95.04 MHz | -51.57 | -59.86 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 10 | -2 |

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.6.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for SSB#0+CSI-IM#0 and SSB#1+CSI-IM#1 of Cell 1 shall fulfil the requirements in clauses 10.1.28.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB#0+CSI-IM#0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.7.7.6.2.3-1.

Relative accuracy of SSB#0+CSI-IM#0 compared with SSB#1+CSI-IM#1. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.7.7.6.2.3-2.

**Table A.7.7.6.2.3-1: L1-SINR absolute accuracy test requirement**

| | Test requirement [Notes1,2] |
|---|---|
| SSB#0+CSI-IM#0 | L1_SINR0 -δ ≤ Reported SINR(dB) ≤ L1_SINR0 +δ |

NOTE 1: L1_SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB#0+CSI-IM#0 under consideration
NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-2, selected according to the Io used in the test

**Table A.7.7.6.2.3-2: L1-SINR relative accuracy test requirement**

| | Test requirement [Notes1,2] |
|---|---|
| SSB#0+CSI-IM#0 - SSB#1+CSI-IM#1 | L1-SINR0 - L1-SINR1 - σ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ |

NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB#n+CSI-IM#n under consideration
NOTE 2: σ is the SINR relative requirement from Table 10.1.28.2.2-1, selected according to the Io used in the test

## A.7.7.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

### A.7.7.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in clauses 9.8.4.3 and clause 10.1.28.3 for L1-SINR measurements based on CSI-RS as both CMR and IMR with the testing configurations for NR cell in table A.7.7.6.3.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.6.3.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with CSI-RS based both CMR based IMR**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.6.3.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.6.3.2-1 and table A.7.7.6.3.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.7.7.6.3.2-1 and table A.7.7.6.3.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI-RS resource sets with two CSI-RS resources for each set. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as both CMR and IMR.

**Table A.7.7.6.3.2-1: FR2 L1-SINR measurement test with CSI-RS based both CMR and IMR**

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| SSB ARFCN | 1 | | freq1 |
| Duplex mode | 1 | | TDD |

| EPRE ratio of PBCH DMRS to SSS | | | |
| EPRE ratio of PBCH to PBCH DMRS | | | |
| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |

**Table A.7.7.6.3.2-2: FR2 CSI-RS based L1-SINR measurement OTA related test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | CSI-RS0 | CSI-RS1 |
| Angle of arrival configuration | | | Setup 1 according to A.3.15.1 | |
| Assumption for UE beams[Note 4] | | | Rough | |
| $N_{oc}$ | 1~2 | dBm/15 kHz | -100 | |
| $N_{oc}$ | 1~2 | dBm/SSB SCS | -91 | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 10 | 0 |
| CSI-RS-RSRP[Note1] | 1~2 | dBm/SCS | -81 | -91 |
| Io[Note1] | 1~2 | dBm/ 95.04 MHz | -51.57 | -59.86 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 10 | 0 |
| NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.<br>NOTE 3: No additional noise is added by the test system in Test 2.<br>NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

### A.7.7.6.3.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 for CMR +CSI-RS#0 for IMR and CSI-RS#1 for CMR +CSI-RS#0 for IMR of Cell 1 shall fulfil the requirements in clause 10.1.28.3. The following requirements are to be verified:

Absolute accuracy of CSI-RS#0 for CMR + CSI-RS#0 for IMR. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.7.7.6.3.3-1.

Relative accuracy of CSI-RS#0 for CMR + CSI-RS#0 for IMR compared with CSI-RS#1 for CMR + CSI-RS#1 for IMR. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.7.7.6.3.3-2.

**Table A.7.7.6.3.3-1: L1-SINR absolute accuracy test requirement**

| | Test requirement [Notes1,2] |
|---|---|
| CSI-RS#0 for CMR + CSI-RS#0 for IMR | L1-SINR0 -δ≤ Reported SINR(dBm) ≤L1-SINR 0 +δ |
| NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS#n under consideration<br>NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.3.1-1. | |

| NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the (CSI-RS#n for CMR + CSI-RS#n for IMR) under consideration<br>NOTE 2: σ is the SINR relative requirement from Table 10.1.28.3.2-1, selected according to the Io used in the test | |

# A.7.7.7 CSI-RSRP

## A.7.7.7.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

### A.7.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.2.1 and 10.1.3.2.2 for intra-frequency measurements.

### A.7.7.7.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.7.1.2-1. Both absolute and relative accuracy of CSI-RSRP intra-frequency measurements are tested by using the parameters in table A.7.7.7.1.2-2 and A.7.7.7.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1. The test consists of two time phases T1 and T2.

**Table A.7.7.7.1.2-1: CSI-RSRP Intra frequency CSI-RSRP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.7.7.1.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.2.1 and relative accuracy requirements in clause 10.1.3.2.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1.

During T2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1.

During T1 and T2:

Relative accuracy of Cell 1 during T2 compared with Cell 1 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1.

**Table A.7.7.7.1.3-1: CSI-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | CSI-RS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ CSI-RS_RP1 +δ +$G_{max}$ |
| Cell 2 | CSI-RS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ CSI-RS_RP2 +δ +$G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.3.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.7.7.7.2 SA inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

### A.7.7.7.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.2.1 and 10.1.5.2.2 for inter-frequency measurements with the testing configurations for NR cells in table A.7.7.7.2.1-1.

**Table A.7.7.7.2.1-1: Applicable NR configurations for FR2 inter-frequency CSI-RSRP accuracy test**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.7.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.7.2.2-1 and table A.7.7.7.2.2-2 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.7.7.7.2.2-1 and table A.7.7.7.2.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.7.7.7.2.2-1: CSI-RSRP inter-frequency test parameters**

| Parameter | | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| $BW_{channel}$ | | | 100: $N_{PRB,c}$ = 24 | | 100: $N_{PRB,c}$ = 24 | |
| Gap pattern ID | | | 0 | | 0 | |
| Duplex mode | | | TDD | TDD | TDD | TDD |
| TDD configuration | | | TDDConf.3.1 | | TDDConf.3.1 | |

| Propagation condition | | - | AWGN | AWGN | AWGN | AWGN |
| Antenna configuration | | - | 1x2 | 1x2 | 1x2 | 1x2 |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | |

**Table A.7.7.7.2.2-2: SS-RSRP inter frequency OTA related test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| Angle of arrival configuration | | Setup 4b according to clause A.3.15.4.2 | | Setup 4b according to clause A.3.15.4.2 | |
| | | AoA1 Spherical coverage | AoA2 Rx Beam Peak | AoA1 Spherical coverage | AoA2 Rx Beam Peak |
| $N_{oc}$ Note1 | dBm/15 kHz Note4 | -90.6 | -90.6 | (Table B.2.3.2-2 Rx Beam Peak +1.97 dB) | (Table B.2.3.2-2 Rx Beam Peak - 3.03 dB) |
| Assumption for UE beams Note 7 | | Rough | | Rough | |
| $N_{oc}$ Note1 | dBm/SCS Note4 | -81.6 | -81.6 | (Table B.2.3.2-2 Rx Beam Peak +11.0 dB) | (Table B.2.3.2-2 Rx Beam Peak +6.0 dB) |
| $\hat{E}_s / N_{oc}$ for SSB | dB | 6.0 | 6.0 | 17.0 | -1.0 |
| $\hat{E}_s / N_{oc}$ for CSI-RS | dB | 6.0 | 6.0 | 17.0 | -1.0 |
| CSI-RS_RP Note2 | dBm/SCS | -75.60 | -75.60 | (Table B.2.3.2-2 Rx Beam Peak +28.0 dB) | (Table B.2.3.2-2 Rx Beam Peak +5.0 dB) |
| (CSI-RS_RP$_{Cell\ 1}$ – CSI-RS_RP$_{Cell\ 2}$) | dB | 0 | | 23.00 | |
| $\hat{E}_s / I_{ot\ BB}$ Note6 for SSB | dB | 5.29 | 5.96 | 8.86 | -3.92 |

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| $\hat{E}_s/I_{ot}$ BB Note6 for CSI-RS | dB | 5.29 | 5.96 | 8.86 | -3.92 |
| Io Note2 | dBm/95.04 MHz Note4 | -50.03 | -50.03 | (Table B.2.3.2-2 Rx Beam Peak +52.68 dB) | (Table B.2.3.2-2 Rx Beam Peak +33.13 dB) |
| ($Io_{freq\ 1}$ – $Io_{freq\ 2}$) | dB | 0 | | 19.55 | |

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-RS_RP, Es/Iot, Io, (CSI-RS_$RP_{Cell\ 2}$ – CSI-RS_$RP_{Cell\ 1}$) and ($Io_{freq\ 2}$ – $Io_{freq\ 1}$) levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ or $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.7.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirements in clause 10.1.5.2.1 and the relative requirements in clause 10.1.5.2.2.

Test 1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in A.7.7.7.2.3-2.

Test 2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in A.7.7.7.2.3-2.

**Table A.7.7.7.2.3-1: CSI-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3,4 |
|---|---|
| Cell 1 | CSI-RS_RP1 -δ +$G_{min}$ +X ≤ Reported RSRP(dBm) ≤ CSI-RS_RP1 +δ +$G_{max}$ |
| Cell 2 | CSI-RS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ CSI-RS_RP2 +δ +$G_{max}$ |

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.2.1-1, selected according to the Io used in the test
NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.

**Table A.7.7.7.2.3-2: CSI-RSRP relative accuracy test requirement**

| | Test requirement Notes1,2,3,4 |
|---|---|

| | |
|---|---|
| Cell 2 – Cell 1 | CSI-RS_RP2 – CSI-RS_RP1 – δ – D – $G_{inter}$ ≤ Reported RSRP(dB) ≤ CSI-RS_RP2 – CSI-RS_RP1 + δ + $G_{inter}$ – (X) + E |

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration
NOTE 2: δ is the RSRP relative accuracy requirement from Table 10.1.5.2.2-1
NOTE 3: Void
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.
NOTE 5: D is the margin due to mis-alignment between fine beam and rough beam. D is the Rough Beam gain reduction in Rx beam peak direction from Table B.2.1.5.3-1, selected according to the UE power class. D is always a positive value.
NOTE 6: $G_{inter}$ is the margin due to different antenna gain caused by frequency separation. $G_{inter}$ is from Table B.2.1.5.2-1, selected according to the UE power class, and is always a positive value.
NOTE 7: E = 3 (dB) is an additional margin to account for the actual gain difference between peak direction and spherical coverage using rough beams.

## A.7.7.8 CSI-RSRQ

### A.7.7.8.1 SA intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8.2.1.

#### A.7.7.8.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.8.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is tested by using the parameters in table A.7.7.8.1.2-2 and table A.7.7.8.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.7.7.8.1.2-1: CSI-RSRQ Intra frequency CSI-RSRQ supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

| Io Note2 | dBm/95.04 MHz Note4 | -50 | | -54 | -54 |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-RSRQ, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.8.1.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ+2.5 dB to Nominal CSI-RSRQ-3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ+3.5 dB to Nominal CSI-RSRQ-4.5 dB according to the requirements in clause 10.1.8.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. Nominal RSRQ is the value shown in table A.7.7.8.1.2-3.

## A.7.7.8.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

### A.7.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.10.2.1 and 10.1.10.2.2 for inter-frequency measurement.

### A.7.7.8.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.8.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test parameters in table A.7.7.8.2.2-2 and table A.7.7.8.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A. 7.7.8.2.2-1: CSI-RSRQ Inter frequency supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.8.2.2-2: CSI-RSRQ Inter frequency general test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| SSB ARFCN | | Freq1 | freq2 | freq1 | Freq2 |
| Duplex mode | | TDD | | TDD | |
| TDD configuration | | TDDConf.3.1 | | TDDConf.3.1 | |
| $BW_{channel}$ | MHz | 100: $N_{PRB,c}$ = 66 | | 100: $N_{PRB,c}$ = 66 | |
| PDSCH Reference measurement channel | | SR.3.1 TDD | - | SR.3.1 TDD | - |

| Io Note2 | dBm/95.04 MHz Note4 | -53.8 | -53.8 | -54.25 | -54.25 |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-RSRQ, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.7.8.2.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ+2.5 dB to Nominal CSI-RSRQ -3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5 dB to Nominal CSI-RSRQ -4.5 dB according to the requirements in clause 10.1.10.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test.

The CSI-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.2.2.

## A.7.7.9 CSI-SINR

### A.7.7.9.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.2.1.

#### A.7.7.9.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.9.1.2-1. . The absolute accuracy of CSI-SINR intra-frequency measurement is test by using the parameters in table A.7.7.9.1.2-2 and table A.7.7.9.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.9.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.9.1.2-2: CSI-SINR Intra frequency test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| SSB ARFCN | | Freq2 | | Freq2 | |
| Duplex mode | | TDD | | TDD | |
| TDD configuration | | TDDConf.3.1 | | TDDConf.3.1 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-SINR and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.7.9.1.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+XdB to Nominal CSI-SINR –X-1 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +YdB to Nominal CSI-SINR –Y-1 dB according to the requirements in clause 10.1.13.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. The relative CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.13.2.1.

Editor's note: The values of X and Y are pending on the accuracy requirement discussion

### A.7.7.9.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.2.1 and 10.1.15.2.2 for inter-frequency measurement.

#### A.7.7.9.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.9.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test parameters in table A.7.7.9.2.2-2 and table A.7.7.9.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.9.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 8: Void
NOTE 9: Void
NOTE 10: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.7.9.2.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR +XdB to Nominal CSI-SINR –X-1 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +YdB to Nominal CSI-SINR –Y-1 dB according to the requirements in clause 10.1.15.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test.

The CSI-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.2.2.

## A.7.7.10 RSTD measurements

### A.7.7.10.1 RSTD measurement accuracy test case for single positioning frequency layer

#### A.7.7.10.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.7.10.1.1-1.

**Table A.7.7.10.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

**Table A.7.7.10.1.1-2: RSTD accuracy test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted. | | | | | |
| NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone | | | | | |
| NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | |
| NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.7.10.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

## A.7.7.10.2 RSTD measurement accuracy test case for dual positioning frequency layer

### A.7.7.10.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

The supported test configurations are specified in table A.7.7.10.2.1-1.

**Table A.7.7.10.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR2. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test.

**Table A.7.7.10.2.1-2: RSTD accuracy test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |

| NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | |
| NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone | | | | | |
| NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | |
| NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.7.10.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

## A.7.7.10.3 RSTD measurement accuracy test case with reduced number of samples for single positioning frequency layer in FR2 in RRC_CONNECTED state

### A.7.7.10.3.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.7.7.10.3.1-1.

**Table A.7.7.10.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be longer than the UE measurement period as defined in clause 9.9.2.7.

**Table A.7.7.10.3.1-2: RSTD accuracy test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| PRS ARFCN | | freq1 | | freq1 | |
| Duplex mode | | TDD | | TDD | |
| TDD configuration | | TDDConf.3.1 | | TDDConf.3.1 | |

They are not settable parameters themselves.<br>NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone<br>NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.<br>NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.7.10.3.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

## A.7.7.10.4 RSTD measurement accuracy test case with Rx TEG

### A.7.7.10.4.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement when the measurements of reference cell and neighbor cell are within the same Rx TEG meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.7.10.4.1-1.

**Table A.7.7.10.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test.

The UE is requested to provide the Rx TEG in the test via *nr-UE-RxTEG-Request-r17* in *NR-TDOA-RequestLocationInformation*.

The test applies to the UE supporting *Rx TEG* defiend in *NR-UE-TEG-Capability* and reporting the same Rx TEG for the measurements of reference cell and neighbour cell.

**Table A.7.7.10.4.1-2: RSTD accuracy test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |

| NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | |

### A.7.7.10.4.2 Test Requirements

The RSTD measurement for Cell 1 and Cell 2 should both fulfil the absolute accuracy requirements with same Rx TEG for reference cell and neighbour cell defined in clause 10.1.23.2.

## A.7.7.10.5 NR RSTD measurement accuracy test case for PRS aggregation in FR2 SA in RRC_CONNECTED mode

### A.7.7.10.5.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement performed by UE by aggregating PRS resources from multiple positioning frequency layers (PFLs) meets the accuracy requirements specified in clause 10.1.23A.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.7.10.5.1-1.

**Table A.7.7.10.5.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth per PFL, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The UE is capable of performing RSTD measurements by aggregating PRS resources from multiple PFLs and is configured by the LMF to perform measurements by aggregating the PRS resources from multiple PFLs via *jointMeasurementsReq*. The resources to be aggregated for RSTD measurement are indicated by the LMF to the UE via *nr-DL-PRS-JointMeasurementRequestedPFL-List*. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.10.

**Table A.7.7.10.5.1-2: RSTD accuracy test parameters for PRS aggregation**

| Parameter | Unit | Cell 1 | Cell 2 |
|---|---|---|---|
| PRS ARFCN | | freq1, freq2 | |
| Duplex mode | | TDD | |
| TDD configuration | | TDDConf.3.1 | |
| $BW_{channel}$ per carrier | MHz | 200: $N_{RB,c}$ = 132 | |
| Measurement gap | | GP#24 or GP#13 | |
| Downlink initial BWP configuration | | DLBWP.0.1 | - |
| Downlink dedicated BWP configuration | | DLBWP.1.1 | - |
| Uplink initial BWP configuration | | ULBWP.0.1 | - |
| Uplink dedicated BWP configuration | | ULBWP.1.1 | - |
| DRX cycle configuration | | Not applicable | - |
| TRS configuration | | TRS.2.1 TDD | - |

| | | | |
|---|---|---|---|
| TCI state | | TCI.State.0 | - |
| PDSCH Reference measurement channel | | SR.3.1 TDD | - |
| RMSI CORESET Reference Channel | | CR.3.1 TDD | - |
| Control channel RMC | | CCR.3.1 TDD | - |
| OCNG Patterns | | OP.1 | OP.1 |
| SSB configuration | | SSB.3 FR2 | SSB.3 FR2 |
| SMTC configuration | | SMTC.1 | SMTC.1 |
| PRS configuration | | PRS.1.1 FR2 | PRS.1.1 FR2 |
| PRS Resource slot offset | slot | 0 | 4 |
| Expected RSTD | μs | N/A | 3 |
| Expected RSTD uncertainty | μs | N/A | 5 |
| Time offset with Cell 1 | μs | - | 3 |
| PDSCH/PDCCH subcarrier spacing | kHz | 120 | 120 |
| EPRE ratio of PSS to SSS | dB | 0 | 0 |
| EPRE ratio of PBCH_DMRS to SSS | | | |
| EPRE ratio of PBCH to PBCH_DMRS | | | |
| EPRE ratio of PDCCH_DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH_DMRS | | | |
| EPRE ratio of PDSCH_DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| EPRE ratio of PRS to SSS | dB | 0 | 0 |
| Propagation conditions | | AWGN | AWGN |
| Antenna configuration | | 1x2 | 1x2 |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.<br>Note 2: Carriers with PRS resources for aggregation are intra-band and contiguous to each other. | | | |

**Table A.7.7.10.5.1-3: RSTD accuracy OTA related test parameters**

| Parameter | Unit | Cell 1 | Cell 2 |
|---|---|---|---|
| Angle of arrival configuration | | Setup 1 according to clause A.3.15.1 | |
| Assumption for UE beams Note 5 | | Rough | |
| $N_{oc}$ Note1 | dBm/SCS Note3 | -89 | |
| PRS $\hat{E}_s/N_{oc}$ | dB | -5.7 | -11.9 |
| PRP Note2 | dBm/SCS | -94.7 | -100.9 |
| PRS $\hat{E}_s/I_{ot}$ | dB | -6 | -13 |
| Io Note2 per PFL | dBm/190.08 MHz Note3 | -55.75 | -55.75 |

Note 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over sub-carriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.

Note 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

#### A.7.7.10.5.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

## A.7.7.11 PRS-RSRP measurements

### A.7.7.11.1 SA measurement accuracy with PRS in FR2

#### A.7.7.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.7.7.11.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.11.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.7.11.1.2-2 and A.7.7.11.1.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.11.1.2-1: PRS-RSRP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

They are not settable parameters themselves.<br>NOTE 3: Void<br>NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone<br>NOTE 5: Void<br>NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.<br>NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

#### A.7.7.11.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.7.11.1.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

**Table A.7.7.11.1.3-1: PRS-RSRP absolute accuracy test requirement**

| | **Test requirement** Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test. | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class | |

### A.7.7.11.2 SA measurement accuracy with PRS in FR2 with reduced sample number

#### A.7.7.11.2.1 Test Purpose and Environment

The purpose of this test is to verify that the accuracy of PRS-RSRP measurement with reduced sample number is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.7.7.11.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.11.2.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.7.11.2.2-2 and A.7.7.11.2.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.11.2.2-1: PRS-RSRP supported test configurations**

| **Configuration** | **Description** |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

**Table A.7.7.11.2.2-2: PRS-RSRP general test parameters**

| **Parameter** | **Unit** | **Test 1** | |
|---|---|---|---|
| | | **Cell 1** | **Cell 2** |

| Io Note2 | dBm/190.08 MHz Note4 | -51.76 | |
| NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |
| NOTE 2: SSB_RP, PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | |
| NOTE 3: Void | | | |
| NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone | | | |
| NOTE 5: Void | | | |
| NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | |

#### A.7.7.11.2.3 Test Requirements

In the test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.7.11.2.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

**Table A.7.7.11.2.3-1: PRS-RSRP absolute accuracy test requirement**

| | **Test requirement** Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test. | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class | |

## A.7.7.12 UE Rx-Tx time difference measurements

### A.7.7.12.1 UE Rx-Tx time difference measurement accuracy for single positioning frequency layer in FR2 SA

#### A.7.7.12.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.1.1-1.

**Table A.7.7.12.1.1-1: Supported test configurations**

| **Config** | **Description** |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

#### A.7.7.12.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.12.1.2-1.

**Table A.7.7.12.1.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| **Parameter** | **Unit** | **Test configuration** | **Test 1** | | **Test 2** | |

| NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |
| NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | | |
| NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone | | | | | | |
| NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone | | | | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |
| NOTE 8: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured. | | | | | | |
| NOTE 9: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | | |

**Table A.7.7.12.1.2-2: Void**

### A.7.7.12.1.3 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

## A.7.7.12.2 UE Rx-Tx time difference measurement accuracy with reduced number of samples in FR2 SA

### A.7.7.12.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy with reduced number of samples is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.2.1-1.

**Table A.7.7.12.2.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is configured to measure UE Rx-Tx time difference using reduced number of samples via *reducedDL-PRS-ProcessingSamples* in *NR-Multi-RTT-RequestLocationInformation* during the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.7.7.12.2.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.12.2.2-1.

**Table A.7.7.12.2.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |

### A.7.7.12.2.3 Test requirements

The UE Rx-Tx time difference measurement with reduced number of samples fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

## A.7.7.12.3 UE Rx-Tx time difference measurement accuracy with RxTx TEG

### A.7.7.12.3.1 Test purpose and environment

The purpose of the test is to verify that the relative UE Rx-Tx time difference measurement accuracy when the two measurements are within the same RxTx TEG is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.3.1-1.

**Table A.7.7.12.3.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is requested to provide the RxTx TEG in the test via *nr-UE-RxTxTEG-Request-r17* in *NR-Multi-RTT-RequestLocationInformation*.

The test applies to the UE supporting *RxTx TEG* defiend in *NR-UE-TEG-Capability* and reporting the same RxTx TEG for the two UE Rx-Tx measurements.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The UE Rx-Tx time difference is derived by the difference of the receiving timing and the transmit timing for each cell.

### A.7.7.12.3.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.12.3.2-1.

**Table A.7.7.12.3.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | | Test 2 | |

| PRP Note 3 | dBm/SCS kHz | 1 | -94.7 | -100.9 | -94.7 | -100.9 |
| Io | dBm/190.08 MHz | 1 | -55.75 | -55.75 | -55.75 | -55.75 |
| Propagation Condition | | 1 | AWGN | | AWGN | |

NOTE 1: Void.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.
NOTE 9: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.7.7.12.3.3 Test requirements

The relative accuracy is derived by the difference of the UE Rx-Tx measurements on the two cells.

The UE Rx-Tx time difference measurements for Cell 1 and Cell 2 fulfil the relative UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2.

### A.7.7.12.4 UE Rx-Tx time difference measurement accuracy with PRS bandwidth aggregation in FR2 SA

#### A.7.7.12.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25A. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations are listed in table A.7.7.12.4.1-1.

**Table A.7.7.12.4.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel

#1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE before the start of the test.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured with measurement gap pattern ID #13 or ID #24 before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

The general test parameters and cell specific test parameters are as given in table A.7.7.12.4.1-2 and table A.7.7.12.4.1-3 respectively.

**Table A.7.7.12.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |
| RF Channel Number | | 1 | 1 | For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel. |
| | | | 2 | For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel. |
| $BW_{channel}$ | MHz | 1 | 200: $N_{RB,c}$ = 132 | For both RF channels |
| SSB configuration | | 1 | SSB.2 FR2 | |
| SMTC configuration | | 1 | SMTC.1 | |
| Measurement gap | | 1 | GP#24 or GP#13 Note 1 | |
| CP length | | 1 | Normal | |
| DRX | | 1 | OFF | |
| Time offset between serving and neighbour cells | µs | 1 | 3 | Synchronous cells/TRPs |
| Expected RSTD | µs | 1 | 3 | |
| Expected RSTD uncertainty | µs | 1 | 5 | |
| Note 1: GP#24 is configured if the UE supports it, otherwise GP#13 is configured. | | | | |

**Table A.7.7.12.4.1-3: Cell specific test parameters**

| Parameter | Unit | Test configuration | Cell 1 | Cell 2 |

| Propagation Condition | | 1 | AWGN | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

Note 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

Note 6: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 7: As observed with 0 dBi gain antenna at the centre of the quiet zone.

### A.7.7.12.4.2 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25A for both Cell 1 and Cell 2.

# A.7.7.13 PRS-RSRPP measurements

## A.7.7.13.1 SA measurement accuracy with PRS in FR2

### A.7.7.13.1.1 Test Purpose and Environment

The purpose of this test is to verify that the accuracy of PRS-RSRPP measurement in RRC_CONNECTED is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

### A.7.7.13.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.13.1.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.13.1.2-1: PRS-RSRPP supported test configurations**

| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.7.13.1.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2 if the reported PRS-RSRPP is in the range shown in table A.7.7.13.1.2-1.

**Table A.7.7.13.1.3-1: PRS-RSRPP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test. | |

NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

## A.7.7.13.2 SA measurement accuracy with reduced PRS samples in FR2

### A.7.7.13.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy with $N_{sample}$ = 1 in FR2 is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

The UE under test should support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the TE indicates the UE to perform positioning measurements with reduced number of samples. The PRS bandwidth is contained within the active BWP and the power difference between the serving cell SS-RSRP and neighbour cell PRS-RSRP is within [6] dB, so that $N_{sample}$ = 1 is assumed.

### A.7.7.13.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.13.2.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.7.13.2.2-1: PRS-RSRPP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation. | | | |

### A.7.7.13.2.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2 if the reported PRS-RSRPP is in the range shown in table A.7.7.13.2.3-1.

**Table A.7.7.13.2.3-1: PRS-RSRPP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRPP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRPP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table [10.1.24.Z.1-2], selected according to the Io used in the test. | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class | |

# A.7.7.14 L1-RSRP measurement for group-based beam reporting

## A.7.7.14.1 SSB based L1-RSRP measurement

### A.7.7.14.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy for group-based beam reporting is within the specified limits. This test will verify the requirements in clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.7.7.14.1.1-1.

The AoA setup for this test is Setup 5 as defined in clause A.3.15.5.

The UE which passes this test can skip A.7.7.4.1.

**Table A.7.7.14.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.7.7.14.1.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.14.1.2-1 and table A.7.7.14.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements is tested by using the parameters in table A.7.7.14.1.2-1 and table A.7.7.14.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI resource sets with one SSB resource in each set. UE is configured to perform RLM, BFD measurement based on the SSB resources 0 and UE is configured to perform group-based L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.7.7.14.1.2-1: FR2 SSB based L1-RSRP general test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1, 2 | | freq1 | freq1 |
| Duplex mode | 1, 2 | | TDD | TDD |
| TDD Configuration | 1, 2 | | TDDConf.3.1 | TDDConf.3.1 |

### A.7.7.14.1.3 Test Requirements

After 320 ms from the beginning of the test, the UE shall send L1-RSRP measurement report with SSB0 and SSB1 as a resource group, where the accuracy of the reported measurement results for SSB0 and SSB1 of Cell 1 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0 and SSB1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB resource reported by UE in L1-RSRP report (SSB0 or SSB1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

**Table A.7.7.14.1.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| SSB0 | SSB_RP0 - δ + $G_{min}$ ≤ Reported RSRP (dBm) ≤ SSB_RP0 + δ + $G_{max}$ |
| SSB1 | SSB_RP1 - δ + $G_{min}$ ≤ Reported RSRP (dBm) ≤ SSB_RP1 + δ + $G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.7.7.14.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

### A.7.7.14.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy for group-based beam reporting is within the specified limits. This test will verify the requirements in clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in table A.7.7.14.2.1-1.

The AoA setup for this test is Setup X1 as defined in clause A.3.15.X1.

**Table A.7.7.14.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.14.2.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.14.2.2-1 and table A.7.7.14.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements is tested by using the parameters in table A.7.7.14.2.2-1 and table A.7.7.14.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI resource sets with one CSI-RS resource in each set. UE is configured to perform RLM and BFD based on SSB 0 and 1 and UE is configured to perform group-based L1-RSRP measurement based on the CSI resources. CSI-RS resources are not transmitted in the same OFDM symbols as SSB.

**Table A.7.7.14.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters**

| NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |
| NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | | |
| NOTE 3: No additional noise is added by the test system in Test 2. | | | | | | |
| NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |

### A.7.7.14.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0 and CSI-RS1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS resource reported by UE in L1-RSRP report (CSI-RS0 or CSI-RS1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.7.7.14.2.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 – δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 + δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 – δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 + δ + $G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

# A.7.7.15 LTM L1-RSRP measurement

## A.7.7.15.1 SSB based inter-frequency L1-RSRP measurement

### A.7.7.15.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause10.1.20B.1.1] for inter-frequency L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.7.7.15.1.1-1.

Prior to the start of the test,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A4 is used.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- The UE has reported L3 measurement results and performed SSB based L1-RSRP measurement on Cell 2.

**Table A.7.7.15.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.7.7.15.1.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.15.1.2-1 and table A.7.7.15.1.2-2 below. The absolute accuracy of inter-frequency L1-RSRP measurements are tested by using the parameters in table A.7.7.15.1.2-1 and table A.7.7.15.1.2-2. The inter-frequency L1-RSRP measurements are supported by a measurement gap.

Before the test, UE is configured L1-RSRP measurement on SSB0 of Cell 2.

**Table A.7.7.15.1.2-1: FR2 SSB based inter-frequency L1-RSRP general test parameters**

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB_RP, Es/Iot, Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.7.15.1.3 Test Requirements

The L1-RSRP measurement accuracy for Cell 2 shall fulfil the absolute requirements in clause 10.1.20B.1.1.

Test 1:

Absolute accuracy of SSB0 in Cell 2. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.15.1.3-1.

Test 2:

Absolute accuracy of SSB0 in Cell 2. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.15.1.3-1.

**Table A.7.7.15.1.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| SSB0 | SSB_RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤ SSB_RP0 +δ + $G_{max}$ |

NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the Io used in the test
NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

# A.7.7.16 RSCPD Measurements

## A.7.7.16.1 RSCPD with RSTD measurement accuracy in FR2 SA in RRC_CONNECTED

### A.7.7.16.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.7.7.16.1.1-1.

**Table A.7.7.16.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP [34] as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_CONNECTED, shall be provided to the UE before the start of the test.
The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

### A.7.7.16.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.7.7.16.1.2-1 and table A.7.7.16.1.2-2.

**Table A.7.7.16.1.2-1: RSCPD accuracy test parameters**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | Cell 1 | Cell 2 |
| PRS ARFCN | | Freq1 | |
| Duplex mode | | TDD | |
| TDD configuration | | TDDConf.3.1 | |
| $BW_{channel}$ | MHz | 200: $N_{RB,c}$ = 132 | |
| Measurement gap | | GP#24 or GP#13 | |

| Note 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4. | | | |
| Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | |

### A.7.7.16.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

## A.7.7.17 RSCP with UE Rx-Tx time difference measurements

### A.7.7.17.1 RSCP with UE Rx-Tx time difference measurement accuracy in FR2 SA

#### A.7.7.17.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of DL RSCP measurement reported with UE Rx-Tx time difference measurement is within the specified limits. This test will verify the requirements in clause 10.1.44.2. The test is

conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.2.1-1.

**Table A.7.7.12.2.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData*, *NR-Multi-RTT-RequestLocationInformation* with *nr-DL-PRS-RSCP-Request* from LMF via LPP [34] and *NR-Multi-RTT-MeasurementCapability* as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCP in RRC CONNECTED, shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.7.7.17.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.17.1.2-1.

**Table A.7.7.17.1.2-1: RSCP with UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |
|---|---|---|---|---|

| Active DL BWP configuration | | 1 | DLBWP.1.1 | N/A |
| Active UL BWP configuration | | 1 | ULBWP.1.1 | N/A |
| PRS configuration | | 1 | PRS.1.1 FR2 | PRS.1.1 FR2 |
| PRS BW | | 1 | 64 PRBs | 64 PRBs |
| PRS Resource slot offset | slot | 1 | 0 | 4 |
| SRS configuration | | 1 | POS-SRS.3 | N/A |
| $N_{oc}$ Note 1 | dBm/SCS | 1 | -89 | |
| $N_{oc}$ Note 1 | dBm/15 kHz | 1 | -98 | |
| PRS $\hat{E}_s/I_{ot}$ | dB | 1 | 0 | -6 |
| PRS $\hat{E}_s/N_{oc}$ | dB | 1 | 2.23 | -1.73 |
| PRP Note 3 | dBm/SCS kHz | 1 | -86.77 | -90.73 |
| Io | dBm/190.08 MHz | 1 | -51.76 | -51.76 |
| Propagation Condition | | 1 | AWGN | |

Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 2: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 3: PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
Note 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
Note 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
Note 7: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.
Note 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

#### A.7.7.17.1.3 Test requirements

The RSCP with UE Rx-Tx time difference measurements fulfils the RSCP measurement accuracy requirements specified in clause 10.1.44.2 for both Cell 1 and Cell 2.

## A.7.8 Measurement procedure in RRC_INACTIVE

### A.7.8.1 RSTD measurements

#### A.7.8.1.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_INACTIVE state

##### A.7.8.1.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.7.8.1.1.1-1.

**Table A.7.8.1.1.1-1: Supported test configurations for NR RSTD**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2 and Cell 3. During T2 UE shall be in RRC_INACTIVE state and all cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s).

The UE is configured with DRX cycle of 0.64 s.

The general test parameters are listed in table A.7.8.1.1.1-2, and cell specific test parameters are listed in table Table A.7.8.1.1.1-3 and table A.7.8.1.1.1-4.

**Table A.7.8.1.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

| OCNG patterns defined in A.3.2.1 | | | OP.5 FDD | N/A | N/A |
| $N_{oc}$ Note 3 | Config 1 | dBm/SCS | -89 | | |
| PRS $\hat{E}_s/N_{oc}$ | | dB | -Infinity | -Infinity | -Infinity |
| Io Note 4 | Config 1 | dBm/ 190.08 MHz | -54.00 | -54.00 | -54.00 |
| SSB RP Note4 | Config 1 | dBm/SCS | -89 | -Infinity | -Infinity |
| $\hat{E}_s/N_{oc}$ | | dB | 0 | -Infinity | -Infinity |
| Propagation Condition | | | AWGN | | |

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.

NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 4: SSB RP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.

**Table A.7.8.1.1.1-4: Cell-specific test parameters for RSTD measurement reporting delay during T2**

| Parameter | | Unit | Cell 1 | Cell 2 | Cell 3 |
|---|---|---|---|---|---|
| | | | T2 | T2 | T2 |
| RF Channel Number | | | 1 | 1 | 1 |
| Positiong frequency layer | | | 1 | 1 | 1 |

| PRS $\hat{E}_s/N_{oc}$ | Config 1 | dB | -5.44 | -11.67 | -11.67 |
| Io | Config 1 | dBm/ 19.08 MHz | -55.48 | -55.48 | -55.48 |
| PRS $\hat{E}_s/I_{ot}$ | | dB | -6 | -13 | -13 |
| Propagation Condition | | | AWGN | | |

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

### A.7.8.1.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

## A.7.8.1.2 NR RSTD measurement reporting delay test case with reduced number of samples in RRC_INACTIVE, FR1 SA

### A.7.8.1.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations are specified in table A.7.8.1.2.1-1.

**Table A.7.8.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2. PRS resources from all three cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The *nr-DL-TDOA-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The general test parameters are listed in table A.7.8.1.2.1-2, and cell specific test parameters are listed in table A.7.8.1.2.1-3 and A.7.8.1.2.1-4.

**Table A.7.8.1.2.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |

| PRS $\hat{E}_s/I_{ot}$ | | dB | -3 | -6 | -6 |
| Propagation Condition | | | AWGN | | |
| NOTE 1: OCNG shall be used such that all active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols, except for slots where PRS is transmitted by any of the cells. | | | | | |
| NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. | | | | | |
| NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | |
| NOTE 4: Io levels apply only for symbols where PRS is transmitted. | | | | | |

### A.7.8.1.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

### A.7.8.1.3 NR RSTD measurement reporting delay test case for PRS aggregation in FR2 SA in RRC_INACTIVE state

#### A.7.8.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation in RRC_INACTIVE state meets the requirements specified in clause 5.6.2.6 in AWGN propagation condition in FR2 in standalone scenario when two intra-band contiguous positioning frequency layers (PFL) are configured.

The supported test configurations are listed in table A.7.8.1.3.1-1.

**Table A.7.8.1.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are 6 synchronous cells in the test: Cell 1, Cell 2, Cell 3 Cell 4, Cell 5 and Cell 6. Cell 1 is the PCell on NR RF channel 1 in FR2. Cell 2 and Cell 3 are neighbour cells on the same RF channel as Cell 1. Cell 4, Cell 5 and Cell 6 are the neighbour cells on a different NR RF channel, i.e., RF channel 2, in FR2. Cell 1 and Cell 4, Cell 2 and Cell 5, Cell 3 and Cell 6 are respectively intra-band contiguous and PRS resources are transmitted by the same Tx chain for each combination.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2, Cell 3, Cell 4, Cell 5 and Cell 6. During T2 UE shall be in RRC_INACTIVE state and all 6 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

In *NR-TDOA-ProvideAssistanceData*, there are three *NR-linkedDL-PRS-ResourceSetID-PRS-AggregationList*. The first list indicates aggregation of PRS resource sets from Cell 1 and Cell 4, and the second list indicates aggregation of PRS resource sets from Cell 2 and Cell 5. The third list indicates aggregation of PRS resource sets from Cell 3 and Cell 6. In *NR-TDOA-RequestLocationInformation*, the IE *nr-DL-PRS-JointMeasurementRequestedPFL-List* is included and indicates aggregation of PFLs on RF channel 1 and RF channel 2.

The UE is configured with DRX cycle of 0.64 s.

The general test parameters are given in table A.7.8.1.3.1-2, and cell specific test parameters for T1 and T2 are listed in table A.7.8.1.3.1-3 and table A.7.8.1.3.1-4, respectively.

**Table A.7.8.1.3.1-2: General test parameters for RSTD measurement with PRS aggregation reporting delay**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Reference cell | | Cell 1, Cell 4 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | Cell 2, Cell 3, Cell 4, Cell 5 and Cell 6 | Cell 2, Cell 3, Cell 4, Cell 5 and Cell 6 appear at the first, second, third, fourth and fifth places in the neighbour cell list in the DL-TDOA assistance data. |

| Propagation Condition | | | AWGN | | |

Note 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
Note 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.
Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 4: The values are defined separately for the cells from which the transmitted PRS resources are aggregated.

#### A.7.8.1.3.2 Test requirements

The RSTD measurement time with PRS aggregation in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.2.6.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from Cell 2 and Cell 5, Cell 3 and Cell 6 respectively with respect to the Cell 1 and Cell 4 from which the transmitted PRS resources are also aggregated, within the time duration specified in clause 5.6.2.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events observed during repeated tests shall be at least 90%, where the reported RSTD measurement with PRS aggregation for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3.

### A.7.8.1.4 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_INACTIVE state with eDRX > 10.24s

#### A.7.8.1.4.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.2.5 for RSTD measurements in RRC_INACTIVE with eDRX and periodic reporting. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.8.1.4.1-1.

**Table A.7.8.1.4.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_INACTIVE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_INACTIVE.

The test concludes after the UE reports the first set of measurements based on the configured reporting periodicity.

The general test parameters and cell specific test parameters are as given in table A.7.8.1.4.1-2 and table A.7.8.1.4.1-3 respectively.

**Table A.7.8.1.4.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1 | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |

| Note 1: | OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves. |
| Note 4: | The resources for uplink transmission are assigned to the UE prior to the start of time period T2. |
| Note 5: | Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation |
| Note 6: | Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4. |

#### A.7.8.1.4.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2. The requirement shall be evaluated based on the first measurement report received from the UE.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is considered complete after the UE has reported the first set of measurements based on the configured reporting interval.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

## A.7.8.2 PRS-RSRP measurements

### A.7.8.2.1 PRS-RSRP reporting delay test case for single positioning frequency layer in RRC_INACTIVE

#### A.7.8.2.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 5.6.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_INACTIVE. Supported test configurations are shown in table A.7.8.2.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.2.1.1-2, and table A.7.8.2.1.1-3.

**Table A.7.8.2.1.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

#### A.7.8.2.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 5.6.3.5.The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

### A.7.8.2.2 PRS-RSRP reporting delay test case with reduced number of samples in RRC_INACTIVE

### A.7.8.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 5.6.3.5 in an environment with AWGN propagation conditions when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations are specified in table A.7.8.2.2.1-1.

**Table A.7.8.2.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2. PRS resources from both cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-AoD assistance* data and location information request.

The *nr-DL-AoD-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The general test parameters are listed in table A.7.8.2.2.1-2, and cell specific test parameters are listed in table A.7.8.2.2.1-3.

**Table A.7.8.2.2.1-2: General test parameters**

| NOTE 8: Void. | | | | | | |

#### A.7.8.2.2.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.7.8.2.3 PRS-RSRP reporting delay in RRC_INACTIVE with eDRX

#### A.7.8.2.3.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 5.6.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_INACTIVE when configured with eDRX. Supported test configurations are shown in table A.7.8.2.3.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.2.3.1-2 and table A.7.8.2.3.1-3.

**Table A.7.8.2.3.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

Note 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.

Note 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.8.2.3.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 5.6.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.3.5 with $T_{available_PRS}$ = 0.64s starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

A test is complete after the UE has reported the first set of results based on the configured reporting interval.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

## A.7.8.3 UE Rx-Tx time difference measurements

### A.7.8.3.1 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

#### A.7.8.3.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement in RRC_INACTIVE state meets the requirements specified in clause 5.6.4 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.7.8.3.1.1-1.

**Table A.7.8.3.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.8.3.1.1-2 and table A.7.8.3.1.1-3 respectively.

**Table A.7.8.3.1.1-2: General test parameters**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

#### A.7.8.3.1.2 Test requirements

The UE Rx-Tx time difference measurement time in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.4.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time specified in clause 5.6.4 starting from the beginning of time interval T2.

NOTE The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.7.8.3.2 UE Rx-Tx time difference measurement with reduced number of samples in RRC_INACTIVE, FR2 SA

#### A.7.8.3.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 5.6.4.5 in AWGN propagation condition in FR2 in standalone scenario when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations in listed in table A.7.8.3.2.1-1.

**Table A.7.8.3.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2. PRS resources from both cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The *nr-Multi-RTT-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.8.3.2.1-2 and table A.7.8.3.2.1-3 respectively.

**Table A.7.8.3.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| RF Channel Number | | 1 | 1 | For both Cell 1 and Cell 2 |

| Parameter | Unit | Test configuration | Value | Comment |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io levels apply only for symbols where PRS is transmitted.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: OCNG shall be used such that all active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols, except for slots where PRS is transmitted by any of the cells.
NOTE 9: Void.

### A.7.8.3.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

# A.7.8.3.3UE Rx-Tx time difference measurements with PRS bandwidth aggregation in FR2 SA

## A.7.8.3.3.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.4.6 for UE Rx-Tx measurements with PRS bandwidth aggregation. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations in listed in table A.7.8.3.3.1-1.

**Table A.7.8.3.3.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The general test parameters and cell specific test parameters are as given in table A.7.8.3.3.1-2 and table A.7.8.3.3.1-3, respectively.

**Table A.7.8.3.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

### A.7.8.3.3.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.6.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

# A.7.8.3.4 UE Rx-Tx time difference measurements for single positioning frequency layer with eDRX > 10.24s in FR2 SA

## A.7.8.3.4.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.4.5 for UE Rx-Tx measurements in RRC_INACTIVE with eDRX. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations in listed in table A.7.8.3.4.1-1.

**Table A.7.8.3.4.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The general test parameters and cell specific test parameters are as given in table A.7.8.3.4.1-2 and table A.7.8.3.4.1-3 respectively.

**Table A.7.8.3.4.1-2: General test parameters**

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

#### A.7.8.3.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is complete after the UE has reported the first set of results based on the configured reporting interval.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.8.4 PRS-RSRPP measurements

### A.7.8.4.1 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR2 in RRC_INACTIVE state

#### A.7.8.4.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 5.6.5.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.8.4.1.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.4.1.1-2, and table A.7.8.4.1.1-3.

**Table A.7.8.4.1.1-1: supported test configurations for PRS RSRPP measurement for FR2**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.8.4.1.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 5.6.5.5.The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.5.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.X, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

### A.7.8.4.2 PRS-RSRPP reporting delay test with reduced number of samples for single positioning frequency layer in FR2 in RRC_INACTIVE state

#### A.7.8.4.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 5.6.5.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario for reduced number of samples. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* is configured by LMF to perform PRS measurement with reduced number of samples. Supported test configurations are shown in table A.7.8.4.2.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is $\Delta T$ after slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.4.2.1-2, and table A.7.8.4.2.1-3.

**Table A.7.8.4.2.1-1: supported test configurations for PRS RSRPP measurement for FR2**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.7.8.4.2.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 5.6.5.5. The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.5.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.38, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

### A.7.8.4.3 PRS-RSPP reporting delay in RRC_INACTIVE state with eDRX > 10.24s in FR2

#### A.7.8.4.3.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.5.5 for PRS-RSRPP measurements in RRC_INACTIVE with eDRX and periodic reporting. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform PRS-RSRPP measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.8.4.3.1-1.

**Table A.7.8.4.3.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_INACTIVE state before the start of T2. Both cells transmit PRS only during the second time interval of duration T2.

The *NR-DL-AoD-ProvideAssistanceData* and *NR-DL-AoD-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least $\Delta T$ ms before the start of T2, where $\Delta T$ = 50 ms is the maximum processing time of the DL-AoD assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_INACTIVE.

The test concludes after the UE reports the first set of measurements based on the configured reporting periodicity.

The general test parameters and cell specific test parameters are as given in table A.7.8.4.3.1-2 and table A.7.8.4.3.1-3, respectively.

**Table A.7.8.4.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in the positioning assistance data. |
| RF Channel Number | | 1 | 1 | For Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 100: $N_{RB,c}$ = 66 | |
| SSB configuration | | 1 | SSB.3 FR2 | |

| Propagation Condition | | 1 | AWGN | | | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Note 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

Note 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

#### A.7.8.4.3.2 Test requirements

The PRS-RSRPP measurement time shall fulfill the requirements specified in clause 5.6.5.5.

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2 within the specified measurement period duration starting from the beginning of time interval T2. The requirement shall be evaluated based on the first measurement report received from the UE.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS-RSRPP measurement for each correct event shall be within the PRS-RSRPP reporting range specified in clause 10.1.38.3.

## A.7.8.5 RSCPD Measurements

### A.7.8.5.1 DL RSCPD reported with RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_INACTIVE state

#### A.7.8.5.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD reported with RSTD measurement meets the requirements specified in clause 5.6.7.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

The test environment is the same as in clause A.7.8.1.1 with the following additional configuration in table A.7.8.5.1.1-1 and description.

In *nr-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE also is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s) to be measured within the configured time window.

**Table A.7.8.5.1.1-1: Time window configuration**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Indicated time window configuration | Config 1 | | MTW.1 | As specified in clause A.3.38 |

#### A.7.8.5.1.2 Test Requirements

The DL RSCPD reported with RSTD measurement time fulfils the requirements specified in clause 5.6.7.5.

The UE shall perform and report the DL RSCPD and DL RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3 and the reported RSCPD measurement for each correct event shall be within the RSCPD reporting range specified in clause 10.1.43.3.

## A.7.8.6 RSCP Measurements

### A.7.8.6.1 DL RSCP with UE Rx-Tx time difference measurements in RRC_INACTIVE for single positioning frequency layer in FR2 SA

#### A.7.8.6.1.1 Test purpose and environment

The purpose of the test is to verify that the DL RSCP and UE Rx-Tx time difference measurements in RRC_INACTIVE state meet the requirements specified in clause 5.6.8.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured for both DL RSCP measurement and UE Rx-Tx time difference measurement.

The supported test configurations are listed in table A.7.8.6.1.1-1.

**Table A.7.8.6.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE during T1. In *NR-Multi-RTT-RequestLocationInformation*, the UE is configured to perform DL RSCP measurement via *nr-DL-PRS-RSCP-Request*. The UE is configured to perform both DL RSCP and UE Rx-Tx time difference measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*, but the time window periodicity is not configured. The last slot containing the two messages for the multi-RTTI assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 shall be aligned with the start of the configured time window containing the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are listed in table A.7.8.6.1.1-2 and table A.7.8.6.1.1-3.

**Table A.7.8.6.1.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34]. |
| Neighbour cell | | 1 | Cell 2 | Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34]. |

| Propagation Condition | | 1 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 9: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

#### A.7.8.6.1.2 Test requirements

The DL RSCP with UE Rx-Tx time difference measurement time in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.8.

The UE shall perform and report the DL RSCP and UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified DL RSCP with UE Rx-Tx time difference measurement time specified in clause 5.6.8 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported DL RSCP measurement for each correct event shall be within the DL RSCP reporting range specified in clause 10.1.44 and the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.

## A.7.9 Measurement performance requirements in RRC_INACTIVE

### A.7.9.1 RSTD measurements

#### A.7.9.1.1 RSTD measurement accuracy test case for single positioning frequency layer in FR2 in RRC_INACTIVE state

##### A.7.9.1.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_INACTIVE state meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.9.1.1.1-1.

**Table A.7.9.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. The UE is configured with DRX cycle of 0.64 s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355[34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

**Table A.7.9.1.1.1-2: RSTD accuracy test parameters**

| NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

#### A.7.9.1.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.7.9.1.2 RSTD measurement accuracy test case with reduced number of samples for single positioning frequency layer in FR2 in RRC_INACTIVE state

#### A.7.9.1.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_INACTIVE state meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.7.9.1.2.1-1.

**Table A.7.9.1.2.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. The UE is configured with DRX cycle of 0.64 s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

#### A.7.9.1.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.7.9.1.3 RSTD measurement accuracy for PRS aggregation in FR2 in RRC_INACTIVE state

#### A.7.9.1.3.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation on two PFLs meets the accuracy requirements specified in clause 10.1.23A.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.9.1.3.1-1.

**Table A.7.9.1.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are four synchronous cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR2. Cell 2 is a neighbour cell on the same NR RF channel as Cell 1. Cell 3 and Cell 4 are neighbor cells in a different NR RF channel #2 in FR2. Cell 1 and Cell 3 are intra-band contiguous, and PRS resources from Cell 1 and Cell 3 are transmitted by the same Tx chain. Cell 2 and Cell 4 are intra-band contiguous, and PRS resources from Cell 2 and Cell 4 are transmitted by the same Tx chain.

GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured. The UE is configured with DRX cycle of 0.64s.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.6.

In *NR-TDOA-ProvideAssistanceData*, there are two *NR-linkedDL-PRS-ResourceSetID-PRS-AggregationList*. The first list indicates aggregation of resource sets from Cell 1 and Cell 3, and the second list indicates aggregation of resource sets from Cell 2 and Cell 4. In *NR-TDOA-RequestLocationInformation*, *nr-DL-PRS-JointMeasurementRequestedPFL-List* is included and indicates aggregation of PFLs on NR RF channel #1 and NR RF channel #2.

| Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.9.1.3.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

## A.7.9.2 PRS-RSRP measurements

### A.7.9.2.1 SA measurement accuracy with PRS in FR2 in RRC_INACTIVE

#### A.7.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy in RRC_INACTIVE is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.7.9.2.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.2.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.9.2.1.2-2 and A.7.9.2.1.2-3. In all test cases, Cell 1 is the PCell.

**Table A.7.9.2.1.2-1: PRS-RSRP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

**Table A.7.9.2.1.2-2: PRS-RSRP general test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |

| NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.9.2.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.9.2.1.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

**Table A.7.9.2.1.3-1: PRS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test. | |

NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

### A.7.9.2.2 PRS-RSRP measurements with reduced number of sample in RRC_INACTIVE

#### A.7.9.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.7.9.2.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.2.2.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.9.2.2.2-2 and A.7.9.2.2.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.7.9.2.2.2-1.

**Table A.7.9.2.2.2-1: PRS-RSRP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

| NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.9.2.2.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.9.2.2.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

**Table A.7.9.2.2.3-1: PRS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |

NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test.
NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

## A.7.9.3 UE Rx-Tx time difference measurements

### A.7.9.3.1 UE Rx-Tx time difference measurements in RRC_INACTIVE

#### A.7.9.3.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario.

The supported test configuration is listed in table A.7.9.3.1.1-1.

**Table A.7.9.3.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is configured to transmit SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

#### A.7.9.3.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.9.3.1.2-1.

**Table A.7.9.3.1.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| AoA setup | | 1 | Setup 1 as specified in clause A.3.15 | | Setup 1 as specified in clause A.3.15 | |

| PRS Resource slot offset | slot | 1 | 0 | 4 | 0 | 4 |
| SRS configuration | | 1 | POS-SRS.3 | N/A | POS-SRS.3 | N/A |
| $N_{oc}$ Note 2 | dBm/SCS | 1 | -89 | | -89 | |
| $N_{oc}$ Note 2 | dBm/15 kHz | 1 | -98 | | -98 | |
| PRS $\hat{E}_s/I_{ot}$ | dB | 1 | -2.41 | -12.12 | -2.41 | -12.12 |
| PRS $\hat{E}_s/N_{oc}$ | dB | 1 | -2 | -10 | -2 | -10 |
| PRS-RSRP Note 3 | dBm/SCS kHz | 1 | -91 | -99 | -91 | -99 |
| Io | dBm/190.08 MHz | 1 | -54.62 | -54.62 | -54.62 | -54.62 |
| Propagation Condition | | 1 | AWGN | | AWGN | |

NOTE 1: Void.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.7.9.3.1.3 Test requirements

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

### A.7.9.3.2 UE Rx-Tx time difference measurement accuracy with reduced number of samples in FR2 SA

#### A.7.9.3.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy with reduced number of samples in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.9.3.2.1-1.

**Table A.7.9.3.2.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test. The UE is configured to measure UE Rx-Tx time difference using reduced number of samples via *requestedDL-PRS-ProcessingSamples* in *NR-Multi-RTT-RequestLocationInformation*.

UE shall be configured to enter into RRC_INACTIVE state before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.7.9.3.2.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.9.3.2.2-1.

**Table A.7.9.3.2.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |
|---|---|---|---|---|

| Io | dBm/190.08 MHz | 1 | -51.76 | -51.76 |
| Propagation Condition | | 1 | AWGN | |

NOTE 1: Void.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.7.9.3.2.3 Test requirements

The UE Rx-Tx time difference measurement with reduced number of samples in RRC_INACTIVE state fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

### A.7.9.3.3 UE Rx-Tx time difference measurement accuracy with PRS bandwidth aggregation in FR2 SA in RRC_INACTIVE state

#### A.7.9.3.3.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25A. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations are listed in table A.7.9.3.3.1-1.

**Table A.7.9.3.3.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* TS 37.355 [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE before the start of the test.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

The general test parameters and cell specific test parameters are as given in table A.7.9.3.3.1-2 and table A.7.9.3.3.1-3, respectively.

**Table A.7.9.3.3.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | Cell 1 | Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34]. |

| Propagation Condition | | 1 | AWGN | |

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

Note 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

Note 6: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 7: As observed with 0 dBi gain antenna at the centre of the quiet zone.

### A.7.9.3.3.2 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25A for both Cell 1 and Cell 2.

# A.7.9.4 PRS-RSRPP measurements

## A.7.9.4.1 SA measurement accuracy in FR2 in RRC INACTIVE

### A.7.9.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

### A.7.9.4.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.4.1.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.7.9.4.1.2-1.

**Table A.7.9.4.1.2-1: PRS-RSRPP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

| NOTE 2: PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | |
| NOTE 3: Void | | | | | |
| NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone | | | | | |
| NOTE 5: Void | | | | | |
| NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.7.9.4.1.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2. if the reported PRS-RSRPP is in the range shown in table A.7.9.4.1.3-1.

**Table A.7.9.4.1.3-1: PRS-RSRPP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRPP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRPP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table [10.1.24.Z.1-2], selected according to the Io used in the test. | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class | |

## A.7.9.4.2 SA measurement accuracy with reduced PRS samples in FR2 in RRC INACTIVE

### A.7.9.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy with $N_{sample}$ = 1 in FR2in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clauses 10.1.38.2. The UE under test should support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*, and the TE indicates the UE to perform positioning measurements with reduced number of samples. The PRS bandwidth is contained within the initial DL BWP and the power difference between the serving cell SS-RSRP and neighbour cell PRS-RSRP is within 6 dB, so that $N_{sample}$ = 1 is assumed.

### A.7.9.4.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.4.2.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.7.9.4.2.2-1: PRS-RSRPP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

**Table A.7.9.4.2.2-2: PRS-RSRPP general test parameters**

| NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. | | | |
| NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation. | | | |

### A.7.9.4.2.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2 if the reported PRS-RSRPP is in the range shown in table A.7.9.4.2.3-1.

**Table A.7.9.4.2.3-1: PRS-RSRPP absolute accuracy test requirement**

| | Test requirement [Notes1,2,3] |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRPP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRPP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table [10.1.24.Z.1-2], selected according to the Io used in the test. | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class | |

# A.7.9.5 RSCPD Measurements

## A.7.9.5.1 RSCPD with RSTD measurement accuracy in FR2 SA in RRC_INACTIVE

### A.7.9.5.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.7.9.5.1.1-1.

**Table A.7.9.5.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_INACTIVE, shall be provided to the UE before the start of the test.

### A.7.9.5.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.7.9.5.1.2-1.

**Table A.7.9.5.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters in RRC_INACTIVE**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | Cell 1 | Cell 2 |
| PRS ARFCN | | Freq1 | |

| Propagation conditions | | AWGN | AWGN |
| Antenna configuration | | 1x2 | 1x2 |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS. | | | |

**Table A.7.7. 5.1.2-2: RSTD accuracy OTA related test parameters**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | Cell 1 | Cell 2 |
| Angle of arrival configuration | | Setup 1 according to clause A.3.15.1 | |
| Assumption for UE beams Note 5 | | Rough | |
| $N_{oc}$ Note1 | dBm/SCS Note3 | -89 | |
| PRS $\hat{E}_s / N_{oc}$ | dB | -5.7 | -11.9 |
| PRP Note2 | dBm/SCS | -94.7 | -100.9 |
| PRS $\hat{E}_s / I_{ot}$ Note 4 | dB | -6 | -13 |
| Io Note2 | dBm/190.08 MHz Note3 | -55.75 | -55.75 |
| NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |
| NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted. | | | |
| NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. | | | |
| NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4. | | | |
| NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation. | | | |

#### A.7.9.5.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

## A.7.9.6 RSCP Measurements

### A.7.9.6.1 RSCP with UE Rx-Tx time difference measurement accuracy in FR2 SA

#### A.7.9.6.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of DL RSCP measurement reported with UE Rx-Tx time difference measurement in RRC_INACTIVE is within the specified limits. This test will verify the requirements in clause 10.1.44.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.9. 6.1.1-1.

**Table A.7.9.6.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData , NR-Multi-RTT-RequestLocationInformation* with *nr-DL-PRS-RSCP-Request* from LMF via LPP and *NR-Multi-RTT-MeasurementCapability* as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCP in RRC INACTIVE, shall be provided to the UE before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

### A.7.9.6.1.2 Test parameters

The test parameters are given in table A.7.9. 6.1.2-1.

**Table A.7.9. 6.1.2-1: RSCP with UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter | Unit | Test configuration | Test 1 | |
|---|---|---|---|---|
| | | | Cell 1 | Cell 2 |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 7: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.

#### A.7.9.6.1.3 Test requirements

The RSCP measurement reported with UE Rx-Tx time difference measurements fulfils the RSCP measurement accuracy requirements specified in clause 10.1.44.2 for both Cell 1 and Cell 2.

# A.7.10 Measurement Procedure in RRC_IDLE

## A.7.10.1 RSTD Measurements

### A.7.10.1.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_IDLE state for non-RedCap UE

#### A.7.10.1.1.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 4.5.2.5 for RSTD measurements in RRC_IDLE without eDRX. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.10.1.1.1-1.

**Table A.7.10.1.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_IDLE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s).

The UE is configured with DRX cycle of 0.64 s.

The general test parameters are listed in table A.7.10.1.1.1-2, and cell specific test parameters are listed in table A.7.10.1.1.1-2, table A.7.10.1.1.1-3, and table A.7.10.1.1.1-4.

**Table A.7.10.1.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Reference cell | | | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells | | | Cell 2 and Cell 3 | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data. |

| PRS $\hat{E}_s/I_{ot}$ | | dB | -6 | -13 | -13 |
| Propagation Condition | | | AWGN | | |

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

#### A.7.10.1.1.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 4.5.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

### A.7.10.1.2 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_IDLE state with eDRX > 10.24s

#### A.7.10.1.2.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 4.5.2.5 for RSTD measurements in RRC_IDLE with eDRX and periodic reporting. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.10.1.2.1-1.

**Table A.7.10.1.2.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_IDLE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least $\Delta T$ ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_IDLE.

The test concludes after the UE reports the first set of measurements based on the configured reporting periodicity.

The general test parameters and cell specific test parameters are as given in table A.7.10.1.2.1-2 and table A.7.10.1.2.1-3, respectively.

**Table A.7.10.1.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1 | Cell 1 | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

#### A.7.10.1.2.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 4.5.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2. The requirement shall be evaluated based on the first measurement report received from the UE.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is considered complete after the UE has reported first set of measurement based on the configured reporting periodicity.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

### A.7.10.1.3 NR RSTD measurement reporting delay test case for PRS aggregation in FR2 SA in RRC_IDLE state

#### A.7.10.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation in RRC_IDLE state meets the requirements specified in clause 4.5.2.6 in AWGN propagation condition in FR2 in standalone scenario when two intra-band contiguous positioning frequency layers (PFLs) are configured.

The test environment and configurations reuse the test case for RRC_INACTIVE state defined in clause A.7.8.1.3 except that UE shall be in RRC_IDLE state and all 6 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DLBWP during T2.

#### A.7.10.1.3.2 Test requirements

The RSTD measurement time with PRS aggregation in RRC_IDLE state fulfils the requirements specified in clause 4.5.2.6.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from Cell 2 and Cell 5, Cell 3 and Cell 6 respectively with respect to the Cell 1 and Cell 4 from which the transmitted PRS resources are also aggregated, within the time duration specified in clause 4.5.2.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events observed during repeated tests shall be at least 90%, where the reported RSTD measurement with PRS aggregation for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3.

## A.7.10.2 PRS-RSRP Measurements

### A.7.10.2.1 PRS-RSRP reporting delay test case for single positioning frequency layer in RRC_IDLE state for non-RedCap UE in FR2

#### A.7.10.2.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 4.5.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_IDLE state. Supported test configurations are shown in table A.7.10.2.1.1-1.

**Table A.7.10.2.1.1-1: supported test configurations for PRS RSRP measurement for FR2.**

| Config | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED state, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_IDLE state.

The beginning of the time interval T2 is the first PRS resource occasion occurring $\Delta T$ after the slot #n, where $\Delta T$ = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.10.2.1.1-2 and table A.7.10.2.1.1-3.

**Table A.7.10.2.1.1-2: General test parameters for PRS RSRP measurement reporting delay.**

| Parameter | Unit | Test configuration | Value | Comment |

| Propagation Condition | | Config 1 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

#### A.7.10.2.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 4.5.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 4.5.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

### A.7.10.2.2 PRS-RSRP reporting delay test case in RRC_IDLE state in FR2 when eDRX cycle > 10.24s

#### A.7.10.2.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 4.5.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_IDLE when configured with eDRX.

The supported test configurations in table A.7.8.2.3.1-1 apply for this test.

The test procedure in clause A.7.8.2.3.1 apply for this test, except that during T2, UE is in RRC_IDLE state.

The general test parameters as specified in table A.7.8.2.3.1-2 apply for this test, except those specified in table A.7.10.2.2.1-1.

The cell specific test parameters as specified in table A.7.8.2.3.1-3 apply for this test.

**Table A.7.10.2.2.1-1: General test parameters for PRS RSRP measurement reporting delay**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| CN eDRX configuration | | Config 1 | eDRX cycle = 40.96s<br>PTW length = 1.28s | |

### A.7.10.2.2.2 Test Requirements

The test requirements in clause A.7.8.2.3.2 apply for this test, except that the time limits are specified in clause 4.5.3.5.

## A.7.10.3 RSCPD Measurements

### A.7.10.3.1 DL RSCPD reported with RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_IDLE state

#### A.7.10.3.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD reported with RSTD measurement meets the requirements specified in clause 5.6.7.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

The test environment is the same as in clause A.7.10.1.1 with the following additional configuration in table A.7.10.3.1.1-1 and description.

In *nr-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE also is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s) to be measured within the configured time window.

**Table A.7.10.3.1.1-1: Time window configuration**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Indicated time window configuration | Config 1 | | MTW.1 | As specified in clause A.3.38 |

#### A.7.10.3.1.2 Test Requirements

The DL RSCPD reported with RSTD measurement time fulfils the requirements specified in clause 5.6.7.5.

The UE shall perform and report the DL RSCPD and DL RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in

clause 10.1.23.3 and the reported RSCPD measurement for each correct event shall be within the RSCPD reporting range specified in clause 10.1.43.3.

# A.7.11 Measurement Performance Requirements in RRC_IDLE

## A.7.11.1 RSTD Measurements

### A.7.11.1.1 NR RSTD measurement accuracy test case for single positioning frequency layer in FR2 SA in RRC_IDLE state for non-RedCap UE

#### A.7.11.1.1.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement in RRC_IDLE state without eDRX meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.11.1.1.1-1.

**Table A.7.11.1.1.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2. The UE is configured with DRX cycle of 0.64s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

The RSTD accuracy test parameters are listed in table A.7.11.1.1.1-2, and the RSTD accuracy OTA related test parameters are listed in table A.7.11.1.1.1-3.

**Table A.7.11.1.1.1-2: RSTD accuracy test parameters**

| NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. | | | | | |
| NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4. | | | | | |
| NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation. | | | | | |

### A.7.11.1.1.2 Test requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.7.11.1.2 RSTD measurement accuracy test case for single positioning frequency layer in FR2 SA in RRC_IDLE state with eDRX > 10.24s

#### A.7.11.1.2.1 Test purpose and environment

The purpose of this test is to verify that RSTD measurements performed in RRC_IDLE with eDRX and periodic reporting satisfy the measurement accuracy requirements specified in clause 10.1.23.2. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.11.1.2.1-1.

**Table A.7.11.1.2.1-1: Supported test configurations**

| PCell configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are two synchronous cells in the test: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 4.5.2.5.

The general test parameters and cell specific test parameters are as given in table A.7.11.1.2.1-2 and table A.7.11.1.2.1-3 respectively.

**Table A.7.11.1.2.1-2: General test parameters**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Reference cell | | 1 | Cell 1 | |
| Neighbour cell | | 1 | Cell 2 | |
| RF Channel Number | | 1 | 1 | For Cell 1 and Cell 2 |
| $BW_{channel}$ | MHz | 1 | 200: $N_{RB,c}$ = 132 | |
| SSB configuration | | 1 | SSB.3 FR2 | |
| SMTC configuration | | 1 | SMTC.1 | |
| CP length | | 1 | Normal | |
| DRX | s | 1 | 0.64 | |
| eDRX cycle length | s | 1 | 40.96 | |
| PTW length | s | 1 | 1.28 | |
| Reporting periodicity | s | 1 | 20 | *reportingInterval* for periodic reporting defined in TS 37.355 [34]. |
| Time offset between serving and neighbour cell | µs | 1 | 3 | Synchronous cells |
| Expected RSTD | µs | 1 | 3 | |
| Expected RSTD uncertainty | µs | 1 | 5 | |

**Table A.7.11.1.2.1-3: Cell specific test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|
| | | Cell 1 | Cell 2 | Cell 1 | Cell 2 |
| AoA setup | | Setup 1 as specified in clause A.3.15 | | | |

| Propagation conditions | | AWGN | | | |
| Antenna configuration | | 1x2 | 1x2 | 1x2 | 1x2 |

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 6: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 7: As observed with 0 dBi gain antenna at the centre of the quiet zone.

### A.7.11.1.2.2 Test requirements

The reported RSTD measurements shall fulfill the absolute accuracy requirements specified in clause 10.1.23.2.

#### A.7.11.1.3 NR RSTD measurement accuracy test case for PRS aggregation in FR2 SA in RRC_IDLE state

##### A.7.11.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement results with PRS aggregation in RRC_IDLE state meets the requirements specified in clause 10.1.23A.2 in AWGN propagation condition in FR2 in standalone scenario when two intra-band contiguous positioning frequency layers (PFLs) are configured.

The test environment and configurations reuse the test case for RRC_INACTIVE state defined in clause A.7.9.1.3, except that UE shall be in RRC_IDLE state and all 4 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP during T2.

##### A.7.11.1.3.2 Test requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

### A.7.11.2 PRS-RSRP measurements

#### A.7.11.2.1 PRS-RSRP measurement accuracy test case for non-RedCap UE in FR2 in RRC_IDLE state

##### A.7.11.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy in RRC_IDLE is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

##### A.7.11.2.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.11.2.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in tables A.7.11.2.1.2-2 and A.7.11.2.1.2-3. In all test cases, Cell 1 is the PCell.

**Table A.7.11.2.1.2-1: PRS-RSRP supported test configurations**

| Configuration | Description |
|---|---|

| $\hat{E}_s / I_{ot}^{BB}$ Note4 | dB | -2.41 | -12.12 | -2.41 | -12.12 |
| Io Note2 | dBm/190.08 MHz Note3 | -54.62 | | -54.62 | |
| NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | |
| NOTE 2: PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | |
| NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. | | | | | |
| NOTE 4: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4. | | | | | |
| NOTE 5: Information about types of UE beam is given in annex B.2.1.3 and does not limit UE implementation or test system implementation. | | | | | |

#### A.7.11.2.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.11.2.1.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

**Table A.7.11.2.1.3-1: PRS-RSRP absolute accuracy test requirement**

| | **Test requirement** Notes1,2,3 |
|---|---|
| Cell 1 | PRS_RP1 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +$G_{max}$ |
| Cell 2 | PRS_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +$G_{max}$ |
| Note 1: | PRS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration. |
| Note 2: | δ is the RSRP absolute accuracy requirement from table 10.1.24.2.1-2, selected according to the Io used in the test. |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from table B.2.1.6.1-1, selected according to the UE power class. |

### A.7.11.2.2 PRS-RSRP measurement accuracy test case in RRC_IDLE state in FR2 for case 2 when eDRX cycle > 10.24s

#### A.7.11.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_IDLE with eDRX meets the accuracy requirements specified in clauses 10.1.24.2.1 and 10.1.24.2.2 in an environment with AWGN propagation conditions.

#### A.7.11.2.2.1 Test parameters

The supported test configurations in table A.7.9.2.1.2-1 apply for this test.

The test procedure in clause A.7.9.2.1.2 apply for this test, except that UE is in RRC_IDLE state.

The general test parameters as specified in table A.7.9.2.1.2-2 apply for this test, except those additionally specified in table A.7.11.2.2.1-1.

The OTA related test parameters in table A.7.9.2.1.2-3 apply for this test.

**Table A.7.11.2.2.1-1: PRS-RSRP test parameters**

| **Parameter** | **Unit** | **Test configuration** | **Value** | **Comment** |
|---|---|---|---|---|
| eDRX cycle length (for CN eDRX) | s | 1, 2, 3 | 40.96 | |
| PTW window length | s | 1, 2, 3 | 1.28 | |

#### A.7.11.2.2.2 Test Requirements

The test requirements in clause A.7.9.2.1.3 apply for this test.

# A.7.11.3 RSCPD measurements

## A.7.11.3.1 RSCPD with RSTD measurement accuracy in FR2 SA in RRC_IDLE

### A.7.11.3.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.7.11.3.1.1-1.

**Table A.7.11.3.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP [34] as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_IDLE, shall be provided to the UE before the start of the test.

### A.7.11.3.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.7.11.3.1.1.2-1.

**Table A.7.11.3.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters in RRC_IDLE**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | Cell 1 | Cell 2 |
| PRS ARFCN | | Freq1 | |
| Duplex mode | | TDD | |
| TDD configuration | | TDDConf.3.1 | |
| $BW_{channel}$ | MHz | 200: $N_{RB,c}$ = 132 | |
| Downlink initial BWP configuration | | DLBWP.0.1 | - |
| Downlink dedicated BWP configuration | | DLBWP.1.1 | - |
| Uplink initial BWP configuration | | ULBWP.0.1 | - |
| Uplink dedicated BWP configuration | | ULBWP.1.1 | - |
| DRX cycle configuration | | Not applicable | - |
| TRS configuration | | TRS.2.1 TDD | - |
| TCI state | | TCI.State.0 | - |
| PDSCH Reference measurement channel | | SR.3.1 TDD | - |
| RMSI CORESET Reference Channel | | CR.3.1 TDD | - |
| Control channel RMC | | CCR.3.1 TDD | - |
| OCNG Patterns | | OP.1 | OP.1 |
| SSB configuration | | SSB.3 FR2 | SSB.3 FR2 |
| SMTC configuration | | SMTC.1 | SMTC.1 |
| PRS configuration | | PRS.1.1 FR2 | PRS.1.1 FR2 |
| PRS Resource slot offset | slot | 0 | 4 |
| Expected RSTD | µs | N/A | 3 |
| Expected RSTD uncertainty | µs | N/A | 5 |
| Time offset with Cell 1 | µs | - | 3 |
| PDSCH/PDCCH subcarrier spacing | kHz | 120 | 120 |
| EPRE ratio of PSS to SSS | dB | 0 | 0 |
| EPRE ratio of PBCH_DMRS to SSS | | | |
| EPRE ratio of PBCH to PBCH_DMRS | | | |
| EPRE ratio of PDCCH_DMRS to SSS | | | |

| | | | |
|---|---|---|---|
| EPRE ratio of PDCCH to PDCCH_DMRS | | | |
| EPRE ratio of PDSCH_DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH_DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| EPRE ratio of PRS to SSS | dB | 0 | 0 |
| Propagation conditions | | AWGN | AWGN |
| Antenna configuration | | 1x2 | 1x2 |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS. | | | |

**Table A.7. 11.3.1.2-1-2: RSTD accuracy OTA related test parameters**

| Parameter | Unit | Test 1 | |
|---|---|---|---|
| | | Cell 1 | Cell 2 |
| Angle of arrival configuration | | Setup 1 according to clause A.3.15.1 | |
| Assumption for UE beams Note 5 | | Rough | |
| $N_{OC}$ Note1 | dBm/SCS Note3 | -89 | |
| PRS $\hat{E}_s / N_{oc}$ | dB | -5.7 | -11.9 |
| PRP Note2 | dBm/SCS | -94.7 | -100.9 |
| PRS $\hat{E}_s / I_{ot}$ Note 4 | dB | -6 | -13 |
| Io Note2 | dBm/190.08 MHz Note3 | -55.75 | -55.75 |
| NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled. | | | |
| NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted. | | | |
| NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. | | | |
| NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] table 6.2.1.3-4. | | | |
| NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation. | | | |

### A.7.11.3.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

# Annex B (normative): Conditions for RRM requirements applicability for operating bands

## B.1 Conditions for NR RRC_IDLE state mobility

### B.1.1 Introduction

In annex B.1, the following conditions are specified:

- UE conditions which shall apply for UE intra-frequency measurements procedures and requirements in clause 4,
- UE conditions which shall apply for UE inter-frequency measurements procedures and requirements in clause 4.

### B.1.2 Conditions for measurements on NR intra-frequency cells for cell re-selection

This clause defines the following conditions for NR intra-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.1.2-1 for FR1 NR cells.

The conditions are defined in table B.1.2-2 for FR2 NR cells.

**Table B.1.2-1: Conditions for intra-frequency cell re-selection in FR1**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | dB |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | ≥ -4 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -123 | -120 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -122.5 | -119.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -122 | -119 | |
| | NR_FDD_FR1_F | -121.5 | -118.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -121 | -118 | |
| | NR_FDD_FR1_H | -120.5 | -117.5 | |
| | NR_FDD_FR1_N | -117.5 | -114.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.1.2-2: Conditions for intra-frequency cell re-selection in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum SSB_RP Note 2, Note 3 | | | | | | | SSB Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{SSB}$ | | | | | | | dB |
| | | | $SCS_{SSB}$ = 120 kHz | | | | | | $SCS_{SSB}$ = 240 kHz | |
| | | | UE Power class | | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 6 | 1, 2, 3, 4, 5 | |
| Conditions | Rx Beam Peak | n257 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | -104.9 | -104.9 | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | -105.1 | -105.1 | | |
| | | n259 | | | -105.5 | | -102.0 | | | |
| | | n260 | -104.3 | | -106.5 | -122.8+$Y_4$ | | | | |
| | | n261 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | | -104.9 | | |
| | | n262 | -102.3 | -105.6 | -103.6 | -118.8+$Y_4$ | | | | |
| | Spherical coverage Note 1 | n257 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | -96.9 | -96.9 | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n259 | | | -92.7 | | | | | |
| | | n258 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | -97.1 | -97.1 | | |
| | | n260 | -96.3 | | -93.9 | -110.8+$Z_4$ | | | | |
| | | n261 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | | -96.9 | | |
| | | n262 | -94.1 | -93.7 | -90.5 | -106.7+$Z_4$ | | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.1.2-2:*

*- The value of Y for Power class 4 is FFS, where $Y_4$ is the rough/fine beam gain difference in Rx beam peak direction for Power class 4*

*- The value of Z for Power class 4 is FFS, where $Z_4$ is the rough/fine beam gain difference in spherical coverage directions for Power class 4.*

# B.1.2A Conditions for measurements on NR intra-frequency cells under CCA for cell re-selection

This clause defines the following conditions for NR intra-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.1.2A-1 for FR1 NR cells under CCA.

**Table B.1.2A-1: Conditions for intra-frequency cell re-selection in FR1 under CCA**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_CCA_FR1_I | -120 | -117 | ≥ -4 |
| | NR_CCA_FR1_J | -119.5 | -116.5 | |
| NOTE 1: NR operating band groups are as defined in clause 3.5.2. | | | | |

## B.1.3 Conditions for measurements on NR inter-frequency cells for cell re-selection

This clause defines the following conditions for NR inter-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions defined in table B.1.2-1 for FR1 NR intra-frequency cell re-selection shall also apply for FR1 NR inter-frequency cells in this clause.

The conditions defined in table B.1.2-2 for FR2 NR intra-frequency cell re-selection shall also apply for FR2 NR inter-frequency cells in this clause.

## B.1.3A Conditions for measurements on NR inter-frequency cells under CCA for cell re-selection

This clause defines the following conditions for NR inter-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions defined in table B.1.2A-1 for FR1 NR intra-frequency cells under CCA shall also apply to FR1 NR inter-frequency cells under CCA in this clause.

## B.1.4 Conditions for measurements on NR intra-frequency cells for cell re-selection for RedCap

This clause defines the following conditions for RedCap NR intra-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.1.4-1 and table B.1.4-2 for 2 Rx and 1 Rx RedCap respectively for FR1 NR cells.

The conditions are defined in table B.1.4-3 for FR2 NR cells.

**Table B.1.4-1: Conditions for intra-frequency cell re-selection in FR1 for 2Rx RedCap**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | dB |
| Conditions | NR_FDD_ FR1_A, NR_TDD_ FR1_A, NR_SDL_FR1_A | -124 | -121 | ≥ -4 |
| | NR_FDD_ FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | |
| | NR_FDD_ FR1_C NR_TDD_ FR1_C | -123 | -120 | |
| | NR_FDD_ FR1_D, NR_TDD_ FR1_D | -122.5 | -119.5 | |
| | NR_FDD_ FR1_E, NR_TDD_ FR1_E | -122 | -119 | |
| | NR_FDD_ FR1_F | -121.5 | -118.5 | |
| | NR_FDD_ FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -121 | -118 | |
| | NR_FDD_ FR1_H | -120.5 | -117.5 | |
| | NR_FDD_ FR1_N | -117.5 | -114.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.1.4-2: Conditions for intra-frequency cell re-selection in FR1 for 1Rx RedCap**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | SSB Ês/Iot |
|---|---|---|---|

| | | dBm / $SCS_{SSB}$ | | dB |
|---|---|---|---|---|
| | | **$SCS_{SSB}$ = 15 kHz** | **$SCS_{SSB}$ = 30 kHz** | |
| **Conditions** | NR_FDD_ FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | ≥ -4 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | |
| | NR_FDD_ FR1_C NR_TDD_FR1_C | -123 | -120 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -122.5 | -119.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -122 | -119 | |
| | NR_FDD_FR1_F | -121.5 | -118.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -121 | -118 | |
| | NR_FDD_FR1_H | -120.5 | -117.5 | |
| | NR_FDD_ FR1_N | -117.5 | -114.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.1.4-3: Conditions for intra-frequency cell re-selection in FR2 for RedCap**

| Parameter | Angle of arrival | NR operating bands | Minimum SSB_RP Note 2, Note 3 | | | | | | SSB Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{SSB}$ | | | | | | dB |
| | | | $SCS_{SSB}$ = 120 kHz | | | | | $SCS_{SSB}$ = 240 kHz | |
| | | | UE Power class | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 7 | 1, 2, 3, 4, 5, 7 |
| Conditions | Rx Beam Peak | n257 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | -120.4+$Y_5$ | -113.1+$Y_7$ | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | -120.6+$Y_5$ | -113.1+$Y_7$ | | |
| | | n261 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | | -113.1+$Y_7$ | | |
| | Spherical coverage Note 1 | n257 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | -112.4+$Z_5$ | -102.2+$Z_7$ | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | -112.6+$Z_5$ | -102.2+$Z_7$ | | |
| | | n261 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | | -102.2+$Z_7$ | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.1.2-2:*

*- The value of Y for Power classes 4, 5 and 7 is FFS, where $Y_4$, $Y_5$ and $Y_7$ are the rough/fine beam gain differences in Rx beam peak direction for Power classes 4, 5 and 7 respectively*

*- The value of Z for Power classes 4, 5 and 7 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for Power classes 4, 5, and 7 respectively*

## B.1.5 Conditions for measurements on NR inter-frequency cells for cell re-selection for RedCap

This clause defines the following conditions for RedCap NR inter-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions defined in table B.1.4-1 and table B.1.4-2 for 2 Rx and 1 Rx RedCap respectively for FR1 RedCap NR intra-frequency cell re-selection shall also apply for FR1 RedCap NR inter-frequency cells in this clause.

The conditions defined in table B.1.4-3 for FR2 RedCap NR intra-frequency cell re-selection shall also apply for FR2 RedCap NR inter-frequency cells in this clause.

## B.1.6 Conditions for measurements on NR intra-frequency cells for cell re-selection for satellite access

This clause defines the following conditions for NR intra-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions are defined in table B.1.6-1 for FR1 NR cells.

**Table B.1.6-1: Conditions for intra-frequency cell re-selection in FR1 for satellite access**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| **Conditions** | NR_FDD_SAB_FR1_A | -124 | -121 | ≥ -4 |
| NOTE 1: NR operating band groups for satellite access are defined in clause 3.5.2A. | | | | |

## B.1.7 Conditions for measurements on NR inter-frequency cells for cell re-selection for satellite access

This clause defines the following conditions for NR inter-frequency measurements performed based on SSBs for cell re-selection: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions defined in table B.1.6-1 for FR1 NR intra-frequency cell re-selection for satellite access shall also apply for FR1 NR inter-frequency cells for satellite access in this clause.

# B.2 Conditions for UE measurements procedures and performance requirements in RRC_CONNECTED state

## B.2.1 Introduction

### B.2.1.1 General

In annex B.2, the following conditions are specified:

- The conditions for RRC connection release with redirection to NR requirements in clause 6.2.3.2.1,
- The conditions for UE transmit timing adjustment in clause 7.1
- UE conditions which shall apply for UE intra-frequency measurements procedures and requirements in clause 9,

UE conditions which shall apply for UE inter-frequency measurements procedures and requirements in clause 9,

- UE conditions which shall apply for UE intra-frequency measurements performance requirements in clause 10,
- UE conditions which shall apply for UE inter-frequency measurements performance requirements in clause 10.

## B.2.1.2 Derivation of Minimum SSB_RP values for FR1

[FFS]

## B.2.1.3 Derivation of Minimum SSB_RP values for FR2

*Editor's note:*

*- The Assumption for UE beams (fine or rough) in annex A RRM test cases is defined based on power class 3, and unless otherwise stated also applies for other UE power classes*

### B.2.1.3.1 Minimum SSB_RP values for Rx Beam Peak angle of arrival

Minimum SSB_RP values in tables B.2.2-2 and B.2.3-2 are based on Reference sensitivity for the Operating band and for the UE power class, taking a baseline of UE Power class 3 in Band n260 with 50 MHz channel bandwidth.

Minimum SSB_RP = Reference sensitivity $_{PC3, n260, 50 MHz}$ +Y -10Log$_{10}$(PRB$_{Refsens}$ x 12) – SNR$_{Refsens}$ + SSB Ês/Iot + $\Delta MB_{P,n}$

where:

Reference sensitivity $_{PC3, n260, 50 MHz}$ is the reference sensitivity value in dBm specified for power class 3 in Band n260 for 50 MHz Channel bandwidth in table 7.3.2.3-1 of TS 38.101-2 [19];

Y is the gain difference between fine and rough beams, which is defined in table B.2.1.3.1-1;

**Table B.2.1.3.1-1: Gain difference Y between fine and rough beams, Rx beam peak direction**

| Value "Y" in dB, for each UE power class | | | | | | |
|---|---|---|---|---|---|---|
| **1** | **2** | **3** | **4** | **5** | **6** | **7** |
| 18 | 9.0 | 7.0 | FFS | 15.5 | 15.5 | FFS |

PRB$_{Refsens}$ is N$_{PRB}$ associated with subcarrier spacing 120 kHz for 50 MHz in TS 38.101-2 [19] Table 5.3.2-1, and is 32;

12 is the number of subcarriers in a PRB;

SNR$_{Refsens}$ is the SNR used for simulation of Refsens and EIS spherical coverage, and is -1 dB;

SSB Ês/Iot is the minimum value required by the UE to perform measurements, and is -6 dB for intra-frequency measurements and -4 dB for inter-frequency measurements. The only contribution to Iot is the UE internal noise;

$\Delta MB_{P,n}$ is the UE multi-band relaxation factor value in dB specified in TS 38.101-2 [19] clause 6.2.1.

The calculated Minimum SSB_RP value for the baseline of UE power class 3 in Band n260 is (-109.5+$\Delta MB_{P,n}$) dBm/120 kHz for intra-frequency measurements and (-107.5+$\Delta MB_{P,n}$) dBm/120 kHz for inter-frequency measurements.

The following methodology to define the Minimum SSB_RP level for power class X (PC_X) and operating band Y (Band_Y) is used:

For Intra-frequency: Minimum SSB_RP (PC_X, Band_Y) = -109.5 dBm/120 kHz + Refsens $_{PC_X, Band_Y, 50 MHz}$ – Refsens $_{PC3, n260, 50 MHz}$ + Y $_{PC_X}$ – Y $_{PC3}$ +$\Delta MB_{P,n}$,

For Inter-frequency: Minimum SSB_RP (PC_X, Band_Y) = -107.5 dBm/120 kHz + Refsens $_{PC_X, Band_Y, 50 MHz}$ – Refsens $_{PC3, n260, 50 MHz}$ + Y $_{PC_X}$ – Y $_{PC3}$ +$\Delta MB_{P,n}$.

#### B.2.1.3.2 Minimum SSB_RP values for angle of arrival within Spherical coverage

Minimum SSB_RP values in tables B.2.2-2 and B.2.3-2 are based on EIS spherical coverage for the Operating band and for the UE power class, taking a baseline of UE power class 3 in Band n260 with 50 MHz channel bandwidth.

Minimum SSB_RP = EIS spherical coverage $_{PC3, n260, 50 MHz}$ +Z -10Log$_{10}$(PRB$_{Refsens}$ x 12) – SNR$_{Refsens}$ + SSB Ês/Iot + $\Delta MB_{S,n}$

where:

EIS spherical coverage $_{PC3, n260, 50 MHz}$ is the EIS spherical coverage value in dBm specified for power class 3 in Band n260 for 50 MHz Channel bandwidth in TS 38.101-2 [19] Table 7.3.4.3-1;

Z is the gain difference between fine and rough beams, and is defined in table B.2.1.3.2-1;

**Table B.2.1.3.2-1: Gain difference Z between fine and rough beams, Spherical coverage directions**

| Value "Z" in dB, for each UE power class | | | | | | |
|---|---|---|---|---|---|---|
| **1** | **2** | **3** | **4** | **5** | **6** | **7** |
| 18 | 9.0 | 7.0 | FFS | 15.5 | 15.5 | FFS |

PRB$_{Refsens}$ is $N_{PRB}$ associated with subcarrier spacing 120 kHz for 50 MHz in TS 38.101-2 [19] Table 5.3.2-1, and is 32;

12 is the number of subcarriers in a PRB;

SNR$_{Refsens}$ is the SNR used for simulation of Refsens and EIS spherical coverage, and is -1 dB;

SSB Ês/Iot is the minimum value required by the UE to perform measurements, and is -6 dB for intra-frequency measurements and -4 dB for inter-frequency measurements. The only contribution to Iot is the UE internal noise;

$\Delta MB_{S,n}$ is the UE multi-band relaxation factor value in dB specified in TS 38.101-2 [19] clause 6.2.1.

The calculated Minimum SSB_RP value for the baseline of UE power class 3 in Band n260 is (-96.9+$\Delta MB_{S,n}$) dBm/120 kHz for intra-frequency measurements and is (-94.9+$\Delta MB_{S,n}$) dBm/120 kHz for inter-frequency measurements.

The following methodology to define the Minimum SSB_RP level for power class X (PC_X) and operating band Y (Band_Y) is used:

For Intra-frequency: Minimum SSB_RP (PC_X, Band_Y) = -96.9 dBm/120 kHz + EIS spherical coverage $_{PC_X, Band_Y, 50 MHz}$ – EIS spherical coverage $_{PC3, n260, 50 MHz}$ + Z $_{PC_X}$ – Z $_{PC3}$ +$\Delta MB_{S,n}$

For Inter-frequency: Minimum SSB_RP (PC_X, Band_Y) = -94.9 dBm/120 kHz + EIS spherical coverage $_{PC_X, Band_Y, 50 MHz}$ – EIS spherical coverage $_{PC3, n260, 50 MHz}$ + Z $_{PC_X}$ – Z $_{PC3}$ +$\Delta MB_{S,n}$

### B.2.1.4 Gain to SS-RSRP and CSI-RSRP measurement point for FR1

In FR1 conducted requirements are specified at the UE antenna connector, which is also the SS-RSRP and CSI-RSRP measurement point.

### B.2.1.5 Gain to SS-RSRP and CSI-RSRP measurement point for FR2

#### B.2.1.5.1 Gain to SS-RSRP and CSI-RSRP measurement point for Rx Beam Peak angle of arrival

In clause 5.1.1 of TS 38.215 [4] SS-RSRP and CSI-RSRP is defined to be measured based on the combined signal from antenna elements corresponding to a given receiver branch. The reference point for requirement parameters from the UE perspective is the input of the UE antenna array. The gain “G” relates the combined signal from antenna elements corresponding to a given receiver branch to the reference point for requirement parameters.

The gain “G” affects absolute signal level values reported by the UE.

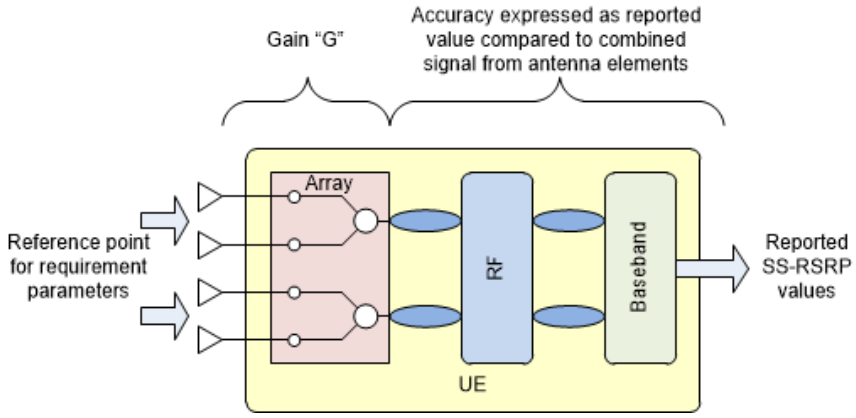

**Figure B.2.1.5.1-1: Gain and Reference point for requirement parameters**

**Table B.2.1.5.1-1: UE gain G, Rx beam peak direction**

| | UE Power class | | | | | | |
|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Minimum, dBi | 0 | FFS | -10 | FFS | -5 | -5 | FFS |
| Maximum, dBi | +50 | FFS | +20 | FFS | +44 | +44 | FFS |

Gain range in spherical coverage directions may be lower than in Rx beam peak direction, according to the difference between the EIS spherical coverage value specified in TS 38.101-2 [19] clause 7.3.4 and the Reference sensitivity level specified in TS 38.101-2 [19] clause 7.3.2.

### B.2.1.5.2 Gain to SS-RSRP measurement point for different frequency

In any specific direction, the UE gain G may be different depending on frequencies. The gain "$G_{inter}$" affects relative signal level values reported by the UE when measuring between different frequencies and is specified in table B.2.1.5.2-1 for each power class.

**Table B.2.1.5.2-1: UE gain difference between inter-frequencies $G_{inter}$**

| | UE Power class | | | | | | |
|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Maximum difference, dB | 3 | FFS | 3 | FFS | [3] | [3] | FFS |

### B.2.1.5.3 Alignment of Rough beam to Rx beam Peak

The definition of Rx Beam Peak in TS 38.101-2 [19] clause 7.3.2 is based on Throughput at Reference sensitivity power level, and assumes use of Fine beams. In many RRM scenarios the UE can use Rough beams, but the largest Rough beam gain direction may not be aligned to the Fine beam Peak direction.

When the Rx Beam Peak is selected and defined based on Fine Beams, the rough beam gain in that direction may be lower than the largest rough beam gain in another direction within Spherical Coverage. The term "D" is the maximum allowed rough beam gain reduction, and is specified in table B.2.1.5.3-1 for each power class.

**Table B.2.1.5.3-1: Rough Beam gain reduction "D" in Rx Beam Peak direction**

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|
| Maximum gain reduction, dB | 11.5 | FFS | 5.5 | FFS | 10 | 10 | FFS |

## B.2.1.6 Gain to PRS-RSRP measurement point for FR2

### B.2.1.6.1 Gain to PRS-RSRP measurement point for Rx Beam Peak angle of arrival

In clause 5.1.28 of TS 38.215 [4] PRS-RSRP is defined to be measured based on the combined signal from antenna elements corresponding to a given receiver branch. The reference point for requirement parameters from the UE perspective is the input of the UE antenna array. The gain "G" relates the combined signal from antenna elements corresponding to a given receiver branch to the reference point for requirement parameters.

The gain "G" affects absolute signal level values reported by the UE.

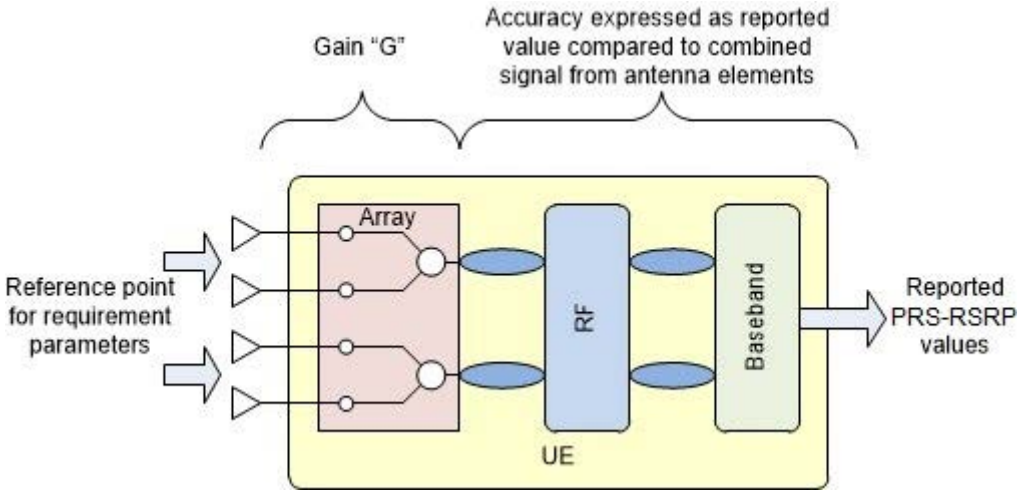

**Figure B.2.1.6.1-1: Gain and Reference point for requirement parameters**

The gain range for each power class is specified in table B.2.1.61-1.

**Table B.2.1.6.1-1: UE gain G, Rx beam peak direction**

| | UE Power class | | | | |
|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 7 |
| Minimum, dBi | FFS | FFS | -10 | FFS | FFS |
| Maximum, dBi | FFS | FFS | +20 | FFS | FFS |

Gain range in spherical coverage directions may be lower than in Rx beam peak direction, according to the difference between the EIS spherical coverage value specified in TS 38.101-2 [19] clause 7.3.4 and the Reference sensitivity level specified in TS 38.101-2 [19] clause 7.3.2.

## B.2.1.7 Derivation of Minimum SSB_RP values for FR2-NTN for satellite access

### B.2.1.7.1 Minimum SSB_RP values for Rx Beam

Minimum SSB_RP values to be used in clauses B.2.17 and B.2.18 are based on Reference sensitivity for the Operating band and for the UE VSAT Type, taking as baseline Band n512 with 50 MHz channel bandwidth.

Minimum SSB_RP = Reference sensitivity $_{UE_Type,\ n512,\ 50\ MHz}$ +Y -10Log$_{10}$(PRB$_{Refsens}$ x 12) – SNR$_{Refsens}$ + SSB Ês/Iot + $\Delta MB_{P,n}$

where:

Reference sensitivity $_{UE_Type,\ n512,\ 50\ MHz}$ is the reference sensitivity value in dBm declared for each UE vendor and following the range specified for each VSAT UE type in Band n512 for 50 MHz Channel bandwidth in table 10.3.2-2 of TS 38.101-5 [42];

Y is the gain difference between fine and rough beams, which is defined in table B.2.1.7.1-1;

**Table B.2.1.7.1-1: Gain difference Y between fine and rough beams, Rx beam peak direction**

| UE VSAT Type | 1 and 4 (mechanically steered antenna) | 2, 3 and 5 (electronically steered antenna) |
|---|---|---|
| **Gain "Y" (dB)** | 0 | [FFS] |

$PRB_{Refsens}$ is $N_{PRB}$ associated with subcarrier spacing 120 kHz for 50 MHz in TS 38.101-5 [41] Table 5.3.2-2, and is 32;

12 is the number of subcarriers in a PRB;

$SNR_{Refsens}$ is the SNR used for simulation of Refsens and EIS spherical coverage, and is -1 dB;

SSB $\hat{E}s/Iot$ is the minimum value required by the UE to perform measurements, and is -6 dB for intra-frequency measurements and -4 dB for inter-frequency measurements. The only contribution to Iot is the UE internal noise;

$\Delta MB_{P,n}$ is 0.

The following methodology to define the Minimum SSB_RP level for VSAT UE Type X(VSAT_X) and operating band Y (Band_Y) is used:

For Intra-frequency: Minimum SSB_RP (VSAT_X, Band_Y) = Intra-frequency Minimum SSB_RP (VSAT_X, Band_512) + $Refsens_{VSAT_X,\ Band_Y,\ 50\ MHz} - Refsens_{VSAT_X,\ n512,\ 50\ MHz}$;

For Inter-frequency: Minimum SSB_RP (VSAT_X, Band_Y) = Inter-frequency Minimum SSB_RP (VSAT_X, Band_512) + $Refsens_{VSAT_X,\ Band_Y,\ 50\ MHz} - Refsens_{VSAT_X,\ n512,\ 50\ MHz}$;

## B.2.1.8 Gain to SS-RSRP for FR2-NTN for satellite access

In clause 5.1.1 of TS 38.215 [4] SS-RSRP and CSI-RSRP is defined to be measured based on the combined signal from antenna elements corresponding to a given receiver branch. The reference point for requirement parameters from the UE perspective is the input of the UE antenna array. The gain "G" relates the combined signal from antenna elements corresponding to a given receiver branch to the reference point for requirement parameters.

The gain "G" affects absolute signal level values reported by the UE.

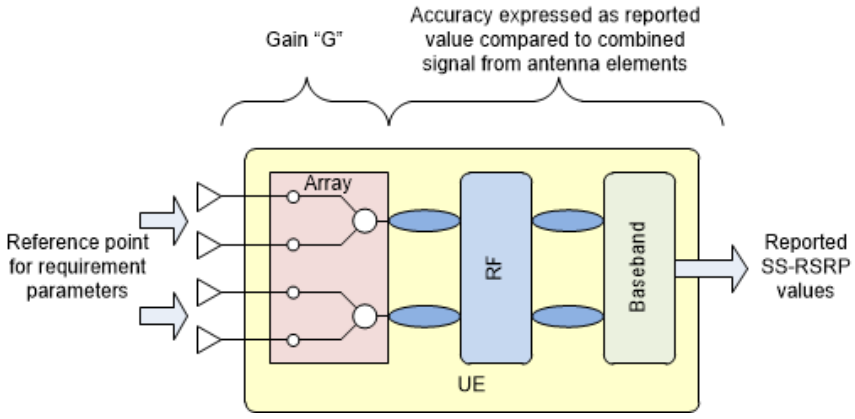

**Figure B.2.1.8.1-1: Gain and Reference point for requirement parameters**

The gain range for each type of VSAT equipment is specified in table B.2.1.8.1-1.

**Table B.2.1.8.1-1: NTN gain G**

| | VSAT type 3 | VSAT type 1/2/4/5 |
|---|---|---|
| Minimum, dBi | 25.6 | 28.5 |

| | | |
|---|---|---|
| Maximum, dBi | From 45 to 55 | From 45 to 55 |

## B.2.2 Conditions for NR intra-frequency measurements

This clause defines the following conditions for NR intra-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.2-1 for FR1 NR cells.

The conditions are defined in table B.2.2-2 for FR2 NR cells.

**Table B.2.2-1: Conditions for intra-frequency measurements in FR1**

| Parameter | NR operating band groups [Note1] | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | dB |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -127 | -124 | ≥ -6 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -126.5 | -123.5 | |
| | NR_TDD_FR1_C | -126 | -123 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -125.5 | -122.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -125 | -122 | |
| | NR_FDD_FR1_F | -124.5 | -121.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -124 | -121 | |
| | NR_FDD_FR1_H | -123.5 | -120.5 | |
| | NR_FDD_ FR1_N | -120.5 | -117.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.2.2-2: Conditions for intra-frequency measurements in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum SSB_RP Note 2, Note 3 | | | | | | | SSB Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{SSB}$ | | | | | | | dB |
| | | | $SCS_{SSB}$ = 120 kHz | | | | | | $SCS_{SSB}$ = 240 kHz | |
| | | | UE Power class | | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 6 | 1, 2, 3, 4, 5, 6 | |
| Conditions | Rx Beam Peak | n257 | -110.3 | -113.8 | -112.1 | -127.8+$Y_4$ | -123.4+$Y_5$ | -107.9 | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-6 |
| | | n258 | -110.3 | -113.8 | -112.1 | -127.8+$Y_4$ | -123.6+$Y_5$ | -108.1 | | |
| | | n259 | | | -108.5 | | -120.5+$Y_5$ | | | |
| | | n260 | -107.3 | | -109.5 | -125.8+$Y_4$ | | | | |
| | | n261 | -110.3 | -113.8 | -112.1 | -127.8+$Y_4$ | | -107.9 | | |
| | | n262 | -105.3 | -108,6 | -106.6 | -121.8+$Y_4$ | | | | |
| | Spherical coverage Note 1 | n257 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | -115.4+$Z_5$ | -99.9 | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-6 |
| | | n258 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | -115.6+$Z_5$ | -100.1 | | |
| | | n259 | | | -95.7 | | | | | |
| | | n260 | -99.3 | | -96.9 | -113.8+$Z_4$ | | | | |
| | | n261 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | | -99.9 | | |
| | | n262 | -97.1 | -96.7 | -93.5 | -109.7+$Z_4$ | | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.2-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively.*

## B.2.3 Conditions for NR inter-frequency measurements

This clause defines the following conditions for NR inter-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.3-1 for FR1 NR cells.

The conditions are defined in table B.2.3-2 for FR2 NR cells.

**Table B.2.3-1: Conditions for inter-frequency measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -125 | -122 | ≥ -4 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -124.5 | -121.5 | |
| | NR_FDD_FR1_C , NR_TDD_FR1_C | -124 | -121 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -124.5 | -120.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -123 | -120 | |
| | NR_FDD_FR1_F | -122.5 | -119.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -122 | -119 | |
| | NR_FDD_FR1_H | -121.5 | -118.5 | |
| | NR_FDD_ FR1_N | -118.5 | -115.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.2.3-2: Conditions for inter-frequency measurements in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum SSB_RP Note 2, Note 3 | | | | | | SSB Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{SSB}$ | | | | | | dB |
| | | | $SCS_{SSB}$ = 120 kHz | | | | | $SCS_{SSB}$ = 240 kHz | |
| | | | UE Power class | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 6 | 1, 2, 3, 4, 5, 6 | |
| Conditions | Rx Beam Peak | n257 | -108.3 | -111.8 | -110.1 | -125.8+$Y_4$ | -121.4+$Y_5$ | -105.9 | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -108.3 | -111.8 | -110.1 | -125.8+$Y_4$ | -121.6+$Y_5$ | -106.1 | | |
| | | n259 | | | -106.5 | | -118.5+$Y_5$ | | | |
| | | n260 | -105.3 | | -107.5 | -123.8+$Y_4$ | | | | |
| | | n261 | -108.3 | -111.8 | -110.1 | -125.8+$Y_4$ | | -105.9 | | |
| | | n262 | -103.3 | -106.6 | -104.6 | -119.8+$Y_4$ | | | | |
| | Spherical coverage Note 1 | n257 | -100.3 | -100.8 | -99.2 | -116.8+$Z_4$ | -113.4+$Z_5$ | -97.9 | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -100.3 | -100.8 | -99.2 | -116.8+$Z_4$ | -113.6+$Z_5$ | -98.1 | | |
| | | n259 | | | -93.7 | | | | | |
| | | n260 | -97.3 | | -94.9 | -111.8+$Z_4$ | | | | |
| | | n261 | -100.3 | -100.8 | -99.2 | -116.8+$Z_4$ | | -97.9 | | |
| | | n262 | -95.1 | -94.7 | -91.5 | -107.7+$Z_4$ | | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.3-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

# B.2.4 Conditions for NR L1-RSRP reporting

## B.2.4.1 Conditions for SSB based L1-RSRP reporting

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.4.1-1 for FR1 NR cells.

The conditions are defined in table B.2.4.1-2 for FR2 NR cells.

**Table B.2.4.1-1: Conditions for SSB based L1-RSRP measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | ≥ -3 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | |
| | NR_TDD_FR1_C | -123 | -120 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -122.5 | -119.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -122 | -119 | |
| | NR_FDD_FR1_F | -121.5 | -118.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -121 | -118 | |
| | NR_FDD_FR1_H | -120.5 | -117.5 | |
| | NR_FDD_ FR1_N | -117.5 | -114.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.2.4.1-2: Conditions for SSB based L1-RSRP measurements in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum SSB_RP Note 2, Note 3 | | | | | | | SSB Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{SSB}$ | | | | | | | dB |
| | | | $SCS_{SSB}$ = 120 kHz | | | | | | $SCS_{SSB}$ = 240 kHz | |
| | | | UE Power class | | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 6 | 1, 2, 3, 4, 5 | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.4.1-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

## B.2.4.2 Conditions for CSI-RS based L1-RSRP reporting

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on CSI-RS: CSI-RS_RP and CSI-RS Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.4.2-1 for FR1 NR cells.

The conditions are defined in table B.2.4.2-2 for FR2 NR cells.

**Table B.2.4.2-1: Conditions for CSI-RS based L1-RSRP measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum CSI-RS_RP | | | CSI-RS Ês/Iot |
|---|---|---|---|---|---|
| | | dBm / $SCS_{CSI-RS}$ | | | dB |
| | | $SCS_{CSI-RS}$ = 15 kHz | $SCS_{CSI-RS}$ = 30 kHz | $SCS_{CSI-RS}$ = 60 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | -118 | ≥ -3 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | -117.5 | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -123 | -120 | -117 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -122.5 | -119.5 | -116.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -122 | -119 | -116 | |
| | NR_FDD_FR1_F | -121.5 | -118.5 | -115.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -121 | -118 | -115 | |
| | NR_FDD_FR1_H | -120.5 | -117.5 | -114.5 | |
| | NR_FDD_ FR1_N | -117.5 | -114.5 | -111.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | | |

**Table B.2.4.2-2: Conditions for CSI-RS based L1-RSRP measurements in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum CSI-RS_RP Note 2, Note 3 | | | | | | CSI-RS Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{CSI-RS}$ | | | | | | dB |
| | | | $SCS_{CSI-RS}$ = 60 kHz | | | | | $SCS_{CSI-RS}$ = 120 kHz | |
| | | | UE Power class | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 1, 2, 3, 4, 5 | |
| Conditions | Rx Beam Peak | n257 | -110.3 | -113.8 | -112.1 | -127.8+$Y_4$ | -123.4+$Y_5$ | (Value for $SCS_{CSI-RS}$ = 60 kHz) +3 dB | ≥-3 |

| | | n258 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | -115.6+$Z_5$ | | |
| | | n259 | | | -95.7 | | | | |
| | | n260 | -99.3 | | -96.9 | -113.8+$Z_4$ | | | |
| | | n261 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | | | |
| | | n262 | -97.1 | -96.7 | -93.5 | -109.7+$Z_4$ | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum CSI-RS Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.4.2-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

## B.2.5 Conditions for RRC connection release with redirection to NR

This clause defines the following conditions for RRC connection release with redirection to NR: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.5-1 for FR1 NR cells.

The conditions are defined in table B.2.5-2 for FR2 NR cells.

**Table B.2.5-1: Conditions for for RRC connection release with redirection to NR in FR1**

| Parameter | NR operating band groups [Note1] | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -125 | -122 | ≥ -4 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -124.5 | -121.5 | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -124 | -121 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -124.5 | -120.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -123 | -120 | |
| | NR_FDD_FR1_F | -122.5 | -119.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -122 | -119 | |
| | NR_FDD_FR1_H | -121.5 | -118.5 | |
| | NR_FDD_ FR1_N | -118.5 | -115.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.2.5-2: Conditions for RRC connection release with redirection to NR in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum SSB_RP Note 2, Note 3 | | | | | | SSB Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{SSB}$ | | | | | | dB |
| | | | $SCS_{SSB}$ = 120 kHz | | | | | $SCS_{SSB}$ = 240 kHz | |
| | | | UE Power class | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 1, 2, 3, 4, 5 | |
| Conditions | Rx Beam Peak | n257 | -108.3 | -111.8 | -110.1 | -125.8+$Y_4$ | -121.4+$Y_5$ | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -108.3 | -111.8 | -110.1 | -125.8+$Y_4$ | -121.6+$Y_5$ | | |
| | | n259 | | | -106.5 | | -118.5+$Y_5$ | | |
| | | n260 | -105.3 | | -107.5 | -123.8+$Y_4$ | | | |
| | | n261 | -108.3 | -111.8 | -110.1 | -125.8+$Y_4$ | | | |
| | | n262 | -103.3 | -106.6 | -104.6 | -119.8+$Y_4$ | | | |
| | Spherical coverage Note 1 | n257 | -100.3 | -100.8 | -99.2 | -116.8+$Z_4$ | -113.4+$Z_5$ | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-4 |
| | | n258 | -100.3 | -100.8 | -99.2 | -116.8+$Z_4$ | -113.6+$Z_5$ | | |
| | | n259 | | | -93.7 | | | | |
| | | n260 | -97.3 | | -94.9 | -111.8+$Z_4$ | | | |
| | | n261 | -100.3 | -100.8 | -99.2 | -116.8+$Z_4$ | | | |
| | | n262 | -95.1 | -94.7 | -91.5 | -107.7+$Z_4$ | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.5.2-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

# B.2.8 Conditions for NR L1-SINR reporting

## B.2.8.1 Conditions for L1-SINR reporting with CSI-RS based CMR and no dedicated IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on CSI-RSs: CSI-RS_RP and CSI-RS Ês/Iot, applicable for a corresponding operating band.

The conditions defined in table B.2.8.1-1 for FR1 NR cells.

The conditions defined in table B.2.8.1-2 for FR2 NR cells.

**Table B.2.8.1-1: Conditions for L1-SINR measurements with CSI-RS based CMR only in FR1**

| Parameter | NR operating band groups Note1 | Minimum CSI-RS_RP | | | CSI-RS CMR Ês/Iot |
|---|---|---|---|---|---|
| | | dBm / $SCS_{CSI-RS}$ | | | dB |
| | | $SCS_{CSI-RS}$ = 15 kHz | $SCS_{CSI-RS}$ = 30 kHz | $SCS_{CSI-RS}$ = 60 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | -118 | ≥ -3 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | -117.5 | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -123 | -120 | -117 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -122.5 | -119.5 | -116.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -122 | -119 | -116 | |

| | | n261 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum CSI-RS Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

## B.2.8.2 Conditions for L1-SINR reporting with SSB based CMR and dedicated IMR configured

### B.2.8.2.1 L1-SINR reporting with SSB based CMR and dedicated ZP-IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on SSBs and ZP-IMRs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions defined in table B.2.8.2.1-1 for FR1 NR cells.

The conditions defined in table B.2.8.2.1-2 for FR2 NR cells.

**Table B.2.8.2.1-1: Conditions for L1-SINR measurements with SSB based CMR and ZP-IMR in FR1**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | dB |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | ≥ -3 |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

### B.2.8.2.2 L1-SINR reporting with SSB based CMR and dedicated NZP-IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on SSBs and NZP-IMRs: SSB_RP, SSB Ês/Iot and NZP-IMR Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.8.2.2-1 for FR1 NR cells.

The conditions are defined in table B.2.8.2.2-2 for FR2 NR cells.

**Table B.2.8.2.2-1: Conditions for L1-SINR measurements with SSB based CMR and NZP-IMR in FR1**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP dBm / $SCS_{SSB}$ | | SSB Ês/Iot | NZP-IMR Ês/Iot |
|---|---|---|---|---|---|
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | dB | dB |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -121 | -118 | ≥ 0 | ≥ 0 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -120.5 | -117.5 | | |

| | | n261 | -96.3 | -96.8 | -95.2 | -112.8+$Z_4$ | | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.8.2.2-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

## B.2.8.3 Conditions for L1-SINR reporting with CSI-RS based CMR and dedicated IMR configured

### B.2.8.3.1 L1-SINR reporting with CSI-RS based CMR and dedicated ZP-IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on CSI-RSs and ZP-IMRs: CSI-RS_RP and CSI-RS Ês/Iot, applicable for a corresponding operating band.

The conditions defined in table B.2.8.3.1-1 for FR1 NR cells.

The conditions defined in table B.2.8.3.1-2 for FR2 NR cells.

**Table B.2.8.3.1-1: Conditions for L1-SINR measurements with CSI-RS based CMR and ZP-IMR in FR1**

| Parameter | NR operating band groups Note1 | Minimum CSI-RS_RP | | | CSI-RS Ês/Iot |
|---|---|---|---|---|---|
| | | dBm / $SCS_{CSI-RS}$ | | | dB |
| | | $SCS_{CSI-RS}$ = 15 kHz | $SCS_{CSI-RS}$ = 30 kHz | $SCS_{CSI-RS}$ = 60 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -124 | -121 | -118 | ≥ -3 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -123.5 | -120.5 | -117.5 | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -123 | -120 | -117 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -122.5 | -119.5 | -116.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -122 | -119 | -116 | |
| | NR_FDD_FR1_F | -121.5 | -118.5 | -115.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -121 | -118 | -115 | |

| | NR_FDD_ FR1_N | -114.5 | -111.5 | -108.5 | | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | | | |

**Table B.2.8.3.2-2: Conditions for L1-SINR measurements with CSI-RS based CMR and NZP-IMR in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum CSI-RS_RP Note 2, Note 3 | | | | | | CSI-RS Ês/Iot | NZP-IMR Ês/Iot |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | dBm / $SCS_{CSI-RS}$ | | | | | | dB | dB |
| | | | $SCS_{CSI-RS}$ = 60 kHz | | | | | $SCS_{CSI-RS}$ = 120 kHz | | |
| | | | UE Power class | | | | | UE Power class | | |
| | | | 1 | 2 | 3 | 4 | 5 | 1, 2, 3, 4, 5 | | |
| Conditions | Rx Beam Peak | n257 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | -120.4+$Y_5$ | (Value for $SCS_{CSI-RS}$ = 60 kHz) +3 dB | ≥0 | ≥0 |
| | | n258 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | -120.6+$Y_5$ | | | |
| | | n259 | | | -105.5 | | -117.5+$Y_5$ | | | |
| | | n260 | -104.3 | | -106.5 | -122.8+$Y_4$ | | | | |
| | | n261 | -107.3 | -110.8 | -109.1 | -124.8+$Y_4$ | | | | |
| | Spherical coverage Note 1 | n257 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | -112.4+$Z_5$ | (Value for $SCS_{CSI-RS}$ = 60 kHz) +3 dB | ≥0 | ≥0 |
| | | n258 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | -112.6+$Z_5$ | | | |
| | | n259 | | | -92.7 | | -109.5+$Z_5$ | | | |
| | | n260 | -96.3 | | -93.9 | -110.8+$Z_4$ | | | | |
| | | n261 | -99.3 | -99.8 | -98.2 | -115.8+$Z_4$ | | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum CSI-RS Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.8.3.2-2:*

*- The value of Y for power classes 4 and 5 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

## B.2.9 Conditions for NR intra-frequency measurements under CCA

This clause defines the following conditions for NR intra-frequency measurements unde CCA and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.9-1 for NR cells under CCA.

**Table B.2.9-1: Conditions for intra-frequency measurements under CCA**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_CCA_FR1_I | -123 | -120 | ≥ -6 |
| | NR_CCA_FR1_J | -122.5 | -119.5 | |
| NOTE 1: NR operating band groups are as defined in clause 3.5.2. | | | | |

## B.2.10 Conditions for NR inter-frequency measurements under CCA

This clause defines the following conditions for NR inter-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.10-1 for NR cells under CCA.

**Table B.2.10-1: Conditions for inter-frequency measurements under CCA**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_CCA_FR1_I | -121 | -118 | ≥ -4 |
| | NR_CCA_FR1_J | -120.5 | -117.5 | |
| NOTE 1: NR operating band groups are as defined in clause 3.5.2. | | | | |

## B.2.11 Conditions for NR L1-RSRP reporting under CCA

### B.2.11.1 Conditions for SSB based L1-RSRP reporting

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on SSBs under CCA: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.11.1-1 for NR cells under CCA.

**Table B.2.11.1-1: Conditions for SSB based L1-RSRP measurements under CCA**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_CCA_FR1_I | -120 | -117 | ≥ -3 |
| | NR_CCA_FR1_J | -119.5 | -116.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

## B.2.12 Conditions for NR CSI-RS based intra-frequency measurements

This clause defines the following conditions for NR CSI-RS based intra-frequency measurements and corresponding procedures performed based on CSI-RS: CSI_RP and CSI-RS Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.12-1 for FR1 NR cells.

The conditions are defined in table B.2.12-2 for FR2 NR cells.

**Table B.2.12-1: Conditions for CSI-RS based intra-frequency measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum CSI_RP | | | CSI-RS Ês/Iot |
|---|---|---|---|---|---|
| | | dBm / $SCS_{CSI-RS}$ | | | |
| | | $SCS_{CSI-RS}$ = 15 kHz | $SCS_{CSI-RS}$ = 30 kHz | $SCS_{CSI-RS}$ = 60 kHz | dB |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -127 | -124 | -121 | ≥ -6 |

| | | n261 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | | |
| NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.<br>NOTE 2: Values specified at the Reference point to give minimum CSI-RS Ês/Iot, with no applied noise.<br>NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19]. | | | | | | | | | |

*Editor's notes for Table B.2.12-2:*

- *The value of Y for power class 4 is FFS, where $Y_4$ is the rough/fine beam gain difference in Rx beam peak direction for power class 4*

- *The value of Z for power class 4 is FFS, where $Z_4$ is the rough/fine beam gain difference in spherical coverage directions for power class 4*

## B.2.13 Conditions for NR CSI-RS based inter-frequency measurements

This clause defines the following conditions for NR CSI-RS based inter-frequency measurements and corresponding procedures performed based on CSI-RS: CSI_RP and CSI-RS Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.13-1 for FR1 NR cells.

The conditions are defined in table B.2.13-2 for FR2 NR cells.

**Table B.2.13-1: Conditions for CSI-RS based inter-frequency measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum CSI_RP | | | CSI-RS Ês/Iot |
|---|---|---|---|---|---|
| | | dBm / $SCS_{CSI-RS}$ | | | dB |
| | | $SCS_{CSI-RS}$ = 15 kHz | $SCS_{CSI-RS}$ = 30 kHz | $SCS_{CSI-RS}$ = 60 kHz | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum CSI-RS Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.13-2:*

- *The value of Y for power class 4 is FFS, where $Y_4$ is the rough/fine beam gain difference in Rx beam peak direction for power class 4*

- *The value of Z for power class 4 is FFS, where $Z_4$ is the rough/fine beam gain difference in spherical coverage directions for power class 4.*

## B.2.14 Conditions for NR PRS-based measurements

This clause defines the following conditions for NR PRS-based measurements and corresponding procedures performed based on PRS: PRP and PRS Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.14-1 for FR1 NR cells.

The conditions are defined in table B.2.14-2 for FR2 NR cells.

**Table B.2.14-1: Conditions for NR PRS-based measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum PRP1,2 dBm / $SCS_{PRS}$ | | | PRS Ês/Iot dB | |
|---|---|---|---|---|---|---|
| | | $SCS_{PRS}$ = 15 kHz | $SCS_{PRS}$ = 30 kHz | $SCS_{PRS}$ = 60 kHz | | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -127 | -124 | -121 | ≥ -6 Note2<br>≥ -13 Note3<br>≥ -3 Note4<br>≥ -10 Note8 | ≥ -6 Note5<br>≥ -3 Note6<br>≥ 0 Note7 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -126.5 | -123.5 | -120.5 | | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -126 | -123 | -120 | | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -125.5 | -122.5 | -119.5 | | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -125 | -122 | -119 | | |
| | NR_FDD_FR1_F | -124.5 | -121.5 | -118.5 | | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -124 | -121 | -118 | | |
| | NR_FDD_FR1_H | -123.5 | -120.5 | -117.5 | | |
| | NR_FDD_FR1_N | -120.5 | -117.5 | -114.5 | | |

NOTE 1: NR operating band groups are defined in clause 3.5.2.
NOTE 2: PRS Ês/Iot for RSTD measurement reference cell PRS resource, and RSCPD measurement reference cell PRS resource.
NOTE 3: PRS Ês/Iot for RSTD measurement neighbor cell PRS resource, and RSCPD measurement neighbor cell PRS resource, PRS-RSRP measurement, PRS-RSRPP measurement and UE Rx-Tx time difference measurement, and DL RSCP measurement.
NOTE 4: PRS Ês/Iot for PRS-RSRP measurement, PRS-RSRPP measurement, UE Rx-Tx time difference measurement, DL RSCP measurement, and PRS-RSRP measurement when performed by 1Rx RedCap UE.
NOTE 5: PRS Ês/Iot for RSTD measurement neighbor cell PRS resource, RSCPD measurement neighbor cell PRS resource, PRS-RSRP measurement, PRS-RSRPP measurement, UE Rx-Tx time difference measurement when performed with reduced number of samples, and DL RSCP measurement.

NOTE 6: PRS Ês/Iot for RSTD measurement reference cell PRS resource when performed with reduced number of samples, and DL RSCPD measurement reference cell PRS resource.
NOTE 7: PRS Ês/Iot for PRS-RSRP measurement, PRS-RSRPP measurement, UE Rx-Tx time difference measurement when performed with reduced number of samples, and DL RSCP measurement.
NOTE 8: PRS Ês/Iot for RSTD measurement neighbor cell PRS resource, UE Rx-Tx measurements when performed by 1Rx RedCap UE, and PRS-RSRPP measurement when performed by 1Rx RedCap UE.

**Table B.2.14-2: Conditions for NR PRS-based measurements in FR2**

| Parameter | Angle of arrival | NR operating bands | Minimum PRP1,2 Note 2, Note 3 dBm / $SCS_{PRS}$ | | | | | | PRS Ês/Iot dB | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | $SCS_{PRS}$ = 120 kHz | | | | | $SCS_{PRS}$ = 60 kHz | | |
| | | | UE power class | | | | | UE power class | | |
| | | | 1 | 2 | 3 | 4 | 5 | 1, 2, 3, 4 | | |

| | | n258 | -110.3 | -113.8 | -112.1 | -127.8+$Y_4$ | -117.6+Y5 | | ≥ -13 Note5 | ≥ -3 Note8 |
| | | n259 | | | -108.5 | -124.7+$Y_4$ | -114.5+Y5 | | ≥ -3 Note6 | ≥ 0 Note9 |
| | | n260 | -107.3 | | -109.5 | -125.8+$Y_4$ | | | ≥ -10 Note8 | |
| | | n261 | -110.3 | -113.8 | -112.1 | -127.8+$Y_4$ | | | | |
| | | n262 | -105.3 | -108.6 | -106.6 | -121.8+$Y_4$ | | | | |
| | Spherical coverage Note 1 | n257 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | -109.4+Z5 | (Value for $SCS_{PRS}$ = 120 kHz) - 3 dB | ≥ -6 Note4 | ≥ -6 Note7 |
| | | n258 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | | | ≥ -13 Note5 | ≥ -3 Note8 |
| | | n259 | | | -95.7 | -115.7+$Z_4$ | -101.6+Z5 | | ≥ -3 Note6 | ≥ 0 Note9 |
| | | n260 | -99.3 | | -96.9 | -113.8+$Z_4$ | | | ≥ -10 Note8 | |
| | | n261 | -102.3 | -102.8 | -101.2 | -118.8+$Z_4$ | | | | |
| | | n262 | -97.1 | -94.7 | -93.5 | -109.7+$Z_4$ | | | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum PRS Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].
NOTE 4: PRS Ês/Iot for RSTD measurement reference cell PRS resource, and RSCPD measurement reference cell PRS resource.
NOTE 5: PRS Ês/Iot for RSTD measurement neighbor cell PRS resource, and RSCPD measurement neighbor cell PRS resource, PRS-RSRP measurement, PRS-RSRPP measurement and UE Rx-Tx time difference measurement, and DL RSCP measurement.
NOTE 6: PRS Ês/Iot for PRS-RSRP measurement, PRS-RSRPP measurement and UE Rx-Tx time difference measurement, DL RSCP measurement, and PRS-RSRP measurement when performed by 1Rx RedCap UE.
NOTE 7: PRS Ês/Iot for RSTD measurement neighbor cell PRS resource, RSCPD measurement neighbor cell PRS resource, PRS-RSRP measurement, PRS-RSRPP measurement, UE Rx-Tx time difference measurement when performed with reduced number of samples, and DL RSCP measurement.
NOTE 8: PRS Ês/Iot for RSTD measurement reference cell PRS resource when performed with reduced number of samples, and DL RSCPD measurement reference cell PRS resource.
NOTE 9: PRS Ês/Iot for PRS-RSRP measurement, PRS-RSRPP measurement, and UE Rx-Tx time difference measurement when performed with reduced number of samples, and DL RSCP measurement.
NOTE 10: PRS Ês/Iot for RSTD measurement neighbor cell PRS resource, UE Rx-Tx measurements when performed by 1Rx RedCap UE, and PRS-RSRPP measurement when performed by 1Rx RedCap UE.

*Editor's notes for Table B.2.14-2:*

- *The value of Y for power classes 4 and 1 is FFS, where $Y_4$ and $Y_5$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4 and 5 respectively*

*- The value of Z for power classes 4 and 5 is FFS, where $Z_4$ and $Z_5$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4 and 5 respectively*

## B.2.15 Conditions for NR intra-frequency measurements for RedCap

This clause defines the following conditions for RedCap NR intra-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.15-1 and table B.2.15-2 for 1 Rx and 2 Rx RedCap respectively for FR1 NR cells.

The conditions are defined in table B.2.15-3 for FR2 NR cells.

**Table B.2.15-1: Conditions for intra-frequency cell re-selection in FR1 for 1Rx RedCap**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_ FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -127 | -124 | ≥ -6 |
| | NR_FDD_ FR1_B, NR_TDD_FR1_B | -126.5 | -123.5 | |
| | NR_FDD_FR1_C, NR_TDD_ FR1_C | -126 | -123 | |
| | NR_FDD_ FR1_D, NR_TDD_ FR1_D | -125.5 | -122.5 | |
| | NR_FDD_ FR1_E, NR_TDD_ FR1_E | -125 | -122 | |
| | NR_FDD_ FR1_F | -124.5 | -121.5 | |
| | NR_FDD_ FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -124 | -121 | |
| | NR_FDD_ FR1_H | -123.5 | -120.5 | |
| | NR_FDD_FR1_N | -120.5 | -117.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.2.15-2: Conditions for intra-frequency cell re-selection in FR1 for 2Rx RedCap**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_ FR1_A, NR_TDD_ FR1_A, NR_SDL_FR1_A | -127 | -124 | ≥ -6 |
| | NR_FDD_ FR1_B, NR_TDD_FR1_B | -126.5 | -123.5 | |
| | NR_FDD_FR1_C, NR_TDD_ FR1_C | -126 | -123 | |
| | NR_FDD_ FR1_D, NR_TDD_ FR1_D | -125.5 | -122.5 | |
| | NR_FDD_ FR1_E, NR_TDD_ FR1_E | -125 | -122 | |
| | NR_FDD_ FR1_F | -124.5 | -121.5 | |
| | NR_FDD_ FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -124 | -121 | |
| | NR_FDD_ FR1_H | -123.5 | -120.5 | |
| | NR_FDD_FR1_N | -120.5 | -117.5 | |
| NOTE 1: NR operating band groups are defined in clause 3.5.2. | | | | |

**Table B.2.15-3: Conditions for intra-frequency measurements in FR2 for RedCap**

| Parameter | AoA | NR opt. bands | Minimum SSB_RP Note 2, Note 3 (dBm / $SCS_{SSB}$) | | SSB Ês/Iot (dB) |
|---|---|---|---|---|---|
| | | | $SCS_{SSB}$ = 120 kHz | $SCS_{SSB}$ = 240 kHz | |

| Parameter | AoA | NR opt. bands | Minimum SSB_RP Note 2, Note 3 (dBm / $SCS_{SSB}$) | | | | | | | SSB Ês/Iot (dB) |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | UE Power class | | | | | | UE Power class | |
| | | | 1 | 2 | 3 | 4 | 5 | 7 | 1, 2, 3, 4, 5 | |
| Conditions | Rx Beam Peak | n257 | -110.3 | -113.8 | -112.1 | -127.8 +$Y_4$ | -123.4 +$Y_5$ | -116.1 +$Y_7$ | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-6 |
| | | n258 | -110.3 | -113.8 | -112.1 | -127.8 +$Y_4$ | -123.6 +$Y_5$ | -116.1 +$Y_7$ | | |
| | | n261 | -110.3 | -113.8 | -112.1 | -127.8 +$Y_4$ | | -116.1 +$Y_7$ | | |
| | Sph. cov. Note 1 | n257 | -102.3 | -102.8 | -101.2 | -118.8 +$Z_4$ | -115.4 +$Z_5$ | -105.2 +$Z_7$ | (Value for $SCS_{SSB}$ = 120 kHz) +3 dB | ≥-6 |
| | | n258 | -102.3 | -102.8 | -101.2 | -118.8 +$Z_4$ | -115.6 +$Z_5$ | -105.2 +$Z_7$ | | |
| | | n261 | -102.3 | -102.8 | -101.2 | -118.8 +$Z_4$ | | -105.2 +$Z_7$ | | |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.
NOTE 2: Values specified at the Reference point to give minimum SSB Ês/Iot, with no applied noise.
NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by $\Delta MB_{P,n}$ and Spherical coverage values are increased by $\Delta MB_{S,n}$, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.2-2:*

- *The value of Y for power classes 4, 5 and 7 is FFS, where $Y_4$, $Y_5$ and $Y_7$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4, 5 and 7 respectively*

- *The value of Z for power classes 4, 5 and 7 is FFS, where $Z_4$, $Z_5$ and $Z_7$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4, 5 and 7 respectively*

## B.2.16 Conditions for NR inter-frequency measurements for RedCap

This clause defines the following conditions for RedCap NR inter-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.2.16-1 and table B.2.16-2 for 1 Rx and 2 Rx RedCap for FR1 NR cells.

The conditions are defined in table B.2.16-3 for FR2 NR cells.

**Table B.2.16-1: Conditions for inter-frequency measurements in FR1 for 1 Rx RedCap**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -125 | -122 | ≥ -4 |
| | NR_FDD_FR1_B, NR_TDD_FR1_B | -124.5 | -121.5 | |
| | NR_FDD_FR1_C, NR_TDD_FR1_C | -124 | -121 | |
| | NR_FDD_FR1_D, NR_TDD_FR1_D | -124.5 | -120.5 | |
| | NR_FDD_FR1_E, NR_TDD_FR1_E | -123 | -120 | |
| | NR_FDD_FR1_F | -122.5 | -119.5 | |
| | NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G | -122 | -119 | |
| | NR_FDD_FR1_H | -121.5 | -118.5 | |

NOTE 1: NR operating band groups are defined in clause 3.5.2.

**Table B.2.16-2: Conditions for inter-frequency measurements in FR1 for 2 Rx RedCap**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A | -125 | -122 | ≥ -4 |

*Editor's notes for Table B.2.3-2:*

- *The value of Y for power classes 4, 5 and 7 is FFS, where $Y_4$, $Y_5$ and $Y_7$ are the rough/fine beam gain differences in Rx beam peak direction for power classes 4, 5 and 7 respectively*

- *The value of Z for power classes 4, 5 and 7 is FFS, where $Z_4$, $Z_5$ and $Z_7$ are the rough/fine beam gain differences in spherical coverage directions for power classes 4, 5 and 7 respectively*

## B.2.17 Conditions for NR intra-frequency measurements for satellite access

This clause defines the following conditions for NR intra-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions are defined in table B.2.17-1 for FR1 NR cells.

**Table B.2.17-1: Conditions for intra-frequency measurements in FR1 for satellite access**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| **Conditions** | NR_FDD_SAB_FR1_A | -127 | -124 | ≥ -6 |
| NOTE 1: NR operating band groups for satellite access are defined in clause 3.5.2A. | | | | |

The conditions for FR2-NTN NR cells depend on the $EIS_{REFSENS_50M}$ declared by the vendor as described in clause 10.3.2 in [42] and on the UE VSAT Type. The minimum SSB_RP for the different bands shall be calculated for intra frequency measurements according to the formulation provided in clause B.2.1.7 of this specification.

# B.2.18 Conditions for NR inter-frequency measurements for satellite access

This clause defines the following conditions for NR inter-frequency measurements and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions are defined in table B.2.18-1 for FR1 NR cells.

**Table B.2.18-1: Conditions for inter-frequency measurements in FR1 for satellite access**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_SAB_FR1_A | -125 | -122 | ≥ -4 |
| NOTE 1: NR operating band groups for satellite access are defined in clause 3.5.2A. | | | | |

The conditions for FR2-NTN NR cells depend on the $EIS_{REFSENS_50M}$ declared by the vendor as described in clause 10.3.2 in [42] and on the UE VSAT Type. The minimum SSB_RP for the different bands shall be calculated for intra requency measurements according to the formulation provided in clause B.2.1.7 of this specification.

# B.2.19 Conditions for NR L1-RSRP reporting for satellite access

## B.2.19.1 Conditions for SSB based L1-RSRP reporting for satellite access

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on SSBs: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions are defined in table B.2.19.1-1 for FR1 NR cells.

**Table B.2.19.1-1: Conditions for SSB based L1-RSRP measurements in FR1 for satellite access**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_SAB_FR1_A | -124 | -121 | ≥ -3 |
| NOTE 1: NR operating band groups for satellite access are defined in clause 3.5.2A. | | | | |

## B.2.19.2 Conditions for CSI-RS based L1-RSRP reporting for satellite access

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on CSI-RS: CSI-RS_RP and CSI-RS Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions are defined in table B.2.19.2-1 for FR1 NR cells.

**Table B.2.19.2-1: Conditions for CSI-RS based L1-RSRP measurements in FR1 for satellite access**

| Parameter | NR operating band groups Note1 | Minimum CSI-RS_RP | | | CSI-RS Ês/Iot |
|---|---|---|---|---|---|
| | | dBm / $SCS_{CSI-RS}$ | | | dB |
| | | $SCS_{CSI-RS}$ = 15 kHz | $SCS_{CSI-RS}$ = 30 kHz | $SCS_{CSI-RS}$ = 60 kHz | |
| Conditions | NR_FDD_SAB_FR1_A | -124 | -121 | -118 | ≥ -3 |
| NOTE 1: NR operating band groups for satellite access are defined in clause 3.5.2A. | | | | | |

## B.2.20 Conditions for RRC connection release with redirection to NR for satellite access

This clause defines the following conditions for RRC connection release with redirection to NR: SSB_RP and SSB Ês/Iot, applicable for a corresponding operating band for satellite access.

The conditions are defined in table B.2.20-1 for FR1 NR cells.

**Table B.2.20-1: Conditions for for RRC connection release with redirection to NR in FR1 for satellite access**

| Parameter | NR operating band groups Note1 | Minimum SSB_RP | | SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm / $SCS_{SSB}$ | | dB |
| | | $SCS_{SSB}$ = 15 kHz | $SCS_{SSB}$ = 30 kHz | |
| Conditions | NR_FDD_SAB_FR1_A | -125 | -122 | ≥ -4 |
| NOTE 1: NR operating band groups for satellite access are defined in clause 3.5.2A. | | | | |

# B.3 RRM Requirements Exceptions

## B.3.1 Introduction

annex B.3 covers exceptions for side conditions based on receiver sensitivity for CA, DC, and SUL.

## B.3.2 Receiver sensitivity relaxation for CA

### B.3.2.1 Receiver sensitivity relaxation for UE supporting CA in FR1

For a UE supporting inter-band carrier aggregation configuration with uplink in NR band, if there is a relaxation of receiver sensitivity $\Delta R_{IB,c}$>0 dB as defined in clause 7.3A.3 of TS 38.101-1 [18], the relevant side conditions specifying received power levels (SSB_RP and Io) shall be increased by the amount $\Delta=\Delta R_{IB,c}$ defined for the corresponding downlink NR bands.

For a UE supporting CA configuration in FR1, the requirement in this clause applies for both SC and CA operation.

### B.3.2.2 Receiver sensitivity relaxation for UE configured with CA in FR1

#### B.3.2.2.1 Inter-band carrier aggregation

For a UE configured with inter-band carrier aggregation with active uplink in NR band, if there is a relaxation of receiver sensitivity $\Delta R_{IB,c}$>0 dB as defined in clause 7.3A.3 of TS 38.101-1 [18], the relevant side conditions specifying received power levels (SSB_RP and Io) shall be increased by the amount $\Delta=\Delta R_{IB,c}$ defined for the corresponding downlink NR bands.

If the relaxation Δ specified in this clause applies, then the relaxation specified in clause B.3.2.1 should not be applied.

#### B.3.2.2.2 Reference sensitivity exceptions due to UL harmonic interference for CA

In this clause, requirements exceptions are described for the UE configured with a band in FR1 when it is impacted by UL harmonic interference from another band in FR1 of the same CA configuration.

A relevant side condition (SSB_RP and Io) in a requirement shall be increased by the amount Δ=L2-L1, where L1 is the reference sensitivity level specified in clause 7.3.2 of TS 38.101-1 [18], and L2 is the reference sensitivity level based on the requirements in clause 7.3A.4 of TS 38.101-1 [18], when the following conditions are fulfilled,

- corresponding downlink component carriers on different NR bands are configured with CA and active,
- the upling is configured in the NR low operating band and is active,
- the uplink configuration is as specified in clause 7.3A.4 of TS 38.101-1 [18], and
- the exception requirements specified in clause 7.3A.4 of TS 38.101-1 [18] apply.

If the relaxation Δ specified in this clause applies, then the relaxation specified in clause B.3.2.1 should not be applied.

#### B.3.2.2.3 Reference sensitivity exceptions due to intermodulation interference due to 2UL CA

In this clause, requirements exceptions are described for the UE with an inter-band carrier aggregation with uplink assigned to two NR bands.

A relevant side condition (SSB_RP and Io) in a requirement shall be increased by the amount Δ=L2-L1, where L1 is the reference sensitivity level specified in clause 7.3.2 of TS 38.101-1 [18], and L2 is the reference sensitivity level based on the requirements in clause 7.3A.5 of TS 38.101-1 [18], when the following conditions are fulfilled,

- corresponding downlink component carriers on different bands are configured with CA and active,
- uplinks are assigned to two NR bands,
- the exception requirements specified in clause 7.3A.5 of TS 38.101-1 [18] apply.

If the relaxation Δ specified in this clause applies, then the relaxation specified in clause B.3.2.1 should not be applied.

### B.3.2.3 Receiver sensitivity relaxation for UE supporting CA in FR2

### B.3.2.4 Receiver sensitivity relaxation for UE configured with CA in FR2

#### B.3.2.4.1 Intra-band contiguous carrier aggregation

For a UE configured with intra-band contiguous carrier aggregation in NR band in FR2, if there is a relaxation of receiver sensitivity $\Delta R_{IB}$>0 dB as defined in clause 7.3A.2.1 of TS 38.101-2 [19] depending on the aggregated channel bandwidth, the relevant side conditions specifying received power levels (SSB_RP and Io) shall be increased by the amount $\Delta=\Delta R_{IB}$ defined for the corresponding downlink NR bands.

#### B.3.2.4.2 Intra-band non-contiguous carrier aggregation

For a UE configured with intra-band non-contiguous carrier aggregation in NR band in FR2, if there is a relaxation of receiver sensitivity $\Delta R_{IB}$>0 dB as defined in clause 7.3A.2.1 of TS 38.101-2 [19] depending on the aggregated channel bandwidth, the relevant side conditions specifying received power levels (SSB_RP and Io) shall be increased by the amount $\Delta=\Delta R_{IB}$ defined for the corresponding downlink NR bands.

## B.3.3 Receiver sensitivity relaxation for DC

### B.3.3.1 Receiver sensitivity relaxation for EN-DC

Editor's note: TBD

### B.3.3.2 Receiver sensitivity relaxation for NE-DC

Editor's note: TBD

## B.3.4 Receiver sensitivity relaxation for SUL

### B.3.4.1 Receiver sensitivity relaxation for UE supporting SUL in FR1

For a UE supporting a SUL configuration in FR1, if there is a relaxation of receiver sensitivity $\Delta R_{IB,c}$>0 dB as defined in clause 7.3C.3 of TS 38.101-1 [18], the relevant side conditions specifying received power levels (SSB_RP and Io) shall be increased by the amount $\Delta=\Delta R_{IB,c}$ defined for the corresponding downlink NR bands.

For a UE supporting a SUL configuration in FR1, the requirement in this clause applies for both SC and SUL operation.

### B.3.4.2 Receiver sensitivity relaxation for UE configured with SUL in FR1

#### B.3.4.2.1 Reference sensitivity exceptions due to UL harmonic interference for SUL

In this clause, requirements exceptions are described for the UE with a band in FR1 when it is impacted by UL harmonic interference from another band in FR1 of the same SUL configuration.

A relevant side condition (SSB_RP and Io) in a requirement shall be increased by the amount $\Delta$=L2-L1, where L1 is the reference sensitivity level specified in clause 7.3.2 of TS 38.101-1 [18], and L2 is the reference sensitivity level based on the requirements in clause 7.3C.2 of TS 38.101-1 [18], when the following conditions are fulfilled,

- a downlink component carrier is configured in NR band and is active,
- the upling is configured in the NR low operating band and is active,
- the uplink configuration is as specified in clause 7.3C.2 of TS 38.101-1 [18], and
- the exception requirements specified in clause 7.3C.2 of TS 38.101-1 [18] apply.

If the relaxation $\Delta$ specified in this clause applies, then the relaxation specified in clause B.3.4.1 should not be applied.

# B.4 Conditions for V2X

## B.4.1 Test parameters for GNSS signals

This clause defines the reference signal power levels of generated salellites for a corresponding GNSS, which will be used in V2X test cases.

**Table B.4.1-1: GNSS Referenece Signal Power Parameters**

| System | Parameters | Unit | Value |
|---|---|---|---|
| | Number of generated satellites per system | - | 6 |
| GPS(1) | Reference signal power level for all satellites | dBm | -128.5 |
| Galileo | Reference signal power level for all satellites | dBm | -127 |
| GLONASS | Reference signal power level for all satellites | dBm | -131 |
| BDS | Reference signal power level for all satellites | dBm | -133 |

| System | Parameters | Unit | Value |
|---|---|---|---|
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on UE capabilities.<br>NOTE 2: The DUT UE does not need to support all systems. The DUT UE shall support at least one system and will be test for the supported systems. | | | |

## B.4.2 Conditions for PSBCH-RSRP Accuracy Requirements

This clause defines the following conditions for PSBCH-RSRP measurement accuracy requirements applicable for a corresponding operating band.

The conditions are defined in table B.4.2-1 for FR1.

**Table B.4.2-1: Conditions for PSBCH-RSRP measurements in FR1**

| Parameter | NR V2X operating band groups Note1 | Minimum S-SSB_RP | | | S-SSB Ês/Iot |
|---|---|---|---|---|---|
| | | dBm/$SCS_{S-SSB}$ | | | dB |
| | | $SCS_{S-SSB}$ = 15 kHz | $SCS_{S-SSB}$ = 30 kHz | $SCS_{S-SSB}$ = 60 kHz | |
| | NR_TDD_FR1_B | -126.5 | -123.5 | -120.5 | ≥ -6 |
| | NR_TDD_FR1_J | -122.5 | -119.5 | -116.5 | |
| NOTE 1: NR V2X operating band groups are as defined in section 3.5 for the corresponding NR operating bands. | | | | | |

## B.4.3 Conditions for Selection/Reselection to Intra-frequency SyncRef UE

This clause defines the S-SSB_RP and S-SSB Ês/Iot applicable for a corresponding operating band.

The conditions for selection/reselection to intra-frequency SyncRef UE are defined in table B.4.3-1 for FR1.

**Table B.4.3-1: V2X synchronization measurements in FR1**

| Parameter | NR V2X operating band groups Note1 | Minimum S-SSB_RP | | | S-SSB Ês/Iot |
|---|---|---|---|---|---|
| | | dBm/$SCS_{S-SSB}$ | | | dB |
| | | $SCS_{S-SSB}$ = 15 kHz | $SCS_{S-SSB}$ = 30 kHz | $SCS_{S-SSB}$ = 60 kHz | |
| | NR_TDD_FR1_B | -120.5 | -117.5 | -114.5 | ≥ 0 |
| | NR_TDD_FR1_J | -116.5 | -113.5 | -110.5 | ≥ 0 |
| NOTE 1: NR V2X operating band groups are as defined in section 3.5 for the corresponding NR operating bands.<br>NOTE 2: The SyncRef UE transmission frequency shall be accurate to within ±5 PPM compared to the absolute frequency. | | | | | |

## B.4.4 Conditions for L1 SL-RSRP Accuracy Requirements

This clause defines the following condtions for L1 SL-RSRP measurement accuracy requirements applicable for a corresponding operating band.

The conditions are defined in table B.4.4-1 for FR1.

**Table B.4.4-1: Conditions for L1 SL-RSRP measurements in FR1**

| Parameter | NR V2X operating band groups Note1 | Minimum L1 SL-RSRP | | | Ês/Iot |
|---|---|---|---|---|---|
| | | dBm/SCS | | | dB |
| | | SCS= 15 kHz | SCS= 30 kHz | SCS = 60 kHz | |
| | NR_TDD_FR1_B | -120.5 | -117.5 | -114.5 | ≥ 0 |
| | NR_TDD_FR1_J | -116.5 | -113.5 | -110.5 | |
| NOTE 1: NR V2X operating band groups are as defined in section 3.5 for the corresponding NR operating bands. | | | | | |

NOTE 2: The parameter Ês/Iot is the Ês/Iot of PSCCH-DMRS and/or PSSCH-DMRS.
NOTE 3: The SCS is for PSCCH and/or PSSCH.

## B.4.5 Conditions for PSBCH-RSRP Accuracy Requirements under CCA

This clause defines the following conditions for PSBCH-RSRP measurement accuracy requirements applicable for a corresponding operating band under CCA.

The conditions are defined in table B.4.5-1 for FR1.

**Table B.4.5-1: Conditions for PSBCH-RSRP measurements in FR1**

| Parameter | NR sidelink operating band groups Note1 | Minimum S-SSB_RP | | S-SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm/SCS$_{S-SSB}$ | | dB |
| | | SCS$_{S-SSB}$ = 15 kHz | SCS$_{S-SSB}$ = 30 kHz | |
| | NR_CCA_FR1_I | -123 | -120 | ≥ -6 |
| | NR_CCA_FR1_J | -122.5 | -119.5 | |
| NOTE 1: NR sidelink operating band groups are as defined in section 3.5 for the corresponding NR operating bands. | | | | |

## B.4.6 Conditions for Selection/Reselection to Intra-frequency SyncRef UE under CCA

This clause defines the S-SSB_RP and S-SSB Ês/Iot applicable for a corresponding operating band under CCA.

The conditions for selection/reselection to intra-frequency SyncRef UE are defined in table B.4.6-1 for FR1.

**Table B.4.6-1: Sidelink synchronization measurements in FR1**

| Parameter | NR sidelink operating band groups Note1 | Minimum S-SSB_RP | | S-SSB Ês/Iot |
|---|---|---|---|---|
| | | dBm/SCS$_{S-SSB}$ | | dB |
| | | SCS$_{S-SSB}$ = 15 kHz | SCS$_{S-SSB}$ = 30 kHz | |
| | NR_CCA_FR1_I | -117 | -114 | ≥ 0 |
| | NR_CCA_FR1_J | -116.5 | -113.5 | ≥ 0 |
| NOTE 1: NR sidelink operating band groups are as defined in section 3.5 for the corresponding NR operating bands.<br>NOTE 2: The SyncRef UE transmission frequency shall be accurate to within ±5 PPM compared to the absolute frequency. | | | | |

## B.4.7 Conditions for L1 SL-RSRP Accuracy Requirements under CCA

This clause defines the following conditions for L1 SL-RSRP measurement accuracy requirements applicable for a corresponding operating band under CCA.

The conditions are defined in table B.4.7-1 for FR1.

**Table B.4.7-1: Conditions for L1 SL-RSRP measurements in FR1**

| Parameter | NR sidelink operating band groups Note1 | Minimum L1 SL-RSRP | | Ês/Iot |
|---|---|---|---|---|
| | | dBm/SCS | | dB |
| | | SCS= 15 kHz | SCS= 30 kHz | |
| | NR_CCA_FR1_I | -117 | -114 | ≥ 0 |
| | NR_CCA_FR1_J | -116.5 | -113.5 | |
| NOTE 1: NR sidelink operating band groups are as defined in section 3.5 for the corresponding NR operating bands.<br>NOTE 2: The parameter Ês/Iot is the Ês/Iot of PSCCH-DMRS and/or PSSCH-DMRS. | | | | |

NOTE 3: The SCS is for PSCCH and/or PSSCH.

# B.4A Conditions for NR Sidelink Positioning Measurement Procedures and Performance Requirements

## B.4A.1 Conditions for NR SL-PRS based measurements

This clause defines the following condtions for NR SL-PRS based measurement procedures and accuracy requirements: SL-PRP and SL-PRS Ês/Iot, applicable for a corresponding operating band.

The conditions are defined in table B.4A.1-1 for FR1.

**Table B.4A.1-1: Conditions for NR SL-PRS based measurements in FR1**

| Parameter | NR operating band groups Note1 | Minimum SL-PRP1,2 dBm / $SCS_{SL-PRS}$ | | | SL-PRS Ês/Iot dB |
|---|---|---|---|---|---|
| | | $SCS_{SL-PRS}$ = 15 kHz | $SCS_{SL-PRS}$ = 30 kHz | $SCS_{SL-PRS}$ = 60 kHz | |
| Conditions | NR_TDD_FR1_B | -123.5 | -120.5 | -117.5 | ≥ 0 Note2<br>≥ -3 Note3 |
| | NR_TDD_FR1_C | -123 | -120 | -117 | |
| | NR_FDD_FR1_G | -121 | -118 | -115 | |
| | NR_TDD_FR1_J | -119.5 | -116.5 | -113.5 | |

NOTE 1: NR operating band groups are defined in clause 3.5.2.
NOTE 2: SL-PRS Ês/Iot for SL-PRS resource of the reference UE for SL RSTD measurement.
NOTE 3: SL-PRS Ês/Iot for SL-PRS resource of the anchor UE, which is not the reference UE, for SL RSTD measurement, SL PRS-RSRP measurement, SL PRS-RSRPP measurement, SL Rx-Tx time difference measurement, SL AoA measurement, and SL RTOA measurement.

# B.5 High level test procedure for SAN RRM tests

The following high level steps are conducted for test cases for SAN defined in clause A.14.

- A set of ephemeris information are pre-defined for each satellite corresponding to respective epoch times in TS 38.508-1 [38].
- The same ephemeris information will be maintained during the test (constant ephemerisInfo in all SIB19 updates), i.e. SAN RRM test cases are defined with fixed constant Delay and Doppler shift from Satellite access node to UE unless otherwise stated.

The range from which the constant Delay is selected is as follows:

  - For GSO an altitude of 35,786km is considered. The range of the one-way delay between UE and satellite is from 119.375 ms to 128.79 ms.
  - For NGSO an altitude of 600km and 1200km on a circular orbit are considered. The range of the one-way delay between UE and satellite is from 2 ms (lowest value for LEO orbit 600km) to 6.67 ms (highest value for LEO orbit 1200km).

- The constant Doppler shift (i.e. frequency offset) is derived from the same ephemeris (i.e. orbit emulation) as the Delay.
- UE location is determined for the test. During the test, the test system shall provide the UE location to the DUT using AT commands.
- The ephemeris and the UE location should be designed such that elevation angle relative to the UE position shall not be smaller than 30 deg during entire test time.

- Test equipment adjusts the time and frequency of transmission according to the pre-defined ephemeris (constant in all SIB19 updates) and UE location.

| 2024-12 | RAN#106 | RP-243059 | 5073 | | A | (NR_NTN_solutions-Perf) CR on correction of test parameters and requirements for TCs for inter-frequency cell reselection on FR1 NR NTN | 18.8.0 |
| 2024-12 | RAN#106 | RP-243056 | 5074 | | F | CR to TS 38.133 paging interruption requirement correction for NR NTN enh | 18.8.0 |
| 2024-12 | RAN#106 | RP-243059 | 5080 | | A | (NR_NTN_solutions-Core) Modify NR NTN cell re-selection measurement in RRC IDLE state. | 18.8.0 |
| 2024-12 | RAN#106 | RP-243063 | 5083 | | A | (NR_redcap-Core) Modify CG-SDT requirements for RedCap. | 18.8.0 |
| 2024-12 | RAN#106 | RP-243063 | 5092 | | A | (NR_redcap-Core)Correction on RedCap UE | 18.8.0 |
| 2024-12 | RAN#106 | RP-243063 | 5094 | | A | (NR_RRM_enh2) Correction on HO with PSCell | 18.8.0 |
| 2024-12 | RAN#106 | RP-243055 | 5107 | | A | (NR_newRAT-Perf) Correction to RLM scheduling restriction test cases_R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243034 | 5110 | | A | (NR_2step_RACH-Perf) Correction to 2-step RACH RRM RMCs and test cases_R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243039 | 5113 | | A | (NR_CSIRS_L3meas-Perf) Correction to CSI-RS based mobility measurement test cases_R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243062 | 5115 | | A | (NR_redcap-Perf) Correction to RedCap 2-step RACH RRM test cases_R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243062 | 5117 | | A | (NR_redcap-Perf) Correction to RedCap measurement and radio link monitoring test cases_R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243033 | 5123 | | F | Correction on SCell activation delay for UE supporting intra-band non-collocated | 18.8.0 |
| 2024-12 | RAN#106 | RP-243051 | 5124 | 1 | F | Corrections on LTM core requirements | 18.8.0 |
| 2024-12 | RAN#106 | RP-243051 | 5125 | | F | Corrections on TC for NR conditional handover including target MCG and candidate SCG | 18.8.0 |
| 2024-12 | RAN#106 | RP-243045 | 5127 | 1 | F | Correction on IE for UE capability for PC6 UE | 18.8.0 |
| 2024-12 | RAN#106 | RP-243057 | 5129 | 1 | F | CR on performance requirements maintenance for R18 NTN | 18.8.0 |
| 2024-12 | RAN#106 | RP-243044 | 5131 | 1 | F | CR on core part requirements maintenance for multi-Rx | 18.8.0 |
| 2024-12 | RAN#106 | RP-243044 | 5132 | 1 | F | CR on AoA setup for multi-Rx | 18.8.0 |
| 2024-12 | RAN#106 | RP-243061 | 5139 | | A | (NR_pos_enh-Core) CR on Rel-17 positioning requirements | 18.8.0 |
| 2024-12 | RAN#106 | RP-243054 | 5142 | 1 | F | (NR_newRAT-Core) Correction on SCell activation delay | 18.8.0 |
| 2024-12 | RAN#106 | RP-243056 | 5143 | 1 | F | (NR_NTN_enh-Core) Modify NR NTN core requirements in RRC Connected state | 18.8.0 |
| 2024-12 | RAN#106 | RP-243049 | 5146 | 1 | F | CR corrections of RRM core requirements for NR MIMO Evo | 18.8.0 |
| 2024-12 | RAN#106 | RP-243049 | 5147 | 2 | F | CR corrections of RRM performance requirements for NR MIMO Evo | 18.8.0 |
| 2024-12 | RAN#106 | RP-243039 | 5151 | 1 | F | (NR_DualTxRx_MUSIM-Core) CR on 38.133 MUSIM Core | 18.8.0 |
| 2024-12 | RAN#106 | RP-243048 | 5153 | 1 | F | (NR_MG_enh2-Core) CR on 38.133 MG enh2 on NeedForGaps | 18.8.0 |
| 2024-12 | RAN#106 | RP-243056 | 5154 | 1 | F | CR for updating the note for NTN frequency range definition in RLM requirements | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5156 | 1 | F | CR on R18 FR2 SCell activation delay reduction | 18.8.0 |
| 2024-12 | RAN#106 | RP-243049 | 5159 | 1 | F | CR on R18 MIMO RRM requirements | 18.8.0 |
| 2024-12 | RAN#106 | RP-243059 | 5161 | | A | (NR_NTN_solutions-Core) CR on measurement requirements for NTN R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243048 | 5163 | | A | (NR_MG_enh-Core) CR on measurement requirements for con-MG R18 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243042 | 5164 | | F | CR on RRM core requirements for less than 5MHz BW | 18.8.0 |
| 2024-12 | RAN#106 | RP-243042 | 5165 | | F | CR on test configurations for less than 5MHz BW | 18.8.0 |
| 2024-12 | RAN#106 | RP-243048 | 5166 | 1 | F | CR on NFG requirements | 18.8.0 |
| 2024-12 | RAN#106 | RP-243048 | 5167 | | F | CR on TCs for R18 MGE | 18.8.0 |
| 2024-12 | RAN#106 | RP-243035 | 5168 | 1 | F | CR on TCs for option C for BWP without restriction | 18.8.0 |
| 2024-12 | RAN#106 | RP-243056 | 5169 | 1 | F | CR on Rx-Tx measurement requirements for NTN | 18.8.0 |
| 2024-12 | RAN#106 | RP-243056 | 5170 | | F | CR on RLM requriements for FR2-NTN | 18.8.0 |
| 2024-12 | RAN#106 | RP-243057 | 5175 | 1 | F | CR to TS 38.133 Satellite switching with re-synchronization test case correction for NR NTN enh | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5177 | 1 | F | CR on RRM requirements for eFeRRM | 18.8.0 |
| 2024-12 | RAN#106 | RP-243032 | 5178 | | F | CR on core part of R18 NES | 18.8.0 |
| 2024-12 | RAN#106 | RP-243032 | 5179 | 1 | F | CR on perf part of R18 NES | 18.8.0 |
| 2024-12 | RAN#106 | RP-243034 | 5180 | 2 | F | CR on core part of R18 ATG | 18.8.0 |
| 2024-12 | RAN#106 | RP-243034 | 5181 | | F | CR on perf part of R18 ATG | 18.8.0 |
| 2024-12 | RAN#106 | RP-243033 | 5183 | | F | CR on core part of R18 NonCol_intraB_ENDC_NR_CA | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5184 | 1 | F | CR on core part of R18 SCell activation enhancement | 18.8.0 |
| 2024-12 | RAN#106 | RP-243048 | 5185 | 1 | F | CR on CSSF of R18 Concurrent MGs | 18.8.0 |
| 2024-12 | RAN#106 | RP-243048 | 5186 | 1 | F | CR on test case of R18 NFG enhancement | 18.8.0 |
| 2024-12 | RAN#106 | RP-243044 | 5188 | 1 | F | maintenance CR for test cases for multi-rx | 18.8.0 |
| 2024-12 | RAN#106 | RP-243061 | 5194 | | A | (NR_pos-Perf) CAT-A CR to 38.133 (Release 18) on corrections to accuracy requirement for UE Rx-Tx measurement | 18.8.0 |
| 2024-12 | RAN#106 | RP-243032 | 5199 | 1 | F | 38.133 CR on handover delays for NES-based CHO | 18.8.0 |

| Change history | | | | | | | |
|---|---|---|---|---|---|---|---|
| Date | Meeting | TDoc | CR | Rev | Cat | Subject/Comment | New version |
| 2024-12 | RAN#106 | RP-243056 | 5208 | 1 | F | (NR_NTN_enh-Core) Formal CR on Interruption time for hard satellite switch | 18.8.0 |
| 2024-12 | RAN#106 | RP-243059 | 5210 | | A | [NR_NTN_solutions-Perf] Correction in derive parameters in A.14.4.2.4 and A.14.4.2.6 (Rel-18) | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5211 | 1 | F | CR on NR standalone tests with all NR cells in FR1 for RedCap | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5219 | | F | CR 38.133 RRM specification improvement for clauses 10 to A_3 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5220 | | F | CR 38.133 RRM specification improvement for clause A_6 | 18.8.0 |
| 2024-12 | RAN#106 | RP-243069 | 5227 | | B | Big CR to 38133 for RRM performance part for expanded and improved NR positioning | 18.8.0 |
| 2024-12 | RAN#106 | RP-243070 | 5228 | | F | Big CR to 38133 for RRM core part for expanded and improved NR positioning | 18.8.0 |
| 2024-12 | RAN#106 | RP-243064 | 5229 | | F | CR for RRM Spec Improvement (section 1~6) | 18.8.0 |
| 2025-03 | RAN#107 | RP-250608 | 5237 | 1 | F | (NR_RRM_enh3-Core) CR for RRM Spec Improvement (section A.7) | 18.9.0 |
| 2025-03 | RAN#107 | RP-250579 | 5241 | | A | (NR_newRAT-Core) CR for RRM measurement on deactivated SCC - R18 | 18.9.0 |
| 2025-03 | RAN#107 | RP-250587 | 5245 | | A | (NR_RRM_Enh-Perf) CR on A.4.6.6.1 for EN-DC intra-frequency CGI identification - R18 | 18.9.0 |
| 2025-03 | RAN#107 | RP-250591 | 5247 | | A | (NR_MG_enh-Core) CR on RRM requirements for NCSG - R18 | 18.9.0 |
| 2025-03 | RAN#107 | RP-250605 | 5249 | | F | CR on core requirements for R18 mobility | 18.9.0 |
| 2025-03 | RAN#107 | RP-250605 | 5251 | | F | (NR_Mob_enh2-Pref) Correction on test cases for Idle mode fast CA/DC measurement | 18.9.0 |
| 2025-03 | RAN#107 | RP-250608 | 5252 | | F | (NR_redcap_enh-Core) Correction on eRedCap UE | 18.9.0 |
| 2025-03 | RAN#107 | RP-250597 | 5254 | | A | (NR_RRM_enh2) Correction on NR PSCell Addition Delay requirements | 18.9.0 |
| 2025-03 | RAN#107 | RP-250597 | 5261 | | A | (NR_SL_enh-Core) CR on correction of wrong indentation for Selection / Reselection of V2X Synchronization Reference Source | 18.9.0 |
| 2025-03 | RAN#107 | RP-250608 | 5262 | | F | (NR_SL_enh2-Core) CR on correction of wrong indentation for Selection / Reselection of Sidelink Synchronization Reference Source with CCA | 18.9.0 |
| 2025-03 | RAN#107 | RP-250605 | 5267 | 1 | F | CR on maintenance for R18 mobility | 18.9.0 |
| 2025-03 | RAN#107 | RP-250606 | 5268 | 1 | F | (NR_NTN_enh-Core) CR on adding FR2 term in the requirement tables in cell re-selection for NTN | 18.9.0 |
| 2025-03 | RAN#107 | RP-250582 | 5275 | | A | (LTE_NR_DC_CA_enh-Core) CR on R16 EMR | 18.9.0 |
| 2025-03 | RAN#107 | RP-250585 | 5278 | | A | (NR_UE_pow_sav-Core) CR on R16 measurement relaxation for low mobility | 18.9.0 |
| 2025-03 | RAN#107 | RP-250588 | 5281 | | A | (NR_unlic-Core) CR on R16 CSSF_outside gap for SA scenario | 18.9.0 |
| 2025-03 | RAN#107 | RP-250591 | 5283 | | A | (NR_MG_enh-Core) CR on the interruption of deactivated SCell measurement when NCSG is configured | 18.9.0 |
| 2025-03 | RAN#107 | RP-250597 | 5287 | | A | (NR_RRM_enh2-Core) CR on R17 handover with PSCell change | 18.9.0 |
| 2025-03 | RAN#107 | RP-250601 | 5288 | | F | (NR_ATG-Core) CR on location-based CHO of R18 ATG | 18.9.0 |
| 2025-03 | RAN#107 | RP-250603 | 5289 | | F | (NR_MG_enh2-Core) CR on Case 2 of R18 Concurrent MGs | 18.9.0 |
| 2025-03 | RAN#107 | RP-250605 | 5290 | | F | (NR_Mob_enh2-Core) CR on R18 CHO with PSCell change | 18.9.0 |
| 2025-03 | RAN#107 | RP-250590 | 5292 | | A | (NR_ext_to_71GHz-Perf) CR to TS 38.133 on test cases in FR2-2 with CCA | 18.9.0 |
| 2025-03 | RAN#107 | RP-250601 | 5293 | | F | (NR_ATG-Core) CR to TS 38.133 on core maintenance for R18 ATG | 18.9.0 |
| 2025-03 | RAN#107 | RP-250606 | 5294 | | F | (NR_NTN_enh-Core) CR on core requirements of Rel-18 NR NTN enhancements | 18.9.0 |
| 2025-03 | RAN#107 | RP-250607 | 5296 | 1 | F | CR on correction on interruption requirements for SRS BW aggregation | 18.9.0 |
| 2025-03 | RAN#107 | RP-250605 | 5298 | 1 | F | (NR_Mob_enh2-Core) CR on Rel-18 LTM | 18.9.0 |
| 2025-03 | RAN#107 | RP-250601 | 5302 | 1 | F | CR on handover requirements for BWP without restriction | 18.9.0 |
| 2025-03 | RAN#107 | RP-250601 | 5303 | | F | CR on Pre-MG requirements for ATG | 18.9.0 |
| 2025-03 | RAN#107 | RP-250607 | 5305 | 1 | F | CR on core requirements of positioning enhancements | 18.9.0 |
| 2025-03 | RAN#107 | RP-250606 | 5308 | | F | (NR_NTN_enh-Core) Correction IE for NR NTN in RRC connected state | 18.9.0 |
| 2025-03 | RAN#107 | RP-250606 | 5309 | 1 | F | (NR_NTN_enh-Core) Correction on NR NTN handover delay | 18.9.0 |
| 2025-03 | RAN#107 | RP-250606 | 5310 | 1 | F | (NR_NTN_enh-Core) Modify NR NTN cell re-selection measurement in RRC IDLE state. | 18.9.0 |
| 2025-03 | RAN#107 | RP-250593 | 5312 | | A | (NR_NTN_solutions-Core) Correction on NR NTN in RRC connected state_R18 | 18.9.0 |
| 2025-03 | RAN#107 | RP-250587 | 5315 | | A | (NR_RF_FR1-Perf) Correction to Rel-16 Tx switching RRM test cases_R18 | 18.9.0 |
| 2025-03 | RAN#107 | RP-250592 | 5317 | | A | (NR_RF_FR1_enh-Perf) Correction to Rel-17 Tx switching RRM test cases_R18 | 18.9.0 |
