**Important notice**

---

The present document can be downloaded from the  
[ETSI Search & Browse Standards](#) application.

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format on [ETSI deliver](#) repository.

Users should be aware that the present document may be revised or have its status changed,  
this information is available in the [Milestones listing](#).

If you find errors in the present document, please send your comments to  
the relevant service listed under [Committee Support Staff](#).

If you find a security vulnerability in the present document, please report it through our  
[Coordinated Vulnerability Disclosure \(CVD\)](#) program.

---

**Notice of disclaimer & limitation of liability**

---

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

---

# Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at [3GPP to ETSI numbering cross-referencing](#).

---

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

| 4.4 Functions .....                                                                    | 37 |
| 5 Procedures .....                                                                     | 39 |
| 5.1 General .....                                                                      | 39 |
| 5.1.1 Introduction.....                                                                | 39 |
| 5.1.2 General requirements.....                                                        | 39 |
| 5.1.3 Requirements for UE in MR-DC .....                                               | 39 |
| 5.2 System information .....                                                           | 40 |
| 5.2.1 Introduction.....                                                                | 40 |
| 5.2.2 System information acquisition .....                                             | 41 |
| 5.2.2.1 General UE requirements.....                                                   | 41 |
| 5.2.2.2 SIB validity and need to (re)-acquire SIB .....                                | 41 |
| 5.2.2.2.1 SIB validity.....                                                            | 41 |
| 5.2.2.2.2 SI change indication and PWS notification .....                              | 43 |
| 5.2.2.3 Acquisition of System Information .....                                        | 44 |
| 5.2.2.3.1 Acquisition of <i>MIB</i> and <i>SIB1</i> .....                              | 44 |
| 5.2.2.3.2 Acquisition of an SI message .....                                           | 45 |
| 5.2.2.3.3 Request for on demand system information .....                               | 47 |
| 5.2.2.3.3a Request for on demand positioning system information .....                  | 48 |
| 5.2.2.3.4 Actions related to transmission of <i>RRCSystemInfoRequest</i> message ..... | 49 |
| 5.2.2.3.5 Acquisition of SIB(s) or posSIB(s) in <i>RRC_CONNECTED</i> .....             | 49 |
| 5.2.2.3.6 Actions related to transmission of <i>DedicatedSIBRequest</i> message .....  | 50 |
| 5.2.2.4 Actions upon receipt of System Information .....                               | 51 |
| 5.2.2.4.1 Actions upon reception of the <i>MIB</i> .....                               | 51 |
| 5.2.2.4.2 Actions upon reception of the <i>SIB1</i> .....                              | 51 |
| 5.2.2.4.3 Actions upon reception of <i>SIB2</i> .....                                  | 56 |
| 5.2.2.4.4 Actions upon reception of <i>SIB3</i> .....                                  | 56 |
| 5.2.2.4.5 Actions upon reception of <i>SIB4</i> .....                                  | 57 |
| 5.2.2.4.6 Actions upon reception of <i>SIB5</i> .....                                  | 58 |
| 5.2.2.4.7 Actions upon reception of <i>SIB6</i> .....                                  | 58 |
| 5.2.2.4.8 Actions upon reception of <i>SIB7</i> .....                                  | 58 |
| 5.2.2.4.9 Actions upon reception of <i>SIB8</i> .....                                  | 58 |
| 5.2.2.4.10 Actions upon reception of <i>SIB9</i> .....                                 | 59 |
| 5.2.2.4.11 Actions upon reception of <i>SIB10</i> .....                                | 59 |
| 5.2.2.4.12 Actions upon reception of <i>SIB11</i> .....                                | 59 |
| 5.2.2.4.13 Actions upon reception of <i>SIB12</i> .....                                | 60 |
| 5.2.2.4.14 Actions upon reception of <i>SIB13</i> .....                                | 61 |

|            |                                                                                                                          |     |

| History .....                 |                                                                                        | 1326        |

---

# Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# 1 Scope

The present document specifies the Radio Resource Control protocol for the radio interface between UE and NG-RAN.

The scope of the present document also includes:

- the radio related information transported in a transparent container between source gNB and target gNB upon inter gNB handover;
- the radio related information transported in a transparent container between a source or target gNB and another system upon inter RAT handover.
- the radio related information transported in a transparent container between a source eNB and target gNB during E-UTRA-NR Dual Connectivity.

The RRC protocol is also used to configure the radio interface between an IAB-node and its parent node [2].

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**AM MRB:** An MRB associated with at least an AM RLC bearer for PTP transmission.

**BH RLC channel:** An RLC channel between two nodes, which is used to transport backhaul packets.

**Broadcast MRB:** A radio bearer configured for MBS broadcast delivery.

**CEIL:** Mathematical function used to 'round up' i.e. to the nearest integer having a higher or equal value.

**DAPS bearer:** a bearer whose radio protocols are located in both the source gNB and the target gNB during DAPS handover to use both source gNB and target gNB resources.

**Dedicated signalling:** Signalling sent on DCCH logical channel between the network and a single UE.

**Dormant BWP:** The dormant BWP is one of downlink BWPs configured by the network via dedicated RRC signalling. In the dormant BWP, the UE stops monitoring PDCCH on/for the SCell, but continues performing CSI measurements, Automatic Gain Control (AGC) and beam management, if configured. For each serving cell other than the SpCell or PUCCH SCell, the network may configure one BWP as a dormant BWP.

**Earth-fixed cell:** An NTN cell fixed with respect to a certain geographic area on Earth. It can be provisioned by beam(s) continuously covering the same geographical area (e.g., the case of GSO satellites).

**Field:** The individual contents of an information element are referred to as fields.

**FLOOR:** Mathematical function used to 'round down' i.e. to the nearest integer having a lower or equal value.

**Frequency Selection Area ID:** An identity used for broadcast MBS session to guide the frequency selection of the UE as defined in TS 23.247 [67].

**Global cell identity:** An identity to uniquely identifying an NR cell. It is consisted of *cellIdentity* and *plmn-Identity* of the first *PLMN-Identity* in *plmn-IdentityList* in SIB1.

**Information element:** A structural element containing single or multiple fields is referred as information element.

**MBS Radio Bearer:** A radio bearer that is configured for MBS delivery.

**Multicast/Broadcast Service:** A point-to-multipoint service as defined in TS 23.247 [67].

**Multicast MRB:** A radio bearer configured for MBS multicast delivery.

**MUSIM gap:** Period that the UE may use to perform MUSIM operations.

**NCSG:** Network controlled small gap as defined in TS 38.133 [14].

**NPN-only Cell:** A cell that is only available for normal service for NPNs' subscriber. An NPN-capable UE determines that a cell is NPN-only Cell by detecting that the *cellReservedForOtherUse* IE is set to true while the *npn-IdentityInfoList* IE is present in *CellAccessRelatedInfo*.

**NR sidelink communication:** AS functionality enabling at least V2X Communication as defined in TS 23.287 [55], and ProSe Communication (including ProSe UE-to-Network Relay and non-Relay communication) as defined in TS 23.304 [65] between two or more nearby UEs, using NR technology but not traversing any network node.

**NR sidelink discovery:** AS functionality enabling ProSe non-Relay Discovery and ProSe UE-to-Network Relay discovery for Proximity based Services as defined in TS 23.304 [65] between two or more nearby UEs, using NR technology but not traversing any network node.

**PNI-NPN identity:** an identifier of a PNI-NPN comprising of a PLMN ID and a CAG-ID combination.

**Primary Cell:** The MCG cell, operating on the primary frequency, in which the UE either performs the initial connection establishment procedure or initiates the connection re-establishment procedure.

**PC5 Relay RLC channel:** An RLC channel between L2 U2N Remote UE and L2 U2N Relay UE, which is used to transport packets over PC5 for L2 UE-to-Network relay.

**Primary SCG Cell:** For dual connectivity operation, the SCG cell in which the UE performs random access when performing the Reconfiguration with Sync procedure.

**Primary Timing Advance Group:** Timing Advance Group containing the SpCell.

**PUCCH SCell:** An SCell configured with PUCCH by *PUCCH-Config*.

**PUSCH-Less SCell:** An SCell configured without PUSCH.

**Quasi-Earth-fixed cell:** An NTN cell fixed with respect to a certain geographic area on Earth during a certain time duration. It can be provisioned by beam(s) covering one geographic area for a limited period and a different geographic area during another period (e.g., the case of NGSO satellites generating steerable beams).

**RedCap UE:** A UE with reduced capabilities as specified in clause 4.2.21.1 in TS 38.306 [26].

**RLC bearer configuration:** The lower layer part of the radio bearer configuration comprising the RLC and logical channel configurations.

**Secondary Cell:** For a UE configured with CA, a cell providing additional radio resources on top of Special Cell.

**Secondary Cell Group:** For a UE configured with dual connectivity, the subset of serving cells comprising of the PSCell and zero or more secondary cells.

**Serving Cell:** For a UE in RRC\_CONNECTED not configured with CA/DC there is only one serving cell comprising of the primary cell. For a UE in RRC\_CONNECTED configured with CA/ DC the term 'serving cells' is used to denote the set of cells comprising of the Special Cell(s) and all secondary cells.

**Small Data Transmission:** A procedure used for transmission of data and/or signalling over allowed radio bearers in RRC\_INACTIVE state (i.e. without the UE transitioning to RRC\_CONNECTED state).

**SNPN identity:** an identifier of an SNPN comprising of a PLMN ID and an NID combination.

**Special Cell:** For Dual Connectivity operation the term Special Cell refers to the PCell of the MCG or the PSCell of the SCG, otherwise the term Special Cell refers to the PCell.

**Split SRB:** In MR-DC, an SRB that supports transmission via MCG and SCG as well as duplication of RRC PDUs as defined in TS 37.340 [41].

**SSB Frequency:** Frequency referring to the position of resource element RE=#0 (subcarrier #0) of resource block RB#10 of the SS block.

**U2N Relay UE:** A UE that provides functionality to support connectivity to the network for U2N Remote UE(s).

**U2N Remote UE:** A UE that communicates with the network via a U2N Relay UE.

**Uu Relay RLC channel:** An RLC channel between L2 U2N Relay UE and gNB, which is used to transport packets over Uu for L2 UE-to-Network relay.

**UE Inactive AS Context:** UE Inactive AS Context is stored when the connection is suspended and restored when the connection is resumed. It includes information as defined in clause 5.3.8.3.

**V2X sidelink communication:** AS functionality enabling V2X Communication as defined in TS 23.285 [56], between nearby UEs, using E-UTRA technology but not traversing any network node.

## 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

|        |                                                          |
|--------|----------------------------------------------------------|
| 5GC    | 5G Core Network                                          |
| ACK    | Acknowledgement                                          |
| AM     | Acknowledged Mode                                        |
| ARQ    | Automatic Repeat Request                                 |
| AS     | Access Stratum                                           |
| ASN.1  | Abstract Syntax Notation One                             |
| BAP    | Backhaul Adaptation Protocol                             |
| BCD    | Binary Coded Decimal                                     |
| BFD    | Beam Failure Detection                                   |
| BH     | Backhaul                                                 |
| BLER   | Block Error Rate                                         |
| BWP    | Bandwidth Part                                           |
| CA     | Carrier Aggregation                                      |
| CAG    | Closed Access Group                                      |
| CAG-ID | Closed Access Group Identifier                           |
| CAPC   | Channel Access Priority Class                            |
| CBR    | Channel Busy Ratio                                       |
| CCCH   | Common Control Channel                                   |
| CFR    | Common Frequency Resources                               |

| UP      | User Plane                            |
| VR      | Virtual Reality                       |

In the ASN.1, lower case may be used for some (parts) of the above abbreviations e.g. c-RNTI.

---

## 4 General

### 4.1 Introduction

This specification is organised as follows:

- clause 4.2 describes the RRC protocol model;
- clause 4.3 specifies the services provided to upper layers as well as the services expected from lower layers;
- clause 4.4 lists the RRC functions;
- clause 5 specifies RRC procedures, including UE state transitions;
- clause 6 specifies the RRC messages in ASN.1 and description;
- clause 7 specifies the variables (including protocol timers and constants) and counters to be used by the UE;
- clause 8 specifies the encoding of the RRC messages;
- clause 9 specifies the specified and default radio configurations;
- clause 10 specifies generic error handling;
- clause 11 specifies the RRC messages transferred across network nodes;
- clause 12 specifies the UE capability related constraints and performance requirements.

## 4.2 Architecture

### 4.2.1 UE states and state transitions including inter RAT

A UE is either in RRC\_CONNECTED state or in RRC\_INACTIVE state when an RRC connection has been established. If this is not the case, i.e. no RRC connection is established, the UE is in RRC\_IDLE state. The RRC states can further be characterised as follows:

- **RRC\_IDLE:**
  - A UE specific DRX may be configured by upper layers;
  - At lower layers, the UE may be configured with a DRX for PTM transmission of MBS broadcast;
  - UE controlled mobility based on network configuration;
  - The UE:
    - Monitors Short Messages transmitted with P-RNTI over DCI (see clause 6.5);
    - Monitors a Paging channel for CN paging using 5G-S-TMSI, except if the UE is acting as a L2 U2N Remote UE;
    - If configured by upper layers for MBS multicast reception, monitors a Paging channel for CN paging using TMGI;
    - Performs neighbouring cell measurements and cell (re-)selection;
    - Performs measurements on L2 U2N Relay UEs and relay (re-)selection;
    - Acquires system information and can send SI request (if configured);
    - Performs logging of available measurements together with location and time for logged measurement configured UEs;
    - Performs idle/inactive measurements for idle/inactive measurement configured UEs;
    - If configured by upper layers for MBS broadcast reception, acquires MCCH change notification and MBS broadcast control information and data.
- **RRC\_INACTIVE:**
  - A UE specific DRX may be configured by upper layers or by RRC layer;

- At lower layers, the UE may be configured with a DRX for PTM transmission of MBS broadcast;
- UE controlled mobility based on network configuration;
- The UE stores the UE Inactive AS context;
- A RAN-based notification area is configured by RRC layer;
- Transfer of unicast data and/or signalling to/from UE over radio bearers configured for SDT.
- The UE:
  - Monitors Short Messages transmitted with P-RNTI over DCI (see clause 6.5);
  - During SDT procedure, monitors control channels associated with the shared data channel to determine if data is scheduled for it;
  - While SDT procedure is not ongoing, monitors a Paging channel for CN paging using 5G-S-TMSI and RAN paging using fullI-RNTI, except if the UE is acting as a L2 U2N Remote UE;
  - If configured by upper layers for MBS multicast reception, while SDT procedure is not ongoing, monitors a Paging channel for paging using TMGI;
  - Performs neighbouring cell measurements and cell (re-)selection;
  - Performs measurements on L2 U2N Relay UEs and relay (re-)selection;
  - Performs RAN-based notification area updates periodically and when moving outside the configured RAN-based notification area;
  - Acquires system information and, while SDT procedure is not ongoing, can send SI request (if configured);
  - While SDT procedure is not ongoing, performs logging of available measurements together with location and time for logged measurement configured UEs;
  - While SDT procedure is not ongoing, performs idle/inactive measurements for idle/inactive measurement configured UEs;
  - If configured by upper layers for MBS broadcast reception, acquires MCCH change notification and MBS broadcast control information and data;
  - Transmits SRS for Positioning.
- **RRC\_CONNECTED:**
  - The UE stores the AS context;
  - Transfer of unicast data to/from UE;
  - Transfer of MBS multicast data to UE;
  - At lower layers, the UE may be configured with a UE specific DRX;
  - At lower layers, the UE may be configured with a DRX for PTM transmission of MBS broadcast and/or a DRX for MBS multicast;
  - For UEs supporting CA, use of one or more SCells, aggregated with the SpCell, for increased bandwidth;
  - For UEs supporting DC, use of one SCG, aggregated with the MCG, for increased bandwidth;
  - Network controlled mobility within NR, to/from E-UTRA, and to UTRA-FDD;
  - Network controlled mobility (path switch) between a serving cell and a L2 U2N Relay UE, or vice versa.
  - The UE:
    - Monitors Short Messages transmitted with P-RNTI over DCI (see clause 6.5), if configured;

- Monitors control channels associated with the shared data channel to determine if data is scheduled for it;
- Provides channel quality and feedback information;
- Performs neighbouring cell and/or L2 U2N relay measurements and measurement reporting;
- Acquires system information;
- Performs immediate MDT measurement together with available location reporting;
- If configured by upper layers for MBS broadcast reception, acquires MCCH change notification and MBS broadcast control information and data.

Figure 4.2.1-1 illustrates an overview of UE RRC state machine and state transitions in NR. A UE has only one RRC state in NR at one time.

**Figure 4.2.1-1: UE state machine and state transitions in NR**

Figure 4.2.1-2 illustrates an overview of UE state machine and state transitions in NR as well as the mobility procedures supported between NR/5GC, E-UTRA/EPC and E-UTRA/5GC.

**Figure 4.2.1-2: UE state machine and state transitions between NR/5GC, E-UTRA/EPC and E-UTRA/5GC**

Figure 4.2.1-3 illustrates the mobility procedure supported between NR/5GC and UTRA-FDD.

**Figure 4.2.1-3: Mobility procedure supported between NR/5GC and UTRA-FDD**

## 4.2.2 Signalling radio bearers

"Signalling Radio Bearers" (SRBs) are defined as Radio Bearers (RBs) that are used only for the transmission of RRC and NAS messages. More specifically, the following SRBs are defined:

- SRB0 is for RRC messages using the CCCH logical channel (except SRB0 of L2 U2N Remote UE);
- SRB1 is for RRC messages (which may include a piggybacked NAS message) as well as for NAS messages prior to the establishment of SRB2, all using DCCH logical channel (except SRB1 of L2 U2N Remote UE);
- SRB2 is for NAS messages and for RRC messages which include logged measurement information, all using DCCH logical channel (except SRB2 of L2 U2N Remote UE). SRB2 has a lower priority than SRB1 and may be configured by the network after AS security activation;
- SRB3 is for specific RRC messages when UE is in (NG)EN-DC or NR-DC, all using DCCH logical channel;
- SRB4 is for RRC messages which include application layer measurement report information, all using DCCH logical channel. SRB4 has a lower priority than SRB1 and can only be configured by the network after AS security activation.

In downlink, piggybacking of NAS messages is used only for one dependant (i.e. with joint success/failure) procedure: bearer establishment/modification/release. In uplink piggybacking of NAS message is used only for transferring the initial NAS message during connection setup and connection resume.

NOTE 1: The NAS messages transferred via SRB2 are also contained in RRC messages, which however do not include any RRC protocol control information.

Once AS security is activated, all RRC messages on SRB1, SRB2, SRB3 and SRB4, including those containing NAS messages, are integrity protected and ciphered by PDCP. NAS independently applies integrity protection and ciphering to the NAS messages, see TS 24.501 [23].

Split SRB is supported for all the MR-DC options in both SRB1 and SRB2 (split SRB is not supported for SRB0, SRB3 and SRB4).

For operation with shared spectrum channel access in FR1, SRB0, SRB1 and SRB3 are assigned with the highest priority Channel Access Priority Class (CAPC), (i.e. CAPC = 1) while CAPC for SRB2 is configurable.

For the NR sidelink L2 U2N relay operations, SRB0, SRB1, SRB2 of a L2 U2N Remote UE are not using Uu CCCH/DCCH logical channels. The SRB0, SRB1, SRB2 of a L2 U2N Remote UE are transmitted via the PC5 Relay RLC channels over PC5 and Uu Relay RLC channels over Uu.

## 4.3 Services

### 4.3.1 Services provided to upper layers

The RRC protocol offers the following services to upper layers:

- Broadcast of common control information;
- Notification of UEs in RRC\_IDLE, e.g. about a mobile terminating call;
- Notification of UEs about ETWS and/or CMAS;
- Transfer of dedicated signalling;
- Broadcast of positioning assistance data;
- Transfer of application layer measurement configuration and reporting.

### 4.3.2 Services expected from lower layers

In brief, the following are the main services that RRC expects from lower layers:

- Integrity protection, ciphering and loss-less in-sequence delivery of information without duplication;

## 4.4 Functions

The RRC protocol includes the following main functions:

- Broadcast of system information:
  - Including NAS common information;
  - Information applicable for UEs in RRC\_IDLE and RRC\_INACTIVE (e.g. cell (re-)selection parameters, neighbouring cell information) and information (also) applicable for UEs in RRC\_CONNECTED (e.g. common channel configuration information);
  - Including ETWS notification, CMAS notification;
  - Including positioning assistance data.
- RRC connection control:
  - Paging;

- Establishment/modification/suspension/resumption/release of RRC connection, including e.g. assignment/modification of UE identity (C-RNTI, fullI-RNTI, etc.), establishment/modification/suspension/resumption/release of SRBs (except for SRB0);
- Access barring;
- Initial AS security activation, i.e. initial configuration of AS integrity protection (SRBs, DRBs) and AS ciphering (SRBs, DRBs);
- RRC connection mobility including e.g. intra-frequency and inter-frequency handover, path switch from a PCell to a target L2 U2N Relay UE or from a L2 U2N Relay UE to a target PCell, associated AS security handling, i.e. key/algorithm change, specification of RRC context information transferred between network nodes;
- Establishment/modification/suspension/resumption/release of RBs carrying user data (DRBs/MRBs);
- Radio configuration control including e.g. assignment/modification of ARQ configuration, HARQ configuration, DRX configuration;
- In case of DC, cell management including e.g. change of PSCell, addition/modification/release of SCG cell(s);
- In case of CA, cell management including e.g. addition/modification/release of SCell(s);
- QoS control including assignment/ modification of semi-persistent scheduling (SPS) configuration and configured grant configuration for DL and UL respectively, assignment/ modification of parameters for UL rate control in the UE, i.e. allocation of a priority and a prioritised bit rate (PBR) for each RB of UE and logical channel of IAB-MT.
- Recovery from radio link failure.
- Inter-RAT mobility including e.g. AS security activation, transfer of RRC context information;
- Measurement configuration and reporting:
  - Establishment/modification/release of measurement configuration (e.g. intra-frequency, inter-frequency and inter- RAT measurements);
  - Setup and release of measurement gaps;
  - Measurement reporting.
- Configuration of BAP entity and BH RLC channels for the support of IAB-node.
- Configuration of SRAP entity and Uu/PC5 Relay RLC channels for the support of L2 U2N relay.
- Other functions including e.g. generic protocol error handling, transfer of dedicated NAS information, transfer of UE radio access capability information.
- Support of self-configuration and self-optimisation.
- Support of measurement logging and reporting for network performance optimisation, as specified in TS 37.320 [61];
- Support of transfer of application layer measurement configuration and reporting.

## 5 Procedures

### 5.1 General

#### 5.1.1 Introduction

This clause covers the general requirements.

#### 5.1.2 General requirements

The UE shall:

- 1> process the received messages in order of reception by RRC, i.e. the processing of a message shall be completed before starting the processing of a subsequent message;

NOTE: Network may initiate a subsequent procedure prior to receiving the UE's response of a previously initiated procedure.

- 1> within a clause execute the steps according to the order specified in the procedural description;

- 1> consider the term 'radio bearer' (RB) to cover SRBs, DRBs and MRBs unless explicitly stated otherwise;

- 1> set the *rrc-TransactionIdentifier* in the response message, if included, to the same value as included in the message received from the network that triggered the response message;

- 1> upon receiving a choice value set to *setup*:

- 2> apply the corresponding received configuration and start using the associated resources, unless explicitly specified otherwise;

- 1> upon receiving a choice value set to *release*:

- 2> clear the corresponding configuration and stop using the associated resources;

- 1> in case the size of a list is extended, upon receiving an extension field comprising the entries in addition to the ones carried by the original field (regardless of whether the network signals more entries in total); apply the following generic behaviour unless explicitly stated otherwise:

- 2> create a combined list by concatenating the additional entries included in the extension field to the original field while maintaining the order among both the original and the additional entries;

- 2> for the combined list, created according to the previous, apply the same behaviour as defined for the original field.

#### 5.1.3 Requirements for UE in MR-DC

In this specification, the UE considers itself to be in:

- EN-DC, if and only if it is configured with *nr-SecondaryCellGroupConfig* according to TS 36.331[10], and it is connected to EPC,
- NGEN-DC, if and only if it is configured with *nr-SecondaryCellGroupConfig* according to TS 36.331[10], and it is connected to 5GC,
- NE-DC, if and only if it is configured with *mrdc-SecondaryCellGroup* set to *eutra-SCG*,
- NR-DC, if and only if it is configured with *mrdc-SecondaryCellGroup* set to *nr-SCG*,
- MR-DC, if and only if it is in (NG)EN-DC, NE-DC or NR-DC.

NOTE: This use of these terms deviates from the definition in TS 37.340 [41] and other specifications. In TS 37.340, these terms include also the case where the UE is configured with E-UTRA or NR MCG only (i.e. no NR or E-UTRA SCG) but with one or more bearers terminated in a secondary node (i.e. using NR PDCP).

The UE in (NG)EN-DC only executes a subclause of clause 5 in this specification when the subclause:

- is referred to from a subclause under execution, either in this specification or in TS 36.331 [10]; or
- applies to a message received on SRB3 (if SRB3 is established); or
- applies to field(s), IE(s), UE variable(s) or timer(s) in this specification that the UE is configured with.

When executing a subclause of clause 5 in this specification, the UE follows the requirements in clause 5.1.2 and in all subclauses of this specification applicable to the messages (including processing time requirements), fields, IEs, timers and UE variables indicated in the subclause under execution.

## 5.2 System information

### 5.2.1 Introduction

System Information (SI) is divided into the *MIB* and a number of SIBs and posSIBs where:

- the *MIB* is always transmitted on the BCH with a periodicity of 80 ms and repetitions made within 80 ms (TS 38.212 [17], clause 7.1) and it includes parameters that are needed to acquire *SIB1* from the cell. The first transmission of the *MIB* is scheduled in subframes as defined in TS 38.213 [13], clause 4.1 and repetitions are scheduled according to the period of SSB;

NOTE 1: If the period of SSB is larger than 80 ms, the *MIB* is transmitted with the same periodicity as that of SSB.

- the *SIB1* is transmitted on the DL-SCH with a periodicity of 160 ms and variable transmission repetition periodicity within 160 ms as specified in TS 38.213 [13], clause 13. The default transmission repetition periodicity of *SIB1* is 20 ms but the actual transmission repetition periodicity is up to network implementation. For SSB and CORESET multiplexing pattern 1, *SIB1* repetition transmission period is 20 ms. For SSB and CORESET multiplexing pattern 2/3, *SIB1* transmission repetition period is the same as the SSB period (TS 38.213 [13], clause 13). *SIB1* includes information regarding the availability and scheduling (e.g. mapping of SIBs to SI message, periodicity, SI-window size) of other SIBs with an indication whether one or more SIBs are only provided on-demand and, in that case, the configuration needed by the UE to perform the SI request. *SIB1* is cell-specific SIB;
- SIBs other than *SIB1* and posSIBs are carried in *SystemInformation* (SI) messages, which are transmitted on the DL-SCH. Only SIBs or posSIBs having the same periodicity can be mapped to the same SI message. SIBs and posSIBs are mapped to different SI messages, i.e. an SI message contains either only SIBs or only posSIBs. Each SI message is transmitted within periodically occurring time domain windows (referred to as SI-windows with same length for all SI messages). Each SI message is associated with an SI-window and the SI-windows of different SI messages do not overlap. That is, within one SI-window only the corresponding SI message is transmitted. An SI message may be repeated with the same content a number of times within the SI-window. Any SIB or posSIB except *SIB1* can be configured to be cell specific or area specific, using an indication in *SIB1*. The cell specific SIB is applicable only within a cell that provides the SIB while the area specific SIB is applicable within an area referred to as SI area, which consists of one or several cells and is identified by *systemInformationAreaID*;
- The mapping of SIBs to SI messages is configured in *schedulingInfoList* and *schedulingInfoList2*, while the mapping of posSIBs to SI messages is configured in *posSchedulingInfoList* and *schedulingInfoList2*. Each SIB and each posSIB is mapped to a single SI message. posSIBs of the same *posSibType* carrying GNSS Generic Assistance Data for different GNSS/SBAS (identified by *gnss-id/sbas-id*, see TS 37.355 [49]) are mapped to different SI messages. Each SIB and posSIB is contained at most once in an SI message. For SIBs and posSIBs with segments, the segments contained in SI messages are transmitted according to the SI message periodicity, with one segment of a particular *sibType/posSibType* in each SI message;

- For a UE in RRC\_CONNECTED, the network can provide system information through dedicated signalling using the *RRCReconfiguration* message, e.g. if the UE has an active BWP with no common search space configured to monitor system information, paging, or upon request from the UE.
- For PSCell and SCells, the network provides the required SI by dedicated signalling, i.e. within an *RRCReconfiguration* message. Nevertheless, the UE shall acquire *MIB* of the PSCell to get SFN timing of the SCG (which may be different from MCG). Upon change of relevant SI for SCell, the network releases and adds the concerned SCell. For PSCell, the required SI can only be changed with Reconfiguration with Sync.

NOTE 2: The physical layer imposes a limit to the maximum size a SIB can take. The maximum *SIB1* or *SI message* size is 2976 bits.

## 5.2.2 System information acquisition

### 5.2.2.1 General UE requirements

Figure 5.2.2.1-1: System information acquisition

The UE applies the SI acquisition procedure to acquire the AS, NAS- and positioning assistance data information. The procedure applies to UEs in RRC\_IDLE, in RRC\_INACTIVE and in RRC\_CONNECTED.

The UE in RRC\_IDLE and RRC\_INACTIVE shall ensure having a valid version of (at least) the *MIB*, *SIB1* through *SIB4*, *SIB5* (if the UE supports E-UTRA), *SIB11* (if the UE is configured for idle/inactive measurements), *SIB12* (if UE is capable of NR sidelink communication/discovery and is configured by upper layers to receive or transmit NR sidelink communication/discovery), and *SIB13*, *SIB14* (if UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication), *SIB15* (if UE is configured by upper layers to report disaster roaming related information), *SIB16* (if the UE is capable of slice-based cell reselection and the UE receives NSAG information for cell reselection from upper layer), *SIB17* (if the UE is using TRS resources for power saving in RRC\_IDLE and RRC\_INACTIVE) and *SIB19* (if UE is accessing NR via NTN access).

The UE capable of MBS broadcast which is receiving or interested to receive MBS broadcast service(s) via a broadcast MRB shall ensure having a valid version of *SIB20*, regardless of the RRC state the UE is in.

The UE shall ensure having a valid version of the posSIB requested by upper layers.

### 5.2.2.2 SIB validity and need to (re)-acquire SIB

#### 5.2.2.2.1 SIB validity

The UE shall apply the SI acquisition procedure as defined in clause 5.2.2.3 upon cell selection (e.g. upon power on), cell-reselection, return from out of coverage, after reconfiguration with sync completion, after entering the network from another RAT, upon receiving an indication that the system information has changed, upon receiving a PWS notification, upon receiving request (e.g., a positioning request) from upper layers; and whenever the UE does not have a valid version of a stored SIB or posSIB or a valid version of a requested SIB.

When the UE acquires a *MIB* or a *SIB1* or an SI message in a serving cell as described in clause 5.2.2.3, and if the UE stores the acquired SIB, then the UE shall store the associated *areaScope*, if present, the first *PLMN-Identity* in the *PLMN-IdentityInfoList* for non-NPN-only cells or the first NPN identity (SNPN identity in case of SNPN, or PNI-NPN identity in case of PNI-NPN) in the *NPN-IdentityInfoList* for NPN-only cells, the *cellIdentity*, the

*systemInformationAreaID*, if present, and the *valueTag*, if present, as indicated in the *si-SchedulingInfo* for the SIB. If the UE stores the acquired posSIB, then the UE shall store the associated *areaScope*, if present, the *cellIdentity*, the *systemInformationAreaID*, if present, the *valueTag*, if provided in *assistanceDataSIB-Element*, and the *expirationTime* if provided in *assistanceDataSIB-Element*. The UE may use a valid stored version of the SI except *MIB*, *SIB1*, *SIB6*, *SIB7* or *SIB8* e.g. after cell re-selection, upon return from out of coverage or after the reception of SI change indication. The *valueTag* and *expirationTime* for posSIB is optionally provided in *assistanceDataSIB-Element*, as specified in TS 37.355 [49].

A L2 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE can inform the interested SIB(s) to the connected L2 U2N Relay UE as defined in clause 5.8.9.8.2 and receive the SIB(s) from the L2 U2N Relay UE as defined in clause 5.8.9.9.3. A L2 U2N Remote UE in RRC\_CONNECTED receives SIB1 and other SIB(s) in *RRCReconfiguration* message and performs on-demand SI request if required, as defined in clause 5.2.2.3.5 and 5.2.2.3.6. The L2 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE or RRC\_CONNECTED is not required to obtain SI over Uu interface, but it may decide to perform the SI acquisition procedure over Uu interface as defined in clause 5.2.2.3 by UE implementation.

NOTE: The storage and management of the stored SIBs in addition to the SIBs valid for the current serving cell is left to UE implementation.

The UE shall:

- 1> delete any stored version of a SIB after 3 hours from the moment it was successfully confirmed as valid;
- 1> for each stored version of a SIB:
  - 2> if the *areaScope* is associated and its value for the stored version of the SIB is the same as the value received in the *si-SchedulingInfo* for that SIB from the serving cell:
    - 3> if the UE is NPN capable and the cell is an NPN-only cell:
      - 4> if the first NPN identity included in the *NPN-IdentityInfoList*, the *systemInformationAreaID* and the *valueTag* that are included in the *si-SchedulingInfo* for the SIB received from the serving cell are identical to the NPN identity, the *systemInformationAreaID* and the *valueTag* associated with the stored version of that SIB:
        - 5> consider the stored SIB as valid for the cell;
    - 3> else if the first *PLMN-Identity* included in the *PLMN-IdentityInfoList*, the *systemInformationAreaID* and the *valueTag* that are included in the *si-SchedulingInfo* for the SIB received from the serving cell are identical to the *PLMN-Identity*, the *systemInformationAreaID* and the *valueTag* associated with the stored version of that SIB:
      - 4> consider the stored SIB as valid for the cell;
  - 2> if the *areaScope* is not present for the stored version of the SIB and the *areaScope* value is not included in the *si-SchedulingInfo* for that SIB from the serving cell:
    - 3> if the UE is NPN capable and the cell is an NPN-only cell:
      - 4> if the first NPN identity in the *NPN-IdentityInfoList*, the *cellIdentity* and *valueTag* that are included in the *si-SchedulingInfo* for the SIB received from the serving cell are identical to the NPN identity, the *cellIdentity* and the *valueTag* associated with the stored version of that SIB:
        - 5> consider the stored SIB as valid for the cell;
    - 3> else if the first *PLMN-Identity* in the *PLMN-IdentityInfoList*, the *cellIdentity* and *valueTag* that are included in the *si-SchedulingInfo* for the SIB received from the serving cell are identical to the *PLMN-Identity*, the *cellIdentity* and the *valueTag* associated with the stored version of that SIB:
      - 4> consider the stored SIB as valid for the cell;
- 1> for each stored version of a posSIB:
  - 2> if the *areaScope* is associated and its value for the stored version of the posSIB is the same as the value received in the *posSIB-MappingInfo* for that posSIB from the serving cell and the *systemInformationAreaID*

included in the *si-SchedulingInfo* is identical to the *systemInformationAreaID* associated with the stored version of that posSIB:

- 3> if the *valueTag* (see TS 37.355 [49]) for the posSIB received from the serving cell is identical to the *valueTag* associated with the stored version of that posSIB; or if the *expirationTime* (see TS 37.355 [49]) associated with the stored posSIB has not been expired:
  - 4> consider the stored posSIB as valid for the cell;
- 2> if the *areaScope* is not present for the stored version of the posSIB and the *areaScope* value is not included in the *posSIB-MappingInfo* for that posSIB from the serving cell and the *cellIdentity* for the posSIB received from the serving cell is identical to the *cellIdentity* associated with the stored version of that posSIB:
  - 3> if the *valueTag* (see TS 37.355 [49]) for the posSIB received from the serving cell is identical to the *valueTag* associated with the stored version of that posSIB; or if the *expirationTime* (see TS 37.355 [49]) associated with the stored posSIB has not been expired:
    - 4> consider the stored posSIB as valid for the cell;

#### 5.2.2.2.2 SI change indication and PWS notification

A modification period is used, i.e. updated SI message (other than SI message for ETWS, CMAS, positioning assistance data, and some NTN-specific information as specified in the field descriptions ) is broadcasted in the modification period following the one where SI change indication is transmitted. The modification period boundaries are defined by SFN values for which  $\text{SFN mod } m = 0$ , where  $m$  is the number of radio frames comprising the modification period. The modification period is configured by system information. If H-SFN is provided in *SIB1*, and UE is configured with eDRX, modification period boundaries are defined by SFN values for which  $(\text{H-SFN} * 1024 + \text{SFN}) \text{ mod } m = 0$ .

For UEs in RRC\_IDLE or RRC\_INACTIVE configured to use an IDLE eDRX cycle longer than the modification period, an eDRX acquisition period is defined. The boundaries of the eDRX acquisition period are determined by H-SFN values for which  $\text{H-SFN mod } 1024 = 0$ .

The UE receives indications about SI modifications and/or PWS notifications using Short Message transmitted with P-RNTI over DCI (see clause 6.5). Repetitions of SI change indication may occur within preceding modification period or within preceding eDRX acquisition period. SI change indication is not applicable for SI messages containing posSIBs.

UEs in RRC\_IDLE or in RRC\_INACTIVE while SDT procedure is not ongoing shall monitor for SI change indication in its own paging occasion(s) that the UE monitors as specified in TS 38.304 [20]. UEs in RRC\_CONNECTED shall monitor for SI change indication in any paging occasion at least once per modification period if the UE is provided with common search space, including *pagingSearchSpace*, *searchSpaceSIB1* and *searchSpaceOtherSystemInformation*, on the active BWP to monitor paging, as specified in TS 38.213 [13], clause 13.

UEs in RRC\_INACTIVE while SDT procedure is ongoing shall monitor for SI change indication in any paging occasion at least once per modification period, if the initial downlink BWP on which the SDT procedure is ongoing is associated with a CD-SSB.

During a modification period where ETWS or CMAS transmission is started or stopped, the SI messages carrying the posSIBs scheduled in *posSchedulingInfoList* may change, so the UE might not be able to successfully receive those posSIBs in the remainder of the current modification period and next modification period according to the scheduling information received prior to the change.

ETWS or CMAS capable UEs in RRC\_IDLE or in RRC\_INACTIVE while SDT procedure is not ongoing shall monitor for indications about PWS notification in its own paging occasion(s) that the UE monitors as specified in TS 38.304 [20]. ETWS or CMAS capable UEs in RRC\_CONNECTED shall monitor for indication about PWS notification in any paging occasion at least once every *defaultPagingCycle* if the UE is provided with common search space, including *pagingSearchSpace*, *searchSpaceSIB1* and *searchSpaceOtherSystemInformation*, on the active BWP to monitor paging.

ETWS or CMAS capable UEs in RRC\_INACTIVE while SDT procedure is ongoing shall monitor for indication about PWS notification in any paging occasion at least once every *defaultPagingCycle*, if the initial downlink BWP on which the SDT procedure is ongoing is associated with a CD-SSB.

For Short Message reception in a paging occasion, the UE monitors the PDCCH monitoring occasion(s) for paging as specified in TS 38.304 [20] and TS 38.213 [13].

A L2 U2N Remote UE is not required to monitor paging occasion for SI modifications and/or PWS notifications. It obtains the updated system information and SIB6/7/8 from the connected L2 U2N Relay UE as defined in clause 5.8.9.9.3.

If the UE receives a Short Message, the UE shall:

- 1> if the UE is ETWS capable or CMAS capable, the *etwsAndCmasIndication* bit of Short Message is set, and the UE is provided with *searchSpaceSIB1* and *searchSpaceOtherSystemInformation* on the active BWP or the initial BWP:
  - 2> immediately re-acquire the *SIB1*;
- 2> if the UE is ETWS capable and *si-SchedulingInfo* includes scheduling information for *SIB6*:
  - 3> acquire *SIB6*, as specified in clause 5.2.2.3.2, immediately;
- 2> if the UE is ETWS capable and *si-SchedulingInfo* includes scheduling information for *SIB7*:
  - 3> acquire *SIB7*, as specified in clause 5.2.2.3.2, immediately;
- 2> if the UE is CMAS capable and *si-SchedulingInfo* includes scheduling information for *SIB8*:
  - 3> acquire *SIB8*, as specified in clause 5.2.2.3.2, immediately;

NOTE: In case *SIB1*, *SIB6*, *SIB7*, or *SIB8* overlap with a measurement gap it is left to UE implementation how to immediately acquire *SIB1*, *SIB6*, *SIB7*, or *SIB8*.

- 1> if the UE does not operate an IDLE eDRX cycle longer than the modification period and the *systemInfoModification* bit of Short Message is set:
  - 2> apply the SI acquisition procedure as defined in clause 5.2.2.3 from the start of the next modification period;
- 1> if the UE operates an IDLE eDRX cycle longer than the modification period and the *systemInfoModification-eDRX* bit of Short Message is set:
  - 2> apply the SI acquisition procedure as defined in clause 5.2.2.3 from the start of the next eDRX acquisition period boundary.

### 5.2.2.3 Acquisition of System Information

#### 5.2.2.3.1 Acquisition of *MIB* and *SIB1*

The UE shall:

- 1> apply the specified BCCH configuration defined in 9.1.1.1;
- 1> if the UE is in RRC\_IDLE or in RRC\_INACTIVE; or
- 1> if the UE is in RRC\_CONNECTED while T311 is running:
  - 2> acquire the *MIB*, which is scheduled as specified in TS 38.213 [13];
  - 2> if the UE is unable to acquire the *MIB*:
    - 3> perform the actions as specified in clause 5.2.2.5;
  - 2> else:
    - 3> perform the actions specified in clause 5.2.2.4.1.
- 1> if the UE is in RRC\_CONNECTED with an active BWP with common search space configured by *searchSpaceSIB1* and *pagingSearchSpace* and has received an indication about change of system information; or

- 1> if the UE is in RRC\_CONNECTED with an active BWP with common search space configured by *searchSpaceSIB1* and the UE has not stored a valid version of a SIB or posSIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s) or posSIB(s) in accordance with clause 5.2.2.1, and, UE has not acquired SIB1 in current modification period; or
- 1> if the UE is in RRC\_CONNECTED with an active BWP with common search space configured by *searchSpaceSIB1*, and, the UE has not stored a valid version of a SIB or posSIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s) or posSIB(s) in accordance with clause 5.2.2.1, and, *si-BroadcastStatus* for the required SIB(s) or *posSI-BroadcastStatus* for the required posSIB(s) is set to *notBroadcasting* in acquired *SIB1* in current modification period; or
- 1> if the UE is in RRC\_IDLE or in RRC\_INACTIVE; or
- 1> if the UE is in RRC\_CONNECTED while T311 is running:
  - 2> if *ssb-SubcarrierOffset* indicates *SIB1* is transmitted in the cell (TS 38.213 [13]) and if *SIB1* acquisition is required for the UE:
    - 3> acquire the *SIB1*, which is scheduled as specified in TS 38.213 [13];
    - 3> if the UE is unable to acquire the *SIB1*:
      - 4> perform the actions as specified in clause 5.2.2.5;
    - 3> else:
      - 4> upon acquiring *SIB1*, perform the actions specified in clause 5.2.2.4.2.
  - 2> else if *SIB1* acquisition is required for the UE and *ssb-SubcarrierOffset* indicates that *SIB1* is not scheduled in the cell:
    - 3> perform the actions as specified in clause 5.2.2.5.

NOTE 1: The UE in RRC\_CONNECTED is only required to acquire broadcasted *SIB1* if the UE can acquire it without disrupting unicast or MBS multicast data reception, i.e., the broadcast and unicast/MBS multicast beams are quasi co-located. The UE in RRC\_INACTIVE state while SDT procedure is ongoing, is only required to acquire broadcasted *SIB1* and *MIB* if the UE can acquire them without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.

NOTE 2: UE in RRC\_INACTIVE that does not support *inactiveStateNTN-r17* enters RRC\_IDLE upon cell reselection between TN cell and NTN cell, and initiates the NAS signalling connection recovery (see TS 24.501 [23]).

### 5.2.2.3.2 Acquisition of an SI message

For SI message acquisition PDCCH monitoring occasion(s) are determined according to *searchSpaceOtherSystemInformation*. If *searchSpaceOtherSystemInformation* is set to zero, PDCCH monitoring occasions for SI message reception in SI-window are same as PDCCH monitoring occasions for *SIB1* where the mapping between PDCCH monitoring occasions and SSBs is specified in TS 38.213[13]. If *searchSpaceOtherSystemInformation* is not set to zero, PDCCH monitoring occasions for SI message are determined based on search space indicated by *searchSpaceOtherSystemInformation*. PDCCH monitoring occasions for SI message which are not overlapping with UL symbols (determined according to *tdd-UL-DL-ConfigurationCommon*) are sequentially numbered from one in the SI window. The  $[x \times N + K]^{\text{th}}$  PDCCH monitoring occasion (s) for SI message in SI-window corresponds to the  $K^{\text{th}}$  transmitted SSB, where  $x = 0, 1, \dots, X-1$ ,  $K = 1, 2, \dots, N$ ,  $N$  is the number of actual transmitted SSBs determined according to *ssb-PositionsInBurst* in *SIB1* and  $X$  is equal to  $\text{CEIL}(\text{number of PDCCH monitoring occasions in SI-window}/N)$ . The actual transmitted SSBs are sequentially numbered from one in ascending order of their SSB indexes. The UE assumes that, in the SI window, PDCCH for an SI message is transmitted in at least one PDCCH monitoring occasion corresponding to each transmitted SSB and thus the selection of SSB for the reception SI messages is up to UE implementation.

When acquiring an SI message, the UE shall:

- 1> determine the start of the SI-window for the concerned SI message as follows:
  - 2> if the concerned SI message is configured in the *schedulingInfoList*:

- 3> for the concerned SI message, determine the number  $n$  which corresponds to the order of entry in the list of SI messages configured by *schedulingInfoList* in *si-SchedulingInfo* in *SIB1*;
- 3> determine the integer value  $x = (n - 1) \times w$ , where  $w$  is the *si-WindowLength*;
- 3> the SI-window starts at the slot  $\#a$ , where  $a = x \bmod N$ , in the radio frame for which  $\text{SFN} \bmod T = \text{FLOOR}(x/N)$ , where  $T$  is the *si-Periodicity* of the concerned SI message and  $N$  is the number of slots in a radio frame as specified in TS 38.211 [16];
- 2> else if the concerned SI message is configured in the *schedulingInfoList2*;
- 3> determine the integer value  $x = (\text{si-WindowPosition} - 1) \times w$ , where  $w$  is the *si-WindowLength*;
- 3> the SI-window starts at the slot  $\#a$ , where  $a = x \bmod N$ , in the radio frame for which  $\text{SFN} \bmod T = \text{FLOOR}(x/N)$ , where  $T$  is the *si-Periodicity* of the concerned SI message and  $N$  is the number of slots in a radio frame as specified in TS 38.211 [16];
- 2> else if the concerned SI message is configured in the *posSchedulingInfoList* and *offsetToSI-Used* is not configured:
- 3> create a concatenated list of SI messages by appending the *posSchedulingInfoList* in *posSI-SchedulingInfo* in *SIB1* to *schedulingInfoList* in *si-SchedulingInfo* in *SIB1*;
- 3> for the concerned SI message, determine the number  $n$  which corresponds to the order of entry in the concatenated list;
- 3> determine the integer value  $x = (n - 1) \times w$ , where  $w$  is the *si-WindowLength*;
- 3> the SI-window starts at the slot  $\#a$ , where  $a = x \bmod N$ , in the radio frame for which  $\text{SFN} \bmod T = \text{FLOOR}(x/N)$ , where  $T$  is the *posSI-Periodicity* of the concerned SI message and  $N$  is the number of slots in a radio frame as specified in TS 38.211 [16];
- 2> else if the concerned SI message is configured by the *posSchedulingInfoList* and *offsetToSI-Used* is configured:
- 3> determine the number  $m$  which corresponds to the number of SI messages with an associated *si-Periodicity* of 8 radio frames (80 ms), configured by *schedulingInfoList* in *SIB1*;
- 3> for the concerned SI message, determine the number  $n$  which corresponds to the order of entry in the list of SI messages configured by *posSchedulingInfoList* in *SIB1*;
- 3> determine the integer value  $x = m \times w + (n - 1) \times w$ , where  $w$  is the *si-WindowLength*;
- 3> the SI-window starts at the slot  $\#a$ , where  $a = x \bmod N$ , in the radio frame for which  $\text{SFN} \bmod T = \text{FLOOR}(x/N) + 8$ , where  $T$  is the *posSI-Periodicity* of the concerned SI message and  $N$  is the number of slots in a radio frame as specified in TS 38.211 [16];
- 1> receive the PDCCH containing the scheduling RNTI, i.e. SI-RNTI in the PDCCH monitoring occasion(s) for SI message acquisition, from the start of the SI-window and continue until the end of the SI-window whose absolute length in time is given by *si-WindowLength*, or until the SI message was received;
- 1> if the SI message was not received by the end of the SI-window, repeat reception at the next SI-window occasion for the concerned SI message in the current modification period;
- 1> if all the SIB(s) and/or posSIB(s) requested in *DedicatedSIBRequest* message have been acquired:
- 2> stop timer T350, if running;

NOTE 1: The UE is only required to acquire broadcasted SI message if the UE can acquire it without disrupting unicast or MBS multicast data reception, i.e. the broadcast and unicast/MBS multicast beams are quasi co-located.

NOTE 2: The UE is not required to monitor PDCCH monitoring occasion(s) corresponding to each transmitted SSB in SI-window.

NOTE 3: If the concerned SI message was not received in the current modification period, handling of SI message acquisition is left to UE implementation.

NOTE 4: A UE in RRC\_CONNECTED may stop the PDCCH monitoring during the SI window for the concerned SI message when the requested SIB(s) are acquired.

NOTE 5: A UE capable of NR sidelink communication/discovery and configured by upper layers to perform NR sidelink communication/discovery on a frequency, may acquire *SIB12* or *SystemInformationBlockType28* from a cell other than current serving cell (for RRC\_INACTIVE or RRC\_IDLE) or current PCell (for RRC\_CONNECTED), if *SIB12* of current serving cell (for RRC\_INACTIVE or RRC\_IDLE) or current PCell (for RRC\_CONNECTED) does not provide configuration for NR sidelink communication/discovery for the frequency, and if the other cell providing configuration for NR sidelink communication/discovery for the frequency meets the S-criteria as defined in TS 38.304 [20] or TS 36.304 [27].

1> perform the actions for the acquired SI message as specified in clause 5.2.2.4.

### 5.2.2.3.3 Request for on demand system information

The UE shall, while SDT procedure is not ongoing:

- 1> if *SIB1* includes *si-SchedulingInfo* containing *si-RequestConfigSUL* and criteria to select supplementary uplink as defined in TS 38.321[3], clause 5.1.1 is met:
  - 2> trigger the lower layer to initiate the Random Access procedure on supplementary uplink in accordance with TS 38.321 [3] using the PRACH preamble(s) and PRACH resource(s) in *si-RequestConfigSUL* corresponding to the SI message(s) that the UE requires to operate within the cell, and for which *si-BroadcastStatus* is set to *notBroadcasting*;
  - 2> if acknowledgement for SI request is received from lower layers:
    - 3> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 1> else if the UE is a RedCap UE and if *initialUplinkBWP-RedCap* is configured in *UplinkConfigCommonSIB* and if *SIB1* includes *si-SchedulingInfo* containing *si-RequestConfigRedCap* and criteria to select normal uplink as defined in TS 38.321[3], clause 5.1.1 is met:
  - 2> trigger the lower layer to initiate the Random Access procedure on normal uplink in accordance with TS 38.321 [3] using the PRACH preamble(s) and PRACH resource(s) in *si-RequestConfigRedcap* corresponding to the SI message(s) that the UE requires to operate within the cell, and for which *si-BroadcastStatus* is set to *notBroadcasting*;
  - 2> if acknowledgement for SI request is received from lower layers:
    - 3> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 1> else:
  - 2> if the UE is not a RedCap UE and if *SIB1* includes *si-SchedulingInfo* containing *si-RequestConfig* and criteria to select normal uplink as defined in TS 38.321[3], clause 5.1.1 is met; or
  - 2> if the UE is a RedCap UE and if *initialUplinkBWP-RedCap* is not configured in *UplinkConfigCommonSIB* and if *SIB1* includes *si-SchedulingInfo* containing *si-RequestConfig* and criteria to select normal uplink as defined in TS 38.321[3], clause 5.1.1 is met:
    - 3> trigger the lower layer to initiate the Random Access procedure on normal uplink in accordance with TS 38.321 [3] using the PRACH preamble(s) and PRACH resource(s) in *si-RequestConfig* corresponding to the SI message(s) that the UE requires to operate within the cell, and for which *si-BroadcastStatus* is set to *notBroadcasting*;
    - 3> if acknowledgement for SI request is received from lower layers:
      - 4> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 2> else:

- 3> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the parameters for which values are provided in *SIB1*;
- 3> apply the default MAC Cell Group configuration as specified in 9.2.2;
- 3> apply the *timeAlignmentTimerCommon* included in *SIB1*;
- 3> apply the CCCH configuration as specified in 9.1.1.2;
- 3> initiate transmission of the *RRCSystemInfoRequest* message with *rrcSystemInfoRequest* in accordance with 5.2.2.3.4;
- 3> if acknowledgement for *RRCSystemInfoRequest* message with *rrcSystemInfoRequest* is received from lower layers:
  - 4> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 1> if cell reselection occurs while waiting for the acknowledgment for SI request from lower layers:
  - 2> reset MAC;
  - 2> if SI request is based on *RRCSystemInfoRequest* message with *rrcSystemInfoRequest*:
    - 3> release RLC entity for SRB0.

NOTE: After RACH failure for SI request it is up to UE implementation when to retry the SI request.

#### 5.2.2.3.3a Request for on demand positioning system information

The UE shall, while SDT procedure is not ongoing:

- 1> if *SIB1* includes *posSI-SchedulingInfo* containing *posSI-RequestConfigSUL* and criteria to select supplementary uplink as defined in TS 38.321[3], clause 5.1.1 is met:
  - 2> trigger the lower layer to initiate the Random Access procedure on supplementary uplink in accordance with TS 38.321 [3] using the PRACH preamble(s) and PRACH resource(s) in *posSI-RequestConfigSUL* corresponding to the SI message(s) that the UE upper layers require for positioning operations, and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *notBroadcasting*;
  - 2> if acknowledgement for SI request is received from lower layers:
    - 3> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 1> else if the UE is a RedCap UE and if *initialUplinkBWP-RedCap* is configured in *UplinkConfigCommonSIB* and if *SIB1* includes *posSI-SchedulingInfo* containing *posSI-RequestConfigRedCap* and criteria to select normal uplink as defined in TS 38.321[3], clause 5.1.1 is met:
  - 2> trigger the lower layer to initiate the Random Access procedure on normal uplink in accordance with TS 38.321 [3] using the PRACH preamble(s) and PRACH resource(s) in *posSI-RequestConfigRedCap* corresponding to the SI message(s) that the UE upper layers require for positioning operations, and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *notBroadcasting*;
  - 2> if acknowledgement for SI request is received from lower layers:
    - 3> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 1> else:
  - 2> if the UE is not a RedCap UE and if *SIB1* includes *posSI-SchedulingInfo* containing *posSI-RequestConfig* and criteria to select normal uplink as defined in TS 38.321[3], clause 5.1.1 is met; or
  - 2> if the UE is a RedCap UE and if *initialUplinkBWP-RedCap* is not configured in *UplinkConfigCommonSIB* and if *SIB1* includes *posSI-SchedulingInfo* containing *posSI-RequestConfig* and criteria to select normal uplink as defined in TS 38.321[3], clause 5.1.1 is met;

- 3> trigger the lower layer to initiate the Random Access procedure on normal uplink in accordance with TS 38.321 [3] using the PRACH preamble(s) and PRACH resource(s) in *posSI-RequestConfig* corresponding to the SI message(s) that the UE upper layers require for positioning operations, and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *notBroadcasting*;
- 3> if acknowledgement for SI request is received from lower layers:
  - 4> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 2> else:
  - 3> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the parameters for which values are provided in *SIB1*;
  - 3> apply the default MAC Cell Group configuration as specified in 9.2.2;
  - 3> apply the *timeAlignmentTimerCommon* included in *SIB1*;
  - 3> apply the CCCH configuration as specified in 9.1.1.2;
  - 3> initiate transmission of the *RRCSystemInfoRequest* message with *rrcPosSystemInfoRequest* in accordance with 5.2.2.3.4;
  - 3> if acknowledgement for *RRCSystemInfoRequest* message with *rrcPosSystemInfoRequest* is received from lower layers:
    - 4> acquire the requested SI message(s) as defined in clause 5.2.2.3.2, immediately;
- 1> if cell reselection occurs while waiting for the acknowledgment for SI request from lower layers:
  - 2> reset MAC;
  - 2> if SI request is based on *RRCSystemInfoRequest* message with *rrcPosSystemInfoRequest*:
    - 3> release RLC entity for SRB0.

NOTE: After RACH failure for SI request it is up to UE implementation when to retry the SI request.

#### 5.2.2.3.4 Actions related to transmission of *RRCSystemInfoRequest* message

The UE shall set the contents of *RRCSystemInfoRequest* message as follows:

- 1> if the procedure is triggered to request the required SI message(s) other than positioning:
  - 2> set the *requested-SI-List* to indicate the SI message(s) that the UE requires to operate within the cell, and for which *si-BroadcastStatus* is set to *notBroadcasting*;
- 1> else if the procedure is triggered to request the required SI message(s) for positioning:
  - 2> set the *requestedPosSI-List* to indicate the SI message(s) that the UE upper layers require for positioning operations, and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *notBroadcasting*.

The UE shall submit the *RRCSystemInfoRequest* message to lower layers for transmission.

#### 5.2.2.3.5 Acquisition of SIB(s) or posSIB(s) in RRC\_CONNECTED

The UE shall:

- 1> if the UE is in RRC\_CONNECTED with an active BWP not configured with common search space with the field *searchSpaceOtherSystemInformation* and the UE has not stored a valid version of a SIB or posSIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s) or posSIB(s) in accordance with clause 5.2.2.1, or

- 1> if the UE is in RRC\_CONNECTED and acting as a L2 U2N Remote UE and the UE has not stored a valid version of a SIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s) in accordance with clause 5.2.2.1:
  - 2> for the SI message(s) that, according to the *si-SchedulingInfo* or *posSI-SchedulingInfo* in the stored SIB1, contain at least one required SIB or requested posSIB:
    - 3> if *onDemandSIB-Request* is configured and timer T350 is not running:
      - 4> initiate transmission of the *DedicatedSIBRequest* message in accordance with 5.2.2.3.6;
      - 4> start timer T350 with the timer value set to the *onDemandSIB-RequestProhibitTimer*;
  - 1> else if the UE is in RRC\_CONNECTED with an active BWP configured with common search space with the field *searchSpaceOtherSystemInformation* and the UE has not stored a valid version of a SIB or posSIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s) or posSIB(s) in accordance with clause 5.2.2.1:
    - 2> for the SI message(s) that, according to the *si-SchedulingInfo* in the stored SIB1, contain at least one required SIB and for which *si-BroadcastStatus* is set to *broadcasting*:
      - 3> acquire the SI message(s) as defined in clause 5.2.2.3.2;
    - 2> for the SI message(s) that, according to the *si-SchedulingInfo* in the stored SIB1, contain at least one required SIB and for which *si-BroadcastStatus* is set to *notBroadcasting*:
      - 3> if *onDemandSIB-Request* is configured and timer T350 is not running:
        - 4> initiate transmission of the *DedicatedSIBRequest* message in accordance with 5.2.2.3.6;
        - 4> start timer T350 with the timer value set to the *onDemandSIB-RequestProhibitTimer*;
        - 4> acquire the requested SI message(s) corresponding to the requested SIB(s) as defined in clause 5.2.2.3.2.
    - 2> for the SI message(s) that, according to the *posSI-SchedulingInfo* or *si-SchedulingInfo-v1700*, if present, in the stored SIB1, contain at least one requested posSIB and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *broadcasting*:
      - 3> acquire the SI message(s) as defined in clause 5.2.2.3.2;
    - 2> for the SI message(s) that, according to the *posSI-SchedulingInfo* or *si-SchedulingInfo-v1700*, if present, in the stored SIB1, contain at least one requested posSIB and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *notBroadcasting*:
      - 3> if *onDemandSIB-Request* is configured and timer T350 is not running:
        - 4> initiate transmission of the *DedicatedSIBRequest* message in accordance with 5.2.2.3.6;
        - 4> start timer T350 with the timer value set to the *onDemandSIB-RequestProhibitTimer*;
        - 4> acquire the requested SI message(s) corresponding to the requested posSIB(s) as defined in clause 5.2.2.3.2.

NOTE: UE may include on demand request for SIB and/or posSIB(s) in the same *DedicatedSIBRequest* message.

#### 5.2.2.3.6 Actions related to transmission of *DedicatedSIBRequest* message

The UE shall set the contents of *DedicatedSIBRequest* message as follows:

- 1> if the procedure is triggered to request the required SIB(s):
  - 2> include *requestedSIB-List* in the *onDemandSIB-RequestList* to indicate the requested SIB(s);

- 1> if the procedure is triggered to request the required posSIB(s):
  - 2> include *requestedPosSIB-List* in the *onDemandSIB-RequestList* to indicate the requested posSIB(s).

The UE shall submit the *DedicatedSIBRequest* message to lower layers for transmission.

## 5.2.2.4 Actions upon receipt of System Information

### 5.2.2.4.1 Actions upon reception of the *MIB*

Upon receiving the *MIB* the UE shall:

- 1> store the acquired *MIB*;
- 1> if the UE is in RRC\_IDLE or in RRC\_INACTIVE, or if the UE is in RRC\_CONNECTED while *T311* is running:
  - 2> if the access is not for NTN or the UE is not capable of NTN; and
  - 2> if the *cellBarred* in the acquired *MIB* is set to *barred*:
    - 3> if the UE is a RedCap UE and *ssb-SubcarrierOffset* indicates *SIB1* is transmitted in the cell (TS 38.213 [13]):
      - 4> acquire the *SIB1*, which is scheduled as specified in TS 38.213 [13];
    - 3> consider the cell as barred in accordance with TS 38.304 [20];
    - 3> perform cell re-selection to other cells on the same frequency as the barred cell as specified in TS 38.304 [20];
  - 2> else:
    - 3> apply the received *systemFrameNumber*, *pdccch-ConfigSIB1*, *subCarrierSpacingCommon*, *ssb-SubcarrierOffset* and *dmrs-TypeA-Position*.

NOTE: A UE capable of NTN access should acquire *SIB1* to determine whether the cell is an NTN cell.

### 5.2.2.4.2 Actions upon reception of the *SIB1*

Upon receiving the *SIB1* the UE shall:

- 1> store the acquired *SIB1*;
- 1> if the access is for NTN:
  - 2> if the UE is in RRC\_IDLE or in RRC\_INACTIVE, or if the UE is in RRC\_CONNECTED while *T311* is running; and
  - 2> if the *cellBarredNTN* in the acquired *SIB1* is set to *barred* or the *cellBarredNTN* is not included in the acquired *SIB1*:
    - 3> consider the cell as barred in accordance with TS 38.304 [20];
    - 3> perform cell re-selection to other cells on the same frequency as the barred cell as specified in TS 38.304 [20], upon which the procedure ends;
- 1> if the UE is a RedCap UE and it is in RRC\_IDLE or in RRC\_INACTIVE, or if the RedCap UE is in RRC\_CONNECTED while *T311* is running:
  - 2> if *intraFreqReselectionRedCap* is not present in *SIB1*:
    - 3> consider the cell as barred in accordance with TS 38.304 [20];
    - 3> perform barring as if *intraFreqReselectionRedCap* is set to allowed, upon which the procedure ends;

- 2> else:
    - 3> if the *cellBarredRedCap1Rx* is present in the acquired *SIB1* and is set to *barred* and the UE is equipped with 1 Rx branch; or
    - 3> if the *cellBarredRedCap2Rx* is present in the acquired *SIB1* and is set to *barred* and the UE is equipped with 2 Rx branches; or
    - 3> if the *halfDuplexRedCapAllowed* is not present in the acquired *SIB1* and the UE supports only half-duplex FDD operation:
    - 4> consider the cell as barred in accordance with TS 38.304 [20];
    - 4> perform barring based on *intraFreqReselectionRedCap* as specified in TS 38.304 [20], upon which the procedure ends;
  - 1> if the *cellAccessRelatedInfo* contains an entry of a selected SNPN or PLMN and in case of PLMN the UE is either allowed or instructed to access the PLMN via a cell for which at least one CAG ID is broadcast:
    - 2> in the remainder of the procedures use *npn-IdentityList*, *trackingAreaCode*, and *cellIdentity* for the cell as received in the corresponding entry of *npn-IdentityInfoList* containing the selected PLMN or SNPN;
  - 1> else if the *cellAccessRelatedInfo* contains an entry with the *PLMN-Identity* of the selected PLMN:
    - 2> in the remainder of the procedures use *plmn-IdentityList*, *trackingAreaCode*, *trackingAreaList*, and *cellIdentity* for the cell as received in the corresponding *PLMN-IdentityInfo* containing the selected PLMN;
  - 1> if the UE in RRC\_INACTIVE is configured for feature(s) that it does not support in current serving cell:
    - 2> not use the corresponding configuration in current serving cell;
- NOTE 0: The requirement above applies only to UE that indicates different support of UE capabilities for TN and NTN.
- 1> if in RRC\_CONNECTED while T311 is not running:
    - 2> disregard the *frequencyBandList*, if received, while in RRC\_CONNECTED;
    - 2> forward the *cellIdentity* to upper layers;
    - 2> forward the *trackingAreaCode* to upper layers, if included;
    - 2> forward the *trackingAreaList* to upper layers, if included;
    - 2> forward the received *posSIB-MappingInfo* to upper layers, if included;
    - 2> apply the configuration included in the *servingCellConfigCommon*;
    - 2> if the UE has a stored valid version of a SIB or posSIB, in accordance with clause 5.2.2.2.1, that the UE requires to operate within the cell in accordance with clause 5.2.2.1:
      - 3> use the stored version of the required SIB or posSIB;
    - 2> else:
      - 3> acquire the required SIB or posSIB requested by upper layer as defined in clause 5.2.2.3.5;

NOTE 1: Void.

- 1> else:
  - 2> if the UE supports one or more of the frequency bands indicated in the *frequencyBandList* for downlink for TDD, or one or more of the frequency bands indicated in the *frequencyBandList* for uplink for FDD, and they are not downlink only bands, and
  - 2> if the UE is IAB-MT or supports at least one *additionalSpectrumEmission* in the *nr-NS-PmaxList* for a supported band in the downlink for TDD, or a supported band in uplink for FDD, and

- 2> if the UE supports an uplink channel bandwidth with a maximum transmission bandwidth configuration (see TS 38.101-1 [15], TS 38.101-2 [39], and TS 38.101-5 [75]) which
  - is smaller than or equal to the *carrierBandwidth* (indicated in *uplinkConfigCommon* for the SCS of the initial uplink BWP or, for RedCap UE, of the RedCap-specific initial uplink BWP if configured), and which
  - is wider than or equal to the bandwidth of the initial uplink BWP or, for RedCap UE, of the RedCap-specific initial uplink BWP if configured, and
- 2> if the UE supports a downlink channel bandwidth with a maximum transmission bandwidth configuration (see TS 38.101-1 [15], TS 38.101-2 [39], and TS 38.101-5 [75]) which
  - is smaller than or equal to the *carrierBandwidth* (indicated in *downlinkConfigCommon* for the SCS of the initial downlink BWP or, for RedCap UE, of the RedCap-specific initial downlink BWP if configured), and which
  - is wider than or equal to the bandwidth of the initial downlink BWP or, for RedCap UE, of the RedCap-specific initial downlink BWP if configured, and
- 2> if *frequencyShift7p5khz* is present and the UE supports corresponding 7.5kHz frequency shift on this band; or *frequencyShift7p5khz* is not present, and
- 2> if the UE is not a RedCap UE, or for TDD if the UE is a RedCap UE, or for FDD if the UE is a RedCap UE and *halfDuplexRedCapAllowed* is present, or if the UE is a RedCap UE and the RedCap UE supports full-duplex FDD operation on this band:
- 3> if neither *trackingAreaCode* nor *trackingAreaList* is provided for the selected PLMN nor the registered PLMN nor PLMN of the equivalent PLMN list:
  - 4> consider the cell as barred in accordance with TS 38.304 [20];
  - 4> perform cell re-selection to other cells on the same frequency as the barred cell as specified in TS 38.304 [20];
- 3> else if UE is IAB-MT and if *iab-Support* is not provided for the selected PLMN nor the registered PLMN nor PLMN of the equivalent PLMN list nor the selected SNPN nor the registered SNPN:
  - 4> consider the cell as barred in accordance with TS 38.304 [20];
- 3> else:
  - 4> apply a supported uplink channel bandwidth with a maximum transmission bandwidth which
    - is contained within the *carrierBandwidth* indicated in *uplinkConfigCommon* for the SCS of the initial uplink BWP or, for RedCap UEs, RedCap-specific initial uplink BWP, if configured, and which
    - is wider than or equal to the bandwidth of the initial BWP for the uplink or, for a RedCap UE, of the RedCap-specific initial uplink BWP if configured;
  - 4> apply a supported downlink channel bandwidth with a maximum transmission bandwidth which
    - is contained within the *carrierBandwidth* indicated in *downlinkConfigCommon* for the SCS of the initial downlink BWP or, for RedCap UEs, RedCap-specific initial downlink BWP, if configured, and which
    - is wider than or equal to the bandwidth of the initial BWP for the downlink or, for a RedCap UE, of the RedCap-specific initial downlink BWP if configured;
  - 4> select the first frequency band in the *frequencyBandList*, for FDD from *frequencyBandList* for uplink, or for TDD from *frequencyBandList* for downlink, which the UE supports and for which the UE supports at least one of the *additionalSpectrumEmission* values in *nr-NS-PmaxList*, if present, and for RedCap UEs in FDD, if the *halfDuplexRedCapAllowed* is not present, for which the UE supports full-duplex FDD operation;
  - 4> forward the *cellIdentity* to upper layers;
  - 4> forward the *trackingAreaCode* to upper layers;

- 4> forward the *trackingAreaList* to upper layers, if included;
- 4> forward the received *posSIB-MappingInfo* to upper layers, if included;
- 4> forward the PLMN identity or SNPN identity or PNI-NPN identity to upper layers;
- 4> if in RRC\_INACTIVE and the forwarded information does not trigger message transmission by upper layers:
  - 5> if the serving cell does not belong to the configured *ran-NotificationAreaInfo*:
    - 6> initiate an RNA update as specified in 5.3.13.8;
- 4> forward the *ims-EmergencySupport* to upper layers, if present;
- 4> forward the *eCallOverIMS-Support* to upper layers, if present;
- 4> forward the *UAC-AccessCategory1-SelectionAssistanceInfo* or *UAC-AC1-SelectAssistInfo* for the selected PLMN/SNPN to upper layers, if present and set to *a*, *b* or *c*;
- 4> if the UE is in SNPN access mode:
  - 5> forward the *imsEmergencySupportForSNPN* indicators with the corresponding SNPN identities to upper layers, if present;
- 4> apply the configuration included in the *servingCellConfigCommon*;
- 4> apply the specified PCCH configuration defined in 9.1.1.3;
- 4> if the UE has a stored valid version of a SIB, in accordance with clause 5.2.2.2.1, that the UE requires to operate within the cell in accordance with clause 5.2.2.1:
  - 5> use the stored version of the required SIB;
- 4> if the UE has not stored a valid version of a SIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s), in accordance with clause 5.2.2.1:
  - 5> for the SI message(s) that, according to the *si-SchedulingInfo*, contain at least one required SIB and for which *si-BroadcastStatus* is set to *broadcasting*:
    - 6> acquire the SI message(s) as defined in clause 5.2.2.3.2;
  - 5> for the SI message(s) that, according to the *si-SchedulingInfo*, contain at least one required SIB and for which *si-BroadcastStatus* is set to *notBroadcasting*:
    - 6> trigger a request to acquire the SI message(s) as defined in clause 5.2.2.3.3;
- 4> if the UE has a stored valid version of a posSIB, in accordance with clause 5.2.2.2.1, of one or several required posSIB(s), in accordance with clause 5.2.2.1:
  - 5> use the stored version of the required posSIB;
- 4> if the UE has not stored a valid version of a posSIB, in accordance with clause 5.2.2.2.1, of one or several posSIB(s) in accordance with clause 5.2.2.1:
  - 5> for the SI message(s) that, according to the *posSI-SchedulingInfo* or *si-SchedulingInfo-v1700*, if present, contain at least one requested posSIB and for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *broadcasting*:
    - 6> acquire the SI message(s) as defined in clause 5.2.2.3.2;
  - 5> for the SI message(s) that, according to the *posSI-SchedulingInfo* or *si-SchedulingInfo-v1700*, if present, contain at least one requested posSIB for which *posSI-BroadcastStatus* in *posSchedulingInfoList* in *posSI-SchedulingInfo* or *si-BroadcastStatus* of the type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700*, if present, is set to *notBroadcasting*:

- 6> trigger a request to acquire the SI message(s) as defined in clause 5.2.2.3.3a;
- 4> apply the first listed *additionalSpectrumEmission* which it supports among the values included in *nr-NS-PmaxList* within *frequencyBandList* in *uplinkConfigCommon* for FDD or in *downlinkConfigCommon* for TDD;
- 4> if the *additionalPmax* is present in the same entry of the selected *additionalSpectrumEmission* within *nr-NS-PmaxList*:
  - 5> apply the *additionalPmax* for UL;
- 4> else:
  - 5> apply the *p-Max* in *uplinkConfigCommon* for UL;
- 4> if *supplementaryUplink* is present in *servingCellConfigCommon*; and
- 4> if the UE supports one or more of the frequency bands indicated in the *frequencyBandList* for the *supplementaryUplink*; and
- 4> if the UE supports at least one *additionalSpectrumEmission* in the *nr-NS-PmaxList* for a supported supplementary uplink band; and
- 4> if the UE is not a RedCap UE, or for TDD if the UE is a RedCap UE, or for FDD if the UE is a RedCap UE and *halfDuplexRedCapAllowed* is present, or if the UE is a RedCap UE and the RedCap UE supports full-duplex FDD operation on the frequency bands indicated in the *frequencyBandList* for the *supplementaryUplink*; and
- 4> if the UE supports an uplink channel bandwidth with a maximum transmission bandwidth configuration (see TS 38.101-1 [15] and TS 38.101-2 [39]) which
  - is smaller than or equal to the *carrierBandwidth* (indicated in *supplementaryUplink* for the SCS of the initial uplink BWP), and which
  - is wider than or equal to the bandwidth of the initial uplink BWP of the SUL;
- 5> consider supplementary uplink as configured in the serving cell;
- 5> select the first frequency band in the *frequencyBandList* for the *supplementaryUplink* which the UE supports and for which the UE supports at least one of the *additionalSpectrumEmission* values in *nr-NS-PmaxList*, if present, and for RedCap UEs in FDD, if the *halfDuplexRedCapAllowed* is not present, for which the UE supports full-duplex FDD operation;
- 5> apply a supported supplementary uplink channel bandwidth with a maximum transmission bandwidth which
  - is contained within the *carrierBandwidth* (indicated in *supplementaryUplink* for the SCS of the initial uplink BWP), and which
  - is wider than or equal to the bandwidth of the initial BWP of the SUL;
- 5> apply the first listed *additionalSpectrumEmission* which it supports among the values included in *nr-NS-PmaxList* within *frequencyBandList* for the *supplementaryUplink*;
- 5> if the *additionalPmax* is present in the same entry of the selected *additionalSpectrumEmission* within *nr-NS-PmaxList* for the *supplementaryUplink*:
  - 6> apply the *additionalPmax* in *supplementaryUplink* for SUL;
- 5> else:
  - 6> apply the *p-Max* in *supplementaryUplink* for SUL;

NOTE 2: For an out of coverage L2 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE receiving SIB1 from its connected L2 U2N Relay UE, it is up to Remote UE implementation whether to consider and apply the following parameters: *frequencyBandList*, *carrierBandwidth*, *frequencyShift7p5khz*, frequency band, channel bandwidth, the configuration included in the *servingCellConfigCommon*, the specified PCCH configuration, *additionalSpectrumEmission*, *additionalPmax*, and *p-Max*.

2> else:

3> consider the cell as barred in accordance with TS 38.304 [20]; and

3> perform barring as if *intraFreqReselection*, or *intraFreqReselectionRedCap* for RedCap UEs, is set to *notAllowed*;

#### 5.2.2.4.3 Actions upon reception of SIB2

Upon receiving SIB2, the UE shall:

1> if in RRC\_IDLE or in RRC\_INACTIVE or in RRC\_CONNECTED while T311 is running:

2> if, for the entry in *frequencyBandList* with the same index as the frequency band selected in clause 5.2.2.4.2, the UE supports at least one *additionalSpectrumEmission* in the *nr-NS-PmaxList* within the *frequencyBandList*:

3> apply the first listed *additionalSpectrumEmission* which it supports among the values included in *nr-NS-PmaxList* within *frequencyBandList*;

3> if the *additionalPmax* is present in the same entry of the selected *additionalSpectrumEmission* within *nr-NS-PmaxList*:

4> apply the *additionalPmax*;

3> else:

4> apply the *p-Max*;

3> if the UE selects a frequency band (from the procedure in clause 5.2.2.4.2) for the supplementary uplink:

4> if, for the entry in *frequencyBandListSUL* with the same index as the frequency band selected in clause 5.2.2.4.2, the UE supports at least one *additionalSpectrumEmission* in the *nr-NS-PmaxList* within the *frequencyBandListSUL*:

5> apply the first listed *additionalSpectrumEmission* which it supports among the values included in *nr-NS-PmaxList* within *frequencyBandListSUL*;

5> if the *additionalPmax* is present in the same entry of the selected *additionalSpectrumEmission* within *nr-NS-PmaxList*:

6> apply the *additionalPmax*;

5> else:

6> apply the *p-Max*;

4> else:

5> apply the *p-Max*.

2> else:

3> apply the *p-Max*;

#### 5.2.2.4.4 Actions upon reception of SIB3

No UE requirements related to the contents of this SIB3 apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

#### 5.2.2.4.5 Actions upon reception of *SIB4*

Upon receiving *SIB4* the UE shall:

- 1> if in RRC\_IDLE, or in RRC\_INACTIVE or in RRC\_CONNECTED while T311 is running:
  - 2> for each entry in the *interFreqCarrierFreqList*:
    - 3> if the UE is not a RedCap UE; or
    - 3> if the UE is a RedCap UE and the *interFreqCarrierFreqList-v1700* is absent; or
    - 3> if the UE is a RedCap UE and *redCapAccessAllowed* is present in *interFreqCarrierFreqList-v1700*:
      - 4> select the first frequency band in the *frequencyBandList*, and *frequencyBandListSUL*, if present, which the UE supports and for which the UE supports at least one of the *additionalSpectrumEmission* values in *nr-NS-PmaxList*, if present:
      - 4> if, the frequency band selected by the UE in *frequencyBandList* to represent a non-serving NR carrier frequency is not a downlink only band:
      - 5> if, for the selected frequency band, the UE supports at least one *additionalSpectrumEmission* in the *nr-NS-PmaxList* within the *frequencyBandList*:
        - 6> apply the first listed *additionalSpectrumEmission* which it supports among the values included in *nr-NS-PmaxList* within *frequencyBandList*;
        - 6> if the *additionalPmax* is present in the same entry of the selected *additionalSpectrumEmission* within *nr-NS-PmaxList*:
          - 7> apply the *additionalPmax*;
        - 6> else:
          - 7> apply the *p-Max*;
        - 6> if *frequencyBandListSUL* is present in *SIB4* and, for the frequency band selected in *frequencyBandListSUL*, the UE supports at least one *additionalSpectrumEmission* in the *nr-NS-PmaxList* within *FrequencyBandListSUL*:
          - 7> apply the first listed *additionalSpectrumEmission* which it supports among the values included in *nr-NS-PmaxList* within *frequencyBandListSUL*;
          - 7> if the *additionalPmax* is present in the same entry of the selected *additionalSpectrumEmission* within *nr-NS-PmaxList*:
            - 8> apply the *additionalPmax*;
          - 7> else:
            - 8> apply the *p-Max*;
        - 6> else:
          - 7> apply the *p-Max*;
      - 5> else:
        - 6> apply the *p-Max*;
    - 1> if in RRC\_IDLE or RRC\_INACTIVE, and T331 is running:
      - 2> perform the actions as specified in 5.7.8.1a;

#### 5.2.2.4.6 Actions upon reception of *SIB5*

No UE requirements related to the contents of this *SIB5* apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

#### 5.2.2.4.7 Actions upon reception of *SIB6*

Upon receiving the *SIB6* the UE shall:

- 1> forward the received *warningType*, *messageIdentifier* and *serialNumber* to upper layers;

#### 5.2.2.4.8 Actions upon reception of *SIB7*

Upon receiving the *SIB7* the UE shall:

- 1> if there is no current value for *messageIdentifier* and *serialNumber* for *SIB7*; or
- 1> if either the received value of *messageIdentifier* or of *serialNumber*, or of both *messageIdentifier* and *serialNumber* are different from the current values of *messageIdentifier* and *serialNumber* for *SIB7*:
  - 2> use the received values of *messageIdentifier* and *serialNumber* for *SIB7* as the current values of *messageIdentifier* and *serialNumber* for *SIB7*;
  - 2> discard any previously buffered *warningMessageSegment*;
  - 2> if all segments of a warning message have been received:
    - 3> assemble the warning message from the received *warningMessageSegment(s)*;
    - 3> forward the received warning message, *messageIdentifier*, *serialNumber* and *dataCodingScheme* to upper layers;
    - 3> stop reception of *SIB7*;
    - 3> discard the current values of *messageIdentifier* and *serialNumber* for *SIB7*;
  - 2> else:
    - 3> store the received *warningMessageSegment*;
    - 3> continue reception of *SIB7*;
- 1> else if all segments of a warning message have been received:
  - 2> assemble the warning message from the received *warningMessageSegment(s)*;
  - 2> forward the received complete warning message, *messageIdentifier*, *serialNumber* and *dataCodingScheme* to upper layers;
  - 2> stop reception of *SIB7*;
  - 2> discard the current values of *messageIdentifier* and *serialNumber* for *SIB7*;
- 1> else:
  - 2> store the received *warningMessageSegment*;
  - 2> continue reception of *SIB7*;

The UE should discard any stored *warningMessageSegment* and the current value of *messageIdentifier* and *serialNumber* for *SIB7* if the complete warning message has not been assembled within a period of 3 hours.

#### 5.2.2.4.9 Actions upon reception of *SIB8*

Upon receiving the *SIB8* the UE shall:

- 1> if the *SIB8* contains a complete warning message and the complete geographical area coordinates (if any):
  - 2> forward the received warning message, *messageIdentifier*, *serialNumber*, *dataCodingScheme* and the geographical area coordinates (if any) to upper layers;
  - 2> continue reception of *SIB8*;
- 1> else:
  - 2> if the received values of *messageIdentifier* and *serialNumber* are the same (each value is the same) as a pair for which a warning message and the geographical area coordinates (if any) are currently being assembled:
    - 3> store the received *warningMessageSegment*;
    - 3> store the received *warningAreaCoordinatesSegment* (if any);
    - 3> if all segments of a warning message and geographical area coordinates (if any) have been received:
      - 4> assemble the warning message from the received *warningMessageSegment*;
      - 4> assemble the geographical area coordinates from the received *warningAreaCoordinatesSegment* (if any);
      - 4> forward the received warning message, *messageIdentifier*, *serialNumber*, *dataCodingScheme* and geographical area coordinates (if any) to upper layers;
      - 4> stop assembling a warning message and geographical area coordinates (if any) for this *messageIdentifier* and *serialNumber* and delete all stored information held for it;
    - 3> continue reception of *SIB8*;
  - 2> else if the received values of *messageIdentifier* and/or *serialNumber* are not the same as any of the pairs for which a warning message is currently being assembled:
    - 3> start assembling a warning message for this *messageIdentifier* and *serialNumber* pair;
    - 3> start assembling the geographical area coordinates (if any) for this *messageIdentifier* and *serialNumber* pair;
    - 3> store the received *warningMessageSegment*;
    - 3> store the received *warningAreaCoordinatesSegment* (if any);
    - 3> continue reception of *SIB8*;

The UE should discard *warningMessageSegment* and *warningAreaCoordinatesSegment* (if any) and the associated values of *messageIdentifier* and *serialNumber* for *SIB8* if the complete warning message and the geographical area coordinates (if any) have not been assembled within a period of 3 hours.

NOTE: The number of warning messages that a UE can re-assemble simultaneously is a function of UE implementation.

#### 5.2.2.4.10 Actions upon reception of *SIB9*

Upon receiving *SIB9* with *referenceTimeInfo*, the UE may perform the related actions except for the action of ignoring all further *referenceTimeInfo* received in *SIB9* as specified in clause 5.7.1.3.

#### 5.2.2.4.11 Actions upon reception of *SIB10*

Upon receiving *SIB10*, the UE shall:

- 1> Forward the *HRNN-list* entries with the corresponding PNI-NPN and SNPN identities to upper layers;

#### 5.2.2.4.12 Actions upon reception of *SIB11*

Upon receiving *SIB11*, the UE shall:

- 1> if in RRC\_IDLE or RRC\_INACTIVE, and T331 is running;
- 2> perform the actions as specified in 5.7.8.1a;

#### 5.2.2.4.13 Actions upon reception of *SIB12*

Upon receiving *SIB12*, the UE shall:

- 1> if the UE has stored at least one segment of *SIB12* and the value tag of *SIB12* has changed since a previous segment was stored:
  - 2> discard all stored segments;
- 1> store the segment;
- 1> if all segments have been received:
  - 2> assemble *SIB12-IEs* from the received segments;
  - 2> if *sl-FreqInfoList* is included in *sl-ConfigCommonNR*:
    - 3> if configured to receive NR sidelink communication:
      - 4> use the resource pool(s) indicated by *sl-RxPool* for NR sidelink communication reception, as specified in 5.8.7;
    - 3> if configured to transmit NR sidelink communication:
      - 4> use the resource pool(s) indicated by *sl-TxPoolSelectedNormal*, or *sl-TxPoolExceptional* for NR sidelink communication transmission, as specified in 5.8.8;
      - 4> perform CBR measurement on the transmission resource pool(s) indicated by *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* for NR sidelink communication transmission, as specified in 5.5.3.1;
      - 4> use the synchronization configuration parameters for NR sidelink communication on frequencies included in *sl-FreqInfoList*, as specified in 5.8.5;
    - 3> if configured to receive NR sidelink discovery:
      - 4> use the resource pool(s) indicated by *sl-DiscRxPool* or *sl-RxPool* for NR sidelink discovery reception, as specified in 5.8.13.2;
    - 3> if configured to transmit NR sidelink discovery:
      - 4> if the UE is configured by upper layers to transmit NR sidelink L2 U2N relay discovery messages and *sl-L2U2N-Relay* is included in *SIB12*; or
      - 4> if the UE is configured by upper layers to transmit NR sidelink L3 U2N relay discovery messages and *sl-L3U2N-RelayDiscovery* is included in *SIB12*; or
      - 4> if the UE is configured by upper layers to transmit NR sidelink non-relay discovery messages and *sl-NonRelayDiscovery* is included in *SIB12*:
        - 5> use the resource pool(s) indicated by *sl-DiscTxPoolSelected*, *sl-TxPoolExceptional* or *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission, as specified in 5.8.13.3;
        - 5> perform CBR measurement on the transmission resource pool(s) indicated by *sl-TxPoolSelectedNormal*, *sl-DiscTxPoolSelected* or *sl-TxPoolExceptional* for NR sidelink discovery transmission, as specified in 5.5.3.1;
        - 5> use the synchronization configuration parameters for NR sidelink discovery on frequencies included in *sl-FreqInfoList*, as specified in 5.8.5;
  - 2> if *sl-RadioBearerConfigList* or *sl-RLC-BearerConfigList* is included in *sl-ConfigCommonNR*:
    - 3> perform sidelink DRB addition/modification/release as specified in 5.8.9.1a.1/5.8.9.1a.2;

- 2> if *sl-MeasConfigCommon* is included in *sl-ConfigCommonNR*:
  - 3> store the NR sidelink measurement configuration;
- 2> if *sl-DRX-ConfigCommonGC-BC* is included in *SIB12-IEs*:
  - 3> store the NR sidelink DRX configuration and configure lower layers to perform sidelink DRX operation for groupcast and broadcast as specified in TS 38.321 [3];
- 1> if the UE is acting as L2 U2N Remote UE:
  - 2> if the *sl-TimersAndConstantsRemoteUE* is included in *SIB12*:
    - 3> use values for timers T300, T301 and T319 as included in the *sl-TimersAndConstantsRemoteUE* received in *SIB12*;
  - 2> else:
    - 3> use values for timers T300, T301 and T319 as included in the *ue-TimersAndConstants* received in *SIB1*;

The UE should discard any stored segments for *SIB12* if the complete *SIB12* has not been assembled within a period of 3 hours. The UE shall discard any stored segments for *SIB12* upon cell (re-)selection.

#### 5.2.2.4.14 Actions upon reception of *SIB13*

Upon receiving *SIB13*, the UE shall perform the actions upon reception of *SystemInformationBlockType21* as specified in 5.2.2.28 in TS 36.331 [10].

#### 5.2.2.4.15 Actions upon reception of *SIB14*

Upon receiving *SIB14*, the UE shall perform the actions upon reception of *SystemInformationBlockType26* as specified in 5.2.2.33 in TS 36.331 [10].

#### 5.2.2.4.16 Actions upon reception of *SIBpos*

No UE requirements related to the contents of the *SIBpos* apply other than those specified elsewhere e.g. within TS 37.355 [49], and/or within the corresponding field descriptions.

#### 5.2.2.4.17 Actions upon reception of *SIB15*

Upon receiving *SIB15*, the UE shall:

- 1> forward the applicable disaster roaming information for each PLMN sharing the cell to upper layers.

#### 5.2.2.4.18 Actions upon reception of *SIB16*

Upon receiving *SIB16* with cell reselection priorities for slicing, the UE shall perform the actions as specified in TS 38.304 [20].

#### 5.2.2.4.19 Actions upon reception of *SIB17*

Upon receiving *SIB17*, the UE shall:

- 1> if the UE has stored at least one segment of *SIB17* and the value tag of *SIB17* has changed since a previous segment was stored:
  - 2> discard all stored segments;
- 1> store the segment;
- 1> if all segments have been received:
  - 2> assemble *SIB17-IEs* from the received segments.

The UE should discard any stored segments for *SIB17* if the complete *SIB17* has not been assembled within a period of 3 hours. The UE shall discard any stored segments for *SIB17* upon cell (re-) selection.

#### 5.2.2.4.20 Actions upon reception of *SIB18*

Upon receiving *SIB18*, the UE shall:

- 1> forward the Group IDs for Network selection (GINs) in *SIB18* with the corresponding SNPN identities to upper layers;

#### 5.2.2.4.21 Actions upon reception of *SIB19*

Upon receiving *SIB19*, the UE in RRC\_CONNECTED shall:

- 1> start or restart T430 for serving cell with the timer value set to *ntn-UISyncValidityDuration* for the serving cell from the subframe indicated by *epochTime* for the serving cell;

NOTE: UE should attempt to re-acquire *SIB19* before the end of the duration indicated by *ntn-UISyncValidityDuration* and *epochTime* by UE implementation.

#### 5.2.2.4.22 Actions upon reception of *SIB20*

No UE requirements related to the contents of *SIB20* apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

#### 5.2.2.4.23 Actions upon reception of *SIB21*

No UE requirements related to the contents of *SIB21* apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

### 5.2.2.5 Essential system information missing

The UE shall:

- 1> if in RRC\_IDLE or in RRC\_INACTIVE or in RRC\_CONNECTED while T311 is running:
  - 2> if the UE is unable to acquire the *MIB*:
    - 3> consider the cell as barred in accordance with TS 38.304 [20];
    - 3> perform barring as if *intraFreqReselection*, or *intraFreqReselectionRedCap* for RedCap UEs, is set to *allowed*;
  - 2> else if the UE is unable to acquire the *SIB1*:
    - 3> consider the cell as barred in accordance with TS 38.304 [20];
    - 3> if the UE is a RedCap UE:
      - 4> perform barring as if *intraFreqReselectionRedCap* is set to *allowed*;
    - 3> else:
      - 4> perform cell re-selection to other cells on the same frequency as the barred cell as specified in TS 38.304 [20].

NOTE: The *SIB19* is essential for NTN access. If UE is unable to acquire the *SIB19* for NTN access, the action is up to UE implementation (e.g., cell re-selection to other cells).

#### 5.2.2.6 T430 expiry

The UE shall:

- 1> if T430 for serving cell expires and if in RRC\_CONNECTED:

- 2> inform lower layers that UL synchronisation is lost;
- 2> acquire *SIB19* as defined in clause 5.2.2.3.2;
- 2> upon successful acquisition of *SIB19*:
- 3> inform lower layers when UL synchronisation is obtained;

NOTE: The exact time when UL synchronisation is obtained (after *SIB19* is acquired) is left to UE implementation, which can be from the subframe indicated by *epochTime* and optionally before the subframe indicated by *epochTime*.

## 5.3 Connection control

### 5.3.1 Introduction

#### 5.3.1.1 RRC connection control

RRC connection establishment involves the establishment of SRB1. The network completes RRC connection establishment prior to completing the establishment of the NG connection, i.e. prior to receiving the UE context information from the 5GC. Consequently, AS security is not activated during the initial phase of the RRC connection. During this initial phase of the RRC connection, the network may configure the UE to perform measurement reporting, but the UE only sends the corresponding measurement reports after successful AS security activation. However, the UE only accepts a re-configuration with sync message when AS security has been activated.

Upon receiving the UE context from the 5GC, the RAN activates AS security (both ciphering and integrity protection) using the initial AS security activation procedure. The RRC messages to activate AS security (command and successful response) are integrity protected, while ciphering is started only after completion of the procedure. That is, the response to the message used to activate AS security is not ciphered, while the subsequent messages (e.g. used to establish SRB2, DRBs and multicast MRBs) are both integrity protected and ciphered. After having initiated the initial AS security activation procedure, the network may initiate the establishment of SRB2 and DRBs and/or multicast MRBs, i.e. the network may do this prior to receiving the confirmation of the initial AS security activation from the UE. In any case, the network will apply both ciphering and integrity protection for the RRC reconfiguration messages used to establish SRB2, DRBs and/or multicast MRBs. The network should release the RRC connection if the initial AS security activation and/or the radio bearer establishment fails. A configuration with SRB2 without DRB or multicast MRB, or with DRB or multicast MRB without SRB2 is not supported (i.e., SRB2 and at least one DRB or multicast MRB must be configured in the same RRC Reconfiguration message, and it is not allowed to release all the DRBs and multicast MRBs without releasing the RRC Connection). For IAB-MT, a configuration with SRB2 without any DRB/MRB is supported.

The release of the RRC connection normally is initiated by the network. The procedure may be used to re-direct the UE to an NR frequency or an E-UTRA carrier frequency.

The suspension of the RRC connection is initiated by the network. When the RRC connection is suspended, the UE stores the UE Inactive AS context and any configuration received from the network, and transits to RRC\_INACTIVE state. The RRC message to suspend the RRC connection is integrity protected and ciphered.

The resumption of a suspended RRC connection is initiated by upper layers when the UE needs to transit from RRC\_INACTIVE state to RRC\_CONNECTED state or by RRC layer to perform a RNA update or by RAN paging from NG-RAN or for SDT. When the RRC connection is resumed, network configures the UE according to the RRC connection resume procedure based on the stored UE Inactive AS context and any RRC configuration received from the network. The RRC connection resume procedure re-activates AS security and re-establishes SRB(s) and DRB(s) and/or multicast MRB(s), if configured.

Upon initiating the resume procedure for SDT, AS security (both ciphering and integrity protection) is re-activated for SRB2 (if configured for SDT) and for SRB1. In addition, AS security is also re-activated (if security is configured) for all the DRBs configured for SDT. Further, the PDCP entities of SRB1 and PDCP entities of the radio bearers configured for SDT are re-established and resumed whilst the UE remains in RRC\_INACTIVE state. Transmission and reception of data and/or signalling messages over radio bearers configured for SDT can happen whilst the UE is in RRC\_INACTIVE state and SDT procedure is ongoing.

In response to a request to resume the RRC connection or in response to a resume procedure initiated for SDT, the network may resume the suspended RRC connection and send UE to RRC\_CONNECTED, or reject the request to resume and send UE to RRC\_INACTIVE (with a wait timer), or directly re-suspend the RRC connection and send UE to RRC\_INACTIVE, or directly release the RRC connection and send UE to RRC\_IDLE, or instruct the UE to initiate NAS level recovery (in this case the network sends an RRC setup message).

NOTE: In case the UE receives the configurations for NR sidelink communication via the E-UTRA, the configurations for NR sidelink communication in *SIB12* and *sl-ConfigDedicatedNR* within *RRCReconfiguration* used in clause 5.3 are provided by the configurations in *SystemInformationBlockType28* and *sl-ConfigDedicatedForNR* within *RRCConnectionReconfiguration* as specified in TS 36.331[10], respectively.

### 5.3.1.2 AS Security

AS security comprises of the integrity protection and ciphering of RRC signalling (SRBs) and user data (DRBs).

RRC handles the configuration of the AS security parameters which are part of the AS configuration: the integrity protection algorithm, the ciphering algorithm, if integrity protection and/or ciphering is enabled for a DRB and two parameters, namely the *keySetChangeIndicator* and the *nextHopChainingCount*, which are used by the UE to determine the AS security keys upon reconfiguration with sync (with key change), connection re-establishment and/or connection resume.

The integrity protection algorithm is common for SRB1, SRB2, SRB3 (if configured), SRB4 (if configured) and DRBs configured with integrity protection, with the same *keyToUse* value. The ciphering algorithm is common for SRB1, SRB2, SRB3 (if configured), SRB4 (if configured) and DRBs configured with the same *keyToUse* value. Neither integrity protection nor ciphering applies for SRB0.

NOTE 0: All DRBs related to the same PDU session have the same enable/disable setting for ciphering and the same enable/disable setting for integrity protection, as specified in TS 33.501 [11].

RRC integrity protection and ciphering are always activated together, i.e. in one message/procedure. RRC integrity protection and ciphering for SRBs are never de-activated. However, it is possible to switch to a 'NULL' ciphering algorithm (*nea0*).

The 'NULL' integrity protection algorithm (*nia0*) is used only for SRBs and for the UE in limited service mode, see TS 33.501 [11] and when used for SRBs, integrity protection is disabled for DRBs. In case the 'NULL' integrity protection algorithm is used, 'NULL' ciphering algorithm is also used.

NOTE 1: Lower layers discard RRC messages for which the integrity protection check has failed and indicate the integrity protection verification check failure to RRC.

The AS applies four different security keys: one for the integrity protection of RRC signalling ( $K_{\text{RRCCint}}$ ), one for the ciphering of RRC signalling ( $K_{\text{RRCCenc}}$ ), one for integrity protection of user data ( $K_{\text{UPint}}$ ) and one for the ciphering of user data ( $K_{\text{UPenc}}$ ). All four AS keys are derived from the  $K_{\text{gNB}}$  key. The  $K_{\text{gNB}}$  key is based on the  $K_{\text{AMF}}$  key (as specified in TS 33.501 [11]), which is handled by upper layers.

The integrity protection and ciphering algorithms can only be changed with reconfiguration with sync. The AS keys ( $K_{\text{gNB}}$ ,  $K_{\text{RRCCint}}$ ,  $K_{\text{RRCCenc}}$ ,  $K_{\text{UPint}}$  and  $K_{\text{UPenc}}$ ) change upon reconfiguration with sync (if *masterKeyUpdate* is included), and upon connection re-establishment and connection resume.

For each radio bearer an independent counter (*COUNT*, as specified in TS 38.323 [5]) is maintained for each direction. For each radio bearer, the *COUNT* is used as input for ciphering and integrity protection.

It is not allowed to use the same *COUNT* value more than once for a given security key. As specified in TS 33.501 clause 6.9.4.1 [11], the network is responsible for avoiding reuse of the *COUNT* with the same RB identity and with the same key, e.g. due to the transfer of large volumes of data, release and establishment of new RBs, and multiple termination point changes for RLC-UM bearers and multiple termination point changes for RLC-AM bearer with SN terminated PDCP re-establishment (*COUNT* reset) due to SN only full configuration whilst the key stream inputs (i.e. bearer ID, security key) at MN have not been updated. In order to avoid such re-use, the network may e.g. use different RB identities for RB establishments, change the AS security key, or an RRC\_CONNECTED to RRC\_IDLE/RRC\_INACTIVE and then to RRC\_CONNECTED transition.

In order to limit the signalling overhead, individual messages/ packets include a short sequence number (PDCP SN, as specified in TS 38.323 [5]). In addition, an overflow counter mechanism is used: the hyper frame number (*HFN*, as specified in TS 38.323 [5]). The *HFN* needs to be synchronized between the UE and the network.

For each SRB, the value provided by RRC to lower layers to derive the 5-bit BEARER parameter used as input for ciphering and for integrity protection is the value of the corresponding *srb-Identity* with the MSBs padded with zeroes.

For a UE provided with an *sk-counter*, *keyToUse* indicates whether the UE uses the master key ( $K_{gNB}$ ) or the secondary key ( $S-K_{eNB}$  or  $S-K_{gNB}$ ) for a particular DRB. The secondary key is derived from the master key and *sk-Counter*, as defined in TS 33.501[11]. Whenever there is a need to refresh the secondary key, e.g. upon change of MN with  $K_{gNB}$  change or to avoid COUNT reuse, the security key update is used (see 5.3.5.7). When the UE is in NR-DC, the network may provide a UE configured with an SCG with an *sk-Counter* even when no DRB is setup using the secondary key ( $S-K_{gNB}$ ) in order to allow the configuration of SRB3. The network can also provide the UE with an *sk-Counter*, even if no SCG is configured, when using SN terminated MCG bearers.

## 5.3.2 Paging

### 5.3.2.1 General

Figure 5.3.2.1-1: Paging

The purpose of this procedure is:

- to transmit paging information to a UE in RRC\_IDLE or RRC\_INACTIVE.
- to transmit paging information for a L2 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE to its serving L2 U2N Relay UE in any RRC state.

### 5.3.2.2 Initiation

The network initiates the paging procedure by transmitting the *Paging* message at the UE's paging occasion as specified in TS 38.304 [20]. The network may address multiple UEs within a *Paging* message by including one *PagingRecord* for each UE. The network may also include one or multiple TMGI(s) in the *Paging* message to page UEs for specific MBS multicast session(s).

### 5.3.2.3 Reception of the *Paging message* by the UE or *PagingRecord* by the L2 U2N Remote UE

Upon receiving the *Paging* message by the UE or receiving *PagingRecord* from its connected L2 U2N Relay UE by a L2 U2N Remote UE, the UE shall:

- 1> if in RRC\_IDLE, for each of the *PagingRecord*, if any, included in the *Paging* message, or
- 1> if in RRC\_IDLE, for the *PagingRecord*, if any, included in the *UuMessageTransferSidelink* message received from the connected L2 U2N Relay UE:
- 2> if the *ue-Identity* included in the *PagingRecord* matches the UE identity allocated by upper layers:
  - 3> if upper layers indicate the support of paging cause:
    - 4> forward the *ue-Identity*, *accessType* (if present) and paging cause (if determined) to the upper layers;
  - 3> else:

- 4> forward the *ue-Identity* and *accessType* (if present) to the upper layers;
- 1> if in RRC\_INACTIVE, for each of the *PagingRecord*, if any, included in the *Paging* message, or
- 1> if in RRC\_INACTIVE, for the *PagingRecord*, if any, included in the *UuMessageTransferSidelink* message received from the connected L2 U2N Relay UE:
  - 2> if the *ue-Identity* included in the *PagingRecord* matches the UE's stored *fullI-RNTI*:
    - 3> if the UE is configured by upper layers with Access Identity 1:
      - 4> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set to *mps-PriorityAccess*;
    - 3> else if the UE is configured by upper layers with Access Identity 2:
      - 4> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set to *mcs-PriorityAccess*;
    - 3> else if the UE is configured by upper layers with one or more Access Identities equal to 11-15:
      - 4> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set to *highPriorityAccess*;
    - 3> else:
      - 4> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set to *mt-Access*;
- NOTE: A MUSIM UE may not initiate the RRC connection resumption procedure, e.g. when it decides not to respond to the *Paging* message due to UE implementation constraints as specified in TS 24.501 [23].
- 2> else if the *ue-Identity* included in the *PagingRecord* matches the UE identity allocated by upper layers:
  - 3> if upper layers indicate the support of paging cause:
    - 4> forward the *ue-Identity*, *accessType* (if present) and paging cause (if determined) to the upper layers;
  - 3> else:
    - 4> forward the *ue-Identity* and *accessType* (if present) to the upper layers;
  - 3> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'other';
- 1> if in RRC\_IDLE, for each *TMGI* included in *pagingGroupList*, if any, included in the *Paging* message:
  - 2> if the UE has joined an MBS session indicated by the *TMGI* included in the *pagingGroupList*:
    - 3> forward the *TMGI* to the upper layers;
- 1> if in RRC\_INACTIVE and the UE has joined one or more MBS session(s) indicated by the *TMGI(s)* included in the *pagingGroupList*:
  - 2> if *PagingRecordList* is not included in the *Paging* message; or
  - 2> if none of the *ue-Identity* included in any of the *PagingRecord* matches the UE identity allocated by upper layers or the UE's stored *fullI-RNTI*:
    - 3> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set as below:
      - 4> if the UE is configured by upper layers with Access Identity 1:
        - 5> set *resumeCause* to *mps-PriorityAccess*;
      - 4> else if the UE is configured by upper layers with Access Identity 2:
        - 5> set *resumeCause* to *mcs-PriorityAccess*;

- 4> else if the UE is configured by upper layers with one or more Access Identities equal to 11-15:
- 5> set *resumeCause* to *highPriorityAccess*;
- 4> else:
- 5> set *resumeCause* to *mt-Access*;
- 2> else if the *ue-Identity* included in any of the *PagingRecord* matches the UE identity allocated by upper layers:
- 3> forward the *TMGI(s)* to the upper layers;
- 1> if the UE is acting as a L2 U2N Relay UE, for each of the *PagingRecord*, if any, included in the *Paging* message:
- 2> if the *ue-Identity* included in the *PagingRecord* in the *Paging* message matches the UE identity in *sl-PagingIdentityRemoteUE* included in *sl-PagingInfo-RemoteUE* received in *RemoteUEInformationSidelink* message from a L2 U2N Remote UE:
- 3> initiate the Uu Message transfer in sidelink to that UE as specified in 5.8.9.9;

### 5.3.3 RRC connection establishment

#### 5.3.3.1 General

Figure 5.3.3.1-1: RRC connection establishment, successful

Figure 5.3.3.1-2: RRC connection establishment, network reject

The purpose of this procedure is to establish an RRC connection. RRC connection establishment involves SRB1 establishment. The procedure is also used to transfer the initial NAS dedicated information/ message from the UE to the network.

The network applies the procedure e.g.as follows:

- When establishing an RRC connection;
- When UE is resuming or re-establishing an RRC connection, and the network is not able to retrieve or verify the UE context. In this case, UE receives *RRCSetup* and responds with *RRCSetupComplete*.

### 5.3.3.1a Conditions for establishing RRC Connection for NR sidelink communication/discovery/V2X sidelink communication

For NR sidelink communication/discovery, an RRC connection establishment is initiated only in the following cases:

- 1> if configured by upper layers to transmit NR sidelink communication and related data is available for transmission;
- 2> if the frequency on which the UE is configured to transmit NR sidelink communication is included in *sl-FreqInfoList* within *SIB12* provided by the cell on which the UE camps; and if the valid version of *SIB12* does not include *sl-TxPoolSelectedNormal* for the concerned frequency;
- 1> if configured by upper layers to transmit NR sidelink discovery and related data is available for transmission:
  - 2> if the UE is configured by upper layers to transmit NR sidelink L2 U2N relay discovery messages and *sl-L2U2N-Relay* is included in *SIB12*; or
  - 2> if the UE is configured by upper layers to transmit NR sidelink L3 U2N relay discovery messages and *sl-L3U2N-RelayDiscovery* is included in *SIB12*; or
  - 2> if the UE is configured by upper layers to transmit NR sidelink non-relay discovery messages and *sl-NonRelayDiscovery* is included in *SIB12*;
  - 3> if the frequency on which the UE is configured to transmit NR sidelink discovery is included in *sl-FreqInfoList* within *SIB12* provided by the cell on which the UE camps; and if the valid version of *SIB12* includes neither *sl-DiscTxPoolSelected* nor *sl-TxPoolSelectedNormal* for the concerned frequency;

For L2 U2N Relay UE in RRC\_IDLE, an RRC connection establishment is initiated in the following cases:

- 1> if any message is received from a L2 U2N Remote UE via SL-RLC0 as specified in 9.1.1.4 or SL-RLC1 as specified in 9.2.4;

For V2X sidelink communication, an RRC connection is initiated only when the conditions specified for V2X sidelink communication in clause 5.3.3.1a of TS 36.331 [10] are met.

NOTE: Upper layers initiate an RRC connection (except if the RRC connection is initiated at the L2 U2N Relay UE upon reception of a message from a L2 U2N Remote UE via SL-RLC0 or SL-RLC1). The interaction with NAS is left to UE implementation.

### 5.3.3.2 Initiation

The UE initiates the procedure when upper layers request establishment of an RRC connection while the UE is in RRC\_IDLE and it has acquired essential system information, or for sidelink communication as specified in clause 5.3.3.1a.

The UE shall ensure having valid and up to date essential system information as specified in clause 5.2.2.2 before initiating this procedure.

Upon initiation of the procedure, the UE shall:

- 1> if the upper layers provide an Access Category and one or more Access Identities upon requesting establishment of an RRC connection;
- 2> perform the unified access control procedure as specified in 5.3.14 using the Access Category and Access Identities provided by upper layers;
- 3> if the access attempt is barred, the procedure ends;
- 1> if the upper layers provide NSAG information and one or more S-NSSAI(s) triggering the access attempt (TS 23.501 [32] and TS 24.501 [23]):
  - 2> apply the NSAG with highest NSAG priority among the NSAGs that are included in *SIB1* (i.e., in *FeatureCombination* and/or in *RA-PrioritizationSliceInfo*), and that are associated with the S-NSSAI(s) triggering the access attempt, in the Random Access procedure (TS 38.321 [3], clause 5.1);

NOTE: If there are multiple NSAGs with the same highest NAS-provided NSAG priority identified for access attempt as above, it is left to UE implementation to select the NSAG to be applied in the Random Access procedure.

1> if the UE is acting as L2 U2N Remote UE:

2> establish a SRAP entity as specified in TS 38.351 [66], if no SRAP entity has been established;

2> apply the specified configuration of SL-RLC0 as specified in 9.1.1.4;

2> apply the SDAP configuration and PDCP configuration as specified in 9.1.1.2 for SRB0;

1> else:

2> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the parameters for which values are provided in *SIB1*;

2> apply the default MAC Cell Group configuration as specified in 9.2.2;

2> apply the CCCH configuration as specified in 9.1.1.2;

2> apply the *timeAlignmentTimerCommon* included in *SIB1*;

1> start timer T300;

1> initiate transmission of the *RRCSetupRequest* message in accordance with 5.3.3.3;

### 5.3.3.3 Actions related to transmission of *RRCSetupRequest* message

The UE shall set the contents of *RRCSetupRequest* message as follows:

1> set the *ue-Identity* as follows:

2> if upper layers provide a 5G-S-TMSI:

3> set the *ue-Identity* to *ng-5G-S-TMSI-Part1*;

2> else:

3> draw a 39-bit random value in the range  $0..2^{39}-1$  and set the *ue-Identity* to this value;

NOTE 1: Upper layers provide the 5G-S-TMSI if the UE is registered in the TA of the current cell.

1> if the establishment of the RRC connection is the result of release with redirect with *mpsPriorityIndication* (either in NR or E-UTRAN):

2> set the *establishmentCause* to *mps-PriorityAccess*;

1> else:

2> set the *establishmentCause* in accordance with the information received from upper layers;

NOTE 2: In case the L2 U2N Relay UE initiates RRC connection establishment triggered by reception of message from a L2 U2N Remote UE via SL-RLC0 or SL-RLC1 as specified in 5.3.3.1a, the L2 U2N Relay UE sets the *establishmentCause* by implementation, but it can only set the *emergency*, *mps-PriorityAccess*, or *mcs-PriorityAccess* as *establishmentCause* if the same cause value is in the message received from the L2 U2N Remote UE via SL-RLC0.

1> if *ta-Report* is configured with value *enabled* and the UE supports TA reporting:

2> indicate TA report initiation to lower layers;

The UE shall submit the *RRCSetupRequest* message to lower layers for transmission.

If the UE is a RedCap UE and the RedCap-specific initial downlink BWP is not associated with CD-SSB, the UE may continue cell re-selection related measurements as well as cell re-selection evaluation, otherwise the UE shall continue

cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in 5.3.3.6.

NOTE 3: For L2 U2N Remote UE in RRC\_IDLE, the cell (re)selection procedure as specified in TS 38.304 [20] and relay (re)selection procedure as specified in 5.8.15.3 are performed independently and up to UE implementation to select either a cell or a L2 U2N Relay UE.

#### 5.3.3.4 Reception of the *RRCSetup* by the UE

The UE shall perform the following actions upon reception of the *RRCSetup*:

- 1> if the *RRCSetup* is received in response to an *RRCReestablishmentRequest*; or
- 1> if the *RRCSetup* is received in response to an *RRCResumeRequest* or *RRCResumeRequest1*:
  - 2> if *sdt-MAC-PHY-CG-Config* is configured:
    - 3> instruct the MAC entity to stop the *cg-SDT-TimeAlignmentTimer*, if it is running;
    - 3> instruct the MAC entity to start the *timeAlignmentTimer* associated with the PTAG, if it is not running;
  - 2> if *srs-PosRRC-Inactive* is configured:
    - 3> instruct the MAC entity to stop the *inactivePosSRS-TimeAlignmentTimer*, if it is running;
  - 2> discard any stored UE Inactive AS context and *suspendConfig*;
  - 2> discard any current AS security context including the  $K_{RRCCenc}$  key, the  $K_{RRCCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key;
  - 2> release radio resources for all established RBs except SRB0 and broadcast MRBs, including release of the RLC entities, of the associated PDCP entities and of SDAP;
  - 2> release the RRC configuration except for the default L1 parameter values, default MAC Cell Group configuration, CCCH configuration and broadcast MRBs;
  - 2> indicate to upper layers fallback of the RRC connection;
  - 2> discard any application layer measurement reports which were not transmitted yet;
  - 2> inform upper layers about the release of all application layer measurement configurations;
  - 2> stop timer T380, if running;
- 1> perform the cell group configuration procedure in accordance with the received *masterCellGroup* and as specified in 5.3.5.5;
- 1> perform the radio bearer configuration procedure in accordance with the received *radioBearerConfig* and as specified in 5.3.5.6;
- 1> if stored, discard the cell reselection priority information provided by the *cellReselectionPriorities* or inherited from another RAT;
- 1> stop timer T300, T301, T319;
- 1> if T319a is running:
  - 2> stop T319a;
  - 2> consider SDT procedure is not ongoing;
- 1> if T390 is running:
  - 2> stop timer T390 for all access categories;
  - 2> perform the actions as specified in 5.3.14.4;

- 1> if T302 is running:
  - 2> stop timer T302;
  - 2> perform the actions as specified in 5.3.14.4;
- 1> stop timer T320, if running;
- 1> if the *RRCSetup* is received in response to an *RRCResumeRequest*, *RRCResumeRequest1* or *RRCSetupRequest*:
  - 2> if T331 is running:
    - 3> stop timer T331;
    - 3> perform the actions as specified in 5.7.8.3;
  - 2> enter *RRC\_CONNECTED*;
  - 2> stop the cell re-selection procedure;
  - 2> stop relay (re)selection procedure if any for L2 U2N Remote UE;
- 1> consider the current cell to be the PCell;
- 1> perform the L2 U2N Remote UE configuration procedure in accordance with the received *sl-L2RemoteUE-Config* as specified in 5.3.5.16;
- 1> perform the sidelink dedicated configuration procedure in accordance with the received *sl-ConfigDedicatedNR* as specified in 5.3.5.14;
- 1> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:
  - 2> if *reconnectCellId* in *VarRLF-Report* is not set after failing to perform reestablishment and if this is the first *RRCSetup* received by the UE after declaring the failure:
    - 3> if the UE supports RLF-Report for conditional handover and if *choCellId* in *VarRLF-Report* is set:
      - 4> set *timeUntilReconnection* in *VarRLF-Report* to the time that elapsed since the radio link failure or handover failure experienced in the *failedPCellId* stored in *VarRLF-Report*;
    - 3> else:
      - 4> set *timeUntilReconnection* in *VarRLF-Report* to the time that elapsed since the last radio link failure or handover failure;
    - 3> set *nrReconnectCellId* in *reconnectCellId* in *VarRLF-Report* to the global cell identity and the tracking area code of the PCell;
  - 2> if *reconnectCellId* in *VarRLF-Report* of TS 36.331[10] is not set after failing to perform reestablishment and if this is the first *RRCSetup* received by the UE after declaring the failure:
    - 3> set *timeUntilReconnection* in *VarRLF-Report* of TS 36.331[10] to the time that elapsed since the last radio link failure or handover failure in LTE;
    - 3> set *nrReconnectCellId* in *reconnectCellId* in *VarRLF-Report* of TS 36.331[10] to the global cell identity and the tracking area code of the PCell;
- 1> set the content of *RRCSetupComplete* message as follows:
  - 2> if upper layers provide a 5G-S-TMSI:
    - 3> if the *RRCSetup* is received in response to an *RRCSetupRequest*:

- 4> set the *ng-5G-S-TMSI-Value* to *ng-5G-S-TMSI-Part2*;
- 3> else:
  - 4> set the *ng-5G-S-TMSI-Value* to *ng-5G-S-TMSI*;
- 2> if upper layers selected an SNPN or a PLMN and in case of PLMN UE is either allowed or instructed to access the PLMN via a cell for which at least one CAG ID is broadcast:
  - 3> set the *selectedPLMN-Identity* from the *npn-IdentityInfoList*;
- 2> else:
  - 3> set the *selectedPLMN-Identity* to the PLMN selected by upper layers from the *plmn-IdentityInfoList*;
- 2> if upper layers provide the 'Registered AMF':
  - 3> include and set the *registeredAMF* as follows:
    - 4> if the PLMN identity of the 'Registered AMF' is different from the PLMN selected by the upper layers:
      - 5> include the *plmnIdentity* in the *registeredAMF* and set it to the value of the PLMN identity in the 'Registered AMF' received from upper layers;
    - 4> set the *amf-Identifier* to the value received from upper layers;
  - 3> include and set the *guami-Type* to the value provided by the upper layers;
- 2> if upper layers provide one or more S-NSSAI (see TS 23.003 [21]):
  - 3> include the *s-NSSAI-List* and set the content to the values provided by the upper layers;
- 2> if upper layers provide onboarding request indication:
  - 3> include the *onboardingRequest*;
- 2> set the *dedicatedNAS-Message* to include the information received from upper layers;
- 2> if connecting as an IAB-node:
  - 3> include the *iab-NodeIndication*;
- 2> if the SIB1 contains *idleModeMeasurementsNR* and the UE has NR idle/inactive measurement information concerning cells other than the PCell available in *VarMeasIdleReport*; or
- 2> if the SIB1 contains *idleModeMeasurementsEUTRA* and the UE has E-UTRA idle/inactive measurement information available in *VarMeasIdleReport*:
  - 3> include the *idleMeasAvailable*;
- 2> if the UE has logged measurements available for NR and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
  - 3> include the *logMeasAvailable* in the *RRCSetupComplete* message;
  - 3> if Bluetooth measurement results are included in the logged measurements the UE has available for NR:
    - 4> include the *logMeasAvailableBT* in the *RRCSetupComplete* message;
  - 3> if WLAN measurement results are included in the logged measurements the UE has available for NR:
    - 4> include the *logMeasAvailableWLAN* in the *RRCSetupComplete* message;
- 2> if the *sigLoggedMeasType* in *VarLogMeasReport* is included:
  - 3> if T330 timer is running and the logged measurements configuration is for NR:

- 4> set *sigLogMeasConfigAvailable* to *true* in the *RRCSetupComplete* message;
- 3> else:
  - 4> if the UE has logged measurements available for NR:
    - 5> set *sigLogMeasConfigAvailable* to *false* in the *RRCSetupComplete* message;
  - 2> if the UE has connection establishment failure or connection resume failure information available in *VarConnEstFailReport* or *VarConnEstFailReportList* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport* or in at least one of the entries of *VarConnEstFailReportList*:
    - 3> include *connEstFailInfoAvailable* in the *RRCSetupComplete* message;
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*, or
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* of TS 36.331 [10], and if the UE is capable of cross-RAT RLF reporting and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report* of TS 36.331 [10]:
    - 3> include *rlf-InfoAvailable* in the *RRCSetupComplete* message;
  - 2> if the UE has successful handover information available in *VarSuccessHO-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarSuccessHO-Report*:
    - 3> include *successHO-InfoAvailable* in the *RRCSetupComplete* message;
  - 2> if the UE supports storage of mobility history information and the UE has mobility history information available in *VarMobilityHistoryReport*:
    - 3> include the *mobilityHistoryAvail* in the *RRCSetupComplete* message;
  - 2> if the UE supports uplink RRC message segmentation of *UECapabilityInformation* according to the network indication *rrc-SegAllowed*:
    - 3> may include the *ul-RRC-Segmentation* in the *RRCSetupComplete* message;
  - 2> if the UE supports uplink RRC message segmentation of *UECapabilityInformation* according to the network indication *rrc-MaxCapaSegAllowed*:
    - 3> include the *ul-RRC-MaxCapaSegments* in the *RRCSetupComplete* message;
  - 2> if the *RRCSetup* is received in response to an *RRCResumeRequest*, *RRCResumeRequest1* or *RRCSetupRequest*:
    - 3> if *speedStateReselectionPars* is configured in the *SIB2*:
      - 4> include the *mobilityState* in the *RRCSetupComplete* message and set it to the mobility state (as specified in TS 38.304 [20]) of the UE just prior to entering *RRC\_CONNECTED* state;
- 1> submit the *RRCSetupComplete* message to lower layers for transmission, upon which the procedure ends.

#### 5.3.3.5 Reception of the *RRCReject* by the UE

The UE shall:

- 1> perform the actions as specified in 5.3.15;

#### 5.3.3.6 Cell re-selection or cell selection or relay (re)selection while T390, T300 or T302 is running (UE in *RRC\_IDLE*)

The UE shall:

- 1> if cell reselection occurs while T300 or T302 is running; or

- 1> if relay (re)selection or cell selection by a L2 U2N Remote UE occurs while T300 is running; or
- 1> if cell changes due to relay (re)selection or cell selection by a L2 U2N Remote UE while T302 is running:
  - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'RRC connection failure';
- 1> else:
  - 2> if cell selection or reselection occurs while T390 is running; or
  - 2> cell change due to relay selection or reselection occurs while T390 is running:
    - 3> stop T390 for all access categories;
    - 3> perform the actions as specified in 5.3.14.4.

### 5.3.3.7 T300 expiry

The UE shall:

- 1> if timer T300 expires:
  - 2> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established (except broadcast MRBs);
  - 2> if the UE supports RRC Connection Establishment failure with temporary offset and the T300 has expired a consecutive *connEstFailCount* times on the same cell for which *connEstFailureControl* is included in *SIB1*:
    - 3> for a period as indicated by *connEstFailOffsetValidity*:
      - 4> use *connEstFailOffset* for the parameter *Qoffsettemp* for the concerned cell when performing cell selection and reselection according to TS 38.304 [20] and TS 36.304 [27];

NOTE 1: When performing cell selection, if no suitable or acceptable cell can be found, it is up to UE implementation whether to stop using *connEstFailOffset* for the parameter *Qoffsettemp* during *connEstFailOffsetValidity* for the concerned cell.

- 2> if the UE supports multiple CEF report:
  - 3> if the UE has connection establishment failure information or connection resume failure information available in *VarConnEstFailReport* and if the RPLMN is equal to *plmn-identity* stored in *VarConnEstFailReport*; and
  - 3> if the cell identity of current cell is not equal to the cell identity stored in *measResultFailedCell* in *VarConnEstFailReport* and if the *maxCEFReport-r17* has not been reached:
    - 4> append the *VarConnEstFailReport* as a new entry in the *VarConnEstFailReportList*;
  - 2> if the UE has connection establishment failure information or connection resume failure information available in *VarConnEstFailReport* and if the RPLMN is not equal to *plmn-identity* stored in *VarConnEstFailReport*; or
  - 2> if the cell identity of current cell is not equal to the cell identity stored in *measResultFailedCell* in *VarConnEstFailReport*:
    - 3> reset the *numberOfConnFail* to 0;
  - 2> if the UE supports multiple CEF report and if the UE has connection establishment failure information or connection resume failure information available in *VarConnEstFailReportList* and if the RPLMN is not equal to *plmn-identity* stored in any entry of *VarConnEstFailReportList*:
    - 3> clear the content included in *VarConnEstFailReportList*;
  - 2> clear the content included in *VarConnEstFailReport* except for the *numberOfConnFail*, if any;

2> store the following connection establishment failure information in the *VarConnEstFailReport* by setting its fields as follows:

- 3> set the *plmn-Identity* to the PLMN selected by upper layers (see TS 24.501 [23]) from the PLMN(s) included in the *plmn-IdentityInfoList* in *SIB1*;
- 3> set the *measResultFailedCell* to include the global cell identity, tracking area code, the cell level and SS/PBCH block level RSRP, and RSRQ, and SS/PBCH block indexes, of the failed cell based on the available SSB measurements collected up to the moment the UE detected connection establishment failure;
- 3> if available, set the *measResultNeighCells*, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency/ set of frequencies per RAT and according to the following:
  - 4> for each neighbour cell included, include the optional fields that are available;

NOTE 2: The UE includes the latest results of the available measurements as used for cell reselection evaluation, which are performed in accordance with the performance requirements as specified in TS 38.133 [14].

- 3> if available, set the *locationInfo* as follows:
  - 4> if available, set the *commonLocationInfo* to include the detailed location information;
  - 4> if available, set the *bt-LocationInfo* to include the Bluetooth measurement results, in order of decreasing RSSI for Bluetooth beacons;
  - 4> if available, set the *wlan-LocationInfo* to include the WLAN measurement results, in order of decreasing RSSI for WLAN APs;
  - 4> if available, set the *sensor-LocationInfo* to include the sensor measurement results as follows:
    - 5> if available, include the *sensor-MeasurementInformation*;
    - 5> if available, include the *sensor-MotionInformation*;

NOTE 3: Which location information related configuration is used by the UE to make the *locationInfo* available for inclusion in the *VarConnEstFailReport* is left to UE implementation.

- 3> set *perRAInfoList* to indicate the performed random access procedure related information as specified in 5.7.10.5;
- 3> if the *numberOfConnFail* is smaller than 8:
  - 4> increment the *numberOfConnFail* by 1;

2> inform upper layers about the failure to establish the RRC connection, upon which the procedure ends;

The UE may discard the connection establishment failure or connection resume failure information, i.e. release the UE variable *VarConnEstFailReport* and the UE variable *VarConnEstFailReportList*, 48 hours after the last connection establishment failure is detected.

The L2 U2N Relay UE either indicates to upper layers (to trigger PC5 unicast link release) or sends *NotificationMessageSidelink* message to the connected L2 U2N Remote UE(s) in accordance with 5.8.9.10.

### 5.3.3.8 Abortion of RRC connection establishment

If upper layers abort the RRC connection establishment procedure, due to a NAS procedure being aborted as specified in TS 24.501 [23], while the UE has not yet entered RRC\_CONNECTED, the UE shall:

- 1> stop timer T300, if running;
- 1> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established (except broadcast MRBs).

The L2 U2N Relay UE either indicates to upper layers (to trigger PC5 unicast link release) or sends *NotificationMessageSidelink* message to the connected L2 U2N Remote UE(s) in accordance with 5.8.9.10.

The L2 U2N Remote UE indicates to upper layers to trigger PC5 unicast link release with its connected L2 U2N Relay UE.

## 5.3.4 Initial AS security activation

### 5.3.4.1 General

Figure 5.3.4.1-1: Security mode command, successful

Figure 5.3.4.1-2: Security mode command, failure

The purpose of this procedure is to activate AS security upon RRC connection establishment.

### 5.3.4.2 Initiation

The network initiates the security mode command procedure to a UE in RRC\_CONNECTED. Moreover, the network applies the procedure as follows:

- when only SRB1 is established, i.e. prior to establishment of SRB2, multicast MRBs and/ or DRBs.

### 5.3.4.3 Reception of the *SecurityModeCommand* by the UE

The UE shall:

- 1> derive the  $K_{gNB}$  key, as specified in TS 33.501 [11];
- 1> derive the  $K_{RRInt}$  key associated with the *integrityProtAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.501 [11];
- 1> request lower layers to verify the integrity protection of the *SecurityModeCommand* message, using the algorithm indicated by the *integrityProtAlgorithm* as included in the *SecurityModeCommand* message and the  $K_{RRInt}$  key;
- 1> if the *SecurityModeCommand* message passes the integrity protection check:
  - 2> derive the  $K_{RREnc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.501 [11];

- 2> derive the  $K_{UPint}$  key associated with the *integrityProtAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.501 [11];
  - 2> configure lower layers to apply SRB integrity protection using the indicated algorithm and the  $K_{RRInt}$  key immediately, i.e. integrity protection shall be applied to all subsequent messages received and sent by the UE, including the *SecurityModeComplete* message;
  - 2> configure lower layers to apply SRB ciphering using the indicated algorithm, the  $K_{RRCenc}$  key after completing the procedure, i.e. ciphering shall be applied to all subsequent messages received and sent by the UE, except for the *SecurityModeComplete* message which is sent unciphered;
  - 2> consider AS security to be activated;
  - 2> submit the *SecurityModeComplete* message to lower layers for transmission, upon which the procedure ends;
- 1> else:
- 2> continue using the configuration used prior to the reception of the *SecurityModeCommand* message, i.e. neither apply integrity protection nor ciphering.
  - 2> submit the *SecurityModeFailure* message to lower layers for transmission, upon which the procedure ends.

## 5.3.5 RRC reconfiguration

### 5.3.5.1 General

Figure 5.3.5.1-1: RRC reconfiguration, successful

Figure 5.3.5.1-2: RRC reconfiguration, failure

The purpose of this procedure is to modify an RRC connection, e.g. to establish/modify/release RBs/BH RLC channels/Uu Relay RLC channels/PC5 Relay RLC channels, to perform reconfiguration with sync, to setup/modify/release measurements, to add/modify/release SCells and cell groups, to add/modify/release conditional handover configuration, to add/modify/release conditional PSCell change or conditional PSCell addition configuration. As part of the procedure, NAS dedicated information may be transferred from the Network to the UE.

RRC reconfiguration to perform reconfiguration with sync includes, but is not limited to, the following cases:

- reconfiguration with sync and security key refresh, involving RA to the PCell/PSCell, MAC reset, refresh of security and re-establishment of RLC and PDCP triggered by explicit indicators;

- reconfiguration with sync but without security key refresh, involving RA to the PCell/PSCell, MAC reset and RLC re-establishment and PDCP data recovery (for AM DRB or AM MRB) triggered by explicit indicators.
- reconfiguration with sync for DAPS and security key refresh, involving RA to the target PCell, establishment of target MAC, and
  - for non-DAPS bearer: refresh of security and re-establishment of RLC and PDCP triggered by explicit indicators;
  - for DAPS bearer: establishment of RLC for the target PCell, refresh of security and reconfiguration of PDCP to add the ciphering function, the integrity protection function and ROHC function of the target PCell;
  - for SRB: refresh of security and establishment of RLC and PDCP for the target PCell;
- reconfiguration with sync for DAPS but without security key refresh, involving RA to the target PCell, establishment of target MAC, and
  - for non-DAPS bearer: RLC re-establishment and PDCP data recovery (for AM DRB or AM MRB) triggered by explicit indicators.
  - for DAPS bearer: establishment of RLC for target PCell, reconfiguration of PDCP to add the ciphering function, the integrity protection function and ROHC function of the target PCell;
  - for SRB: establishment of RLC and PDCP for the target PCell.
- reconfiguration with sync for direct-to-indirect path switch, not involving RA at target side, involving re-establishment of PDCP /PDCP data recovery (for AM DRB) triggered by explicit indicators.

In (NG)EN-DC and NR-DC, SRB3 can be used for measurement configuration and reporting, for UE assistance (re-)configuration and reporting for power savings, for IP address (re-)configuration and reporting for IAB-nodes, to (re-)configure MAC, RLC, BAP, physical layer and RLF timers and constants of the SCG configuration, and to reconfigure PDCP for DRBs associated with the S-K<sub>gNB</sub> or SRB3, and to reconfigure SDAP for DRBs associated with S-K<sub>gNB</sub> in NGEN-DC and NR-DC, and to add/modify/release conditional PSCell change configuration, provided that the (re-)configuration does not require any MN involvement, and to transmit RRC messages between the MN and the UE during fast MCG link recovery. In (NG)EN-DC and NR-DC, only *measConfig*, *radioBearerConfig*, *conditionalReconfiguration*, *bap-Config*, *iab-IP-AddressConfigurationList*, *otherConfig* and/or *secondaryCellGroup* are included in *RRCReconfiguration* received via SRB3, except when *RRCReconfiguration* is received within *DLInformationTransferMRDC*.

### 5.3.5.2 Initiation

The Network may initiate the RRC reconfiguration procedure to a UE in RRC\_CONNECTED. The Network applies the procedure as follows:

- the establishment of RBs (other than SRB1, that is established during RRC connection establishment) is performed only when AS security has been activated;
- the establishment of BH RLC Channels for IAB is performed only when AS security has been activated;
- the establishment of Uu Relay RLC channels and PC5 Relay RLC channels (other than SL-RLC0 and SL-RLC1) for L2 U2N Relay UE is performed only when AS security has been activated, and the establishment of PC5 Relay RLC channels for L2 U2N Remote UE (other than SL-RLC0 and SL-RLC1) is performed only when AS security has been activated;
- the addition of Secondary Cell Group and SCells is performed only when AS security has been activated;
- the *reconfigurationWithSync* is included in *secondaryCellGroup* only when at least one RLC bearer or BH RLC channel is setup in SCG;
- the *reconfigurationWithSync* is included in *masterCellGroup* only when AS security has been activated, and SRB2 with at least one DRB or multicast MRB or, for IAB, SRB2, have been setup and not suspended;
- the *conditionalReconfiguration* for CPC is included only when at least one RLC bearer is setup in SCG;

- the *conditionalReconfiguration* for CHO or CPA is included only when AS security has been activated, and SRB2 with at least one DRB or multicast MRB or, for IAB, SRB2, are setup and not suspended.

### 5.3.5.3 Reception of an *RRCReconfiguration* by the UE

The UE shall perform the following actions upon reception of the *RRCReconfiguration*, or upon execution of the conditional reconfiguration (CHO, CPA or CPC):

- 1> if the *RRCReconfiguration* is applied due to a conditional reconfiguration execution upon cell selection performed while timer T311 was running, as defined in 5.3.7.3:
  - 2> remove all the entries within the MCG and the SCG *VarConditionalReconfig*, if any;
- 1> if the *RRCReconfiguration* includes the *daps-SourceRelease*:
  - 2> reset the source MAC and release the source MAC configuration;
  - 2> for each DAPS bearer:
    - 3> release the RLC entity or entities as specified in TS 38.322 [4], clause 5.1.3, and the associated logical channel for the source SpCell;
    - 3> reconfigure the PDCP entity to release DAPS as specified in TS 38.323 [5];
  - 2> for each SRB:
    - 3> release the PDCP entity for the source SpCell;
    - 3> release the RLC entity as specified in TS 38.322 [4], clause 5.1.3, and the associated logical channel for the source SpCell;
  - 2> release the physical channel configuration for the source SpCell;
  - 2> discard the keys used in the source SpCell (the  $K_{gNB}$  key, the  $K_{RRCenc}$  key, the  $K_{RRCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key), if any;
- 1> if the *RRCReconfiguration* is received via other RAT (i.e., inter-RAT handover to NR):
  - 2> if the *RRCReconfiguration* does not include the *fullConfig* and the UE is connected to 5GC (i.e., delta signalling during intra 5GC handover):
    - 3> re-use the source RAT SDAP and PDCP configurations if available (i.e., current SDAP/PDCP configurations for all RBs from source E-UTRA RAT prior to the reception of the inter-RAT HO *RRCReconfiguration* message);
- 1> else:
  - 2> if the *RRCReconfiguration* includes the *fullConfig*:
    - 3> perform the full configuration procedure as specified in 5.3.5.11;
- 1> if the *RRCReconfiguration* includes the *masterCellGroup*:
  - 2> perform the cell group configuration for the received *masterCellGroup* according to 5.3.5.5;
- 1> if the *RRCReconfiguration* includes the *masterKeyUpdate*:
  - 2> perform AS security key update procedure as specified in 5.3.5.7;
- 1> if the *RRCReconfiguration* includes the *sk-Counter*:
  - 2> perform security key update procedure as specified in 5.3.5.7;
- 1> if the *RRCReconfiguration* includes the *secondaryCellGroup*:
  - 2> perform the cell group configuration for the SCG according to 5.3.5.5;

- 1> if the *RRCReconfiguration* includes the *mrdc-SecondaryCellGroupConfig*:
    - 2> if the *mrdc-SecondaryCellGroupConfig* is set to *setup*:
      - 3> if the *mrdc-SecondaryCellGroupConfig* includes *mrdc-ReleaseAndAdd*:
        - 4> perform MR-DC release as specified in clause 5.3.5.10;
      - 3> if the received *mrdc-SecondaryCellGroup* is set to *nr-SCG*:
        - 4> perform the RRC reconfiguration according to 5.3.5.3 for the *RRCReconfiguration* message included in *nr-SCG*;
      - 3> if the received *mrdc-SecondaryCellGroup* is set to *eutra-SCG*:
        - 4> perform the RRC connection reconfiguration as specified in TS 36.331 [10], clause 5.3.5.3 for the *RRCConnectionReconfiguration* message included in *eutra-SCG*;
    - 2> else (*mrdc-SecondaryCellGroupConfig* is set to *release*):
      - 3> perform MR-DC release as specified in clause 5.3.5.10;
  - 1> if the *RRCReconfiguration* message includes the *radioBearerConfig*:
    - 2> perform the radio bearer configuration according to 5.3.5.6;
  - 1> if the *RRCReconfiguration* message includes the *radioBearerConfig2*:
    - 2> perform the radio bearer configuration according to 5.3.5.6;
  - 1> if the *RRCReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> if the *RRCReconfiguration* message includes the *dedicatedNAS-MessageList*:
    - 2> forward each element of the *dedicatedNAS-MessageList* to upper layers in the same order as listed;
  - 1> if the *RRCReconfiguration* message includes the *dedicatedSIB1-Delivery*:
    - 2> perform the action upon reception of *SIB1* as specified in 5.2.2.4.2;
- NOTE 0: If this *RRCReconfiguration* is associated to the MCG and includes *reconfigurationWithSync* in *spCellConfig* and *dedicatedSIB1-Delivery*, the UE initiates (if needed) the request to acquire required SIBs, according to clause 5.2.2.3.5, only after the random access procedure towards the target SpCell is completed.
- 1> if the *RRCReconfiguration* message includes the *dedicatedSystemInformationDelivery*:
    - 2> perform the action upon reception of System Information as specified in 5.2.2.4;
    - 2> if all the SIB(s) and/or posSIB(s) requested in *DedicatedSIBRequest* message have been acquired:
      - 3> stop timer T350, if running;
  - 1> if the *RRCReconfiguration* message includes the *dedicatedPosSysInfoDelivery*:
    - 2> perform the action upon reception of the contained posSIB(s), as specified in clause 5.2.2.4.16;
    - 2> if all the SIB(s) and/or posSIB(s) requested in *DedicatedSIBRequest* message have been acquired:
      - 3> stop timer T350, if running;
  - 1> if the *RRCReconfiguration* message includes the *otherConfig*:
    - 2> perform the other configuration procedure as specified in 5.3.5.9;
  - 1> if the *RRCReconfiguration* message includes the *bap-Config*:

- 2> perform the BAP configuration procedure as specified in 5.3.5.12;
- 1> if the *RRCReconfiguration* message includes the *iab-IP-AddressConfigurationList*:
  - 2> if *iab-IP-AddressToReleaseList* is included:
    - 3> perform release of IP address as specified in 5.3.5.12a.1.1;
  - 2> if *iab-IP-AddressToAddModList* is included:
    - 3> perform IAB IP address addition/update as specified in 5.3.5.12a.1.2;
- 1> if the *RRCReconfiguration* message includes the *conditionalReconfiguration*:
  - 2> perform conditional reconfiguration as specified in 5.3.5.13;
- 1> if the *RRCReconfiguration* message includes the *needForGapsConfigNR*:
  - 2> if *needForGapsConfigNR* is set to *setup*:
    - 3> consider itself to be configured to provide the measurement gap requirement information of NR target bands;
  - 2> else:
    - 3> consider itself not to be configured to provide the measurement gap requirement information of NR target bands;
- 1> if the *RRCReconfiguration* message includes the *needForGapNCSG-ConfigNR*:
  - 2> if *needForGapNCSG-ConfigNR* is set to *setup*:
    - 3> consider itself to be configured to provide the measurement gap and NCSG requirement information of NR target bands;
  - 2> else:
    - 3> consider itself not to be configured to provide the measurement gap and NCSG requirement information of NR target bands;
- 1> if the *RRCReconfiguration* message includes the *needForGapNCSG-ConfigEUTRA*:
  - 2> if *needForGapNCSG-ConfigEUTRA* is set to *setup*:
    - 3> consider itself to be configured to provide the measurement gap and NCSG requirement information of E-UTRA target bands;
  - 2> else:
    - 3> consider itself not to be configured to provide the measurement gap and NCSG requirement information of E-UTRA target bands;
- 1> if the *RRCReconfiguration* message includes the *onDemandSIB-Request*:
  - 2> if *onDemandSIB-Request* is set to *setup*:
    - 3> consider itself to be configured to request SIB(s) or posSIB(s) in *RRC\_CONNECTED* in accordance with clause 5.2.2.3.5;
  - 2> else:
    - 3> consider itself not to be configured to request SIB(s) or posSIB(s) in *RRC\_CONNECTED* in accordance with clause 5.2.2.3.5;
    - 3> stop timer T350, if running;
- 1> if the *RRCReconfiguration* message includes the *sl-ConfigDedicatedNR*:

- 2> perform the sidelink dedicated configuration procedure as specified in 5.3.5.14;

NOTE 0a: If the *sl-ConfigDedicatedNR* was received embedded within an E-UTRA *RRCConnectionReconfiguration* message, the UE does not build an NR *RRCReconfigurationComplete* message for the received *sl-ConfigDedicatedNR*.

- 1> if the *RRCReconfiguration* message includes the *sl-L2RelayUE-Config*:
  - 2> perform the L2 U2N Relay UE configuration procedure as specified in 5.3.5.15;
- 1> if the *RRCReconfiguration* message includes the *sl-L2RemoteUE-Config*:
  - 2> perform the L2 U2N Remote UE configuration procedure as specified in 5.3.5.16;
- 1> if the *RRCReconfiguration* message includes the *dedicatedPagingDelivery*:
  - 2> perform the *Paging* message reception procedure as specified in 5.3.2.3;
- 1> if the *RRCReconfiguration* message includes the *sl-ConfigDedicatedEUTRA-Info*:
  - 2> perform related procedures for V2X sidelink communication in accordance with TS 36.331 [10], clause 5.3.10 and clause 5.5.2;
- 1> if the *RRCReconfiguration* message includes the *ul-GapFR2-Config*:
  - 2> perform the FR2 UL gap configuration procedure as specified in 5.3.5.13c;
- 1> if the *RRCReconfiguration* message includes the *musim-GapConfig*:
  - 2> perform the MUSIM gap configuration procedure as specified in 5.3.5.9a;
- 1> if the *RRCReconfiguration* message includes the *appLayerMeasConfig*:
  - 2> perform the application layer measurement configuration procedure as specified in 5.3.5.13d;
- 1> if the *RRCReconfiguration* message includes the *ue-TxTEG-RequestUL-TDOA-Config*:
  - 2> if *ue-TxTEG-RequestUL-TDOA-Config* is set to *setup*:
    - 3> perform the UE positioning assistance information procedure as specified in 5.7.14;
  - 2> else:
    - 3> release the configuration of UE positioning assistance information;
- 1> set the content of the *RRCReconfigurationComplete* message as follows:
  - 2> if the *RRCReconfiguration* includes the *masterCellGroup* containing the *reportUplinkTxDirectCurrent*:
    - 3> include the *uplinkTxDirectCurrentList* for each MCG serving cell with UL;
    - 3> include *uplinkDirectCurrentBWP-SUL* for each MCG serving cell configured with SUL carrier, if any, within the *uplinkTxDirectCurrentList*;
  - 2> if the *RRCReconfiguration* includes the *masterCellGroup* containing the *reportUplinkTxDirectCurrentTwoCarrier*:
    - 3> include in the *uplinkTxDirectCurrentTwoCarrierList* the list of uplink Tx DC locations for the configured intra-band uplink carrier aggregation in the MCG;
  - 2> if the *RRCReconfiguration* includes the *masterCellGroup* containing the *reportUplinkTxDirectCurrentMoreCarrier*:
    - 3> include in the *uplinkTxDirectCurrentMoreCarrierList* the list of uplink Tx DC locations for the configured intra-band uplink carrier aggregation in the MCG;
  - 2> if the *RRCReconfiguration* includes the *secondaryCellGroup* containing the *reportUplinkTxDirectCurrent*:

- 3> include the *uplinkTxDirectCurrentList* for each SCG serving cell with UL;
- 3> include *uplinkDirectCurrentBWP-SUL* for each SCG serving cell configured with SUL carrier, if any, within the *uplinkTxDirectCurrentList*;
- 2> if the *RRCReconfiguration* includes the *secondaryCellGroup* containing the *reportUplinkTxDirectCurrentTwoCarrier*:
  - 3> include in the *uplinkTxDirectCurrentTwoCarrierList* the list of uplink Tx DC locations for the configured intra-band uplink carrier aggregation in the SCG;
- 2> if the *RRCReconfiguration* includes the *secondaryCellGroup* containing the *reportUplinkTxDirectCurrentMoreCarrier*:
  - 3> include in the *uplinkTxDirectCurrentMoreCarrierList* the list of uplink Tx DC locations for the configured intra-band uplink carrier aggregation in the SCG;

NOTE 0b: The UE does not expect that the *reportUplinkTxDirectCurrentTwoCarrier* or *reportUplinkTxDirectCurrentMoreCarrier* is received in both *masterCellGroup* and in *secondaryCellGroup*. Network only configures at most one of *reportUplinkTxDirectCurrent*, *reportUplinkTxDirectCurrentTwoCarrier* or *reportUplinkTxDirectCurrentMoreCarrier* in one RRC message.

- 2> if the *RRCReconfiguration* message includes the *mrdc-SecondaryCellGroupConfig* with *mrdc-SecondaryCellGroup* set to *eutra-SCG*:
  - 3> include in the *eutra-SCG-Response* the E-UTRA *RRCCConnectionReconfigurationComplete* message in accordance with TS 36.331 [10] clause 5.3.5.3;
- 2> if the *RRCReconfiguration* message includes the *mrdc-SecondaryCellGroupConfig* with *mrdc-SecondaryCellGroup* set to *nr-SCG*:
  - 3> include in the *nr-SCG-Response* the SCG *RRCCReconfigurationComplete* message;
  - 3> if the *RRCReconfiguration* message is applied due to conditional reconfiguration execution and the *RRCCReconfiguration* message does not include the *reconfigurationWithSync* in the *masterCellGroup*:
    - 4> include in the *selectedCondRRCCReconfig* the *condReconfigId* for the selected cell of conditional reconfiguration execution;
- 2> if the *RRCReconfiguration* includes the *reconfigurationWithSync* in *spCellConfig* of an MCG:
  - 3> if the UE has logged measurements available for NR and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
    - 4> include the *logMeasAvailable* in the *RRCCReconfigurationComplete* message;
    - 4> if Bluetooth measurement results are included in the logged measurements the UE has available for NR:
      - 5> include the *logMeasAvailableBT* in the *RRCCReconfigurationComplete* message;
    - 4> if WLAN measurement results are included in the logged measurements the UE has available for NR:
      - 5> include the *logMeasAvailableWLAN* in the *RRCCReconfigurationComplete* message;
  - 3> if the *sigLoggedMeasType* in *VarLogMeasReport* is included:
    - 4> if T330 timer is running and the logged measurements configuration is for NR:
      - 5> set *sigLogMeasConfigAvailable* to *true* in the *RRCCReconfigurationComplete* message;
    - 4> else:
      - 5> if the UE has logged measurements available for NR:
        - 6> set *sigLogMeasConfigAvailable* to *false* in the *RRCCReconfigurationComplete* message;

- 3> if the UE has connection establishment failure or connection resume failure information available in *VarConnEstFailReport* or *VarConnEstFailReportList* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport* or in at least one of the entries of *VarConnEstFailReportList*:
  - 4> include *connEstFailInfoAvailable* in the *RRCReconfigurationComplete* message;
- 3> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*; or
- 3> if the UE has radio link failure or handover failure information available in *VarRLF-Report* of TS 36.331 [10] and if the UE is capable of cross-RAT RLF reporting and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report* of TS 36.331 [10]:
  - 4> include *rlf-InfoAvailable* in the *RRCReconfigurationComplete* message;
- 3> if the UE was configured with *successHO-Config* when connected to the source PCell; and
- 3> if the applied *RRCReconfiguration* is not due to a conditional reconfiguration execution upon cell selection performed while timer T311 was running, as defined in 5.3.7.3:
  - 4> perform the actions for the successful handover report determination as specified in clause 5.7.10.6, upon successfully completing the Random Access procedure triggered for the *reconfigurationWithSync* in *spCellConfig* of the MCG;
- 3> if the UE has successful handover information available in *VarSuccessHO-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarSuccessHO-Report*:
  - 4> include *successHO-InfoAvailable* in the *RRCReconfigurationComplete* message;
- 2> if the *RRCReconfiguration* message was received via SRB1, but not within *mrdc-SecondaryCellGroup* or E-UTRA *RRCCConnectionReconfiguration* or E-UTRA *RRCCConnectionResume*:
- 3> if the UE is configured to provide the measurement gap requirement information of NR target bands:
  - 4> if the *RRCReconfiguration* message includes the *needForGapsConfigNR*; or
  - 4> if the *NeedForGapsInfoNR* information is changed compared to last time the UE reported this information:
    - 5> include the *NeedForGapsInfoNR* and set the contents as follows:
      - 6> include *intraFreq-needForGap* and set the gap requirement information of intra-frequency measurement for each NR serving cell;
      - 6> if *requestedTargetBandFilterNR* is configured:
        - 7> for each supported NR band that is also included in *requestedTargetBandFilterNR*, include an entry in *interFreq-needForGap* and set the gap requirement information for that band;
      - 6> else:
        - 7> include an entry in *interFreq-needForGap* and set the corresponding gap requirement information for each supported NR band;
- 3> if the UE is configured to provide the measurement gap and NCSG requirement information of NR target bands:
  - 4> if the *RRCReconfiguration* message includes the *needForGapNCSG-ConfigNR*; or
  - 4> if the *needForGapNCSG-InfoNR* information is changed compared to last time the UE reported this information:
    - 5> include the *NeedForGapNCSG-InfoNR* and set the contents as follows:
      - 6> include *intraFreq-needForNCSG* and set the gap and NCSG requirement information of intra-frequency measurement for each NR serving cell;

- 6> if *requestedTargetBandFilterNCSG-NR* is configured:
  - 7> for each supported NR band included in *requestedTargetBandFilterNCSG-NR*, include an entry in *interFreq-needForNCSG* and set the NCSG requirement information for that band;
- 6> else:
  - 7> include an entry for each supported NR band in *interFreq-needForNCSG* and set the corresponding NCSG requirement information;
- 3> if the UE is configured to provide the measurement gap and NCSG requirement information of E-UTRA target bands:
  - 4> if the *RRCReconfiguration* message includes the *needForGapNCSG-ConfigEUTRA*; or
  - 4> if the *needForGapNCSG-InfoEUTRA* information is changed compared to last time the UE reported this information:
  - 5> include the *NeedForGapNCSG-InfoEUTRA* and set the contents as follows:
    - 6> if *requestedTargetBandFilterNCSG-EUTRA* is configured, for each supported E-UTRA band included in *requestedTargetBandFilterNCSG-EUTRA*, include an entry in *needForNCSG-EUTRA* and set the NCSG requirement information for that band; otherwise, include an entry for each supported E-UTRA band in *needForNCSG-EUTRA* and set the corresponding NCSG requirement information;
- 1> if the UE is configured with E-UTRA *nr-SecondaryCellGroupConfig* (UE in (NG)EN-DC):
  - 2> if the *RRCReconfiguration* message was received via E-UTRA SRB1 as specified in TS 36.331 [10]; or
  - 2> if the *RRCReconfiguration* message was received via E-UTRA RRC message *RRConnectionReconfiguration* within *MobilityFromNRCommand* (handover from NR standalone to (NG)EN-DC);
  - 3> if the *RRCReconfiguration* is applied due to a conditional reconfiguration execution for CPC which is configured via *conditionalReconfiguration* contained in *nr-SecondaryCellGroupConfig* specified in TS 36.331 [10]:
    - 4> submit the *RRCReconfigurationComplete* message via the E-UTRA MCG embedded in E-UTRA RRC message *ULInformationTransferMRDC* as specified in TS 36.331 [10], clause 5.6.2a.
  - 3> else if the *RRCReconfiguration* message was included in E-UTRA *RRConnectionResume* message:
    - 4> submit the *RRCReconfigurationComplete* message via E-UTRA embedded in E-UTRA RRC message *RRConnectionResumeComplete* as specified in TS 36.331 [10], clause 5.3.3.4a;
  - 3> else:
    - 4> submit the *RRCReconfigurationComplete* via E-UTRA embedded in E-UTRA RRC message *RRConnectionReconfigurationComplete* as specified in TS 36.331 [10], clause 5.3.5.3/5.3.5.4/5.4.2.3;
  - 3> if the *scg-State* is not included in the E-UTRA message (*RRConnectionReconfiguration* or *RRConnectionResume*) containing the *RRCReconfiguration* message:
    - 4> perform SCG activation as specified in 5.3.5.13a;
    - 4> if *reconfigurationWithSync* was included in *spCellConfig* of an SCG:
      - 5> initiate the Random Access procedure on the PSCell, as specified in TS 38.321 [3];
    - 4> else if the SCG was deactivated before the reception of the E-UTRA RRC message containing the *RRCReconfiguration* message:
      - 5> if *bfd-and-RLM* was not configured to *true* before the reception of the E-UTRA *RRConnectionReconfiguration* or *RRConnectionResume* message containing the

*RRCReconfiguration* message or if lower layers indicate that a Random Access procedure is needed for SCG activation:

- 6> initiate the Random Access procedure on the SpCell, as specified in TS 38.321 [3];
- 5> else the procedure ends;
- 4> else the procedure ends;
- 3> else:
  - 4> perform SCG deactivation as specified in 5.3.5.13b;
  - 4> the procedure ends;
- 2> if the *RRCReconfiguration* message was received within *nr-SecondaryCellGroupConfig* in *RRCConnectionReconfiguration* message received via SRB3 within *DLInformationTransferMRDC*:
  - 3> submit the *RRCReconfigurationComplete* via E-UTRA embedded in E-UTRA RRC message *RRCConnectionReconfigurationComplete* as specified in TS 36.331 [10], clause 5.3.5.3/5.3.5.4;
  - 3> if the *scg-State* is not included in the *RRCConnectionReconfiguration*:
    - 4> if *reconfigurationWithSync* was included in *spCellConfig* of an SCG:
      - 5> initiate the Random Access procedure on the SpCell, as specified in TS 38.321 [3];
    - 4> else the procedure ends;
  - 3> else:
    - 4> perform SCG deactivation as specified in 5.3.5.13b;
    - 4> the procedure ends;

NOTE 1: The order the UE sends the *RRCConnectionReconfigurationComplete* message and performs the Random Access procedure towards the SCG is left to UE implementation.

- 2> else (*RRCReconfiguration* was received via SRB3) but not within *DLInformationTransferMRDC*:
  - 3> submit the *RRCReconfigurationComplete* message via SRB3 to lower layers for transmission using the new configuration;

NOTE 2: In (NG)EN-DC and NR-DC, in the case *RRCReconfiguration* is received via SRB1 or within *DLInformationTransferMRDC* via SRB3, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case *RRCReconfiguration* is received via SRB3 but not within *DLInformationTransferMRDC*, the random access is triggered by the MAC layer due to arrival of *RRCReconfigurationComplete*.

- 1> else if the *RRCReconfiguration* message was received via SRB1 within the *nr-SCG* within *mrdc-SecondaryCellGroup* (UE in NR-DC, *mrdc-SecondaryCellGroup* was received in *RRCReconfiguration* or *RRCResume* via SRB1):
  - 2> if the *RRCReconfiguration* is applied due to a conditional reconfiguration execution for CPC which is configured via *conditionalReconfiguration* contained in *nr-SCG* within *mrdc-SecondaryCellGroup*:
    - 3> submit the *RRCReconfigurationComplete* message via the NR MCG embedded in NR RRC message *ULInformationTransferMRDC* as specified in clause 5.7.2a.3.
  - 2> if the *scg-State* is not included in the *RRCReconfiguration* or *RRCResume* message containing the *RRCReconfiguration* message:
    - 3> perform SCG activation as specified in 5.3.5.13a;
    - 3> if *reconfigurationWithSync* was included in *spCellConfig* in *nr-SCG*:
      - 4> initiate the Random Access procedure on the PSCell, as specified in TS 38.321 [3];

- 3> else if the SCG was deactivated before the reception of the NR RRC message containing the *RRCReconfiguration* message:
  - 4> if *bfd-and-RLM* was not configured to *true* before the reception of the *RRCReconfiguration* or *RRCResume* message containing the *RRCReconfiguration* message; or
  - 4> if lower layers indicate that a Random Access procedure is needed for SCG activation:
    - 5> initiate the Random Access procedure on the PSCell, as specified in TS 38.321 [3];
  - 4> else the procedure ends;

3> else the procedure ends;

2> else

3> perform SCG deactivation as specified in 5.3.5.13b;

3> the procedure ends;

NOTE 2a: The order in which the UE sends the *RRCReconfigurationComplete* message and performs the Random Access procedure towards the SCG is left to UE implementation.

1> else if the *RRCReconfiguration* message was received via SRB3 (UE in NR-DC):

2> if the *RRCReconfiguration* message was received within *DLInformationTransferMRDC*:

3> if the *RRCReconfiguration* message was received within the *nr-SCG* within *mrdc-SecondaryCellGroup* (NR SCG RRC Reconfiguration):

4> if the *scg-State* is not included in the *RRCReconfiguration* message containing the *RRCReconfiguration* message:

5> if *reconfigurationWithSync* was included in *spCellConfig* in *nr-SCG*:

6> initiate the Random Access procedure on the PSCell, as specified in TS 38.321 [3];

5> else:

6> the procedure ends;

4> else:

5> perform SCG deactivation as specified in 5.3.5.13b;

5> the procedure ends;

3> else:

4> if the *RRCReconfiguration* does not include the *mrdc-SecondaryCellGroupConfig*:

5> if the *RRCReconfiguration* includes the *scg-State*:

6> perform SCG deactivation as specified in 5.3.5.13b;

4> submit the *RRCReconfigurationComplete* message via SRB1 to lower layers for transmission using the new configuration;

2> else:

3> submit the *RRCReconfigurationComplete* message via SRB3 to lower layers for transmission using the new configuration;

1> else (*RRCReconfiguration* was received via SRB1):

2> if the UE is in NR-DC and;

2> if the *RRCReconfiguration* does not include the *mrdc-SecondaryCellGroupConfig*:

- 3> if the *RRCReconfiguration* includes the *scg-State*:
  - 4> perform SCG deactivation as specified in 5.3.5.13b;
- 3> else:
  - 4> perform SCG activation without SN message as specified in 5.3.5.13b1;
- 2> if the *reconfigurationWithSync* was included in *spCellConfig* of an MCG:
  - 3> if *ta-Report* is configured with value *enabled* and the UE supports TA reporting:
    - 4> indicate TA report initiation to lower layers;
- 2> submit the *RRCReconfigurationComplete* message via SRB1 to lower layers for transmission using the new configuration;
- 2> if this is the first *RRCReconfiguration* message after successful completion of the RRC re-establishment procedure:
  - 3> resume SRB2, SRB4, DRBs, multicast MRB, and BH RLC channels for IAB-MT, and Uu Relay RLC channels for L2 U2N Relay UE, that are suspended;
- 1> if *reconfigurationWithSync* was included in *spCellConfig* of an MCG or SCG and when MAC of an NR cell group successfully completes a Random Access procedure triggered above; or,
- 1> if *sl-PathSwitchConfig* was included in *reconfigurationWithSync* included in *spCellConfig* of an MCG, and when successfully sending *RRCReconfigurationComplete* message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE):
  - 2> stop timer T304 for that cell group if running;
  - 2> if *sl-PathSwitchConfig* was included in *reconfigurationWithSync*:
    - 3> stop timer T420;
    - 3> release all radio resources, including release of the RLC entities and the MAC configuration at the source side;
    - 3> reset MAC used in the source cell;

NOTE 2b: PDCP and SDAP configured by the source prior to the path switch that are reconfigured and re-used by target when delta signalling is used, are not released as part of this procedure.

- 2> stop timer T310 for source SpCell if running;
- 2> apply the parts of the CSI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;
- 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;
- 2> for each DRB configured as DAPS bearer, request uplink data switching to the PDCP entity, as specified in TS 38.323 [5];
- 2> if the *reconfigurationWithSync* was included in *spCellConfig* of an MCG:
  - 3> if T390 is running:
    - 4> stop timer T390 for all access categories;
    - 4> perform the actions as specified in 5.3.14.4.
  - 3> if T350 is running:
    - 4> stop timer T350;

- 3> if *RRCReconfiguration* does not include *dedicatedSIB1-Delivery* and
- 3> if the active downlink BWP, which is indicated by the *firstActiveDownlinkBWP-Id* for the target SpCell of the MCG, has a common search space configured by *searchSpaceSIB1*:
  - 4> acquire the *SIB1*, which is scheduled as specified in TS 38.213 [13], of the target SpCell of the MCG;
  - 4> upon acquiring *SIB1*, perform the actions specified in clause 5.2.2.4.2;
- 2> if the *reconfigurationWithSync* was included in *spCellConfig* of an MCG; or
- 2> if the *reconfigurationWithSync* was included in *spCellConfig* of an SCG and the CPA or CPC was configured:
  - 3> remove all the entries within the MCG and the SCG *VarConditionalReconfig*, if any;
  - 3> remove all the entries within *VarConditionalReconfiguration* as specified in TS 36.331 [10], clause 5.3.5.9.6, if any;
  - 3> for each *measId* of the MCG *measConfig*, if configured, and for each *measId* of the SCG *measConfig*, if configured, if the associated *reportConfig* has a *reportType* set to *condTriggerConfig*:
    - 4> for the associated *reportConfigId*:
      - 5> remove the entry with the matching *reportConfigId* from the *reportConfigList* within the *VarMeasConfig*;
    - 4> if the associated *measObjectId* is only associated to a *reportConfig* with *reportType* set to *condTriggerConfig*:
      - 5> remove the entry with the matching *measObjectId* from the *measObjectList* within the *VarMeasConfig*;
    - 4> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;
- 2> if *reconfigurationWithSync* was included in *masterCellGroup* or *secondaryCellGroup*:
  - 3> if the UE initiated transmission of a *UEAssistanceInformation* message for the corresponding cell group during the last 1 second, and the UE is still configured to provide the concerned UE assistance information for the corresponding cell group; or
  - 3> if the *RRCReconfiguration* message is applied due to a conditional reconfiguration execution, and the UE is configured to provide UE assistance information for the corresponding cell group, and the UE has initiated transmission of a *UEAssistanceInformation* message for the corresponding cell group since it was configured to do so in accordance with 5.7.4.2:
    - 4> initiate transmission of a *UEAssistanceInformation* message for the corresponding cell group in accordance with clause 5.7.4.3 to provide the concerned UE assistance information;
    - 4> start or restart the prohibit timer (if exists) or the leave without response timer for the MUSIM associated with the concerned UE assistance information with the timer value set to the value in corresponding configuration;
  - 3> if *SIB12* is provided by the target PCell, and the UE initiated transmission of a *SidelinkUEInformationNR* message indicating a change of NR sidelink communication/discovery related parameters relevant in target PCell (i.e. change of *sl-RxInterestedFreqList* or *sl-TxResourceReqList*) during the last 1 second preceding reception of the *RRCReconfiguration* message including *reconfigurationWithSync* in *spCellConfig* of an MCG; or
  - 3> if the *RRCReconfiguration* message is applied due to a conditional reconfiguration execution and the UE is capable of NR sidelink communication/discovery and *SIB12* is provided by the target PCell, and the UE has initiated transmission of a *SidelinkUEInformationNR* message since it was configured to do so in accordance with 5.8.3.2:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message in accordance with 5.8.3.3;

- 2> if *reconfigurationWithSync* was included in *masterCellGroup*:
  - 3> if configured with application layer measurements and if application layer measurement report container has been received from upper layers for which the successful transmission of the message or at least one segment of the message has not been confirmed by lower layers:
    - 4> re-submit the *MeasurementReportAppLayer* message or all segments of the *MeasurementReportAppLayer* message to lower layers for transmission via SRB4;
- 2> if *reconfigurationWithSync* was included in *masterCellGroup* and the target cell provides *SIB21*:
  - 3> if the UE initiated transmission of an *MBSInterestIndication* message during the last 1 second preceding reception of this *RRCReconfiguration* message; or
  - 3> if the *RRCReconfiguration* message is applied due to a conditional reconfiguration execution, and the UE has initiated transmission of an *MBSInterestIndication* message after having received this *RRCReconfiguration* message:
    - 4> initiate transmission of an *MBSInterestIndication* message in accordance with clause 5.9.4;
- 2> the procedure ends.

NOTE 3: The UE is only required to acquire broadcasted *SIB1* if the UE can acquire it without disrupting unicast or MBS multicast data reception, i.e. the broadcast and unicast/MBS multicast beams are quasi co-located.

NOTE 4: The UE sets the content of *UEAssistanceInformation* according to latest configuration (i.e. the configuration after applying the *RRCReconfiguration* message) and latest UE preference. The UE may include more than the concerned UE assistance information within the *UEAssistanceInformation* according to 5.7.4.2. Therefore, the content of *UEAssistanceInformation* message might not be the same as the content of the previous *UEAssistanceInformation* message.

#### 5.3.5.4 Secondary cell group release

The UE shall:

- 1> as a result of SCG release triggered by E-UTRA (i.e. (NG)EN-DC case) or NR (i.e. NR-DC case):
  - 2> reset SCG MAC, if configured;
  - 2> for each RLC bearer that is part of the SCG configuration:
    - 3> perform RLC bearer release procedure as specified in 5.3.5.5.3;
  - 2> for each BH RLC channel that is part of the SCG configuration:
    - 3> perform BH RLC channel release procedure as specified in 5.3.5.5.10;
  - 2> release the SCG configuration;
  - 2> remove all the entries within the SCG *VarConditionalReconfig*, if any;
- 2> if SCG release was triggered by NR (i.e. NR-DC case):
  - 3> remove all the entries within the MCG *VarConditionalReconfig* for which the *RRCReconfiguration* within *condRRCReconfig* does not include the *masterCellGroup* with *reconfigurationWithSync*, if any;
- 2> else (i.e. EN-DC case):
  - 3> perform *VarConditionalReconfiguration* CPC removal as specified in TS 36.331 [10] clause 5.3.5.9.7;
- 2> stop timer T310 for the corresponding SpCell, if running;
- 2> stop timer T312 for the corresponding SpCell, if running;
- 2> stop timer T304 for the corresponding SpCell, if running.

NOTE: Release of cell group means only release of the lower layer configuration of the cell group but the *RadioBearerConfig* may not be released.

### 5.3.5.5 Cell Group configuration

#### 5.3.5.5.1 General

The network configures the UE with Master Cell Group (MCG), and zero or one Secondary Cell Group (SCG). In (NG)EN-DC, the MCG is configured as specified in TS 36.331 [10], and for NE-DC, the SCG is configured as specified in TS 36.331 [10]. The network provides the configuration parameters for a cell group in the *CellGroupConfig* IE.

The UE performs the following actions based on a received *CellGroupConfig* IE:

- 1> if the *CellGroupConfig* contains the *spCellConfig* with *reconfigurationWithSync*:
  - 2> perform Reconfiguration with sync according to 5.3.5.5.2;
  - 2> resume all suspended radio bearers except the SRBs for the source cell group, and resume SCG transmission for all radio bearers, and resume BH RLC channels and resume SCG transmission for BH RLC channels for IAB-MT, if suspended;

NOTE: If the SCG is deactivated, resuming SCG transmission for all radio bearers does not imply that PDCP PDUs can be transmitted or received on SCG RLC bearers.

- 1> if the *CellGroupConfig* contains the *rlc-BearerToReleaseList* or *rlc-BearerToReleaseListExt*:

- 2> perform RLC bearer release as specified in 5.3.5.5.3;

- 1> if the *CellGroupConfig* contains the *rlc-BearerToAddModList*:

- 2> perform the RLC bearer addition/modification as specified in 5.3.5.5.4;

- 1> if the *CellGroupConfig* contains the *mac-CellGroupConfig*:

- 2> configure the MAC entity of this cell group as specified in 5.3.5.5.5;

- 1> if the *CellGroupConfig* contains the *sCellToReleaseList*:

- 2> perform SCell release as specified in 5.3.5.5.8;

- 1> if the *CellGroupConfig* contains the *spCellConfig*:

- 2> configure the SpCell as specified in 5.3.5.5.7;

- 1> if the *CellGroupConfig* contains the *sCellToAddModList*:

- 2> perform SCell addition/modification as specified in 5.3.5.5.9;

- 1> if the *CellGroupConfig* contains the *bh-RLC-ChannelToReleaseList*:

- 2> perform BH RLC channel release as specified in 5.3.5.5.10;

- 1> if the *CellGroupConfig* contains the *bh-RLC-ChannelToAddModList*:

- 2> perform the BH RLC channel addition/modification as specified in 5.3.5.5.11;

- 1> if the *CellGroupConfig* contains the *uu-RelayRLC-ChannelToReleaseList*:

- 2> perform Uu Relay RLC channel release as specified in 5.3.5.5.12;

- 1> if the *CellGroupConfig* contains the *uu-RelayRLC-ChannelToAddModList*:

- 2> perform the Uu Relay RLC channel addition/modification as specified in 5.3.5.5.13;

### 5.3.5.5.2 Reconfiguration with sync

The UE shall perform the following actions to execute a reconfiguration with sync.

- 1> if the AS security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;
- 1> stop timer T430 if running;
- 1> if no DAPS bearer is configured:
  - 2> stop timer T310 for the corresponding SpCell, if running;
- 1> if this procedure is executed for the MCG:
  - 2> if timer T316 is running;
    - 3> stop timer T316;
    - 3> clear the information included in *VarRLF-Report*, if any;
  - 2> resume MCG transmission, if suspended.
- 1> stop timer T312 for the corresponding SpCell, if running;
- 1> if *sl-PathSwitchConfig* is included:
  - 2> consider the target L2 U2N Relay UE to be the one indicated by the *targetRelayUE-Identity* in the *sl-PathSwitchConfig*;
  - 2> start timer T420 for the corresponding target L2 U2N Relay UE with the timer value set to *t420*, as included in the *sl-PathSwitchConfig*;
  - 2> apply the value of the *newUE-Identity* as the C-RNTI;
  - 2> indicate to upper layer (to trigger the PC5 unicast link establishment) with the target L2 U2N Relay UE indicated by the *targetRelayUE-Identity*;
  - 2> apply the default configuration of SL-RLC1 as defined in 9.2.4 for SRB1;
- 1> else (*sl-PathSwitchConfig* is not included):
  - 2> if this procedure is executed for the MCG or if this procedure is executed for an SCG not indicated as deactivated in the E-UTRA or NR RRC message in which the *RRCReconfiguration* message is embedded:
    - 3> start timer T304 for the corresponding SpCell with the timer value set to *t304*, as included in the *reconfigurationWithSync*;
  - 2> if the *frequencyInfoDL* is included:
    - 3> consider the target SpCell to be one on the SSB frequency indicated by the *frequencyInfoDL* with a physical cell identity indicated by the *physCellId*;
  - 2> else:
    - 3> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the *physCellId*;
  - 2> start synchronising to the DL of the target SpCell;
  - 2> apply the specified BCCH configuration defined in 9.1.1.1 for the target SpCell;
  - 2> acquire the *MIB* of the target SpCell, which is scheduled as specified in TS 38.213 [13];
  - 2> if *NTN-Config* is configured for the target cell:
    - 3> start timer T430 with the timer value set to *ntn-UISyncValidityDuration* from the subframe indicated by *epochTime*, according to the target cell *NTN-Config*;

NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.

NOTE 2: The UE may omit reading the *MIB* if the UE already has the required timing information, or the timing information is not needed for random access.

NOTE 2a: A UE with DAPS bearer does not monitor for system information updates in the source PCell.

2> If any DAPS bearer is configured:

3> create a MAC entity for the target cell group with the same configuration as the MAC entity for the source cell group;

3> for each DAPS bearer:

4> establish an RLC entity or entities for the target cell group, with the same configurations as for the source cell group;

4> establish the logical channel for the target cell group, with the same configurations as for the source cell group;

NOTE 2b: In order to understand if a DAPS bearer is configured, the UE needs to check the presence of the field *daps-Config* within the *RadioBearerConfig* IE received in *radioBearerConfig* or *radioBearerConfig2*.

3> for each SRB:

4> establish an RLC entity for the target cell group, with the same configurations as for the source cell group;

4> establish the logical channel for the target cell group, with the same configurations as for the source cell group;

3> suspend SRBs for the source cell group;

NOTE 3: Void

3> apply the value of the *newUE-Identity* as the C-RNTI in the target cell group;

3> configure lower layers for the target SpCell in accordance with the received *spCellConfigCommon*;

3> configure lower layers for the target SpCell in accordance with any additional fields, not covered in the previous, if included in the received *reconfigurationWithSync*.

2> else:

3> reset the MAC entity of this cell group;

3> consider the SCell(s) of this cell group, if configured, that are not included in the *SCellToAddModList* in the *RRCReconfiguration* message, to be in deactivated state;

3> apply the value of the *newUE-Identity* as the C-RNTI for this cell group;

3> configure lower layers in accordance with the received *spCellConfigCommon*;

3> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *reconfigurationWithSync*.

2> if the UE is acting as L2 U2N Remote UE at the source side:

3> indicate upper layer to trigger PC5 unicast link release.

Upon L2 U2N Relay UE receiving *reconfigurationWithSync*, it either indicates to upper layers (to trigger PC5 unicast link release) or sends *NotificationMessageSidelink* message to the connected L2 U2N Remote UE(s) in accordance with 5.8.9.10.

#### 5.3.5.5.3 RLC bearer release

The UE shall:

- 1> for each *logicalChannelIdentity/LogicalChannelIdentityExt* value included in the *rlc-BearerToReleaseList/rlc-BearerToReleaseListExt* that is part of the current UE configuration within the same cell group (LCH release); or
- 1> for each *logicalChannelIdentity* value that is to be released as the result of an SCG release according to 5.3.5.4:
  - 2> release the RLC entity or entities as specified in TS 38.322 [4], clause 5.1.3;
  - 2> release the corresponding logical channel.

#### 5.3.5.5.4 RLC bearer addition/modification

For each *RLC-BearerConfig* received in the *rlc-BearerToAddModList* IE the UE shall:

- 1> if the UE's current configuration contains an RLC bearer with the received *logicalChannelIdentity/LogicalChannelIdentityExt* within the same cell group:
  - 2> if the RLC bearer is associated with an DAPS bearer, or
  - 2> if any DAPS bearer is configured and the RLC bearer is associated with an SRB:
    - 3> reconfigure the RLC entity or entities for the target cell group in accordance with the received *rlc-Config*;
    - 3> reconfigure the logical channel for the target cell group in accordance with the received *mac-LogicalChannelConfig*;
  - 2> else:
    - 3> if *reestablishRLC* is received:
      - 4> re-establish the RLC entity as specified in TS 38.322 [4];
    - 3> reconfigure the RLC entity or entities in accordance with the received *rlc-Config*;
    - 3> reconfigure the logical channel in accordance with the received *mac-LogicalChannelConfig*;
    - 3> if *servedMBS-RadioBearer* is received:
      - 4> associate this logical channel with the PDCP entity identified by *servedMBS-RadioBearer*;

NOTE 1: For DRB and SRB, the network does not re-associate an already configured logical channel with another radio bearer. Hence, *servedRadioBearer* is not present in this case. For MRB, the network does not re-associate an already configured logical channel with DRB or SRB or another MRB (i.e. MRB with another PDCP entity). Hence *multicastRLC-BearerConfig* is not present in this case. If a radio bearer is released and another is added with the same radio bearer identity, it is considered as a new (different) radio bearer. Hence, the network also releases the RLC bearer(s) associated with the released radio bearer.

NOTE 2: In DAPS handover, the UE may perform RLC entity re-establishment (if *reestablishRLC* is set) for an RLC bearer associated with a non-DAPS bearer when indication of successful completion of random access towards target cell is received from lower layers as specified in TS 38.321 [3].

- 1> else (a logical channel with the given *logicalChannelIdentity/LogicalChannelIdentityExt* is not configured within the same cell group, including the case when full configuration option is used):
  - 2> if the *servedRadioBearer* associates the logical channel with an SRB and *rlc-Config* is not included:
    - 3> establish an RLC entity in accordance with the default configuration defined in 9.2 for the corresponding SRB;
  - 2> else:
    - 3> establish an RLC entity in accordance with the received *rlc-Config*;

- 2> if the *servedRadioBearer* associates the logical channel with an SRB and if *mac-LogicalChannelConfig* is not included:
  - 3> configure this MAC entity with a logical channel in accordance to the default configuration defined in 9.2 for the corresponding SRB;
- 2> else:
  - 3> configure this MAC entity with a logical channel in accordance to the received *mac-LogicalChannelConfig*;
- 2> associate this logical channel with the PDCP entity identified by *servedRadioBearer* or *servedMBS-RadioBearer*.

#### 5.3.5.5.5 MAC entity configuration

The UE shall:

- 1> if SCG MAC is not part of the current UE configuration (i.e. SCG establishment):
  - 2> create an SCG MAC entity;
- 1> if any DAPS bearer is configured:
  - 2> reconfigure the MAC main configuration for the target cell group in accordance with the received *mac-CellGroupConfig* excluding *tag-ToReleaseList* and *tag-ToAddModList*;
- 1> else:
  - 2> reconfigure the MAC main configuration of the cell group in accordance with the received *mac-CellGroupConfig* excluding *tag-ToReleaseList* and *tag-ToAddModList*;
- 1> if the received *mac-CellGroupConfig* includes the *tag-ToReleaseList*:
  - 2> for each *TAG-Id* value included in the *tag-ToReleaseList* that is part of the current UE configuration:
    - 3> release the TAG indicated by *TAG-Id*;
- 1> if the received *mac-CellGroupConfig* includes the *tag-ToAddModList*:
  - 2> for each *tag-Id* value included in *tag-ToAddModList* that is not part of the current UE configuration (TAG addition):
    - 3> add the TAG, corresponding to the *tag-Id*, in accordance with the received *timeAlignmentTimer*;
  - 2> for each *tag-Id* value included in *tag-ToAddModList* that is part of the current UE configuration (TAG modification):
    - 3> reconfigure the TAG, corresponding to the *tag-Id*, in accordance with the received *timeAlignmentTimer*.

#### 5.3.5.5.6 RLF Timers & Constants configuration

The UE shall:

- 1> if the received *rlf-TimersAndConstants* is set to *release*:
  - 2> if any DAPS bearer is configured:
    - 3> use values for timers T301, T310, T311 and constants N310, N311 for the target cell group, as included in *ue-TimersAndConstants* received in *SIB1*;
- 2> else:
  - 3> use values for timers T301, T310, T311 and constants N310, N311, as included in *ue-TimersAndConstants* received in *SIB1*;

- 1> else:
  - 2> if any DAPS bearer is configured:
    - 3> configure the value of timers and constants for the target cell group in accordance with received *rlf-TimersAndConstants*;
  - 2> else:
    - 3> (re-)configure the value of timers and constants in accordance with received *rlf-TimersAndConstants*;
    - 3> stop timer T310 for this cell group, if running;
    - 3> stop timer T312 for this cell group, if running;
    - 3> reset the counters N310 and N311.

#### 5.3.5.5.7 SpCell Configuration

The UE shall:

- 1> if the UE is acting as L2 U2N Remote UE:
  - 2> if the *SpCellConfig* contains the *rlf-TimersAndConstants* which is set to *setup*:
    - 3> use value for timers T311 as received in *rlf-TimersAndConstants*;
  - 2> else if *rlf-TimersAndConstants* is not configured for this cell group or *SpCellConfig* contains the *rlf-TimersAndConstants* which is set to *release*:
    - 3> use value for timers T311, as included in *ue-TimersAndConstants* received in *SIB1*;
- 1> else
  - 2> if the *SpCellConfig* contains the *rlf-TimersAndConstants*:
    - 3> configure the RLF timers and constants for this cell group as specified in 5.3.5.5.6;
  - 2> else if *rlf-TimersAndConstants* is not configured for this cell group:
    - 3> if any DAPS bearer is configured:
      - 4> use values for timers T301, T310, T311 and constants N310, N311 for the target cell group, as included in *ue-TimersAndConstants* received in *SIB1*;
    - 3> else
      - 4> use values for timers T301, T310, T311 and constants N310, N311, as included in *ue-TimersAndConstants* received in *SIB1*;
  - 2> if the *SpCellConfig* contains *spCellConfigDedicated*:
    - 3> configure the SpCell in accordance with the *spCellConfigDedicated*;
    - 3> consider the bandwidth part indicated in *firstActiveUplinkBWP-Id*, if included in the *spCellConfigDedicated*, to be the active uplink bandwidth part;
    - 3> if the *firstActiveDownlinkBWP-Id* is included in the *spCellConfigDedicated*:
      - 4> if the *SpCellConfig* is included in an *RRReconfiguration* message contained in an NR or E-UTRA RRC message indicating that the SCG is deactivated:
        - 5> consider the bandwidth part indicated in *firstActiveDownlinkBWP-Id* to be the bandwidth part for Radio Link Monitoring, Beam Failure Detection and measurements;
      - 4> else:

- 5> consider the bandwidth part indicated in *firstActiveDownlinkBWP-Id* to be the active downlink bandwidth part;
- 3> if any of the reference signal(s) that are used for radio link monitoring are reconfigured by the received *spCellConfigDedicated*:
  - 4> stop timer T310 for the corresponding SpCell, if running;
  - 4> stop timer T312 for the corresponding SpCell, if running;
  - 4> reset the counters N310 and N311.
- 1> if the *SpCellConfig* contains the *lowMobilityEvaluationConnected*:
  - 2> the UE may perform the evaluation of the low mobility criterion for this cell group as specified in 5.7.13.1;
- 1> if the *SpCellConfig* contains the *goodServingCellEvaluationRLM*:
  - 2> the UE may perform the evaluation of the good serving cell quality criterion for this SpCell as specified in 5.7.13.2;
- 1> if the *SpCellConfig* contains the *goodServingCellEvaluationBFD*:
  - 2> the UE may perform the evaluation of the good serving cell quality criterion for this serving cell as specified in 5.7.13.2;

#### 5.3.5.5.8 SCell Release

The UE shall:

- 1> if the release is triggered by reception of the *sCellToReleaseList*:
  - 2> for each *sCellIndex* value included in the *sCellToReleaseList*:
    - 3> if the current UE configuration includes an SCell with value *sCellIndex*:
      - 4> release the SCell.

#### 5.3.5.5.9 SCell Addition/Modification

The UE shall:

- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is not part of the current UE configuration (SCell addition):
  - 2> add the SCell, corresponding to the *sCellIndex*, in accordance with the *sCellConfigCommon* and *sCellConfigDedicated*;
  - 2> if the *sCellState* is included:
    - 3> configure lower layers to consider the SCell to be in activated state;
  - 2> else:
    - 3> configure lower layers to consider the SCell to be in deactivated state;
  - 2> for each *measId* included in the *measIdList* within *VarMeasConfig*:
    - 3> if SCells are not applicable for the associated measurement; and
    - 3> if the concerned SCell is included in *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*:
      - 4> remove the concerned SCell from *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 2> if the *SCellConfig* contains the *goodServingCellEvaluationBFD*:

- 3> the UE may perform the evaluation of the good serving cell quality criterion for this serving cell as specified in 5.7.13.2.
- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is part of the current UE configuration (SCell modification):
  - 2> modify the SCell configuration in accordance with the *sCellConfigDedicated*;
  - 2> if the *sCellToAddModList* was received in an *RRCReconfiguration* message including *reconfigurationWithSync*, or received in an *RRCResume* message, or received in an *RRCReconfiguration* message including *reconfigurationWithSync* embedded in an *RRCResume* message or embedded in an *RRCReconfiguration* message or embedded in an E-UTRA *RRCCConnectionReconfiguration* message or embedded in an E-UTRA *RRCCConnectionResume* message, or received in an *RRCReconfiguration* message embedded in an *RRCReconfiguration* message or embedded in an E-UTRA *RRCCConnectionReconfiguration* message activating deactivated SCG:
  - 3> if the *sCellState* is included:
    - 4> configure lower layers to consider the SCell to be in activated state;
  - 3> else:
    - 4> configure lower layers to consider the SCell to be in deactivated state.
- 2> if the *SCellConfig* contains the *goodServingCellEvaluationBFD*:
  - 3> the UE may perform the evaluation of the good serving cell quality criterion for this serving cell as specified in 5.7.13.2.

#### 5.3.5.5.10 BH RLC channel release

The IAB-node shall:

- 1> for each *BH-RLC-ChannelID* value included in the *bh-RLC-ChannelToReleaseList* that is part of the current IAB-node configuration within the same cell group (LCH release); or
- 1> for each *BH-RLC-ChannelID* value that is to be released as the result of an SCG release according to 5.3.5.4:
  - 2> release the RLC entity or entities as specified in TS 38.322 [4], clause 5.1.3;
  - 2> release the corresponding logical channel.

#### 5.3.5.5.11 BH RLC channel addition/modification

For each *BH-RLC-ChannelConfig* received in the *bh-RLC-ChannelToAddModList* IE the IAB-node shall:

- 1> if the current configuration contains a BH RLC Channel with the received *bh-RLC-ChannelID* within the same cell group:
  - 2> if *reestablishRLC* is received:
    - 3> re-establish the RLC entity as specified in TS 38.322 [4];
  - 2> reconfigure the RLC entity or entities in accordance with the received *rlc-Config*;
  - 2> reconfigure the logical channel in accordance with the received *mac-LogicalChannelConfig*;
- 1> else (a backhaul logical channel with the given *BH-RLC-ChannelID* was not configured before within the same cell group):
  - 2> establish an RLC entity in accordance with the received *rlc-Config*;
  - 2> configure this MAC entity with a logical channel in accordance to the received *mac-LogicalChannelConfig*.

#### 5.3.5.5.12 Uu Relay RLC channel release

The L2 U2N Relay UE shall:

- 1> for each *Uu-RelayRLC-ChannelID* value included in the *uu-RelayRLC-ChannelToReleaseList* that is part of the current configuration within the same cell group (LCH release):
  - 2> release the RLC entity as specified in TS 38.322 [4], clause 5.1.3;
  - 2> release the corresponding logical channel.

#### 5.3.5.5.13 Uu Relay RLC channel addition/modification

For each *Uu-RelayRLC-ChannelConfig* received in the *uu-RelayRLC-ChannelToAddModList* the L2 U2N Relay UE shall:

- 1> if the current configuration contains a Uu Relay RLC channel with the same *uu-RelayRLC-ChannelID* within the same cell group:
  - 2> if *reestablishRLC* is received:
    - 3> re-establish the RLC entity as specified in TS 38.322 [4];
  - 2> reconfigure the RLC entity in accordance with the received *rlc-Config*;
  - 2> reconfigure the logical channel in accordance with the received *mac-LogicalChannelConfig*;
- 1> else (a logical channel with the given *uu-RelayRLC-ChannelID* was not configured before within the same cell group):
  - 2> establish an RLC entity in accordance with the received *rlc-Config*;
  - 2> configure this MAC entity with a logical channel in accordance to the received *mac-LogicalChannelConfig*.

### 5.3.5.6 Radio Bearer configuration

#### 5.3.5.6.1 General

The UE shall perform the following actions based on a received *RadioBearerConfig* IE:

- 1> if the *RadioBearerConfig* includes the *srb3-ToRelease* or *srb4-ToRelease*:
  - 2> perform the SRB release as specified in 5.3.5.6.2;
- 1> if the *RadioBearerConfig* includes the *srb-ToAddModList* or *srb4-ToAddMod* or if any DAPS bearer is configured:
  - 2> perform the SRB addition or reconfiguration as specified in 5.3.5.6.3;
- 1> if the *RadioBearerConfig* includes the *drb-ToReleaseList*:
  - 2> perform DRB release as specified in 5.3.5.6.4;
- 1> if the *RadioBearerConfig* includes the *drb-ToAddModList*:
  - 2> perform DRB addition or reconfiguration as specified in 5.3.5.6.5;
- 1> if the *RadioBearerConfig* includes the *mrb-ToReleaseList*:
  - 2> perform multicast MRB release as specified in 5.3.5.6.6;
- 1> if the *RadioBearerConfig* includes the *mrb-ToAddModList*:
  - 2> perform multicast MRB addition or reconfiguration as specified in 5.3.5.6.7;

- 1> release all SDAP entities established for the PDU sessions, if any, that have no associated DRB as specified in TS 37.324 [24] clause 5.1.2, and indicate the release of the user plane resources for PDU Sessions associated with the released SDAP entities to upper layers;
- 1> release all SDAP entities established for the MBS multicast sessions, if any, that have no associated multicast MRB as specified in TS 37.324 [24] clause 5.1.2, and indicate the release of user plane resources for these MBS multicast sessions to upper layers.

#### 5.3.5.6.2 SRB release

The UE shall:

- 1> if *srb3-ToRelease* is included:
  - 2> release the PDCP entity and the *srb-Identity* of the SRB3;
- 1> if *srb4-ToRelease* is included
  - 2> release the PDCP entity and the *srb-Identity* of the SRB4.

#### 5.3.5.6.3 SRB addition/modification

The UE shall:

- 1> If any DAPS bearer is configured, for each SRB:
  - 2> establish a PDCP entity for the target cell group as specified in TS 38.323 [5], with the same configuration as the PDCP entity for the source cell group;
  - 2> if the *masterKeyUpdate* is received:
    - 3> configure the PDCP entity with the security algorithms according to *securityConfig* and apply the keys ( $K_{RRCEnc}$  and  $K_{RRCint}$ ) associated with the master key ( $K_{gNB}$ );
  - 2> else:
    - 3> configure the PDCP entity for the target cell group with state variables continuation as specified in TS 38.323 [5], and with the same security configuration as the PDCP entity for the source cell group;
- 1> for each *srb-Identity* value included in the *srb-ToAddModList* or *srb4-ToAddMod* that is not part of the current UE configuration (SRB establishment or reconfiguration from E-UTRA PDCP to NR PDCP):
  - 2> establish a PDCP entity;
  - 2> if AS security has been activated:
    - 3> if target RAT of handover is E-UTRA/5GC; or
    - 3> if the UE is connected to E-UTRA/5GC:
      - 4> if the UE is capable of E-UTRA/5GC, but not capable of NGEN-DC:
        - 5> configure the PDCP entity with the security algorithms and keys ( $K_{RRCEnc}$  and  $K_{RRCint}$ ) configured/derived as specified in TS 36.331 [10];
      - 4> else (i.e., UE capable of NGEN-DC):
        - 5> configure the PDCP entity with the security algorithms according to *securityConfig* and apply the keys ( $K_{RRCEnc}$  and  $K_{RRCint}$ ) associated with the master key ( $K_{eNB}$ ) or secondary key ( $S-K_{gNB}$ ) as indicated in *keyToUse*, if applicable;
    - 3> else (i.e., UE connected to NR or UE connected to E-UTRA/EPC):
      - 4> configure the PDCP entity with the security algorithms according to *securityConfig* and apply the keys ( $K_{RRCEnc}$  and  $K_{RRCint}$ ) associated with the master key ( $K_{eNB}/K_{gNB}$ ) or secondary key ( $S-K_{gNB}$ ) as indicated in *keyToUse*, if applicable;

- 2> if the current UE configuration as configured by E-UTRA in TS 36.331 [10] includes an SRB identified with the same *srb-Identity* value:
  - 3> associate the E-UTRA RLC entity and DCCH of this SRB with the NR PDCP entity;
  - 3> release the E-UTRA PDCP entity of this SRB;
- 2> if the *pdcp-Config* is included:
  - 3> configure the PDCP entity in accordance with the received *pdcp-Config*;
- 2> else:
  - 3> configure the PDCP entity in accordance with the default configuration defined in 9.2.1 for the corresponding SRB;
- 1> if any DAPS bearer is configured, for each *srb-Identity* value included in the *srb-ToAddModList* that is part of the current UE configuration:
  - 2> if the *pdcp-Config* is included:
    - 3> reconfigure the PDCP entity for the target cell group in accordance with the received *pdcp-Config*;
- 1> else, for each *srb-Identity* value included in the *srb-ToAddModList* or *srb4-ToAddMod* that is part of the current UE configuration:
  - 2> if the *reestablishPDCP* is set:
    - 3> if target RAT of handover is E-UTRA/5GC; or
    - 3> if the UE is connected to E-UTRA/5GC:
      - 4> if the UE is capable of E-UTRA/5GC, but not capable of NGEN-DC:
        - 5> configure the PDCP entity to apply the integrity protection algorithm and  $K_{\text{RRCint}}$  key configured/derived as specified in TS 36.331 [10], i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
        - 5> configure the PDCP entity to apply the ciphering algorithm and  $K_{\text{RRCenc}}$  key configured/derived as specified in TS 36.331 [10], i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
      - 4> else (i.e., a UE capable of NGEN-DC):
        - 5> configure the PDCP entity to apply the integrity protection algorithm and  $K_{\text{RRCint}}$  key associated with the master key ( $K_{\text{eNB}}$ ) or secondary key ( $S\text{-}K_{\text{gNB}}$ ), as indicated in *keyToUse*, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
        - 5> configure the PDCP entity to apply the ciphering algorithm and  $K_{\text{RRCenc}}$  key associated with the master key ( $K_{\text{eNB}}$ ) or secondary key ( $S\text{-}K_{\text{gNB}}$ ) as indicated in *keyToUse*, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
    - 3> else (i.e., UE connected to NR or UE in EN-DC):
      - 4> configure the PDCP entity to apply the integrity protection algorithm and  $K_{\text{RRCint}}$  key associated with the master key ( $K_{\text{eNB}}/K_{\text{gNB}}$ ) or secondary key ( $S\text{-}K_{\text{gNB}}$ ), as indicated in *keyToUse*, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
      - 4> configure the PDCP entity to apply the ciphering algorithm and  $K_{\text{RRCenc}}$  key associated with the master key ( $K_{\text{eNB}}/K_{\text{gNB}}$ ) or secondary key ( $S\text{-}K_{\text{gNB}}$ ) as indicated in *keyToUse*, i.e. the ciphering configuration

shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

- 3> re-establish the PDCP entity of this SRB as specified in TS 38.323 [5];
- 2> else, if the *discardOnPDCP* is set:
  - 3> trigger the PDCP entity to perform SDU discard as specified in TS 38.323 [5];
- 2> if the *pdcp-Config* is included:
  - 3> reconfigure the PDCP entity in accordance with the received *pdcp-Config*.

#### 5.3.5.6.4 DRB release

The UE shall:

- 1> for each *drb-Identity* value included in the *drb-ToReleaseList* that is part of the current UE configuration; or
- 1> for each *drb-Identity* value that is to be released as the result of full configuration according to 5.3.5.11:
  - 2> release the PDCP entity and the *drb-Identity*;
  - 2> if SDAP entity associated with this DRB is configured:
    - 3> indicate the release of the DRB to SDAP entity associated with this DRB (TS 37.324 [24], clause 5.3.3);
  - 2> if the DRB is associated with an *eps-BearerIdentity*:
    - 3> if a new bearer is not added either with NR or E-UTRA with same *eps-BearerIdentity*:
      - 4> indicate the release of the DRB and the *eps-BearerIdentity* of the released DRB to upper layers.

NOTE 1: The UE does not consider the message as erroneous if the *drb-ToReleaseList* includes any *drb-Identity* value that is not part of the current UE configuration.

NOTE 2: Whether or not the RLC and MAC entities associated with this PDCP entity are reset or released is determined by the *CellGroupConfig*.

#### 5.3.5.6.5 DRB addition/modification

The UE shall:

- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):
  - 2> establish a PDCP entity and configure it in accordance with the received *pdcp-Config*;
  - 2> if the PDCP entity of this DRB is not configured with *cipheringDisabled*:
    - 3> if target RAT of handover is E-UTRA/5GC; or
    - 3> if the UE is connected to E-UTRA/5GC:
      - 4> if the UE is capable of E-UTRA/5GC but not capable of NGEN-DC:
        - 5> configure the PDCP entity with the ciphering algorithm and  $K_{UPenc}$  key configured/derived as specified in TS 36.331 [10];
      - 4> else (i.e., a UE capable of NGEN-DC):
        - 5> configure the PDCP entity with the ciphering algorithms according to *securityConfig* and apply the key ( $K_{UPenc}$ ) associated with the master key ( $K_{eNB}$ ) or secondary key ( $S-K_{gNB}$ ) as indicated in *keyToUse*, if applicable;
    - 3> else (i.e., UE connected to NR or UE connected to E-UTRA/EPC):

- 4> configure the PDCP entity with the ciphering algorithms according to *securityConfig* and apply the  $K_{UPenc}$  key associated with the master key ( $K_{eNB}/K_{gNB}$ ) or the secondary key ( $S-K_{gNB}/S-K_{eNB}$ ) as indicated in *keyToUse*;
- 2> if the PDCP entity of this DRB is configured with *integrityProtection*:
  - 3> configure the PDCP entity with the integrity protection algorithms according to *securityConfig* and apply the  $K_{UPint}$  key associated with the master ( $K_{eNB}/K_{gNB}$ ) or the secondary key ( $S-K_{gNB}$ ) as indicated in *keyToUse*;
- 2> if an *sdap-Config* is included:
  - 3> if an SDAP entity with the received *pdu-Session* does not exist:
    - 4> establish an SDAP entity as specified in TS 37.324 [24] clause 5.1.1;
    - 4> if an SDAP entity with the received *pdu-Session* did not exist prior to receiving this reconfiguration:
      - 5> indicate the establishment of the user plane resources for the *pdu-Session* to upper layers;
  - 3> configure the SDAP entity in accordance with the received *sdap-Config* as specified in TS 37.324 [24] and associate the DRB with the SDAP entity;
  - 3> for each QFI value added in *mappedQoS-FlowsToAdd*, if the QFI value is previously configured, the QFI value is released from the old DRB;
- 2> if the DRB is associated with an *eps-BearerIdentity*:
  - 3> if the DRB was configured with the same *eps-BearerIdentity* either by NR or E-UTRA prior to receiving this reconfiguration:
    - 4> associate the established DRB with the corresponding *eps-BearerIdentity*;
  - 3> else:
    - 4> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;
- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is part of the current UE configuration and configured as DAPS bearer:
  - 2> reconfigure the PDCP entity to configure DAPS with the ciphering function, integrity protection function and ROHC function of the target cell group as specified in TS 38.323 [5] and configure it in accordance with the received *pdcp-Config*;
  - 2> if the *masterKeyUpdate* is received:
    - 3> if the ciphering function of the target cell group PDCP entity is not configured with *cipheringDisabled*:
      - 4> configure the ciphering function of the target cell group PDCP entity with the ciphering algorithm according to *securityConfig* and apply the  $K_{UPenc}$  key associated with the master key ( $K_{gNB}$ ), as indicated in *keyToUse*, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received from the target cell group and sent to the target cell group by the UE;
    - 3> if the integrity protection function of the target cell group PDCP entity is configured with *integrityProtection*:
      - 4> configure the integrity protection function of the target cell group PDCP entity with the integrity protection algorithms according to *securityConfig* and apply the  $K_{UPint}$  key associated with the master key ( $K_{gNB}$ ) as indicated in *keyToUse*;
  - 2> else:
    - 3> configure the ciphering function and the integrity protection function of the target cell group PDCP entity with the same security configuration as the PDCP entity for the source cell group;

- 2> if the *sdap-Config* is included and when indication of successful completion of random access towards target cell is received from lower layers as specified in [3]:
  - 3> reconfigure the SDAP entity in accordance with the received *sdap-Config* as specified in TS 37.324 [24];
  - 3> for each QFI value added in *mappedQoS-FlowsToAdd*, if the QFI value is previously configured, the QFI value is released from the old DRB;
- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is part of the current UE configuration and not configured as DAPS bearer:
  - 2> if the *reestablishPDCP* is set:
    - 3> if target RAT of handover is E-UTRA/5GC; or
    - 3> if the UE is connected to E-UTRA/5GC:
      - 4> if the UE is capable of E-UTRA/5GC but not capable of NGEN-DC:
        - 5> if the PDCP entity of this DRB is not configured with *cipheringDisabled*:
          - 6> configure the PDCP entity with the ciphering algorithm and  $K_{UPenc}$  key configured/derived as specified in TS 36.331 [10], clause 5.4.2.3, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;
        - 4> else (i.e., a UE capable of NGEN-DC):
          - 5> if the PDCP entity of this DRB is not configured with *cipheringDisabled*:
            - 6> configure the PDCP entity with the ciphering algorithm and  $K_{UPenc}$  key associated with the master key ( $K_{eNB}$ ) or the secondary key ( $S-K_{gNB}$ ), as indicated in *keyToUse*, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;
      - 3> else (i.e., UE connected to NR or UE connected to E-UTRA/EPC (in EN-DC or capable of EN-DC)):
        - 4> if the PDCP entity of this DRB is not configured with *cipheringDisabled*:
          - 5> configure the PDCP entity with the ciphering algorithm and  $K_{UPenc}$  key associated with the master key ( $K_{eNB}/K_{gNB}$ ) or the secondary key ( $S-K_{gNB}/S-K_{eNB}$ ), as indicated in *keyToUse*, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;
        - 4> if the PDCP entity of this DRB is configured with *integrityProtection*:
          - 5> configure the PDCP entity with the integrity protection algorithms according to *securityConfig* and apply the  $K_{UPint}$  key associated with the master key ( $K_{eNB}/K_{gNB}$ ) or the secondary key ( $S-K_{gNB}$ ) as indicated in *keyToUse*;
    - 3> if *drb-ContinueROHC* is included in *pdcp-Config*:
      - 4> indicate to lower layer that *drb-ContinueROHC* is configured;
    - 3> if *drb-ContinueEHC-DL* is included in *pdcp-Config*:
      - 4> indicate to lower layer that *drb-ContinueEHC-DL* is configured;
    - 3> if *drb-ContinueEHC-UL* is included in *pdcp-Config*:
      - 4> indicate to lower layer that *drb-ContinueEHC-UL* is configured;
    - 3> if *drb-ContinueUDC* is included in *pdcp-Config*:
      - 4> indicate to lower layer that *drb-ContinueUDC* is configured;
    - 3> re-establish the PDCP entity of this DRB as specified in TS 38.323 [5], clause 5.1.2;
  - 2> else, if the *recoverPDCP* is set:

- 3> trigger the PDCP entity of this DRB to perform data recovery as specified in TS 38.323 [5];
- 2> if the *pdcp-Config* is included:
  - 3> reconfigure the PDCP entity in accordance with the received *pdcp-Config*.
- 2> if the *sdap-Config* is included:
  - 3> reconfigure the SDAP entity in accordance with the received *sdap-Config* as specified in TS37.324 [24];
  - 3> for each QFI value added in *mappedQoS-FlowsToAdd*, if the QFI value is previously configured, the QFI value is released from the old DRB;

NOTE 1: Void.

NOTE 2: When determining whether a *drb-Identity* value is part of the current UE configuration, the UE does not distinguish which *RadioBearerConfig* and *DRB-ToAddModList* that DRB was originally configured in. To re-associate a DRB with a different key ( $K_{eNB}$  to  $S-K_{gNB}$ ,  $K_{gNB}$  to  $S-K_{eNB}$ ,  $K_{gNB}$  to  $S-K_{gNB}$ , or vice versa), the network provides the *drb-Identity* value in the (target) *drb-ToAddModList* and sets the *reestablishPDCP* flag. The network does not list the *drb-Identity* in the (source) *drb-ToReleaseList*.

NOTE 3: When setting the *reestablishPDCP* flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

NOTE 5: Ciphering and integrity protection can be enabled or disabled for a DRB. The enabling/disabling of ciphering or integrity protection can be changed only by releasing and adding the DRB.

NOTE 6: In DAPS handover, the UE may perform PDCP entity re-establishment (if *reestablishPDCP* is set) or the PDCP data recovery (if *recoverPDCP* is set) for a non-DAPS bearer when indication of successful completion of random access towards target cell is received from lower layers as specified in TS 38.321 [3]. In this case, the UE suspends data transmission and reception for all non-DAPS bearers in the source MCG for duration of the DAPS handover.

#### 5.3.5.6.6 Multicast MRB release

The UE shall:

- 1> for each *mrbs-Identity* value included in the *mrbs-ToReleaseList* that is part of the current UE configuration; or
- 1> for each *mrbs-Identity* value that is to be released as the result of full configuration according to 5.3.5.11:
  - 2> release the PDCP entity and the *mrbs-Identity*;

NOTE 1: The UE does not consider the message as erroneous if the *mrbs-ToReleaseList* includes any *mrbs-Identity* value that is not part of the current UE configuration.

NOTE 2: Whether or not the RLC and MAC entities associated with this PDCP entity are reset or released is determined by the *CellGroupConfig*.

#### 5.3.5.6.7 Multicast MRB addition/modification

The UE shall for each element in the order of entry in the list *mrbs-ToAddModList*:

- 1> if *mrbs-Identity* value included in the *mrbs-ToAddModList* is part of the UE configuration:
  - 2> if *mrbs-Identity* value included in the *mrbs-ToAddModList* for which *mrbs-IdentityNew* is included (i.e., multicast MRB ID change):
    - 3> update the *mrbs-Identity* to the value *mrbs-IdentityNew*;
  - 2> if the *reestablishPDCP* is set:

- 3> if *drb-ContinueROHC* is included in *pdcp-Config*:
    - 4> indicate to lower layer that *drb-ContinueROHC* is configured;
  - 3> if *drb-ContinueEHC-DL* is included in *pdcp-Config*:
    - 4> indicate to lower layer that *drb-ContinueEHC-DL* is configured;
  - 3> re-establish the PDCP entity of this multicast MRB as specified in TS 38.323 [5], clause 5.1.2;
  - 2> else, if the *recoverPDCP* is set:
    - 3> trigger the PDCP entity of this MRB to perform data recovery as specified in TS 38.323 [5];
  - 2> if the *pdcp-Config* is included:
    - 3> reconfigure the PDCP entity in accordance with the received *pdcp-Config*;
  - 1> else if *mrb-Identity* value included in the *mrb-ToAddModList* is not part of the UE configuration (i.e., multicast MRB establishment including the case when full configuration option is used):
    - 2> establish a PDCP entity and configure it in accordance with the received *pdcp-Config*;
    - 2> associate the established multicast MRB with the corresponding *mbs-SessionId*;
    - 2> if an SDAP entity with the received *mbs-SessionId* does not exist:
      - 3> establish an SDAP entity as specified in TS 37.324 [24] clause 5.1.1;
    - 3> if an SDAP entity with the received *mbs-SessionId* did not exist prior to receiving this reconfiguration:
      - 4> indicate the establishment of the user plane resources for the *mbs-SessionId* to upper layers.
- NOTE 1: When setting the *reestablishPDCP* flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. The network does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.
- NOTE 2: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.
- NOTE 3: When updating the *mrb-Identity*, the network ensures new MRBs are listed at the end of the *mrb-ToAddModList* if they have the same MRB ID as in the existing UE configuration.

### 5.3.5.7 AS Security key update

The UE shall:

- 1> if UE is connected to E-UTRA/EPC or E-UTRA/5GC:
  - 2> upon reception of *sk-Counter* as specified in TS 36.331 [10]:
    - 3> update the  $S\text{-}K_{\text{gNB}}$  key based on the  $K_{\text{eNB}}$  key and using the received *sk-Counter* value, as specified in TS 33.401 [30] for EN-DC, or TS 33.501 [11] for NGEN-DC;
    - 3> derive the  $K_{\text{RRCEnc}}$  and  $K_{\text{UPenc}}$  keys as specified in TS 33.401 [30] for EN-DC, or TS 33.501 [11] for NGEN-DC;
    - 3> derive the  $K_{\text{RRCint}}$  and  $K_{\text{UPint}}$  keys as specified in TS 33.401 [30] for EN-DC or TS 33.501 [11] for NGEN-DC.
- 1> else if this procedure was initiated due to reception of the *masterKeyUpdate*:
  - 2> if the *nas-Container* is included in the received *masterKeyUpdate*:
    - 3> forward the *nas-Container* to the upper layers;

- 2> if the *keySetChangeIndicator* is set to *true*:
  - 3> derive or update the  $K_{gNB}$  key based on the  $K_{AMF}$  key, as specified in TS 33.501 [11];
- 2> else:
  - 3> derive or update the  $K_{gNB}$  key based on the current  $K_{gNB}$  key or the NH, using the *nextHopChainingCount* value indicated in the received *masterKeyUpdate*, as specified in TS 33.501 [11];
- 2> store the *nextHopChainingCount* value;
- 2> derive the keys associated with the  $K_{gNB}$  key as follows:
  - 3> if the *securityAlgorithmConfig* is included in *SecurityConfig*:
    - 4> derive the  $K_{RRCenc}$  and  $K_{UPenc}$  keys associated with the *cipheringAlgorithm* indicated in the *securityAlgorithmConfig*, as specified in TS 33.501 [11];
    - 4> derive the  $K_{RRCint}$  and  $K_{UPint}$  keys associated with the *integrityProtAlgorithm* indicated in the *securityAlgorithmConfig*, as specified in TS 33.501 [11];
  - 3> else:
    - 4> derive the  $K_{RRCenc}$  and  $K_{UPenc}$  keys associated with the current *cipheringAlgorithm*, as specified in TS 33.501 [11];
    - 4> derive the  $K_{RRCint}$  and  $K_{UPint}$  keys associated with the current *integrityProtAlgorithm*, as specified in TS 33.501 [11].

NOTE 1: Ciphering and integrity protection are optional to configure for the DRBs.

- 1> else if this procedure was initiated due to reception of the *sk-Counter* (UE is in NE-DC, or NR-DC, or is configured with SN terminated bearer(s)):
  - 2> derive or update the secondary key ( $S-K_{gNB}$  or  $S-KeNB$ ) based on the  $K_{gNB}$  key and using the received *sk-Counter* value, as specified in TS 33.501 [11];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key as specified in TS 33.501 [11] using the ciphering algorithms indicated in the *RadioBearerConfig* associated with the secondary key ( $S-K_{gNB}$  or  $S-KeNB$ ) as indicated by *keyToUse*;
  - 2> derive the  $K_{RRCint}$  key and the  $K_{UPint}$  key as specified in TS 33.501 [11] using the integrity protection algorithms indicated in the *RadioBearerConfig* associated with the secondary key ( $S-K_{gNB}$  or  $S-KeNB$ ) as indicated by *keyToUse*;

NOTE 2: If the UE has no radio bearer configured with *keyToUse* set to *secondary* and receives the *sk-Counter* without any *RadioBearerConfig* with *keyToUse* set to *secondary*, the UE does not consider it as an invalid reconfiguration.

### 5.3.5.8 Reconfiguration failure

#### 5.3.5.8.1 Void

#### 5.3.5.8.2 Inability to comply with *RRCReconfiguration*

NOTE 00: The UE behaviour specified in this clause does not apply to the following, and the UE ignores, i.e. does not take an action on and does not store, the fields that it does not support or does not comprehend:

- The fields in *ServingCellConfigCommon* that are defined in Rel-16 and later.
- The fields of *searchSpaceMCCH* and *searchSpaceMTCH* in *PDCCH-ConfigCommon* that are defined in Rel-17 and later.

The UE shall:

- 1> if the UE is in (NG)EN-DC:
  - 2> if the UE is unable to comply with (part of) the configuration included in the *RRCReconfiguration* message received over SRB3;
    - 3> if the *RRCReconfiguration* message was received as part of *ConditionalReconfiguration*:
      - 4> continue using the configuration used prior to when the inability to comply with the *RRCReconfiguration* message was detected;
    - 3> else:
      - 4> continue using the configuration used prior to the reception of *RRCReconfiguration* message;
    - 3> if MCG transmission is not suspended:
      - 4> initiate the SCG failure information procedure as specified in clause 5.7.3 to report SCG reconfiguration error, upon which the connection reconfiguration procedure ends;
    - 3> else:
      - 4> initiate the connection re-establishment procedure as specified in TS 36.331 [10], clause 5.3.7, upon which the connection reconfiguration procedure ends;
  - 2> else, if the UE is unable to comply with (part of) the configuration included in the *RRCReconfiguration* message received over SRB1;
    - 3> if the *RRCReconfiguration* message was received as part of *ConditionalReconfiguration*:
      - 4> continue using the configuration used prior to when the inability to comply with the *RRCReconfiguration* message was detected;
    - 3> else:
      - 4> continue using the configuration used prior to the reception of *RRCReconfiguration* message;
    - 3> initiate the connection re-establishment procedure as specified in TS 36.331 [10], clause 5.3.7, upon which the connection reconfiguration procedure ends.
- 1> else if *RRCReconfiguration* is received via NR (i.e., NR standalone, NE-DC, or NR-DC):
  - 2> if the UE is unable to comply with (part of) the configuration included in the *RRCReconfiguration* message received over SRB3;

NOTE 0: This case does not apply in NE-DC.

- 3> if the *RRCReconfiguration* message was received as part of *ConditionalReconfiguration*:
  - 4> continue using the configuration used prior to when the inability to comply with the *RRCReconfiguration* message was detected;
- 3> else:
  - 4> continue using the configuration used prior to the reception of *RRCReconfiguration* message;
- 3> if MCG transmission is not suspended:
  - 4> initiate the SCG failure information procedure as specified in clause 5.7.3 to report SCG reconfiguration error, upon which the connection reconfiguration procedure ends;
- 3> else:
  - 4> initiate the connection re-establishment procedure as specified in clause 5.3.7, upon which the connection reconfiguration procedure ends;
- 2> else if the UE is unable to comply with (part of) the configuration included in the *RRCReconfiguration* message received over the SRB1 or if the upper layers indicate that the *nas-Container* is invalid;

NOTE 0a: The compliance also covers the SCG configuration carried within octet strings e.g. field *mrdc-SecondaryCellGroupConfig*. I.e. the failure behaviour defined also applies in case the UE cannot comply with the embedded SCG configuration or with the combination of (parts of) the MCG and SCG configurations.

NOTE 0b: The compliance also covers the V2X sidelink configuration carried within an octet string, e.g. field *sl-ConfigDedicatedEUTRA*. I.e. the failure behaviour defined also applies in case the UE cannot comply with the embedded V2X sidelink configuration.

- 3> if the *RRCReconfiguration* message was received as part of *ConditionalReconfiguration*:
  - 4> continue using the configuration used prior to when the inability to comply with the *RRCReconfiguration* message was detected;
- 3> else:
  - 4> continue using the configuration used prior to the reception of *RRCReconfiguration* message;
- 3> if AS security has not been activated:
  - 4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other'
- 3> else if AS security has been activated but SRB2 and at least one DRB or multicast MRB or, for IAB, SRB2, have not been setup:
  - 4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure';
- 3> else:
  - 4> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the reconfiguration procedure ends;
- 1> else if *RRCReconfiguration* is received via other RAT (Handover to NR failure):
  - 2> if the UE is unable to comply with any part of the configuration included in the *RRCReconfiguration* message or if the upper layers indicate that the *nas-Container* is invalid:
  - 3> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT.

NOTE 1: The UE may apply above failure handling also in case the *RRCReconfiguration* message causes a protocol error for which the generic error handling as defined in clause 10 specifies that the UE shall ignore the message.

NOTE 2: If the UE is unable to comply with part of the configuration, it does not apply any part of the configuration, i.e. there is no partial success/failure.

NOTE 3: It is up to UE implementation whether the compliance check for an *RRCReconfiguration* received as part of *ConditionalReconfiguration* is performed upon the reception of the message or upon CHO, CPA and CPC execution (when the message is required to be applied).

#### 5.3.5.8.3 T304 expiry (Reconfiguration with sync Failure) or T420 expiry (Path switch failure)

The UE shall:

- 1> if T304 of the MCG expires; or
- 1> if T420 expires; or,
- 1> if the target L2 U2N Relay UE (i.e., the UE indicated by *targetRelayUE-Identity* in the received *RRCReconfiguration* message containing *reconfigurationWithSync* indicating path switch as specified in 5.3.5.5.2) changes its serving PCell before path switch:
- 2> release dedicated preambles provided in *rach-ConfigDedicated* if configured;

- 2> release dedicated msgA PUSCH resources provided in *rach-ConfigDedicated* if configured;
  - 2> if any DAPS bearer is configured, and radio link failure is not detected in the source PCell, according to clause 5.3.10.3:
    - 3> reset MAC for the target PCell and release the MAC configuration for the target PCell;
    - 3> for each DAPS bearer:
      - 4> release the RLC entity or entities as specified in TS 38.322 [4], clause 5.1.3, and the associated logical channel for the target PCell;
      - 4> reconfigure the PDCP entity to release DAPS as specified in TS 38.323 [5];
    - 3> for each SRB:
      - 4> if the *masterKeyUpdate* was not received:
        - 5> configure the PDCP entity for the source PCell with state variables continuation as specified in TS 38.323 [5];
      - 4> release the PDCP entity for the target PCell;
      - 4> release the RLC entity as specified in TS 38.322 [4], clause 5.1.3, and the associated logical channel for the target PCell;
      - 4> trigger the PDCP entity for the source PCell to perform SDU discard as specified in TS 38.323 [5];
      - 4> re-establish the RLC entity for the source PCell;
    - 3> release the physical channel configuration for the target PCell;
    - 3> discard the keys used in target PCell (the  $K_{gNB}$  key, the  $K_{RRCenc}$  key, the  $K_{RRCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key), if any;
    - 3> resume suspended SRBs in the source PCell;
    - 3> for each non-DAPS bearer:
      - 4> revert back to the UE configuration used for the DRB or multicast MRB in the source PCell, includes PDCP, RLC states variables, the security configuration and the data stored in transmission and reception buffers in PDCP and RLC entities ;
    - 3> revert back to the UE measurement configuration used in the source PCell;
    - 3> store the handover failure information in *VarRLF-Report* as described in the clause 5.3.10.5;
    - 3> initiate the failure information procedure as specified in clause 5.7.5 to report DAPS handover failure.
  - 2> else:
    - 3> revert back to the UE configuration used in the source PCell;
    - 3> if the associated T304 was not initiated upon cell selection performed while timer T311 was running, as defined in clause 5.3.7.3:
      - 4> store the handover failure information in *VarRLF-Report* as described in the clause 5.3.10.5;
    - 3> initiate the connection re-establishment procedure as specified in clause 5.3.7.
- NOTE 1: In the context above, "the UE configuration" includes state variables and parameters of each radio bearer.
- 1> else if T304 of a secondary cell group expires:
    - 2> if MCG transmission is not suspended:
      - 3> release dedicated preambles provided in *rach-ConfigDedicated*, if configured;

- 3> release dedicated msgA PUSCH resources provided in *rach-ConfigDedicated*, if configured;
  - 3> initiate the SCG failure information procedure as specified in clause 5.7.3 to report SCG reconfiguration with sync failure, upon which the RRC reconfiguration procedure ends;
  - 2> else:
    - 3> if the UE is in NR-DC:
      - 4> initiate the connection re-establishment procedure as specified in clause 5.3.7;
    - 3> else (the UE is in (NG) EN-DC):
      - 4> initiate the connection re-establishment procedure as specified in TS 36.331 [10], clause 5.3.7;
  - 1> else if T304 expires when *RRCReconfiguration* is received via other RAT (HO to NR failure):
    - 2> reset MAC;
    - 2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT.
- NOTE 2: In this clause, the term 'handover failure' has been used to refer to 'reconfiguration with sync failure'.

### 5.3.5.9 Other configuration

The UE shall:

- 1> if the received *otherConfig* includes the *delayBudgetReportingConfig*:
  - 2> if *delayBudgetReportingConfig* is set to *setup*:
    - 3> consider itself to be configured to send delay budget reports in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to send delay budget reports and stop timer T342, if running.
- 1> if the received *otherConfig* includes the *overheatingAssistanceConfig*:
  - 2> if *overheatingAssistanceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide overheating assistance information in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide overheating assistance information and stop timer T345, if running;
- 1> if the received *otherConfig* includes the *idc-AssistanceConfig*:
  - 2> if *idc-AssistanceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide IDC assistance information in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide IDC assistance information;
- 1> if the received *otherConfig* includes the *drx-PreferenceConfig*:
  - 2> if *drx-PreferenceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide its preference on DRX parameters for power saving for the cell group in accordance with 5.7.4;
  - 2> else:

- 3> consider itself not to be configured to provide its preference on DRX parameters for power saving for the cell group and stop timer T346a associated with the cell group, if running;
- 1> if the received *otherConfig* includes the *maxBW-PreferenceConfig*:
  - 2> if *maxBW-PreferenceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide its preference on the maximum aggregated bandwidth for power saving for the cell group in accordance with 5.7.4;
    - 3> if *otherConfig* includes *maxBW-PreferenceConfigFR2-2*:
      - 4> consider itself to be configured to provide its preference on the maximum aggregated bandwidth for FR2-2 for power saving for the cell group in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide its preference on the maximum aggregated bandwidth for power saving for the cell group and stop timer T346b associated with the cell group, if running;
- 1> if the received *otherConfig* includes the *maxCC-PreferenceConfig*:
  - 2> if *maxCC-PreferenceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide its preference on the maximum number of secondary component carriers for power saving for the cell group in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide its preference on the maximum number of secondary component carriers for power saving for the cell group and stop timer T346c associated with the cell group, if running;
- 1> if the received *otherConfig* includes the *maxMIMO-LayerPreferenceConfig*:
  - 2> if *maxMIMO-LayerPreferenceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide its preference on the maximum number of MIMO layers for power saving for the cell group in accordance with 5.7.4;
    - 3> if *otherConfig* includes *maxMIMO-LayerPreferenceConfigFR2-2*:
      - 4> consider itself to be configured to provide its preference on the maximum number of MIMO layers for FR2-2 for power saving for the cell group in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide its preference on the maximum number of MIMO layers for power saving for the cell group and stop timer T346d associated with the cell group, if running;
- 1> if the received *otherConfig* includes the *minSchedulingOffsetPreferenceConfig*:
  - 2> if *minSchedulingOffsetPreferenceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide its preference on the minimum scheduling offset for cross-slot scheduling for power saving for the cell group in accordance with 5.7.4;
    - 3> if *otherConfig* includes *minSchedulingOffsetPreferenceConfigExt*:
      - 4> consider itself to be configured to provide its preference on the minimum scheduling offset for 480 kHz SCS and/or 960 kHz SCS for cross-slot scheduling for power saving for the cell group in accordance with 5.7.4;
  - 2> else:

- 3> consider itself not to be configured to provide its preference on the minimum scheduling offset for cross-slot scheduling for power saving for the cell group and stop timer T346e associated with the cell group, if running;

1> if the received *otherConfig* includes the *releasePreferenceConfig*:

2> if *releasePreferenceConfig* is set to *setup*:

- 3> consider itself to be configured to provide assistance information to transition out of RRC\_CONNECTED in accordance with 5.7.4;

2> else:

- 3> consider itself not to be configured to provide assistance information to transition out of RRC\_CONNECTED and stop timer T346f, if running.

1> if the received *otherConfig* includes the *obtainCommonLocation*:

2> include available detailed location information for any subsequent measurement report or any subsequent RLF report, *SCGFailureInformation* and successful handover report;

NOTE 1: The UE is requested to attempt to have valid detailed location information available whenever sending a measurement report for which it is configured to include available detailed location information. The UE may not succeed e.g. because the user manually disabled the GPS hardware, due to no/poor satellite coverage. Further details, e.g. regarding when to activate GNSS, are up to UE implementation.

1> if the received *otherConfig* includes the *btNameList*:

2> if *btNameList* is set to *setup*, include available Bluetooth measurement results for any subsequent measurement report or any subsequent RLF report and *SCGFailureInformation*;

1> if the received *otherConfig* includes the *wlanNameList*:

2> if *wlanNameList* is set to *setup*, include available WLAN measurement results for any subsequent measurement report or any subsequent RLF report and *SCGFailureInformation*;

1> if the received *otherConfig* includes the *sensorNameList*:

2> if *sensorNameList* is set to *setup*, include available Sensor measurement results for any subsequent measurement report or any subsequent RLF report and *SCGFailureInformation*;

NOTE 2: The UE is requested to attempt to have valid Bluetooth measurements, WLAN measurements and Sensor measurements whenever sending a measurement report for which it is configured to include these measurements. The UE may not succeed e.g. because the user manually disabled the WLAN or Bluetooth or Sensor hardware. Further details, e.g. regarding when to activate WLAN or Bluetooth or Sensor, are up to UE implementation.

1> if the received *otherConfig* includes the *sl-AssistanceConfigNR*:

2> consider itself to be configured to provide configured grant assistance information for NR sidelink communication in accordance with 5.7.4;

1> if the received *otherConfig* includes the *referenceTimePreferenceReporting*:

2> consider itself to be configured to provide UE reference time assistance information in accordance with 5.7.4;

1> else:

2> consider itself not to be configured to provide UE reference time assistance information;

1> if the received *otherConfig* includes the *successHO-Config*:

2> consider itself to be configured to provide the successful handover information in accordance with 5.7.10.6;

1> else:

2> consider itself not to be configured to provide the successful handover information.

- 1> if the received *otherConfig* includes the *ul-GapFR2-PreferenceConfig*:
  - 2> consider itself to be configured to provide its preference on FR2 UL gap in accordance with 5.7.4;
- 1> else:
  - 2> consider itself not to be configured to provide its preference on FR2 UL gap;
- 1> if the received *otherConfig* includes the *musim-GapAssistanceConfig*:
  - 2> if *musim-GapAssistanceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide MUSIM assistance information for gap preference in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide MUSIM assistance information for gap preference and stop timer T346h, if running;
- 1> if the received *otherConfig* includes the *musim-LeaveAssistanceConfig*:
  - 2> if *musim-LeaveAssistanceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide MUSIM assistance information for leaving RRC\_CONNECTED in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide MUSIM assistance information for leaving RRC\_CONNECTED and stop timer T346g, if running.
- 1> if the received *otherConfig* includes the *rlm-RelaxationReportingConfig*:
  - 2> if *rlm-RelaxationReportingConfig* is set to *setup*:
    - 3> consider itself to be configured to report the relaxation state of RLM measurements in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to report the relaxation state of RLM measurements and stop timer T346j associated with the cell group, if running;
- 1> if the received *otherConfig* includes the *bfd-RelaxationReportingConfig*:
  - 2> if *bfd-RelaxationReportingConfig* is set to *setup*:
    - 3> consider itself to be configured to report the relaxation state of BFD measurements in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to report the relaxation state of BFD measurements and stop timer T346k associated with the cell group, if running;
- 1> if the received *otherConfig* includes the *scg-DeactivationPreferenceConfig*:
  - 2> if the *scg-DeactivationPreferenceConfig* is set to *setup*:
    - 3> consider itself to be configured to provide its SCG deactivation preference in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to provide its SCG deactivation preference and stop timer T346i, if running.
- 1> if the received *otherConfig* includes the *propDelayDiffReportConfig*:

- 2> if the *propDelayDiffReportConfig* is set to *setup*:
  - 3> consider itself to be configured to provide service link propagation delay difference between serving cell and neighbour cell(s) in accordance with 5.7.4;
- 2> else:
  - 3> consider itself not to be configured to provide service link propagation delay difference between serving cell and neighbour cell(s).
- 1> if the received *otherConfig* includes the *rrm-MeasRelaxationReportingConfig*:
  - 2> if the *rrm-MeasRelaxationReportingConfig* is set to *setup*:
    - 3> consider itself to be configured to report the fulfilment of the criterion for relaxing RRM measurements in accordance with 5.7.4;
  - 2> else:
    - 3> consider itself not to be configured to report the fulfilment of the criterion for relaxing RRM measurements.

### 5.3.5.9a MUSIM gap configuration

The UE shall:

- 1> if *musim-GapConfig* is set to *setup*:
  - 2> for each *musim-GapId* included in the received *musim-GapToReleaseList*:
    - 3> release the periodic MUSIM gap configuration associated with the *musim-GapId*;
  - 2> for each *MUSIM-Gap* included in the received *musim-GapToAddModList*:
    - 3> setup periodic MUSIM gap configuration indicated by the *MUSIM-Gap* in accordance with the received *musim-GapRepetitionAndOffset* (providing *musim-GapRepetition* and *Offset* value for the following condition) i.e. the first subframe of each periodic MUSIM gap occurs at an SFN and subframe of the NR PCell meeting the following condition:
 
$$\text{SFN mod } T = \text{FLOOR}(\text{Offset}/10);$$

$$\text{subframe} = \text{Offset mod } 10;$$
 with  $T = \text{musim-GapRepetition}/10;$
  - 2> if *musim-AperiodicGap* is included:
    - 3> setup aperiodic MUSIM gap configuration indicated by the *musim-AperiodicGap* in accordance with the received *musim-Starting-SFN-AndSubframe*, i.e. the first subframe of aperiodic MUSIM gap occurs at an SFN and subframe of the NR PCell meeting the following condition:
 
$$\text{SFN} = \text{starting-SFN};$$

$$\text{subframe} = \text{startingSubframe};$$
- 1> else if *musim-GapConfig* is set to *release*:
  - 2> release the MUSIM gap configuration.

### 5.3.5.10 MR-DC release

The UE shall:

- 1> as a result of MR-DC release triggered by E-UTRA or NR:
  - 2> release SRB3, if established, as specified in 5.3.5.6.2;

- 2> release *measConfig* associated with SCG;
- 2> if the UE is configured with NR SCG:
  - 3> release the SCG configuration as specified in clause 5.3.5.4;
  - 3> release *otherConfig* associated with the SCG, if configured;
  - 3> stop timers T346a, T346b, T346c, T346d, T346e, T346j and T346k associated with the SCG, if running;
  - 3> release *bap-Config* associated with the SCG, if configured;
  - 3> release the BAP entity as specified in TS 38.340 [47], if there is no configured *bap-Config*;
  - 3> release *iab-IP-AddressConfigurationList* associated with the SCG, if configured;
- 2> else if the UE is configured with E-UTRA SCG:
  - 3> release the SCG configuration as specified in TS 36.331 [10], clause 5.3.10.19 to release the E-UTRA SCG;

### 5.3.5.11 Full configuration

The UE shall:

- 1> release/ clear all current dedicated radio configurations except for the following:
  - the MCG C-RNTI;
  - the AS security configurations associated with the master key;
  - the SRB1/SRB2 configurations and DRB/multicast MRB configurations as configured by *radioBearerConfig* or *radioBearerConfig2*;

NOTE 1: Radio configuration is not just the resource configuration but includes other configurations like *MeasConfig*. Radio configuration also includes the RLC bearer configurations as configured by *RLC-BearerConfig*, PC5 Relay RLC channel as configured by *SL-RLC-ChannelConfig*, and Uu Relay RLC channel as configured by *Uu-RelayRLC-ChannelConfig*. In case NR-DC or NE-DC is configured, this also includes the entire NR or E-UTRA SCG configuration which are released according to the MR-DC release procedure as specified in 5.3.5.10.

NOTE 1a: For NR sidelink communication/discovery, the radio configuration includes the sidelink RRC configuration received from the network, but does not include the sidelink RRC reconfiguration and sidelink UE capability received from other UEs via PC5-RRC. In addition, the UE considers the new NR sidelink configurations as full configuration, in case of state transition and change of system information used for NR sidelink communication/discovery.

NOTE 1b: To establish the RLC bearer of SRB(s) after release due to *fullConfig*, the network can include the *srb-Identity* within *srb-ToAddModList* (i.e. the UE applies RLC default configuration) and/or provide *rlc-BearerToAddModList* of concerned SRB(s) explicitly.

- the logged measurement configuration;
- the *successHO-Config*.

- 1> if the *spCellConfig* in the *masterCellGroup* includes the *reconfigurationWithSync*:
  - 2> release/ clear all current common radio configurations;
  - 2> if *sl-PathSwitchConfig* was included in *reconfigurationWithSync*:
    - 3> use the default values specified in 9.2.3 for timer T311;
  - 2> else:
    - 3> use the default values specified in 9.2.3 for timers T310, T311 and constants N310, N311;

- 1> else (full configuration after re-establishment or during RRC resume):
  - 2> if the UE is acting as L2 U2N Remote UE:
    - 3> use value for timer T311, as included in *ue-TimersAndConstants* received in *SIB1*
  - 2> else:
    - 3> use values for timers T301, T310, T311 and constants N310, N311, as included in *ue-TimersAndConstants* received in *SIB1*;
- 1> if no *measConfigAppLayerId* is included:
  - 2> inform upper layers about the release of all application layer measurement configurations;
  - 2> discard any received application layer measurement report from upper layers;
  - 2> consider itself not to be configured to send application layer measurement report.
- 1> if the UE is acting as L2 U2N Remote UE at the target side during reconfiguration with sync, or after re-establishment, or during RRC resume:
  - 2> apply the default configuration of SL-RLC1 as specified in clause 9.2.4 and associate it with the SRB1;
- 1> else:
  - 2> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the following:
    - parameters for which values are provided in *SIB1*;
  - 2> apply the default MAC Cell Group configuration as specified in 9.2.2;
  - 2> for each *srb-Identity* value included in the *srb-ToAddModList* (SRB reconfiguration):
    - 3> establish an RLC entity for the corresponding SRB;
    - 3> apply the default SRB configuration defined in 9.2.1 for the corresponding SRB;

NOTE 2: This is to get the SRBs (SRB1 and SRB2 for reconfiguration with sync and SRB2 for resume and reconfiguration after re-establishment) to a known state from which the reconfiguration message can do further configuration.

- 1> for each *pdu-Session* that is part of the current UE configuration:
  - 2> release the SDAP entity (clause 5.1.2 in TS 37.324 [24]);
  - 2> release each DRB associated to the *pdu-Session* as specified in 5.3.5.6.4;

NOTE 3: This will retain the *pdu-Session* but remove the DRBs including *drb-identity* of these bearers from the current UE configuration. Setup of the DRBs within the AS is described in clause 5.3.5.6.5 using the new configuration. The *pdu-Session* acts as the anchor for associating the released and re-setup DRB. In the AS the DRB re-setup is equivalent with a new DRB setup (including new PDCP and logical channel configurations).

- 1> for each *mbs-SessionId* that is part of the current UE configuration and associated to a multicast MRB:
  - 2> release the SDAP entity (clause 5.1.2 in TS 37.324 [24]);
  - 2> release each multicast MRB associated to the *mbs-SessionId* as specified in 5.3.5.6.6;

NOTE 4: This will retain the *mbs-SessionId* but remove the multicast MRBs including *mrbs-identity* of these bearers from the current UE configuration. Setup of the multicast MRBs within the AS is described in clause 5.3.5.6.7 using the new configuration. The *mbs-SessionId* acts as the anchor for associating the released and re-setup multicast MRB. In the AS the multicast MRB re-setup is equivalent with a new multicast MRB setup (including new PDCP and logical channel configurations).

- 1> for each *pdu-Session* that is part of the current UE configuration but not added with same *pdu-Session* in the *drb-ToAddModList*:
  - 2> if the procedure was triggered due to reconfiguration with sync:
    - 3> indicate the release of the user plane resources for the *pdu-Session* to upper layers after successful reconfiguration with sync;
  - 2> else:
    - 3> indicate the release of the user plane resources for the *pdu-Session* to upper layers immediately;
- 1> for each *mbs-SessionId* that is part of the current UE configuration but not added with the same *mbs-SessionId* in the *mrb-ToAddModList*:
  - 2> if the procedure was triggered due to reconfiguration with sync:
    - 3> indicate the release of the user plane resources for the *mbs-SessionId* to upper layers after successful reconfiguration with sync;
  - 2> else:
    - 3> indicate the release of the user plane resources for the *mbs-SessionId* to upper layers immediately.

#### 5.3.5.12 BAP configuration

The IAB-MT shall:

- 1> if the *bap-Config* is set to *setup*:
  - 2> if no BAP entity is established:
    - 3> establish a BAP entity as specified in TS 38.340 [47];
  - 2> if *bap-Address* is included:
    - 3> configure the BAP entity to use the *bap-Address* as this node's BAP address;
  - 2> if *defaultUL-BAP-RoutingID* is included:
    - 3> configure the BAP entity to apply the default UL BAP routing ID according to the configuration;
  - 2> if *defaultUL-BH-RLC-Channel* is included:
    - 3> configure the BAP entity to apply the default UL BH RLC channel according to the configuration;
  - 2> if *flowControlFeedbackType* is included:
    - 3> configure the BAP entity to apply the flow control feedback according to the configuration;
- 1> if the *bap-Config* is set to *release*:
  - 2> release the concerned *bap-Config*;
  - 2> if there is no other configured *bap-Config* for the MCG or for the SCG:
    - 3> release the BAP entity as specified in TS 38.340 [47].

#### 5.3.5.12a IAB Other Configuration

##### 5.3.5.12a.1 IP address management

##### 5.3.5.12a.1.1 IP Address Release

The IAB-MT shall:

- 1> if the release is triggered by reception of the *iab-IP-AddressToReleaseList*:
- 2> for each *iab-IP-AddressIndex* value included in *iab-IP-AddressToReleaseList*:
- 3> release the corresponding *IAB-IP-AddressConfiguration*.

#### 5.3.5.12a.1.2 IP Address Addition/Modification

The IAB-MT shall:

- 1> for each *iab-IP-AddressIndex* value included in the *iab-IP-AddressToAddModList* that is not part of the current IAB-MT configuration:
  - 2> add the IP address indicated in *iab-IP-Address*, corresponding to the *iab-IP-AddressIndex*.
  - 2> if added IP address is *IPv4-Address*:
    - 3> if *iab-IP-Usage* is set to *f1-C*:
      - 4> store the received IPv4 address for F1-C traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else if *iab-IP-Usage* is set to *f1-U*:
      - 4> store the received IPv4 address for F1-U traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else if *iab-IP-Usage* is set to *non-F1*:
      - 4> store the received IPv4 address for non-F1 traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else:
      - 4> store the received IPv4 address for all traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
  - 2> else if *IPv6-Address* is included:
    - 3> if *iab-IP-Usage* is set to *f1-C*:
      - 4> store the received IPv6 address for F1-C traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else if *iab-IP-Usage* is set to *f1-U*:
      - 4> store the received IPv6 address for F1-U traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else if *iab-IP-Usage* is set to *non-F1*:
      - 4> store the received IPv6 address for non-F1 traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else:
      - 4> store the received IPv6 address for all traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
  - 2> else if *IPv6-Prefix* is included in *iab-IP-AddressToAddModList*:
    - 3> if *iab-IP-Usage* is set to *f1-C*:
      - 4> store the received IPv6 address prefix for F1-C traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
    - 3> else if *iab-IP-Usage* is set to *f1-U*:

- 4> store the received IPv6 address prefix for F1-U traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
- 3> else if *iab-IP-Usage* is set to *non-F1*:
  - 4> store the received IPv6 address prefix for non-F1 traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
- 3> else:
  - 4> store the received IPv6 address prefix for all traffic together with the IAB-donor-DU BAP address corresponding to the *iab-IP-AddressIndex*.
- 1> for each *iab-IP-AddressIndex* value included in the *iab-IP-AddressToAddModList* that is part of the current IAB-MT configuration:
  - 2> modify the IP address configuration(s) in accordance with the *IAB-IP-AddressConfiguration* corresponding to the *iab-IP-AddressIndex*.

### 5.3.5.13 Conditional Reconfiguration

#### 5.3.5.13.1 General

The network configures the UE with one or more candidate target SpCells in the conditional reconfiguration. The UE evaluates the condition of each configured candidate target SpCell. The UE applies the conditional reconfiguration associated with one of the target SpCells which fulfils associated execution condition. The network provides the configuration parameters for the target SpCell in the *condRRCReconfig*.

In NR-DC, the UE may receive two independent *conditionalReconfiguration*:

- a *conditionalReconfiguration* associated with MCG, that is included in the *RRCReconfiguration* message received via SRB1; and
- a *conditionalReconfiguration*, associated with SCG, that is included in the *RRCReconfiguration* message received via SRB3, or, alternatively, included within a *RRCReconfiguration* message embedded in a *RRCReconfiguration* message received via SRB1.

In this case:

- the UE maintains two independent *VarConditionalReconfig*, one associated with each *conditionalReconfiguration*;
- the UE independently performs all the procedures in clause 5.3.5.13 for each *conditionalReconfiguration* and the associated *VarConditionalReconfig*, unless explicitly stated otherwise;
- the UE performs the procedures in clause 5.5 for the *VarConditionalReconfig* associated with the same cell group like the *measConfig*.

In EN-DC, the *VarConditionalReconfig* is associated with the SCG.

In NE-DC and when no SCG is configured, the *VarConditionalReconfig* is associated with the MCG.

The UE performs the following actions based on a received *ConditionalReconfiguration* IE:

- 1> if the *ConditionalReconfiguration* contains the *condReconfigToRemoveList*:
  - 2> perform conditional reconfiguration removal procedure as specified in 5.3.5.13.2;
- 1> if the *ConditionalReconfiguration* contains the *condReconfigToAddModList*:
  - 2> perform conditional reconfiguration addition/modification as specified in 5.3.5.13.3;

#### 5.3.5.13.2 Conditional reconfiguration removal

The UE shall:

- 1> for each *condReconfigId* value included in the *condReconfigToRemoveList* that is part of the current UE conditional reconfiguration in *VarConditionalReconfig*;
- 2> remove the entry with the matching *condReconfigId* from the *VarConditionalReconfig*;

NOTE: The UE does not consider the message as erroneous if the *condReconfigToRemoveList* includes any *condReconfigId* value that is not part of the current UE configuration.

#### 5.3.5.13.3 Conditional reconfiguration addition/modification

For each *condReconfigId* received in the *condReconfigToAddModList* IE the UE shall:

- 1> if an entry with the matching *condReconfigId* exists in the *condReconfigToAddModList* within the *VarConditionalReconfig*:
  - 2> if the entry in *condReconfigToAddModList* includes an *condExecutionCond* or *condExecutionCondSCG*;
    - 3> replace *condExecutionCond* or *condExecutionCondSCG* within the *VarConditionalReconfig* with the value received for this *condReconfigId*;
  - 2> if the entry in *condReconfigToAddModList* includes an *condRRCReconfig*;
    - 3> replace *condRRCReconfig* within the *VarConditionalReconfig* with the value received for this *condReconfigId*;
- 1> else:
  - 2> add a new entry for this *condReconfigId* within the *VarConditionalReconfig*;
- 1> perform conditional reconfiguration evaluation as specified in 5.3.5.13.4;

#### 5.3.5.13.4 Conditional reconfiguration evaluation

The UE shall:

- 1> for each *condReconfigId* within the *VarConditionalReconfig*:
  - 2> if the *RRCReconfiguration* within *condRRCReconfig* includes the *masterCellGroup* including the *reconfigurationWithSync*:
    - 3> consider the cell which has a physical cell identity matching the value indicated in the *ServingCellConfigCommon* included in the *reconfigurationWithSync* within the *masterCellGroup* in the received *condRRCReconfig* to be applicable cell;
  - 2> else if the *RRCReconfiguration* within *condRRCReconfig* includes the *secondaryCellGroup* including the *reconfigurationWithSync*:
    - 3> consider the cell which has a physical cell identity matching the value indicated in the *ServingCellConfigCommon* included in the *reconfigurationWithSync* within the *secondaryCellGroup* within the received *condRRCReconfig* to be applicable cell;
  - 2> if *condExecutionCondSCG* is configured:
    - 3> in the remainder of the procedure, consider each *measId* indicated in the *condExecutionCondSCG* as a *measId* in the *VarMeasConfig* associated with the SCG *measConfig*;
  - 2> if *condExecutionCond* is configured:
    - 3> if it is configured via SRB3 or configured within *nr-SCG* or within *nr-SecondaryCellGroupConfig* (specified in TS 36.331[10]) via SRB1:
      - 4> in the remainder of the procedure, consider each *measId* indicated in the *condExecutionCond* as a *measId* in the *VarMeasConfig* associated with the SCG *measConfig*;
- 3> else:

- 4> in the remainder of the procedure, consider each *measId* indicated in the *condExecutionCond* as a *measId* in the *VarMeasConfig* associated with the MCG *measConfig*;
- 2> for each *measId* included in the *measIdList* within *VarMeasConfig* indicated in the *condExecutionCond* or *condExecutionCondSCG* associated to *condReconfigId*:
  - 3> if the *condEventId* is associated with *condEventT1*, and if the entry condition applicable for this event associated with the *condReconfigId*, i.e. the event corresponding with the *condEventId(s)* of the corresponding *condTriggerConfig* within *VarConditionalReconfig*, is fulfilled for the applicable cell; or
  - 3> if the *condEventId* is associated with *condEventD1*, and if the entry conditions applicable for this event associated with the *condReconfigId*, i.e. the event corresponding with the *condEventId(s)* of the corresponding *condTriggerConfig* within *VarConditionalReconfig*, is fulfilled for the applicable cell during the corresponding *timeToTrigger* defined for this event within the *VarConditionalReconfig*; or
  - 3> if the *condEventId* is associated with *condEventA3*, *condEventA4* or *condEventA5*, and if the entry condition(s) applicable for this event associated with the *condReconfigId*, i.e. the event corresponding with the *condEventId(s)* of the corresponding *condTriggerConfig* within *VarConditionalReconfig*, is fulfilled for the applicable cells for all measurements after layer 3 filtering taken during the corresponding *timeToTrigger* defined for this event within the *VarConditionalReconfig*;
  - 4> consider the event associated to that *measId* to be fulfilled;
  - 3> if the *measId* for this event associated with the *condReconfigId* has been modified; or
  - 3> if the *condEventId* is associated with *condEventT1*, and if the leaving condition applicable for this event associated with the *condReconfigId*, i.e. the event corresponding with the *condEventId(s)* of the corresponding *condTriggerConfig* within *VarConditionalReconfig*, is fulfilled for the applicable cell; or
  - 3> if the *condEventId* is associated with *condEventD1*, and if the leaving condition(s) applicable for this event associated with the *condReconfigId*, i.e. the event corresponding with the *condEventId(s)* of the corresponding *condTriggerConfig* within *VarConditionalReconfig*, is fulfilled for the applicable cell during the corresponding *timeToTrigger* defined for this event within the *VarConditionalReconfig*; or
  - 3> if the *condEventId* is associated with *condEventA3*, *condEventA4* or *condEventA5*, and if the leaving condition(s) applicable for this event associated with the *condReconfigId*, i.e. the event corresponding with the *condEventId(s)* of the corresponding *condTriggerConfig* within *VarConditionalReconfig*, is fulfilled for the applicable cells for all measurements after layer 3 filtering taken during the corresponding *timeToTrigger* defined for this event within the *VarConditionalReconfig*;
  - 4> consider the event associated to that *measId* to be not fulfilled;
- 2> if event(s) associated to all *measId(s)* within *condTriggerConfig* for the applicable cell are fulfilled:
  - 3> consider the applicable cell, associated to that *condReconfigId*, as a triggered cell;
  - 3> initiate the conditional reconfiguration execution, as specified in 5.3.5.13.5;

NOTE 1: Up to 2 *MeasId* can be configured for each *condReconfigId*. The conditional reconfiguration event of the 2 *MeasId* may have the same or different event conditions, triggering quantity, time to trigger, and triggering threshold.

NOTE 2: Void.

#### 5.3.5.13.4a Conditional reconfiguration evaluation of SN initiated inter-SN CPC for EN-DC

The UE shall:

- 1> for each *condReconfigurationId* within the *VarConditionalReconfiguration* specified in TS 36.331[10]:
  - 2> for each *measId* included in the *measIdList* within *VarMeasConfig* indicated in the *CondReconfigExecCondSCG* contained in the *triggerConditionSN* associated to the *condReconfigurationId* as specified in TS 36.331[10]:

- 3> if the entry condition(s) applicable for the event associated with that *measId*, is fulfilled for the applicable cells for all measurements after layer 3 filtering taken during the corresponding *timeToTrigger* defined for this event associated with that *measId*:
  - 4> consider this event to be fulfilled;
- 3> if the *measId* for this event has been modified; or
- 3> if the leaving condition(s) applicable for this event associated with that *measId*, is fulfilled for the applicable cells for all measurements after layer 3 filtering taken during the corresponding *timeToTrigger* defined for this event associated with that *measId*:
  - 4> consider this event associated to that *measId* to be not fulfilled;
- 2> if trigger conditions for all events associated with the *measId(s)* indicated in the *CondReconfigExecCondSCG* contained in the *triggerConditionSN* as specified in TS 36.331[10]), are fulfilled:
  - 3> consider the target cell candidate within the *RRCReconfiguration* message contained in *nr-SecondaryCellGroupConfig* in the *RRCConnectionReconfiguration* message, as specified in TS 36.331[10], contained in the stored *condReconfigurationToApply*, associated to that *condReconfigurationId* as specified in TS 36.331[10]), clause 5.3.5.9.4, as a triggered cell;
  - 3> initiate the conditional reconfiguration execution, as specified in TS 36.331[10]), clause 5.3.5.9.5;

NOTE: Void.

### 5.3.5.13.5 Conditional reconfiguration execution

The UE shall:

- 1> if more than one triggered cell exists:
  - 2> select one of the triggered cells as the selected cell for conditional reconfiguration execution;
- 1> else:
  - 2> consider the triggered cell as the selected cell for conditional reconfiguration execution;
- 1> for the selected cell of conditional reconfiguration execution:
  - 2> apply the stored *condRRCReconfig* of the selected cell and perform the actions as specified in 5.3.5.3;

NOTE: If multiple NR cells are triggered in conditional reconfiguration execution, it is up to UE implementation which one to select, e.g. the UE considers beams and beam quality to select one of the triggered cells for execution.

### 5.3.5.13a SCG activation

Upon initiating the procedure, the UE shall:

- 1> if the UE is configured with an SCG after receiving the message for which this procedure is initiated:
- 2> if the UE was configured with a deactivated SCG before receiving the message for which this procedure is initiated:
  - 3> consider the SCG to be activated;
  - 3> resume performing radio link monitoring on the SCG, if previously stopped;
  - 3> indicate to lower layers to resume beam failure detection on the PSCell, if previously stopped;
  - 3> indicate to lower layers that the SCG is activated.

### 5.3.5.13b SCG deactivation

Upon initiating the procedure, the UE shall:

- 1> consider the SCG to be deactivated;
- 1> indicate to lower layers that the SCG is deactivated;
- 1> if *bfd-and-RLM* is configured to *true*:
  - 2> perform radio link monitoring on the SCG;
  - 2> indicate to lower layers to perform beam failure detection on the PSCell;
- 1> else:
  - 2> stop radio link monitoring on the SCG;
  - 2> indicate to lower layers to stop beam failure detection on the PSCell;
  - 2> stop timer T310 for this cell group, if running;
  - 2> stop timer T312 for this cell group, if running;
  - 2> reset the counters N310 and N311;
- 1> if the UE was in RRC\_CONNECTED and the SCG was activated before receiving the message for which this procedure is initiated:
  - 2> if SRB3 was configured before the reception of the *RRCReconfiguration* or of the *RRCCConnectionReconfiguration* and SRB3 is not to be released according to any *RadioBearerConfig* included in the *RRCReconfiguration* or in the *RRCCConnectionReconfiguration* as specified in TS 36.331[10]:
    - 3> trigger the PDCP entity of SRB3 to perform SDU discard as specified in TS 38.323 [5];
    - 3> re-establish the RLC entity of SRB3 as specified in TS 38.322 [4].

### 5.3.5.13b1 SCG activation without SN message

Upon initiating the procedure, the UE shall:

- 1> if the SCG was deactivated before the reception of the *RRCReconfiguration* message or the E-UTRA *RRCCConnectionReconfiguration* message for which the procedure invoking this clause is executed:
  - 2> consider the SCG to be activated;
  - 2> indicate to lower layers that the SCG is activated;
  - 2> resume performing radio link monitoring on the SCG, if previously stopped;
  - 2> indicate to lower layers to resume beam failure detection on the PSCell, if previously stopped;
- 2> if *bfd-and-RLM* was not configured to *true* before the reception of the *RRCReconfiguration* message or the E-UTRA *RRCCConnectionReconfiguration* message for which the procedure invoking this clause is executed; or
- 2> if lower layers indicate that a Random Access procedure is needed for SCG activation:
  - 3> initiate the Random Access procedure on the PSCell, as specified in TS 38.321 [3].

### 5.3.5.13c FR2 UL gap configuration

The UE shall:

- 1> if *ul-GapFR2-Config* is set to *setup*:
  - 2> if an FR2 UL gap configuration is already setup, release the FR2 UL gap configuration;

- 2> setup the FR2 UL gap configuration indicated by the *ul-GapFR2-Config* in accordance with the received *gapOffset*, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

$\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);$

if the UGRP is larger than 5ms:

$\text{subframe} = \text{gapOffset mod } 10;$

else:

$\text{subframe} = \text{gapOffset or } (\text{gapOffset} + 5);$

with  $T = \text{CEIL}(\text{UGRP}/10).$

- 1> else if *ul-GapFR2-Config* is set to release:

- 2> release the FR2 UL gap configuration.

NOTE 1: For *ul-GapFR2-Config* configuration with synchronous CA, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation. For *ul-GapFR2-Config* configuration with asynchronous CA, the SFN and subframe of a serving cell on FR2 frequency indicated by the *refFR2-ServCellAsyncCA* in *ul-GapFR2-Config* is used in the gap calculation.

### 5.3.5.13d Application layer measurement configuration

The UE shall:

- 1> if *measConfigAppLayerToReleaseList* is included in *appLayerMeasConfig* within *RRCReconfiguration* or *RRCResume*:
  - 2> for each *measConfigAppLayerId* value included in the *measConfigAppLayerToReleaseList*:
    - 3> forward the *measConfigAppLayerId* and inform upper layers about the release of the application layer measurement configuration including any RAN visible application layer measurement configuration;
    - 3> discard any application layer measurement report received from upper layers;
    - 3> consider itself not to be configured to send application layer measurement report for the *measConfigAppLayerId*.
- 1> if *measConfigAppLayerToAddModList* is included in *appLayerMeasConfig* within *RRCReconfiguration* or *RRCResume*:
  - 2> for each *measConfigAppLayerId* value included in the *measConfigAppLayerToAddModList*:
    - 3> if *measConfigAppLayerContainer* is included for the corresponding *MeasConfigAppLayer* configuration:
      - 4> forward the *measConfigAppLayerContainer*, the *measConfigAppLayerId* and the *serviceType* to upper layers considering the *serviceType*;
    - 3> consider itself to be configured to send application layer measurement report for the *measConfigAppLayerId* in accordance with 5.7.16;
    - 3> forward the *transmissionOfSessionStartStop*, if configured, and *measConfigAppLayerId* to upper layers considering the *serviceType*;
  - 3> if *ran-VisibleParameters* is set to setup and the parameters have been received:
    - 4> forward the *measConfigAppLayerId*, the *ran-VisiblePeriodicity*, if configured, the *numberOfBufferLevelEntries*, if configured, and the *reportPayoutDelayForMediaStartup*, if configured, to upper layers considering the *serviceType*;
  - 3> else if *ran-VisibleParameters* is set to release:

- 4> forward the *measConfigAppLayerId* and inform upper layers about the release of the RAN visible application layer measurement configuration;
- 3> if *pauseReporting* is set to *true*:
  - 4> if at least one segment, but not all segments, of a segmented *MeasurementReportAppLayer* message containing an application layer measurement report associated with the *measConfigAppLayerId* has been submitted to lower layers for transmission:
    - 5> submit the remaining segments of the *MeasurementReportAppLayer* message to lower layers for transmission;
  - 4> suspend submitting application layer measurement report containers to lower layers for the application layer measurement configuration associated with the *measConfigAppLayerId*;
  - 4> store any previously or subsequently received application layer measurement report containers associated with the *measConfigAppLayerId* for which no segment, or full message, has been submitted to lower layers for transmission;
- 3> else if *pauseReporting* is set to *false* and if transmission of application layer measurement report containers has previously been suspended for the application layer measurement configuration associated with the *measConfigAppLayerId*:
  - 4> submit stored application layer measurement report containers to lower layers, if any, for the application layer measurements configuration associated with the *measConfigAppLayerId*;
  - 4> resume submitting application layer measurement report containers to lower layers for the application layer measurement configuration associated with the *measConfigAppLayerId*;

NOTE 1: The UE may discard reports when the memory reserved for storing application layer measurement report containers becomes full.

NOTE 2: The transmission of RAN visible application layer measurement reports and *appLayerSessionStatus* is not paused when *pauseReporting* is set to *true*.

#### 5.3.5.14 Sidelink dedicated configuration

Upon initiating the procedure, the UE shall:

- 1> if *sl-FreqInfoToReleaseList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> for each entry included in the received *sl-FreqInfoToReleaseList* that is part of the current UE configuration:
    - 3> release the related configurations from the stored NR sidelink communication/discovery configurations;
- 1> if *sl-FreqInfoToAddModList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> if configured to receive NR sidelink communication:
    - 3> use the resource pool(s) indicated by *sl-RxPool* for NR sidelink communication reception, as specified in 5.8.7;
  - 2> if configured to transmit NR sidelink communication:
    - 3> use the resource pool(s) indicated by *sl-TxPoolSelectedNormal*, *sl-TxPoolScheduling* or *sl-TxPoolExceptional* for NR sidelink communication transmission, as specified in 5.8.8;
  - 2> if configured to receive NR sidelink discovery:
    - 3> use the resource pool(s) indicated by *sl-DiscRxPool* or *sl-RxPool* for NR sidelink discovery reception, as specified in 5.8.13.2;
  - 2> if configured to transmit NR sidelink discovery:

- 3> use the resource pool(s) indicated by *sl-DiscTxPoolSelected*, *sl-DiscTxPoolScheduling*, *sl-TxPoolSelectedNormal*, *sl-TxPoolScheduling* or *sl-TxPoolExceptional* for NR sidelink discovery transmission, as specified in 5.8.13.3;
- 2> perform CBR measurement on the transmission resource pool(s) indicated by *sl-TxPoolSelectedNormal*, *sl-TxPoolScheduling*, *sl-DiscTxPoolSelected*, *sl-DiscTxPoolScheduling* or *sl-TxPoolExceptional* for NR sidelink communication/discovery transmission, as specified in 5.5.3;
- 2> use the synchronization configuration parameters for NR sidelink communication/discovery on frequencies included in *sl-FreqInfoToAddModList*, as specified in 5.8.5;
- 1> if *sl-RadioBearerToReleaseList* or *sl-RLC-BearerToReleaseList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> perform sidelink DRB release as specified in 5.8.9.1a.1;
- 1> if *sl-RadioBearerToAddModList* or *sl-RLC-BearerToAddModList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> perform sidelink DRB addition/modification as specified in 5.8.9.1a.2;
- 1> if *sl-ScheduledConfig* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> configure the MAC entity parameters, which are to be used for NR sidelink communication/discovery, in accordance with the received *sl-ScheduledConfig*;
- 1> if *sl-UE-SelectedConfig* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> configure the parameters, which are to be used for NR sidelink communication/discovery, in accordance with the received *sl-UE-SelectedConfig*;
- 1> if *sl-MeasConfigInfoToReleaseList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> for each *SL-DestinationIndex* included in the received *sl-MeasConfigInfoToReleaseList* that is part of the current UE configuration:
    - 3> remove the entry with the matching *SL-DestinationIndex* from the stored NR sidelink measurement configuration information;
- 1> if *sl-MeasConfigInfoToAddModList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> for each *sl-DestinationIndex* included in the received *sl-MeasConfigInfoToAddModList* that is part of the current stored NR sidelink measurement configuration:
    - 3> reconfigure the entry according to the value received for this *sl-DestinationIndex* from the stored NR sidelink measurement configuration information;
  - 2> for each *sl-DestinationIndex* included in the received *sl-MeasConfigInfoToAddModList* that is not part of the current stored NR sidelink measurement configuration:
    - 3> add a new entry for this *sl-DestinationIndex* to the stored NR sidelink measurement configuration.

NOTE 1: The UE is expected to update the mapping between the Destination Layer-2 ID and the destination index for the stored NR sidelink measurement configuration after the UE updates the destination list and reports to the gNB.

- 1> if *sl-DRX-ConfigGC-BC* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> store the NR sidelink DRX configuration and configure lower layers to perform sidelink DRX operation for groupcast and broadcast as specified in TS 38.321 [3];
- 1> if *sl-DRX-ConfigUC-ToReleaseList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 2> for each *SL-DestinationIndex* included in the received *sl-DRX-ConfigUC-ToReleaseList* that is part of the current UE configuration:

3> remove the entry with the matching *SL-DestinationIndex* from the stored NR sidelink DRX configuration information;

1> if *sl-DRX-ConfigUC-ToAddModList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:

2> for each *sl-DestinationIndex* included in the received *sl-DRX-ConfigUC-ToAddModList* that is part of the current stored NR sidelink DRX configuration:

3> reconfigure the entry according to the value received for this *sl-DestinationIndex* from the stored NR sidelink DRX configuration information;

2> for each *sl-DestinationIndex* included in the received *sl-DRX-ConfigUC-ToAddModList* that is not part of the current stored NR sidelink DRX configuration:

3> add a new entry for this *sl-DestinationIndex* to the stored NR sidelink DRX configuration.

NOTE 2: The UE is expected to update the mapping between the Destination Layer-2 ID and the destination index for the stored NR sidelink DRX configuration after the UE updates the destination list and reports to the gNB.

1> if *sl-RLC-ChannelToReleaseList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:

2> perform PC5 Relay RLC channel release as specified in 5.8.9.7.1;

1> if *sl-RLC-ChannelToAddModList* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* or *RRCSetup*:

2> perform PC5 Relay RLC channel addition/modification as specified in 5.8.9.7.2;

### 5.3.5.15 L2 U2N Relay UE configuration

#### 5.3.5.15.1 General

The network configures the L2 U2N Relay UE with relay operation related configurations. For each connected L2 U2N Remote UE indicated in *sl-L2IdentityRemote*, the network provides the configuration parameters used for relaying.

The L2 U2N Relay UE shall:

1> if *sl-L2RelayUE-Config* is set to *setup*:

2> if the *sl-L2RelayUE-Config* contains the *sl-RemoteUE-ToReleaseList*:

3> perform the L2 U2N Remote UE release as specified in 5.3.5.15.2;

2> if the *sl-L2RelayUE-Config* contains the *sl-RemoteUE-ToAddModList*:

3> perform the L2 U2N Remote UE addition/modification as specified in 5.3.5.15.3;

1> else if *sl-L2RelayUE-Config* is set to *release*:

2> release the relay operation related configurations.

#### 5.3.5.15.2 L2 U2N Remote UE Release

The L2 U2N Relay UE shall:

1> if the release is triggered by reception of the *sl-RemoteUE-ToReleaseList*:

2> for each *SL-DestinationIdentity* value included in the *sl-RemoteUE-ToReleaseList*:

3> if the current UE has a PC5 RRC connection to a L2 U2N Remote UE with *SL-DestinationIdentity*:

4> indicate upper layers to trigger PC5 unicast link release.

### 5.3.5.15.3 L2 U2N Remote UE Addition/Modification

The L2 U2N Relay UE shall:

- 1> if no SRAP entity has been established:
  - 2> establish a SRAP entity as specified in TS 38.351 [66];
- 1> for each *sl-L2IdentityRemote* value included in the *sl-RemoteUE-ToAddModList* that is not part of the current UE configuration (L2 U2N Remote UE Addition):
  - 2> configure the parameters to SRAP entity in accordance with the *sl-SRAP-ConfigRelay*;
  - 2> if SRB1 is included in *sl-MappingToAddModList*, and *sl-EgressRLC-ChannelPC5* is configured:
    - 3> release SL-RLC1, if established;
    - 3> associate the PC5 Relay RLC channel as indicated by *sl-EgressRLC-ChannelPC5* with SRB1;
  - 2> else: (i.e. SRB1 is not included in *sl-MappingToAddModList*, or SRB1 is included in *sl-MappingToAddModList*, but *sl-EgressRLC-ChannelPC5* is not configured)
  - 3> if SL-RLC1 is not established:
    - 4> apply the default configuration of SL-RLC1 as specified in clause 9.2.4 and associate it with the SRB1;
- 1> for each *sl-L2IdentityRemote* value included in the *sl-RemoteUE-ToAddModList* that is part of the current UE configuration (L2 U2N Remote UE modification):
  - 2> modify the configuration in accordance with the *sl-SRAP-ConfigRelay*;

### 5.3.5.16 L2 U2N Remote UE configuration

The network configures the L2 U2N Remote UE with relay operation related configurations, e.g. SRAP configuration.

The L2 U2N Remote UE shall:

- 1> if *sl-L2RemoteUE-Config* is set to *setup* or received from *RRCSetup* message:
  - 2> if the *sl-L2RemoteUE-Config* contains the *sl-SRAP-ConfigRemote*:
    - 3> if no SRAP entity has been established:
      - 4> establish a SRAP entity as specified in TS 38.351 [66];
    - 3> configure the parameters to SRAP entity in accordance with the *sl-SRAP-ConfigRemote*;
    - 3> if SRB1 is included in *sl-MappingToAddModList*, and *sl-EgressRLC-ChannelPC5* is configured:
      - 4> release SL-RLC1, if established;
      - 4> associate the PC5 Relay RLC channel as indicated by *sl-EgressRLC-ChannelPC5* with SRB1;
    - 3> else: (i.e. SRB1 is not included in *sl-MappingToAddModList*, or SRB1 is included in *sl-MappingToAddModList*, but *sl-EgressRLC-ChannelPC5* is not configured)
    - 4> if SL-RLC1 is not established:
      - 5> apply the default configuration of SL-RLC1 as specified in clause 9.2.4 and associate it with the SRB1;
  - 2> if the *sl-L2RemoteUE-Config* contains the *sl-UEIdentityRemote*:
    - 3> use the value of the *sl-UEIdentityRemote* as the C-RNTI in the PCell.
- 1> else if *sl-L2RemoteUE-Config* is set to *release*:

2> release the relay operation related configurations.

## 5.3.6 Counter check

### 5.3.6.1 General

**Figure 5.3.6.1-1: Counter check procedure**

The counter check procedure is used by the network to request the UE to verify the amount of data sent/ received on each DRB. More specifically, the UE is requested to check if, for each DRB, the most significant bits of the COUNT match with the values indicated by the network.

NOTE: The procedure enables the network to detect packet insertion by an intruder (a 'man in the middle').

### 5.3.6.2 Initiation

The network initiates the procedure by sending a *CounterCheck* message.

NOTE: The network may initiate the procedure when any of the COUNT values reaches a specific value.

### 5.3.6.3 Reception of the *CounterCheck* message by the UE

Upon receiving the *CounterCheck* message, the UE shall:

- 1> for each DRB that is established:
  - 2> if no COUNT exists for a given direction (uplink or downlink) because it is a uni-directional bearer configured only for the other direction:
    - 3> assume the COUNT value to be 0 for the unused direction;
  - 2> if the *drb-Identity* is not included in the *drb-CountMSB-InfoList*:
    - 3> include the DRB in the *drb-CountInfoList* in the *CounterCheckResponse* message by including the *drb-Identity*, the *count-Uplink* and the *count-Downlink* set to the value of TX\_NEXT – 1 and RX\_NEXT – 1 (specified in TS 38.323 [5]), respectively;
  - 2> else if, for at least one direction, the most significant bits of the COUNT are different from the value indicated in the *drb-CountMSB-InfoList*:
    - 3> include the DRB in the *drb-CountInfoList* in the *CounterCheckResponse* message by including the *drb-Identity*, the *count-Uplink* and the *count-Downlink* set to the value of TX\_NEXT – 1 and RX\_NEXT – 1 (specified in TS 38.323 [5]), respectively;
- 1> for each DRB that is included in the *drb-CountMSB-InfoList* in the *CounterCheck* message that is not established:
  - 2> include the DRB in the *drb-CountInfoList* in the *CounterCheckResponse* message by including the *drb-Identity*, the *count-Uplink* and the *count-Downlink* with the most significant bits set identical to the corresponding values in the *drb-CountMSB-InfoList* and the least significant bits set to zero;
- 1> submit the *CounterCheckResponse* message to lower layers for transmission upon which the procedure ends.

## 5.3.7 RRC connection re-establishment

### 5.3.7.1 General

**Figure 5.3.7.1-1: RRC connection re-establishment, successful**

**Figure 5.3.7.1-2: RRC re-establishment, fallback to RRC establishment, successful**

The purpose of this procedure is to re-establish the RRC connection. A UE in RRC\_CONNECTED, for which AS security has been activated with SRB2 and at least one DRB/multicast MRB setup or, for IAB, SRB2, may initiate the procedure in order to continue the RRC connection. The connection re-establishment succeeds if the network is able to find and verify a valid UE context or, if the UE context cannot be retrieved, and the network responds with an *RRCSetup* according to clause 5.3.3.4.

The network applies the procedure e.g as follows:

- When AS security has been activated and the network retrieves or verifies the UE context:
  - to re-activate AS security without changing algorithms;
  - to re-establish and resume the SRB1;
- When UE is re-establishing an RRC connection, and the network is not able to retrieve or verify the UE context:
  - to discard the stored AS Context and release all RBs and BH RLC channels and Uu Relay RLC channels;
  - to fallback to establish a new RRC connection.

If AS security has not been activated, the UE shall not initiate the procedure but instead moves to RRC\_IDLE directly, with release cause 'other'. If AS security has been activated, but SRB2 and at least one DRB or multicast MRB or, for IAB, SRB2, are not setup, the UE does not initiate the procedure but instead moves to RRC\_IDLE directly, with release cause 'RRC connection failure'.

### 5.3.7.2 Initiation

The UE initiates the procedure when one of the following conditions is met:

- 1> upon detecting radio link failure of the MCG and *t316* is not configured, in accordance with 5.3.10; or
- 1> upon detecting radio link failure of the MCG while SCG transmission is suspended, in accordance with 5.3.10; or
- 1> upon detecting radio link failure of the MCG while PSCell change or PSCell addition is ongoing, in accordance with 5.3.10; or
- 1> upon detecting radio link failure of the MCG while the SCG is deactivated, in accordance with 5.3.10; or
- 1> upon re-configuration with sync failure of the MCG, in accordance with clause 5.3.5.8.3; or
- 1> upon mobility from NR failure, in accordance with clause 5.4.3.5; or
- 1> upon integrity check failure indication from lower layers concerning SRB1 or SRB2, except if the integrity check failure is detected on the *RRCReestablishment* message; or
- 1> upon an RRC connection reconfiguration failure, in accordance with clause 5.3.5.8.2; or
- 1> upon detecting radio link failure for the SCG while MCG transmission is suspended, in accordance with clause 5.3.10.3 in NR-DC or in accordance with TS 36.331 [10] clause 5.3.11.3 in NE-DC; or
- 1> upon reconfiguration with sync failure of the SCG while MCG transmission is suspended in accordance with clause 5.3.5.8.3; or
- 1> upon SCG change failure while MCG transmission is suspended in accordance with TS 36.331 [10] clause 5.3.5.7a; or
- 1> upon SCG configuration failure while MCG transmission is suspended in accordance with clause 5.3.5.8.2 in NR-DC or in accordance with TS 36.331 [10] clause 5.3.5.5 in NE-DC; or
- 1> upon integrity check failure indication from SCG lower layers concerning SRB3 while MCG is suspended; or
- 1> upon T316 expiry, in accordance with clause 5.7.3b.5; or
- 1> upon detecting sidelink radio link failure by L2 U2N Remote UE in RRC\_CONNECTED, in accordance with clause 5.8.9.3; or
- 1> upon reception of *NotificationMessageSidelink* including *indicationType* by L2 U2N Remote UE in RRC\_CONNECTED, in accordance with clause 5.8.9.10; or
- 1> upon PC5 unicast link release indicated by upper layer at L2 U2N Remote UE in RRC\_CONNECTED while T301 is not running.

NOTE 0: It is up to UE implementation whether to initiate the procedure while T346g is running.

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> stop timer T304, if running;
- 1> start timer T311;
- 1> stop timer T316, if running;
- 1> if UE is not configured with *attemptCondReconfig*:
  - 2> reset MAC;
  - 2> release *spCellConfig*, if configured;
  - 2> suspend all RBs, and BH RLC channels for IAB-MT, and Uu Relay RLC channels for L2 U2N Relay UE, except SRB0 and broadcast MRBs;
  - 2> release the MCG SCell(s), if configured;

- 2> if MR-DC is configured:
    - 3> perform MR-DC release, as specified in clause 5.3.5.10;
  - 2> release *delayBudgetReportingConfig*, if configured and stop timer T342, if running;
  - 2> release *overheatingAssistanceConfig*, if configured and stop timer T345, if running;
  - 2> release *idc-AssistanceConfig*, if configured;
  - 2> release *btNameList*, if configured;
  - 2> release *wlanNameList*, if configured;
  - 2> release *sensorNameList*, if configured;
  - 2> release *drx-PreferenceConfig* for the MCG, if configured and stop timer T346a associated with the MCG, if running;
  - 2> release *maxBW-PreferenceConfig* for the MCG, if configured and stop timer T346b associated with the MCG, if running;
  - 2> release *maxCC-PreferenceConfig* for the MCG, if configured and stop timer T346c associated with the MCG, if running;
  - 2> release *maxMIMO-LayerPreferenceConfig* for the MCG, if configured and stop timer T346d associated with the MCG, if running;
  - 2> release *minSchedulingOffsetPreferenceConfig* for the MCG, if configured stop timer T346e associated with the MCG, if running;
  - 2> release *rlm-RelaxationReportingConfig* for the MCG, if configured and stop timer T346j associated with the MCG, if running;
  - 2> release *bfd-RelaxationReportingConfig* for the MCG, if configured and stop timer T346k associated with the MCG, if running;
  - 2> release *releasePreferenceConfig*, if configured stop timer T346f, if running;
  - 2> release *onDemandSIB-Request* if configured, and stop timer T350, if running;
  - 2> release *referenceTimePreferenceReporting*, if configured;
  - 2> release *sl-AssistanceConfigNR*, if configured;
  - 2> release *obtainCommonLocation*, if configured;
  - 2> release *musim-GapAssistanceConfig*, if configured and stop timer T346h, if running;
  - 2> release *musim-LeaveAssistanceConfig*, if configured;
  - 2> release *ul-GapFR2-PreferenceConfig*, if configured;
  - 2> release *scg-DeactivationPreferenceConfig*, if configured, and stop timer T346i, if running;
  - 2> release *propDelayDiffReportConfig*, if configured;
  - 2> release *rrm-MeasRelaxationReportingConfig*, if configured;
  - 2> release *maxBW-PreferenceConfigFR2-2*, if configured;
  - 2> release *maxMIMO-LayerPreferenceConfigFR2-2*, if configured;
  - 2> release *minSchedulingOffsetPreferenceConfigExt*, if configured;
- 1> release *successHO-Config*, if configured;
  - 1> if any DAPS bearer is configured:

- 2> reset the source MAC and release the source MAC configuration;
- 2> for each DAPS bearer:
  - 3> release the RLC entity or entities as specified in TS 38.322 [4], clause 5.1.3, and the associated logical channel for the source SpCell;
  - 3> reconfigure the PDCP entity to release DAPS as specified in TS 38.323 [5];
- 2> for each SRB:
  - 3> release the PDCP entity for the source SpCell;
  - 3> release the RLC entity as specified in TS 38.322 [4], clause 5.1.3, and the associated logical channel for the source SpCell;
- 2> release the physical channel configuration for the source SpCell;
- 2> discard the keys used in the source SpCell (the  $K_{gNB}$  key, the  $K_{RRCenc}$  key, the  $K_{RRCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key), if any;
- 1> release *sl-L2RelayUE-Config*, if configured;
- 1> release *sl-L2RemoteUE-Config*, if configured;
- 1> release the SRAP entity, if configured;
- 1> if the UE is acting as L2 U2N Remote UE:
  - 2> if the PC5-RRC connection with the U2N Relay UE is determined to be released:
    - 3> indicate upper layers to trigger PC5 unicast link release;
    - 3> perform either cell selection in accordance with the cell selection process as specified in TS 38.304 [20], or relay selection as specified in clause 5.8.15.3, or both;
  - 2> else (i.e., maintain the PC5 RRC connection):
    - 3> consider the connected L2 U2N Relay UE as suitable and perform actions as specified in clause 5.3.7.3a;

NOTE 1: It is up to Remote UE implementation whether to release or keep the current PC5 unicast link.

1> else:

- 2> if the UE is capable of L2 U2N Remote UE:
  - 3> perform either cell selection as specified in TS 38.304 [20], or relay selection as specified in clause 5.8.15.3, or both;
- 2> else:
  - 3> perform cell selection in accordance with the cell selection process as specified in TS 38.304 [20].

NOTE 2: For L2 U2N Remote UE, if both a suitable cell and a suitable relay are available, the UE can select either one based on its implementation.

### 5.3.7.3 Actions following cell selection while T311 is running

Upon selecting a suitable NR cell, the UE shall:

- 1> ensure having valid and up to date essential system information as specified in clause 5.2.2.2;
- 1> stop timer T311;
- 1> if T390 is running:
  - 2> stop timer T390 for all access categories;

- 2> perform the actions as specified in 5.3.14.4;
- 1> stop the relay (re)selection procedure, if ongoing;
- 1> if the cell selection is triggered by detecting radio link failure of the MCG or re-configuration with sync failure of the MCG or mobility from NR failure, and
- 1> if *attemptCondReconfig* is configured; and
- 1> if the selected cell is not configured with *CondEventT1*, or the selected cell is configured with *CondEventT1* and leaving condition has not been fulfilled; and
- 1> if the selected cell is one of the candidate cells for which the *reconfigurationWithSync* is included in the *masterCellGroup* in the MCG *VarConditionalReconfig*:
  - 2> if the UE supports RLF-Report for conditional handover, set the *choCellId* in the *VarRLF-Report* to the global cell identity, if available, otherwise to the physical cell identity and carrier frequency of the selected cell;
- 2> apply the stored *condRRCReconfig* associated to the selected cell and perform actions as specified in 5.3.5.3;

NOTE 1: It is left to network implementation to how to avoid keystore reuse in case of CHO based recovery after a failed handover without key change.

1> else:

- 2> if UE is configured with *attemptCondReconfig*:
  - 3> reset MAC;
  - 3> release *spCellConfig*, if configured;
  - 3> release the MCG SCell(s), if configured;
  - 3> release *delayBudgetReportingConfig*, if configured and stop timer T342, if running;
  - 3> release *overheatingAssistanceConfig* , if configured and stop timer T345, if running;
- 3> if MR-DC is configured:
  - 4> perform MR-DC release, as specified in clause 5.3.5.10;
- 3> release *idc-AssistanceConfig*, if configured;
- 3> release *btNameList*, if configured;
- 3> release *wlanNameList*, if configured;
- 3> release *sensorNameList*, if configured;
- 3> release *drx-PreferenceConfig* for the MCG, if configured and stop timer T346a associated with the MCG, if running;
- 3> release *maxBW-PreferenceConfig* for the MCG, if configured and stop timer T346b associated with the MCG, if running;
- 3> release *maxCC-PreferenceConfig* for the MCG, if configured and stop timer T346c associated with the MCG, if running;
- 3> release *maxMIMO-LayerPreferenceConfig* for the MCG, if configured and stop timer T346d associated with the MCG, if running;
- 3> release *minSchedulingOffsetPreferenceConfig* for the MCG, if configured and stop timer T346e associated with the MCG, if running;
- 3> release *rlm-RelaxationReportingConfig* for the MCG, if configured and stop timer T346j associated with the MCG, if running;

- 3> release *bfd-RelaxationReportingConfig* for the MCG, if configured and stop timer T346k associated with the MCG, if running;
- 3> release *releasePreferenceConfig*, if configured and stop timer T346f, if running;
- 3> release *onDemandSIB-Request* if configured, and stop timer T350, if running;
- 3> release *referenceTimePreferenceReporting*, if configured;
- 3> release *sl-AssistanceConfigNR*, if configured;
- 3> release *obtainCommonLocation*, if configured;
- 3> release *scg-DeactivationPreferenceConfig*, if configured, and stop timer T346i, if running;
- 3> release *musim-GapAssistanceConfig*, if configured and stop timer T346h, if running;
- 3> release *musim-LeaveAssistanceConfig*, if configured;
- 3> release *propDelayDiffReportConfig*, if configured;
- 3> release *ul-GapFR2-PreferenceConfig*, if configured;
- 3> release *rrm-MeasRelaxationReportingConfig*, if configured;
- 3> release *maxBW-PreferenceConfigFR2-2*, if configured;
- 3> release *maxMIMO-LayerPreferenceConfigFR2-2*, if configured;
- 3> release *minSchedulingOffsetPreferenceConfigExt*, if configured;
- 3> suspend all RBs, and BH RLC channels for the IAB-MT, except SRB0 and broadcast MRBs;
- 2> remove all the entries within the MCG *VarConditionalReconfig*, if any;
- 2> for each *measId*, if the associated *reportConfig* has a *reportType* set to *condTriggerConfig*:
  - 3> for the associated *reportConfigId*:
    - 4> remove the entry with the matching *reportConfigId* from the *reportConfigList* within the *VarMeasConfig*;
  - 3> if the associated *measObjectId* is only associated to a *reportConfig* with *reportType* set to *condTriggerConfig*:
    - 4> remove the entry with the matching *measObjectId* from the *measObjectList* within the *VarMeasConfig*;
  - 3> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;
- 2> release the PC5 RLC entity for SL-RLC0, if any;
- 2> start timer T301;
- 2> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the parameters for which values are provided in *SIB1*;
- 2> apply the default MAC Cell Group configuration as specified in 9.2.2;
- 2> apply the CCCH configuration as specified in 9.1.1.2;
- 2> apply the *timeAlignmentTimerCommon* included in *SIB1*;
- 2> initiate transmission of the *RRCReestablishmentRequest* message in accordance with 5.3.7.4;

NOTE 2: This procedure applies also if the UE returns to the source PCell.

NOTE 3: A L2 U2N Relay UE may re-establish (e.g. via release and establish) the SL-RLC0 and SL-RLC1 of the connected L2 U2N Remote UE(s).

Upon selecting an inter-RAT cell, the UE shall:

- 1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure'.

### 5.3.7.3a Actions following relay selection while T311 is running

Upon selecting a suitable L2 U2N Relay UE, the L2 U2N Remote UE shall:

- 1> indicate to upper layer to trigger the PC5 unicast link establishment with the selected L2 U2N Relay UE, if a new L2 U2N Relay UE is selected;
- 1> ensure having valid and up to date essential system information as specified in clause 5.2.2.2;
- 1> stop timer T311;
- 1> if T390 is running:
  - 2> stop timer T390 for all access categories;
  - 2> perform the actions as specified in 5.3.14.4;
- 1> stop the cell selection procedure, if ongoing;
- 1> start timer T301;
- 1> release the RLC entity for SRB0, if any;
- 1> establish a SRAP entity as specified in TS 38.351 [66], if no SRAP entity has been established;
- 1> apply the specified configuration of SL-RLC0 as specified in 9.1.1.4;
- 1> apply the SDAP configuration and PDCP configuration as specified in 9.1.1.2 for SRB0;
- 1> initiate transmission of the *RRCReestablishmentRequest* message in accordance with 5.3.7.4.

### 5.3.7.4 Actions related to transmission of *RRCReestablishmentRequest* message

The UE shall set the contents of *RRCReestablishmentRequest* message as follows:

- 1> if the procedure was initiated due to radio link failure as specified in 5.3.10.3 or reconfiguration with sync failure as specified in 5.3.5.8.3:
  - 2> set the *reestablishmentCellId* in the *VarRLF-Report* to the global cell identity of the selected cell;
- 1> set the *ue-Identity* as follows:
  - 2> set the *c-RNTI* to the C-RNTI used in the source PCell (reconfiguration with sync or mobility from NR failure) or used in the PCell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *physCellId* to the physical cell identity of the source PCell (reconfiguration with sync or mobility from NR failure) or of the PCell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
    - 3> over the ASN.1 encoded as per clause 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
    - 3> with the  $K_{RRCCint}$  key and integrity protection algorithm that was used in the source PCell (reconfiguration with sync or mobility from NR failure) or of the PCell in which the trigger for the re-establishment occurred (other cases); and
    - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;

1> set the *reestablishmentCause* as follows:

2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.8.2:

3> set the *reestablishmentCause* to the value *reconfigurationFailure*;

2> else if the re-establishment procedure was initiated due to reconfiguration with sync failure as specified in 5.3.5.8.3 (intra-NR handover failure) or 5.4.3.5 (inter-RAT mobility from NR failure):

3> set the *reestablishmentCause* to the value *handoverFailure*;

2> else:

3> set the *reestablishmentCause* to the value *otherFailure*;

1> re-establish PDCP for SRB1;

1> if the UE is acting as L2 U2N Remote UE:

2> establish or re-establish (e.g. via release and add) SL RLC entity for SRB1;

2> apply the default configuration of SL-RLC1 as defined in 9.2.4 for SRB1;

2> apply the default configuration of PDCP as defined in 9.2.1 for SRB1;

2> apply the default configuration of SRAP as defined in 9.2.5 for SRB1;

1> else:

2> re-establish RLC for SRB1;

2> apply the default configuration defined in 9.2.1 for SRB1;

1> configure lower layers to suspend integrity protection and ciphering for SRB1;

NOTE: Ciphering is not applied for the subsequent *RRCReestablishment* message used to resume the connection. An integrity check is performed by lower layers, but merely upon request from RRC.

1> resume SRB1;

1> if *ta-Report* is configured with value *enabled* and the UE supports TA reporting:

2> indicate TA report initiation to lower layers;

1> submit the *RRCReestablishmentRequest* message to lower layers for transmission.

### 5.3.7.5 Reception of the *RRCReestablishment* by the UE

The UE shall:

1> stop timer T301;

1> consider the current cell to be the PCell;

1> update the  $K_{gNB}$  key based on the current  $K_{gNB}$  key or the NH, using the received *nextHopChainingCount* value, as specified in TS 33.501 [11];

1> store the *nextHopChainingCount* value indicated in the *RRCReestablishment* message;

1> derive the  $K_{RRCenc}$  and  $K_{UPenc}$  keys associated with the previously configured *cipheringAlgorithm*, as specified in TS 33.501 [11];

1> derive the  $K_{RRCint}$  and  $K_{UPint}$  keys associated with the previously configured *integrityProtAlgorithm*, as specified in TS 33.501 [11].

1> request lower layers to verify the integrity protection of the *RRCReestablishment* message, using the previously configured algorithm and the  $K_{RRCint}$  key;

- 1> if the integrity protection check of the *RRCReestablishment* message fails:
  - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure', upon which the procedure ends;
- 1> configure lower layers to resume integrity protection for SRB1 using the previously configured algorithm and the  $K_{RRChint}$  key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to resume ciphering for SRB1 using the previously configured algorithm and, the  $K_{RRChenc}$  key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> release the measurement gap configuration indicated by the *measGapConfig*, if configured;
- 1> release the MUSIM gap configuration indicated by the *musim-GapConfig*, if configured;
- 1> release the FR2 UL gap configuration indicated by the *ul-GapFR2-Config*, if configured;
- 1> perform the L2 U2N Remote UE configuration procedure in accordance with the received *sl-L2RemoteUE-Config* as specified in 5.3.5.16;
- 1> set the content of *RRCReestablishmentComplete* message as follows:
  - 2> if the UE has logged measurements available for NR and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
    - 3> include the *logMeasAvailable* in the *RRCReestablishmentComplete* message;
    - 3> if Bluetooth measurement results are included in the logged measurements the UE has available for NR:
      - 4> include the *logMeasAvailableBT* in the *RRCReestablishmentComplete* message;
    - 3> if WLAN measurement results are included in the logged measurements the UE has available for NR:
      - 4> include the *logMeasAvailableWLAN* in the *RRCReestablishmentComplete* message;
  - 2> if the *sigLoggedMeasType* in *VarLogMeasReport* is included:
    - 3> if T330 timer is running and the logged measurements configuration is for NR:
      - 4> set *sigLogMeasConfigAvailable* to *true* in the *RRCReestablishmentComplete* message;
    - 3> else:
      - 4> if the UE has logged measurements available for NR:
        - 5> set *sigLogMeasConfigAvailable* to *false* in the *RRCReestablishmentComplete* message;
  - 2> if the UE has connection establishment failure or connection resume failure information available in *VarConnEstFailReport* or *VarConnEstFailReportList* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport* or in at least one of the entries of *VarConnEstFailReportList*:
    - 3> include *connEstFailInfoAvailable* in the *RRCReestablishmentComplete* message;
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*; or
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* of TS 36.331 [10] and if the UE is capable of cross-RAT RLF reporting and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report* of TS 36.331 [10]:
    - 3> include *rlf-InfoAvailable* in the *RRCReestablishmentComplete* message;
  - 2> if the UE has successful handover information available in *VarSuccessHO-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarSuccessHO-Report*:

- 3> include *successHO-InfoAvailable* in the *RRCReestablishmentComplete* message;
- 1> submit the *RRCReestablishmentComplete* message to lower layers for transmission;
- 1> if *SIB21* is provided by the PCell:
  - 2> if the UE initiated transmission of an *MBSInterestIndication* message during the last 1 second preceding detection of radio link failure:
  - 3> initiate transmission of an *MBSInterestIndication* message in accordance with 5.9.4;
- 1> the procedure ends.

### 5.3.7.6 T311 expiry

Upon T311 expiry, the UE shall:

- 1> if the procedure was initiated due to radio link failure or handover failure:
  - 2> set the *noSuitableCellFound* in the *VarRLF-Report* to *true*;
- 1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure'.

### 5.3.7.7 T301 expiry or selected cell/L2 U2N Relay UE no longer suitable

The UE shall:

- 1> if timer T301 expires; or
- 1> if the selected cell becomes no longer suitable according to the cell selection criteria as specified in TS 38.304 [20]; or
- 1> if the (re)selected L2 U2N Relay UE becomes unsuitable; or
- 1> upon reception of *NotificationMessageSidelink* indicating *relayUE-HO* or *relayUE-CellReselection*; or
- 1> upon PC5 unicast link release indicated by upper layer at L2 U2N Remote UE:
  - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure'.

### 5.3.7.8 Reception of the *RRCSetup* by the UE

The UE shall:

- 1> perform the RRC connection establishment procedure as specified in 5.3.3.4.

## 5.3.8 RRC connection release

### 5.3.8.1 General

**Figure 5.3.8.1-1: RRC connection release, successful**

The purpose of this procedure is:

- to release the RRC connection, which includes the release of the established radio bearers (except for broadcast MRBs), BH RLC channels, Uu Relay RLC channels, PC5 Relay RLC channels as well as all radio resources; or
- to suspend the RRC connection only if SRB2 and at least one DRB or multicast MRB or, for IAB, SRB2, are setup, which includes the suspension of the established radio bearers (except for broadcast MRBs).

### 5.3.8.2 Initiation

The network initiates the RRC connection release procedure to transit a UE in RRC\_CONNECTED to RRC\_IDLE; or to transit a UE in RRC\_CONNECTED to RRC\_INACTIVE only if SRB2 and at least one DRB or multicast MRB or, for IAB, SRB2, is setup in RRC\_CONNECTED; or to transit a UE in RRC\_INACTIVE back to RRC\_INACTIVE when the UE tries to resume (for resuming a suspended RRC connection, for RNA Update or for initiating SDT); or to transit a UE in RRC\_INACTIVE to RRC\_IDLE when the UE tries to resume (for resuming of a suspended RRC connection, for RNA Update or for initiating SDT). The procedure can also be used to release and redirect a UE to another frequency.

### 5.3.8.3 Reception of the *RRCRelease* by the UE

The UE shall:

- 1> delay the following actions defined in this clause 60 ms from the moment the *RRCRelease* message was received or optionally when lower layers indicate that the receipt of the *RRCRelease* message has been successfully acknowledged, whichever is earlier;

NOTE 0: When the *RRCRelease* message is received on a HARQ process with disabled HARQ feedback, and when STATUS reporting, as defined in TS 38.322 [4], has not been triggered for a logical channel associated with the SRB1, the lower layers can be considered to have indicated that the receipt of the *RRCRelease* message has been successfully acknowledged.

- 1> stop timer T380, if running;
- 1> stop timer T320, if running;
- 1> if timer T316 is running;
  - 2> stop timer T316;
  - 2> clear the information included in *VarRLF-Report*, if any;
- 1> stop timer T350, if running;
- 1> stop timer T346g, if running;
- 1> if the AS security is not activated:
  - 2> ignore any field included in *RRCRelease* message except *waitTime*;
  - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;
- 1> if the *RRCRelease* message includes *redirectedCarrierInfo* indicating redirection to *eutra*:
  - 2> if *cnType* is included:
    - 3> after the cell selection, indicate the available CN Type(s) and the received *cnType* to upper layers;

NOTE 1: Handling the case if the E-UTRA cell selected after the redirection does not support the core network type specified by the *cnType*, is up to UE implementation.

- 2> if *voiceFallbackIndication* is included:
  - 3> consider the RRC connection release was for EPS fallback for IMS voice (see TS 23.502 [43]);
- 1> if the *RRCRelease* message includes the *cellReselectionPriorities*:
  - 2> store the cell reselection priority information provided by the *cellReselectionPriorities*;

- 2> if the *t320* is included:
  - 3> start timer T320, with the timer value set according to the value of *t320*;
- 1> else:
  - 2> apply the cell reselection priority information broadcast in the system information;
- 1> if *deprioritisationReq* is included and the UE supports RRC connection release with deprioritisation:
  - 2> start or restart timer T325 with the timer value set to the *deprioritisationTimer* signalled;
  - 2> store the *deprioritisationReq* until T325 expiry;

NOTE 1a: The UE stores the deprioritisation request irrespective of any cell reselection absolute priority assignments (by dedicated or common signalling) and regardless of RRC connections in NR or other RATs unless specified otherwise.

- 1> if the *RRCRelease* includes the *measIdleConfig*:
  - 2> if T331 is running:
    - 3> stop timer T331;
    - 3> perform the actions as specified in 5.7.8.3;
  - 2> if the *measIdleConfig* is set to *setup*:
    - 3> store the received *measIdleDuration* in *VarMeasIdleConfig*;
    - 3> start timer T331 with the value set to *measIdleDuration*;
    - 3> if the *measIdleConfig* contains *measIdleCarrierListNR*:
      - 4> store the received *measIdleCarrierListNR* in *VarMeasIdleConfig*;
    - 3> if the *measIdleConfig* contains *measIdleCarrierListEUTRA*:
      - 4> store the received *measIdleCarrierListEUTRA* in *VarMeasIdleConfig*;
    - 3> if the *measIdleConfig* contains *validityAreaList*:
      - 4> store the received *validityAreaList* in *VarMeasIdleConfig*;
- 1> if the *RRCRelease* includes *suspendConfig*:
  - 2> reset MAC and release the default MAC Cell Group configuration, if any;
  - 2> apply the received *suspendConfig* except the received *nextHopChainingCount*;
  - 2> if the *sdt-Config* is configured:
    - 3> for each of the DRB in the *sdt-DRB-List*:
      - 4> consider the DRB to be configured for SDT;
    - 3> if *sdt-SRB2-Indication* is configured:
      - 4> consider the SRB2 to be configured for SDT;
    - 3> for each RLC bearer (except those associated with broadcast MRBs) that is not suspended:
      - 4> re-establish the RLC entity as specified in TS 38.322 [4];
    - 3> for SRB2 (if it is resumed) and for SRB1:
      - 4> trigger the PDCP entity to perform SDU discard as specified in TS 38.323 [5];
    - 3> if *sdt-MAC-PHY-CG-Config* is configured:

4> configure the PCell with the configured grant resources for SDT and instruct the MAC entity to start the *cg-SDT-TimeAlignmentTimer*;

2> if *srs-PosRRC-Inactive* is configured:

3> apply the configuration and instruct MAC to start the *inactivePosSRS-TimeAlignmentTimer*;

NOTE 1b: The Network should provide full configuration to UE for SRS for Positioning in RRC\_INACTIVE.

2> remove all the entries within the MCG and the SCG *VarConditionalReconfig*, if any;

2> for each *measId* of the MCG *measConfig* and for each *measId* of the SCG *measConfig*, if configured, if the associated *reportConfig* has a *reportType* set to *condTriggerConfig*:

3> for the associated *reportConfigId*:

4> remove the entry with the matching *reportConfigId* from the *reportConfigList* within the *VarMeasConfig*;

3> if the associated *measObjectId* is only associated to a *reportConfig* with *reportType* set to *condTriggerConfig*:

4> remove the entry with the matching *measObjectId* from the *measObjectList* within the *VarMeasConfig*;

3> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> if the UE is acting as L2 U2N Remote UE:

3> if the PC5-RRC connection with the U2N Relay UE is determined to be released:

4> indicate upper layers to trigger PC5 unicast link release;

3> else (i.e., maintain the PC5 RRC connection):

4> establish or re-establish (e.g. via release and add) SL RLC entity for SRB1;

2> else:

3> re-establish RLC entities for SRB1;

2> if the *RRCRelease* message with *suspendConfig* was received in response to an *RRCResumeRequest* or an *RRCResumeRequest1*:

3> stop the timer T319 if running;

3> in the stored UE Inactive AS context:

4> replace the  $K_{\text{gNB}}$  and  $K_{\text{RRCint}}$  keys with the current  $K_{\text{gNB}}$  and  $K_{\text{RRCint}}$  keys;

4> replace the *nextHopChainingCount* with the value of *nextHopChainingCount* received in the *RRCRelease* message;

4> replace the *cellIdentity* with the *cellIdentity* of the cell the UE has received the *RRCRelease* message;

4> if the *suspendConfig* contains the *sl-UEIdentityRemote* (i.e. the UE is a L2 U2N Remote UE):

5> replace the C-RNTI with the value of the *sl-UEIdentityRemote*;

5> replace the physical cell identity with the value of the *sl-PhysCellId* in *sl-ServingCellInfo* contained in the discovery message received from the connected L2 U2N Relay UE;

4> else:

5> replace the C-RNTI with the C-RNTI used in the cell (see TS 38.321 [3]) the UE has received the *RRCRelease* message;

- 5> replace the physical cell identity with the physical cell identity of the cell the UE has received the *RRCRelease* message;
- 3> replace the *nextHopChainingCount* with the value associated with the current  $K_{gNB}$ ;
- 3> stop the timer T319a if running and consider SDT procedure is not ongoing;
- 2> else:
- 3> store in the UE Inactive AS Context the *nextHopChainingCount* received in the *RRCRelease* message, the current  $K_{gNB}$  and  $K_{RRCint}$  keys, the ROHC state, the EHC context(s), the UDC state, the stored QoS flow to DRB mapping rules, the application layer measurement configuration, the C-RNTI used in the source PCell, the *cellIdentity* and the physical cell identity of the source PCell, the *spCellConfigCommon* within *ReconfigurationWithSync* of the NR PCell (if configured) and all other parameters configured except for:
- parameters within *ReconfigurationWithSync* of the PCell;
  - parameters within *ReconfigurationWithSync* of the NR PCell, if configured;
  - parameters within *MobilityControlInfoSCG* of the E-UTRA PCell, if configured;
  - *servingCellConfigCommonSIB*;
  - *sl-L2RelayUE-Config*, if configured;
  - *sl-L2RemoteUE-Config*, if configured;

NOTE 1c: *suspendConfig* is not stored as part of UE Inactive AS Context, except for the fields explicitly specified.

- 3> store any previously or subsequently received application layer measurement report containers for which no segment, or full message, has been submitted to lower layers for transmission;

NOTE 2: NR sidelink communication/discovery related configurations and logged measurement configuration are not stored as UE Inactive AS Context, when UE enters RRC\_INACTIVE.

- 2> suspend all SRB(s) and DRB(s) and multicast MRB(s), except SRB0 and broadcast MRBs;
- 2> indicate PDCP suspend to lower layers of all DRBs and multicast MRBs;
- 2> release Uu Relay RLC channel(s), if configured;
- 2> release PC5 Relay RLC channel(s), if configured;
- 2> release the SRAP entity, if configured;

NOTE 2a: A L2 U2N Relay UE may re-establish the SL-RLC0, SL-RLC1 and SRAP entity after release.

- 2> if the *t380* is included:
- 3> start timer T380, with the timer value set to *t380*;
- 2> if the *RRCRelease* message is including the *waitTime*:
- 3> start timer T302 with the value set to the *waitTime*;
- 3> inform upper layers that access barring is applicable for all access categories except categories '0' and '2';
- 2> if T390 is running:
- 3> stop timer T390 for all access categories;
- 3> perform the actions as specified in 5.3.14.4;
- 2> indicate the suspension of the RRC connection to upper layers;
- 2> if the UE is capable of L2 U2N Remote UE:

3> enter RRC\_INACTIVE, and perform either cell selection as specified in TS 38.304 [20], or relay selection as specified in clause 5.8.15.3, or both;

2> else:

3> enter RRC\_INACTIVE and perform cell selection as specified in TS 38.304 [20];

1> else:

2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with the release cause 'other'.

NOTE 3: Whether to release the PC5 unicast link is left to L2 U2N Remote UE's implementation.

NOTE 4: It is left to UE implementation whether to stop T430, if running, when going to RRC\_INACTIVE.

#### 5.3.8.4 T320 expiry

The UE shall:

1> if T320 expires:

2> if stored, discard the cell reselection priority information provided by the *cellReselectionPriorities* or inherited from another RAT;

2> apply the cell reselection priority information broadcast in the system information.

#### 5.3.8.5 UE actions upon the expiry of *DataInactivityTimer*

Upon receiving the expiry of *DataInactivityTimer* from lower layers while in RRC\_CONNECTED, the UE shall:

1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure'.

#### 5.3.8.6 T346g expiry

The UE shall:

1> if T346g expires:

2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other'.

### 5.3.9 RRC connection release requested by upper layers

#### 5.3.9.1 General

The purpose of this procedure is to release the RRC connection. Access to the current PCell may be barred as a result of this procedure.

#### 5.3.9.2 Initiation

The UE initiates the procedure when upper layers request the release of the RRC connection as specified in TS 24.501 [23]. The UE shall not initiate the procedure for power saving purposes.

The UE shall:

1> if the upper layers indicate barring of the PCell:

2> treat the PCell used prior to entering RRC\_IDLE as barred according to TS 38.304 [20];

1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other'.

### 5.3.10 Radio link failure related actions

#### 5.3.10.1 Detection of physical layer problems in RRC\_CONNECTED

The UE shall:

- 1> if any DAPS bearer is configured, upon receiving N310 consecutive "out-of-sync" indications for the source SpCell from lower layers and T304 is running:
  - 2> start timer T310 for the source SpCell.
- 1> upon receiving N310 consecutive "out-of-sync" indications for the SpCell from lower layers while neither T300, T301, T304, T311, T316 nor T319 are running:
  - 2> start timer T310 for the corresponding SpCell.

#### 5.3.10.2 Recovery of physical layer problems

Upon receiving N311 consecutive "in-sync" indications for the SpCell from lower layers while T310 is running, the UE shall:

- 1> stop timer T310 for the corresponding SpCell.
- 1> stop timer T312 for the corresponding SpCell, if running.

NOTE 1: In this case, the UE maintains the RRC connection without explicit signalling, i.e. the UE maintains the entire radio resource configuration.

NOTE 2: Periods in time where neither "in-sync" nor "out-of-sync" is reported by L1 do not affect the evaluation of the number of consecutive "in-sync" or "out-of-sync" indications.

#### 5.3.10.3 Detection of radio link failure

The UE shall:

- 1> if any DAPS bearer is configured and T304 is running:
  - 2> upon T310 expiry in source SpCell; or
  - 2> upon random access problem indication from source MCG MAC; or
  - 2> upon indication from source MCG RLC that the maximum number of retransmissions has been reached; or
  - 2> upon consistent uplink LBT failure indication from source MCG MAC:
    - 3> consider radio link failure to be detected for the source MCG i.e. source RLF;
    - 3> suspend the transmission and reception of all DRBs and multicast MRBs in the source MCG;
    - 3> reset MAC for the source MCG;
    - 3> release the source connection.
- 1> else:
  - 2> during a DAPS handover: the following only applies for the target PCell;
  - 2> upon T310 expiry in PCell; or
  - 2> upon T312 expiry in PCell; or
  - 2> upon random access problem indication from MCG MAC while neither T300, T301, T304, T311 nor T319 are running and SDT procedure is not ongoing; or

- 2> upon indication from MCG RLC that the maximum number of retransmissions has been reached while SDT procedure is not ongoing; or
- 2> if connected as an IAB-node, upon BH RLF indication received on BAP entity from the MCG; or
- 2> upon consistent uplink LBT failure indication from MCG MAC while T304 is not running:
  - 3> if the indication is from MCG RLC and CA duplication is configured and activated for MCG, and for the corresponding logical channel *allowedServingCells* only includes SCell(s):
    - 4> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.
  - 3> else:
    - 4> consider radio link failure to be detected for the MCG, i.e. MCG RLF;
    - 4> discard any segments of segmented RRC messages stored according to 5.7.6.3;

NOTE: Void.

- 4> if AS security has not been activated:
  - 5> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other';-
- 4> else if AS security has been activated but SRB2 and at least one DRB or multicast MRB or, for IAB, SRB2, have not been setup:
  - 5> store the radio link failure information in the *VarRLF-Report* as described in clause 5.3.10.5;
  - 5> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure';
- 4> else:
  - 5> store the radio link failure information in the *VarRLF-Report* as described in clause 5.3.10.5;
  - 5> if T316 is configured; and
  - 5> if SCG transmission is not suspended; and
  - 5> if the SCG is not deactivated; and
  - 5> if neither PSCell change nor PSCell addition is ongoing (i.e. timer T304 for the NR PSCell is not running in case of NR-DC or timer T307 of the E-UTRA PSCell is not running as specified in TS 36.331 [10], clause 5.3.10.10, in NE-DC):
    - 6> initiate the MCG failure information procedure as specified in 5.7.3b to report MCG radio link failure.
  - 5> else:
    - 6> initiate the connection re-establishment procedure as specified in 5.3.7.

A L2/L3 U2N Relay UE shall:

- 1> upon detecting radio link failure:
  - 2> either indicate to upper layers (to trigger PC5 unicast link release) or send *NotificationMessageSidelink* to the connected L2/L3 U2N Remote UE(s) in accordance with 5.8.9.10.

The UE shall:

- 1> upon T310 expiry in PSCell; or
- 1> upon T312 expiry in PSCell; or
- 1> upon random access problem indication from SCG MAC; or

- 1> upon indication from SCG RLC that the maximum number of retransmissions has been reached; or
- 1> if connected as an IAB-node, upon BH RLF indication received on BAP entity from the SCG; or
- 1> upon consistent uplink LBT failure indication from SCG MAC:
  - 2> if the indication is from SCG RLC and CA duplication is configured and activated for SCG, and for the corresponding logical channel *allowedServingCells* only includes SCell(s):
    - 3> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.
  - 2> else:
    - 3> consider radio link failure to be detected for the SCG, i.e. SCG RLF;
    - 3> if the SCG is deactivated:
      - 4> stop radio link monitoring on the SCG;
      - 4> indicate to lower layers to stop beam failure detection on the PSCell;
    - 3> if MCG transmission is not suspended:
      - 4> initiate the SCG failure information procedure as specified in 5.7.3 to report SCG radio link failure.
  - 3> else:
    - 4> if the UE is in NR-DC:
      - 5> initiate the connection re-establishment procedure as specified in 5.3.7;
    - 4> else (the UE is in (NG)EN-DC):
      - 5> initiate the connection re-establishment procedure as specified in TS 36.331 [10], clause 5.3.7;

#### 5.3.10.4 RLF cause determination

The UE shall set the *rlf-Cause* in the *VarRLF-Report* as follows:

- 1> if the UE declares radio link failure due to T310 expiry:
  - 2> set the *rlf-Cause* as *t310-Expiry*;
- 1> else if the UE declares radio link failure due to the random access problem indication from MCG MAC:
  - 2> if the random access procedure was initiated for beam failure recovery:
    - 3> set the *rlf-Cause* as *beamFailureRecoveryFailure*;
  - 2> else:
    - 3> set the *rlf-Cause* as *randomAccessProblem*;
- 1> else if the UE declares radio link failure due to the reaching of maximum number of retransmissions from the MCG RLC:
  - 2> set the *rlf-Cause* as *rlc-MaxNumRetx*;
- 1> else if the UE declares radio link failure due to consistent uplink LBT failures:
  - 2> set the *rlf-Cause* as *lbtFailure*;
- 1> else if the IAB-MT declares radio link failure due to the reception of a BH RLF indication on BAP entity:
  - 2> set the *rlf-Cause* as *bh-rlfRecoveryFailure*.
- 1> else if the UE declares radio link failure due to T312 expiry:

2> set the *rlf-Cause* as *t312-Expiry*;

### 5.3.10.5 RLF report content determination

The UE shall determine the content in the *VarRLF-Report* as follows:

- 1> clear the information included in *VarRLF-Report*, if any;
  - 1> set the *plmn-IdentityList* to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN);
  - 1> set the *measResultLastServCell* to include the cell level RSRP, RSRQ and the available SINR, of the source PCell (in case HO failure) or PCell (in case RLF) based on the available SSB and CSI-RS measurements collected up to the moment the UE detected failure;
  - 1> if the SS/PBCH block-based measurement quantities are available:
    - 2> set the *rsIndexResults* in *measResultLastServCell* to include all the available measurement quantities of the source PCell (in case HO failure) or PCell (in case RLF), ordered such that the highest SS/PBCH block RSRP is listed first if SS/PBCH block RSRP measurement results are available, otherwise the highest SS/PBCH block RSRQ is listed first if SS/PBCH block RSRQ measurement results are available, otherwise the highest SS/PBCH block SINR is listed first, based on the available SS/PBCH block based measurements collected up to the moment the UE detected failure;
  - 1> if the CSI-RS based measurement quantities are available:
    - 2> set the *rsIndexResults* in *measResultLastServCell* to include all the available measurement quantities of the source PCell (in case HO failure) or PCell (in case RLF), ordered such that the highest CSI-RS RSRP is listed first if CSI-RS RSRP measurement results are available, otherwise the highest CSI-RS RSRQ is listed first if CSI-RS RSRQ measurement results are available, otherwise the highest CSI-RS SINR is listed first, based on the available CSI-RS based measurements collected up to the moment the UE detected failure;
  - 1> set the *ssbRLMConfigBitmap* and/or *csi-rsRLMConfigBitmap* in *measResultLastServCell* to include the radio link monitoring configuration of the source PCell (in case HO failure) or PCell (in case RLF), if available;
  - 1> for each of the configured *measObjectNR* in which measurements are available:
    - 2> if the SS/PBCH block-based measurement quantities are available:
      - 3> set the *measResultListNR* in *measResultNeighCells* to include all the available measurement quantities of the best measured cells, other than the source PCell (in case HO failure) or PCell (in case RLF), ordered such that the cell with highest SS/PBCH block RSRP is listed first if SS/PBCH block RSRP measurement results are available, otherwise the cell with highest SS/PBCH block RSRQ is listed first if SS/PBCH block RSRQ measurement results are available, otherwise the cell with highest SS/PBCH block SINR is listed first, based on the available SS/PBCH block based measurements collected up to the moment the UE detected failure;
      - 3> for each neighbour cell included, include the optional fields that are available;
- NOTE 0a: For the neighboring cells included in *measResultListNR* in *measResultNeighCells* ordered based on the SS/PBCH block measurement quantities, UE also includes the CSI-RS based measurement quantities, if available.
- 2> if the CSI-RS based measurement quantities are available:
    - 3> set the *measResultListNR* in *measResultNeighCells* to include all the available measurement quantities of the best measured cells, other than the source PCell (in case HO failure) or PCell (in case RLF), ordered such that the cell with highest CSI-RS RSRP is listed first if CSI-RS RSRP measurement results are available, otherwise the cell with highest CSI-RS RSRQ is listed first if CSI-RS RSRQ measurement results are available, otherwise the cell with highest CSI-RS SINR is listed first, based on the available CSI-RS based measurements collected up to the moment the UE detected radio link failure;
    - 3> for each neighbour cell included, include the optional fields that are available;

NOTE 0b: For ordering the neighboring cells based on the CSI-RS measurement quantities, UE includes measurements only for the cells not yet included in *measResultListNR* in *measResultNeighCells* to avoid overriding SS/PBCH block-based ordered measurements.

- 2> for each neighbour cell, if any, included in *measResultListNR* in *measResultNeighCells*:
  - 3> if the UE supports RLF-Report for conditional handover and if the neighbour cell is one of the candidate cells for which the *reconfigurationWithSync* is included in the *masterCellGroup* in the MCG *VarConditionalReconfig* at the moment of the detected failure:
    - 4> set *choConfig* in *MeasResult2NR* to the execution condition for each *measId* within *condTriggerConfig* associated to the neighbour cell within the MCG *VarConditionalReconfig*;
    - 4> if the first entry of *choConfig* corresponds to a fulfilled execution condition at the moment of handover failure, or radio link failure; or
    - 4> if the second entry of *choConfig*, if available, corresponds to a fulfilled execution condition at the moment of handover failure, or radio link failure:
      - 5> set *firstTriggeredEvent* to the execution condition *condFirstEvent* corresponding to the first entry of *choConfig* or to the execution condition *condSecondEvent* corresponding to the second entry of *choConfig*, whichever execution condition was fulfilled first in time;
      - 5> set *timeBetweenEvents* to the elapsed time between the point in time of fulfilling the condition in *choConfig* that was fulfilled first in time, and the point in time of fulfilling the condition in *choConfig* that was fulfilled second in time, if both the first execution condition corresponding to the first entry and the second execution condition corresponding to the second entry in the *choConfig* were fulfilled;
- 1> for each of the configured EUTRA frequencies in which measurements are available;
  - 2> set the *measResultListEUTRA* in *measResultNeighCells* to include the best measured cells ordered such that the cell with highest RSRP is listed first if RSRP measurement results are available, otherwise the cell with highest RSRQ is listed first, and based on measurements collected up to the moment the UE detected failure;
  - 3> for each neighbour cell included, include the optional fields that are available;

NOTE 1: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Exclude-listed cells are not required to be reported.

- 1> set the *c-RNTI* to the C-RNTI used in the source PCell (in case HO failure) or PCell (in case RLF);
- 1> if the failure is detected due to reconfiguration with sync failure as described in 5.3.5.8.3, set the fields in *VarRLF-report* as follows:
  - 2> set the *connectionFailureType* to *hof*;
  - 2> if the UE supports RLF-Report for DAPS handover and if any DAPS bearer was configured while T304 was running:
    - 3> set *lastHO-Type* to *daps*;
  - 3> if radio link failure was detected in the source PCell, according to clause 5.3.10.3:
    - 4> set *timeConnSourceDAPS-Failure* to the time between the initiation of the DAPS handover execution and the radio link failure detected in the source PCell while T304 was running;
    - 4> set the *rlf-Cause* to the trigger for detecting the source radio link failure in accordance with clause 5.3.10.4;
- 2> if the UE supports RLF-Report for conditional handover and if configuration of the conditional handover is available in the MCG *VarConditionalReconfig* at the moment of the handover failure:
  - 3> if the UE executed a conditional handover toward target PCell according to the *condRRCReconfig* of the target PCell:

- 4> set *timeSinceCHO-Reconfig* to the time elapsed between the execution of the last *RRCReconfiguration* message including *reconfigurationWithSync* for the target PCell of the failed conditional handover, and the reception in the source PCell of the last *conditionalReconfiguration* including the *condRRCReconfig* of the target PCell of the failed conditional handover;
- 3> else:
  - 4> set *timeSinceCHO-Reconfig* to the time elapsed between the execution of the last *RRCReconfiguration* message including *reconfigurationWithSync* for the target PCell of the failed handover, and the reception in the source PCell of the last *conditionalReconfiguration* including the *condRRCReconfig*;
  - 3> set *choCandidateCellList* to include the global cell identity, if available, and otherwise to the physical cell identity and carrier frequency of each of the candidate target cells for conditional handover included in *condRRCReconfig* within the MCG *VarConditionalReconfig* at the time of the failed handover, excluding the candidate target cells included in *measResultNeighCells*;
- 2> if the UE supports RLF-Report for conditional handover and if the last executed *RRCReconfiguration* message including *reconfigurationWithSync* was concerning a conditional handover:
  - 3> set *lastHO-Type* to *cho*;
  - 2> set the *nrFailedPCellId* in *failedPCellId* to the global cell identity and tracking area code, if available, and otherwise to the physical cell identity and carrier frequency of the target PCell of the failed handover;
  - 2> include *nrPreviousCell* in *previousPCellId* and set it to the global cell identity and tracking area code of the PCell where the last *RRCReconfiguration* message including *reconfigurationWithSync* was received;
  - 2> set the *timeConnFailure* to the elapsed time since the execution of the last *RRCReconfiguration* message including the *reconfigurationWithSync*;
- 1> else if the failure is detected due to Mobility from NR failure as described in 5.4.3.5, set the fields in *VarRLF-report* as follows:
  - 2> set the *connectionFailureType* to *hof*;
  - 2> if last *MobilityFromNRCommand* concerned a failed inter-RAT handover from NR to E-UTRA and if the UE supports Radio Link Failure Report for Inter-RAT MRO EUTRA (NR to EUTRA):
    - 3> set the *eutraFailedPCellId* in *failedPCellId* to the global cell identity and tracking area code, if available, and otherwise to the physical cell identity and carrier frequency of the target PCell of the failed handover;
  - 2> include *nrPreviousCell* in *previousPCellId* and set it to the global cell identity and tracking area code of the PCell where the last *MobilityFromNRCommand* message was received;
  - 2> set the *timeConnFailure* to the elapsed time since the initialization of the handover associated to the last *MobilityFromNRCommand* message;
- 1> else if the failure is detected due to radio link failure as described in 5.3.10.3, set the fields in *VarRLF-report* as follows:
  - 2> set the *connectionFailureType* to *rlf*;
  - 2> set the *rlf-Cause* to the trigger for detecting radio link failure in accordance with clause 5.3.10.4;
  - 2> set the *nrFailedPCellId* in *failedPCellId* to the global cell identity and the tracking area code, if available, and otherwise to the physical cell identity and carrier frequency of the PCell where radio link failure is detected;
  - 2> if an *RRCReconfiguration* message including the *reconfigurationWithSync* was received before the connection failure:
    - 3> if the last successfully executed *RRCReconfiguration* message including the *reconfigurationWithSync* concerned an intra NR handover and it was received while connected to the previous PCell to which the UE was connected before connecting to the PCell where radio link failure is detected; and
    - 3> if T316 was not running before entering the PCell in which the radio link failure was detected; and

- 3> if T311 was not running before entering the PCell in which the radio link failure was detected:
  - 4> include the *nrPreviousCell* in *previousPCellId* and set it to the global cell identity and the tracking area code of the PCell where the last executed *RRCReconfiguration* message including *reconfigurationWithSync* was received;
  - 4> if the UE supports RLF-Report for DAPS handover and if the last executed *RRCReconfiguration* message including *reconfigurationWithSync* was concerning a DAPS handover:
    - 5> set *lastHO-Type* to *daps*;
  - 4> else if the UE supports RLF-Report for conditional handover and if the last executed *RRCReconfiguration* message including *reconfigurationWithSync* was concerning a conditional handover:
    - 5> set *lastHO-Type* to *cho*;
  - 4> set the *timeConnFailure* to the elapsed time since the execution of the last *RRCReconfiguration* message including the *reconfigurationWithSync*;
- 3> else if the last *RRCReconfiguration* message including the *reconfigurationWithSync* concerned a handover to NR from E-UTRA and if the UE supports Radio Link Failure Report for Inter-RAT MRO EUTRA:
  - 4> include the *eutraPreviousCell* in *previousPCellId* and set it to the global cell identity and the tracking area code of the E-UTRA PCell where the last *RRCReconfiguration* message including *reconfigurationWithSync* was received embedded in E-UTRA RRC message *MobilityFromEUTRACommand* message as specified in TS 36.331 [10] clause 5.4.3.3;
  - 4> set the *timeConnFailure* to the elapsed time since reception of the last *RRCReconfiguration* message including the *reconfigurationWithSync* embedded in E-UTRA RRC message *MobilityFromEUTRACommand* message as specified in TS 36.331 [10] clause 5.4.3.3;
- 2> if configuration of the conditional handover is available in the MCG *VarConditionalReconfig* at the moment of declaring the radio link failure:
  - 3> set *timeSinceCHO-Reconfig* to the time elapsed between the detection of the radio link failure, and the reception, in the PCell, of the last *conditionalReconfiguration* including the *condRRCReconfig* message;
  - 3> set *choCandidateCellList* to include the global cell identity if available, and otherwise to the physical cell identity and carrier frequency of each of all the candidate target cells for conditional handover included in *condRRCReconfig* within the MCG *VarConditionalReconfig* at the time of radio link failure, excluding the candidate target cells included in *measResultNeighCells*;
- 1> if *connectionFailureType* is *rlf* and the *rlf-Cause* is set to *randomAccessProblem* or *beamFailureRecoveryFailure*; or
- 1> if *connectionFailureType* is *hof* and if the failed handover is an intra-RAT handover:
  - 2> set the *ra-InformationCommon* to include the random-access related information as described in clause 5.7.10.5;
- 1> if available, set the *locationInfo* as in 5.3.3.7.

The UE may discard the radio link failure information or handover failure information, i.e. release the UE variable *VarRLF-Report*, 48 hours after the radio link failure/handover failure is detected.

NOTE 2: In this clause, the term 'handover failure' has been used to refer to 'reconfiguration with sync failure'.

### 5.3.11 UE actions upon going to RRC\_IDLE

The UE shall:

- 1> reset MAC;

- 1> set the variable *pendingRNA-Update* to *false*, if that is set to *true*;
- 1> if going to RRC\_IDLE was triggered by reception of the *RRCRelease* message including a *waitTime*:
  - 2> if T302 is running:
    - 3> stop timer T302;
  - 2> start timer T302 with the value set to the *waitTime*;
  - 2> inform upper layers that access barring is applicable for all access categories except categories '0' and '2'.
- 1> else:
  - 2> if T302 is running:
    - 3> stop timer T302;
    - 3> perform the actions as specified in 5.3.14.4;
- 1> if T390 is running:
  - 2> stop timer T390 for all access categories;
  - 2> perform the actions as specified in 5.3.14.4;
- 1> if the UE is leaving RRC\_INACTIVE:
  - 2> if going to RRC\_IDLE was not triggered by reception of the *RRCRelease* message:
    - 3> if stored, discard the cell reselection priority information provided by the *cellReselectionPriorities*;
    - 3> stop the timer T320, if running;
  - 2> if T319a is running:
    - 3> stop timer T319a;
    - 3> consider SDT procedure is not ongoing;
- 1> stop all timers that are running except T302, T320, T325, T330, T331, T400 and T430;
- 1> discard the UE Inactive AS context, if any;
- 1> release the *suspendConfig*, if configured;
- 1> remove all the entries within the MCG and the SCG *VarConditionalReconfig*, if any;
- 1> for each *measId*, if the associated *reportConfig* has a *reportType* set to *condTriggerConfig*:
  - 2> for the associated *reportConfigId*:
    - 3> remove the entry with the matching *reportConfigId* from the *reportConfigList* within the *VarMeasConfig*;
  - 2> if the associated *measObjectId* is only associated to a *reportConfig* with *reportType* set to *condTriggerConfig*:
    - 3> remove the entry with the matching *measObjectId* from the *measObjectList* within the *VarMeasConfig*;
  - 2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;
- 1> discard the  $K_{\text{gNB}}$  key, the S- $K_{\text{gNB}}$  key, the S- $K_{\text{eNB}}$  key, the  $K_{\text{RRCenc}}$  key, the  $K_{\text{RRCint}}$  key, the  $K_{\text{UPint}}$  key and the  $K_{\text{UPenc}}$  key, if any;
- 1> release all radio resources, including release of the RLC entity, the BAP entity, the MAC configuration and the associated PDCP entity and SDAP for all established RBs (except for broadcast MRBs), BH RLC channels, Uu Relay RLC channels, PC5 Relay RLC channels and SRAP entity;

NOTE 0: A L2 U2N Relay UE may re-establish the SL-RLC0, SL-RLC1 and SRAP entity after release.

- 1> indicate the release of the RRC connection to upper layers together with the release cause;
- 1> inform upper layers about the release of all application layer measurement configurations;
- 1> discard any application layer measurement reports which were not yet submitted to lower layers for transmission;
- 1> discard any segments of segmented RRC messages stored according to 5.7.6.3;
- 1> except if going to RRC\_IDLE was triggered by inter-RAT cell reselection while the UE is in RRC\_INACTIVE or RRC\_IDLE or when selecting an inter-RAT cell while T311 was running or when selecting an E-UTRA cell for EPS fallback for IMS voice as specified in 5.4.3.5:
  - 2> if the UE is capable of L2 U2N Remote UE:
    - 3> enter RRC\_IDLE, and perform either cell selection as specified in TS 38.304 [20], or relay selection as specified in clause 5.8.15.3, or both;
  - 2> else:
    - 3> enter RRC\_IDLE and perform cell selection as specified in TS 38.304 [20];

NOTE 1: Whether to release the PC5 unicast link is left to L2 U2N Remote UE's implementation.

NOTE 2: It is left to UE implementation whether to stop T430, if running, when going to RRC\_IDLE.

### 5.3.12 UE actions upon PUCCH/SRS release request

Upon receiving a PUCCH release request from lower layers, for all bandwidth parts of an indicated serving cell the UE shall:

- 1> release PUCCH-CSI-Resources configured in *CSI-ReportConfig*;
- 1> release *SchedulingRequestResourceConfig* instances configured in *PUCCH-Config*.

Upon receiving an SRS release request from lower layers, for all bandwidth parts of an indicated serving cell the UE shall:

- 1> release *SRS-Resource* instances configured in *SRS-Config*;
- 1> release *ue-TxTEG-RequestUL-TDOA-Config*, if configured.

Upon receiving a positioning SRS configuration for RRC\_INACTIVE release request from lower layers, the UE shall:

- 1> release the configured *srs-PosRRC-Inactive*.

### 5.3.13 RRC connection resume

#### 5.3.13.1 General

Figure 5.3.13.1-1: RRC connection resume, successful

Figure 5.3.13.1-2: RRC connection resume fallback to RRC connection establishment, successful

Figure 5.3.13.1-3: RRC connection resume followed by network release, successful

Figure 5.3.13.1-4: RRC connection resume followed by network suspend, successful

Figure 5.3.13.1-5: RRC connection resume, network reject

The purpose of this procedure is to resume a suspended RRC connection, including resuming SRB(s), DRB(s) and multicast MRB(s) or perform an RNA update. This procedure is also used to initiate SDT in RRC\_INACTIVE.

#### 5.3.13.1a Conditions for resuming RRC Connection for NR sidelink communication/discovery/V2X sidelink communication

For NR sidelink communication/discovery an RRC connection is resumed only in the following cases:

- 1> if configured by upper layers to transmit NR sidelink communication and related data is available for transmission;

- 2> if the frequency on which the UE is configured to transmit NR sidelink communication is included in *sl-FreqInfoList* within *SIB12* provided by the cell on which the UE camps; and if the valid version of *SIB12* does not include *sl-TxPoolSelectedNormal* for the concerned frequency;
- 1> if configured by upper layers to transmit NR sidelink discovery and related data is available for transmission:
  - 2> if the UE is configured by upper layers to transmit NR sidelink L2 U2N relay discovery messages and *sl-L2U2N-Relay* is included in *SIB12*; or
  - 2> if the UE is configured by upper layers to transmit NR sidelink L3 U2N relay discovery messages and *sl-L3U2N-RelayDiscovery* is included in *SIB12*; or
  - 2> if the UE is configured by upper layers to transmit NR sidelink non-relay discovery messages and *sl-NonRelayDiscovery* is included in *SIB12*;
  - 3> if the frequency on which the UE is configured to transmit NR sidelink discovery is included in *sl-FreqInfoList* within *SIB12* provided by the cell on which the UE camps; and if the valid version of *SIB12* does not include *sl-DiscTxPoolSelected* or *sl-TxPoolSelectedNormal* for the concerned frequency;

For L2 U2N Relay UE in RRC\_INACTIVE, an RRC connection establishment is resumed in the following cases:

- 1> if any message is received from the L2 U2N Remote UE via SL-RLC0 as specified in 9.1.1.4 or SL-RLC1 as specified in 9.2.4;

For V2X sidelink communication an RRC connection resume is initiated only when the conditions specified for V2X sidelink communication in clause 5.3.3.1a of TS 36.331 [10] are met.

NOTE: Upper layers initiate an RRC connection resume (except if the RRC connection resume is initiated at the L2 U2N Relay UE upon reception of a message from a L2 U2N Remote UE via SL-RLC0 or SL-RLC1). The interaction with NAS is left to UE implementation.

### 5.3.13.1b Conditions for initiating SDT

A UE in RRC\_INACTIVE initiates the resume procedure for SDT when all of the following conditions are fulfilled:

- 1> the upper layers request resumption of RRC connection; and
- 1> *SIB1* includes *sdt-ConfigCommon*; and
- 1> *sdt-Config* is configured; and
- 1> all the pending data in UL is mapped to the radio bearers configured for SDT; and
- 1> for a RedCap UE when RedCap-specific initial downlink BWP includes no CD-SSB, *ncd-SSB-RedCapInitialBWP-SDT* is configured; and
- 1> lower layers indicate that conditions for initiating SDT as specified in TS 38.321 [3] are fulfilled.

NOTE: How the UE determines that all pending data in UL is mapped to radio bearers configured for SDT is left to UE implementation.

### 5.3.13.2 Initiation

The UE initiates the procedure when upper layers or AS (when responding to RAN paging, upon triggering RNA updates while the UE is in RRC\_INACTIVE, for NR sidelink communication/discovery/V2X sidelink communication as specified in clause 5.3.13.1a) requests the resume of a suspended RRC connection or requests the resume for initiating SDT as specified in clause 5.3.13.1b.

The UE shall ensure having valid and up to date essential system information as specified in clause 5.2.2.2 before initiating this procedure.

Upon initiation of the procedure, the UE shall:

- 1> if the resumption of the RRC connection is triggered by response to NG-RAN paging;

- 2> select '0' as the Access Category;
- 2> perform the unified access control procedure as specified in 5.3.14 using the selected Access Category and one or more Access Identities provided by upper layers;
- 3> if the access attempt is barred, the procedure ends;
- 1> else if the resumption of the RRC connection is triggered by upper layers:
  - 2> if the upper layers provide an Access Category and one or more Access Identities:
    - 3> perform the unified access control procedure as specified in 5.3.14 using the Access Category and Access Identities provided by upper layers;
    - 4> if the access attempt is barred, the procedure ends;
  - 2> if the upper layers provide NSAG information and one or more S-NSSAI(s) triggering the access attempt (TS 23.501 [32] and TS 24.501 [23]):
    - 3> apply the NSAG with highest NSAG priority among the NSAGs that are included in *SIB1* (i.e., in *FeatureCombination* and/or in *RA-PrioritizationSliceInfo*), and that are associated with the S-NSSAI(s) triggering the access attempt, in the Random Access procedure (TS 38.321 [3], clause 5.1);

NOTE: If there are multiple NSAGs with the same highest NAS-provided NSAG priority identified for access attempt as above, it is left to UE implementation to select the NSAG to be applied in the Random Access procedure.

- 2> if the resumption occurs after release with redirect with *mpsPriorityIndication*:
  - 3> set the *resumeCause* to *mps-PriorityAccess*;
- 2> else:
  - 3> set the *resumeCause* in accordance with the information received from upper layers;
- 1> else if the resumption of the RRC connection is triggered due to an RNA update as specified in 5.3.13.8:
  - 2> if an emergency service is ongoing:

NOTE 1: How the RRC layer in the UE is aware of an ongoing emergency service is up to UE implementation.

- 3> select '2' as the Access Category;
- 3> set the *resumeCause* to *emergency*;
- 2> else:
  - 3> select '8' as the Access Category;
- 2> perform the unified access control procedure as specified in 5.3.14 using the selected Access Category and one or more Access Identities to be applied as specified in TS 24.501 [23];
- 3> if the access attempt is barred:
  - 4> set the variable *pendingRNA-Update* to *true*;
  - 4> the procedure ends;

NOTE 2: In case the L2 U2N Relay UE initiates RRC connection resume triggered by reception of message from a L2 U2N Remote UE via SL-RLC0 or SL-RLC1 as specified in 5.3.13.1a, the L2 U2N Relay UE sets the *resumeCause* by implementation, but it can only set the *emergency*, *mps-PriorityAccess*, or *mcs-PriorityAccess* as *resumeCause*, if the same cause value in the message received from the L2 U2N Remote UE via SL-RLC0.

- 1> if the UE is in NE-DC or NR-DC:
  - 2> if the UE does not support maintaining SCG configuration upon connection resumption:

- 3> release the MR-DC related configurations (i.e., as specified in 5.3.5.10) from the UE Inactive AS context, if stored;
- 1> if the UE does not support maintaining the MCG SCell configurations upon connection resumption:
  - 2> release the MCG SCell(s) from the UE Inactive AS context, if stored;
- 1> if the UE is acting as L2 U2N Remote UE:
  - 2> establish a SRAP entity as specified in TS 38.351 [66], if no SRAP entity has been established;
  - 2> apply the default configuration of SL-RLC1 as defined in 9.2.4 for SRB1;
  - 2> apply the default PDCP configuration as defined in 9.2.1 for SRB1;
  - 2> apply the default configuration of SRAP as defined in 9.2.5 for SRB1;
- 1> else:
  - 2> apply the default L1 parameter values as specified in corresponding physical layer specifications, except for the parameters for which values are provided in *SIB1*;
  - 2> apply the default SRB1 configuration as specified in 9.2.1;
  - 2> apply the default MAC Cell Group configuration as specified in 9.2.2;
- 1> release *delayBudgetReportingConfig* from the UE Inactive AS context, if stored;
- 1> stop timer T342, if running;
- 1> release *overheatingAssistanceConfig* from the UE Inactive AS context, if stored;
- 1> stop timer T345, if running;
- 1> release *idc-AssistanceConfig* from the UE Inactive AS context, if stored;
- 1> release *drx-PreferenceConfig* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346a, if running;
- 1> release *maxBW-PreferenceConfig* and *maxBW-PreferenceConfigFR2-2* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346b, if running;
- 1> release *maxCC-PreferenceConfig* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346c, if running;
- 1> release *maxMIMO-LayerPreferenceConfig* and *maxMIMO-LayerPreferenceConfigFR2-2* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346d, if running;
- 1> release *minSchedulingOffsetPreferenceConfig* and *minSchedulingOffsetPreferenceConfigExt* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346e, if running;
- 1> release *rlm-RelaxationReportingConfig* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346j, if running;
- 1> release *bfd-RelaxationReportingConfig* for all configured cell groups from the UE Inactive AS context, if stored;
- 1> stop all instances of timer T346k, if running;
- 1> release *releasePreferenceConfig* from the UE Inactive AS context, if stored;

- 1> release *wlanNameList* from the UE Inactive AS context, if stored;
- 1> release *btNameList* from the UE Inactive AS context, if stored;
- 1> release *sensorNameList* from the UE Inactive AS context, if stored;
- 1> release *obtainCommonLocation* from the UE Inactive AS context, if stored;
- 1> stop timer T346f, if running;
- 1> stop timer T346i, if running;
- 1> release *referenceTimePreferenceReporting* from the UE Inactive AS context, if stored;
- 1> release *sl-AssistanceConfigNR* from the UE Inactive AS context, if stored;
- 1> release *musim-GapAssistanceConfig* from the UE Inactive AS context, if stored and stop timer T346h, if running;
- 1> release *musim-GapConfig* from the UE Inactive AS context, if stored;
- 1> release *musim-LeaveAssistanceConfig* from the UE Inactive AS context, if stored;
- 1> release *propDelayDiffReportConfig* from the UE Inactive AS context, if stored;
- 1> release *ul-GapFR2-PreferenceConfig*, if configured;
- 1> release *rrm-MeasRelaxationReportingConfig* from the UE Inactive AS context, if stored;
- 1> if the UE is acting as L2 U2N Remote UE:
  - 2> apply the specified configuration of SL-RLC0 used for the delivery of RRC message over SRB0 as specified in 9.1.1.4;
  - 2> apply the SDAP configuration and PDCP configuration as specified in 9.1.1.2 for SRB0;
- 1> else:
  - 2> apply the CCCH configuration as specified in 9.1.1.2;
  - 2> apply the *timeAlignmentTimerCommon* included in *SIB1*;
- 1> if *sdt-MAC-PHY-CG-Config* is configured:
  - 2> if the resume procedure is initiated in a cell that is different to the PCell in which the UE received the stored *sdt-MAC-PHY-CG-Config*:
    - 3> release the stored *sdt-MAC-PHY-CG-Config*;
    - 3> instruct the MAC entity to stop the *cg-SDT-TimeAlignmentTimer*, if it is running;
- 1> if *ncd-SSB-RedCapInitialBWP-SDT* is configured:
  - 2> if the resume procedure is initiated in a cell that is different to the PCell in which the UE received the stored *ncd-SSB-RedCapInitialBWP-SDT*:
    - 3> release the stored *ncd-SSB-RedCapInitialBWP-SDT*;
- 1> if conditions for initiating SDT in accordance with 5.3.13.1b are fulfilled:
  - 2> consider the resume procedure is initiated for SDT;
  - 2> start timer T319a when the lower layers first transmit the CCCH message;
  - 2> consider SDT procedure is ongoing;
- 1> else:
  - 2> start timer T319;

- 2> instruct the MAC entity to stop the *cg-SDT-TimeAlignmentTimer*, if it is running;
- 1> if *ta-Report* is configured with value *enabled* and the UE supports TA reporting:
  - 2> indicate TA report initiation to lower layers;
- 1> set the variable *pendingRNA-Update* to *false*;
- 1> release *successHO-Config* from the UE Inactive AS context, if stored;
- 1> initiate transmission of the *RRCResumeRequest* message or *RRCResumeRequest1* in accordance with 5.3.13.3.

### 5.3.13.3 Actions related to transmission of *RRCResumeRequest* or *RRCResumeRequest1* message

The UE shall set the contents of *RRCResumeRequest* or *RRCResumeRequest1* message as follows:

- 1> if *useFullResumeID* is signalled in *SIB1*:
  - 2> select *RRCResumeRequest1* as the message to use;
  - 2> set the *resumeIdentity* to the stored *fullI-RNTI* value;
- 1> else:
  - 2> select *RRCResumeRequest* as the message to use;
  - 2> set the *resumeIdentity* to the stored *shortI-RNTI* value;
- 1> restore the RRC configuration, RoHC state, the EHC context(s), the UDC state, the stored QoS flow to DRB mapping rules and the  $K_{gNB}$  and  $K_{RRCint}$  keys from the stored UE Inactive AS context except for the following:
  - *masterCellGroup*;
  - *mrdc-SecondaryCellGroup*, if stored; and
  - *pdcp-Config*;
- 1> set the *resumeMAC-I* to the 16 least significant bits of the MAC-I calculated:
  - 2> over the ASN.1 encoded as per clause 8 (i.e., a multiple of 8 bits) *VarResumeMAC-Input*;
  - 2> with the  $K_{RRCint}$  key in the UE Inactive AS Context and the previously configured integrity protection algorithm; and
  - 2> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
- 1> derive the  $K_{gNB}$  key based on the current  $K_{gNB}$  key or the NH, using the *nextHopChainingCount* value received in the previous *RRCRelease* message and stored in the UE Inactive AS Context, as specified in TS 33.501 [11];
- 1> derive the  $K_{RRCenc}$  key, the  $K_{RRCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key;
- 1> configure lower layers to apply integrity protection for all radio bearers except SRB0 and MRBs using the configured algorithm and the  $K_{RRCint}$  key and  $K_{UPint}$  key derived in this clause immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE;

NOTE 1: Only DRBs with previously configured UP integrity protection shall resume integrity protection.

- 1> configure lower layers to apply ciphering for all radio bearers except SRB0 and MRBs and to apply the configured ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key derived in this clause, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE;
- 1> re-establish PDCP entities for SRB1;
- 1> resume SRB1;
- 1> if the resume procedure is initiated for SDT:

- 2> for each radio bearer that is configured for SDT and for SRB1:
  - 3> restore the *RLC-BearerConfig* associated with the RLC bearers of *masterCellGroup* and *pdcp-Config* from the UE Inactive AS context;
  - 3> if the radio bearer is a DRB configured with Ethernet Header Compression:
    - 4> indicate to lower layer that *ethernetHeaderCompression* is not configured;
  - 3> if the radio bearer is a DRB configured with UDC:
    - 4> indicate to lower layer that *uplinkDataCompression* is not configured;
  - 3> if the radio bearer is a DRB configured with ROHC function:
    - 4> if *sdt-DRB-ContinueROHC* is set to *cell* and the resume procedure is initiated in a cell that is the same as the PCell in which the UE received the previous *RRCRelease* message; or
    - 4> if *sdt-DRB-ContinueROHC* is set to *rna* and the resume procedure is initiated in a cell belonging to the same RNA as the PCell in which the UE received the previous *RRCRelease* message:
      - 5> indicate to lower layer that *drb-continueROHC* is configured;
    - 4> else:
      - 5> indicate to lower layer that *drb-continueROHC* is not configured;
  - 3> re-establish PDCP entity for the radio bearer that is configured for SDT without triggering PDCP status report;
- 2> resume all the radio bearers that are configured for SDT;
- 1> submit the selected message *RRCResumeRequest* or *RRCResumeRequest1* for transmission to lower layers.

NOTE 2: Only DRBs with previously configured UP ciphering shall resume ciphering.

If lower layers indicate an integrity check failure while T319 is running or SDT procedure is ongoing, perform actions specified in 5.3.13.5.

If the UE is a RedCap UE and the RedCap-specific initial downlink BWP is not associated with CD-SSB, the UE may continue cell re-selection related measurements as well as cell re-selection evaluation, otherwise the UE shall continue cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in 5.3.13.6.

NOTE 3: For L2 U2N Remote UE in RRC\_INACTIVE, the cell (re)selection procedure as specified in TS 38.304 [20] and relay (re)selection procedure as specified in 5.8.15.3 are performed independently and it is up to UE implementation to select either a cell or a L2 U2N Relay UE.

### 5.3.13.4 Reception of the *RRCResume* by the UE

The UE shall:

- 1> stop timer T319, if running;
- 1> stop timer T319a, if running and consider SDT procedure is not ongoing;
- 1> stop timer T380, if running;
- 1> if T331 is running:
  - 2> stop timer T331;
  - 2> perform the actions as specified in 5.7.8.3;
- 1> if the *RRCResume* includes the *fullConfig*:
  - 2> perform the full configuration procedure as specified in 5.3.5.11;

- 1> else:
  - 2> if the *RRCResume* does not include the *restoreMCG-SCells*:
    - 3> release the MCG SCell(s) from the UE Inactive AS context, if stored;
  - 2> if the *RRCResume* does not include the *restoreSCG*:
    - 3> release the MR-DC related configurations (i.e., as specified in 5.3.5.10) from the UE Inactive AS context, if stored;
  - 2> restore the *masterCellGroup*, *mrdc-SecondaryCellGroup*, if stored, and *pdcp-Config* from the UE Inactive AS context;
  - 2> configure lower layers to consider the restored MCG and SCG SCell(s) (if any) to be in deactivated state;
- 1> discard the UE Inactive AS context;
- 1> store the used *nextHopChainingCount* value associated to the current  $K_{\text{gNB}}$ ;
- 1> if *sdt-MAC-PHY-CG-Config* is configured:
  - 2> instruct the MAC entity to stop the *cg-SDT-TimeAlignmentTimer*, if it is running;
  - 2> instruct the MAC entity to start the *timeAlignmentTimer* associated with the PTAG, if it is not running;
- 1> if *srs-PosRRC-Inactive* is configured:
  - 2> instruct the MAC entity to stop *inactivePosSRS-TimeAlignmentTimer*, if it is running;
- 1> release the *suspendConfig* except the *ran-NotificationAreaInfo*;
- 1> if the *RRCResume* includes the *masterCellGroup*:
  - 2> perform the cell group configuration for the received *masterCellGroup* according to 5.3.5.5;
- 1> if the *RRCResume* includes the *mrdc-SecondaryCellGroup*:
  - 2> if the received *mrdc-SecondaryCellGroup* is set to *nr-SCG*:
    - 3> perform the RRC reconfiguration according to 5.3.5.3 for the *RRCReconfiguration* message included in *nr-SCG*;
  - 2> if the received *mrdc-SecondaryCellGroup* is set to *eutra-SCG*:
    - 3> perform the RRC connection reconfiguration as specified in TS 36.331 [10], clause 5.3.5.3 for the *RRCConnectionReconfiguration* message included in *eutra-SCG*;
- 1> if the *RRCResume* includes the *radioBearerConfig*:
  - 2> perform the radio bearer configuration according to 5.3.5.6;
- 1> if the *RRCResume* message includes the *sk-Counter*:
  - 2> perform security key update procedure as specified in 5.3.5.7;
- 1> if the *RRCResume* message includes the *radioBearerConfig2*:
  - 2> perform the radio bearer configuration according to 5.3.5.6;
- 1> if the *RRCResume* message includes the *needForGapsConfigNR*:
  - 2> if *needForGapsConfigNR* is set to *setup*:
    - 3> consider itself to be configured to provide the measurement gap requirement information of NR target bands;
- 2> else:

- 3> consider itself not to be configured to provide the measurement gap requirement information of NR target bands;
  - 1> if the *RRCResume* message includes the *needForGapNCSG-ConfigNR*:
    - 2> if *needForGapNCSG-ConfigNR* is set to *setup*:
      - 3> consider itself to be configured to provide the measurement gap and NCSG requirement information of NR target bands;
    - 2> else:
      - 3> consider itself not to be configured to provide the measurement gap and NCSG requirement information of NR target bands;
  - 1> if the *RRCResume* message includes the *needForGapNCSG-ConfigEUTRA*:
    - 2> if *needForGapNCSG-ConfigEUTRA* is set to *setup*:
      - 3> consider itself to be configured to provide the measurement gap and NCSG requirement information of E-UTRA target bands;
    - 2> else:
      - 3> consider itself not to be configured to provide the measurement gap and NCSG requirement information of E-UTRA target bands;
  - 1> if the *RRCResume* message includes the *appLayerMeasConfig*:
    - 2> perform the application layer measurement configuration procedure as specified in 5.3.5.13d;
  - 1> if the *RRCResume* message includes the *sl-L2RemoteUE-Config* (i.e. the UE is a L2 U2N Remote UE):
    - 2> perform the L2 U2N Remote UE configuration procedure as specified in 5.3.5.16;
  - 1> if the *RRCResume* message includes the *sl-ConfigDedicatedNR*:
    - 2> perform the sidelink dedicated configuration procedure as specified in 5.3.5.14;
  - 1> resume SRB2 (if suspended), SRB3 (if configured), SRB4 (if configured), all DRBs (that are suspended) and multicast MRBs;
- NOTE 1: If the SCG is deactivated, resuming SRB3 and all DRBs does not imply that PDCP or RRC PDUs can be transmitted or received on SCG RLC bearers.
- 1> if stored, discard the cell reselection priority information provided by the *cellReselectionPriorities* or inherited from another RAT;
  - 1> stop timer T320, if running;
  - 1> if the *RRCResume* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> resume measurements if suspended;
  - 1> if T390 is running:
    - 2> stop timer T390 for all access categories;
    - 2> perform the actions as specified in 5.3.14.4;
  - 1> if T302 is running:
    - 2> stop timer T302;
    - 2> perform the actions as specified in 5.3.14.4;

- 1> enter RRC\_CONNECTED;
- 1> indicate to upper layers that the suspended RRC connection has been resumed;
- 1> stop the cell re-selection procedure;
- 1> stop relay reselection procedure if any for L2 U2N Remote UE;
- 1> consider the current cell to be the PCell;
- 1> set the content of the of *RRCResumeComplete* message as follows:
  - 2> if the upper layer provides NAS PDU, set the *dedicatedNAS-Message* to include the information received from upper layers;
  - 2> if upper layers provides a PLMN:
    - 3> if the UE is either allowed or instructed to access the PLMN via a cell for which at least one CAG ID is broadcast:
      - 4> set the *selectedPLMN-Identity* from the *nprn-IdentityInfoList*;
    - 3> else:
      - 4> set the *selectedPLMN-Identity* to the PLMN selected by upper layers from the *plmn-IdentityInfoList*;
  - 2> if the *masterCellGroup* contains the *reportUplinkTxDirectCurrent*:
    - 3> include the *uplinkTxDirectCurrentList* for each MCG serving cell with UL;
    - 3> include *uplinkDirectCurrentBWP-SUL* for each MCG serving cell configured with SUL carrier, if any, within the *uplinkTxDirectCurrentList*;
  - 2> if the *masterCellGroup* contains the *reportUplinkTxDirectCurrentTwoCarrier*:
    - 3> include in the *uplinkTxDirectCurrentTwoCarrierList* the list of uplink Tx DC locations for the configured uplink carrier aggregation in the MCG;
  - 2> if the *masterCellGroup* contains the *reportUplinkTxDirectCurrentMoreCarrier*:
    - 3> include in the *uplinkTxDirectCurrentMoreCarrierList* the list of uplink Tx DC locations for the configured uplink carrier aggregation in the MCG;
  - 2> if the UE has idle/inactive measurement information concerning cells other than the PCell available in *VarMeasIdleReport*:
    - 3> if the *idleModeMeasurementReq* is included in the *RRCResume* message:
      - 4> set the *measResultIdleEUTRA* in the *RRCResumeComplete* message to the value of *measReportIdleEUTRA* in the *VarMeasIdleReport*, if available;
      - 4> set the *measResultIdleNR* in the *RRCResumeComplete* message to the value of *measReportIdleNR* in the *VarMeasIdleReport*, if available;
      - 4> discard the *VarMeasIdleReport* upon successful delivery of the *RRCResumeComplete* message is confirmed by lower layers;
    - 3> else:
      - 4> if the SIB1 contains *idleModeMeasurementsNR* and the UE has NR idle/inactive measurement information concerning cells other than the PCell available in *VarMeasIdleReport*; or
      - 4> if the SIB1 contains *idleModeMeasurementsEUTRA* and the UE has E-UTRA idle/inactive measurement information available in *VarMeasIdleReport*:
        - 5> include the *idleMeasAvailable*;
  - 2> if the *RRCResume* message includes *mrdc-SecondaryCellGroup* set to *eutra-SCG*:

- 3> include in the *eutra-SCG-Response* the E-UTRA *RRCConnectionReconfigurationComplete* message in accordance with TS 36.331 [10] clause 5.3.5.3;
- 2> if the *RRCResume* message includes *mrdc-SecondaryCellGroup* set to *nr-SCG*:
  - 3> include in the *nr-SCG-Response* the SCG *RRCReconfigurationComplete* message;
- 2> if the UE has logged measurements available for NR and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
  - 3> include the *logMeasAvailable* in the *RRCResumeComplete* message;
  - 3> if Bluetooth measurement results are included in the logged measurements the UE has available for NR:
    - 4> include the *logMeasAvailableBT* in the *RRCResumeComplete* message;
  - 3> if WLAN measurement results are included in the logged measurements the UE has available for NR:
    - 4> include the *logMeasAvailableWLAN* in the *RRCResumeComplete* message;
- 2> if the *sigLoggedMeasType* in *VarLogMeasReport* is included:
  - 3> if T330 timer is running and the logged measurements configuration is for NR:
    - 4> set *sigLogMeasConfigAvailable* to *true* in the *RRCResumeComplete* message;
  - 3> else:
    - 4> if the UE has logged measurements available for NR:
      - 5> set *sigLogMeasConfigAvailable* to *false* in the *RRCResumeComplete* message;
- 2> if the UE has connection establishment failure or connection resume failure information available in *VarConnEstFailReport* or *VarConnEstFailReportList* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport* or in at least one of the entries of *VarConnEstFailReportList*:
  - 3> include *connEstFailInfoAvailable* in the *RRCResumeComplete* message;
- 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*; or
- 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* of TS 36.331 [10] and if the UE is capable of cross-RAT RLF reporting and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report* of TS 36.331 [10]:
  - 3> include *rlf-InfoAvailable* in the *RRCResumeComplete* message;
- 2> if the UE has successful handover information available in *VarSuccessHO-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarSuccessHO-Report*:
  - 3> include *successHO-InfoAvailable* in the *RRCResumeComplete* message;
- 2> if the UE supports storage of mobility history information and the UE has mobility history information available in *VarMobilityHistoryReport*:
  - 3> include the *mobilityHistoryAvail* in the *RRCResumeComplete* message;
- 2> if *speedStateReselectionPars* is configured in the *SIB2*:
  - 3> include the *mobilityState* in the *RRCResumeComplete* message and set it to the mobility state (as specified in TS 38.304 [20]) of the UE just prior to entering RRC\_CONNECTED state;
- 2> if the UE is configured to provide the measurement gap requirement information of NR target bands:
  - 3> include the *NeedForGapsInfoNR* and set the contents as follows:
    - 4> include *intraFreq-needForGap* and set the gap requirement information of intra-frequency measurement for each NR serving cell;

- 4> if *requestedTargetBandFilterNR* is configured, for each supported NR band that is also included in *requestedTargetBandFilterNR*, include an entry in *interFreq-needForGap* and set the gap requirement information for that band; otherwise, include an entry in *interFreq-needForGap* and set the corresponding gap requirement information for each supported NR band;
- 2> if the UE is configured to provide the measurement gap and NCSG requirement information of NR target bands:
  - 3> include the *NeedForGapNCSG-InfoNR* and set the contents as follows:
    - 4> include *intraFreq-needForNCSG* and set the gap and NCSG requirement information of intra-frequency measurement for each NR serving cell;
    - 4> if *requestedTargetBandFilterNCSG-NR* is configured:
      - 5> for each supported NR band included in *requestedTargetBandFilterNCSG-NR*, include an entry in *interFreq-needForNCSG* and set the NCSG requirement information for that band;
    - 4> else:
      - 5> include an entry for each supported NR band in *interFreq-needForNCSG* and set the corresponding NCSG requirement information;
  - 2> if the UE is configured to provide the measurement gap and NCSG requirement information of E-UTRA target bands:
    - 3> include the *NeedForGapNCSG-InfoEUTRA* and set the contents as follows:
      - 4> if *requestedTargetBandFilterNCSG-EUTRA* is configured:
        - 5> for each supported E-UTRA band included in *requestedTargetBandFilterNCSG-EUTRA*, include an entry in *needForNCSG-EUTRA* and set the NCSG requirement information for that band;
      - 4> else:
        - 5> include an entry for each supported E-UTRA band in *needForNCSG-EUTRA* and set the corresponding NCSG requirement information;
  - 1> submit the *RRCResumeComplete* message to lower layers for transmission;
  - 1> the procedure ends.

NOTE 2: Network only configures at most one of *reportUplinkTxDirectCurrent*, *reportUplinkTxDirectCurrentTwoCarrier* or *reportUplinkTxDirectCurrentMoreCarrier* in one RRC message.

### 5.3.13.5 Handling of failure to resume RRC Connection

The UE shall:

- 1> if timer T319 expires:
  - 2> if the UE supports multiple CEF report:
    - 3> if the UE has connection establishment failure information or connection resume failure information available in *VarConnEstFailReport* and if the RPLMN is equal to *plmn-identity* stored in *VarConnEstFailReport*; and
    - 3> if the cell identity of current cell is not equal to the cell identity stored in *measResultFailedCell* in *VarConnEstFailReport* and if the *maxCEFReport-r17* has not been reached:
      - 4> append the *VarConnEstFailReport* as a new entry in the *VarConnEstFailReportList*;
  - 2> if the UE has connection establishment failure information or connection resume failure information available in *VarConnEstFailReport* and if the RPLMN is not equal to *plmn-identity* stored in *VarConnEstFailReport*; or

- 2> if the cell identity of current cell is not equal to the cell identity stored in *measResultFailedCell* in *VarConnEstFailReport*:
    - 3> reset the *numberOfConnFail* to 0;
  - 2> if the UE has connection establishment failure information or connection resume failure information available in *VarConnEstFailReportList* and if the RPLMN is not equal to *plmn-identity* stored in any entry of *VarConnEstFailReportList*:
    - 3> clear the content included in *VarConnEstFailReportList*;
  - 2> clear the content included in *VarConnEstFailReport* except for the *numberOfConnFail*, if any;
  - 2> store the following connection resume failure information in the *VarConnEstFailReport* by setting its fields as follows:
    - 3> set the *plmn-Identity* to the PLMN selected by upper layers (see TS 24.501 [23]) from the PLMN(s) included in the *plmn-IdentityInfoList* in *SIB1*;
    - 3> set the *measResultFailedCell* to include the global cell identity, tracking area code, the cell level and SS/PBCH block level RSRP, and RSRQ, and SS/PBCH block indexes, of the failed cell based on the available SSB measurements collected up to the moment the UE detected connection resume failure;
    - 3> if available, set the *measResultNeighCells*, in order of decreasing ranking-criterion as used for cell reselection, to include neighbouring cell measurements for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency/ set of frequencies per RAT and according to the following:
      - 4> for each neighbour cell included, include the optional fields that are available;
- NOTE: The UE includes the latest results of the available measurements as used for cell reselection evaluation, which are performed in accordance with the performance requirements as specified in TS 38.133 [14].
- 3> if available, set the *locationInfo* as in 5.3.3.7;
  - 3> set *perRAInfoList* to indicate the performed random access procedure related information as specified in 5.7.10.5;
  - 3> if *numberOfConnFail* is smaller than 8:
    - 4> increment the *numberOfConnFail* by 1;
  - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'RRC Resume failure'.
- 1> else if upon receiving integrity check failure indication from lower layers while T319 is running:
    - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'RRC Resume failure'.
  - 1> else if indication from the MCG RLC that the maximum number of retransmissions has been reached is received while SDT procedure is ongoing; or
  - 1> if random access problem indication is received from MCG MAC while SDT procedure is ongoing; or
  - 1> if the lower layers indicate that *cg-SDT-TimeAlignmentTimer* or the *configuredGrantTimer* expired before receiving network response for the UL CG-SDT transmission with CCCH message while SDT procedure is ongoing; or
  - 1> if integrity check failure indication is received from lower layers while SDT procedure is ongoing; or
  - 1> if T319a expires:
    - 2> consider SDT procedure is not ongoing;
    - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'RRC Resume failure'.

The UE may discard the connection resume failure or connection establishment failure information, i.e. release the UE variable *VarConnEstFailReport* and the UE variable *VarConnEstFailReportList*, 48 hours after the last connection resume failure is detected.

The L2 U2N Relay UE either indicates to upper layers (to trigger PC5 unicast link release) or sends *NotificationMessageSidelink* message to the connected L2 U2N Remote UE(s) in accordance with 5.8.9.10.

#### 5.3.13.6 Cell re-selection or cell selection or L2 U2N relay (re)selection while T390, T319 or T302 is running or SDT procedure is ongoing (UE in RRC\_INACTIVE) or SRS transmission in RRC\_INACTIVE is configured

The UE shall:

- 1> if cell reselection occurs while T319 or T302 is running or while SDT procedure is ongoing; or
- 1> if relay (re)selection or cell selection by a L2 U2N Remote UE occurs while T319 is running; or
- 1> if cell changes due to relay reselection or cell selection by a L2 U2N Remote UE while T302 is running:
  - 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'RRC Resume failure';
- 1> else if cell selection or reselection occurs while T390 is running, or cell change due to relay selection or reselection occurs while T390 is running:
  - 2> stop T390 for all access categories;
  - 2> perform the actions as specified in 5.3.14.4.
- 1> else if cell reselection occurs when *srs-PosRRC-Inactive* is configured:
  - 2> indicate to the lower layer to stop *inactivePosSRS-TimeAlignmentTimer*;
  - 2> release the *srs-PosRRC-Inactive*.

#### 5.3.13.7 Reception of the *RRCSetup* by the UE

The UE shall:

- 1> perform the RRC connection setup procedure as specified in 5.3.3.4.

#### 5.3.13.8 RNA update

In RRC\_INACTIVE state, the UE shall:

- 1> if T380 expires; or
- 1> if RNA Update is triggered at reception of SIB1, as specified in 5.2.2.4.2:
  - 2> if T319 is not running and SDT procedure is not ongoing:
    - 3> initiate RRC connection resume procedure in 5.3.13.2 with *resumeCause* set to *rna-Update*;
- 1> if barring is alleviated for Access Category '8' or Access Category '2', as specified in 5.3.14.4:
  - 2> if upper layers do not request RRC the resumption of an RRC connection, and
  - 2> if the variable *pendingRNA-Update* is set to *true*:
    - 3> initiate RRC connection resume procedure in 5.3.13.2 with *resumeCause* value set to *rna-Update*.

If the UE in RRC\_INACTIVE state fails to find a suitable cell and camps on the acceptable cell to obtain limited service as defined in TS 38.304 [20], the UE shall:

- 1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'other'.

NOTE: It is left to UE implementation how to behave when T380 expires while the UE is camped neither on a suitable nor on an acceptable cell.

#### 5.3.13.9 Reception of the *RRCRelease* by the UE

The UE shall:

- 1> perform the actions as specified in 5.3.8.

#### 5.3.13.10 Reception of the *RRCReject* by the UE

The UE shall:

- 1> perform the actions as specified in 5.3.15.

#### 5.3.13.11 Inability to comply with *RRCResume*

The UE shall:

- 1> if the UE is unable to comply with (part of) the configuration included in the *RRCResume* message;
- 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with release cause 'RRC Resume failure'.

NOTE 1: The UE may apply above failure handling also in case the *RRCResume* message causes a protocol error for which the generic error handling as defined in 10 specifies that the UE shall ignore the message.

NOTE 2: If the UE is unable to comply with part of the configuration, it does not apply any part of the configuration, i.e. there is no partial success/failure.

#### 5.3.13.12 Inter RAT cell reselection

Upon reselecting to an inter-RAT cell, the UE shall:

- 1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other'.

### 5.3.14 Unified Access Control

#### 5.3.14.1 General

The purpose of this procedure is to perform access barring check for an access attempt associated with a given Access Category and one or more Access Identities upon request from upper layers according to TS 24.501 [23] or the RRC layer. This procedure does not apply to IAB-MT. This procedure does not apply to L2 U2N Relay UE initiating RRC connection establishment or RRC connection resume upon reception of any message from a L2 U2N remote UE via SL-RLC0 or SL-RLC1 in accordance to 5.3.3.1a or 5.3.13.1a.

After a PCell change in RRC\_CONNECTED the UE shall defer access barring checks until it has obtained *SIB1* (as specified in 5.2.2.2) from the target cell.

#### 5.3.14.2 Initiation

Upon initiation of the procedure, the UE shall:

- 1> if timer T390 is running for the Access Category:
  - 2> consider the access attempt as barred;
- 1> else if timer T302 is running and the Access Category is neither '2' nor '0':
  - 2> consider the access attempt as barred;
- 1> else:

- 2> if the Access Category is '0':
  - 3> consider the access attempt as allowed;
- 2> else:
  - 3> if *SIB1* includes *uac-BarringPerPLMN-List* that contains a *UAC-BarringPerPLMN* for the selected PLMN or SNPN:
    - 4> if the procedure in 5.2.2.4.2 for a selected PLMN resulted in use of information in *npn-IdentityInfoList* and *UAC-BarringPerPLMN* has an entry with the *plmn-IdentityIndex* corresponding to used information in this list:
      - 5> select the *UAC-BarringPerPLMN* entry with the *plmn-IdentityIndex* corresponding to used information in the *npn-IdentityInfoList*;
    - 4> else:
      - 5> select the *UAC-BarringPerPLMN* entry with the *plmn-IdentityIndex* corresponding to the selected PLMN and the *PLMN-IdentityInfo*, if any, or the selected SNPN and the *npn-IdentityInfoList*;
  - 3> if any *UAC-BarringPerPLMN* entry is selected:
    - 4> in the remainder of this procedure, use the selected *UAC-BarringPerPLMN* entry (i.e. presence or absence of access barring parameters in this entry) irrespective of the *uac-BarringForCommon* included in *SIB1*;
  - 3> else if *SIB1* includes *uac-BarringForCommon*:
    - 4> in the remainder of this procedure use the *uac-BarringForCommon* (i.e. presence or absence of these parameters) included in *SIB1*;
  - 3> else:
    - 4> consider the access attempt as allowed;
  - 3> if *uac-BarringForCommon* is applicable or the *uac-ACBarringListType* indicates that *uac-ExplicitACBarringList* is used:
    - 4> if the corresponding *UAC-BarringPerCatList* contains a *UAC-BarringPerCat* entry corresponding to the Access Category:
      - 5> select the *UAC-BarringPerCat* entry;
      - 5> if the *uac-BarringInfoSetList* contains a *UAC-BarringInfoSet* entry corresponding to the selected *uac-barringInfoSetIndex* in the *UAC-BarringPerCat*:
        - 6> select the *UAC-BarringInfoSet* entry;
        - 6> perform access barring check for the Access Category as specified in 5.3.14.5, using the selected *UAC-BarringInfoSet* as "UAC barring parameter";
      - 5> else:
        - 6> consider the access attempt as allowed;
    - 4> else:
      - 5> consider the access attempt as allowed;
  - 3> else if the *uac-ACBarringListType* indicates that *uac-ImplicitACBarringList* is used:
    - 4> select the *uac-BarringInfoSetIndex* corresponding to the Access Category in the *uac-ImplicitACBarringList*;
    - 4> if the *uac-BarringInfoSetList* contains the *UAC-BarringInfoSet* entry corresponding to the selected *uac-BarringInfoSetIndex*:

- 5> select the *UAC-BarringInfoSet* entry;
- 5> perform access barring check for the Access Category as specified in 5.3.14.5, using the selected *UAC-BarringInfoSet* as "UAC barring parameter";
- 4> else:
  - 5> consider the access attempt as allowed;
- 3> else:
  - 4> consider the access attempt as allowed;
- 1> if the access barring check was requested by upper layers:
  - 2> if the access attempt is considered as barred:
    - 3> if timer T302 is running:
      - 4> if timer T390 is running for Access Category '2':
        - 5> inform the upper layer that access barring is applicable for all access categories except categories '0', upon which the procedure ends;
      - 4> else
        - 5> inform the upper layer that access barring is applicable for all access categories except categories '0' and '2', upon which the procedure ends;
    - 3> else:
      - 4> inform upper layers that the access attempt for the Access Category is barred, upon which the procedure ends;
    - 2> else:
      - 3> inform upper layers that the access attempt for the Access Category is allowed, upon which the procedure ends;
  - 1> else:
    - 2> the procedure ends.

### 5.3.14.3 Void

### 5.3.14.4 T302, T390 expiry or stop (Barring alleviation)

The UE shall:

- 1> if timer T302 expires or is stopped:
  - 2> for each Access Category for which T390 is not running:
    - 3> consider the barring for this Access Category to be alleviated;
- 1> else if timer T390 corresponding to an Access Category other than '2' expires or is stopped, and if timer T302 is not running:
  - 2> consider the barring for this Access Category to be alleviated;
- 1> else if timer T390 corresponding to the Access Category '2' expires or is stopped:
  - 2> consider the barring for this Access Category to be alleviated;
- 1> when barring for an Access Category is considered being alleviated:
  - 2> if the Access Category was informed to upper layers as barred:

- 3> inform upper layers about barring alleviation for the Access Category.
- 2> if barring is alleviated for Access Category '8'; or
- 2> if barring is alleviated for Access Category '2':
- 3> perform actions specified in 5.3.13.8;

### 5.3.14.5 Access barring check

The UE shall:

- 1> if one or more Access Identities equal to 1, 2, 11, 12, 13, 14, or 15 are indicated according to TS 24.501 [23], and
- 1> if for at least one of these Access Identities the corresponding bit in the *uac-BarringForAccessIdentity* contained in "UAC barring parameter" is set to *zero*:
  - 2> consider the access attempt as allowed;
- 1> else:
  - 2> if the establishment of the RRC connection is the result of release with redirect with *mpsPriorityIndication* (either in NR or E-UTRAN); and
  - 2> if the bit corresponding to Access Identity 1 in the *uac-BarringForAccessIdentity* contained in the "UAC barring parameter" is set to *zero*:
    - 3> consider the access attempt as allowed;
  - 2> else if Access Identity 3 is indicated:
    - 3> if *uac-BarringFactorForAI3* is not included in "UAC barring parameter":
      - 4> consider the access attempt as allowed;
    - 3> else:
      - 4> draw a random number '*rand*' uniformly distributed in the range:  $0 \leq rand < 1$ ;
      - 4> if '*rand*' is lower than the value indicated by *uac-BarringFactorForAI3* included in "UAC barring parameter":
        - 5> consider the access attempt as allowed;
      - 4> else:
        - 5> consider the access attempt as barred;
  - 2> else:
    - 3> draw a random number '*rand*' uniformly distributed in the range:  $0 \leq rand < 1$ ;
    - 3> if '*rand*' is lower than the value indicated by *uac-BarringFactor* included in "UAC barring parameter":
      - 4> consider the access attempt as allowed;
    - 3> else:
      - 4> consider the access attempt as barred;
  - 1> if the access attempt is considered as barred:
    - 2> draw a random number '*rand*' that is uniformly distributed in the range  $0 \leq rand < 1$ ;
    - 2> start timer T390 for the Access Category with the timer value calculated as follows, using the *uac-BarringTime* included in "UAC barring parameter":

$$T390 = (0.7 + 0.6 * rand) * uac\text{-}BarringTime.$$

## 5.3.15 RRC connection reject

### 5.3.15.1 Initiation

The UE initiates the procedure upon the reception of *RRCReject* when the UE tries to establish or resume an RRC connection.

### 5.3.15.2 Reception of the *RRCReject* by the UE

The UE shall:

- 1> stop timer T300, if running;
- 1> stop timer T319, if running;
- 1> stop timer T319a, if running and consider SDT procedure is not ongoing;
- 1> stop timer T302, if running;
- 1> reset MAC and release the default MAC Cell Group configuration;
- 1> if *waitTime* is configured in the *RRCReject*:
  - 2> start timer T302, with the timer value set to the *waitTime*;
- 1> if *RRCReject* is received in response to a request from upper layers:
  - 2> inform the upper layer that access barring is applicable for all access categories except categories '0' and '2';
- 1> if *RRCReject* is received in response to an *RRCSetupRequest*:
  - 2> inform upper layers about the failure to setup the RRC connection, upon which the procedure ends;
- 1> else if *RRCReject* is received in response to an *RRCResumeRequest* or an *RRCResumeRequest1*:
  - 2> if resume is triggered by upper layers:
    - 3> inform upper layers about the failure to resume the RRC connection;
  - 2> if resume is triggered due to an RNA update; or
  - 2> if resume is triggered for SDT and T380 has expired:
    - 3> set the variable *pendingRNA-Update* to *true*;
  - 2> discard the current  $K_{gNB}$  key, the  $K_{RRCenc}$  key, the  $K_{RRCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key derived in accordance with 5.3.13.3;
  - 2> if resume is triggered for SDT:
    - 3> for SRB2, if it is resumed and for SRB1:
      - 4> trigger the PDCP entity to perform SDU discard as specified in TS 38.323 [5];
      - 4> re-establish the RLC entity as specified in TS 38.322 [4];
    - 3> for each DRB that is not suspended:
      - 4> indicate PDCP suspend to lower layers;
      - 4> re-establish the RLC entity as specified in TS 38.322 [4];
  - 2> suspend SRB1 and the radio bearers configured for SDT, if any;

2> the procedure ends.

Upon L2 U2N Relay UE receives *RRCReject*, it either indicates to upper layers (to trigger PC5 unicast link release) or sends *NotificationMessageSidelink* message to the connected L2 U2N Remote UE(s) in accordance with 5.8.9.10.

The RRC\_INACTIVE UE shall continue to monitor paging while the timer T302 is running.

NOTE: If timer T331 is running, the UE continues to perform idle/inactive measurements according to 5.7.8.

## 5.4 Inter-RAT mobility

### 5.4.1 Introduction

Network controlled inter-RAT mobility between NR and E-UTRA, where E-UTRA can be connected to either EPC or 5GC, and from NR to UTRA-FDD is supported.

### 5.4.2 Handover to NR

#### 5.4.2.1 General

**Figure 5.4.2.1-1: Handover to NR, successful**

The purpose of this procedure is to, under the control of the network, transfer a connection between the UE and another Radio Access Network (e.g. E-UTRAN) to NR.

The handover to NR procedure applies when SRBs, possibly in combination with DRBs, are established in another RAT. Handover from E-UTRA to NR applies only after integrity has been activated in E-UTRA.

#### 5.4.2.2 Initiation

The RAN using another RAT initiates the handover to NR procedure, in accordance with the specifications applicable for the other RAT, by sending the *RRCReconfiguration* message via the radio access technology from which the inter-RAT handover is performed.

The network applies the procedure as follows:

- to activate ciphering, possibly using NULL algorithm, if not yet activated in the other RAT;
- to re-establish SRBs and one or more DRBs;

#### 5.4.2.3 Reception of the *RRCReconfiguration* by the UE

The UE shall:

- 1> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the parameters for which values are provided in *SIB1*;
- 1> apply the default MAC Cell Group configuration as specified in 9.2.2;
- 1> perform RRC reconfiguration procedure as specified in 5.3.5;

NOTE: If the UE is connected to 5GC of the source E-UTRA cell, the delta configuration for PDCP and SDAP can be used for intra-system inter-RAT handover. For other cases, source RAT configuration is not considered when the UE applies the reconfiguration message of target RAT.

### 5.4.3 Mobility from NR

#### 5.4.3.1 General

Figure 5.4.3.1-1: Mobility from NR, successful

Figure 5.4.3.1-2: Mobility from NR, failure

The purpose of this procedure is to move a UE in RRC\_CONNECTED to a cell using other RAT, e.g. E-UTRA, UTRA-FDD. The mobility from NR procedure covers the following type of mobility:

- handover, i.e. the *MobilityFromNRCommand* message includes radio resources that have been allocated for the UE in the target cell;

#### 5.4.3.2 Initiation

The network initiates the mobility from NR procedure to a UE in RRC\_CONNECTED, possibly in response to a *MeasurementReport* or an *MCGFailureInformation* message, by sending a *MobilityFromNRCommand* message. The network applies the procedure as follows:

- the procedure is initiated only when AS security has been activated, and SRB2 with at least one DRB or multicast MRB have been setup and not suspended;
- the procedure is not initiated if any DAPS bearer is configured;

#### 5.4.3.3 Reception of the *MobilityFromNRCommand* by the UE

The UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> if T316 is running:
  - 2> stop timer T316;
  - 2> clear the information included in *VarRLF-Report*, if any;
- 1> if T390 is running:

- 2> stop timer T390 for all access categories;
- 2> perform the actions as specified in 5.3.14.4;
- 1> if the *targetRAT-Type* is set to *eutra*:
  - 2> consider inter-RAT mobility as initiated towards E-UTRA;
  - 2> forward the *nas-SecurityParamFromNR* to the upper layers, if included;
- 1> else if the *targetRAT-Type* is set to *utra-fdd*:
  - 2> consider inter-RAT mobility as initiated towards UTRA-FDD;
  - 2> forward the *nas-SecurityParamFromNR* to the upper layers, if included;
- 1> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT.

#### 5.4.3.4 Successful completion of the mobility from NR

Upon successfully completing the handover, at the source side the UE shall:

- 1> reset MAC;
- 1> stop all timers that are running except T325, T330 and T400;
- 1> release *ran-NotificationAreaInfo*, if stored;
- 1> release the AS security context including the  $K_{RRCCenc}$  key, the  $K_{RRCint}$  key, the  $K_{UPint}$  key and the  $K_{UPenc}$  key, if stored;
- 1> release all radio resources, including release of the RLC entity and the MAC configuration;
- 1> release the associated PDCP entity and SDAP entity for all established RBs;

NOTE : PDCP and SDAP configured by the source RAT prior to the handover that are reconfigured and re-used by target RAT when delta signalling (i.e., during inter-RAT intra-system handover when *fullConfig* is not present) is used, are not released as part of this procedure.

- 1> if the *targetRAT-Type* is set to *eutra* and the *nas-SecurityParamFromNR* is included: or
- 1> if the *targetRAT-Type* is set to *utra-fdd*:
  - 2> indicate the release of the RRC connection to upper layers together with the release cause 'other'.

#### 5.4.3.5 Mobility from NR failure

The UE shall:

- 1> if the UE does not succeed in establishing the connection to the target radio access technology:
  - 2> if the *targetRAT-Type* in the received *MobilityFromNRCommand* is set to *eutra* and the UE supports Radio Link Failure Report for Inter-RAT MRO EUTRA:
    - 3> store handover failure information in *VarRLF-Report* according to 5.3.10.5;
  - 2> if *voiceFallbackIndication* is included in the *MobilityFromNRCommand* message; or
  - 2> if the mobility from NR procedure is for emergency services fallback as specified in TS 23.502 [43]:
    - 3> attempt to select an E-UTRA cell:
      - 4> if a suitable E-UTRA cell is selected; or
      - 4> if no suitable E-UTRA cell is available and an acceptable E-UTRA cell supporting emergency call is selected when the UE has an ongoing emergency call:

5> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure';

4> else:

5> revert back to the configuration used in the source PCell;

5> initiate the connection re-establishment procedure as specified in clause 5.3.7;

NOTE: It is left to UE implementation to determine whether the mobility from NR procedure is for emergency services fallback as specified in TS 23.502 [43].

2> else:

3> revert back to the configuration used in the source PCell;

3> initiate the connection re-establishment procedure as specified in clause 5.3.7;

1> else if the UE is unable to comply with any part of the configuration included in the *MobilityFromNRCommand* message; or

1> if there is a protocol error in the inter RAT information included in the *MobilityFromNRCommand* message, causing the UE to fail the procedure according to the specifications applicable for the target RAT:

2> if the *targetRAT-Type* in the received *MobilityFromNRCommand* is set to *eutra* and the UE supports Radio Link Failure Report for Inter-RAT MRO EUTRA:

3> store handover failure information in *VarRLF-Report* according to 5.3.10.5;

2> revert back to the configuration used in the source PCell;

2> initiate the connection re-establishment procedure as specified in clause 5.3.7.

## 5.5 Measurements

### 5.5.1 Introduction

The network may configure an RRC\_CONNECTED UE to perform measurements. The network may configure the UE to report them in accordance with the measurement configuration or perform conditional reconfiguration evaluation in accordance with the conditional reconfiguration. The measurement configuration is provided by means of dedicated signalling i.e. using the *RRCReconfiguration* or *RRCResume*.

The network may configure the UE to perform the following types of measurements:

- NR measurements;
- Inter-RAT measurements of E-UTRA frequencies;
- Inter-RAT measurements of UTRA-FDD frequencies;
- NR sidelink measurements of L2 U2N Relay UEs.

The network may configure the UE to report the following measurement information based on SS/PBCH block(s):

- Measurement results per SS/PBCH block;
- Measurement results per cell based on SS/PBCH block(s);
- SS/PBCH block(s) indexes.

The network may configure the UE to report the following measurement information based on CSI-RS resources:

- Measurement results per CSI-RS resource;
- Measurement results per cell based on CSI-RS resource(s);

- CSI-RS resource measurement identifiers.

The network may configure the UE to perform the following types of measurements for NR sidelink and V2X sidelink:

- CBR measurements.

The network may configure the UE to report the following CLI measurement information based on SRS resources:

- Measurement results per SRS resource;
- SRS resource(s) indexes.

The network may configure the UE to report the following CLI measurement information based on CLI-RSSI resources:

- Measurement results per CLI-RSSI resource;
- CLI-RSSI resource(s) indexes.

The network may configure the UE to report the following Rx-Tx time difference measurement information based on CSI-RS for tracking or PRS:

- UE Rx-Tx time difference measurement result.

The measurement configuration includes the following parameters:

**1. Measurement objects:** A list of objects on which the UE shall perform the measurements.

- For intra-frequency and inter-frequency measurements a measurement object indicates the frequency/time location and subcarrier spacing of reference signals to be measured. Associated with this measurement object, the network may configure a list of cell specific offsets, a list of 'exclude-listed' cells and a list of 'allow-listed' cells. Exclude-listed cells are not applicable in event evaluation or measurement reporting. Allow-listed cells are the only ones applicable in event evaluation or measurement reporting.
- The *measObjectId* of the MO which corresponds to each serving cell is indicated by *servingCellMO* within the serving cell configuration.
- For inter-RAT E-UTRA measurements a measurement object is a single E-UTRA carrier frequency. Associated with this E-UTRA carrier frequency, the network can configure a list of cell specific offsets and a list of 'exclude-listed' cells. Exclude-listed cells are not applicable in event evaluation or measurement reporting.
- For inter-RAT UTRA-FDD measurements a measurement object is a set of cells on a single UTRA-FDD carrier frequency.
- For NR sidelink measurements of L2 U2N Relay UEs, a measurement object is a single NR sidelink frequency to be measured.
- For CBR measurement of NR sidelink communication, a measurement object is a set of transmission resource pool(s) on a single carrier frequency for NR sidelink communication.
- For CBR measurement of NR sidelink discovery, a measurement object is a set of discovery dedicated resource pool(s) or transmission resource pool(s) also used for NR sidelink discovery on a single carrier frequency for NR sidelink discovery.
- For CLI measurements a measurement object indicates the frequency/time location of SRS resources and/or CLI-RSSI resources, and subcarrier spacing of SRS resources to be measured.

**2. Reporting configurations:** A list of reporting configurations where there can be one or multiple reporting configurations per measurement object. Each measurement reporting configuration consists of the following:

- Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.
- RS type: The RS that the UE uses for beam and cell measurement results (SS/PBCH block or CSI-RS).

- Reporting format: The quantities per cell and per beam that the UE includes in the measurement report (e.g. RSRP) and other associated information such as the maximum number of cells and the maximum number beams per cell to report.

In case of conditional reconfiguration, each configuration consists of the following:

- Execution criteria: The criteria the UE uses for conditional reconfiguration execution.
- RS type: The RS that the UE uses for obtaining beam and cell measurement results (SS/PBCH block-based or CSI-RS-based), used for evaluating conditional reconfiguration execution condition.

- 3. Measurement identities:** For measurement reporting, a list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities, it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is also included in the measurement report that triggered the reporting, serving as a reference to the network. For conditional reconfiguration triggering, one measurement identity links to exactly one conditional reconfiguration trigger configuration. And up to 2 measurement identities can be linked to one conditional reconfiguration execution condition.
- 4. Quantity configurations:** The quantity configuration defines the measurement filtering configuration used for all event evaluation and related reporting, and for periodical reporting of that measurement. For NR measurements, the network may configure up to 2 quantity configurations with a reference in the NR measurement object to the configuration that is to be used. In each configuration, different filter coefficients can be configured for different measurement quantities, for different RS types, and for measurements per cell and per beam.

- 5. Measurement gaps:** Periods that the UE may use to perform measurements.

A UE in RRC\_CONNECTED maintains a measurement object list, a reporting configuration list, and a measurement identities list according to signalling and procedures in this specification. The measurement object list possibly includes NR measurement object(s), CLI measurement object(s), inter-RAT objects, and L2 U2N Relay objects. Similarly, the reporting configuration list includes NR, inter-RAT, and L2 U2N Relay reporting configurations. Any measurement object can be linked to any reporting configuration of the same RAT type. Some reporting configurations may not be linked to a measurement object. Likewise, some measurement objects may not be linked to a reporting configuration.

The measurement procedures distinguish the following types of cells:

1. The NR serving cell(s) – these are the SpCell and one or more SCells.
2. Listed cells – these are cells listed within the measurement object(s).
3. Detected cells – these are cells that are not listed within the measurement object(s) but are detected by the UE on the SSB frequency(ies) and subcarrier spacing(s) indicated by the measurement object(s).

For NR measurement object(s), the UE measures and reports on the serving cell(s)/serving Relay UE (for L2 U2N Remote UE), listed cells and/or detected cells. For inter-RAT measurements object(s) of E-UTRA, the UE measures and reports on listed cells and detected cells and, for RSSI and channel occupancy measurements, the UE measures and reports on the configured resources on the indicated frequency. For inter-RAT measurements object(s) of UTRA-FDD, the UE measures and reports on listed cells. For CLI measurement object(s), the UE measures and reports on configured measurement resources (i.e. SRS resources and/or CLI-RSSI resources). For L2 U2N Relay object(s), the UE measures and reports on the serving NR cell(s), as well as the discovered L2 U2N Relay UEs.

Whenever the procedural specification, other than contained in clause 5.5.2, refers to a field it concerns a field included in the *VarMeasConfig* unless explicitly stated otherwise i.e. only the measurement configuration procedure covers the direct UE action related to the received *measConfig*.

In NR-DC, the UE may receive two independent *measConfig*:

- a *measConfig*, associated with MCG, that is included in the *RRCReconfiguration* message received via SRB1; and
- a *measConfig*, associated with SCG, that is included in the *RRCReconfiguration* message received via SRB3, or, alternatively, included within a *RRCReconfiguration* message embedded in a *RRCReconfiguration* message received via SRB1.

In this case, the UE maintains two independent *VarMeasConfig* and *VarMeasReportList*, one associated with each *measConfig*, and independently performs all the procedures in clause 5.5 for each *measConfig* and the associated *VarMeasConfig* and *VarMeasReportList*, unless explicitly stated otherwise.

The configurations related to CBR measurements are only included in the *measConfig* associated with MCG.

The configurations related to Rx-Tx time difference measurement are only included in the *measConfig* associated with MCG.

## 5.5.2 Measurement configuration

### 5.5.2.1 General

The network applies the procedure as follows:

- to ensure that, whenever the UE has a *measConfig* associated with a CG, it includes a *measObject* for the SpCell and for each NR SCell of the CG to be measured;
- to configure at most one measurement identity across all CGs using a reporting configuration with the *reportType* set to *reportCGI*;
- to configure at most one measurement identity per the node hosting PDCP entity using a reporting configuration with the *ul-DelayValueConfig*;
- to configure at most one measurement identity per the node hosting PDCP entity using a reporting configuration with the *ul-ExcessDelayConfig*;
- to ensure that, in the *measConfig* associated with a CG:
  - for all SSB based measurements there is at most one measurement object with the same *ssbFrequency*;
  - an *smtc1* included in any measurement object with the same *ssbFrequency* has the same value and that an *smtc2* included in any measurement object with the same *ssbFrequency* has the same value and that an *smtc3list* included in any measurement object with the same *ssbFrequency* has the same value and that an *smtc4list* included in any measurement object with the same *ssbFrequency* has the same value;
- to ensure that all measurement objects configured in this specification and in TS 36.331 [10] with the same *ssbFrequency* have the same *ssbSubcarrierSpacing*;
- to ensure that, if a measurement object associated with the MCG has the same *ssbFrequency* as a measurement object associated with the SCG:
  - for that *ssbFrequency*, the measurement window according to the *smtc1* configured by the MCG includes the measurement window according to the *smtc1* configured by the SCG, or vice-versa, with an accuracy of the maximum receive timing difference specified in TS 38.133 [14].
  - if both measurement objects are used for RSSI measurements, bits in *measurementSlots* in both objects corresponding to the same slot are set to the same value. Also, the *endSymbol* is the same in both objects.
- to ensure that, if a measurement object has the same *ssbFrequency* as a measurement object configured in TS 36.331 [10]:
  - for that *ssbFrequency*, the measurement window according to the *smtc* configured in TS 36.331 [10] includes the measurement window according to the *smtc1* configured in TS 38.331, or vice-versa, with an accuracy of the maximum receive timing difference specified in TS 38.133 [14].
  - if both measurement objects are used for RSSI measurements, bits in *measurementSlots* in both objects corresponding to the same slot are set to the same value. Also, the *endSymbol* is the same in both objects.
- when the UE is in NE-DC, NR-DC, or NR standalone, to configure at most one measurement identity across all CGs using a reporting configuration with the *reportType* set to *reportSFTD*;

For CSI-RS resources, the network applies the procedure as follows:

- to ensure that all CSI-RS resources configured in each measurement object have the same center frequency, ( $startPRB + \text{floor}(nrofPRBs/2)$ )
- to ensure that the total number of CSI-RS resources configured in each measurement object does not exceed the maximum number specified in TS 38.214 [19].

The UE shall:

- 1> if the received *measConfig* includes the *measObjectToRemoveList*:
  - 2> perform the measurement object removal procedure as specified in 5.5.2.4;
- 1> if the received *measConfig* includes the *measObjectToAddModList*:
  - 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;
- 1> if the received *measConfig* includes the *reportConfigToRemoveList*:
  - 2> perform the reporting configuration removal procedure as specified in 5.5.2.6;
- 1> if the received *measConfig* includes the *reportConfigToAddModList*:
  - 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;
- 1> if the received *measConfig* includes the *quantityConfig*:
  - 2> perform the quantity configuration procedure as specified in 5.5.2.8;
- 1> if the received *measConfig* includes the *measIdToRemoveList*:
  - 2> perform the measurement identity removal procedure as specified in 5.5.2.2;
- 1> if the received *measConfig* includes the *measIdToAddModList*:
  - 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;
- 1> if the received *measConfig* includes the *measGapConfig*:
  - 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;
- 1> if the received *measConfig* includes the *measGapSharingConfig*:
  - 2> perform the measurement gap sharing configuration procedure as specified in 5.5.2.11;
- 1> if the received *measConfig* includes the *s-MeasureConfig*:
  - 2> if *s-MeasureConfig* is set to *ssb-RSRP*, set parameter *ssb-RSRP* of *s-MeasureConfig* within *VarMeasConfig* to the threshold value of the RSRP indicated by the received value of *s-MeasureConfig* which is derived as specified in 6.3.2;
  - 2> else, set parameter *csi-RSRP* of *s-MeasureConfig* within *VarMeasConfig* to the threshold value of the RSRP indicated by the received value of *s-MeasureConfig* which is derived as specified in 6.3.2.

### 5.5.2.2 Measurement identity removal

The UE shall:

- 1> for each *measId* included in the received *measIdToRemoveList* that is part of the current UE configuration in *VarMeasConfig*:
  - 2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;
  - 2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
  - 2> stop the periodical reporting timer or timer T321 or timer T322, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*.

NOTE: The UE does not consider the message as erroneous if the *measIdToRemoveList* includes any *measId* value that is not part of the current UE configuration.

### 5.5.2.3 Measurement identity addition/modification

The network applies the procedure as follows:

- configure a *measId* only if the corresponding measurement object, the corresponding reporting configuration and the corresponding quantity configuration, are configured.

The UE shall:

- 1> for each *measId* included in the received *measIdToAddModList*:
  - 2> if an entry with the matching *measId* exists in the *measIdList* within the *VarMeasConfig*:
    - 3> replace the entry with the value received for this *measId*;
  - 2> else:
    - 3> add a new entry for this *measId* to the *measIdList* within the *VarMeasConfig*;
  - 2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
  - 2> stop the periodical reporting timer or timer T321 or timer T322, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

NOTE 1: If the *measId* associated with *reportConfig* for conditional reconfiguration is modified, the conditions are considered to be not fulfilled as specified in 5.3.5.13.4.

- 2> if the *reportType* is set to *reportCGI* in the *reportConfig* associated with this *measId*:
  - 3> if the *measObject* associated with this *measId* concerns E-UTRA:
    - 4> if the *useAutonomousGaps* is included in the *reportConfig* associated with this *measId*:
      - 5> start timer T321 with the timer value set to 200 ms for this *measId*;
    - 4> else:
      - 5> start timer T321 with the timer value set to 1 second for this *measId*;
  - 3> if the *measObject* associated with this *measId* concerns NR:
    - 4> if the *measObject* associated with this *measId* concerns FR1:
      - 5> if the *useAutonomousGaps* is included in the *reportConfig* associated with this *measId*:
        - 6> if the UE is a RedCap UE with 1 Rx branch
          - 7> start timer T321 with the timer value set to 3 seconds for this *measId*;
        - 6> else
          - 7> start timer T321 with the timer value set to 2 seconds for this *measId*;
      - 5> else:
        - 6> start timer T321 with the timer value set to 2 seconds for this *measId*;
    - 4> if the *measObject* associated with this *measId* concerns FR2:
      - 5> if the *useAutonomousGaps* is included in the *reportConfig* associated with this *measId*:
        - 6> if the UE is a RedCap UE with 1 Rx branch
          - 7> start timer T321 with the timer value set to 6 seconds for this *measId*;

- 6> else
  - 7> start timer T321 with the timer value set to 5 seconds for this *measId*;
- 5> else:
  - 6> start timer T321 with the timer value set to 16 seconds for this *measId*.
- 2> if the *reportType* is set to *reportSFTD* in the *reportConfigNR* associated with this *measId* and the *drx-SFTD-NeighMeas* is included:
  - 3> if the *measObject* associated with this *measId* concerns FR1:
    - 4> start timer T322 with the timer value set to 3 seconds for this *measId*;
  - 3> if the *measObject* associated with this *measId* concerns FR2:
    - 4> start timer T322 with the timer value set to 24 seconds for this *measId*.

#### 5.5.2.4 Measurement object removal

The UE shall:

- 1> for each *measObjectId* included in the received *measObjectToRemoveList* that is part of *measObjectList* in *VarMeasConfig*:
  - 2> remove the entry with the matching *measObjectId* from the *measObjectList* within the *VarMeasConfig*;
  - 2> remove all *measId* associated with this *measObjectId* from the *measIdList* within the *VarMeasConfig*, if any;
  - 2> if a *measId* is removed from the *measIdList*:
    - 3> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
    - 3> stop the periodical reporting timer or timer T321 or timer T322, whichever is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*.

NOTE: The UE does not consider the message as erroneous if the *measObjectToRemoveList* includes any *measObjectId* value that is not part of the current UE configuration.

#### 5.5.2.5 Measurement object addition/modification

The UE shall:

- 1> for each *measObjectId* included in the received *measObjectToAddModList*:
  - 2> if an entry with the matching *measObjectId* exists in the *measObjectList* within the *VarMeasConfig*, for this entry:
    - 3> reconfigure the entry with the value received for this *measObject*, except for the fields *cellsToAddModList*, *excludedCellsToAddModList*, *allowedCellsToAddModList*, *cellsToRemoveList*, *excludedCellsToRemoveList*, *allowedCellsToRemoveList*, *tx-PoolMeasToRemoveList*, *tx-PoolMeasToAddModList*, *ssb-PositionQCL-CellsToRemoveList*, *ssb-PositionQCL-CellsToAddModList*, *cca-CellsToRemoveList*, and *cca-CellsToAddModList*;
  - 3> if the received *measObject* includes the *cellsToRemoveList*:
    - 4> for each *physCellId* included in the *cellsToRemoveList*:
      - 5> remove the entry with the matching *physCellId* from the *cellsToAddModList*;
  - 3> if the received *measObject* includes the *cellsToAddModList*:
    - 4> for each *physCellId* value included in the *cellsToAddModList*:
      - 5> if an entry with the matching *physCellId* exists in the *cellsToAddModList*:

- 6> replace the entry with the value received for this *physCellId*;
- 5> else:
  - 6> add a new entry for the received *physCellId* to the *cellsToAddModList*;
- 3> if the received *measObject* includes the *excludedCellsToRemoveList*:
  - 4> for each *pci-RangeIndex* included in the *excludedCellsToRemoveList*:
    - 5> remove the entry with the matching *pci-RangeIndex* from the *excludedCellsToAddModList*;

NOTE 1: For each *pci-RangeIndex* included in the *excludedCellsToRemoveList* that concerns overlapping ranges of cells, a cell is removed from the exclude-list of cells only if all PCI ranges containing it are removed.

- 3> if the received *measObject* includes the *excludedCellsToAddModList*:
  - 4> for each *pci-RangeIndex* included in the *excludedCellsToAddModList*:
    - 5> if an entry with the matching *pci-RangeIndex* is included in the *excludedCellsToAddModList*:
      - 6> replace the entry with the value received for this *pci-RangeIndex*;
    - 5> else:
      - 6> add a new entry for the received *pci-RangeIndex* to the *excludedCellsToAddModList*;
- 3> if the received *measObject* includes the *allowedCellsToRemoveList*:
  - 4> for each *pci-RangeIndex* included in the *allowedCellsToRemoveList*:
    - 5> remove the entry with the matching *pci-RangeIndex* from the *allowedCellsToAddModList*;

NOTE2: For each *pci-RangeIndex* included in the *allowedCellsToRemoveList* that concerns overlapping ranges of cells, a cell is removed from the allow-list of cells only if all PCI ranges containing it are removed.

- 3> if the received *measObject* includes the *allowedCellsToAddModList*:
  - 4> for each *pci-RangeIndex* included in the *allowedCellsToAddModList*:
    - 5> if an entry with the matching *pci-RangeIndex* is included in the *allowedCellsToAddModList*:
      - 6> replace the entry with the value received for this *pci-RangeIndex*;
    - 5> else:
      - 6> add a new entry for the received *pci-RangeIndex* to the *allowedCellsToAddModList*
- 3> for each *measId* associated with this *measObjectId* in the *measIdList* within the *VarMeasConfig*, if any:
  - 4> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
  - 4> stop the periodical reporting timer or timer T321 or timer T322, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;
- 3> if the received *measObject* includes the *tx-PoolMeasToRemoveList*:
  - 4> for each transmission resource pool indicated in *tx-PoolMeasToRemoveList*:
    - 5> remove the entry with the matching identity of the transmission resource pool from the *tx-PoolMeasToAddModList*;
- 3> if the received *measObject* includes the *tx-PoolMeasToAddModList*:
  - 4> for each transmission resource pool indicated in *tx-PoolMeasToAddModList*:
    - 5> if an entry with the matching identity of the transmission resource pool exists in the *tx-PoolMeasToAddModList*:

- 6> replace the entry with the value received for this transmission resource pool;
- 5> else:
  - 6> add a new entry for the received identity of the transmission resource pool to the *tx-PoolMeasToAddModList*;
- 3> if the received *measObject* includes the *ssb-PositionQCL-CellsToRemoveList*:
  - 4> for each *physCellId* included in the *ssb-PositionQCL-CellsToRemoveList*:
    - 5> remove the entry with the matching *physCellId* from the *ssb-PositionQCL-CellsToAddModList*;
- 3> if the received *measObject* includes the *ssb-PositionQCL-CellsToAddModList*:
  - 4> for each *physCellId* included in the *ssb-PositionQCL-CellsToAddModList*:
    - 5> if an entry with the matching *physCellId* exists in the *ssb-PositionQCL-CellsToAddModList*:
      - 6> replace the entry with the value received for this *physCellId*;
    - 5> else:
      - 6> add a new entry for the received *physCellId* to the *ssb-PositionQCL-CellsToAddModList*;
- 3> if the received *measObject* includes the *cca-CellsToRemoveList*:
  - 4> for each *physCellId* included in the *cca-CellsToRemoveList*:
    - 5> remove the entry with the matching *physCellId* from the *cca-CellsToAddModList*;
- 3> if the received *measObject* includes the *cca-CellsToAddModList*:
  - 4> for each *physCellId* included in the *cca-CellsToAddModList*:
    - 5> if an entry with the matching *physCellId* exists in the *cca-CellsToAddModList*:
      - 6> replace the entry with the value received for this *physCellId*;
    - 5> else:
      - 6> add a new entry for the received *physCellId* to the *cca-CellsToAddModList*;
- 2> else:
  - 3> add a new entry for the received *measObject* to the *measObjectList* within *VarMeasConfig*.

### 5.5.2.6 Reporting configuration removal

The UE shall:

- 1> for each *reportConfigId* included in the received *reportConfigToRemoveList* that is part of the current UE configuration in *VarMeasConfig*:
  - 2> remove the entry with the matching *reportConfigId* from the *reportConfigList* within the *VarMeasConfig*;
  - 2> remove all *measId* associated with the *reportConfigId* from the *measIdList* within the *VarMeasConfig*, if any;
  - 2> if a *measId* is removed from the *measIdList*:
    - 3> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
  - 3> stop the periodical reporting timer or timer T321 or timer T322, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*.

NOTE: The UE does not consider the message as erroneous if the *reportConfigToRemoveList* includes any *reportConfigId* value that is not part of the current UE configuration.

### 5.5.2.7 Reporting configuration addition/modification

The UE shall:

- 1> for each *reportConfigId* included in the received *reportConfigToAddModList*:
  - 2> if an entry with the matching *reportConfigId* exists in the *reportConfigList* within the *VarMeasConfig*, for this entry:
    - 3> reconfigure the entry with the value received for this *reportConfig*;
  - 3> for each *measId* associated with this *reportConfigId* included in the *measIdList* within the *VarMeasConfig*, if any:
    - 4> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
    - 4> stop the periodical reporting timer or timer T321 or timer T322, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;
- 2> else:
  - 3> add a new entry for the received *reportConfig* to the *reportConfigList* within the *VarMeasConfig*.

### 5.5.2.8 Quantity configuration

The UE shall:

- 1> for each RAT for which the received *quantityConfig* includes parameter(s):
  - 2> set the corresponding parameter(s) in *quantityConfig* within *VarMeasConfig* to the value of the received *quantityConfig* parameter(s);
- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
  - 2> stop the periodical reporting timer or timer T321 or timer T322, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*.

### 5.5.2.9 Measurement gap configuration

The UE shall:

- 1> if *gapFR1* is set to *setup*:
  - 2> if an FR1 measurement gap configuration configured by *gapFR1* is already setup, release the FR1 measurement gap configuration;
  - 2> setup the FR1 measurement gap configuration indicated by the *gapFR1* in accordance with the received *gapOffset*, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:
$$\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);$$
$$\text{subframe} = \text{gapOffset mod } 10;$$
with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];
  - 2> apply the specified timing advance *mgta* to the gap occurrences calculated above (i.e. the UE starts the measurement *mgta* ms before the gap subframe occurrences);
- 1> else if *gapFR1* is set to *release*:
  - 2> release the FR1 measurement gap configuration configured by *gapFR1*;
- 1> if *gapFR2* is set to *setup*:

- 2> if an FR2 measurement gap configuration configured by *gapFR2* is already setup, release the FR2 measurement gap configuration;
- 2> setup the FR2 measurement gap configuration indicated by the *gapFR2* in accordance with the received *gapOffset*, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:
  - $\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);$
  - $\text{subframe} = \text{gapOffset mod } 10;$
  - with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];
- 2> apply the specified timing advance *mgta* to the gap occurrences calculated above (i.e. the UE starts the measurement *mgta* ms before the gap subframe occurrences);
- 1> else if *gapFR2* is set to *release*:
  - 2> release the FR2 measurement gap configuration configured by *gapFR2*;
- 1> if *gapUE* is set to *setup*:
  - 2> if a per UE measurement gap configuration configured by *gapUE* is already setup, release the per UE measurement gap configuration;
  - 2> setup the per UE measurement gap configuration indicated by the *gapUE* in accordance with the received *gapOffset*, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:
    - $\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);$
    - $\text{subframe} = \text{gapOffset mod } 10;$
    - with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];
  - 2> apply the specified timing advance *mgta* to the gap occurrences calculated above (i.e. the UE starts the measurement *mgta* ms before the gap subframe occurrences);
- 1> else if *gapUE* is set to *release*:
  - 2> release the per UE measurement gap configuration configured by *gapUE*.
- 1> for each *measGapId* included in the received *gapToReleaseList*:
  - 2> release the measurement gap configuration associated with the *measGapId*;
- 1> for each *measPosPreConfigGapId* included in the received *posMeasGapPreConfigToReleaseList*:
  - 2> release the measurement gap configuration associated with the *measPosPreConfigGapId*;
- 1> for each *GapConfig* received in *gapToAddModList*:
  - 2> setup measurement gap configuration indicated by the *GapConfig* in accordance with the received *gapOffset*, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:
    - $\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);$
    - $\text{subframe} = \text{gapOffset mod } 10;$
    - with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];
  - 2> apply the specified timing advance *mgta* to the gap occurrences calculated above (i.e. the UE starts the measurement *mgta* ms before the gap subframe occurrences);
  - 2> apply the measurement gap as per UE measurement gap, FR1 measurement gap, or FR2 measurement gap according to the *gapType* indicated by the *GapConfig*;
  - 2> associate the measurement gap with the *measGapId* indicated by the *GapConfig*;

- 2> if *gapSharing* in the *GapConfig* is present:
  - 3> setup the gap sharing configuration for the measurement gap in accordance with the received *gapSharing* as defined in TS 38.133 [14];
- 2> else:
  - 3> release the gap sharing configuration (if configured) for the measurement gap;
- 1> for each *PosGapConfig* received in *PosMeasGapPreConfigToAddModList*:
  - 2> if a measurement gap configuration associated with the *measPosPreConfigGapId* indicated by the *PosGapConfig* is already setup:
    - 3> release the measurement gap configuration;
  - 2> setup measurement gap configuration indicated by the *PosGapConfig* in accordance with the received *gapOffset*, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:
    - SFN mod  $T = \text{FLOOR}(\text{gapOffset}/10)$ ;
    - subframe = *gapOffset* mod 10;
    - with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];
  - 2> apply the specified timing advance *mgta* to the gap occurrences calculated above (i.e. the UE starts the measurement *mgta* ms before the gap subframe occurrences);
  - 2> configure the measurement gap as indicated by *gapType*;
- 1> for each FR1, FR2, and per UE measurement gap that is setup:
  - 2> if the measurement gap is configured by *GapConfig* and *preConfigInd-r17* in the corresponding *GapConfig* is present:
    - 3> determine whether the measurement gap is activated or not according to TS 38.133 [14];
  - 2> else if the measurement gap is configured by *PosGapConfig*:
    - 3> consider the measurement gap to be deactivated;
  - 2> else:
    - 3> consider the measurement gap to be activated.

NOTE 1: For FR2 gap configuration with synchronous CA, for the UE in NE-DC or NR-DC, the SFN and subframe of the serving cell indicated by the *refServCellIndicator* is used in the gap calculation. Otherwise, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation

NOTE 2: For FR1 gap or per UE gap configuration, for the UE in NE-DC or NR-DC, the SFN and subframe of the serving cell indicated by the *refServCellIndicator* is used in the gap calculation. Otherwise, the SFN and subframe of the PCell is used in the gap calculation.

NOTE 3: For FR2 gap configuration with asynchronous CA, for the UE in NE-DC or NR-DC, the SFN and subframe of the serving cell indicated by the *refServCellIndicator* and *refFR2ServCellAsyncCA* is used in the gap calculation. Otherwise, the SFN and subframe of a serving cell on FR2 frequency indicated by the *refFR2ServCellAsyncCA* is used in the gap calculation

#### 5.5.2.10 Reference signal measurement timing configuration

The UE shall setup the first SS/PBCH block measurement timing configuration (SMTTC) in accordance with the received *periodicityAndOffset* parameter (providing *Periodicity* and *Offset* value for the following condition) in the *SSB-MTC* configuration. The first subframe of each SMTTC occasion occurs at an SFN and subframe of the NR SpCell meeting the following condition:

$\text{SFN mod } T = (\text{FLOOR}(\text{Offset}/10));$

if the *Periodicity* is larger than *sf5*:

subframe = *Offset* mod 10;

else:

subframe = *Offset* or (*Offset* + 5);

with  $T = \text{CEIL}(\text{Periodicity}/10)$ .

If *smtc2* is present, for cells indicated in the *pci-List* parameter in *smtc2* in the same *MeasObjectNR*, the UE shall setup an additional SS/PBCH block measurement timing configuration (SMTC) in accordance with the received *periodicity* parameter in the *smtc2* configuration and use the *Offset* (derived from parameter *periodicityAndOffset*) and *duration* parameter from the *smtc1* configuration. The first subframe of each SMTC occasion occurs at an SFN and subframe of the NR SpCell meeting the above condition.

If *smtc2-LP* is present, for cells indicated in the *pci-List* parameter in *smtc2-LP* in the same frequency (for intra frequency cell reselection) or different frequency (for inter frequency cell reselection), the UE shall setup an additional SS/PBCH block measurement timing configuration (SMTC) in accordance with the received *periodicity* parameter in the *smtc2-LP* configuration and use the *Offset* (derived from parameter *periodicityAndOffset*) and *duration* parameter from the *smtc* configuration for that frequency. The first subframe of each SMTC occasion occurs at an SFN and subframe of the NR SpCell or serving cell (for cell reselection) meeting the above condition.

If *smtc3list* is present, for cells indicated in the *pci-List* parameter in each *SSB-MTC3* element of the list in the same *MeasObjectNR*, the IAB-MT shall setup an additional SS block measurement timing configuration in accordance with the received *periodicityAndOffset* parameter (using same condition as *smtc1* to identify the SFN and the subframe for SMTC occasion) in each *SSB-MTC3* configuration and use the *duration* and *ssb-ToMeasure* parameters from each *SSB-MTC3* configuration.

If *smtc4list* is present, for cells indicated in the *pci-List* parameter in each *SSB-MTC4* element of the list in the same *MeasObjectNR*, the UE shall setup an additional SS/PBCH block measurement timing configuration (SMTC) in accordance with the received *offset* parameter in each *SSB-MTC4* configuration and use the *duration* parameter and *periodicity* (derived from parameter *periodicityAndOffset*) from the *smtc1* configuration. The first subframe of each SMTC occasion occurs at an SFN and subframe of the NR serving cell meeting the above condition.

On the indicated *ssbFrequency*, the UE shall not consider SS/PBCH block transmission in subframes outside the SMTC occasion for RRM measurements based on SS/PBCH blocks and for RRM measurements based on CSI-RS except for SFTD measurement (see TS 38.133 [14], clause 9.3.8).

### 5.5.2.10a RSSI measurement timing configuration

The UE shall setup the RSSI measurement timing configuration (RMTC) in accordance with the received *rmtc-Periodicity* and, if configured, with *rmtc-SubframeOffset* i.e. the first symbol of each RMTC occasion occurs at first symbol of an SFN and subframe of the NR SpCell meeting the following condition:

$\text{SFN mod } T = \text{FLOOR}(\text{rmtc-SubframeOffset}/10);$

subframe = *rmtc-SubframeOffset* mod 10;

with  $T = \text{rmtc-Periodicity}/10;$

On the frequency configured by *rmtc-Frequency*, the UE shall not consider RSSI measurements outside the configured RMTC occasion which lasts for *measDurationSymbols* for RSSI and channel occupancy measurements.

The UE derives the RSSI measurement duration from a combination of *measDurationSymbols* and *ref-SCS-CP*. At least for RSSI measurement confined within the active DL BWP, the UE performs RSSI measurement using the numerology of the active DL BWP during the derived measurement duration. Otherwise, the numerology used by the UE for measurements is up to UE implementation. If configured, the UE performs RSSI measurements on a bandwidth in accordance with the received *rmtc-Bandwidth*. If configured, the UE performs RSSI measurements according to the TCI state configured by *tcid-StateId* in the reference BWP configured by *ref-BWPId* of the reference serving cell configured by *ref-ServCellId* (see TS 38.133 [14], clause 9.2A.7 and clause 9.3A.8). If the UE has no serving cell in FR2-2 and configured with inter-frequency RSSI measurement in FR2-2, it is up to the UE implementation how to determine the spatial domain filter for the inter-frequency RSSI measurement in FR2-2.

### 5.5.2.11 Measurement gap sharing configuration

The UE shall:

- 1> if *gapSharingFR1* is set to *setup*:
  - 2> if an FR1 measurement gap sharing configuration configured by *gapSharingFR1* is already setup:
    - 3> release the FR1 measurement gap sharing configuration configured by *gapSharingFR1*;
  - 2> setup the FR1 measurement gap sharing configuration indicated by the *measGapSharingConfig* in accordance with the received *gapSharingFR1* as defined in TS 38.133 [14];
- 1> else if *gapSharingFR1* is set to *release*:
  - 2> release the FR1 measurement gap sharing configuration configured by *gapSharingFR1*;
- 1> if *gapSharingFR2* is set to *setup*:
  - 2> if an FR2 measurement gap sharing configuration configured by *gapSharingFR2* is already setup:
    - 3> release the FR2 measurement gap sharing configuration configured by *gapSharingFR2*;
  - 2> setup the FR2 measurement gap sharing configuration indicated by the *measGapSharingConfig* in accordance with the received *gapSharingFR2* as defined in TS 38.133 [14];
- 1> else if *gapSharingFR2* is set to *release*:
  - 2> release the FR2 measurement gap sharing configuration configured by *gapSharingFR2*.
- 1> if *gapSharingUE* is set to *setup*:
  - 2> if a per UE measurement gap sharing configuration configured by *gapSharingUE* is already setup:
    - 3> release the per UE measurement gap sharing configuration configured by *gapSharingUE*;
  - 2> setup the per UE measurement gap sharing configuration indicated by the *measGapSharingConfig* in accordance with the received *gapSharingUE* as defined in TS 38.133 [14];
- 1> else if *gapSharingUE* is set to *release*:
  - 2> release the per UE measurement gap sharing configuration configured by *gapSharingUE*.

## 5.5.3 Performing measurements

### 5.5.3.1 General

An RRC\_CONNECTED UE shall derive cell measurement results by measuring one or multiple beams associated per cell as configured by the network, as described in 5.5.3.3. For all cell measurement results, except for RSSI, and CLI measurement results in RRC\_CONNECTED, the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria, measurement reporting or the criteria to trigger conditional reconfiguration execution. For cell measurements, the network can configure RSRP, RSRQ, SINR, RSCP or EcN0 as trigger quantity. For CLI measurements, the network can configure SRS-RSRP or CLI-RSSI as trigger quantity. For cell and beam measurements, reporting quantities can be any combination of quantities (i.e. only RSRP; only RSRQ; only SINR; RSRP and RSRQ; RSRP and SINR; RSRQ and SINR; RSRP, RSRQ and SINR; only RSCP; only EcN0; RSCP and EcN0), irrespective of the trigger quantity, and for CLI measurements, reporting quantities can be either SRS-RSRP or CLI-RSSI. For conditional reconfiguration execution, the network can configure up to 2 quantities, both using same RS type. The UE does not apply the layer 3 filtering as specified in 5.5.3.2 to derive the CBR measurements. The UE does not apply the layer 3 filtering as specified in 5.5.3.2 to derive the Rx-Tx time difference measurements.

The network may also configure the UE to report measurement information per beam (which can either be measurement results per beam with respective beam identifier(s) or only beam identifier(s)), derived as described in 5.5.3.3a. If beam measurement information is configured to be included in measurement reports, the UE applies the layer 3 beam filtering as specified in 5.5.3.2. On the other hand, the exact L1 filtering of beam measurements used to derive cell measurement results is implementation dependent.

The UE shall:

- 1> whenever the UE has a *measConfig*, perform RSRP and RSRQ measurements for each serving cell for which *servingCellMO* is configured as follows:
  - 2> if the *reportConfig* associated with at least one *measId* included in the *measIdList* within *VarMeasConfig* contains an *rsType* set to *ssb* and *ssb-ConfigMobility* is configured in the *measObject* indicated by the *servingCellMO*, and *absoluteFrequencySSB* is configured in *ServingCellConfigCommon*:
    - 3> if the *reportConfig* contains a *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
      - 4> derive layer 3 filtered RSRP and RSRQ per beam for the serving cell based on SS/PBCH block, as described in 5.5.3.3a;
    - 3> derive serving cell measurement results based on SS/PBCH block, as described in 5.5.3.3;
  - 2> if the *reportConfig* associated with at least one *measId* included in the *measIdList* within *VarMeasConfig* contains an *rsType* set to *csi-rs* and *CSI-RS-ResourceConfigMobility* is configured in the *measObject* indicated by the *servingCellMO*:
    - 3> if the *reportConfig* contains a *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
      - 4> derive layer 3 filtered RSRP and RSRQ per beam for the serving cell based on CSI-RS, as described in 5.5.3.3a;
    - 3> derive serving cell measurement results based on CSI-RS, as described in 5.5.3.3;
- 1> for each serving cell for which *servingCellMO* is configured, if the *reportConfig* associated with at least one *measId* included in the *measIdList* within *VarMeasConfig* contains SINR as trigger quantity and/or reporting quantity:
  - 2> if the *reportConfig* contains *rsType* set to *ssb* and *ssb-ConfigMobility* is configured in the *servingCellMO*, and *absoluteFrequencySSB* is configured in *ServingCellConfigCommon*:
    - 3> if the *reportConfig* contains a *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
      - 4> derive layer 3 filtered SINR per beam for the serving cell based on SS/PBCH block, as described in 5.5.3.3a;
    - 3> derive serving cell SINR based on SS/PBCH block, as described in 5.5.3.3;
  - 2> if the *reportConfig* contains *rsType* set to *csi-rs* and *CSI-RS-ResourceConfigMobility* is configured in the *servingCellMO*:
    - 3> if the *reportConfig* contains a *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
      - 4> derive layer 3 filtered SINR per beam for the serving cell based on CSI-RS, as described in 5.5.3.3a;
    - 3> derive serving cell SINR based on CSI-RS, as described in 5.5.3.3;
- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the *reportType* for the associated *reportConfig* is set to *reportCGI* and timer T321 is running:
    - 3> if *useAutonomousGaps* is configured for the associated *reportConfig*:
      - 4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;
    - 3> else:
      - 4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using available idle periods;
  - 3> if the cell indicated by *reportCGI* field for the associated *measObject* is an NR cell and that indicated cell is broadcasting *SIB1* (see TS 38.213 [13], clause 13):

- 4> try to acquire *SIB1* in the concerned cell;
- 3> if the cell indicated by *reportCGI* field is an E-UTRA cell:
  - 4> try to acquire *SystemInformationBlockType1* in the concerned cell;
- 2> if the *ul-DelayValueConfig* is configured for the associated *reportConfig*:
  - 3> ignore the *measObject*;
  - 3> for each of the configured DRBs, configure the PDCP layer to perform corresponding average UL PDCP packet delay measurement per DRB;
- 2> if the *ul-ExcessDelayConfig* is configured for the associated *reportConfig*:
  - 3> ignore the *measObject*;
  - 3> for each of the configured DRBs, configure the PDCP layer to perform corresponding UL PDCP Excess Packet Delay delay measurement according to the configured threshold per DRB;
- 2> if the *reportType* for the associated *reportConfig* is *periodical*; or
- 2> if the *reportType* for the associated *reportConfig* is *eventTriggered* and the *eventId* is not set to *eventD1*; or
- 2> if the *reportType* for the associated *reportConfig* is *condTriggerConfig*, the *measId* is within the MCG *VarMeasConfig* and is indicated in the *condExecutionCond* associated to a *condReconfigId* in the MCG *VarConditionalReconfig* (for CHO, CPA or MN-initiated inter-SN CPC in NR-DC), and the *condEventId* is not set to *condEventD1* or *condEventT1*; or
- 2> if the *reportType* for the associated *reportConfig* is *condTriggerConfig*, the *measId* is within the SCG *VarMeasConfig* and is indicated in the *condExecutionCond* associated to a *condReconfigId* in the SCG *VarConditionalReconfig* (for intra-SN CPC); or
- 2> if the *reportType* for the associated *reportConfig* is *condTriggerConfig*, the *measId* is within the SCG *VarMeasConfig* and is indicated in the *condExecutionCondSCG* associated to a *condReconfigId* in the MCG *VarConditionalReconfig* (for SN-initiated inter-SN CPC in NR-DC); or
- 2> if the *reportType* for the associated *reportConfig* is *condTriggerConfig*, the *measId* is within the SCG *VarMeasConfig* and is indicated in the *triggerConditionSN* associated to a *condReconfigurationId* in *VarConditionalReconfiguration* as specified in TS 36.331 [10] (for SN-initiated inter-SN CPC in EN-DC):
  - 3> if a measurement gap configuration is setup, or
  - 3> if the UE does not require measurement gaps to perform the concerned measurements:
    - 4> if *s-MeasureConfig* is not configured, or
    - 4> if *s-MeasureConfig* is set to *ssb-RSRP* and the NR SpCell RSRP based on SS/PBCH block, after layer 3 filtering, is lower than *ssb-RSRP*, or
    - 4> if *s-MeasureConfig* is set to *csi-RSRP* and the NR SpCell RSRP based on CSI-RS, after layer 3 filtering, is lower than *csi-RSRP*;
  - 5> if the *measObject* is associated to NR and the *rsType* is set to *csi-rs*:
    - 6> if *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport* for the associated *reportConfig* are configured:
      - 7> derive layer 3 filtered beam measurements only based on CSI-RS for each measurement quantity indicated in *reportQuantityRS-Indexes*, as described in 5.5.3.3a;
    - 6> derive cell measurement results based on CSI-RS for the trigger quantity and each measurement quantity indicated in *reportQuantityCell* using parameters from the associated *measObject*, as described in 5.5.3.3;
- 5> if the *measObject* is associated to NR and the *rsType* is set to *ssb*:

- 6> if *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport* for the associated *reportConfig* are configured:
  - 7> derive layer 3 beam measurements only based on SS/PBCH block for each measurement quantity indicated in *reportQuantityRS-Indexes*, as described in 5.5.3.3a;
- 6> derive cell measurement results based on SS/PBCH block for the trigger quantity and each measurement quantity indicated in *reportQuantityCell* using parameters from the associated *measObject*, as described in 5.5.3.3;
- 5> if the *measObject* is associated to E-UTRA:
  - 6> perform the corresponding measurements associated to neighbouring cells on the frequencies indicated in the concerned *measObject*, as described in 5.5.3.2;
- 5> if the *measObject* is associated to UTRA-FDD:
  - 6> perform the corresponding measurements associated to neighbouring cells on the frequencies indicated in the concerned *measObject*, as described in 5.5.3.2;
- 5> if the *measObject* is associated to L2 U2N Relay UE:
  - 6> perform the corresponding measurements associated to candidate Relay UEs on the frequencies indicated in the concerned *measObject*, as described in 5.5.3.4;
- 4> if the *measRSSI-ReportConfig* is configured in the associated *reportConfig*:
  - 5> perform the RSSI and channel occupancy measurements on the frequency configured by *rmtc-Frequency* in the associated *measObject*;

NOTE 0: The network avoids configuring UEs supporting only CHO and/or Rel-16 CPC with measurements not referred to by any execution condition.

- 2> if the *reportType* for the associated *reportConfig* is set to *reportSFTD* and the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than one:
  - 3> if the *reportSFTD-Meas* is set to *true*:
    - 4> if the *measObject* is associated to E-UTRA:
      - 5> perform SFTD measurements between the PCell and the E-UTRA PSCell;
      - 5> if the *reportRSRP* is set to *true*:
        - 6> perform RSRP measurements for the E-UTRA PSCell;
    - 4> else if the *measObject* is associated to NR:
      - 5> perform SFTD measurements between the PCell and the NR PSCell;
      - 5> if the *reportRSRP* is set to *true*:
        - 6> perform RSRP measurements for the NR PSCell based on SSB;
  - 3> else if the *reportSFTD-NeighMeas* is included:
    - 4> if the *measObject* is associated to NR:
      - 5> if the *drx-SFTD-NeighMeas* is included:
        - 6> perform SFTD measurements between the PCell and the NR neighbouring cell(s) detected based on parameters in the associated *measObject* using available idle periods;
      - 5> else:
        - 6> perform SFTD measurements between the PCell and the NR neighbouring cell(s) detected based on parameters in the associated *measObject*;

- 5> if the *reportRSRP* is set to *true*:
  - 6> perform RSRP measurements based on SSB for the NR neighbouring cell(s) detected based on parameters in the associated *measObject*;
- 2> if the *reportType* for the associated *reportConfig* is *cli-Periodical* or *cli-EventTriggered*:
  - 3> perform the corresponding measurements associated to CLI measurement resources indicated in the concerned *measObjectCLI*;
- 2> perform the evaluation of reporting criteria as specified in 5.5.4, except if *reportConfig* is *condTriggerConfig*.

NOTE 1: The evaluation of conditional reconfiguration execution criteria is specified in 5.3.5.13.

The UE acting as a L2 U2N Remote UE whenever configured with *measConfig* shall:

- 1> perform the corresponding measurements associated to the serving L2 U2N Relay UE, as described in 5.5.3.4;

The UE capable of Rx-Tx time difference measurement when configured with *measObjectRxTxDiff* shall:

- 1> perform the corresponding Rx-Tx time difference measurements associated with downlink reference signals indicated in the concerned *measObjectRxTxDiff*.

The UE capable of CBR measurement when configured to transmit NR sidelink communication/discovery shall:

- 1> If the frequency used for NR sidelink communication/discovery is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-ConfigCommonNR* within *SIB12*:

- 2> if the UE is in *RRC\_IDLE* or in *RRC\_INACTIVE*:
  - 3> if configured with NR sidelink communication and the cell chosen for NR sidelink communication provides *SIB12* which includes *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* for the concerned frequency; or
  - 3> if configured with NR sidelink discovery and the cell chosen for NR sidelink discovery provides *SIB12* which includes *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* but does not include *sl-DiscTxPoolSelected* for the concerned frequency:
    - 4> perform CBR measurement on pool(s) in *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* for the concerned frequency in *SIB12*;
  - 3> if configured with NR sidelink discovery and the cell chosen for NR sidelink discovery provides *SIB12* which includes *sl-DiscTxPoolSelected* for the concerned frequency:
    - 4> perform CBR measurement on pools in *sl-DiscTxPoolSelected* and *sl-TxPoolExceptional* for the concerned frequency in *SIB12*;

- 2> if the UE is in *RRC\_CONNECTED*:

- 3> if *tx-PoolMeasToAddModList* is included in *VarMeasConfig*:
  - 4> perform CBR measurements on each transmission resource pool indicated in the *tx-PoolMeasToAddModList*;
- 3> if *sl-DiscTxPoolSelected*, *sl-TxPoolSelectedNormal*, *sl-TxPoolScheduling* or *sl-TxPoolExceptional* is included in *sl-ConfigDedicatedNR* for the concerned frequency within *RRCReconfiguration*:
  - 4> perform CBR measurement on pool(s) in *sl-DiscTxPoolSelected*, *sl-TxPoolSelectedNormal*, *sl-TxPoolScheduling* and *sl-TxPoolExceptional* if included in *sl-ConfigDedicatedNR* for the concerned frequency within *RRCReconfiguration*;
- 3> else:
  - 4> if configured with NR sidelink communication and the cell chosen for NR sidelink communication provides *SIB12* which includes *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* for the concerned frequency; or

- 4> if configured with NR sidelink discovery and the cell chosen for NR sidelink discovery provides *SIB12* which includes *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* but does not provide *sl-DiscTxPoolSelected* for the concerned frequency:
  - 5> perform CBR measurement on pool(s) in *sl-TxPoolSelectedNormal* or *sl-TxPoolExceptional* for the concerned frequency in *SIB12*;
- 4> if configured with NR sidelink discovery and the cell chosen for NR sidelink discovery provides *SIB12* which includes *sl-DiscTxPoolSelected* for the concerned frequency:
  - 5> perform CBR measurement on pools in *sl-DiscTxPoolSelected* and *sl-TxPoolExceptional* for the concerned frequency in *SIB12*;
- 1> else:
  - 2> if configured with NR sidelink communication and *sl-TxPoolSelectedNormal* is included in *SidelinkPreconfigNR* for the concerned frequency; or
  - 2> if configured with NR sidelink discovery and *sl-TxPoolSelectedNormal* is included in *SidelinkPreconfigNR* but *sl-DiscTxPoolSelected* is not included in *SidelinkPreconfigNR* for the concerned frequency:
    - 3> perform CBR measurement on pool(s) in *sl-TxPoolSelectedNormal* in *SidelinkPreconfigNR* for the concerned frequency.
  - 2> if configured with NR sidelink discovery and *sl-DiscTxPoolSelected* is included in *SidelinkPreconfigNR* for the concerned frequency:
    - 3> perform CBR measurement on pools in *sl-DiscTxPoolSelected* if included in *SidelinkPreconfigNR*.

NOTE 2: In case the configurations for NR sidelink communication and CBR measurement are acquired via the E-UTRA, configurations for NR sidelink communication in *SIB12*, *sl-ConfigDedicatedNR* within *RRCReconfiguration* used in this clause are provided by the configurations in *SystemInformationBlockType28*, *sl-ConfigDedicatedForNR* within *RRCConnectionReconfiguration* as specified in TS 36.331[10], respectively.

NOTE 3: If a UE that is configured by upper layers to transmit V2X sidelink communication is configured by NR with transmission resource pool(s) and the measurement objects concerning V2X sidelink communication (i.e. by *sl-ConfigDedicatedEUTRA-Info*), it shall perform CBR measurement as specified in clause 5.5.3 of TS 36.331 [10], based on the transmission resource pool(s) and the measurement object(s) concerning V2X sidelink communication configured by NR.

NOTE 4: For V2X sidelink communication, each of the CBR measurement results is associated with a resource pool, as indicated by the *poolReportId* (see TS 36.331 [10]), that refers to a pool as included in *sl-ConfigDedicatedEUTRA-Info* or *SIB13*.

### 5.5.3.2 Layer 3 filtering

The UE shall:

- 1> for each cell measurement quantity, each beam measurement quantity, each sidelink measurement quantity as needed in clause 5.8.10, for each CLI measurement quantity that the UE performs measurements according to 5.5.3.1, for each L2 U2N Relay UE measurement quantity according to 5.5.3.4, for evaluating the selected or detected NR sidelink U2N Relay UEs according to 5.8.15.3, and for evaluating the SyncRef UE according to 5.8.5 and 5.8.6:
- 2> filter the measured result, before using for evaluation of reporting criteria, for measurement reporting, for U2N Relay (re)selection evaluation or for evaluating the SyncRef UE, by the following formula:

$$F_n = (1 - \alpha) * F_{n-1} + \alpha * M_n$$

where

$M_n$  is the latest received measurement result from the physical layer;

$F_n$  is the updated filtered measurement result, that is used for evaluation of reporting criteria, for measurement reporting, for U2N Relay (re)selection evaluation or for evaluating the SyncRef UE;

$F_{n-1}$  is the old filtered measurement result, where  $F_0$  is set to  $M_1$  when the first measurement result from the physical layer is received; and for *MeasObjectNR*,  $a = 1/2^{(k_i/4)}$ , where  $k_i$  is the *filterCoefficient* for the corresponding measurement quantity of the  $i$ :th *QuantityConfigNR* in *quantityConfigNR-List*, and  $i$  is indicated by *quantityConfigIndex* in *MeasObjectNR*; for other measurements,  $a = 1/2^{(k/4)}$ , where  $k$  is the *filterCoefficient* for the corresponding measurement quantity received by the *quantityConfig*; for UTRA-FDD,  $a = 1/2^{(k/4)}$ , where  $k$  is the *filterCoefficient* for the corresponding measurement quantity received by *quantityConfigUTRA-FDD* in the *QuantityConfig*;

- 2> adapt the filter such that the time characteristics of the filter are preserved at different input rates, observing that the *filterCoefficient*  $k$  assumes a sample rate equal to  $X$  ms; The value of  $X$  is equivalent to one intra-frequency L1 measurement period as defined in TS 38.133 [14] assuming non-DRX operation, and depends on frequency range.

NOTE 1: If  $k$  is set to 0, no layer 3 filtering is applicable.

NOTE 2: The filtering is performed in the same domain as used for evaluation of reporting criteria, for measurement reporting, for U2N Relay (re)selection evaluation or for evaluating the SyncRef UE, i.e., logarithmic filtering for logarithmic measurements.

NOTE 3: The filter input rate is implementation dependent, to fulfil the performance requirements set in TS 38.133 [14]. For further details about the physical layer measurements, see TS 38.133 [14].

NOTE 4: For CLI-RSSI measurement, it is up to UE implementation whether to reset filtering upon BWP switch.

### 5.5.3.3 Derivation of cell measurement results

The network may configure the UE in RRC\_CONNECTED to derive RSRP, RSRQ and SINR measurement results per cell associated to NR measurement objects based on parameters configured in the *measObject* (e.g. maximum number of beams to be averaged and beam consolidation thresholds) and in the *reportConfig* (*rsType* to be measured, SS/PBCH block or CSI-RS).

The network may configure the UE in RRC\_IDLE or in RRC\_INACTIVE to derive RSRP and RSRQ measurement results per cell associated to NR carriers based on parameters configured in *measIdleCarrierListNR* within *VarMeasIdleConfig* for measurements performed according to 5.7.8.2a.

The UE shall:

- 1> for each cell measurement quantity to be derived based on SS/PBCH block:
  - 2> if *nrofSS-BlocksToAverage* is not configured in the associated *measObject* in RRC\_CONNECTED or in the associated entry in *measIdleCarrierListNR* within *VarMeasIdleConfig* in RRC\_IDLE/RRC\_INACTIVE; or
  - 2> if *absThreshSS-BlocksConsolidation* is not configured in the associated *measObject* in RRC\_CONNECTED or in the associated entry in *measIdleCarrierListNR* within *VarMeasIdleConfig* in RRC\_IDLE/RRC\_INACTIVE; or
  - 2> if the highest beam measurement quantity value is below or equal to *absThreshSS-BlocksConsolidation*:
    - 3> derive each cell measurement quantity based on SS/PBCH block as the highest beam measurement quantity value, where each beam measurement quantity is described in TS 38.215 [9];
  - 2> else:
    - 3> derive each cell measurement quantity based on SS/PBCH block as the linear power scale average of the highest beam measurement quantity values above *absThreshSS-BlocksConsolidation* where the total number of averaged beams shall not exceed *nrofSS-BlocksToAverage*, and where each beam measurement quantity is described in TS 38.215 [9];
  - 2> if in RRC\_CONNECTED, apply layer 3 cell filtering as described in 5.5.3.2;
- 1> for each cell measurement quantity to be derived based on CSI-RS:

- 2> consider a CSI-RS resource to be applicable for deriving cell measurements when the concerned CSI-RS resource is included in the *csi-rs-CellMobility* including the *physCellId* of the cell in the *CSI-RS-ResourceConfigMobility* in the associated *measObject*;
- 2> if *nrofCSI-RS-ResourcesToAverage* in the associated *measObject* is not configured; or
- 2> if *absThreshCSI-RS-Consolidation* in the associated *measObject* is not configured; or
- 2> if the highest beam measurement quantity value is below or equal to *absThreshCSI-RS-Consolidation*:
  - 3> derive each cell measurement quantity based on applicable CSI-RS resources for the cell as the highest beam measurement quantity value, where each beam measurement quantity is described in TS 38.215 [9];
- 2> else:
  - 3> derive each cell measurement quantity based on CSI-RS as the linear power scale average of the highest beam measurement quantity values above *absThreshCSI-RS-Consolidation* where the total number of averaged beams shall not exceed *nrofCSI-RS-ResourcesToAverage*;
- 2> apply layer 3 cell filtering as described in 5.5.3.2.

### 5.5.3.3a Derivation of layer 3 beam filtered measurement

The UE shall:

- 1> for each layer 3 beam filtered measurement quantity to be derived based on SS/PBCH block;
- 2> derive each configured beam measurement quantity based on SS/PBCH block as described in TS 38.215[9], and apply layer 3 beam filtering as described in 5.5.3.2;
- 1> for each layer 3 beam filtered measurement quantity to be derived based on CSI-RS;
- 2> derive each configured beam measurement quantity based on CSI-RS as described in TS 38.215 [9], and apply layer 3 beam filtering as described in 5.5.3.2.

### 5.5.3.4 Derivation of L2 U2N Relay UE measurement results

A UE may be configured by network to derive NR sidelink measurement results of serving L2 U2N Relay UE or candidate L2 U2N Relay UEs associated to the measurement objects configured in the *measObjectRelay*.

The UE shall:

- 1> for each L2 U2N Relay UE measurement quantity to be derived:
  - 2> derive the corresponding measurement quantity based on PSSCH/PSCCH DMRS as described in TS 38.215 [9];
  - 2> apply layer 3 filtering as described in 5.5.3.2;

## 5.5.4 Measurement report triggering

### 5.5.4.1 General

If AS security has been activated successfully, the UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a *reportType* set to *eventTriggered* or *periodical*:
- 3> if the corresponding *measObject* concerns NR:
  - 4> if the corresponding *reportConfig* includes *measRSSI-ReportConfig*:
    - 5> consider the resource indicated by the *rmtc-Config* on the associated frequency to be applicable;

- 4> if the *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:
  - 5> consider only the serving cell to be applicable;
- 4> if the *eventA3* or *eventA5* is configured in the corresponding *reportConfig*:
  - 5> if a serving cell is associated with a *measObjectNR* and neighbours are associated with another *measObjectNR*, consider any serving cell associated with the other *measObjectNR* to be a neighbouring cell as well;
- 4> if the *eventX2* is configured in the corresponding *reportConfig*:
  - 5> consider only the serving L2 U2N Relay UE to be applicable;
- 4> if corresponding *reportConfig* includes *reportType* set to *periodical*; or
- 4> for measurement events other than *eventA1*, *eventA2*, *eventD1* or *eventX2*:
  - 5> if *useAllowedCellList* is set to *true*:
    - 6> consider any neighbouring cell detected based on parameters in the associated *measObjectNR* to be applicable when the concerned cell is included in the *allowedCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
  - 5> else:
    - 6> consider any neighbouring cell detected based on parameters in the associated *measObjectNR* to be applicable when the concerned cell is not included in the *excludedCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
- 3> else if the corresponding *measObject* concerns E-UTRA:
  - 4> if *eventB1* or *eventB2* is configured in the corresponding *reportConfig*:
    - 5> consider a serving cell, if any, on the associated E-UTRA frequency as neighbour cell;
  - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *excludedCellsToAddModListEUTRAN* defined within the *VarMeasConfig* for this *measId*;
- 3> else if the corresponding *measObject* concerns UTRA-FDD:
  - 4> if *eventB1-UTRA-FDD* or *eventB2-UTRA-FDD* is configured in the corresponding *reportConfig*; or
  - 4> if corresponding *reportConfig* includes *reportType* set to *periodical*:
    - 5> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
- 3> else if the corresponding *measObject* concerns L2 U2N Relay UE:
  - 4> if *eventY1-Relay* or *eventY2-Relay* is configured in the corresponding *reportConfig*; or
  - 4> if corresponding *reportConfig* includes *reportType* set to *periodical*:
    - 5> consider any L2 U2N Relay UE fulfilling upper layer criteria detected on the associated frequency to be applicable for this *measId*;
- 2> else if the corresponding *reportConfig* includes a *reportType* set to *reportCGI*:
  - 3> consider the cell detected on the associated *measObject* which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *reportConfig* within the *VarMeasConfig* to be applicable;
- 2> else if the corresponding *reportConfig* includes a *reportType* set to *reportSFTD*:
  - 3> if the corresponding *measObject* concerns NR:

- 4> if the *reportSFTD-Meas* is set to *true*:
  - 5> consider the NR PSCell to be applicable;
- 4> else if the *reportSFTD-NeighMeas* is included:
  - 5> if *cellsForWhichToReportSFTD* is configured in the corresponding *reportConfig*:
    - 6> consider any NR neighbouring cell detected on the associated *measObjectNR* which has a physical cell identity that is included in the *cellsForWhichToReportSFTD* to be applicable;
  - 5> else:
    - 6> consider up to 3 strongest NR neighbouring cells detected based on parameters in the associated *measObjectNR* to be applicable when the concerned cells are not included in the *excludedCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
- 3> else if the corresponding *measObject* concerns E-UTRA:
  - 4> if the *reportSFTD-Meas* is set to *true*:
    - 5> consider the E-UTRA PSCell to be applicable;
- 2> else if the corresponding *reportConfig* includes a *reportType* set to *cli-Periodical* or *cli-EventTriggered*:
  - 3> consider all CLI measurement resources included in the corresponding *measObject* to be applicable;
- 2> else if the corresponding *reportConfig* includes a *reportType* set to *rxTxPeriodical*:
  - 3> consider all Rx-Tx time difference measurement resources included in the corresponding *measObject* to be applicable;
- 2> if the corresponding *reportConfig* concerns the reporting for NR sidelink communication/discovery (i.e. *reportConfigNR-SL*):
  - 3> consider the transmission resource pools indicated by the *tx-PoolMeasToAddModList* defined within the *VarMeasConfig* for this *measId* to be applicable;
- 2> if the *reportType* is set to *eventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include a measurement reporting entry for this *measId* (a first cell triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *useT312* is set to *true* in *reportConfig* for this event:
    - 4> if T310 for the corresponding SpCell is running; and
    - 4> if T312 is not running for corresponding SpCell:
      - 5> start timer T312 for the corresponding SpCell with the value of T312 configured in the corresponding *measObjectNR*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> else if the *reportType* is set to *eventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> if *useT312* is set to *true* in *reportConfig* for this event:
  - 4> if T310 for the corresponding SpCell is running; and
  - 4> if T312 is not running for corresponding SpCell:
    - 5> start timer T312 for the corresponding SpCell with the value of T312 configured in the corresponding *measObjectNR*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *reportType* is set to *eventTriggered* and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *true* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *reportType* is set to *eventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable L2 U2N Relay UEs for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include a measurement reporting entry for this *measId* (a first L2 U2N Relay UE triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned L2 U2N Relay UE(s) in the *relaysTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> else if the *reportType* is set to *eventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable L2 U2N Relay UEs not included in the *relaysTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent L2 U2N Relay UE triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned L2 U2N Relay UE(s) in the *relaysTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> else if the *reportType* is set to *eventTriggered* and if the leaving condition applicable for this event is fulfilled for one or more of the L2 U2N Relay UEs included in the *relaysTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

- 3> remove the concerned L2 U2N Relay UE(s) in the *relaysTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> if *reportOnLeave* is set to *true* for the corresponding reporting configuration:
  - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
- 3> if the *relaysTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
  - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> else if the *reportType* is set to *eventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable transmission resource pools for all measurements taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first transmission resource pool triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned transmission resource pool(s) in the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> else if the *reportType* is set to *eventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable transmission resource pools not included in the *poolsTriggeredList* for all measurements taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent transmission resource pool triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned transmission resource pool(s) in the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *reportType* is set to *eventTriggered* and if the leaving condition applicable for this event is fulfilled for one or more applicable transmission resource pools included in the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned transmission resource pool(s) in the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running
- 2> else if the *reportType* is set to *eventTriggered* and if the *eventId* is set to *eventD1* and if the entering condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include a measurement reporting entry for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

- 2> else if the *reportType* is set to *eventTriggered* and if the *eventId* is set to *eventD1* and if the leaving condition applicable for this event is fulfilled for the associated *VarMeasReport* within the *VarMeasReportList* for this *measId* during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> if *reportOnLeave* is set to *true* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> stop the periodical reporting timer for this *measId*, if running;

NOTE 1: Void.

- 2> if *reportType* is set to *periodical* and if a (first) measurement result is available:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> if the corresponding *reportConfig* includes *measRSSI-ReportConfig*:
    - 4> initiate the measurement reporting procedure as specified in 5.5.5 immediately when RSSI sample values are reported by the physical layer after the first L1 measurement duration;
  - 3> else if the corresponding *reportConfig* includes the *ul-DelayValueConfig*:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided from lower layers of the associated DRB identity;
  - 3> else if the corresponding *reportConfig* includes the *ul-ExcessDelayConfig*:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided from lower layers of the associated DRB identity(ies) according to the configured threshold per DRB identity(ies);
  - 3> else if the *reportAmount* exceeds 1:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell or for the serving L2 U2N Relay UE (if the UE is a L2 U2N Remote UE);
  - 3> else (i.e. the *reportAmount* is equal to 1):
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and for the strongest cell among the applicable cells, or for the NR SpCell and for the strongest L2 U2N Relay UEs among the applicable L2 U2N Relay UEs; or initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the serving L2 U2N Relay UE and for the strongest cell among the applicable cells (if the UE is a L2 U2N Remote UE);
- 2> if, in case the corresponding *reportConfig* concerns the reporting for NR sidelink communication/discovery, *reportType* is set to *periodical* and if a (first) measurement result is available:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and CBR measurement results become available;
- 2> if the *reportType* is set to *cli-EventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable CLI measurement resources for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include a measurement reporting entry for this *measId* (a first CLI measurement resource triggers the event):

- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned CLI measurement resource(s) in the *cli-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> else if the *reportType* is set to *cli-EventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more CLI measurement resources not included in the *cli-TriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent CLI measurement resource triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned CLI measurement resource(s) in the *cli-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *reportType* is set to *cli-EventTriggered* and if the leaving condition applicable for this event is fulfilled for one or more of the CLI measurement resources included in the *cli-TriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned CLI measurement resource(s) in the *cli-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *true* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cli-TriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if *reportType* is set to *cli-Periodical* and if a (first) measurement result is available:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for at least one CLI measurement resource;
- 2> if *reportType* is set to *rxTxPeriodical* and if a (first) measurement result is available:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5.
- 2> if the corresponding *reportConfig* includes a *reportType* is set to *reportSFTD*:
  - 3> if the corresponding *measObject* concerns NR:
    - 4> if the *drx-SFTD-NeighMeas* is included:
      - 5> if the quantity to be reported becomes available for each requested pair of PCell and NR cell:

- 6> stop timer T322;
- 6> initiate the measurement reporting procedure, as specified in 5.5.5;
- 4> else
  - 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for each requested pair of PCell and NR cell or the maximal measurement reporting delay as specified in TS 38.133 [14];
- 3> else if the corresponding *measObject* concerns E-UTRA:
  - 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the pair of PCell and E-UTRA PSCell or the maximal measurement reporting delay as specified in TS 38.133 [14];
- 2> if *reportType* is set to *reportCGI*:
  - 3> if the UE acquired the *SIB1* or *SystemInformationBlockType1* for the requested cell; or
  - 3> if the UE detects that the requested NR cell is not transmitting *SIB1* (see TS 38.213 [13], clause 13):
    - 4> stop timer T321;
    - 4> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> upon the expiry of T321 for this *measId*:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5.
  - 2> upon the expiry of T322 for this *measId*:
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5.

#### 5.5.4.2 Event A1 (Serving becomes better than threshold)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A1-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A1-2, as specified below, is fulfilled;
- 1> for this measurement, consider the NR serving cell corresponding to the associated *measObjectNR* associated with this event.

Inequality A1-1 (Entering condition)

$$Ms - Hys > Thresh$$

Inequality A1-2 (Leaving condition)

$$Ms + Hys < Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a1-Threshold* as defined within *reportConfigNR* for this event).

***Ms*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Ms***.

#### 5.5.4.3 Event A2 (Serving becomes worse than threshold)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;
- 1> for this measurement, consider the serving cell indicated by the *measObjectNR* associated to this event.

Inequality A2-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality A2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

***Ms*** is the measurement result of the serving cell, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

***Thresh*** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigNR* for this event).

***Ms*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Ms***.

#### 5.5.4.4 Event A3 (Neighbour becomes offset better than SpCell)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;
- 1> use the SpCell for *Mp*, *Ofp* and *Ocp*.

NOTE 1: The cell(s) that triggers the event has reference signals indicated in the *measObjectNR* associated to this event which may be different from the NR SpCell *measObjectNR*.

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$$

The variables in the formula are defined as follows:

***Mn*** is the measurement result of the neighbouring cell, not taking into account any offsets.

***Ofn*** is the measurement object specific offset of the reference signal of the neighbour cell (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Mp** is the measurement result of the SpCell, not taking into account any offsets.

**Ofp** is the measurement object specific offset of the SpCell (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the SpCell).

**Ocp** is the cell specific offset of the SpCell (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the SpCell), and is set to zero if not configured for the SpCell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigNR* for this event).

**Mn, Mp** are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**Ofn, Ocn, Ofp, Ocp, Hys, Off** are expressed in dB.

NOTE 2: The definition of Event A3 also applies to CondEvent A3.

#### 5.5.4.5 Event A4 (Neighbour becomes better than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A4-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A4-2, as specified below, is fulfilled.

Inequality A4-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Thresh$$

Inequality A4-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Thresh$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the measurement object specific offset of the neighbour cell (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a4-Threshold* as defined within *reportConfigNR* for this event).

**Mn** is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**Ofn, Ocn, Hys** are expressed in dB.

**Thresh** is expressed in the same unit as **Mn**.

NOTE: The definition of Event A4 also applies to CondEvent A4.

#### 5.5.4.6 Event A5 (SpCell becomes worse than threshold1 and neighbour becomes better than threshold2)

The UE shall:

1> consider the entering condition for this event to be satisfied when both condition A5-1 and condition A5-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

1> use the SpCell for  $M_p$ .

NOTE 1: The parameters of the reference signal(s) of the cell(s) that triggers the event are indicated in the *measObjectNR* associated to the event which may be different from the *measObjectNR* of the NR SpCell.

Inequality A5-1 (Entering condition 1)

$$M_p + H_{ys} < Thresh1$$

Inequality A5-2 (Entering condition 2)

$$M_n + O_{fn} + O_{cn} - H_{ys} > Thresh2$$

Inequality A5-3 (Leaving condition 1)

$$M_p - H_{ys} > Thresh1$$

Inequality A5-4 (Leaving condition 2)

$$M_n + O_{fn} + O_{cn} + H_{ys} < Thresh2$$

The variables in the formula are defined as follows:

**$M_p$**  is the measurement result of the NR SpCell, not taking into account any offsets.

**$M_n$**  is the measurement result of the neighbouring cell, not taking into account any offsets.

**$O_{fn}$**  is the measurement object specific offset of the neighbour cell (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell).

**$O_{cn}$**  is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**$H_{ys}$**  is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

**$Thresh1$**  is the threshold parameter for this event (i.e. *a5-Threshold1* as defined within *reportConfigNR* for this event).

**$Thresh2$**  is the threshold parameter for this event (i.e. *a5-Threshold2* as defined within *reportConfigNR* for this event).

**$M_n$ ,  $M_p$**  are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**$O_{fn}$ ,  $O_{cn}$ ,  $H_{ys}$**  are expressed in dB.

**$Thresh1$**  is expressed in the same unit as  **$M_p$** .

**$Thresh2$**  is expressed in the same unit as  **$M_n$** .

NOTE 2: The definition of Event A5 also applies to CondEvent A5.

#### 5.5.4.7 Event A6 (Neighbour becomes offset better than SCell)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A6-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A6-2, as specified below, is fulfilled;

1> for this measurement, consider the (secondary) cell corresponding to the *measObjectNR* associated to this event to be the serving cell.

NOTE: The reference signal(s) of the neighbour(s) and the reference signal(s) of the SCell are both indicated in the associated *measObjectNR*.

Inequality A6-1 (Entering condition)

$$Mn + Ocn - Hys > Ms + Ocs + Off$$

Inequality A6-2 (Leaving condition)

$$Mn + Ocn + Hys < Ms + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within the associated *measObjectNR* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within the associated *measObjectNR*), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

**Off** is the offset parameter for this event (i.e. *a6-Offset* as defined within *reportConfigNR* for this event).

**Mn**, **Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**Ocn**, **Ocs**, **Hys**, **Off** are expressed in dB.

#### 5.5.4.8 Event B1 (Inter RAT neighbour becomes better than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled.

Inequality B1-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Thresh$$

Inequality B1-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Thresh$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

**Ofn** is the measurement object specific offset of the frequency of the inter-RAT neighbour cell (i.e. *eutra-Q-OffsetRange* as defined within the *measObjectEUTRA* corresponding to the frequency of the neighbour inter-RAT cell, *utra-FDD-Q-OffsetRange* as defined within the *measObjectUTRA-FDD* corresponding to the frequency of the neighbour inter-RAT cell).

**Ocn** is the cell specific offset of the inter-RAT neighbour cell (i.e. *cellIndividualOffset* as defined within the *measObjectEUTRA* corresponding to the frequency of the neighbour inter-RAT cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

**Thresh** is the threshold parameter for this event (i.e. *b1-ThresholdEUTRA* as defined within *reportConfigInterRAT* for this event, *b1-ThresholdUTRA-FDD* as defined for UTRA-FDD within *reportConfigInterRAT* for this event).

**Mn** is expressed in dBm or in dB, depending on the measurement quantity of the inter-RAT neighbour cell.

**Ofn**, **Ocn**, **Hys** are expressed in dB.

**Thresh** is expressed in the same unit as **Mn**.

#### 5.5.4.9 Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2)

The UE shall:

1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

$$Mp + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2)

$$Mn + Ofn + Ocn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Mp - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Ocn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Mp** is the measurement result of the PCell, not taking into account any offsets.

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

**Ofn** is the measurement object specific offset of the frequency of the inter-RAT neighbour cell (i.e. *eutra-Q-OffsetRange* as defined within the *measObjectEUTRA* corresponding to the frequency of the inter-RAT neighbour cell, *utra-FDD-Q-OffsetRange* as defined within the *measObjectUTRA-FDD* corresponding to the frequency of the neighbour inter-RAT cell).

**Ocn** is the cell specific offset of the inter-RAT neighbour cell (i.e. *cellIndividualOffset* as defined within the *measObjectEUTRA* corresponding to the frequency of the neighbour inter-RAT cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *b2-Threshold2EUTRA* as defined within *reportConfigInterRAT* for this event, *b2-Threshold2UTRA-FDD* as defined for UTRA-FDD within *reportConfigInterRAT* for this event).

**Mp** is expressed in dBm in case of RSRP, or in dB in case of RSRQ and SINR.

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

**Ofn**, **Ocn**, **Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Mp**.

**Thresh2** is expressed in the same unit as **Mn**.

#### 5.5.4.10 Event I1 (Interference becomes higher than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition I1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition I1-2, as specified below, is fulfilled.

Inequality I1-1 (Entering condition)

$$Mi - Hys > Thresh$$

Inequality I1-2 (Leaving condition)

$$Mi + Hys < Thresh$$

The variables in the formula are defined as follows:

**Mi** is the measurement result of the interference, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

**Thresh** is the threshold parameter for this event (i.e. *i1-Threshold* as defined within *reportConfigNR* for this event).

**Mi**, **Thresh** are expressed in dBm.

**Hys** is expressed in dB.

#### 5.5.4.11 Event C1 (The NR sidelink channel busy ratio is above a threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition C1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition C1-2, as specified below, is fulfilled;

Inequality C1-1 (Entering condition)

$$Ms - Hys > Thresh$$

Inequality C1-2 (Leaving condition)

$$Ms + Hys < Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of channel busy ratio of the transmission resource pool, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR-SL* for this event).

**Thresh** is the threshold parameter for this event (i.e. *c1-Threshold* as defined within *reportConfigNR-SL* for this event).

**Ms** is expressed in decimal from 0 to 1 in steps of 0.01.

**Hys** is expressed in the same unit as **Ms**.

**Thresh** is expressed in the same unit as **Ms**.

#### 5.5.4.12 Event C2 (The NR sidelink channel busy ratio is below a threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition C2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition C2-2, as specified below, is fulfilled;

Inequality C2-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality C2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of channel busy ratio of the transmission resource pool, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR-SL* for this event).

**Thresh** is the threshold parameter for this event (i.e. *c2-Threshold* as defined within *reportConfigNR-SL* for this event).

**Ms** is expressed in decimal from 0 to 1 in steps of 0.01.

**Hys** is expressed in the same unit as **Ms**.

**Thresh** is expressed in the same unit as **Ms**.

5.5.4.13 Void

5.5.4.14 Void

5.5.4.15 Event D1 (Distance between UE and referenceLocation1 is above threshold1 and distance between UE and referenceLocation2 is below threshold2)

The UE shall:

1> consider the entering condition for this event to be satisfied when both condition D1-1 and condition D1-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition D1-3 or condition D1-4, i.e. at least one of the two, as specified below, are fulfilled;

Inequality D1-1 (Entering condition 1)

$$Ml1 - Hys > Thresh1$$

Inequality D1-2 (Entering condition 2)

$$Ml2 + Hys < Thresh2$$

Inequality D1-3 (Leaving condition 1)

$$Ml1 + Hys < Thresh1$$

Inequality D1-4 (Leaving condition 2)

$$Ml2 - Hys > Thresh2$$

The variables in the formula are defined as follows:

**Ml1** is the distance between UE and a reference location for this event (i.e. *referenceLocation1* as defined within *reportConfigNR* for this event), not taking into account any offsets.

**Ml2** is the distance between UE and a reference location for this event (i.e. *referenceLocation2* as defined within *reportConfigNR* for this event), not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresisLocation* as defined within *reportConfigNR* for this event).

**Thresh1** is the threshold for this event defined as a distance, configured with parameter *distanceThreshFromReference1*, from a reference location configured with parameter *referenceLocation1* within *reportConfigNR* for this event.

**Thresh2** is the threshold for this event defined as a distance, configured with parameter *distanceThreshFromReference2*, from a reference location configured with parameter *referenceLocation2* within *reportConfigNR* for this event.

**M11** is expressed in meters.

**M12** is expressed in the same unit as **M11**.

**Hys** is expressed in the same unit as **M11**.

**Thresh1** is expressed in the same unit as **M11**.

**Thresh2** is expressed in the same unit as **M11**.

NOTE: The definition of Event D1 also applies to CondEvent D1.

#### 5.5.4.16 CondEvent T1 (Time measured at UE is within a duration from threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition T1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition T1-2, as specified below, is fulfilled;

Inequality T1-1 (Entering condition)

$Mt > Thresh1$

Inequality T1-2 (Leaving condition)

$Mt > Thresh1 + Duration$

The variables in the formula are defined as follows:

**Mt** is the time measured at UE.

**Thresh1** is the threshold parameter for this event (i.e. *t1-Threshold* as defined within *reportConfigNR* for this event).

**Duration** is the duration parameter for this event (i.e. *duration* as defined within *reportConfigNR* for this event).

**Mt** is expressed in *ms*.

**Thresh1** is expressed in the same unit as **Mt**.

**Duration** is expressed in the same unit as **Mt**.

#### 5.5.4.17 Event X1 (Serving L2 U2N Relay UE becomes worse than threshold1 and NR Cell becomes better than threshold2)

The UE shall:

1> consider the entering condition for this event to be satisfied when both condition X1-1 and condition X1-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition X1-3 or condition X1-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality X1-1 (Entering condition 1)

$Mr + Hys < Thresh1$

Inequality X1-2 (Entering condition 2)

$Mn + Ofn + Ocn - Hys > Thresh2$

Inequality X1-3 (Leaving condition 1)

$$Mr - Hys > Thresh1$$

Inequality X1-4 (Leaving condition 2)

$$Mn + Ofn + Ocn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Mr** is the measurement result of the serving L2 U2N Relay UE, not taking into account any offsets.

**Mn** is the measurement result of the NR cell, not taking into account any offsets.

**Ofn** is the measurement object specific offset of the reference signal of the NR cell (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the frequency of the NR cell).

**Ocn** is the cell specific offset of the NR cell (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the frequency of the NR cell), and set to zero if not configured for the cell.

**Hys** is the hysteresis parameter for this event.

**Thresh1** is the threshold parameter for this event (i.e. *x1-Threshold1-Relay* as defined within *reportConfigNR* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *x1-Threshold2* as defined within *reportConfigNR* for this event).

**Mr** is expressed in dBm.

**Mn** is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**Ofn, Ocn, Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Mr**.

**Thresh2** is expressed in the same unit as **Mn**.

#### 5.5.4.18 Event X2 (Serving L2 U2N Relay UE becomes worse than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition X2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition X2-2, as specified below, is fulfilled;

Inequality X2-1 (Entering condition)

$$Mr + Hys < Thresh$$

Inequality X2-2 (Leaving condition)

$$Mr - Hys > Thresh$$

The variables in the formula are defined as follows:

**Mr** is the measurement result of the serving L2 U2N Relay UE, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event.

**Thresh** is the threshold parameter for this event (i.e. *x2-Threshold-Relay* as defined within *reportConfigNR* for this event).

**Mr** is expressed in dBm.

**Hys** are expressed in dB.

**Thresh** is expressed in the same unit as **Mr**.

#### 5.5.4.19 Event Y1 (PCell becomes worse than threshold1 and candidate L2 U2N Relay UE becomes better than threshold2)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when both condition Y1-1 and condition Y1-2, as specified below, are fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition Y1-3 or condition Y1-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality Y1-1 (Entering condition 1)

$$Mp + Hys < Thresh1$$

Inequality Y1-2 (Entering condition 2)

$$Mr - Hys > Thresh2$$

Inequality Y1-3 (Leaving condition 1)

$$Mp - Hys > Thresh1$$

Inequality Y1-4 (Leaving condition 2)

$$Mr + Hys < Thresh2$$

The variables in the formula are defined as follows:

***Mp*** is the measurement result of the PCell, not taking into account any offsets.

***Mr*** is the measurement result of the candidate L2 U2N Relay UE, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

***Thresh1*** is the threshold parameter for this event (i.e. *y1-Threshold1* as defined within *reportConfigInterRAT* for this event).

***Thresh2*** is the threshold parameter for this event (i.e. *y1-Threshold2-Relay* as defined within *reportConfigInterRAT* for this event).

***Mp*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ and SINR.

***Mr*** is expressed in dBm or dB, depending on the measurement quantity of candidate L2 U2N Relay UE.

***Hys*** are expressed in dB.

***Thresh1*** is expressed in the same unit as ***Mp***.

***Thresh2*** is expressed in the same unit as ***Mr***.

#### 5.5.4.20 Event Y2 (Candidate L2 U2N Relay UE becomes better than threshold)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition Y2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition Y2-2, as specified below, is fulfilled;

Inequality Y2-1 (Entering condition)

$$Mr - Hys > Thresh$$

Inequality Y2-2 (Leaving condition)

$$Mr + Hys < Thresh$$

The variables in the formula are defined as follows:

***Mr*** is the measurement result of the candidate L2 U2N Relay UE, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

***Thresh*** is the threshold parameter for this event (i.e. *y2-Threshold-Relay* as defined within *reportConfigInterRAT* for this event).

***Mr*** is expressed in dBm or dB, depending on the measurement quantity of candidate L2 U2N Relay UE.

***Hys*** are expressed in dB.

***Thresh*** is expressed in the same unit as ***Mr***.

## 5.5.5 Measurement reporting

### 5.5.5.1 General

**Figure 5.5.5.1-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> for each serving cell configured with *servingCellMO*:
  - 2> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *rsType*:
    - 3> if the serving cell measurements based on the *rsType* included in the *reportConfig* that triggered the measurement report are available:
      - 4> set the *measResultServingCell* within *measResultServingMOList* to include RSRP, RSRQ and the available SINR of the serving cell, derived based on the *rsType* included in the *reportConfig* that triggered the measurement report;
    - 2> else:
      - 3> if SSB based serving cell measurements are available:
        - 4> set the *measResultServingCell* within *measResultServingMOList* to include RSRP, RSRQ and the available SINR of the serving cell, derived based on SSB;
      - 3> else if CSI-RS based serving cell measurements are available:
        - 4> set the *measResultServingCell* within *measResultServingMOList* to include RSRP, RSRQ and the available SINR of the serving cell, derived based on CSI-RS;
  - 1> set the *servCellId* within *measResultServingMOList* to include each NR serving cell that is configured with *servingCellMO*, if any;
  - 1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:

- 2> for each serving cell configured with *servingCellMO*, include beam measurement information according to the associated *reportConfig* as described in 5.5.5.2;
- 1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
  - 2> for each *measObjectId* referenced in the *measIdList* which is also referenced with *servingCellMO*, other than the *measObjectId* corresponding with the *measId* that triggered the measurement reporting;
  - 3> if the *measObjectNR* indicated by the *servingCellMO* includes the RS resource configuration corresponding to the *rsType* indicated in the *reportConfig*:
    - 4> set the *measResultBestNeighCell* within *measResultServingMOList* to include the *physCellId* and the available measurement quantities based on the *reportQuantityCell* and *rsType* indicated in *reportConfig* of the non-serving cell corresponding to the concerned *measObjectNR* with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this *measObjectNR*, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this *measObjectNR*, otherwise with the highest measured SINR;
    - 4> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
      - 5> for each best non-serving cell included in the measurement report:
        - 6> include beam measurement information according to the associated *reportConfig* as described in 5.5.5.2;
- 1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting is set to *eventTriggered* and *eventId* is set to *eventA3*, or *eventA4*, or *eventA5*, or *eventB1*, or *eventB2*:
  - 2> if the UE is in NE-DC and the measurement configuration that triggered this measurement report is associated with the MCG:
    - 3> set the *measResultServFreqListEUTRA-SCG* to include an entry for each E-UTRA SCG serving frequency with the following:
      - 4> include *carrierFreq* of the E-UTRA serving frequency;
      - 4> set the *measResultServingCell* to include the available measurement quantities that the UE is configured to measure by the measurement configuration associated with the SCG;
      - 4> if *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
        - 5> set the *measResultServFreqListEUTRA-SCG* to include within *measResultBestNeighCell* the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;
- 1> if *reportConfig* associated with the *measId* that triggered the measurement reporting is set to *eventTriggered* and *eventId* is set to *eventA3*, or *eventA4*, or *eventA5*:
  - 2> if the UE is in NR-DC and the measurement configuration that triggered this measurement report is associated with the MCG:
    - 3> set the *measResultServFreqListNR-SCG* to include for each NR SCG serving cell that is configured with *servingCellMO*, if any, the following:
      - 4> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *rsType*:
        - 5> if the serving cell measurements based on the *rsType* included in the *reportConfig* that triggered the measurement report are available according to the measurement configuration associated with the SCG:
          - 6> set the *measResultServingCell* within *measResultServFreqListNR-SCG* to include RSRP, RSRQ and the available SINR of the serving cell, derived based on the *rsType* included in the *reportConfig* that triggered the measurement report;

- 4> else:
  - 5> if SSB based serving cell measurements are available according to the measurement configuration associated with the SCG:
    - 6> set the *measResultServingCell* within *measResultServFreqListNR-SCG* to include RSRP, RSRQ and the available SINR of the serving cell, derived based on SSB;
  - 5> else if CSI-RS based serving cell measurements are available according to the measurement configuration associated with the SCG:
    - 6> set the *measResultServingCell* within *measResultServFreqListNR-SCG* to include RSRP, RSRQ and the available SINR of the serving cell, derived based on CSI-RS;
- 4> if results for the serving cell derived based on SSB are included:
  - 5> include the *ssbFrequency* to the value indicated by *ssbFrequency* as included in the *MeasObjectNR* of the serving cell;
- 4> if results for the serving cell derived based on CSI-RS are included:
  - 5> include the *refFreqCSI-RS* to the value indicated by *refFreqCSI-RS* as included in the *MeasObjectNR* of the serving cell;
- 4> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
  - 5> for each serving cell configured with *servingCellMO*, include beam measurement information according to the associated *reportConfig* as described in 5.5.5.2, where availability is considered according to the measurement configuration associated with the SCG;
- 4> if *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
  - 5> if the *measObjectNR* indicated by the *servingCellMO* includes the RS resource configuration corresponding to the *rsType* indicated in the *reportConfig*:
    - 6> set the *measResultNeighCellListNR* within *measResultServFreqListNR-SCG* to include one entry with the *physCellId* and the available measurement quantities based on the *reportQuantityCell* and *rsType* indicated in *reportConfig* of the non-serving cell corresponding to the concerned *measObjectNR* with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this *measObjectNR*, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this *measObjectNR*, otherwise with the highest measured SINR, where availability is considered according to the measurement configuration associated with the SCG;
  - 7> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport*:
    - 8> for each best non-serving cell included in the measurement report:
      - 9> include beam measurement information according to the associated *reportConfig* as described in 5.5.5.2, where availability is considered according to the measurement configuration associated with the SCG;
- 1> if the *measRSSI-ReportConfig* is configured within the corresponding *reportConfig* for this *measId*:
  - 2> set the *rsi-Result* to the linear average of sample value(s) provided by lower layers in the *reportInterval*;
  - 2> set the *channelOccupancy* to the rounded percentage of sample values which are beyond the *channelOccupancyThreshold* within all the sample values in the *reportInterval*;
- 1> if the UE is acting as L2 U2N Remote UE:
  - 2> set the *sl-MeasResultServingRelay* in accordance with the following:

3> set the *cellIdentity* to include the *cellAccessRelatedInfo* contained in the discovery message received from the serving L2 U2N Relay UE;

3> set the *sl-RelayUE-Identity* to include the Source L2 ID of the serving L2 U2N Relay;

3> set the *sl-MeasResult* to include the SL-RSRP of the serving L2 U2N Relay UE;

NOTE 1: In case of no data transmission from L2 U2N Relay UE to L2 U2N Remote UE, it is left to UE implementation whether to use SL-RSRP or SD-RSRP when setting the *sl-MeasResultServingRelay* of the serving L2 U2N Relay UE.

1> if there is at least one applicable neighbouring cell or candidate L2 U2N Relay UE to report:

2> if the *reportType* is set to *eventTriggered* or *periodical*:

3> if the measurement report concerns the candidate L2 U2N Relay UE:

4> set the *sl-MeasResultsCandRelay* in *measResultNeighCells* to include the best candidate L2 U2N Relay UEs up to *maxNrofRelayMeas* in accordance with the following:

5> if the *reportType* is set to *eventTriggered*:

6> include the L2 U2N Relay UEs included in the *relaysTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

5> else:

6> include the applicable L2 U2N Relay UEs for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

5> for each L2 U2N Relay UE that is included in the *sl-MeasResultsCandRelay*:

6> set the *cellIdentity* to include the *cellAccessRelatedInfo* contained in the discovery message received from the concerned L2 U2N Relay UE;

6> set the *sl-RelayUE-Identity* to include the Source L2 ID of the concerned L2 U2N Relay UE;

6> set the *sl-MeasResult* to include the SD-RSRP of the concerned L2 U2N Relay UE;

5> for each included L2 U2N Relay UE, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

6> set the *sl-MeasResult* to include the quantity(ies) indicated in the *reportQuantityRelay* within the concerned *reportConfigRelay* in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best L2 U2N Relay UE is included first;

3> else:

4> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

5> if the *reportType* is set to *eventTriggered* and *eventId* is not set to *eventD1*:

6> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

5> else:

6> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

5> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

5> if the *reportType* is set to *eventTriggered* or *periodical*:

6> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

- 7> if the *measObject* associated with this *measId* concerns NR:
    - 8> if *rsType* in the associated *reportConfig* is set to *ssb*:
      - 9> set *resultsSSB-Cell* within the *measResult* to include the SS/PBCH block based quantity(ies) indicated in the *reportQuantityCell* within the concerned *reportConfig*, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
      - 9> if *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport* are configured, include beam measurement information as described in 5.5.5.2;
    - 8> else if *rsType* in the associated *reportConfig* is set to *csi-rs*:
      - 9> set *resultsCSI-RS-Cell* within the *measResult* to include the CSI-RS based quantity(ies) indicated in the *reportQuantityCell* within the concerned *reportConfig*, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
      - 9> if *reportQuantityRS-Indexes* and *maxNrofRS-IndexesToReport* are configured, include beam measurement information as described in 5.5.5.2;
  - 7> if the *measObject* associated with this *measId* concerns E-UTRA:
    - 8> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfigInterRAT* in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
  - 7> if the *measObject* associated with this *measId* concerns UTRA-FDD and if *ReportConfigInterRAT* includes the *reportQuantityUTRA-FDD*:
    - 8> set the *measResult* to include the quantity(ies) indicated in the *reportQuantityUTRA-FDD* within the concerned *reportConfigInterRAT* in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
- 2> else:
- 3> if the cell indicated by *cellForWhichToReportCGI* is an NR cell:
    - 4> if *plmn-IdentityInfoList* of the *cgi-Info* for the concerned cell has been obtained:
      - 5> include the *plmn-IdentityInfoList* including *plmn-IdentityList*, *trackingAreaCode* (if available), *trackingAreaList* (if available), *ranac* (if available), *cellIdentity* and *cellReservedForOperatorUse* for each entry of the *plmn-IdentityInfoList*;
      - 5> include *frequencyBandList* if available;
      - 5> for each *PLMN-IdentityInfo* in *plmn-IdentityInfoList*:
        - 6> if the *gNB-ID-Length* is broadcast:
          - 7> include *gNB-ID-Length*;
    - 4> if *nr-CGI-Reporting-NPN* is supported by the UE and *npn-IdentityInfoList* of the *cgi-Info* for the concerned cell has been obtained:
      - 5> include the *npn-IdentityInfoList* including *npn-IdentityList*, *trackingAreaCode*, *ranac* (if available), *cellIdentity* and *cellReservedForOperatorUse* for each entry of the *npn-IdentityInfoList*;
      - 5> for each *NPN-IdentityInfo* in *NPN-IdentityInfoList*:
        - 6> if the *gNB-ID-Length* is broadcast:
          - 7> include *gNB-ID-Length*;
    - 5> include *cellReservedForOtherUse* if available;

- 4> else if *MIB* indicates the *SIB1* is not broadcast:
  - 5> include the *noSIB1* including the *ssb-SubcarrierOffset* and *pdccch-ConfigSIB1* obtained from *MIB* of the concerned cell;
- 3> if the cell indicated by *cellForWhichToReportCGI* is an E-UTRA cell:
  - 4> if all mandatory fields of the *cgi-Info-EPC* for the concerned cell have been obtained:
    - 5> include in the *cgi-Info-EPC* the fields broadcasted in E-UTRA *SystemInformationBlockType1* associated to EPC;
  - 4> if the UE is E-UTRA/5GC capable and all mandatory fields of the *cgi-Info-5GC* for the concerned cell have been obtained:
    - 5> include in the *cgi-Info-5GC* the fields broadcasted in E-UTRA *SystemInformationBlockType1* associated to 5GC;
  - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> include the *freqBandIndicator*;
    - 5> if the cell broadcasts the *multiBandInfoList*, include the *multiBandInfoList*;
    - 5> if the cell broadcasts the *freqBandIndicatorPriority*, include the *freqBandIndicatorPriority*;
- 1> if the corresponding *measObject* concerns NR:
  - 2> if the *reportSFTD-Meas* is set to *true* within the corresponding *reportConfigNR* for this *measId*:
    - 3> set the *measResultSFTD-NR* in accordance with the following:
      - 4> set *sfn-OffsetResult* and *frameBoundaryOffsetResult* to the measurement results provided by lower layers;
      - 4> if the *reportRSRP* is set to *true*;
        - 5> set *rsrp-Result* to the RSRP of the NR PSCell derived based on SSB;
  - 2> else if the *reportSFTD-NeighMeas* is included within the corresponding *reportConfigNR* for this *measId*:
    - 3> for each applicable cell which measurement results are available, include an entry in the *measResultCellListSFTD-NR* and set the contents as follows:
      - 4> set *physCellId* to the physical cell identity of the concerned NR neighbour cell.
      - 4> set *sfn-OffsetResult* and *frameBoundaryOffsetResult* to the measurement results provided by lower layers;
      - 4> if the *reportRSRP* is set to *true*:
        - 5> set *rsrp-Result* to the RSRP of the concerned cell derived based on SSB;
- 1> else if the corresponding *measObject* concerns E-UTRA:
  - 2> if the *reportSFTD-Meas* is set to *true* within the corresponding *reportConfigInterRAT* for this *measId*:
    - 3> set the *measResultSFTD-EUTRA* in accordance with the following:
      - 4> set *sfn-OffsetResult* and *frameBoundaryOffsetResult* to the measurement results provided by lower layers;
      - 4> if the *reportRSRP* is set to *true*;
        - 5> set *rsrpResult-EUTRA* to the RSRP of the EUTRA PSCell;
- 1> if average uplink PDCP delay values are available:

- 2> set the *ul-PDCP-DelayValueResultList* to include the corresponding average uplink PDCP delay values;
- 1> if PDCP excess delay measurements are available:
  - 2> set the *ul-PDCP-ExcessDelayResultList* to include the corresponding PDCP excess delay measurements;
- 1> if the *includeCommonLocationInfo* is configured in the corresponding *reportConfig* for this *measId* and detailed location information that has not been reported is available, set the content of *commonLocationInfo* of the *locationInfo* as follows:
  - 2> include the *locationTimestamp*;
  - 2> include the *locationCoordinate*, if available;
  - 2> include the *velocityEstimate*, if available;
  - 2> include the *locationError*, if available;
  - 2> include the *locationSource*, if available;
  - 2> if available, include the *gnss-TOD-msec*;
- 1> if the *coarseLocationRequest* is set to *true* in the corresponding *reportConfig* for this *measId*:
  - 2> include *coarseLocationInfo*, if available;
- 1> if the *includeWLAN-Meas* is configured in the corresponding *reportConfig* for this *measId*, set the *wlan-LocationInfo* of the *locationInfo* in the *measResults* as follows:
  - 2> if available, include the *LogMeasResultWLAN*, in order of decreasing RSSI for WLAN APs;
- 1> if the *includeBT-Meas* is configured in the corresponding *reportConfig* for this *measId*, set the *BT-LocationInfo* of the *locationInfo* in the *measResults* as follows:
  - 2> if available, include the *LogMeasResultBT*, in order of decreasing RSSI for Bluetooth beacons;
- 1> if the *includeSensor-Meas* is configured in the corresponding *reportConfig* for this *measId*, set the *sensor-LocationInfo* of the *locationInfo* in the *measResults* as follows:
  - 2> if available, include the *sensor-MeasurementInformation*;
  - 2> if available, include the *sensor-MotionInformation*;
- 1> if there is at least one applicable transmission resource pool for NR sidelink communication/discovery (for *measResultsSL*):
  - 2> set the *measResultsListSL* to include the CBR measurement results in accordance with the following:
    - 3> if the *reportType* is set to *eventTriggered*:
      - 4> include the transmission resource pools included in the *poolsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable transmission resource pools for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
    - 3> if the corresponding *measObject* concerns NR sidelink communication/discovery, then for each transmission resource pool to be reported:
      - 4> set the *sl-poolReportIdentity* to the identity of this transmission resource pool;
      - 4> set the *sl-CBR-ResultsNR* to the CBR measurement results on PSSCH and PSCCH of this transmission resource pool provided by lower layers, if available;

NOTE 1: Void.

- 1> if there is at least one applicable CLI measurement resource to report:
  - 2> if the *reportType* is set to *cli-EventTriggered* or *cli-Periodical*:
    - 3> set the *measResultCLI* to include the most interfering SRS resources or most interfering CLI-RSSI resources up to *maxReportCLI* in accordance with the following:
      - 4> if the *reportType* is set to *cli-EventTriggered*:
        - 5> if trigger quantity is set to *srs-RSRP* i.e. *i1-Threshold* is set to *srs-RSRP*:
          - 6> include the SRS resource included in the *cli-TriggeredList* as defined within the *VarMeasReportList* for this *measId*;
        - 5> if trigger quantity is set to *cli-RSSI* i.e. *i1-Threshold* is set to *cli-RSSI*:
          - 6> include the CLI-RSSI resource included in the *cli-TriggeredList* as defined within the *VarMeasReportList* for this *measId*;
      - 4> else:
        - 5> if *reportQuantityCLI* is set to *srs-rsrp*:
          - 6> include the applicable SRS resources for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
        - 5> else:
          - 6> include the applicable CLI-RSSI resources for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
      - 4> for each SRS resource that is included in the *measResultCLI*:
        - 5> include the *srs-ResourceId*;
        - 5> set *srs-RSRP-Result* to include the layer 3 filtered measured results in decreasing order, i.e. the most interfering SRS resource is included first;
      - 4> for each CLI-RSSI resource that is included in the *measResultCLI*:
        - 5> include the *rsssi-ResourceId*;
        - 5> set *cli-RSSI-Result* to include the layer 3 filtered measured results in decreasing order, i.e. the most interfering CLI-RSSI resource is included first;
  - 1> if there is at least one applicable UE Rx-Tx time difference measurement to report:
    - 2> set *measResultRxTxTimeDiff* to the latest measurement result;
  - 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
    - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
  - 1> else:
    - 2> if the *reportType* is set to *periodical* or *cli-Periodical* or *rxTxPeriodical*:
      - 3> remove the entry within the *VarMeasReportList* for this *measId*;
      - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

- 1> if the measurement reporting was configured by a *sl-ConfigDedicatedNR* received within the *RRCConnectionReconfiguration*:
  - 2> submit the *MeasurementReport* message to lower layers for transmission via SRB1, embedded in E-UTRA RRC message *ULInformationTransferIRAT* as specified TS 36.331 [10], clause 5.6.28;
- 1> else if the UE is in (NG)EN-DC:
  - 2> if SRB3 is configured and the SCG is not deactivated:
    - 3> submit the *MeasurementReport* message via SRB3 to lower layers for transmission, upon which the procedure ends;
  - 2> else:
    - 3> submit the *MeasurementReport* message via E-UTRA embedded in E-UTRA RRC message *ULInformationTransferMRDC* as specified in TS 36.331 [10].
- 1> else if the UE is in NR-DC:
  - 2> if the measurement configuration that triggered this measurement report is associated with the SCG:
    - 3> if SRB3 is configured and the SCG is not deactivated:
      - 4> submit the *MeasurementReport* message via SRB3 to lower layers for transmission, upon which the procedure ends;
    - 3> else:
      - 4> submit the *MeasurementReport* message via SRB1 embedded in NR RRC message *ULInformationTransferMRDC* as specified in 5.7.2a.3;
  - 2> else:
    - 3> submit the *MeasurementReport* message via SRB1 to lower layers for transmission, upon which the procedure ends;
- 1> else:
  - 2> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

#### 5.5.5.2 Reporting of beam measurement information

For beam measurement information to be included in a measurement report the UE shall:

- 1> if *reportType* is set to *eventTriggered*:
  - 2> consider the trigger quantity as the sorting quantity if available, otherwise RSRP as sorting quantity if available, otherwise RSRQ as sorting quantity if available, otherwise SINR as sorting quantity;
- 1> if *reportType* is set to *periodical*:
  - 2> if a single reporting quantity is set to *true* in *reportQuantityRS-Indexes*:
    - 3> consider the configured single quantity as the sorting quantity;
  - 2> else:
    - 3> if *rsrp* is set to *true*:
      - 4> consider RSRP as the sorting quantity;
    - 3> else:
      - 4> consider RSRQ as the sorting quantity;

- 1> set *rsIndexResults* to include up to *maxNrofRS-IndexesToReport* SS/PBCH block indexes or CSI-RS indexes in order of decreasing sorting quantity as follows:
  - 2> if the measurement information to be included is based on SS/PBCH block:
    - 3> include within *resultsSSB-Indexes* the index associated to the best beam for that SS/PBCH block sorting quantity and if *absThreshSS-BlocksConsolidation* is included in the *VarMeasConfig* for the *measObject* associated to the cell for which beams are to be reported, the remaining beams whose sorting quantity is above *absThreshSS-BlocksConsolidation*;
    - 3> if *includeBeamMeasurements* is set to *true*, include the SS/PBCH based measurement results for the quantities in *reportQuantityRS-Indexes* for each SS/PBCH block index;
  - 2> else if the beam measurement information to be included is based on CSI-RS:
    - 3> include within *resultsCSI-RS-Indexes* the index associated to the best beam for that CSI-RS sorting quantity and, if *absThreshCSI-RS-Consolidation* is included in the *VarMeasConfig* for the *measObject* associated to the cell for which beams are to be reported, the remaining beams whose sorting quantity is above *absThreshCSI-RS-Consolidation*;
    - 3> if *includeBeamMeasurements* is set to *true*, include the CSI-RS based measurement results for the quantities in *reportQuantityRS-Indexes* for each CSI-RS index.

### 5.5.5.3 Sorting of cell measurement results

The UE shall determine the sorting quantity according to parameters of the *reportConfig* associated with the *measId* that triggered the reporting:

- 1> if the *reportType* is set to *eventTriggered*:
  - 2> for an NR cell, consider the quantity used in the *aN-Threshold* (for *eventA1*, *eventA2* and *eventA4*) or in the *a5-Threshold2* (for *eventA5*) or in the *aN-Offset* (for *eventA3* and *eventA6*) or in the *x1-Threshold2* (for *eventX1*) as the sorting quantity;
  - 2> for an E-UTRA cell, consider the quantity used in the *bN-ThresholdEUTRA* as the sorting quantity;
  - 2> for an UTRA-FDD cell, consider the quantity used in the *bN-ThresholdUTRA-FDD* as the sorting quantity;
  - 2> for a candidate L2 U2N Relay UE, consider the *y1-Threshold2-Relay* (for *eventY1-Relay*) or *y2-Threshold-Relay* (for *eventY2-Relay*) as the sorting quantity;
- 1> if the *reportType* is set to *periodical*:
  - 2> determine the sorting quantity according to *reportQuantityCell* for an NR cell, and according to *reportQuantity* for an E-UTRA cell, as below:
    - 3> if a single quantity is set to *true*:
      - 4> consider this quantity as the sorting quantity;
    - 3> else:
      - 4> if *rsrp* is set to *true*;
        - 5> consider RSRP as the sorting quantity;
      - 4> else:
        - 5> consider RSRQ as the sorting quantity;
  - 2> determine the sorting quantity according to *reportQuantityUTRA-FDD* for UTRA-FDD cell, as below:
    - 3> if a single quantity is set to *true*:
      - 4> consider this quantity as the sorting quantity;
    - 3> else:

4> consider RSCP as the sorting quantity.

2> for a candidate L2 U2N Relay UE, consider the *reportQuantityRelay* as the sorting quantity;

## 5.5.6 Location measurement indication

### 5.5.6.1 General

**Figure 5.5.6.1-1: Location measurement indication**

The purpose of this procedure is to indicate to the network that the UE is going to start/stop location related measurements towards E-UTRA or NR which require measurement gaps or start/stop detection of subframe and slot timing towards E-UTRA (*eutra-FineTimingDetection*) which requires measurement gaps. UE shall initiate this procedure only after successful AS security activation.

NOTE: It is a network decision to configure the measurement gap.

### 5.5.6.2 Initiation

The UE shall:

- 1> if and only if upper layers indicate to start performing location measurements towards E-UTRA or NR or start subframe and slot timing detection towards E-UTRA, and the UE requires measurement gaps for these operations while measurement gaps are either not configured or not sufficient:
- 2> if preconfigured measurement gaps for positioning and *posMG-Request* are configured and the UE considers that at least one of the preconfigured measurement gaps for positioning is sufficient for the location measurement when activated:
- 3> trigger the lower layers to initiate the measurement gap activation request using UL MAC CE as specified in TS 38.321 [3];
- 2> else:
- 3> initiate the procedure to indicate start as specified in clause 5.5.6.3;

NOTE 1: The UE verifies the measurement gap situation only upon receiving the indication from upper layers. If at this point in time sufficient gaps are available, the UE does not initiate the procedure. Unless it receives a new indication from upper layers, the UE is only allowed to further repeat the procedure in the same PCell once per frequency of the target RAT if the provided measurement gaps are insufficient.

NOTE 1a: When indication is received from upper layers for performing location measurement and there is pre-configured measurement gap configured (not preconfigured measurement gap for positioning), the UE considers this preconfigured measurement gap to be not sufficient if the measurement gap is not considered to be always activated according to clause 9.1.7.2 of TS 38.133 [14].

- 1> if and only if upper layers indicate to stop performing location measurements towards E-UTRA or NR or stop subframe and slot timing detection towards E-UTRA:
- 2> if there is no activated preconfigured measurement gap for positioning:
- 3> if there is previously triggered UL MAC CE transmission for the measurement gap activation for positioning:

4> indicate to the lower layers to cancel the triggered UL MAC CE transmission for the measurement gap activation as specified in TS 38.321 [3];

2> else if there is activated preconfigured measurement gap for positioning:

3> trigger the lower layers to deactivate all the activated measurement gap(s) for positioning as specified in TS 38.321 [3].

2> if there is configured measurement gap used for positioning and the measurement gap is not the activated preconfigured measurement gap for positioning:

3> initiate the procedure to indicate stop as specified in 5.5.6.3.

NOTE 2: The UE may initiate the procedure to indicate stop even if it did not previously initiate the procedure to indicate start.

### 5.5.6.3 Actions related to transmission of *LocationMeasurementIndication* message

The UE shall set the contents of *LocationMeasurementIndication* message as follows:

1> if the procedure is initiated to indicate start of location related measurements:

2> if the procedure is initiated for RSTD measurements towards E-UTRA:

3> set the *measurementIndication* to the *eutra-RSTD* according to the information received from upper layers;

2> else if the procedure is initiated for positioning measurement towards NR:

3> set the *measurementIndication* to the *nr-PRS-Measurement* according to the information received from upper layers;

1> else if the procedure is initiated to indicate stop of location related measurements:

2> set the *measurementIndication* to the value *release*;

1> if the procedure is initiated to indicate start of subframe and slot timing detection towards E-UTRA:

2> set the *measurementIndication* to the value *eutra-FineTimingDetection*;

1> else if the procedure is initiated to indicate stop of subframe and slot timing detection towards E-UTRA:

2> set the *measurementIndication* to the value *release*;

1> submit the *LocationMeasurementIndication* message to lower layers for transmission, upon which the procedure ends.

## 5.5a Logged Measurements

### 5.5a.1 Logged Measurement Configuration

#### 5.5a.1.1 General

**Figure 5.5a.1.1-1: Logged measurement configuration**

The purpose of this procedure is to configure the UE to perform logging of measurement results while in RRC\_IDLE and RRC\_INACTIVE. The procedure applies to logged measurements capable UEs that are in RRC\_CONNECTED.

NOTE: NG-RAN may retrieve stored logged measurement information by means of the UE information procedure.

#### 5.5a.1.2 Initiation

NG-RAN initiates the logged measurement configuration procedure to UE in RRC\_CONNECTED by sending the *LoggedMeasurementConfiguration* message.

#### 5.5a.1.3 Reception of the *LoggedMeasurementConfiguration* by the UE

Upon receiving the *LoggedMeasurementConfiguration* message the UE shall:

- 1> discard the logged measurement configuration as well as the logged measurement information as specified in 5.5a.2;
- 1> store the received *loggingDuration*, *reportType* and *areaConfiguration*, if included, in *VarLogMeasConfig*;
- 1> if the *LoggedMeasurementConfiguration* message includes *plmn-IdentityList*:
  - 2> set *plmn-IdentityList* in *VarLogMeasReport* to include the RPLMN as well as the PLMNs included in *plmn-IdentityList*;
- 1> else:
  - 2> set *plmn-IdentityList* in *VarLogMeasReport* to include the RPLMN;
- 1> store the received *absoluteTimeInfo*, *traceReference*, *traceRecordingSessionRef*, and *tce-Id* in *VarLogMeasReport*;
- 1> store the received *bt-NameList*, if included, in *VarLogMeasConfig*;
- 1> store the received *wlan-NameList*, if included, in *VarLogMeasConfig*;
- 1> store the received *sensor-NameList*, if included, in *VarLogMeasConfig*;
- 1> start timer T330 with the timer value set to the *loggingDuration*;
- 1> store the received *sigLoggedMeasType*, if included, in *VarLogMeasReport*;
- 1> store the received *earlyMeasIndication*, if included, in *VarLogMeasConfig*;

#### 5.5a.1.4 T330 expiry

Upon expiry of T330 the UE shall:

- 1> release *VarLogMeasConfig*;

The UE is allowed to discard stored logged measurements, i.e. to release *VarLogMeasReport*, 48 hours after T330 expiry.

## 5.5a.2 Release of Logged Measurement Configuration

### 5.5a.2.1 General

The purpose of this procedure is to release the logged measurement configuration as well as the logged measurement information.

### 5.5a.2.2 Initiation

The UE shall initiate the procedure upon receiving a logged measurement configuration in same or another RAT. The UE shall also initiate the procedure upon power off or upon deregistration.

The UE shall:

- 1> stop timer T330, if running;
- 1> if stored, discard the logged measurement configuration as well as the logged measurement information, i.e. release the UE variables *VarLogMeasConfig* and *VarLogMeasReport*.

## 5.5a.3 Measurements logging

### 5.5a.3.1 General

This procedure specifies the logging of available measurements by a UE in RRC\_IDLE and RRC\_INACTIVE that has a logged measurement configuration. The actual process of logging within the UE, takes place in RRC\_IDLE state could continue in RRC\_INACTIVE state or vice versa.

### 5.5a.3.2 Initiation

While T330 is running and SDT procedure is not ongoing, the UE shall:

- 1> if measurement logging is suspended:
  - 2> if during the last logging interval the IDC problems detected by the UE is resolved, resume measurement logging;
- 1> if not suspended, perform the logging in accordance with the following:
  - 2> if the *reportType* is set to *periodical* in the *VarLogMeasConfig*:
    - 3> if the UE is in any cell selection state (as specified in TS 38.304 [20]):
      - 4> perform the logging at regular time intervals, as defined by the *loggingInterval* in the *VarLogMeasConfig*;
    - 3> if the UE is in camped normally state on an NR cell and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
      - 4> if *areaConfiguration* is not included in *VarLogMeasConfig*; or
      - 4> if the serving cell is part of the area indicated by *areaConfig* in *areaConfiguration* in *VarLogMeasConfig*:
        - 5> perform the logging at regular time intervals, as defined by the *loggingInterval* in the *VarLogMeasConfig*;
    - 2> else if the *reportType* is set to *eventTriggered*, and *eventType* is set to *outOfCoverage*:

- 3> perform the logging at regular time intervals as defined by the *loggingInterval* in *VarLogMeasConfig* only when the UE is in any cell selection state;
- 3> upon transition from any cell selection state to camped normally state in NR:
  - 4> if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*; and
  - 4> if *areaConfiguration* is not included in *VarLogMeasConfig* or if the current camping cell is part of the area indicated by *areaConfig* of *areaConfiguration* in *VarLogMeasConfig*;
  - 5> perform the logging;
- 2> else if the *reportType* is set to *eventTriggered* and *eventType* is set to *eventL1*:
  - 3> if the UE is in camped normally state on an NR cell and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
    - 4> if *areaConfiguration* is not included in *VarLogMeasConfig*; or
    - 4> if the serving cell is part of the area indicated by *areaConfig* in *areaConfiguration* in *VarLogMeasConfig*;
    - 5> perform the logging at regular time intervals as defined by the *loggingInterval* in *VarLogMeasConfig* only when the conditions indicated by the *eventL1* are met;
  - 2> when performing the logging:
    - 3> if *InterFreqTargetInfo* is configured and if the UE detected IDC problems on at least one of the frequencies included in *InterFreqTargetInfo* or any inter-RAT frequency during the last logging interval, or
    - 3> if *InterFreqTargetInfo* is not configured and if the UE detected IDC problems during the last logging interval:
      - 4> if *measResultServingCell* in the *VarLogMeasReport* is not empty:
        - 5> include *inDeviceCoexDetected*;
        - 5> suspend measurement logging from the next logging interval;
      - 4> else:
        - 5> suspend measurement logging;

NOTE 0: If the UE detected and resolved IDC problem during the last logging interval, the UE does not suspend measurement logging from the next logging interval and does not suspend measurement logging for the last logging interval.

- 3> set the *relativeTimeStamp* to indicate the elapsed time since the moment at which the logged measurement configuration was received;
- 3> if location information became available during the last logging interval, set the content of the *locationInfo* as in 5.3.3.7;
- 3> if the UE is in any cell selection state (as specified in TS 38.304 [20]):
  - 4> set *anyCellSelectionDetected* to indicate the detection of no suitable or no acceptable cell found;
  - 4> if the *reportType* is set to *eventTriggered* in the *VarLogMeasConfig*; and
  - 4> if the RPLMN at the time of entering the any cell selection state is included in *plmn-IdentityList* stored in *VarLogMeasReport*; and
  - 4> if *areaConfiguration* is not included in *VarLogMeasConfig* or if the last suitable cell that the UE was camping on is part of the area indicated by *areaConfig* of *areaConfiguration* in *VarLogMeasConfig*;

- 5> set the *servCellIdentity* to indicate global cell identity of the last suitable cell that the UE was camping on;
- 5> set the *measResultServingCell* to include the quantities of the last suitable cell the UE was camping on;
- 4> else if the *reportType* is set to *periodical* in the *VarLogMeasConfig*:
  - 5> set the *servCellIdentity* to indicate global cell identity of the last logged cell that the UE was camping on;
  - 5> set the *measResultServingCell* to include the quantities of the last logged cell the UE was camping on;
- 3> else:
  - 4> set the *servCellIdentity* to indicate global cell identity of the cell the UE is camping on;
  - 4> set the *measResultServingCell* to include the quantities of the cell the UE is camping on;
- 3> if available, set the *measResultNeighCells*, in order of decreasing ranking-criterion as used for cell re-selection, to include measurements of neighbouring cell that became available during the last logging interval and according to the following:
  - 4> include measurement results for at most 6 neighbouring cells on the NR serving frequency and for at most 3 cells per NR neighbouring frequency and for the NR neighbouring frequencies in accordance with the following:
    - 5> if *interFreqTargetInfo* is included in *VarLogMeasConfig*:
      - 6> if *earlyMeasIndication* is included in *VarLogMeasConfig*:
        - 7> include measurement results for NR neighbouring frequencies that are included in both *interFreqTargetInfo* and either in *measIdleCarrierListNR* (within the *VarMeasIdleConfig*) or *SIB4*;
      - 6> else:
        - 7> include measurement results for NR neighbouring frequencies that are included in both *interFreqTargetInfo* and *SIB4*;
    - 5> else:
      - 6> if *earlyMeasIndication* is included in *VarLogMeasConfig*:
        - 7> include measurement results for NR neighbouring frequencies that are included in either *measIdleCarrierListNR* (within the *VarMeasIdleConfig*) or *SIB4*;
      - 6> else:
        - 7> include measurement results for NR neighbouring frequencies that are included in *SIB4*;
  - 4> include measurement results for at most 3 neighbours per inter-RAT frequency in accordance with the following:
    - 5> if *earlyMeasIndication* is included in *VarLogMeasConfig*:
      - 6> include measurement results for inter-RAT neighbouring frequencies that are included in either *measIdleCarrierListEUTRA* (within the *VarMeasIdleConfig*) or *SIB5*;
    - 5> else:
      - 6> include measurement results for inter-RAT frequencies that are included in *SIB5*;
  - 4> for each neighbour cell included, include the optional fields that are available;

NOTE 1: The UE includes the latest results of the available measurements as used for cell reselection evaluation in RRC\_IDLE or RRC\_INACTIVE, which are performed in accordance with the performance requirements as specified in TS 38.133 [14].

NOTE 2: For logging the measurements on frequencies (indicated in *measIdleCarrierListNR/measIdleCarrierListEUTRA*) in the logged measurement, the *qualityThreshold* in *measIdleConfig* should not be applied, and how the UE logs the measurements on the frequencies is left to the UE implementation.

- 2> when the memory reserved for the logged measurement information becomes full, stop timer T330 and perform the same actions as performed upon expiry of T330, as specified in 5.5a.1.4.

## 5.6 UE capabilities

### 5.6.1 UE capability transfer

#### 5.6.1.1 General

This clause describes how the UE compiles and transfers its UE capability information upon receiving a UECapabilityEnquiry from the network.

Figure 5.6.1.1-1: UE capability transfer

#### 5.6.1.2 Initiation

The network initiates the procedure to a UE in RRC\_CONNECTED when it needs (additional) UE radio access capability information. The network should retrieve UE capabilities only after AS security activation. Network does not forward UE capabilities that were retrieved before AS security activation to the CN.

#### 5.6.1.3 Reception of the UECapabilityEnquiry by the UE

The UE shall set the contents of UECapabilityInformation message as follows:

- 1> if the *ue-CapabilityRAT-RequestList* contains a *UE-CapabilityRAT-Request* with *rat-Type* set to *nr*:
  - 2> include in the *ue-CapabilityRAT-ContainerList* a *UE-CapabilityRAT-Container* of the type *UE-NR-Capability* and with the *rat-Type* set to *nr*;
  - 2> include the *supportedBandCombinationList*, *featureSets* and *featureSetCombinations* as specified in clause 5.6.1.4;
- 1> if the *ue-CapabilityRAT-RequestList* contains a *UE-CapabilityRAT-Request* with *rat-Type* set to *eutra-nr*:
  - 2> if the UE supports (NG)EN-DC or NE-DC:
    - 3> include in the *ue-CapabilityRAT-ContainerList* a *UE-CapabilityRAT-Container* of the type *UE-MRDC-Capability* and with the *rat-Type* set to *eutra-nr*;
    - 3> include the *supportedBandCombinationList* and *featureSetCombinations* as specified in clause 5.6.1.4;
- 1> if the *ue-CapabilityRAT-RequestList* contains a *UE-CapabilityRAT-Request* with *rat-Type* set to *eutra*:

- 2> if the UE supports E-UTRA:
  - 3> include in the *ue-CapabilityRAT-ContainerList* a *ue-CapabilityRAT-Container* of the type *UE-EUTRA-Capability* associated with the terrestrial network and with the *rat-Type* set to *eutra* as specified in TS 36.331 [10], clause 5.6.3.3, according to the *capabilityRequestFilter*, if received;
- 1> if the *ue-CapabilityRAT-RequestList* contains a *UE-CapabilityRAT-Request* with *rat-Type* set to *utra-fdd*:
  - 2> if the UE supports UTRA-FDD:
    - 3> include the UE radio access capabilities for UTRA-FDD within a *ue-CapabilityRAT-Container* and with the *rat-Type* set to *utra-fdd*;
  - 1> if the RRC message segmentation is enabled based on the field *rrc-SegAllowed* received, and the encoded RRC message is larger than the maximum supported size of a PDCP SDU specified in TS 38.323 [5]:
    - 2> consider the maximum number of UL segments the UE is allowed to use when segmenting the *UECapabilityInformation* message is 16;
    - 2> initiate the UL message segment transfer procedure as specified in clause 5.7.7;
  - 1> else if the RRC message segmentation is enabled based on the field *rrc-MaxCapaSegAllowed* received, and the encoded RRC message is larger than the maximum supported size of a PDCP SDU specified in TS 38.323 [5]:
    - 2> consider the maximum number of UL segments the UE is allowed to use when segmenting the *UECapabilityInformation* message to be the value indicated by *rrc-MaxCapaSegAllowed*;
    - 2> initiate the UL message segment transfer procedure as specified in clause 5.7.7;
  - 1> else:
    - 2> submit the *UECapabilityInformation* message to lower layers for transmission, upon which the procedure ends.

#### 5.6.1.4 Setting band combinations, feature set combinations and feature sets supported by the UE

The UE invokes the procedures in this clause if the NR or E-UTRA network requests UE capabilities for *nr*, *eutra-nr* or *eutra*. This procedure is invoked once per requested *rat-Type* (see clause 5.6.1.3 for capability enquiry by the NR network; see TS 36.331 [10], clause 5.6.3.3 for capability enquiry by the E-UTRA network). The UE shall ensure that the feature set IDs are consistent across feature sets, feature set combinations and band combinations in all three UE capability containers that the network queries with the same fields with the same values, i.e. *UE-CapabilityRequestFilterNR*, *UE-CapabilityRequestFilterCommon*, *rrc-SegAllowed* and fields in *UECapabilityEnquiry* message (i.e. *requestedFreqBandsNR-MRDC*, *requestedCapabilityNR*, *eutra-nr-only* flag, *requestedCapabilityCommon* and *rrc-SegAllowed*) as defined in TS 36.331 [10], where applicable.

NOTE 1: Capability enquiry without *frequencyBandListFilter* is not supported.

NOTE 2: In (NG)EN-DC, the gNB needs the capabilities for RAT types *nr* and *eutra-nr* and it uses the *featureSets* in the *UE-NR-Capability* together with the *featureSetCombinations* in the *UE-MRDC-Capability* to determine the NR UE capabilities for the supported MRDC band combinations. Similarly, the eNB needs the capabilities for RAT types *eutra* and *eutra-nr* and it uses the *featureSetsEUTRA* in the *UE-EUTRA-Capability* together with the *featureSetCombinations* in the *UE-MRDC-Capability* to determine the E-UTRA UE capabilities for the supported MRDC band combinations. Hence, the IDs used in the *featureSets* must match the IDs referred to in *featureSetCombinations* across all three containers. The requirement on consistency implies that there are no undefined feature sets and feature set combinations.

NOTE 3: If the UE cannot include all feature sets and feature set combinations due to message size or list size constraints, it is up to UE implementation which feature sets and feature set combinations it prioritizes.

NOTE 3a: For the usage of *rrc-MaxCapaSegAllowed*, if the NR or E-UTRA network does not request UE capabilities for *nr*, *eutra-nr* and *eutra* in a single enquiry, the feature set IDs might not be consistent across feature sets, feature set combinations and band combinations in all three UE capability containers.

The UE shall:

1> compile a list of "candidate band combinations" according to the filter criteria in *capabilityRequestFilterCommon* (if included), only consisting of bands included in *frequencyBandListFilter*, and prioritized in the order of *frequencyBandListFilter* (i.e. first include band combinations containing the first-listed band, then include remaining band combinations containing the second-listed band, and so on), where for each band in the band combination, the parameters of the band do not exceed *maxBandwidthRequestedDL*, *maxBandwidthRequestedUL*, *maxCarriersRequestedDL*, *maxCarriersRequestedUL*, *ca-BandwidthClassDL-EUTRA* or *ca-BandwidthClassUL-EUTRA*, whichever are received;

1> for each band combination included in the list of "candidate band combinations":

2> if the network (E-UTRA) included the *eutra-nr-only* field, or

2> if the requested *rat-Type* is *eutra*:

3> remove the NR-only band combination from the list of "candidate band combinations";

NOTE 4: The (E-UTRA) network may request capabilities for *nr* but indicate with the *eutra-nr-only* flag that the UE shall not include any NR band combinations in the *UE-NR-Capability*. In this case the procedural text above removes all NR-only band combinations from the candidate list and thereby also avoids inclusion of corresponding feature set combinations and feature sets below.

2> if it is regarded as a fallback band combination with the same capabilities of another band combination included in the list of "candidate band combinations", and

2> if this fallback band combination is generated by releasing at least one SCell or uplink configuration of SCell or SUL according to TS 38.306 [26]:

3> remove the band combination from the list of "candidate band combinations";

NOTE 5: Even if the network requests (only) capabilities for *nr*, it may include E-UTRA band numbers in the *frequencyBandListFilter* to ensure that the UE includes all necessary feature sets needed for subsequently requested *eutra-nr* capabilities. At this point of the procedure the list of "candidate band combinations" contains all NR- and/or E-UTRA-NR band combinations that match the filter (*frequencyBandListFilter*) provided by the NW and that match the *eutra-nr-only* flag (if RAT-Type *nr* is requested by E-UTRA). In the following, this candidate list is used to derive the band combinations, feature set combinations and feature sets to be reported in the requested capability container.

1> if the requested *rat-Type* is *nr*:

2> include into *supportedBandCombinationList* as many NR-only band combinations as possible from the list of "candidate band combinations", starting from the first entry;

3> if *srs-SwitchingTimeRequest* is received:

4> if SRS carrier switching is supported;

5> include *srs-SwitchingTimesListNR* and *srs-SwitchingAffectedBandsListNR* for each band combination;

4> set *srs-SwitchingTimeRequested* to *true*;

2> include, into *featureSetCombinations*, the feature set combinations referenced from the supported band combinations as included in *supportedBandCombinationList* according to the previous;

2> compile a list of "candidate feature set combinations" referenced from the list of "candidate band combinations" excluding entries (rows in feature set combinations) with same or lower capabilities;

2> if *uplinkTxSwitchRequest* is received:

3> include into *supportedBandCombinationList-UplinkTxSwitch* as many NR-only band combinations that supported UL TX switching as possible from the list of "candidate band combinations", starting from the first entry;

4> if *srs-SwitchingTimeRequest* is received:

5> if SRS carrier switching is supported;

6> include *srs-SwitchingTimesListNR* and *srs-SwitchingAffectedBandsListNR* for each band combination;

5> set *srs-SwitchingTimeRequested* to *true*;

3> include, into *featureSetCombinations*, the feature set combinations referenced from the supported band combinations as included in *supportedBandCombinationList-UplinkTxSwitch* according to the previous;

NOTE 6: This list of "candidate feature set combinations" contains the feature set combinations used for NR-only as well as E-UTRA-NR band combinations. It is used to derive a list of NR feature sets referred to from the feature set combinations in the *UE-NR-Capability* and from the feature set combinations in a *UE-MRDC-Capability* container.

2> if *sidelinkRequest* is received:

3> for a sidelink band combination the UE included in *supportedBandCombinationListSidelinkEUTRA-NR*, *supportedBandCombinationListSL-RelayDiscovery* or *supportedBandCombinationListSL-NonRelayDiscovery*:

4> if the UE supports partial sensing for a band of the sidelink band combination, include the partial sensing capabilities for the band using the *sl-TransmissionMode2-PartialSensing-r17*;

3> set *sidelinkRequested* to *true*;

2> include into *featureSets* the feature sets referenced from the "candidate feature set combinations" and may exclude the feature sets with the parameters that exceed any of *maxBandwidthRequestedDL*, *maxBandwidthRequestedUL*, *maxCarriersRequestedDL* or *maxCarriersRequestedUL*, whichever are received;

1> else, if the requested *rat-Type* is *eutra-nr*:

2> include into *supportedBandCombinationList* and/or *supportedBandCombinationListNEDC-Only* as many E-UTRA-NR band combinations as possible from the list of "candidate band combinations", starting from the first entry;

3> if *srs-SwitchingTimeRequest* is received:

4> if SRS carrier switching is supported;

5> include *srs-SwitchingTimesListNR*, *srs-SwitchingTimesListEUTRA* and *srs-SwitchingAffectedBandsListNR* for each band combination;

4> set *srs-SwitchingTimeRequested* to *true*;

2> include, into *featureSetCombinations*, the feature set combinations referenced from the supported band combinations as included in *supportedBandCombinationList* according to the previous;

2> if *uplinkTxSwitchRequest* is received:

3> include into *supportedBandCombinationList-UplinkTxSwitch* as many E-UTRA-NR band combinations that supported UL TX switching as possible from the list of "candidate band combinations", starting from the first entry;

4> if *srs-SwitchingTimeRequest* is received:

5> if SRS carrier switching is supported;

6> include *srs-SwitchingTimesListNR*, *srs-SwitchingTimesListEUTRA* and *srs-SwitchingAffectedBandsListNR* for each band combination;

5> set *srs-SwitchingTimeRequested* to *true*;

3> include, into *featureSetCombinations*, the feature set combinations referenced from the supported band combinations as included in *supportedBandCombinationList-UplinkTxSwitch* according to the previous;

1> else (if the requested *rat-Type* is *eutra*):

- 2> compile a list of "candidate feature set combinations" referenced from the list of "candidate band combinations" excluding entries (rows in feature set combinations) with same or lower capabilities;

NOTE 7: This list of "candidate feature set combinations" contains the feature set combinations used for E-UTRA-NR band combinations. It is used to derive a list of E-UTRA feature sets referred to from the feature set combinations in a *UE-MRDC-Capability* container.

- 2> include into *featureSetsEUTRA* (in the *UE-EUTRA-Capability*) the feature sets referenced from the "candidate feature set combinations" and may exclude the feature sets with the parameters that exceed *ca-BandwidthClassDL-EUTRA* or *ca-BandwidthClassUL-EUTRA*, whichever are received;
- 1> include the received *frequencyBandListFilter* in the field *appliedFreqBandListFilter* of the requested UE capability, except if the requested *rat-Type* is *nr* and the network included the *eutra-nr-only* field;
- 1> if the network included *ue-CapabilityEnquiryExt*:
  - 2> include the received *ue-CapabilityEnquiryExt* in the field *receivedFilters*;

#### 5.6.1.5 Void

### 5.7 Other

#### 5.7.1 DL information transfer

##### 5.7.1.1 General

**Figure 5.7.1.1-1: DL information transfer**

The purpose of this procedure is to transfer NAS dedicated information from NG-RAN to a UE in *RRC\_CONNECTED* or to a UE in *RRC\_INACTIVE* during SDT, or to transfer F1-C related information from IAB Donor-CU to IAB-DU via the collocated IAB-MT in *RRC\_CONNECTED*.

##### 5.7.1.2 Initiation

The network initiates the DL information transfer procedure whenever there is a need to transfer NAS dedicated information, or F1-C related information to an IAB-node. The network initiates the DL information transfer procedure by sending the *DLInformationTransfer* message.

##### 5.7.1.3 Reception of the *DLInformationTransfer* by the UE

Upon receiving *DLInformationTransfer* message, the UE shall:

- 1> if *dedicatedNAS-Message* is included:
  - 2> forward *dedicatedNAS-Message* to upper layers.
- 1> if *referenceTimeInfo* is included:
  - 2> calculate the reference time based on the *time*, *referenceSFN* and *timeInfoType* if it is included;
  - 2> calculate the uncertainty of the reference time based on the *uncertainty*, if *uncertainty* is included;
  - 2> inform upper layers of the reference time and, if *uncertainty* is included, of the uncertainty;

- 2> ignore all further *referenceTimeInfo* received in *SIB9*, if any.
- 1> if *sib9Fallback* is included:
  - 2> apply *referenceTimeInfo* in *SIB9*.
- 1> if *rxTxTimeDiff-gNB* is included:
  - 2> calculate the propagation delay based on the UE Rx-Tx time difference measurement and the received Rx-Tx time difference measurement at the gNB;
  - 2> inform upper layers of the propagation delay.
- 1> if *ta-PDC* is set to *activate*:
  - 2> inform upper layers of the propagation delay determined by the accumulated Timing Advance commands.

Upon receiving *DLInformationTransfer* message, the IAB-MT shall:

- 1> if *dedicatedInfoF1c* is included:
  - 2> forward *dedicatedInfoF1c* to the collocated IAB-DU.

## 5.7.1a DL information transfer for MR-DC

### 5.7.1a.1 General

**Figure 5.7.1a.1-1: DL information transfer MR-DC**

The purpose of this procedure is to transfer RRC messages from the network to the UE over SRB3 (e.g. an NR RRC reconfiguration message including *reconfigurationWithSync*, an E-UTRA RRC connection reconfiguration message including *mobilityControlInfo*, an RRC connection release message, a *MobilityFromNRCommand* message, or a *MobilityFromEUTRACommand* message) during fast MCG link recovery.

### 5.7.1a.2 Initiation

The network initiates this procedure whenever there is a need to transfer an RRC message during fast MCG link recovery.

### 5.7.1a.3 Actions related to reception of *DLInformationTransferMRDC* message

Upon receiving the *DLInformationTransferMRDC*, the UE shall:

- 1> if the *RRCReconfiguration* message is included in *dl-DCCH-MessageNR*:
  - 2> perform the RRC reconfiguration procedure according to 5.3.5.3;
- 1> else if the *RRCRelease* message is included in *dl-DCCH-MessageNR*:
  - 2> perform the RRC release procedure according to 5.3.8;
- 1> else if the *MobilityFromNRCommand* message is included in the *dl-DCCH-MessageNR*:
  - 2> perform the mobility from NR procedure according to 5.4.3.3;
- 1> else if the E-UTRA *RRCConnectionReconfiguration* message is included in *dl-DCCH-MessageEUTRA*:

- 2> perform the RRC connection reconfiguration procedure as specified in TS 36.331 [10], clause 5.3.5.4;
- 1> else if the E-UTRA *RRCConnectionRelease* message is included in *dl-DCCH-MessageEUTRA*:
  - 2> perform the RRC connection release as specified in TS 36.331 [10], clause 5.3.8;
- 1> else if the *MobilityFromEUTRACommand* message is included in the *dl-DCCH-MessageEUTRA*:
  - 2> perform the mobility from E-UTRA procedure as specified in TS 36.331 [10], clause 5.4.3.3;

## 5.7.2 UL information transfer

### 5.7.2.1 General

**Figure 5.7.2.1-1: UL information transfer**

The purpose of this procedure is to transfer NAS dedicated information from the UE to the network in RRC\_CONNECTED or in RRC\_INACTIVE during SDT, or to transfer F1-C related information from IAB-DU to IAB Donor-CU via the collocated IAB-MT in RRC\_CONNECTED.

### 5.7.2.2 Initiation

A UE in RRC\_CONNECTED or a UE in RRC\_INACTIVE during SDT initiates the UL information transfer procedure whenever there is a need to transfer NAS dedicated information. The UE initiates the UL information transfer procedure by sending the *ULInformationTransfer* message. In addition, an IAB-MT in RRC\_CONNECTED initiates the UL information transfer procedure whenever there is a need to transfer F1-C related information. When F1-C related information has to be transferred, the IAB-MT shall initiate the procedure only if SRB2 or split SRB2 is established.

### 5.7.2.3 Actions related to transmission of *ULInformationTransfer* message

The UE shall set the contents of the *ULInformationTransfer* message as follows:

- 1> if the upper layer provides NAS PDU:
  - 2> set the *dedicatedNAS-Message* to include the information received from upper layers;
- 1> for the IAB-MT, if there is a need to transfer F1-C related information:
  - 2> include the *dedicatedInfoF1c*;
- 1> submit the *ULInformationTransfer* message to lower layers for transmission, upon which the procedure ends.

### 5.7.2.4 Failure to deliver *ULInformationTransfer* message

The UE shall:

- 1> if AS security is not started and radio link failure occurs before the successful delivery of *ULInformationTransfer* messages has been confirmed by lower layers; or
- 1> if PDCP re-establishment or release/addition (e.g due to key refresh upon PCell or PSCell change, or RRC connection re-establishment, or failure of resume procedure initiated for SDT) occurs on an SRB on which

*ULInformationTransfer* messages were submitted for transmission but successful delivery of these messages was not confirmed by lower layers:

- 2> inform upper layers about the possible failure to deliver the information contained in the concerned *ULInformationTransfer* messages, unless the messages only include *dedicatedInfoF1c*.

## 5.7.2a UL information transfer for MR-DC

### 5.7.2a.1 General

**Figure 5.7.2a.1-1: UL information transfer MR-DC**

The purpose of this procedure is to transfer MR-DC dedicated information from the UE to the network e.g. the NR or E-UTRA RRC *MeasurementReport*, *FailureInformation*, *UEAssistanceInformation*, *RRCReconfigurationComplete*, *MCGFailureInformation*, or *IABOtherInformation* message.

### 5.7.2a.2 Initiation

A UE in RRC\_CONNECTED initiates the UL information transfer for MR-DC procedure whenever there is a need to transfer MR-DC dedicated information. I.e. the procedure is not used during an RRC connection reconfiguration involving NR or E-UTRA connection reconfiguration, in which case the MR DC information is piggybacked to the *RRCReconfigurationComplete* message, except in the case the UE executes an intra-SN CPC.

### 5.7.2a.3 Actions related to transmission of *ULInformationTransferMRDC* message

The UE shall set the contents of the *ULInformationTransferMRDC* message as follows:

- 1> if there is a need to transfer MR-DC dedicated information related to NR:
  - 2> set the *ul-DCCH-MessageNR* to include the NR MR-DC dedicated information to be transferred (e.g., NR RRC *MeasurementReport*, *UEAssistanceInformation*, *FailureInformation*, *RRCReconfigurationComplete*, *MCGFailureInformation*, or *IABOtherInformation* message);
- 1> else if there is a need to transfer MR-DC dedicated information related to E-UTRA:
  - 2> set the *ul-DCCH-MessageEUTRA* to include the E-UTRA MR-DC dedicated information to be transferred (e.g., E-UTRA RRC *MeasurementReport*, or *MCGFailureInformation* message);
- 1> submit the *ULInformationTransferMRDC* message to lower layers for transmission, upon which the procedure ends.

## 5.7.2b UL transfer of IRAT information

### 5.7.2b.1 General

**Figure 5.7.2b.1-1: UL transfer of IRAT information**

The purpose of this procedure is to transfer from the UE to NR MCG dedicated information terminated at the NR MCG but specified by another RAT e.g. the E-UTRA *MeasurementReport* message, the E-UTRA *SidelinkUEInformation* message or the E-UTRA *UEAssistanceInformation* message. The specific information transferred in this message is set in accordance with:

- the procedure specified in 5.6.10 of TS 36.331 [10] for E-UTRA *UEAssistanceInformation* message;
- the procedure specified in 5.10.2 of TS 36.331 [10] for E-UTRA *SidelinkUEInformation* message;
- the procedure specified in 5.5.5 of TS 36.331 [10] for E-UTRA *MeasurementReport* Message.

### 5.7.2b.2 Initiation

A UE in RRC\_CONNECTED initiates the UL information transfer procedure whenever there is a need to transfer dedicated inter-RAT information as specified in TS 36.331 [10].

### 5.7.2b.3 Actions related to transmission of *ULInformationTransferIRAT* message

The UE shall set the contents of the *ULInformationTransferIRAT* message as follows:

- 1> if there is a need to transfer dedicated LTE information related to V2X sidelink communications:
  - 2> set the *ul-DCCH-MessageEUTRA* to include the V2X sidelink communication information to be transferred (e.g. the E-UTRA RRC *MeasurementReport* message, the E-UTRA RRC *SidelinkUEInformation* message, or the E-UTRA RRC *UEAssistanceInformation* message);
- 1> submit the *ULInformationTransferIRAT* message to lower layers for transmission, upon which the procedure ends;

## 5.7.3 SCG failure information

### 5.7.3.1 General

**Figure 5.7.3.1-1: SCG failure information**

The purpose of this procedure is to inform E-UTRAN or NR MN about an SCG failure the UE has experienced i.e. SCG radio link failure, beam failure of the PSCell while the SCG is deactivated, failure of SCG reconfiguration with sync, SCG configuration failure for RRC message on SRB3, SCG integrity check failure, and consistent uplink LBT failures on PSCell for operation with shared spectrum channel access.

### 5.7.3.2 Initiation

A UE initiates the procedure to report SCG failures when neither MCG nor SCG transmission is suspended and when one of the following conditions is met:

- 1> upon detecting radio link failure for the SCG, in accordance with clause 5.3.10.3;
- 1> upon detecting beam failure of the PSCell while the SCG is deactivated, in accordance with TS 38.321[3];
- 1> upon reconfiguration with sync failure of the SCG, in accordance with clause 5.3.5.8.3;
- 1> upon SCG configuration failure, in accordance with clause 5.3.5.8.2;
- 1> upon integrity check failure indication from SCG lower layers concerning SRB3.

Upon initiating the procedure, the UE shall:

- 1> if the procedure was not initiated due to beam failure of the PSCell while the SCG is deactivated:
  - 2> suspend SCG transmission for all SRBs, DRBs and, if any, BH RLC channels;
  - 2> reset SCG MAC;
- 1> stop T304 for the SCG, if running;
- 1> stop conditional reconfiguration evaluation for CPC or CPA, if configured;
- 1> if the UE is in (NG)EN-DC:
  - 2> initiate transmission of the *SCGFailureInformationNR* message as specified in TS 36.331 [10], clause 5.6.13a.
- 1> else:
  - 2> initiate transmission of the *SCGFailureInformation* message in accordance with 5.7.3.5.

### 5.7.3.3 Failure type determination for (NG)EN-DC

The UE shall set the SCG failure type as follows:

- 1> if the UE initiates transmission of the *SCGFailureInformationNR* message due to T310 expiry:
  - 2> set the *failureType* as *t310-Expiry*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message due to T312 expiry:
  - 2> set the *failureType* as any value and set the *failureType-v1610* as *t312-Expiry*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message to provide reconfiguration with sync failure information for an SCG:
  - 2> set the *failureType* as *synchReconfigFailureSCG*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message to provide random access problem indication from SCG MAC:
  - 2> if the random access procedure was initiated for beam failure recovery:
    - 3> set the *failureType* as *randomAccessProblem* and set the *failureType-v1610* as *beamFailureRecoveryFailure*;

- 2> else:
  - 3> set the *failureType* as *randomAccessProblem*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message to provide indication from SCG RLC that the maximum number of retransmissions has been reached:
  - 2> set the *failureType* as *rlc-MaxNumRetx*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message due to SRB3 integrity check failure:
  - 2> set the *failureType* as *srb3-IntegrityFailure*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message due to Reconfiguration failure of NR RRC reconfiguration message:
  - 2> set the *failureType* as *scg-reconfigFailure*;
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message due to consistent uplink LBT failures:
  - 2> set the *failureType* as any value and set the *failureType-v1610* as *scg-lbtFailure*;
- 1> else if connected as an IAB-node and the *SCGFailureInformationNR* is initiated due to the reception of a BH RLF indication on BAP entity from the SCG:
  - 2> set the *failureType* as any value and set *failureType-v1610* as *bh-RLF*.
- 1> else if the UE initiates transmission of the *SCGFailureInformationNR* message due to beam failure of the PSCell while the SCG is deactivated:
  - 2> set the *failureType* as any value and set *failureType-v1610* as *beamFailure*.

#### 5.7.3.4 Setting the contents of *MeasResultSCG-Failure*

The UE shall set the contents of the *MeasResultSCG-Failure* as follows:

- 1> for each *MeasObjectNR* configured on NR SCG for which a *measId* is configured and measurement results are available:
  - 2> include an entry in *measResultPerMOList*;
  - 2> if there is a *measId* configured with the *MeasObjectNR* and a *reportConfig* which has *rsType* set to *ssb*:
    - 3> set *ssbFrequency* to the value indicated by *ssbFrequency* as included in the *MeasObjectNR*;
  - 2> if there is a *measId* configured with the *MeasObjectNR* and a *reportConfig* which has *rsType* set to *csi-rs*:
    - 3> set *refFreqCSI-RS* to the value indicated by *refFreqCSI-RS* as included in the associated measurement object;
  - 2> if a serving cell is associated with the *MeasObjectNR*:
    - 3> set *measResultServingCell* to include the available quantities of the concerned cell and in accordance with the performance requirements in TS 38.133 [14];
  - 2> set the *measResultNeighCellList* to include the best measured cells, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected the failure, and set its fields as follows:
    - 3> ordering the cells with sorting as follows:
      - 4> based on SS/PBCH block if SS/PBCH block measurement results are available and otherwise based on CSI-RS;

4> using RSRP if RSRP measurement results are available, otherwise using RSRQ if RSRQ measurement results are available, otherwise using SINR;

3> for each neighbour cell included:

4> include the optional fields that are available.

NOTE: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Exclude-listed cells are not required to be reported.

1> if available, set the *locationInfo* as in 5.3.3.7 according to the *otherConfig* associated with the NR SCG.

### 5.7.3.5 Actions related to transmission of *SCGFailureInformation* message

The UE shall set the contents of the *SCGFailureInformation* message as follows:

1> if the UE initiates transmission of the *SCGFailureInformation* message due to T310 expiry:

2> set the *failureType* as *t310-Expiry*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message due to T312 expiry:

2> set the *failureType* as *other* and set the *failureType-v1610* as *t312-Expiry*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message to provide reconfiguration with sync failure information for an SCG:

2> set the *failureType* as *synchReconfigFailureSCG*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message to provide random access problem indication from SCG MAC:

2> if the random access procedure was initiated for beam failure recovery:

3> set the *failureType* as *other* and set the *failureType-v1610* as *beamFailureRecoveryFailure*;

2> else:

3> set the *failureType* as *randomAccessProblem*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message to provide indication from SCG RLC that the maximum number of retransmissions has been reached:

2> set the *failureType* as *rlc-MaxNumRetx*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message due to SRB3 IP check failure:

2> set the *failureType* as *srb3-IntegrityFailure*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message due to Reconfiguration failure of NR RRC reconfiguration message:

2> set the *failureType* as *scg-reconfigFailure*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message due to consistent uplink LBT failures:

2> set the *failureType* as *other* and set the *failureType-v1610* as *scg-lbtFailure*;

1> else if connected as an IAB-node and the *SCGFailureInformation* is initiated due to the reception of a BH RLF indication on BAP entity from the SCG:

2> set the *failureType* as *other* and set *failureType-v1610* as *bh-RLF*;

1> else if the UE initiates transmission of the *SCGFailureInformation* message due to beam failure of the PSCell while the SCG is deactivated:

- 2> set the *failureType* as *other* and set *failureType-v1610* as *beamFailure*;
- 1> include and set *MeasResultSCG-Failure* in accordance with 5.7.3.4;
- 1> for each *MeasObjectNR* configured by a *MeasConfig* associated with the MCG, and for which measurement results are available:
  - 2> include an entry in *measResultFreqList*;
  - 2> if there is a *measId* configured with the *MeasObjectNR* and a *reportConfig* which has *rsType* set to *ssb*:
    - 3> set *ssbFrequency* in *measResultFreqList* to the value indicated by *ssbFrequency* as included in the *MeasObjectNR*;
  - 2> if there is a *measId* configured with the *MeasObjectNR* and a *reportConfig* which has *rsType* set to *csi-rs*:
    - 3> set *refFreqCSI-RS* in *measResultFreqList* to the value indicated by *refFreqCSI-RS* as included in the associated measurement object;
  - 2> if a serving cell is associated with the *MeasObjectNR*:
    - 3> set *measResultServingCell* in *measResultFreqList* to include the available quantities of the concerned cell and in accordance with the performance requirements in TS 38.133 [14];
  - 2> set the *measResultNeighCellList* in *measResultFreqList* to include the best measured cells, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected the failure, and set its fields as follows;
    - 3> ordering the cells with sorting as follows:
      - 4> based on SS/PBCH block if SS/PBCH block measurement results are available and otherwise based on CSI-RS;
      - 4> using RSRP if RSRP measurement results are available, otherwise using RSRQ if RSRQ measurement results are available, otherwise using SINR;
    - 3> for each neighbour cell included:
      - 4> include the optional fields that are available.

NOTE 1: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Exclude-listed cells are not required to be reported.

NOTE 2: Field *measResultSCG-Failure* is used to report available results for NR frequencies the UE is configured to measure by SCG RRC signalling.

- 1> if available, set the *locationInfo* as in 5.3.3.7 according to the *otherConfig* associated with the NR MCG.
- 1> if the UE supports SCG failure for mobility robustness optimization:
  - 2> if the *failureType* is set to *synchReconfigFailureSCG*; or
  - 2> if the *failureType* is set to *randomAccessProblem* and the SCG failure was declared while T304 was running:
    - 3> set *perRAInfoList* to indicate the performed random access procedure related information as specified in 5.7.10.5.
    - 3> set the *failedPSCellId* to the physical cell identity and carrier frequency of the target PSCell of the failed PSCell change or failed PSCell addition;
    - 3> set the *timeSCGFailure* to the elapsed time since the last execution of *RRCReconfiguration* message including the *reconfigurationWithSync* for the SCG until declaring the SCG failure;
    - 3> if the last *RRCReconfiguration* message including the *reconfigurationWithSync* for the PSCell change was received to enter the PSCell in which the SCG failure was declared;

- 4> set the *previousPSCellId* to the physical cell identity and carrier frequency of the source PSCell associated to the last received *RRCReconfiguration* message including *reconfigurationWithSync* for the SCG;
- 2> else:
  - 3> set the *failedPSCellId* to the physical cell identity and carrier frequency of the PSCell in which the SCG failure was declared;
  - 3> set the *timeSCGFailure* to the elapsed time since the last execution of *RRCReconfiguration* message including the *reconfigurationWithSync* for the SCG until declaring the SCG failure;
  - 3> if the last *RRCReconfiguration* message including the *reconfigurationWithSync* for the PSCell change was received to enter the PSCell in which the SCG failure was declared:
    - 4> set the *previousPSCellId* to the physical cell identity and carrier frequency of the source PSCell associated to the last received *RRCReconfiguration* message including *reconfigurationWithSync* for the SCG;

The UE shall submit the *SCGFailureInformation* message to lower layers for transmission.

## 5.7.3a EUTRA SCG failure information

### 5.7.3a.1 General

**Figure 5.7.3a.1-1: EUTRA SCG failure information**

The purpose of this procedure is to inform NR MN about an SCG failure on E-UTRA SN the UE has experienced (e.g. SCG radio link failure, SCG change failure), as specified in TS 36.331 [10] clause 5.6.13.2.

### 5.7.3a.2 Initiation

A UE initiates the procedure to report EUTRA SCG failures when neither NR MCG nor EUTRA SCG transmission is suspended and in accordance with TS 36.331 [10] clause 5.6.13.2. Actions the UE shall perform upon initiating the procedure, other than related to the transmission of the *SCGFailureInformationEUTRA* message are specified in TS 36.331 [10] clause 5.6.13.2.

### 5.7.3a.3 Actions related to transmission of *SCGFailureInformationEUTRA* message

The UE shall set the contents of the *SCGFailureInformationEUTRA* message as follows:

- 1> include *failureType* within *failureReportSCG-EUTRA* and set it to indicate the SCG failure in accordance with TS 36.331 [10] clause 5.6.13.4;
- 1> include and set *measResultSCG-FailureMRDC* in accordance with TS 36.331 [10] clause 5.6.13.5;
- 1> for each EUTRA frequency the UE is configured to measure by *measConfig* for which measurement results are available:
  - 2> set the *measResultFreqListMRDC* to include the best measured cells, ordered such that the best cell is listed first using RSRP to order if RSRP measurement results are available for cells on this frequency, otherwise using RSRQ to order if RSRQ measurement results are available for cells on this frequency, otherwise using

SINR to order, and based on measurements collected up to the moment the UE detected the failure, and for each cell that is included, include the optional fields that are available;

NOTE: Field *measResultSCG-FailureMRDC* is used to report available results for E-UTRAN frequencies the UE is configured to measure by E-UTRA RRC signalling.

1> if available, set the *locationInfo* as in 5.3.3.7.:

The UE shall submit the *SCGFailureInformationEUTRA* message to lower layers for transmission.

## 5.7.3b MCG failure information

### 5.7.3b.1 General

**Figure 5.7.3b.1-1: MCG failure information**

The purpose of this procedure is to inform the network about an MCG failure the UE has experienced i.e. MCG radio link failure. A UE in RRC\_CONNECTED, for which AS security has been activated with SRB2 and at least one DRB or multicast MRB setup or, for IAB, SRB2, may initiate the fast MCG link recovery procedure in order to continue the RRC connection without re-establishment.

### 5.7.3b.2 Initiation

A UE configured with split SRB1 or SRB3 initiates the procedure to report MCG failures when neither MCG nor SCG transmission is suspended, the SCG is not deactivated, *t316* is configured, and when the following condition is met:

1> upon detecting radio link failure of the MCG, in accordance with 5.3.10.3, while T316 is not running.

Upon initiating the procedure, the UE shall:

- 1> stop timer T310 for the PCell, if running;
- 1> stop timer T312 for the PCell, if running;
- 1> suspend MCG transmission for all SRBs, DRBs, multicast MRBs, except SRB0, and, if any, BH RLC channels;
- 1> reset MCG MAC;
- 1> stop conditional reconfiguration evaluation for CHO, if configured;
- 1> stop conditional reconfiguration evaluation for CPC, if configured;
- 1> initiate transmission of the *MCGFailureInformation* message in accordance with 5.7.3b.4.

NOTE: The handling of any outstanding UL RRC messages during the initiation of the fast MCG link recovery is left to UE implementation.

### 5.7.3b.3 Failure type determination

The UE shall set the MCG failure type as follows:

- 1> if the UE initiates transmission of the *MCGFailureInformation* message due to T310 expiry:
  - 2> set the *failureType* as *t310-Expiry*;
- 1> else if the UE initiates transmission of the *MCGFailureInformation* message due to T312 expiry:
  - 2> set the *failureType* as *t312-Expiry*;
- 1> else if the UE initiates transmission of the *MCGFailureInformation* message to provide random access problem indication from MCG MAC:
  - 2> if the random access procedure was initiated for beam failure recovery:
    - 3> set the *failureType* as *beamFailureRecoveryFailure*;
  - 2> else:
    - 3> set the *failureType* as *randomAccessProblem*;
- 1> else if the UE initiates transmission of the *MCGFailureInformation* message to provide indication from MCG RLC that the maximum number of retransmissions has been reached:
  - 2> set the *failureType* as *rlc-MaxNumRetx*;
- 1> else if the UE initiates transmission of the *MCGFailureInformation* message due to consistent uplink LBT failures on the MCG:
  - 2> set the *failureType* as *lbt-Failure*;
- 1> else if connected as an IAB-node and the *MCGFailureInformation* message is initiated due to the reception of a BH RLF indication on BAP entity from the MCG:
  - 2> set the *failureType* as *bh-RLF*.

#### 5.7.3b.4 Actions related to transmission of *MCGFailureInformation* message

The UE shall set the contents of the *MCGFailureInformation* message as follows:

- 1> include and set *failureType* in accordance with 5.7.3b.3;
- 1> for each *MeasObjectNR* configured by a *measConfig* associated with the MCG, and for which measurement results are available:
  - 2> include an entry in *measResultFreqList*;
  - 2> if there is a *measId* configured with the *MeasObjectNR* and a *reportConfig* which has *rsType* set to *ssb*:
    - 3> set *ssbFrequency* in *measResultFreqList* to the value indicated by *ssbFrequency* as included in the *MeasObjectNR*;
  - 2> if there is a *measId* configured with the *MeasObjectNR* and a *reportConfig* which has *rsType* set to *csi-rs*:
    - 3> set *refFreqCSI-RS* in *measResultFreqList* to the value indicated by *refFreqCSI-RS* as included in the associated measurement object;
  - 2> if a serving cell is associated with the *MeasObjectNR*:
    - 3> set *measResultServingCell* in *measResultFreqList* to include the available quantities of the concerned cell and in accordance with the performance requirements in TS 38.133 [14];
  - 2> set the *measResultNeighCellList* in *measResultFreqList* to include the best measured cells, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected the failure, and set its fields as follows;
    - 3> ordering the cells with sorting as follows:

- 4> based on SS/PBCH block if SS/PBCH block measurement results are available and otherwise based on CSI-RS;
  - 4> using RSRP if RSRP measurement results are available, otherwise using RSRQ if RSRQ measurement results are available, otherwise using SINR;
  - 3> for each neighbour cell included:
    - 4> include the optional fields that are available.
  - 1> for each EUTRA frequency the UE is configured to measure by *measConfig* for which measurement results are available:
    - 2> set the *measResultFreqListEUTRA* to include the best measured cells, ordered such that the best cell is listed first using RSRP to order the cells if RSRP measurement results are available for cells on this frequency, otherwise using RSRQ to order the cells if RSRQ measurement results are available for cells on this frequency, otherwise using SINR to order the cells, based on measurements collected up to the moment the UE detected the failure, and for each cell that is included, include the optional fields that are available;
  - 1> for each UTRA-FDD frequency the UE is configured to measure by *measConfig* for which measurement results are available:
    - 2> set the *measResultFreqListUTRA-FDD* to include the best measured cells, ordered such that the best cell is listed first using RSCP to order the cells if RSCP measurement results are available for cells on this frequency, otherwise using EcN0 to order the cells, based on measurements collected up to the moment the UE detected the failure, and for each cell that is included, include the optional fields that are available;
  - 1> if the UE is in NR-DC:
    - 2> include and set *measResultSCG* in accordance with 5.7.3.4;
  - 1> if the UE is in NE-DC:
    - 2> include and set *measResultSCG-EUTRA* in accordance with TS 36.331 [10] clause 5.6.13.5;
- NOTE 1: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Exclude-listed cells are not required to be reported.
- NOTE 2: Field *measResultSCG-Failure* is used to report available results for NR frequencies the UE is configured to measure by SCG RRC signalling.
- NOTE 3: Field *measResultSCG-EUTRA* is used to report available results for E-UTRAN frequencies the UE is configured to measure by E-UTRA RRC signalling.
- 1> if SRB1 is configured as split SRB and *pdcp-Duplication* is not configured:
    - 2> if the *primaryPath* for the PDCP entity of SRB1 refers to the MCG:
      - 3> set the *primaryPath* to refer to the SCG.

The UE shall:

- 1> start timer T316;
- 1> if SRB1 is configured as split SRB:
  - 2> submit the *MCGFailureInformation* message to lower layers for transmission via SRB1, upon which the procedure ends;
- 1> else (i.e. SRB3 configured):
  - 2> submit the *MCGFailureInformation* message to lower layers for transmission embedded in NR RRC message *ULInformationTransferMRDC* via SRB3 as specified in 5.7.2a.3.

### 5.7.3b.5 T316 expiry

The UE shall:

- 1> if T316 expires:
- 2> initiate the connection re-establishment procedure as specified in 5.3.7.

## 5.7.4 UE Assistance Information

### 5.7.4.1 General

**Figure 5.7.4.1-1: UE Assistance Information**

The purpose of this procedure is for the UE to inform the network of:

- its delay budget report carrying desired increment/decrement in the connected mode DRX cycle length, or;
- its overheating assistance information, or;
- its IDC assistance information, or;
- its preference on DRX parameters for power saving, or;
- its preference on the maximum aggregated bandwidth for power saving, or;
- its preference on the maximum number of secondary component carriers for power saving, or;
- its preference on the maximum number of MIMO layers for power saving, or;
- its preference on the minimum scheduling offset for cross-slot scheduling for power saving, or;
- its preference on the RRC state, or;
- configured grant assistance information for NR sidelink communication, or;
- its preference in being provisioned with reference time information, or;
- its preference for FR2 UL gap, or;
- its preference to transition out of RRC\_CONNECTED state for MUSIM operation, or;
- its preference on the MUSIM gaps, or;
- its relaxation state for RLM measurements, or;
- its relaxation state for BFD measurements, or;
- availability of data and/or signalling mapped to radio bearers which are not configured for SDT, or;
- its preference for the SCG to be deactivated, or;
- availability of uplink data to transmit for a DRB for which there is no MCG RLC bearer while the SCG is deactivated, or;

- change of its fulfilment status for RRM measurement relaxation criterion, or;
- service link (specified in TS 38.300 [2]) propagation delay difference between serving cell and neighbour cell(s).

#### 5.7.4.2 Initiation

A UE capable of providing delay budget report in RRC\_CONNECTED may initiate the procedure in several cases, including upon being configured to provide delay budget report and upon change of delay budget preference.

A UE capable of providing overheating assistance information in RRC\_CONNECTED may initiate the procedure if it was configured to do so, upon detecting internal overheating, or upon detecting that it is no longer experiencing an overheating condition.

A UE capable of providing IDC assistance information in RRC\_CONNECTED may initiate the procedure if it was configured to do so, upon detecting IDC problem if the UE did not transmit an IDC assistance information since it was configured to provide IDC indications, or upon change of IDC problem information.

A UE capable of providing its preference on DRX parameters of a cell group for power saving in RRC\_CONNECTED may initiate the procedure in several cases, if it was configured to do so, including upon having a preference on DRX parameters and upon change of its preference on DRX parameters.

A UE capable of providing its preference on the maximum aggregated bandwidth of a cell group for power saving in RRC\_CONNECTED may initiate the procedure in several cases, if it was configured to do so, including upon having a maximum aggregated bandwidth preference and upon change of its maximum aggregated bandwidth preference.

A UE capable of providing its preference on the maximum number of secondary component carriers of a cell group for power saving in RRC\_CONNECTED may initiate the procedure in several cases, if it was configured to do so, including upon having a maximum number of secondary component carriers preference and upon change of its maximum number of secondary component carriers preference.

A UE capable of providing its preference on the maximum number of MIMO layers of a cell group for power saving in RRC\_CONNECTED may initiate the procedure in several cases, if it was configured to do so, including upon having a maximum number of MIMO layers preference and upon change of its maximum number of MIMO layers preference.

A UE capable of providing its preference on the minimum scheduling offset for cross-slot scheduling of a cell group for power saving in RRC\_CONNECTED may initiate the procedure in several cases, if it was configured to do so, including upon having a minimum scheduling offset preference and upon change of its minimum scheduling offset preference.

A UE capable of providing assistance information to transition out of RRC\_CONNECTED state may initiate the procedure if it was configured to do so, upon determining that it prefers to transition out of RRC\_CONNECTED state, or upon change of its preferred RRC state.

A UE capable of providing configured grant assistance information for NR sidelink communication in RRC\_CONNECTED may initiate the procedure in several cases, including upon being configured to provide traffic pattern information and upon change of traffic patterns.

A UE capable of providing an indication of its preference in being provisioned with reference time information may initiate the procedure upon being configured to provide this indication, or if it was configured to provide this indication and upon change of its preference.

A UE capable of providing an indication of its preference in FR2 UL gap may initiate the procedure if it was configured to do so, upon detecting the need of FR2 UL gap activation/deactivation.

A UE capable of providing MUSIM assistance information for gap preference may initiate the procedure if it was configured to do so, upon determining it needs the gaps, or upon change of the gap preference information.

A UE capable of providing MUSIM assistance information for leave indication may initiate the procedure if it was configured to do so upon determining that it needs to leave RRC\_CONNECTED state.

A UE capable of relaxing its RLM measurements of a cell group in RRC\_CONNECTED state shall initiate the procedure for providing an indication of its relaxation state for RLM measurements upon being configured to do so, and upon change of its relaxation state for RLM measurements in RRC\_CONNECTED state.

A UE capable of relaxing its BFD measurements in serving cells of a cell group in RRC\_CONNECTED shall initiate the procedure for providing an indication of its relaxation state for BFD measurements upon being configured to do so, and upon change of its relaxation state for BFD measurements in RRC\_CONNECTED state.

A UE capable of SDT initiates this procedure when data and/or signalling mapped to radio bearers that are not configured for SDT becomes available during SDT (i.e. while SDT procedure is ongoing).

A UE capable of providing its preference for SCG deactivation may initiate the procedure if it was configured to do so, upon determining that it prefers or does no more prefer the SCG to be deactivated.

A UE that has uplink data to transmit for a DRB for which there is no MCG RLC bearer while the SCG is deactivated shall initiate the procedure.

A UE capable of providing an indication of fulfilment of the RRM measurement relaxation criterion in connected mode may initiate the procedure if it was configured to do so, upon change of its fulfilment status for RRM measurement relaxation criterion for connected mode.

A UE capable of providing service link propagation delay difference between serving cell and neighbour cell(s) shall initiate the procedure upon being configured to do so, and upon determining that service link propagation delay difference between serving cell and a neighbour cell has changed more than *threshPropDelayDiff* compared with the last reported value.

Upon initiating the procedure, the UE shall:

- 1> if configured to provide delay budget report:
  - 2> if the UE did not transmit a *UEAssistanceInformation* message with *delayBudgetReport* since it was configured to provide delay budget report; or
  - 2> if the current delay budget is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *delayBudgetReport* and timer T342 is not running:
  - 3> start or restart timer T342 with the timer value set to the *delayBudgetReportingProhibitTimer*;
  - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide a delay budget report;
- 1> if configured to provide overheating assistance information:
  - 2> if the overheating condition has been detected and T345 is not running; or
  - 2> if the current overheating assistance information is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *overheatingAssistance* and timer T345 is not running:
  - 3> start timer T345 with the timer value set to the *overheatingIndicationProhibitTimer*;
  - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide overheating assistance information;
- 1> if configured to provide IDC assistance information:
  - 2> if the UE did not transmit a *UEAssistanceInformation* message with *idc-Assistance* since it was configured to provide IDC assistance information:
    - 3> if on one or more frequencies included in *candidateServingFreqListNR*, the UE is experiencing IDC problems that it cannot solve by itself; or
    - 3> if on one or more supported UL CA combination comprising of carrier frequencies included in *candidateServingFreqListNR*, the UE is experiencing IDC problems that it cannot solve by itself:
    - 4> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide IDC assistance information;
  - 2> else if the current IDC assistance information is different from the one indicated in the last transmission of the *UEAssistanceInformation* message:

- 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide IDC assistance information;

NOTE 1: The term "IDC problems" refers to interference issues applicable across several subframes/slots where not necessarily all the subframes/slots are affected.

NOTE 2: For the frequencies on which a serving cell or serving cells is configured that is activated, IDC problems consist of interference issues that the UE cannot solve by itself, during either active data exchange or upcoming data activity which is expected in up to a few hundred milliseconds.  
For frequencies on which a SCell or SCells is configured that is deactivated, reporting IDC problems indicates an anticipation that the activation of the SCell or SCells would result in interference issues that the UE would not be able to solve by itself.  
For a non-serving frequency, reporting IDC problems indicates an anticipation that if the non-serving frequency or frequencies became a serving frequency or serving frequencies then this would result in interference issues that the UE would not be able to solve by itself.

- 1> if configured to provide its preference on DRX parameters of a cell group for power saving:
  - 2> if the UE has a preference on DRX parameters of the cell group and the UE did not transmit a *UEAssistanceInformation* message with *drx-Preference* for the cell group since it was configured to provide its preference on DRX parameters of the cell group for power saving; or
  - 2> if the current *drx-Preference* information for the cell group is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *drx-Preference* for the cell group and timer T346a associated with the cell group is not running:
    - 3> start the timer T346a with the timer value set to the *drx-PreferenceProhibitTimer* of the cell group;
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the current *drx-Preference*;
- 1> if configured to provide its preference on the maximum aggregated bandwidth of a cell group for power saving:
  - 2> if the UE has a preference on the maximum aggregated bandwidth of the cell group and the UE did not transmit a *UEAssistanceInformation* message with *maxBW-Preference* and/or *maxBW-PreferenceFR2-2* for the cell group since it was configured to provide its preference on the maximum aggregated bandwidth of the cell group for power saving; or
  - 2> if the current *maxBW-Preference* information for the cell group is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *maxBW-Preference* and/or *maxBW-PreferenceFR2-2* for the cell group and timer T346b associated with the cell group is not running:
    - 3> start the timer T346b with the timer value set to the *maxBW-PreferenceProhibitTimer* of the cell group;
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the current *maxBW-Preference* and/or *maxBW-PreferenceFR2-2*;
- 1> if configured to provide its preference on the maximum number of secondary component carriers of a cell group for power saving:
  - 2> if the UE has a preference on the maximum number of secondary component carriers of the cell group and the UE did not transmit a *UEAssistanceInformation* message with *maxCC-Preference* for the cell group since it was configured to provide its preference on the maximum number of secondary component carriers of the cell group for power saving; or
  - 2> if the current *maxCC-Preference* information for the cell group is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *maxCC-Preference* for the cell group and timer T346c associated with the cell group is not running:
    - 3> start the timer T346c with the timer value set to the *maxCC-PreferenceProhibitTimer* of the cell group;
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the current *maxCC-Preference*;
- 1> if configured to provide its preference on the maximum number of MIMO layers of a cell group for power saving:

- 2> if the UE has a preference on the maximum number of MIMO layers of the cell group and the UE did not transmit a *UEAssistanceInformation* message with *maxMIMO-LayerPreference* and/or *maxMIMO-LayerPreferenceFR2-2* for the cell group since it was configured to provide its preference on the maximum number of MIMO layers of the cell group for power saving; or
- 2> if the current *maxMIMO-LayerPreference* information for the cell group is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *maxMIMO-LayerPreference* and/or *maxMIMO-LayerPreferenceFR2-2* for the cell group and timer T346d associated with the cell group is not running:
  - 3> start the timer T346d with the timer value set to the *maxMIMO-LayerPreferenceProhibitTimer* of the cell group;
  - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the current *maxMIMO-LayerPreference* and/or *maxMIMO-LayerPreferenceFR2-2*;
- 1> if configured to provide its preference on the minimum scheduling offset for cross-slot scheduling of a cell group for power saving:
  - 2> if the UE has a preference on the minimum scheduling offset for cross-slot scheduling of the cell group and the UE did not transmit a *UEAssistanceInformation* message with *minSchedulingOffsetPreference* and/or *minSchedulingOffsetPreferenceExt* for the cell group since it was configured to provide its preference on the minimum scheduling offset for cross-slot scheduling of the cell group for power saving; or
  - 2> if the current *minSchedulingOffsetPreference* and/or *minSchedulingOffsetPreferenceExt* information for the cell group is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *minSchedulingOffsetPreference* and/or *minSchedulingOffsetPreferenceExt* for the cell group and timer T346e associated with the cell group is not running:
    - 3> start the timer T346e with the timer value set to the *minSchedulingOffsetPreferenceProhibitTimer* of the cell group;
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the current *minSchedulingOffsetPreference* and/or *minSchedulingOffsetPreferenceExt*;
- 1> if configured to provide its release preference and timer T346f is not running:
  - 2> if the UE determines that it would prefer to transition out of RRC\_CONNECTED state; or
  - 2> if the UE is configured with *connectedReporting* and the UE determines that it would prefer to revert an earlier indication to transition out of RRC\_CONNECTED state:
    - 3> start timer T346f with the timer value set to the *releasePreferenceProhibitTimer*;
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the release preference;
- 1> if configured to provide configured grant assistance information for NR sidelink communication:
  - 2> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide configured grant assistance information for NR sidelink communication;
- 1> if configured to provide preference in being provisioned with reference time information:
  - 2> if the UE did not transmit a *UEAssistanceInformation* message with *referenceTimeInfoPreference* since it was configured to provide preference; or
  - 2> if the UE's preference changed from the last time UE initiated transmission of the *UEAssistanceInformation* message including *referenceTimeInfoPreference*:
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide preference in being provisioned with reference time information.
- 1> if configured to provide its preference on FR2 UL gap:

- 2> if the UE did not transmit a *UEAssistanceInformation* message with *ul-GapFR2-Preference* since it was configured to provide its preference on FR2 UL gap information:
    - 3> if the UE has a preference on FR2 UL gap activation/deactivation:
      - 4> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide FR2 UL gap preference;
    - 2> else if the current FR2 UL gap preference is different from the one indicated in the last transmission of the *UEAssistanceInformation* message:
      - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide FR2 UL gap preference.
  - 1> if configured to provide MUSIM assistance information for leaving RRC\_CONNECTED:
    - 2> if the UE needs to leave RRC\_CONNECTED state and the timer T346g is not running:
      - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide MUSIM assistance information for leaving RRC\_CONNECTED;
      - 3> start the timer T346g with the timer value set to the *musim-LeaveWithoutResponseTimer*;
  - 1> if configured to provide MUSIM assistance information for gap preference:
    - 2> if the UE has a preference on the MUSIM gap(s) and the UE did not transmit a *UEAssistanceInformation* message with *musim-GapPreferenceList* since it was configured to provide MUSIM assistance information for gap preference; or
    - 2> if the current *musim-GapPreferenceList* is different from the one indicated in the last transmission of the *UEAssistanceInformation* message including *musim-GapPreferenceList* and the timer T346h is not running:
      - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the current *musim-GapPreferenceList*;
      - 3> start or restart the timer T346h with the timer value set to the *musim-GapProhibitTimer*.
- NOTE 3: The UE does not need to initiate transmission of the *UEAssistanceInformation* message if the difference between the current *musim-GapPreferenceList* and the last transmission of the *UEAssistanceInformation* message including *musim-GapPreferenceList* is only due to removal of an ended aperiodic gap.
- 1> if configured to provide the relaxation state of RLM measurements of a cell group and RLM measurement of the cell group is not stopped:
    - 2> if the UE did not transmit a *UEAssistanceInformation* message with *rlm-MeasRelaxationState* since it was configured to provide the relaxation state of RLM measurements for the cell group; or
    - 2> if the relaxation state of RLM measurements for the cell group is currently different from the relaxation state reported in the last transmission of the *UEAssistanceInformation* message including *rlm-MeasRelaxationState* of the cell group and timer T346j associated with the cell group is not running:
      - 3> start timer T346j with the timer value set to the *rlm-RelaxtionReportingProhibitTimer*;
      - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the relaxation state of RLM measurements of the cell group;
  - 1> if configured to provide the relaxation state of BFD measurements of serving cells of a cell group and BFD measurement of the cell group is not stopped:
    - 2> if the UE did not transmit a *UEAssistanceInformation* message with *bfd-MeasRelaxationState* since it was configured to provide the relaxation state of BFD measurements for the cell group; or
    - 2> if the relaxation state of BFD measurements in any serving cell of the cell group is currently different from the relaxation state reported in the last transmission of the *UEAssistanceInformation* message including *bfd-MeasRelaxationState* of the cell group and timer T346k associated with the cell group is not running:
      - 3> start timer T346k with the timer value set to the *bfd-RelaxtionReportingProhibitTimer*;

- 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the relaxation state of BFD measurements of serving cells of the cell group.
- 1> if data and/or signalling mapped to radio bearers not configured for SDT becomes available during SDT (i.e. while SDT procedure is ongoing):
  - 2> if the UE did not transmit a *UEAssistanceInformation* message with *nonSDT-DataIndication* since the initiation of the current resume procedure for SDT:
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide *nonSDT-DataIndication*.
- 1> if configured to provide its preference for SCG deactivation and timer T346i is not running;
  - 2> if the UE prefers the SCG to be deactivated and did not transmit a *UEAssistanceInformation* message with *scg-DeactivationPreference* since it was configured to provide its SCG deactivation preference; or
  - 2> if the UE preference for SCG deactivation is different from the last indicated *scg-DeactivationPreference*:
    - 3> start timer T346i with the timer value set to the *scg-DeactivationPreferenceProhibitTimer*;
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide the UE preference for SCG deactivation;
- 1> if the SCG is deactivated, and,
  - 1> the UE has uplink data to send for an SCG RLC entity while the UE previously did not have any uplink data to send for any SCG RLC entity:
    - 2> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to indicate that the UE has uplink data to send for a DRB whose *DRB-Identity* is not included in any *RLC-BearerConfig* in the *CellGroupConfig* associated with the MCG.
- 1> if configured to send indications of RRM measurement relaxation criterion fulfilment:
  - 2> if the criterion in 5.7.4.4 is met for a period of  $T_{\text{SearchDeltaP-StationaryConnected}}$ :
    - 3> if the UE did not transmit a *UEAssistanceInformation* message with *rrm-MeasRelaxationFulfilment* as *true* since it was configured to provide indications of RRM measurement relaxation criterion fulfilment; or
    - 3> the last *UEAssistanceInformation* message indicated the criterion in 5.7.4.4 is not fulfilled with *rrm-MeasRelaxationFulfilment* as *false*:
      - 4> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to indicate that the criterion for RRM measurement relaxation for connected mode is fulfilled;
  - 2> else:
    - 3> if the last *UEAssistanceInformation* message indicated fulfilment of the criterion in 5.7.4.4 with *rrm-MeasRelaxationFulfilment* as *true*:
      - 4> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to indicate that the criterion for RRM measurement relaxation for connected mode is not fulfilled.
- 1> if configured to provide service link propagation delay difference between serving cell and neighbour cell(s);
  - 2> if the UE did not transmit a *UEAssistanceInformation* message with *propagationDelayDifference* since it was configured to provide service link propagation delay difference between serving cell and neighbour cell(s); or
  - 2> for any neighbour cell in *neighCellInfoList*, if the service link propagation delay difference between serving cell and the neighbour cell has changed more than *threshPropDelayDiff* since the last transmission of the *UEAssistanceInformation* message including *propagationDelayDifference*:
    - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.7.4.3 to provide service link propagation delay difference between serving cell and each neighbour cell included in the *neighCellInfoList*;

### 5.7.4.3 Actions related to transmission of *UEAssistanceInformation* message

The UE shall set the contents of the *UEAssistanceInformation* message as follows:

- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide a delay budget report according to 5.7.4.2 or 5.3.5.3;
  - 2> set *delayBudgetReport* to *type1* according to a desired value;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide overheating assistance information according to 5.7.4.2 or 5.3.5.3;
  - 2> if the UE experiences internal overheating:
    - 3> if the UE prefers to temporarily reduce the number of maximum secondary component carriers:
      - 4> include *reducedMaxCCs* in the *OverheatingAssistance* IE;
      - 4> set *reducedCCsDL* to the number of maximum SCells the UE prefers to be temporarily configured in downlink;
      - 4> set *reducedCCsUL* to the number of maximum SCells the UE prefers to be temporarily configured in uplink;
    - 3> if the UE prefers to temporarily reduce maximum aggregated bandwidth of FR1:
      - 4> include *reducedMaxBW-FR1* in the *OverheatingAssistance* IE;
      - 4> set *reducedBW-DL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all downlink carriers of FR1;
      - 4> set *reducedBW-UL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all uplink carriers of FR1;
    - 3> if the UE prefers to temporarily reduce maximum aggregated bandwidth of FR2-1:
      - 4> include *reducedMaxBW-FR2* in the *OverheatingAssistance* IE;
      - 4> set *reducedBW-DL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all downlink carriers of FR2-1;
      - 4> set *reducedBW-UL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all uplink carriers of FR2-1;
    - 3> if the UE prefers to temporarily reduce maximum aggregated bandwidth of FR2-2:
      - 4> include *reducedMaxBW-FR2-2* in the *OverheatingAssistance* IE;
      - 4> set *reducedBW-FR2-2-DL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all downlink carriers of FR2-2;
      - 4> set *reducedBW-FR2-2-UL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all uplink carriers of FR2-2;
    - 3> if the UE prefers to temporarily reduce the number of maximum MIMO layers of each serving cell operating on FR1:
      - 4> include *reducedMaxMIMO-LayersFR1* in the *OverheatingAssistance* IE;
      - 4> set *reducedMIMO-LayersFR1-DL* to the number of maximum MIMO layers of each serving cell operating on FR1 the UE prefers to be temporarily configured in downlink;
      - 4> set *reducedMIMO-LayersFR1-UL* to the number of maximum MIMO layers of each serving cell operating on FR1 the UE prefers to be temporarily configured in uplink;
    - 3> if the UE prefers to temporarily reduce the number of maximum MIMO layers of each serving cell operating on FR2-1:

- 4> include *reducedMaxMIMO-LayersFR2* in the *OverheatingAssistance* IE;
- 4> set *reducedMIMO-LayersFR2-DL* to the number of maximum MIMO layers of each serving cell operating on FR2-1 the UE prefers to be temporarily configured in downlink;
- 4> set *reducedMIMO-LayersFR2-UL* to the number of maximum MIMO layers of each serving cell operating on FR2-1 the UE prefers to be temporarily configured in uplink;
- 3> if the UE prefers to temporarily reduce the number of maximum MIMO layers of each serving cell operating on FR2-2:
- 4> include *reducedMaxMIMO-LayersFR2-2* in the *OverheatingAssistance* IE;
- 4> set *reducedMIMO-LayersFR2-2-DL* to the number of maximum MIMO layers of each serving cell operating on FR2 the UE prefers to be temporarily configured in downlink;
- 4> set *reducedMIMO-LayersFR2-2-UL* to the number of maximum MIMO layers of each serving cell operating on FR2 the UE prefers to be temporarily configured in uplink;
- 2> else (if the UE no longer experiences an overheating condition):
  - 3> do not include *reducedMaxCCs*, *reducedMaxBW-FR1*, *reducedMaxBW-FR2*, *reducedMaxBW-FR2-2*, *reducedMaxMIMO-LayersFR1*, *reducedMaxMIMO-LayersFR2* or *reducedMaxMIMO-LayersFR2-2* in *OverheatingAssistance* IE;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide IDC assistance information according to 5.7.4.2 or 5.3.5.3:
  - 2> if there is at least one carrier frequency included in *candidateServingFreqListNR*, the UE is experiencing IDC problems that it cannot solve by itself:
    - 3> include the field *affectedCarrierFreqList* with an entry for each affected carrier frequency included in *candidateServingFreqListNR*;
    - 3> for each carrier frequency included in the field *affectedCarrierFreqList*, include *interferenceDirection* and set it accordingly;
  - 2> if there is at least one supported UL CA combination comprising of carrier frequencies included in *candidateServingFreqListNR*, the UE is experiencing IDC problems that it cannot solve by itself:
    - 3> include *victimSystemType* for each UL CA combination included in *affectedCarrierFreqCombList*;
  - 3> if the UE sets *victimSystemType* to *wlan* or *bluetooth*:
    - 4> include *affectedCarrierFreqCombList* with an entry for each supported UL CA combination comprising of carrier frequencies included in *candidateServingFreqListNR*, that is affected by IDC problems;
  - 3> else:
    - 4> optionally include *affectedCarrierFreqCombList* with an entry for each supported UL CA combination comprising of carrier frequencies included in *candidateServingFreqListNR*, that is affected by IDC problems;

NOTE 1: When sending an *UEAssistanceInformation* message to inform the IDC problems, the UE includes all IDC assistance information (rather than providing e.g. the changed part(s) of the IDC assistance information).

NOTE 2: Upon not anymore experiencing a particular IDC problem that the UE previously reported, the UE provides an IDC indication with the modified contents of the *UEAssistanceInformation* message (e.g. by not including the IDC assistance information in the *idc-Assistance* field).

- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *drx-Preference* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
  - 2> include *drx-Preference* in the *UEAssistanceInformation* message;

- 2> if the UE has a preference on DRX parameters for the cell group:
  - 3> if the UE has a preference for the long DRX cycle:
    - 4> include *preferredDRX-LongCycle* in the *DRX-Preference* IE and set it to the preferred value;
  - 3> if the UE has a preference for the DRX inactivity timer:
    - 4> include *preferredDRX-InactivityTimer* in the *DRX-Preference* IE and set it to the preferred value;
  - 3> if the UE has a preference for the short DRX cycle:
    - 4> include *preferredDRX-ShortCycle* in the *DRX-Preference* IE and set it to the preferred value;
  - 3> if the UE has a preference for the short DRX timer:
    - 4> include *preferredDRX-ShortCycleTimer* in the *DRX-Preference* IE and set it to the preferred value;
- 2> else (if the UE has no preference on DRX parameters for the cell group):
  - 3> do not include *preferredDRX-LongCycle*, *preferredDRX-InactivityTimer*, *preferredDRX-ShortCycle* and *preferredDRX-ShortCycleTimer* in the *DRX-Preference* IE;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *maxBW-Preference* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
  - 2> include *maxBW-Preference* in the *UEAssistanceInformation* message;
  - 2> if the UE has a preference on the maximum aggregated bandwidth for the cell group:
    - 3> if the UE prefers to reduce the maximum aggregated bandwidth of FR1:
      - 4> include *reducedMaxBW-FR1* in the *MaxBW-Preference* IE;
      - 4> set *reducedBW-DL* to the maximum aggregated bandwidth the UE desires to have configured across all downlink carriers of FR1 in the cell group;
      - 4> set *reducedBW-UL* to the maximum aggregated bandwidth the UE desires to have configured across all uplink carriers of FR1 in the cell group;
    - 3> if the UE prefers to reduce the maximum aggregated bandwidth of FR2-1:
      - 4> include *reducedMaxBW-FR2* in the *MaxBW-Preference* IE;
      - 4> set *reducedBW-DL* to the maximum aggregated bandwidth the UE desires to have configured across all downlink carriers of FR2-1 in the cell group;
      - 4> set *reducedBW-UL* to the maximum aggregated bandwidth the UE desires to have configured across all uplink carriers of FR2-1 in the cell group;
  - 2> else (if the UE has no preference on the maximum aggregated bandwidth for the cell group):
    - 3> do not include *reducedMaxBW-FR1* and *reducedMaxBW-FR2* in the *MaxBW-Preference* IE;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *maxBW-PreferenceFR2-2* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
  - 2> include *maxBW-PreferenceFR2-2* in the *UEAssistanceInformation* message;
  - 3> if the UE prefers to reduce the maximum aggregated bandwidth of FR2-2:
    - 4> include *reducedMaxBW-FR2-2* in the *MaxBW-PreferenceFR2-2* IE;
    - 4> set *reducedBW-FR2-2-DL* to the maximum aggregated bandwidth the UE desires to have configured across all downlink carriers of FR2-2 in the cell group;
    - 4> set *reducedBW-FR2-2-UL* to the maximum aggregated bandwidth the UE desires to have configured across all uplink carriers of FR2-2 in the cell group;

- 2> else (if the UE has no preference on the maximum aggregated bandwidth for the cell group):
    - 3> do not include *reducedMaxBW-FR2-2* in the *MaxBW-PreferenceFR2-2* IE;
  - 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *maxCC-Preference* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
    - 2> include *maxCC-Preference* in the *UEAssistanceInformation* message;
    - 2> if the UE has a preference on the maximum number of secondary component carriers for the cell group:
      - 3> include *reducedMaxCCs* in the *MaxCC-Preference* IE;
      - 3> set *reducedCCsDL* to the number of maximum SCells the UE desires to have configured in downlink in the cell group;
      - 3> set *reducedCCsUL* to the number of maximum SCells the UE desires to have configured in uplink in the cell group;
    - 2> else (if the UE has no preference on the maximum number of secondary component carriers for the cell group):
      - 3> do not include *reducedMaxCCs* in the *MaxCC-Preference* IE;
- NOTE 3: The UE can implicitly indicate a preference for NR SCG release by reporting the maximum aggregated bandwidth preference for power saving of the cell group, if configured, as zero for both FR1 and FR2, and by reporting the maximum number of secondary component carriers for power saving of the cell group, if configured, as zero for both uplink and downlink.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *maxMIMO-LayerPreference* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
    - 2> include *maxMIMO-LayerPreference* in the *UEAssistanceInformation* message;
    - 2> if the UE has a preference on the maximum number of MIMO layers for the cell group:
      - 3> if the UE prefers to reduce the number of maximum MIMO layers of each serving cell operating on FR1:
        - 4> include *reducedMaxMIMO-LayersFR1* in the *MaxMIMO-LayerPreference* IE;
        - 4> set *reducedMIMO-LayersFR1-DL* to the preferred maximum number of downlink MIMO layers of each BWP of each FR1 serving cell that the UE operates on in the cell group;
        - 4> set *reducedMIMO-LayersFR1-UL* to the preferred maximum number of uplink MIMO layers of each FR1 serving cell that the UE operates on in the cell group;
      - 3> if the UE prefers to reduce the number of maximum MIMO layers of each serving cell operating on FR2-1:
        - 4> include *reducedMaxMIMO-LayersFR2* in the *MaxMIMO-LayerPreference* IE;
        - 4> set *reducedMIMO-LayersFR2-DL* to the preferred maximum number of downlink MIMO layers of each BWP of each FR2-1 serving cell that the UE operates on in the cell group;
        - 4> set *reducedMIMO-LayersFR2-UL* to the preferred maximum number of uplink MIMO layers of each FR2-1 serving cell that the UE operates on in the cell group;
    - 2> else (if the UE has no preference on the maximum number of MIMO layers for the cell group):
      - 3> do not include *reducedMaxMIMO-LayersFR1* and *reducedMaxMIMO-LayersFR2* in the *MaxMIMO-LayerPreference* IE;
  - 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *maxMIMO LayerPreferenceFR2 2* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
    - 2> include *maxMIMO-LayerPreferenceFR2-2* in the *UEAssistanceInformation* message;

- 2> if the UE has a preference on the maximum number of MIMO layers for the cell group for FR2-2:
  - 3> if the UE prefers to reduce the number of maximum MIMO layers of each serving cell operating on FR2 2:
    - 4> include *reducedMaxMIMO-LayersFR2-2* in the *MaxMIMO-LayerPreferenceFR2 2* IE;
    - 4> set *reducedMIMO-LayersFR2-2-DL* to the preferred maximum number of downlink MIMO layers of each BWP of each FR2-2 serving cell that the UE operates on in the cell group;
    - 4> set *reducedMIMO-LayersFR2-2-UL* to the preferred maximum number of uplink MIMO layers of each FR2-2 serving cell that the UE operates on in the cell group;
  - 2> else (if the UE has no preference on the maximum number of MIMO layers for the cell group):
    - 3> do not include *reducedMaxMIMO-LayersFR2-2* in the *MaxMIMO-LayerPreferenceFR2-2* IE;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *minSchedulingOffsetPreference* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
  - 2> include *minSchedulingOffsetPreference* in the *UEAssistanceInformation* message;
  - 2> if the UE has a preference on the minimum scheduling offset for cross-slot scheduling for the cell group:
    - 3> if the UE has a preference for the value of  $K_0$  (TS 38.214 [19], clause 5.1.2.1) for cross-slot scheduling with 15 kHz SCS:
      - 4> include *preferredK0-SCS-15kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_0$ ;
    - 3> if the UE has a preference for the value of  $K_0$  for cross-slot scheduling with 30 kHz SCS:
      - 4> include *preferredK0-SCS-30kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_0$ ;
    - 3> if the UE has a preference for the value of  $K_0$  for cross-slot scheduling with 60 kHz SCS:
      - 4> include *preferredK0-SCS-60kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_0$ ;
    - 3> if the UE has a preference for the value of  $K_0$  for cross-slot scheduling with 120 kHz SCS:
      - 4> include *preferredK0-SCS-120kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_0$ ;
    - 3> if the UE has a preference for the value of  $K_2$  (TS 38.214 [19], clause 6.1.2.1) for cross-slot scheduling with 15 kHz SCS:
      - 4> include *preferredK2-SCS-15kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_2$ ;
    - 3> if the UE has a preference for the value of  $K_2$  for cross-slot scheduling with 30 kHz SCS:
      - 4> include *preferredK2-SCS-30kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_2$ ;
    - 3> if the UE has a preference for the value of  $K_2$  for cross-slot scheduling with 60 kHz SCS:
      - 4> include *preferredK2-SCS-60kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_2$ ;
    - 3> if the UE has a preference for the value of  $K_2$  for cross-slot scheduling with 120 kHz SCS:
      - 4> include *preferredK2-SCS-120kHz* in the *MinSchedulingOffsetPreference* IE and set it to the desired value of  $K_2$ ;

- 2> else (if the UE has no preference on the minimum scheduling offset for cross-slot scheduling for the cell group):
  - 3> do not include *preferredK0* and *preferredK2* in the *MinSchedulingOffsetPreference* IE;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide *minSchedulingOffsetPreferenceExt* of a cell group for power saving according to 5.7.4.2 or 5.3.5.3:
  - 2> include *minSchedulingOffsetPreferenceExt* in the *UEAssistanceInformation* message;
  - 2> if the UE has a preference on the minimum scheduling offset for cross-slot scheduling for the cell group for FR2-2:
    - 3> include *minSchedulingOffsetPreferenceExt* in the *UEAssistanceInformation* message;
      - 4> if the UE has a preference for the value of  $K_0$  (TS 38.214 [19], clause 5.1.2.1) for cross-slot scheduling with 480 kHz SCS:
        - 5> include *preferredK0-SCS-480kHz* in the *minSchedulingOffsetPreferenceExt* IE and set it to the desired value of  $K_0$ ;
      - 4> if the UE has a preference for the value of  $K_0$  for cross-slot scheduling with 960 kHz SCS:
        - 5> include *preferredK0-SCS-960kHz* in the *minSchedulingOffsetPreferenceExt* IE and set it to the desired value of  $K_0$ ;
      - 4> if the UE has a preference for the value of  $K_2$  for cross-slot scheduling with 480 kHz SCS:
        - 5> include *preferredK2-SCS-480kHz* in the *minSchedulingOffsetPreferenceExt* IE and set it to the desired value of  $K_2$ ;
      - 4> if the UE has a preference for the value of  $K_2$  for cross-slot scheduling with 960 kHz SCS:
        - 5> include *preferredK2-SCS-960kHz* in the *minSchedulingOffsetPreferenceExt* IE and set it to the desired value of  $K_2$ ;
    - 3> else (if the UE has no preference on the minimum scheduling offset for cross-slot scheduling for the cell group):
      - 4> do not include *preferredK0* and *preferredK2* in the *minSchedulingOffsetPreferenceExt* IE;
  - 1> if transmission of the *UEAssistanceInformation* message is initiated to provide a release preference according to 5.7.4.2 or 5.3.5.3:
    - 2> include *releasePreference* in the *UEAssistanceInformation* message;
    - 2> set *preferredRRC-State* to the desired RRC state on transmission of the *UEAssistanceInformation* message;
  - 1> if transmission of the *UEAssistanceInformation* message is initiated to provide an indication of preference in being provisioned with reference time information according to 5.7.4.2 or 5.3.5.3:
    - 2> if the UE has a preference in being provisioned with reference time information:
      - 3> set *referenceTimeInfoPreference* to *true*;
    - 2> else:
      - 3> set *referenceTimeInfoPreference* to *false*.
  - 1> if transmission of the *UEAssistanceInformation* message is initiated to provide preference on FR2 UL gap according to 5.7.4.2 or 5.3.5.3:
    - 2> if the UE has a preference for FR2 UL gap configuration:
      - 3> set *ul-GapFR2-PatternPreference* to the preferred FR2 UL gap pattern;
    - 2> else (if the UE has no preference for the FR2 UL gap configuration):

- 3> do not include *ul-GapFR2-PatternPreference* in the *UL-GapFR2-Preference* IE.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide MUSIM assistance information according to 5.7.4.2 or 5.3.5.3:
  - 2> if the UE has a preference for MUSIM periodic gap(s):
    - 3> include *musim-GapPreferenceList* with an entry for each periodic gap the UE prefers to be configured;
    - 4> set *musim-GapLength* and *musim-GapRepetitionAndOffset* in the *musim-GapInfo* IE to the values of the length and the repetition/offset of the gap(s), respectively, the UE prefers to be configured with;
  - 2> if the UE has a preference for MUSIM aperiodic gap:
    - 3> include the field *musim-GapPreferenceList*, with one entry for the aperiodic gap the UE prefers to be configured;
    - 4> include *musim-GapLength* in the *musim-GapInfo* IE and set it to the values of the length of the gap the UE prefers to be configured with;
    - 4> optionally include *musim-Starting-SFN-AndSubframe* in the *musim-GapInfo* IE and set it to the starting SFN/subframe of the gap the UE prefers to be configured with;
  - 2> if the UE has no longer preference for the periodic/aperiodic gaps:
    - 3> do not include *musim-GapPreferenceList* in the *musim-Assistance* IE;
  - 2> if UE has a preference to leave RRC\_CONNECTED state:
    - 3> set *musim-PreferredRRC-State* to the preferred RRC state.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide the relaxation state of RLM measurements of a cell group according to 5.7.4.2:
  - 2> if the UE performs RLM measurement relaxation on the cell group according to TS 38.133 [14]:
    - 3> set the *rlm-MeasRelaxationState* to *true*;
  - 2> else:
    - 3> set the *rlm-MeasRelaxationState* to *false*;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide the relaxation state of BFD measurements of a cell group:
  - 2> for each serving cell of the cell group:
    - 3> if the UE performs BFD measurement relaxation on this serving cell according to TS 38.133 [14]:
      - 4> set the n-th bit of *bfd-MeasRelaxationState* to '1', where n is equal to the *servCellIndex* value + 1 of the serving cell;
    - 3> else:
      - 4> set the n-th bit of *bfd-MeasRelaxationState* to '0', where n is equal to the *servCellIndex* value + 1 of the serving cell.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to indicate availability of data mapped to radio bearers not configured for SDT according to 5.7.4.2:
  - 2> include the *nonSDT-DataIndication* in the *UEAssistanceInformation* message;
  - 2> include and set the *resumeCause* according to the information received from the upper layers, if provided.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide an indication of preference for SCG deactivation according to 5.7.4.2:
  - 2> include *scg-DeactivationPreference* in the *UEAssistanceInformation* message;

- 2> set the *scg-DeactivationPreference* to *scg-DeactivationPreferred* if the UE prefers the SCG to be deactivated, otherwise set it to *noPreference*;
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide an indication that the UE has uplink data related to a deactivated SCG according to 5.7.4.2:
  - 2> include *uplinkData* in the *UEAssistanceInformation* message.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide an indication about whether the criterion for RRM relaxation for connected mode is fulfilled or not fulfilled:
  - 2> if the criterion for RRM measurement relaxation for connected mode is fulfilled:
    - 3> set the *rrm-MeasRelaxationFulfilment* to *true*;
  - 2> else:
    - 3> set the *rrm-MeasRelaxationFulfilment* to *false*.
- 1> if transmission of the *UEAssistanceInformation* message is initiated to provide the service link propagation delay difference between serving cell and neighbour cell(s) according to 5.7.4.2;
  - 2> include the *propagationDelayDifference* for each neighbour cell in the *neighCellInfoList*;

The UE shall set the contents of the *UEAssistanceInformation* message for configured grant assistance information for NR sidelink communication:

- 1> if configured to provide configured grant assistance information for NR sidelink communication:
  - 2> include the *sl-UE-AssistanceInformationNR*;

NOTE 4: It is up to UE implementation when and how to trigger configured grant assistance information for NR sidelink communication.

The UE shall:

- 1> if the procedure was triggered to provide configured grant assistance information for NR sidelink communication by an NR *RRCReconfiguration* message that was embedded within an E-UTRA *RRCConnectionReconfiguration*:
  - 2> submit the *UEAssistanceInformation* to lower layers via SRB1, embedded in E-UTRA RRC message *ULInformationTransferIRAT* as specified in TS 36.331 [10], clause 5.6.28;
- 1> else if the procedure was triggered to provide UE preference for SCG deactivation or to indicate that the UE with a deactivate SCG has uplink data to send on a DRB for which there is no MCG RLC bearer:
  - 2> submit the *UEAssistanceInformation* via SRB1 to lower layers for transmission;
- 1> else if the UE is in (NG)EN-DC:
  - 2> if SRB3 is configured and the SCG is not deactivated:
    - 3> submit the *UEAssistanceInformation* message via SRB3 to lower layers for transmission;
  - 2> else:
    - 3> submit the *UEAssistanceInformation* message via the E-UTRA MCG embedded in E-UTRA RRC message *ULInformationTransferMRDC* as specified in TS 36.331 [10].
- 1> else if the UE is in NR-DC:
  - 2> if the UE assistance configuration that triggered this UE assistance information is associated with the SCG:
    - 3> if SRB3 is configured and the SCG is not deactivated:
      - 4> submit the *UEAssistanceInformation* message via SRB3 to lower layers for transmission;
    - 3> else:

4> submit the *UEAssistanceInformation* message via the NR MCG embedded in NR RRC message *ULInformationTransferMRDC* as specified in 5.7.2a.3;

2> else:

3> submit the *UEAssistanceInformation* message via SRB1 to lower layers for transmission;

1> else:

2> submit the *UEAssistanceInformation* message to lower layers for transmission.

#### 5.7.4.3a Setting the contents of *OverheatingAssistance* IE

The UE shall set the contents of *OverheatingAssistance* IE if initiated to provide overheating assistance indication for SCG in (NG)EN-DC according to clause 5.6.10.3 as specified in TS 36.331 [10]:

1> if the UE prefers to temporarily reduce the number of maximum secondary component carriers for SCG:

2> include *reducedMaxCCs* in the *OverheatingAssistance* IE;

2> set *reducedCCsDL* to the number of maximum PSCell and SCells of the SCG the UE prefers to be temporarily configured in downlink;

2> set *reducedCCsUL* to the number of maximum PSCell and SCells of the SCG the UE prefers to be temporarily configured in uplink;

1> if the UE prefers to temporarily reduce maximum aggregated bandwidth of FR1 for SCG:

2> include *reducedMaxBW-FR1* in the *OverheatingAssistance* IE;

2> set *reducedBW-FR1-DL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all downlink carriers of FR1 of the SCG;

2> set *reducedBW-FR1-UL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all uplink carriers of FR1 of the SCG;

1> if the UE prefers to temporarily reduce maximum aggregated bandwidth of FR2-1 for SCG:

2> include *reducedMaxBW-FR2* in the *OverheatingAssistance* IE;

2> set *reducedBW-FR2-DL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all downlink carriers of FR2-1 of the SCG;

2> set *reducedBW-FR2-UL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all uplink carriers of FR2-1 of the SCG;

1> if the UE prefers to temporarily reduce maximum aggregated bandwidth of FR2-2 for SCG:

2> include *reducedMaxBW-FR2-2* in the *OverheatingAssistance* IE;

2> set *reducedBW-FR2-2-DL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all downlink carriers of FR2-2 of the SCG;

2> set *reducedBW-FR2-2-UL* to the maximum aggregated bandwidth the UE prefers to be temporarily configured across all uplink carriers of FR2-2 of the SCG;

1> if the UE prefers to temporarily reduce the number of maximum MIMO layers of each serving cell operating on FR1 for SCG:

2> include *reducedMaxMIMO-LayersFR1* in the *OverheatingAssistance* IE;

2> set *reducedMIMO-LayersFR1-DL* to the number of maximum MIMO layers of each serving cell operating on FR1 of the SCG the UE prefers to be temporarily configured in downlink;

2> set *reducedMIMO-LayersFR1-UL* to the number of maximum MIMO layers of each serving cell operating on FR1 of the SCG the UE prefers to be temporarily configured in uplink;

- 1> if the UE prefers to temporarily reduce the number of maximum MIMO layers of each serving cell operating on FR2-1 for SCG:
  - 2> include *reducedMaxMIMO-LayersFR2* in the *OverheatingAssistance* IE;
  - 2> set *reducedMIMO-LayersFR2-DL* to the number of maximum MIMO layers of each serving cell operating on FR2-1 of the SCG the UE prefers to be temporarily configured in downlink;
  - 2> set *reducedMIMO-LayersFR2-UL* to the number of maximum MIMO layers of each serving cell operating on FR2-1 of the SCG the UE prefers to be temporarily configured in uplink;
- 1> if the UE prefers to temporarily reduce the number of maximum MIMO layers of each serving cell operating on FR2-2 for SCG:
  - 2> include *reducedMaxMIMO-LayersFR2-2* in the *OverheatingAssistance* IE;
  - 2> set *reducedMIMO-LayersFR2-2-DL* to the number of maximum MIMO layers of each serving cell operating on FR2-2 of the SCG the UE prefers to be temporarily configured in downlink;
  - 2> set *reducedMIMO-LayersFR2-2-UL* to the number of maximum MIMO layers of each serving cell operating on FR2-2 of the SCG the UE prefers to be temporarily configured in uplink;

#### 5.7.4.4 Relaxed measurement criterion for a stationary RedCap UE

The relaxed measurement criterion for a stationary UE is met when:

- $(SS-RSRP_{RefStationaryConnected} - SS-RSRP) < S_{SearchDeltaP-StationaryConnected}$ ,

Where:

- SS-RSRP = current L3 RSRP measurement of the PCell based on SSB (dB).
- $SS-RSRP_{RefStationaryConnected}$  = reference SS-RSRP value of the PCell (dB), set as follows:
  - at the end of RRC reconfiguration procedure as specified in 5.3.5.3, when *rrm-MeasRelaxationReportingConfig* is included in the *RRCReconfiguration* message; or
  - after MAC successfully completes a Random Access procedure after applying a *reconfigurationWithSync* in *spCellConfig* while stationary criterion is configured; or
  - if  $(SS-RSRP - SS-RSRP_{RefStationaryConnected}) > 0$ ; or
  - if the relaxed measurement criterion has not been met for  $T_{SearchDeltaP-StationaryConnected}$ :
    - UE shall set the value of  $SS-RSRP_{RefStationaryConnected}$  to the current SS-RSRP value of the serving cell.

#### 5.7.4a Void

#### 5.7.5 Failure information

##### 5.7.5.1 General

Figure 5.7.5.1-1: Failure information

The purpose of this procedure is to inform the network about a failure detected by the UE.

### 5.7.5.2 Initiation

A UE initiates the procedure when there is a need inform the network about a failure detected by the UE. In particular, the UE initiates the procedure when the following condition is met:

- 1> upon detecting failure for an RLC bearer, in accordance with 5.3.10.3;
- 1> upon detecting DAPS handover failure, in accordance with 5.3.5.8.3;

Upon initiating the procedure, the UE shall:

- 1> initiate transmission of the *FailureInformation* message as specified in 5.7.5.3;

### 5.7.5.3 Actions related to transmission of *FailureInformation* message

The UE shall:

- 1> if initiated to provide RLC failure information, set *FailureInfoRLC-Bearer* as follows:
  - 2> set *logicalChannelIdentity* to the logical channel identity of the failing RLC bearer;
  - 2> set *cellGroupId* to the cell group identity of the failing RLC bearer;
  - 2> set the *failureType* as *rlc-failure*;
- 1> if initiated to provide DAPS failure information, set *FailureInfoDAPS* as follows:
  - 2> set the *failureType* as *daps-failure*;
- 1> if used to inform the network about a failure for an MCG RLC bearer or DAPS failure information:
  - 2> submit the *FailureInformation* message to lower layers for transmission via SRB1;
- 1> else if used to inform the network about a failure for an SCG RLC bearer:
  - 2> if SRB3 is configured;
    - 3> submit the *FailureInformation* message to lower layers for transmission via SRB3;
  - 2> else;
    - 3> if the UE is in (NG)EN-DC:
      - 4> submit the *FailureInformation* message via E-UTRA SRB1 embedded in E-UTRA RRC message *ULInformationTransferMRDC* as specified in TS 36.331 [10].
    - 3> else if the UE is in NR-DC:
      - 4> submit the *FailureInformation* message via SRB1 embedded in NR RRC message *ULInformationTransferMRDC* as specified in clause 5.7.2a.3.

## 5.7.6 DL message segment transfer

### 5.7.6.1 General

Figure 5.7.6.1-1: DL message segment transfer

The purpose of this procedure is to transfer segments of DL DCCH messages from the network to the UE.

NOTE: The segmentation of DL DCCH message is only applicable to *RRCReconfiguration* and *RRCResume* messages in this release.

### 5.7.6.2 Initiation

The network initiates the DL Dedicated Message Segment transfer procedure whenever the encoded RRC message PDU exceeds the maximum PDCP SDU size. The network initiates the DL Dedicated Message Segment transfer procedure by sending the *DL Dedicated Message Segment* message.

### 5.7.6.3 Reception of *DL Dedicated Message Segment* by the UE

Upon receiving *DL Dedicated Message Segment* message, the UE shall:

- 1> store the segment included in *rrc-MessageSegmentContainer*;
- 1> if all segments of the message have been received:
  - 2> assemble the message from the received segments and process the message according to 5.3.5.3 for the *RRCReconfiguration* message or 5.3.13.4 for the *RRCResume* message;
  - 2> discard all segments.

## 5.7.7 UL message segment transfer

### 5.7.7.1 General

**Figure 5.7.7.1-1: UL message segment transfer**

The purpose of this procedure is to transfer segments of UL DCCH messages from UE to a NG-RAN in RRC\_CONNECTED.

NOTE: The segmentation of UL DCCH message is only applicable to *UECapabilityInformation* and *MeasurementReportAppLayer* in this release.

### 5.7.7.2 Initiation

A UE capable of UL RRC message segmentation in RRC\_CONNECTED will initiate the procedure when the following conditions are met:

- 1> if the RRC message segmentation is enabled based on the field *rrc-SegAllowed*, *rrc-MaxCapaSegAllowed* or *rrc-SegAllowedSRB4* received, and
- 1> if the encoded RRC message is larger than the maximum supported size of a PDCP SDU specified in TS 38.323 [5];

Upon initiating the procedure, the UE shall:

- 1> initiate transmission of the *UL Dedicated Message Segment* message as specified in 5.7.7.3;

### 5.7.7.3 Actions related to transmission of *ULDedicatedMessageSegment* message

The UE shall segment the encoded RRC PDU based on the maximum supported size of a PDCP SDU specified in TS 38.323 [5] and the maximum number of UL segments according to *rrc-SegAllowed* or *rrc-MaxCapaSegAllowed* (for segmentation of *UECapabilityInformation*) and *rrc-SegAllowedSRB4* (for segmentation of *MeasurementReportAppLayer*), if received. UE shall minimize the number of segments and set the contents of the *ULDedicatedMessageSegment* messages as follows:

- 1> For each new UL DCCH message, set the *segmentNumber* to 0 for the first message segment and increment the *segmentNumber* for each subsequent RRC message segment;
- 1> set *rrc-MessageSegmentContainer* to include the segment of the UL DCCH message corresponding to the *segmentNumber*;
- 1> if the segment included in the *rrc-MessageSegmentContainer* is the last segment of the UL DCCH message:
  - 2> set the *rrc-MessageSegmentType* to *lastSegment*;
- 1> else:
  - 2> set the *rrc-MessageSegmentType* to *notLastSegment*;
- 1> submit all the *ULDedicatedMessageSegment* messages generated for the segmented RRC message to lower layers for transmission in ascending order based on the *segmentNumber*, upon which the procedure ends.

## 5.7.8 Idle/inactive Measurements

### 5.7.8.1 General

This procedure specifies the measurements to be performed and stored by a UE in RRC\_IDLE and RRC\_INACTIVE when it has an idle/inactive measurement configuration.

#### 5.7.8.1a Measurement configuration

The purpose of this procedure is to update the idle/inactive measurement configuration.

The UE initiates this procedure while T331 is running and SDT procedure is not ongoing and one of the following conditions is met:

- 1> upon selecting a cell when entering RRC\_IDLE or RRC-INACTIVE from RRC\_CONNECTED or RRC\_INACTIVE; or
- 1> upon update of system information (*SIB4*, or *SIB11*), e.g. due to intra-RAT cell (re)selection;

While in RRC\_IDLE or RRC\_INACTIVE, and T331 is running, the UE shall:

- 1> if *VarMeasIdleConfig* includes neither a *measIdleCarrierListEUTRA* nor a *measIdleCarrierListNR* received from the *RRCRelease* message:
  - 2> if the UE supports *idleInactiveEUTRA-MeasReport*:
    - 3> if the *SIB11* includes the *measIdleConfigSIB* and contains *measIdleCarrierListEUTRA*:
      - 4> store or replace the *measIdleCarrierListEUTRA* of *measIdleConfigSIB* of *SIB11* within *VarMeasIdleConfig*;
    - 3> else:
      - 4> remove the *measIdleCarrierListEUTRA* in *VarMeasIdleConfig*, if stored;
  - 2> if the UE supports *idleInactiveNR-MeasReport*:
    - 3> if *SIB11* includes the *measIdleConfigSIB* and contains *measIdleCarrierListNR*:

- 4> store or replace the *measIdleCarrierListNR* of *measIdleConfigSIB* of *SIB11* within *VarMeasIdleConfig*;
- 3> else:
  - 4> remove the *measIdleCarrierListNR* in *VarMeasIdleConfig*, if stored;
- 1> for each entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig* that does not contain an *ssb-MeasConfig* received from the *RRCRelease* message:
  - 2> if there is an entry in *measIdleCarrierListNR* in *measIdleConfigSIB* of *SIB11* that has the same carrier frequency and subcarrier spacing as the entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig* and that contains *ssb-MeasConfig*:
    - 3> delete the *ssb-MeasConfig* of the corresponding entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig*;
    - 3> store the SSB measurement configuration from *SIB11* into *nrofSS-BlocksToAverage*, *absThreshSS-BlocksConsolidation*, *smtc*, *ssb-ToMeasure*, *deriveSSB-IndexFromCell*, and *ss-RSSI-Measurement* within *ssb-MeasConfig* of the corresponding entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig*;
  - 2> else if there is an entry in *interFreqCarrierFreqList* of *SIB4* with the same carrier frequency and subcarrier spacing as the entry in *measIdleCarrierListNR* within *VarMeasIdleConfig*:
    - 3> delete the *ssb-MeasConfig* of the corresponding entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig*;
    - 3> store the SSB measurement configuration from *SIB4* into *nrofSS-BlocksToAverage*, *absThreshSS-BlocksConsolidation*, *smtc*, *ssb-ToMeasure*, *deriveSSB-IndexFromCell*, and *ss-RSSI-Measurement* within *ssb-MeasConfig* of the corresponding entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig*;
  - 2> else:
    - 3> remove the *ssb-MeasConfig* of the corresponding entry in the *measIdleCarrierListNR* within *VarMeasIdleConfig*, if stored;
- 1> perform measurements according to 5.7.8.2a.

## 5.7.8.2 Void

### 5.7.8.2a Performing measurements

When performing measurements on NR carriers according to this clause, the UE shall derive the cell quality as specified in 5.5.3.3 and consider the beam quality to be the value of the measurement results of the concerned beam, where each result is averaged as described in TS 38.215 [9].

While in RRC\_IDLE or RRC\_INACTIVE, and T331 is running and SDT procedure is not ongoing, the UE shall:

- 1> perform the measurements in accordance with the following:
  - 2> if the *VarMeasIdleConfig* includes the *measIdleCarrierListEUTRA* and the *SIB1* contains *idleModeMeasurementsEUTRA*:
    - 3> for each entry in *measIdleCarrierListEUTRA* within *VarMeasIdleConfig*:
      - 4> if UE supports NE-DC between the serving carrier and the carrier frequency indicated by *carrierFreqEUTRA* within the corresponding entry:
        - 5> perform measurements in the carrier frequency and bandwidth indicated by *carrierFreqEUTRA* and *allowedMeasBandwidth* within the corresponding entry;
      - 5> if the *reportQuantitiesEUTRA* is set to *rsrq*:
        - 6> consider RSRQ as the sorting quantity;

- 5> else:
  - 6> consider RSRP as the sorting quantity;
- 5> if the *measCellListEUTRA* is included:
  - 6> consider cells identified by each entry within the *measCellListEUTRA* to be applicable for idle/inactive mode measurement reporting;
- 5> else:
  - 6> consider up to *maxCellMeasIdle* strongest identified cells, according to the sorting quantity, to be applicable for idle/inactive measurement reporting;
- 5> for all cells applicable for idle/inactive measurement reporting, derive measurement results for the measurement quantities indicated by *reportQuantitiesEUTRA*;
- 5> store the derived measurement results as indicated by *reportQuantitiesEUTRA* within the *measReportIdleEUTRA* in *VarMeasIdleReport* in decreasing order of the sorting quantity, i.e. the best cell is included first, as follows:
  - 6> if *qualityThresholdEUTRA* is configured:
    - 7> include the measurement results from the cells applicable for idle/inactive measurement reporting whose RSRP/RSRQ measurement results are above the value(s) provided in *qualityThresholdEUTRA*;
  - 6> else:
    - 7> include the measurement results from all cells applicable for idle/inactive measurement reporting;
- 2> if the *VarMeasIdleConfig* includes the *measIdleCarrierListNR* and the SIB1 contains *idleModeMeasurementsNR*:
  - 3> for each entry in *measIdleCarrierListNR* within *VarMeasIdleConfig* that contains *ssb-MeasConfig*:
    - 4> if UE supports carrier aggregation or NR-DC between serving carrier and the carrier frequency and subcarrier spacing indicated by *carrierFreq* and *ssbSubCarrierSpacing* within the corresponding entry:
      - 5> perform measurements in the carrier frequency and subcarrier spacing indicated by *carrierFreq* and *ssbSubCarrierSpacing* within the corresponding entry;
    - 5> if the *reportQuantities* is set to *rsrq*:
      - 6> consider RSRQ as the cell sorting quantity;
    - 5> else:
      - 6> consider RSRP as the cell sorting quantity;
    - 5> if the *measCellListNR* is included:
      - 6> consider cells identified by each entry within the *measCellListNR* to be applicable for idle/inactive measurement reporting;
    - 5> else:
      - 6> consider up to *maxCellMeasIdle* strongest identified cells, according to the sorting quantity, to be applicable for idle/inactive measurement reporting;
    - 5> for all cells applicable for idle/inactive measurement reporting, derive cell measurement results for the measurement quantities indicated by *reportQuantities*;
    - 5> store the derived cell measurement results as indicated by *reportQuantities* for cells applicable for idle/inactive measurement reporting within *measResultsPerCarrierListIdleNR* in the

*measReportIdleNR* in *VarMeasIdleReport* in decreasing order of the cell sorting quantity, i.e. the best cell is included first, as follows:

- 6> if *qualityThreshold* is configured:
  - 7> include the measurement results from the cells applicable for idle/inactive measurement reporting whose RSRP/RSRQ measurement results are above the value(s) provided in *qualityThreshold*;
- 6> else:
  - 7> include the measurement results from all cells applicable for idle/inactive measurement reporting;
- 5> if *beamMeasConfigIdle* is included in the associated entry in *measIdleCarrierListNR* and if UE supports *idleInactiveNR-MeasBeamReport* for the FR of the carrier frequency indicated by *carrierFreq* within the associated entry, for each cell in the measurement results:
  - 6> derive beam measurements based on SS/PBCH block for each measurement quantity indicated in *reportQuantityRS-Indexes*, as described in TS 38.215 [9];
  - 6> if the *reportQuantityRS-Indexes* is set to *rsrq*:
    - 7> consider RSRQ as the beam sorting quantity;
  - 6> else:
    - 7> consider RSRP as the beam sorting quantity;
  - 6> set *resultsSSB-Indexes* to include up to *maxNrofRS-IndexesToReport* SS/PBCH block indexes in order of decreasing beam sorting quantity as follows:
    - 7> include the index associated to the best beam for the sorting quantity and if *absThreshSS-BlocksConsolidation* is included, the remaining beams whose sorting quantity is above *absThreshSS-BlocksConsolidation*;
  - 6> if the *includeBeamMeasurements* is set to *true*:
    - 7> include the beam measurement results as indicated by *reportQuantityRS-Indexes*;
- 2> if, as a result of the procedure in this clause, the UE performs measurements in one or more carrier frequency indicated by *measIdleCarrierListNR* or *measIdleCarrierListEUTRA*:
  - 3> store the cell measurement results for RSRP and RSRQ for the serving cell within *measResultServingCell* in the *measReportIdleNR* in *VarMeasIdleReport*.
  - 3> if the *VarMeasIdleConfig* includes the *measIdleCarrierListNR* and it contains an entry with *carrierFreq* set to the value of the serving frequency:
    - 4> if *beamMeasConfigIdle* is included in that entry, and if the UE supports *idleInactiveNR-MeasBeamReport* for the FR of the serving cell:
      - 5> derive beam measurements based on SS/PBCH block for each measurement quantity indicated in *reportQuantityRS-Indexes*, as described in TS 38.215 [9];
      - 5> if the *reportQuantityRS-Indexes* is set to *rsrq*:
        - 6> consider RSRQ as the beam sorting quantity;
      - 5> else:
        - 6> consider RSRP as the beam sorting quantity;
      - 5> set *resultsSSB-Indexes* to include up to *maxNrofRS-IndexesToReport* SS/PBCH block indexes in order of decreasing beam sorting quantity as follows:

6> include the index associated to the best beam for the sorting quantity and if *absThreshSS-BlocksConsolidation* is included in SIB2 of serving cell, the remaining beams whose sorting quantity is above *absThreshSS-BlocksConsolidation*;

5> if the *includeBeamMeasurements* is set to true:

6> include the beam measurement results as indicated by *reportQuantityRS-Indexes*;

NOTE 1: How the UE performs idle/inactive measurements is up to UE implementation as long as the requirements in TS 38.133 [14] are met for measurement reporting.

NOTE 2: The UE is not required to perform idle/inactive measurements on a given carrier if the SSB configuration of that carrier provided via dedicated signaling is different from the SSB configuration broadcasted in the serving cell, if any.

NOTE 3: How the UE prioritizes which frequencies to measure or report (in case it is configured with more frequencies than it can measure or report) is left to UE implementation.

NOTE 4: When *idleModeMeasVoiceFallback* is included in SIB5, UE may decide to measure and report idle/inactive measurements for EUTRA carrier frequencies included in SIB5 even if it does not support NE-DC between the serving carrier and the EUTRA carrier frequencies.

### 5.7.8.3 T331 expiry or stop

The UE shall:

1> if T331 expires or is stopped:

2> release the *VarMeasIdleConfig*.

NOTE: It is up to UE implementation whether to continue idle/inactive measurements according to SIB11 and SIB4 configurations or according to E-UTRA SIB5 and E-UTRA SIB24 configurations as specified in TS 36.331 [10] upon inter-RAT cell reselection to E-UTRA, after T331 has expired or stopped.

### 5.7.8.4 Cell re-selection or cell selection while T331 is running

The UE shall:

1> if intra-RAT cell selection or reselection occurs while T331 is running:

2> if *validityAreaList* is configured in *VarMeasIdleConfig*:

3> if the serving frequency does not match with the *carrierFreq* of an entry in the *validityAreaList*; or

3> if the serving frequency matches with the *carrierFreq* of an entry in the *validityAreaList*, the *validityCellList* is included in that entry, and the physical cell identity of the serving cell does not match with any entry in *validityCellList*:

4> stop timer T331;

4> perform the actions as specified in 5.7.8.3, upon which the procedure ends.

1> else if inter-RAT cell selection or reselection occurs while T331 is running:

2> stop timer T331;

2> perform the actions as specified in 5.7.8.3;

## 5.7.9 Mobility history information

### 5.7.9.1 General

This procedure specifies how the mobility history information is stored by the UE, covering RRC\_IDLE, RRC\_INACTIVE and RRC\_CONNECTED.

### 5.7.9.2 Initiation

If the UE supports storage of mobility history information, the UE shall:

- 1> If the UE supports PSCell mobility history information and upon addition of a PSCell:
  - 2> include an entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport* possibly after performing the following, if necessary:
    - 3> if *visitedPSCellInfoListReport* is available in the *visitedCellInfoList* in variable *VarMobilityHistoryReport*:
      - 4> for the oldest PCell entry in *visitedCellInfoList* including *visitedPSCellInfoListReport*;
        - 5> remove the oldest entry in the *visitedPSCellInfoListReport*;
    - 3> else:
      - 4> remove the oldest entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport*;
  - 2> for the included entry:
    - 3> set the field *timeSpent* of the entry according to following:
      - 4> if this is the first PSCell entry for the current PCell since entering the current PCell in RRC\_CONNECTED:
        - 5> include the entry as the time spent with no PSCell since entering the current PCell in RRC\_CONNECTED;
      - 4> else:
        - 5> include the time spent with no PSCell since last PSCell release since entering the current PCell in RRC\_CONNECTED;
  - 1> If the UE supports PSCell mobility history information and upon change, or release of a PSCell while being connected to the current PCell, or upon release of a PSCell while entering 'camped normally' state or 'any cell selection' state or 'camped on any cell' state:
    - 2> include an entry in *visitedPSCellInfoList* of the variable *VarMobilityHistoryReport* possibly after performing the following, if necessary:
      - 3> if *visitedPSCellInfoListReport* is available in the *visitedCellInfoList* in variable *VarMobilityHistoryReport*:
        - 4> for the oldest PCell entry in *visitedCellInfoList* including *visitedPSCellInfoListReport*;
          - 5> remove the oldest entry in the *visitedPSCellInfoListReport*;
      - 3> else:
        - 4> remove the oldest entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport*;
    - 2> for the included entry:
      - 3> if the global cell identity of the previous PSCell is available:
        - 4> include the global cell identity of that cell in the field *visitedCellId* of the entry;
      - 3> else:
        - 4> include the physical cell identity and carrier frequency of that cell in the field *visitedCellId* of the entry;
      - 3> if the PSCell is changed or released while being connected to the current PCell, or if the PSCell is released while entering 'camped normally' state in the same serving cell which was previously the PCell:

- 4> set the field *timeSpent* of the entry as the time spent in the previous PSCell while being connected to the current PCell/serving cell;
- 3> if the PSCell is released while entering 'any cell selection' state or 'camped on any cell' state from a suitable cell in RRC\_CONNECTED state in NR or LTE, or if the PSCell is released while entering 'camped normally' state while previously in RRC\_CONNECTED state in a PCell different from the current serving cell:
  - 4> set the field *timeSpent* of the entry as the time spent in the previous PSCell while being connected to the previous PCell;
- 1> Upon change of suitable cell, consisting of PCell in RRC\_CONNECTED (for NR or E-UTRA cell) or serving cell in RRC\_INACTIVE (for NR cell) or in RRC\_IDLE (for NR or E-UTRA cell), to another NR or E-UTRA cell, or when entering 'any cell selection' state from 'camped normally' state in NR or LTE or when entering 'any cell selection' state or 'camped on any cell' state from a suitable cell in RRC\_CONNECTED state in NR or LTE:

NOTE: Change of suitable cell encompasses also simultaneous change of serving cell and RRC state change.

- 2> include an entry in *visitedCellInfoList* of the variable *VarMobilityHistoryReport* possibly after removing the oldest entry, if necessary, according to following:
  - 3> if the global cell identity of the previous PCell/serving cell is available:
    - 4> include the global cell identity of that cell in the field *visitedCellId* of the entry;
  - 3> else:
    - 4> include the physical cell identity and carrier frequency of that cell in the field *visitedCellId* of the entry;
  - 3> set the field *timeSpent* of the entry as the time spent in the previous PCell/serving cell;
  - 3> if the UE supports PSCell mobility history information and if the UE continues to be connected to the same PSCell during the change of the PCell in RRC\_CONNECTED; or
  - 3> if the UE supports PSCell mobility history information and if the UE changes PSCell at the same time as the change of the PCell in RRC\_CONNECTED; or
  - 3> if the UE supports PSCell mobility history information and if the PSCell is released at the same time as the change of the PCell in RRC\_CONNECTED:
    - 4> include an entry in *visitedPSCellInfoList* of the variable *VarMobilityHistoryReport* possibly after performing the following, if necessary:
      - 5> if *visitedPSCellInfoListReport* is available in the *visitedCellInfoList* in variable *VarMobilityHistoryReport*:
        - 6> for the oldest PCell entry in *visitedCellInfoList* including *visitedPSCellInfoListReport*;
          - 7> remove the oldest entry in the *visitedPSCellInfoListReport*;
      - 5> else:
        - 6> remove the oldest entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport*;
  - 4> for the included entry:
    - 5> if the global cell identity of the PSCell (in case the UE continues to be connected to the same PSCell) or the previous PSCell (in case the UE changes PSCell, or in case PSCell is released) is available:
      - 6> include the global cell identity of that cell in the field *visitedCellId* of the entry;
    - 5> else:
      - 6> include the physical cell identity and carrier frequency of that cell in the field *visitedCellId* of the entry;

- 5> set the field *timeSpent* of the entry as the time spent in the PSCell, while being connected to previous PCell;
- 3> if the UE supports PSCell mobility history information and if the UE was not configured with a PSCell at the time of change of PCell in RRC\_CONNECTED; or
- 3> if the UE supports PSCell mobility history information and if the UE was not configured with a PSCell at the time of entering 'camped normally' state while previously in RRC\_CONNECTED state in a PCell different from the current serving cell; or
- 3> if the UE supports PSCell mobility history information and if the UE was not configured with a PSCell at the time of entering 'any cell selection' state or 'camped on any cell' state from a suitable cell in RRC\_CONNECTED state in NR or LTE:
- 4> include an entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport* after performing the following, if necessary;
  - 5> if *visitedPSCellInfoListReport* is available in the *visitedCellInfoList* in variable *VarMobilityHistoryReport*:
    - 6> for the oldest PCell entry in *visitedCellInfoList* including *visitedPSCellInfoListReport*;
    - 7> remove the oldest entry in the *visitedPSCellInfoListReport*;
  - 5> else:
    - 6> remove the oldest entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport*;
- 4> for the included entry:
  - 5> set the field *timeSpent* of the entry as the time without PSCell according to the following:
    - 6> if the UE experienced a PSCell release since entering the previous PCell in RRC\_CONNECTED:
      - 7> include the time spent with no PSCell since last PSCell release since entering the previous PCell in RRC\_CONNECTED;
    - 6> else:
      - 7> include the time spent with no PSCell since entering the previous PCell in RRC\_CONNECTED;
- 3> if the UE supports PSCell mobility history information and if *visitedPSCellInfoList* exists in *VarMobilityHistoryReport*:
  - 4> include *visitedPSCellInfoList* in *VarMobilityHistoryReport* in the *visitedPSCellInfoListReport* within the entry of the *visitedCellInfoList* associated to the latest PCell entry;
  - 4> remove *visitedPSCellInfoList* from the variable *VarMobilityHistoryReport*;
- 1> if the UE supports PSCell mobility history information and upon entering 'camped normally' state in NR (in RRC\_IDLE or RRC\_INACTIVE) or E-UTRA (in RRC\_IDLE) while previously in RRC\_CONNECTED state NR or LTE in the same serving cell which was previously the PCell while not connected to a PSCell:
- 2> include an entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport* after performing the following, if necessary;
- 3> if *visitedPSCellInfoListReport* is available in the *visitedCellInfoList* in variable *VarMobilityHistoryReport*:
  - 4> for the oldest PCell entry in *visitedCellInfoList* including *visitedPSCellInfoListReport*;
  - 5> remove the oldest entry in the *visitedPSCellInfoListReport*;
- 3> else:

- 4> remove the oldest entry in *visitedPSCellInfoList* in variable *VarMobilityHistoryReport*;
- 2> for the included entry:
  - 3> set the field *timeSpent* of the entry as the time without PSCell according to the following:
    - 4> if the UE experienced a PSCell release since entering the current serving cell in RRC\_CONNECTED:
      - 5> include the time spent with no PSCell since last PSCell release after entering the current serving cell in RRC\_CONNECTED;
    - 4> else:
      - 5> include the time spent with no PSCell since entering the current serving cell in RRC\_CONNECTED;
- 1> upon entering 'camped normally' state in NR (in RRC\_IDLE or RRC\_INACTIVE) or E-UTRA (in RRC\_IDLE) while previously in 'any cell selection' state or 'camped on any cell' state in NR or LTE:
- 2> include an entry in *visitedCellInfoList* in variable *VarMobilityHistoryReport* possibly after removing the oldest entry, if necessary, according to following:
- 3> set the field *timeSpent* of the entry as the time spent in 'any cell selection' state and/or 'camped on any cell' state in NR or LTE.

## 5.7.10 UE Information

### 5.7.10.1 General

**Figure 5.7.10.1-1: UE information procedure**

The UE information procedure is used by the network to request the UE to report information.

### 5.7.10.2 Initiation

The network initiates the procedure by sending the *UEInformationRequest* message. The network should initiate this procedure only after successful security activation.

### 5.7.10.3 Reception of the *UEInformationRequest* message

Upon receiving the *UEInformationRequest* message, the UE shall, only after successful security activation:

- 1> if the *idleModeMeasurementReq* is included in the *UEInformationRequest* and the UE has stored *VarMeasIdleReport* that contains measurement information concerning cells other than the PCell:
- 2> set the *measResultIdleEUTRA* in the *UEInformationResponse* message to the value of *measReportIdleEUTRA* in the *VarMeasIdleReport*, if available;
- 2> set the *measResultIdleNR* in the *UEInformationResponse* message to the value of *measReportIdleNR* in the *VarMeasIdleReport*, if available;

- 2> discard the *VarMeasIdleReport* upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
- 1> if the *logMeasReportReq* is present and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
  - 2> if *VarLogMeasReport* includes one or more logged measurement entries, set the contents of the *logMeasReport* in the *UEInformationResponse* message as follows:
    - 3> include the *absoluteTimeStamp* and set it to the value of *absoluteTimeInfo* in the *VarLogMeasReport*;
    - 3> include the *traceReference* and set it to the value of *traceReference* in the *VarLogMeasReport*;
    - 3> include the *traceRecordingSessionRef* and set it to the value of *traceRecordingSessionRef* in the *VarLogMeasReport*;
    - 3> include the *tce-Id* and set it to the value of *tce-Id* in the *VarLogMeasReport*;
    - 3> include the *logMeasInfoList* and set it to include one or more entries from the *VarLogMeasReport* starting from the entries logged first, and for each entry of the *logMeasInfoList* that is included, include all information stored in the corresponding *logMeasInfoList* entry in *VarLogMeasReport*;
  - 3> if the *VarLogMeasReport* includes one or more additional logged measurement entries that are not included in the *logMeasInfoList* within the *UEInformationResponse* message:
    - 4> include the *logMeasAvailable*;
    - 4> if *bt-LocationInfo* is included in *locationInfo* of one or more of the additional logged measurement entries in *VarLogMeasReport* that are not included in the *logMeasInfoList* within the *UEInformationResponse* message:
      - 5> include the *logMeasAvailableBT*;
    - 4> if *wlan-LocationInfo* is included in *locationInfo* of one or more of the additional logged measurement entries in *VarLogMeasReport* that are not included in the *logMeasInfoList* within the *UEInformationResponse* message:
      - 5> include the *logMeasAvailableWLAN*;
- 1> if *ra-ReportReq* is set to *true* and the UE has random access related information available in *VarRA-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRA-Report*:
  - 2> set the *ra-ReportList* in the *UEInformationResponse* message to the value of *ra-ReportList* in *VarRA-Report*;
  - 2> discard the *ra-ReportList* from *VarRA-Report* upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
- 1> if *rlf-ReportReq* is set to *true*:
  - 2> if the UE has radio link failure information or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:
    - 3> set *timeSinceFailure* in *VarRLF-Report* to the time that elapsed since the last radio link failure or handover failure in NR;
    - 3> set the *rlf-Report* in the *UEInformationResponse* message to the value of *rlf-Report* in *VarRLF-Report*;
    - 3> discard the *rlf-Report* from *VarRLF-Report* upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
  - 2> else if the UE is capable of cross-RAT RLF reporting as defined in TS 38.306 [26] and has radio link failure information or handover failure information available in *VarRLF-Report* of TS 36.331 [10] and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report* of TS 36.331 [10]:
    - 3> set *timeSinceFailure* in *VarRLF-Report* of TS 36.331 [10] to the time that elapsed since the last radio link failure or handover failure in EUTRA;

- 3> set *failedPCellId-EUTRA* in the *rlf-Report* in the *UEInformationResponse* message to indicate the PCell in which RLF was detected or the source PCell of the failed handover in the *VarRLF-Report* of TS 36.331 [10];
  - 3> set the *measResult-RLF-Report-EUTRA* in the *rlf-Report* in the *UEInformationResponse* message to the value of *rlf-Report* in *VarRLF-Report* of TS 36.331 [10];
  - 3> discard the *rlf-Report* from *VarRLF-Report* of TS 36.331 [10] upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
- 1> if *connEstFailReportReq* is set to *true* and the UE has connection establishment failure or connection resume failure information in *VarConnEstFailReport* or *VarConnEstFailReportList* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport* or in at least one of the entries of *VarConnEstFailReportList*:
    - 2> set *timeSinceFailure* in *VarConnEstFailReport* to the time that elapsed since the last connection establishment failure or connection resume failure in NR;
    - 2> set the *connEstFailReport* in the *UEInformationResponse* message to the value of *connEstFailReport* in *VarConnEstFailReport*;
    - 2> if the UE supports multiple CEF report:
      - 3> for each *connEstFailReport* in the *connEstFailReportList* in *VarConnEstFailReportList*:
        - 4> set *timeSinceFailure* to the time that elapsed since the associated connection establishment failure or connection resume failure in NR;
      - 2> for each *connEstFailReport* in the *connEstFailReportList* in the *UEInformationResponse* message, set the value to the value of *connEstFailReport* in *VarConnEstFailReport* in *VarConnEstFailReportList*;
      - 2> discard the *connEstFailReport* from *VarConnEstFailReport* and *VarConnEstFailReportList* upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
  - 1> if the *mobilityHistoryReportReq* is set to *true*:
    - 2> include the *mobilityHistoryReport* and set it to include *visitedCellInfoList* from *VarMobilityHistoryReport*;
    - 2> include in the *mobilityHistoryReport* an entry for the current PCell, possibly after removing the oldest entry if required, and set its fields as follows:
      - 3> set *visitedCellId* to the global cell identity or the physical cell identity and carrier frequency of the current PCell;
      - 3> set field *timeSpent* to the time spent in the current PCell;
      - 3> if the UE supports PSCell mobility history information and if *visitedPSCellInfoList* is present in *VarMobilityHistoryReport*:
        - 4> for the newest entry of the PCell in the *mobilityHistoryReport*, include *visitedPSCellInfoList* from *VarMobilityHistoryReport*;
        - 4> if the UE is configured with a PSCell:
          - 5> for the newest entry of the PCell in the *mobilityHistoryReport*, include the current PSCell information in the *visitedPSCellInfoListReport*, possibly after removing the oldest PSCell entry of a PCell in the *mobilityHistoryReport*, if required, and set its fields as follows:
            - 6> set *visitedCellId* to the global cell identity or the physical cell identity and carrier frequency of the current PSCell;
            - 6> set field *timeSpent* to the time spent in the current PSCell while being connected to the current PCell;
      - 4> else:

- 5> for the newest entry of the PCell in the *mobilityHistoryReport*, include a new entry in the *visitedPSCellInfoListReport*, possibly after removing the oldest PSCell entry of a PCell in the *mobilityHistoryReport*, if required, and set its fields as follows:
  - 6> set field *timeSpent* to the time spent without PSCell in the current PCell since last PSCell release since connected to the current PCell in RRC\_CONNECTED;
- 3> else if the UE supports PSCell mobility history information:
  - 4> if the UE is configured with a PSCell:
    - 5> for the newest entry of the PCell in the *mobilityHistoryReport*, include the current PSCell information in the *visitedPSCellInfoListReport*, possibly after removing the oldest PSCell entry of a PCell in the *mobilityHistoryReport*, if required, and set its fields as follows:
      - 6> set *visitedCellId* to the global cell identity or the physical cell identity and carrier frequency of the current PSCell;
      - 6> set field *timeSpent* to the time spent in the current PSCell while being connected to the current PCell;
  - 4> else:
    - 5> for the newest entry of the PCell in the *mobilityHistoryReport*, include a new entry in the *visitedPSCellInfoListReport*, possibly after removing the oldest PSCell entry of a PCell in the *mobilityHistoryReport*, if required, and set its fields as follows:
      - 6> set field *timeSpent* to the time spent without PSCell in the current PCell since connected to the current PCell in RRC\_CONNECTED;
- 1> if the *successHO-ReportReq* is set to *true* and if the UE has successful handover related information available in *VarSuccessHO-Report* and if the RPLMN is included in the *plmn-IdentityList* stored in *VarSuccessHO-Report*:
  - 2> if the *successHO-Report* in the *VarSuccessHO-Report* concerns a DAPS handover and if a PDCP PDU has been received from the source cell of the concerned HO and a non-duplicated PDCP PDU has been received from the target cell of the concerned HO:
    - 3> set *upInterruptionTimeAtHO* in *VarSuccessHO-Report* to include the time elapsed between the time of arrival of the last PDCP PDU received from the source cell of the concerned handover and the time of arrival of the first non-duplicate PDCP PDU received from the target cell of the concerned handover, as measured at the time of arrival of the first non-duplicate PDCP PDU received from the target cell;
  - 2> set the *successHO-Report* in the *UEInformationResponse* message to the value of *successHO-Report* in the *VarSuccessHO-Report*, if available;
  - 2> discard the *VarSuccessHO-Report* upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
- 1> if the *coarseLocationRequest* is set to *true*:
  - 2> include *coarseLocationInfo*, if available;
- 1> if the *logMeasReport* is included in the *UEInformationResponse*:
  - 2> submit the *UEInformationResponse* message to lower layers for transmission via SRB2;
  - 2> discard the logged measurement entries included in the *logMeasInfoList* from *VarLogMeasReport* upon successful delivery of the *UEInformationResponse* message confirmed by lower layers;
- 1> else:
  - 2> submit the *UEInformationResponse* message to lower layers for transmission via SRB1.

#### 5.7.10.4 Actions upon successful completion of a random-access procedure or on completion of a request of on-demand system information

Upon successfully performing random-access procedure initialized with 4-step or 2-step RA type, or upon failed or successfully completed on-demand system information acquisition procedure in RRC\_IDLE or RRC\_INACTIVE state, the UE shall:

- 1> if the RPLMN or the PLMN selected by upper layers (see TS24.501 [23]) from the PLMN(s) included in the *plmn-IdentityList* in *SIB1* is not included in *plmn-IdentityList* stored in a non-empty *VarRA-Report*:
  - 2> clear the information included in *VarRA-Report*;
- 1> if the number of *RA-Report* entries stored in the *ra-ReportList* in *VarRA-Report* is less than *maxRARReport*:
  - 2> if the number of PLMN entries in *plmn-IdentityList* stored in *VarRA-Report* is less than *maxPLMN*; or
  - 2> if the number of PLMN entries in *plmn-IdentityList* stored in *VarRA-Report* is equal to *maxPLMN* and the list of EPLMNs is subset of or equal to the *plmn-IdentityList* stored in *VarRA-Report*:
  - 3> append the following contents associated to the successfully completed random-access procedure or the failed or successfully completed on-demand system information acquisition procedure as a new entry in the *VarRA-Report*:
    - 4> if the list of EPLMNs has been stored by the UE:
      - 5> set the *plmn-IdentityList* to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN) without exceeding the limit of *maxPLMN*;
    - 4> else:
      - 5> set the *plmn-Identity*, in *plmn-IdentityList*, to the PLMN selected by upper layers (see TS 24.501 [23]) from the PLMN(s) included in the *plmn-IdentityInfoList* in *SIB1*;
    - 4> set the *cellId* to the global cell identity and the tracking area code, if available, otherwise to the physical cell identity and carrier frequency of the cell in which the corresponding random-access preamble was transmitted;
    - 4> if the UE supports spCell ID indication:
      - 5> if the corresponding random-access procedure was performed on an SCell of MCG:
        - 6> set the *spCellId* to the global cell identity of the PCell;
      - 5> if the corresponding random-access procedure was performed on an SCell of SCG:
        - 6> set the *spCellId* to the global cell identity of the PSCell, if available, otherwise, set the *spCellId* to the global cell identity of the PCell;
      - 5> if the corresponding random-access procedure was performed on PSCell:
        - 6> if the *cellId* is not set to the global cell identity of the PSCell, set the *spCellId* to the global cell identity of the PCell;
    - 4> set the *raPurpose* to include the purpose of triggering the random-access procedure;
    - 4> set the *ra-InformationCommon* as specified in clause 5.7.10.5.

The UE may discard the random access report information, i.e. release the UE variable *VarRA-Report*, 48 hours after the last successful random access procedure or the failed or successfully completed on-demand system information acquisition procedure related information is added to the *VarRA-Report*.

NOTE 1: The UE does not log the RA information in the RA report if the triggering event of the random access is consistent UL LBT on SpCell as specified in TS 38.321 [6].

### 5.7.10.5 RA information determination

The UE shall set the content in *ra-InformationCommon* as follows:

- 1> set the *absoluteFrequencyPointA* to indicate the absolute frequency of the reference resource block associated to the random-access resources used in the random-access procedure;
- 1> set the *locationAndBandwidth* and *subcarrierSpacing* associated to the UL BWP of the random-access resources used in the random-access procedure;
- 1> if contention based random-access resources are used in the random-access procedure:
  - 2> set the *msgA-RO-FrequencyStart* and *msgA-RO-FDM* and *msgA-SubcarrierSpacing* associated to the 2 step random-access resources if used in the random-access procedure;
  - 2> if *msgA-SubcarrierSpacing* associated to the 2 step random-access resources used in the random-access procedure is available:
    - 3> set the *msgA-SubcarrierSpacing* associated to the 2 step random-access resources used in the random-access procedure;
  - 2> else if only 2 step random-access resources are available in the UL BWP used in the random-access procedure:
    - 3> set the *msgA-SCS-From-prach-ConfigurationIndex* to the subcarrier spacing as derived from the *msgA-PRACH-ConfigurationIndex* used in the 2-step random-access procedure;
  - 2> else:
    - 3> set the *msg1-SubcarrierSpacing* associated to the 4 step random-access resources used in the random-access procedure;
  - 2> set the *msg1-FrequencyStart* associated to the 4 step random-access resources if used in the random-access procedure, and if its value is different from the value of *msgA-RO-FrequencyStart* if it is included in the *ra-InformationCommon*;
  - 2> set the *msg1-FDM* associated to the 4 step random-access resources if used in the random-access procedure, and if its value is different from the value of *msgA-RO-FDM* if it is included in the *ra-InformationCommon*;
  - 2> if *msg1-SubcarrierSpacing* associated to the 4 step random-access resources used in the random-access procedure is available, and if its value is different from the value of *msgA-SubcarrierSpacing* if it is included in the *ra-InformationCommon*:
    - 3> set the *msg1-SubcarrierSpacing* associated to the 4 step random-access resources used in the random-access procedure;
  - 2> else:
    - 3> set the *msg1-SCS-From-prach-ConfigurationIndex* to the subcarrier spacing as derived from the *prach-ConfigurationIndex* used in the 4-step random-access procedure, and if its value is different from the value of *msgA-SCS-From-prach-ConfigurationIndex* if it is included in the *ra-InformationCommon*;
- 1> if contention free random-access resources are used in the random-access procedure:
  - 2> set the *msg1-FrequencyStartCFRA* and *msg1-FDMCFRA* associated to the 4 step random-access resources if used in the random-access procedure;
  - 2> if *msg1-SubcarrierSpacing* associated to the 4 step random-access resources used in the random-access procedure is available:
    - 3> set the *msg1-SubcarrierSpacingCFRA* associated to the 4 step random-access resources used in the random-access procedure;
  - 2> else:

- 3> set the *msg1-SCS-From-prach-ConfigurationIndexCFRA* to the subcarrier spacing as derived from the *prach-ConfigurationIndex* used in the 4 step random-access procedure;
- 2> set the *msgA-RO-FrequencyStartCFRA* and *msgA-RO-FDMCFRA* associated to the 2 step contention free random access resources if used in the random-access procedure;
- 2> set the *msgA-MCS*, the *nrofPRBs-PerMsgA-PO*, the *msgA-PUSCH-TimeDomainAllocation*, the *frequencyStartMsgA-PUSCH*, the *nrofMsgA-PO-FDM* associated to the 2 step random-access resources if used in the random-access procedure;
- 2> if *msgA-SubcarrierSpacing* associated to the 2 step random-access resources used in the random-access procedure is available:
  - 3> set the *msgA-SubcarrierSpacing* associated to the 2 step random-access resources used in the random-access procedure;
- 2> else if only 2 step random-access resources are available in the UL BWP used in the random-access procedure:
  - 3> set the *msgA-SCS-From-prach-ConfigurationIndex* to the subcarrier spacing as derived from the *msgA-PRACH-ConfigurationIndex* used in the 2-step random-access procedure;
- 2> else:
  - 3> set the *msg1-SubcarrierSpacing* associated to the 4 step random-access resources used in the random-access procedure;
- 1> if the random access procedure is initialized with *RA\_TYPE* set to *2-stepRA* as described in TS 38.321 [3]:
  - 2> set the *dlPathlossRSRP* to the measured RSRP of the DL pathloss reference obtained at the time of *RA\_Type* selection stage of the initialization of the RA procedure as captured in TS 38.321 [3];
  - 2> if the configuration for the random access *msgA-TransMax* was configured in *RACH-ConfigDedicated* for this random access procedure, and *raPurpose* is set to *reconfigurationWithSync*:
    - 3> set *msgA-TransMax* to the value of *msgA-TransMax* in *RACH-ConfigDedicated*;
  - 2> else if *msgA-TransMax* was configured in *RACH-ConfigCommonTwoStepRA*:
    - 3> set *msgA-TransMax* to the value of *msgA-TransMax* in *RACH-ConfigCommonTwoStepRA*;
  - 2> set the *msgA-PUSCH-PayloadSize* to the size of the overall payload available in the UE buffer at the time of initiating the 2 step RA procedure;
- 1> if the purpose of the random access procedure is to request on-demand system information (i.e., if the *raPurpose* is set to *requestForOtherSI* or *msg3RequestForOtherSI*):
  - 2> set the *intendedSIBs* to indicate the SIB(s) the UE wanted to receive as a result of the SI request;
  - 2> set the *ssbsForSI-Acquisition* to indicate the SSB(s) used to receive the SI message;
  - 2> if the on-demand system information acquisition was successful:
    - 3> set the *onDemandSISuccess* to *true*;
- 1> set the parameters associated to the successive random-access attempts associated to the selected beam in the *perRAInfoList* as follows:
  - 2> if the random-access resource used is associated to a SS/PBCH block, set the associated random-access parameters for the successive random-access attempts associated to the same SS/PBCH block for one or more random-access attempts as follows:
    - 3> set the *ssb-Index* to include the SS/PBCH block index associated to the used random-access resource;
    - 3> set the *numberOfPreamblesSentOnSSB* to indicate the number of successive random-access attempts associated to the SS/PBCH block;

- 3> for each random-access attempt performed on the random-access resource, include the following parameters in the chronological order of the random-access attempt:
  - 4> if the random-access attempt is performed on the contention based random-access resource and if *raPurpose* is not equal to '*requestForOtherSI*', include *contentionDetected* as follows:
    - 5> if contention resolution was not successful as specified in TS 38.321 [6] for the transmitted preamble:
      - 6> set the *contentionDetected* to *true*;
    - 5> else:
      - 6> set the *contentionDetected* to *false*;
  - 4> if the random access attempt is a 2-step random access attempt:
    - 5> if fallback from 2-step random access to 4-step random access occurred during the random access attempt:
      - 6> set *fallbackToFourStepRA* to *true*;
  - 4> if the random-access attempt is performed on the contention based random-access resource; or
  - 4> if the random-access attempt is performed on the contention free random-access resource and if the random-access procedure was initiated due to the PDCCH ordering:
    - 5> if the random access attempt is a 4-step random access attempt and the SS/PBCH block RSRP of the SS/PBCH block corresponding to the random-access resource used in the random-access attempt is above *rsrp-ThresholdSSB*; or
    - 5> if the random access attempt is a 2-step random access attempt and the SS/PBCH block RSRP of the SS/PBCH block corresponding to the random-access resource used in the random-access attempt is above *msgA-RSRP-ThresholdSSB*:
      - 6> set the *dlRSRPAboveThreshold* to *true*;
    - 5> else:
      - 6> set the *dlRSRPAboveThreshold* to *false*;
- 2> else if the random-access resource used is associated to a CSI-RS, set the associated random-access parameters for the successive random-access attempts associated to the same CSI-RS for one or more random-access attempts as follows:
  - 3> set the *csi-RS-Index* to include the CSI-RS index associated to the used random-access resource;
  - 3> set the *numberOfPreamblesSentOnCSI-RS* to indicate the number of successive random-access attempts associated to the CSI-RS.

NOTE 1: Void.

#### 5.7.10.6 Actions for the successful handover report determination

The UE shall for the PCell:

- 1> if the ratio between the value of the elapsed time of the timer T304 and the configured value of the timer T304, included in the last applied *RRCReconfiguration* message including the *reconfigurationWithSync*, is greater than *thresholdPercentageT304* if included in the *successHO-Config* received before executing the last reconfiguration with sync; or
- 1> if the ratio between the value of the elapsed time of the timer T310 and the configured value of the timer T310, configured while the UE was connected to the source PCell before executing the last reconfiguration with sync, is greater than *thresholdPercentageT310* included in the *successHO-Config* if configured by the source PCell before executing the last reconfiguration with sync; or

- 1> if the T312 associated to the measurement identity of the target cell was running at the time of initiating the execution of the reconfiguration with sync procedure and if the ratio between the value of the elapsed time of the timer T312 and the configured value of the timer T312, configured while the UE was connected to the source PCell before executing the last reconfiguration with sync, is greater than *thresholdPercentageT312* included in the *successHO-Config* if configured by the source PCell before executing the last reconfiguration with sync; or
- 1> if *sourceDAPS-FailureReporting* is included in the *successHO-Config* before executing the last reconfiguration with sync and is set to *true* and if the last executed handover was a DAPS handover and if an RLF occurred at the source PCell during the DAPS handover while T304 was running;
- 2> store the successful handover information in *VarSuccessHO-Report* and determine the content in *VarSuccessHO-Report* as follows:
  - 3> clear the information included in *VarSuccessHO-Report*, if any;
  - 3> set the *plmn-IdentityList* to include the list of EPLMNs stored by the UE (i.e., includes the RPLMN);
  - 3> set the *c-RNTI* to the C-RNTI assigned by the target PCell of the handover;
  - 3> for the source PCell in which the last *RRCReconfiguration* message including *reconfigurationWithSync* was applied:
    - 4> set the *sourcePCellID* in *sourceCellInfo* to the global cell identity and tracking area code, if available, of the source PCell;
    - 4> set the *sourceCellMeas* in *sourceCellInfo* to include the cell level RSRP, RSRQ and the available SINR, of the source PCell based on the available SSB and CSI-RS measurements collected up to the moment the UE sends *RRCReconfigurationComplete* message;
    - 4> set the *rsIndexResults* in *sourceCellMeas* to include all the available SSB and CSI-RS measurement quantities of the source PCell collected up to the moment the UE sends *RRCReconfigurationComplete* message;
    - 4> if the last executed handover was a DAPS handover and if an RLF occurred at the source PCell during the DAPS handover while T304 was running:
      - 5> set the *rlf-InSourceDAPS* in *sourceCellInfo* to *true*;
  - 3> for the target PCell indicated in the last applied *RRCReconfiguration* message including *reconfigurationWithSync*:
    - 4> set the *targetPCellID* in *targetCellInfo* to the global cell identity and tracking area code, if available, of the target PCell; otherwise, set the *targetCell-PCI-ARFCN* to the physical cell identity and carrier frequency of the target PCell;

NOTE 0: If *targetCell-PCI-ARFCN* is included, it is left to UE implementation how to set the *targetPCellID*.

- 4> set the *targetCellMeas* in *targetCellInfo* to include the cell level RSRP, RSRQ and the available SINR, of the target PCell based on the available SSB and CSI-RS measurements collected up to the moment the UE sends *RRCReconfigurationComplete* message;
- 4> set the *rsIndexResults* in *targetCellMeas* to include all the available SSB and CSI-RS measurement quantities of the target PCell collected up to the moment the UE sends *RRCReconfigurationComplete* message;
- 4> if the last applied *RRCReconfiguration* message including *reconfigurationWithSync* was included in the stored *condRRCReconfig*:
  - 5> set the *timeSinceCHO-Reconfig* to the time elapsed between the initiation of the execution of conditional reconfiguration for the target PCell and the reception of the last *conditionalReconfiguration* including the *condRRCReconfig* of the target PCell in the source PCell;
- 3> if the ratio between the value of the elapsed time of the timer T304 and the configured value of the T304 timer, included in the last applied *RRCReconfiguration* message including the *reconfigurationWithSync*,

is greater than *thresholdPercentageT304* if included in the *successHO-Config* received before executing the last reconfiguration with sync:

4> set *t304-cause* in *shr-Cause* to *true*;

4> set the *ra-InformationCommon* to include the random-access related information associated to the random access procedure in the target PCell, as specified in clause 5.7.10.5;

3> if the ratio between the value of the elapsed time of the timer T310 and the configured value of the T310 timer, configured while the UE was connected to the source PCell before executing the last reconfiguration with sync, is greater than *thresholdPercentageT310* included in the *successHO-Config* if configured by the source PCell before executing the last reconfiguration with sync:

4> set *t310-cause* in *shr-Cause* to *true*;

3> if the T312 associated to the measurement identity of the target cell was running at the time of initiating the execution of the reconfiguration with sync procedure and if the ratio between the value of the elapsed time of the timer T312 and the configured value of the T312 timer, configured while the UE was connected to the source PCell before executing the last reconfiguration with sync, is greater than *thresholdPercentageT312* included in the *successHO-Config* if configured by the source PCell before executing the last reconfiguration with sync:

4> set *t312-cause* in *shr-Cause* to *true*;

3> if *sourceDAPS-FailureReporting* included in the *successHO-Config* if configured by the source PCell before executing the last reconfiguration with sync is set to *true*, and if the last executed handover was a DAPS handover and if an RLF occurred at the source PCell during the DAPS handover while T304 was running:

4> set *sourceDAPS-Failure* in *shr-Cause* to *true*;

3> for each of the *measObjectNR*, configured by the source PCell, in which the last *RRCReconfiguration* message including *reconfigurationWithSync* was applied:

4> if measurements are available for the *measObjectNR*:

5> if the SS/PBCH block-based measurement quantities are available:

6> set the *measResultListNR* in *measResultNeighCells* to include all the available measurement quantities of the best measured cells, other than the source PCell or target PCell, ordered such that the cell with highest SS/PBCH block RSRP is listed first if SS/PBCH block RSRP measurement results are available, otherwise the cell with highest SS/PBCH block RSRQ is listed first if SS/PBCH block RSRQ measurement results are available, otherwise the cell with highest SS/PBCH block SINR is listed first, based on the available SS/PBCH block based measurements collected up to the moment the UE sends the *RRCReconfigurationComplete* message;

6> for each neighbour cell included, include the optional fields that are available;

NOTE 1: For the neighboring cells set included in *measResultListNR* in *measResultNeighCells* ordered based on the SS/PBCH block measurement quantities, the UE includes also the CSI-RS based measurement quantities, if available.

5> if the CSI-RS measurement quantities are available:

6> set the *measResultListNR* in *measResultNeighCells* to include all the available measurement quantities of the best measured cells, other than the source PCell and target PCell, ordered such that the cell with highest CSI-RS RSRP is listed first if CSI-RS RSRP measurement results are available, otherwise the cell with highest CSI-RS RSRQ is listed first if CSI-RS RSRQ measurement results are available, otherwise the cell with highest CSI-RS SINR is listed first, based on the available CSI-RS based measurements collected up to the moment the UE sends the *RRCReconfigurationComplete* message;

6> for each neighbour cell included, include the optional fields that are available;

NOTE 2: For the neighboring cells set ordered based on the CSI-RS measurement quantities, the UE includes measurements only for the cells not yet included in *measResultListNR* in *measResultNeighCells* to avoid overriding SS/PBCH block-based ordered measurements.

- 3> for each of the *measObjectEUTRA*, configured by the source PCell in which the last *RRCReconfiguration* message including *reconfigurationWithSync* was applied:
  - 4> if measurements are available for the *measObjectEUTRA*:
    - 5> set the *measResultListEUTRA* in *measResultNeighCells* to include the best measured cells ordered such that the cell with highest RSRP is listed first if RSRP measurement results are available, otherwise the cell with highest RSRQ is listed first, based on measurements collected up to the moment the UE sends the *RRCReconfigurationComplete* message;
    - 5> for each neighbour cell included, include the optional fields that are available;
  - 4> if the cell was a candidate target cell included in the *condRRCReconfig* within the *conditionalReconfiguration* configured by the source PCell including the *condExecutionCond* within the *conditionalReconfiguration* associated to *condEventA3* or *condEventA5*, in which the last *RRCReconfiguration* message including *reconfigurationWithSync* was applied:
    - 5> set the *choCandidate* to *true* in *measResultNR*;
- 3> if available, set the *locationInfo* as in 5.3.3.7;
- 1> release *successHO-Config* configured by the source PCell and *thresholdPercentageT304* if configured by the target PCell.

The UE may discard the successful handover information, i.e., release the UE variable *VarSuccessHO-Report*, 48 hours after the last successful handover information is added to the *VarSuccessHO-Report*.

## 5.7.11 Void

## 5.7.12 IAB Other Information

### 5.7.12.1 General

**Figure 5.7.12.1-1: IAB Other Information procedure**

The IAB Other Information procedure is used by IAB-MT to request the IAB-donor-CU to allocate IP address or inform the IAB-donor-CU of the IP address for the collocated IAB-DU.

### 5.7.12.2 Initiation

Upon initiation of the procedure, the IAB-MT shall:

- 1> initiate transmission of the *IABOtherInformation* message in accordance with 5.7.12.3;

### 5.7.12.3 Actions related to transmission of *IABOtherInformation* message

The IAB-MT shall set the contents of *IABOtherInformation* message as follows:

- 1> if the procedure is used to request IP addresses:
  - 2> if IPv4 addresses are requested:
    - 3> set the *iab-IPv4-AddressNumReq* to the number of IPv4 addresses requested per specific usage;
  - 2> if IPv6 addresses or IPv6 address prefixes are requested:
    - 3> if IPv6 addresses are requested:
      - 4> set the *iab-IPv6-AddressNumReq* to the number of IPv6 addresses requested per specific usage;
    - 3> else if IPv6 address prefixes are requested:
      - 4> set the *iab-IPv6-AddressPrefixReq* to *true* per specific usage;
- 1> if the procedure is used to report IP addresses:
  - 2> if IPv4 addresses are reported:
    - 3> include *IPv4-Address* in *iab-IPv4-AddressReport*, and for each IP address included:
      - 4> if IPv4 addresses are used for F1-C traffic:
        - 5> include these addresses in *f1-C-Traffic-IP-Address*.
      - 4> if IPv4 addresses are used for F1-U traffic:
        - 5> include these addresses in *f1-U-Traffic-IP-Address*.
      - 4> if IPv4 address are used for non-F1 traffic:
        - 5> include these addresses in *non-f1-Traffic-IP-Address*.
      - 4> if IPv4 addresses are used for all traffic:
        - 5> include these addresses in *all-Traffic-IAB-IP-Address*.
    - 2> if IPv6 addresses or IPv6 address prefixes are reported:
      - 3> if IPv6 addresses are reported:
        - 4> include *IPv6-Address* in *iab-IPv6-AddressReport*, and for each IP address included;
          - 5> if IPv6 addresses are used for F1-C traffic:
            - 6> include these addresses in *f1-C-Traffic-IP-Address*.
          - 5> if IPv6 addresses are used for F1-U traffic:
            - 6> include these addresses in *f1-U-Traffic-IP-Address*.
          - 5> if IPv6 addresses are used for non-F1 traffic:
            - 6> include these addresses in *non-f1-Traffic-IP-Address*.
          - 5> if IPv6 addresses are used for all traffic:
            - 6> include these addresses in *all-Traffic-IAB-IP-Address*.
        - 3> else if IPv6 address prefixes are reported:
          - 4> include these *IPv6-Prefix* in *iab-IPv6-PrefixReport*, and for each IP address prefix included;
            - 5> if this IPv6 address prefix is used for F1-C traffic:

- 6> include this prefix in *f1-C-Traffic-IP-Address*.
- 5> if this IPv6 address prefix is used for F1-U traffic:
  - 6> include this prefix in *f1-U-Traffic-IP-Address*.
- 5> if this IPv6 address prefix is used for non-F1 traffic:
  - 6> include this prefix in *non-f1-Traffic-IP-Address*.
- 5> if this IPv6 address prefix is used for all traffic:
  - 6> include this prefix in *all-Traffic-IAB-IP-Address*.
- 1> if the IAB-MT is in (NG)EN-DC, or
- 1> if the IAB-MT is in NR-DC and the IAB Other Information procedure is towards the IAB-donor-CU in the SN:
  - 2> if SRB3 is configured:
    - 3> submit the *IABOtherInformation* message via SRB3 to lower layers for transmission;
  - 2> else if the IAB-MT is in (NG)EN-DC:
    - 3> submit the *IABOtherInformation* message via the E-UTRA MCG embedded in E-UTRA RRC message *ULInformationTransferMRDC* as specified in TS 36.331 [10];
  - 2> else:
    - 3> submit the *IABOtherInformation* message via the NR MCG embedded in NR RRC message *ULInformationTransferMRDC* as specified in clause 5.7.2a.3;
- 1> else:
  - 2> submit the *IABOtherInformation* message to lower layers for transmission.

## 5.7.13 RLM/BFD relaxation

### 5.7.13.0 General

In case both low mobility criterion and good serving cell criterion are configured for RLM/BFD relaxation, the UE is allowed to perform RLM and/or BFD relaxation according to requirements specified in TS 38.133 [14] when both relaxed measurement criterion for low mobility and relaxed measurement criterion for good serving cell quality are met.

In case only the good serving cell quality criterion is configured for RLM/BFD relaxation, the UE is allowed to perform RLM and/or BFD relaxation according to requirements specified in TS 38.133 [14] when the relaxed measurement criterion for good serving cell quality is met.

When the short DRX cycle is smaller than or equal to 80 ms and the long DRX cycle is larger than 80 ms then the UE is allowed to perform RLM and/or BFD relaxation while *drx-ShortCycleTimer* is running and the relaxed measurement criteria are met.

### 5.7.13.1 Relaxed measurement criterion for low mobility

The relaxed measurement criterion for UE with low mobility in RRC\_CONNECTED is fulfilled when:

- $(SS-RSRP_{Ref} - SS-RSRP) < S_{SearchDeltaP-Connected}$ ,

Where:

- $SS-RSRP$  = current L3 RSRP measurement of the SpCell based on SSB (dB).
- $SS-RSRP_{Ref}$  = reference L3 RSRP measurement of the SpCell based on SSB (dB), set as follows:
  - After receiving low mobility criterion configuration, or

- After MAC of the CG successfully completes a Random Access procedure after applying a *reconfigurationWithSync* in *spCellConfig* of the CG while low mobility criterion is configured, or
- If  $(SS-RSRP - SS-RSRP_{Ref}) > 0$ , or
- If the relaxed measurement criterion has not been met for  $T_{SearchDeltaP-Connected}$ ,
- The UE shall set the value of  $SS-RSRP_{Ref}$  to the current  $SS-RSRP$  value of the SpCell.

### 5.7.13.2 Relaxed measurement criterion for good serving cell quality

The relaxed measurement criterion of good serving cell quality for RLM is fulfilled when the downlink radio link quality on the configured RLM-RS resource is evaluated to be better than the threshold  $Q_{in} + XdB$ , wherein

- $Q_{in}$  is specified in clause 8.1 of TS 38.133 [14].
- $X$  is the parameter *offset* in *goodServingCellEvaluationRLM* for the evaluated serving cell.

The relaxed measurement criterion of good serving cell quality for BFD is fulfilled when the downlink radio link quality on the configured BFD-RS resource is evaluated to be better than the threshold  $Q_{in} + XdB$ , wherein

- $Q_{in}$  is specified in clause 8.1 of TS 38.133 [14].
- $X$  is the parameter *offset* in *goodServingCellEvaluationBFD* for the evaluated serving cell.

## 5.7.14 UE Positioning Assistance Information

### 5.7.14.1 General

**Figure 5.7.14.1-1: UE Positioning Assistance Information procedure**

The UE Positioning Assistance Information procedure is used by UE to report the UE Positioning Assistance Information. The UE reports the association between SRS resources for positioning and the UE Tx TEG ID as defined in TS 38.305 [73].

### 5.7.14.2 Initiation

A UE capable of providing the association between SRS resource for positioning and UE Tx TEG ID in *RRC\_CONNECTED* may initiate the procedure upon being configured to provide this association information.

Upon initiation of the procedure, the UE shall:

- 1> initiate transmission of the *UEPositioningAssistanceInfo* message in accordance with 5.7.14.3 to provide the association.

### 5.7.14.3 Actions related to transmission of *UEPositioningAssistanceInfo* message

The UE shall set the contents of the *UEPositioningAssistanceInfo* message as follows:

- 1> if *ue-TxTEG-RequestUL-TDOA-Config* in *RRCReconfiguration* message is configured with *periodicReporting*:

- 2> for all the association changes store *ue-TxTEG-Association* corresponding to each *ue-TxTEG-ID* with *nr-TimeStamp*;
- 2> include the results in *ue-TxTEG-AssociationList* in the *UEPositioningAssistanceInfo* message on expiry of each configured period;
- 2> optionally include one *ue-TxTEG-TimingErrorMarginValue* for each *UEPositioningAssistanceInfo* message;
- 1> else if *ue-TxTEG-RequestUL-TDOA-Config* in *RRCReconfiguration* message is configured with *oneShot*:
  - 2> identify the *ue-TxTEG-Association* corresponding to each *ue-TxTEG-ID* with *nr-TimeStamp*;
  - 2> include the results in *ue-TxTEG-AssociationList* in the *UEPositioningAssistanceInfo* message only one time;
  - 2> optionally include one *ue-TxTEG-TimingErrorMarginValue* for each *UEPositioningAssistanceInfo* message.

The UE shall submit the *UEPositioningAssistanceInfo* message to lower layers for transmission.

## 5.7.15 Void

## 5.7.16 Application layer measurement reporting

### 5.7.16.1 General

**Figure 5.7.16.1-1: Application layer measurement reporting**

The purpose of this procedure is to send application layer measurement reports to the network.

### 5.7.16.2 Initiation

A UE capable of application layer measurement reporting in *RRC\_CONNECTED* may initiate the procedure when configured with application layer measurement, i.e. when *appLayerMeasConfig* and *SRB4* have been configured by the network.

Upon initiating the procedure, the UE shall:

- 1> for each *measConfigAppLayerId* received from upper layers:
  - 2> if the UE AS has received application layer measurement report container from upper layers which has not been transmitted; and
  - 2> if the application layer measurement reporting has not been suspended for the *measConfigAppLayerId* associated with the application layer measurement report container according to clause 5.3.5.13d:
    - 3> set the *measReportAppLayerContainer* in the *MeasurementReportAppLayer* message to the received value in the application layer measurement report container;
  - 2> set the *measConfigAppLayerId* in the *MeasurementReportAppLayer* message to the value of the *measConfigAppLayerId* received together with application layer measurement report information;

- 2> if session start or stop information has been received from upper layers for the *measConfigAppLayerId*:
  - 3> set the *appLayerSessionStatus* in the *MeasurementReportAppLayer* message to the received value of session start or stop information;
- 2> if RAN visible application layer measurement report has been received from upper layers:
  - 3> for each *appLayerBufferLevel* value in the received RAN visible application layer measurement report:
    - 4> set the *appLayerBufferLevel* values in the *appLayerBufferLevelList* in the *MeasurementReportAppLayer* message to the buffer level values received from the upper layer in the order with the first *appLayerBufferLevel* value set to the newest received buffer level value, the second *appLayerBufferLevel* value set to the second newest received buffer level value, and so on until all the buffer level values received from the upper layer have been assigned or the maximum number of values have been set according to *appLayerBufferLevel*, if configured;
  - 3> set the *playoutDelayForMediaStartup* in the *MeasurementReportAppLayer* message to the received value of playout delay for media startup in the RAN visible application layer measurement report, if any;
  - 3> for each PDU session ID value indicated in the received RAN visible application layer measurement report, if any:
    - 4> set the *PDU-SessionID* field in the *pdu-SessionIdList* in the *MeasurementReportAppLayer* message to the indicated PDU session ID value;
- 1> if the encoded RRC message is larger than the maximum supported size of one PDCP SDU specified in TS 38.323 [5]:
  - 2> if the RRC message segmentation is enabled based on the field *rrc-SegAllowed* received in *appLayerMeasConfig*:
    - 3> initiate the UL message segment transfer procedure as specified in clause 5.7.7;
  - 2> else:
    - 3> discard the RRC message;
- 1> else:
  - 2> submit the *MeasurementReportAppLayer* message to lower layers for transmission upon which the procedure ends.

### 5.7.17 Derivation of pathloss reference for TA validation of SRS for Positioning transmission and CG-SDT in RRC\_INACTIVE

Upon request from lower layer for pathloss reference derivation for TA validation for SRS for Positioning transmission or CG-SDT in RRC\_INACTIVE, the UE shall:

- 1> acquire *SIB2*, if stored version is invalid;
- 1> if *nrofSS-BlocksToAverage* or *absThreshSS-BlocksConsolidation* is not present or if *absThreshSS-BlocksConsolidation* is present and the highest beam measurement quantity value is below or equal to *absThreshSS-BlocksConsolidation*:
  - 2> derive the downlink pathloss reference RSRP for TA validation as the highest beam measurement quantity value, where each beam measurement quantity is described in TS 38.215 [24];
- 1> else:
  - 2> derive the downlink pathloss reference RSRP for TA validation as the linear average of the power values of up to *nrofSS-BlocksToAverage* of the highest beam measurement quantity values above *absThreshSS-BlocksConsolidation*, where each beam measurement quantity is described in TS 38.215 [24].

NOTE: If the UE is configured with multiple SSB configurations, the downlink pathloss reference RSRP for TA validation is derived from the SSB configured by *SIB1*.

## 5.8 Sidelink

### 5.8.1 General

NR sidelink communication consists of unicast, groupcast and broadcast. For unicast, the PC5-RRC connection is a logical connection between a pair of a Source Layer-2 ID and a Destination Layer-2 ID in the AS. The PC5-RRC signalling, as specified in clause 5.8.9, can be initiated after its corresponding PC5 unicast link establishment (TS 23.287 [55]). The PC5-RRC connection and the corresponding sidelink SRBs and sidelink DRB(s) are released when the PC5 unicast link is released as indicated by upper layers.

For each PC5-RRC connection of unicast, one sidelink SRB (i.e. SL-SRB0) is used to transmit the PC5-S message(s) before the PC5-S security has been established. One sidelink SRB (i.e. SL-SRB1) is used to transmit the PC5-S messages to establish the PC5-S security. One sidelink SRB (i.e. SL-SRB2) is used to transmit the PC5-S messages after the PC5-S security has been established, which is protected. One sidelink SRB (i.e. SL-SRB3) is used to transmit the PC5-RRC signalling, which is protected and only sent after the PC5-S security has been established. One sidelink SRB (i.e. SL-SRB4) is used to transmit/receive the NR sidelink discovery messages.

For unicast of NR sidelink communication, AS security comprises of integrity protection of PC5 signalling (SL-SRB1, SL-SRB2 and SL-SRB3) and user data (SL-DRBs), and it further comprises of ciphering of PC5 signaling (SL-SRB1 only for the Direct Link Security Mode Complete message as specified in TS 24.587 [57] for V2X service or TS 24.554 [72] for Proximity-services, SL-SRB2 and SL-SRB3) and user data (SL-DRBs). The ciphering and integrity protection algorithms and parameters for a PC5 unicast link are exchanged by PC5-S messages in the upper layers as specified in TS 33.536 [60], and applied to the corresponding PC5-RRC connection in the AS. Once AS security is activated for a PC5 unicast link in the upper layers as specified in TS 33.536 [60], all messages on SL-SRB2 and SL-SRB3 and/or user data on SL-DRBs of the corresponding PC5-RRC connection are integrity protected and/or ciphered by the PDCP.

For unicast of NR sidelink communication, if the change of the key is indicated by the upper layers as specified in TS 24.587 [57] or TS 24.554 [72], UE re-establishes the PDCP entity of the SL-SRB1, SL-SRB2, SL-SRB3 and SL-DRBs on the corresponding PC5-RRC connection.

NOTE 1: In case the configurations for NR sidelink communication are acquired via the E-UTRA, the configurations for NR sidelink communication in *SIB12* and *sl-ConfigDedicatedNR* within *RRCReconfiguration* used in clause 5.8 are provided by the configurations in *SystemInformationBlockType28* and *sl-ConfigDedicatedForNR* within *RRCConnectionReconfiguration* as specified in TS 36.331 [10], respectively.

NOTE 2: In this release, there is one-to-one correspondence between the PC5-RRC connection and the PC5 unicast link as specified in TS 38.300[2].

NOTE 3: All SL-DRBs related to the same PC5-RRC connection have the same activation/deactivation setting for ciphering and the same activation/deactivation setting for integrity protection as specified in TS 33.536 [60].

NOTE 4: When integrity check failure concerning SL-SRB1 for a specific destination is detected, the UE sends an indication to the upper layers [57].

NOTE 5: The selection of NULL algorithms means that the PC5 messages are considered protected for the purposes of being allowed to be sent or received.

### 5.8.2 Conditions for NR sidelink communication/discovery operation

The UE shall perform NR sidelink communication/discovery operation only if the conditions defined in this clause are met:

- 1> if the UE's serving cell is suitable (RRC\_IDLE or RRC\_INACTIVE or RRC\_CONNECTED); and if either the selected cell on the frequency used for NR sidelink communication/discovery operation belongs to the registered or equivalent PLMN as specified in TS 24.587 [57] or TS 24.554 [72] or the UE is out of coverage on the frequency used for NR sidelink communication/discovery operation as defined in TS 38.304 [20] and TS 36.304 [27]; or
- 1> if the UE's serving cell (RRC\_IDLE or RRC\_CONNECTED) fulfils the conditions to support NR sidelink communication/discovery in limited service state as specified in TS 23.287 [55]; and if either the serving cell is

on the frequency used for NR sidelink communication/discovery operation or the UE is out of coverage on the frequency used for NR sidelink communication/discovery operation as defined in TS 38.304 [20] and TS 36.304 [27]; or

1> if the UE has no serving cell (RRC\_IDLE).

### 5.8.3 Sidelink UE information for NR sidelink communication/discovery

#### 5.8.3.1 General

**Figure 5.8.3.1-1: Sidelink UE information for NR sidelink communication/discovery**

The purpose of this procedure is to inform the network that the UE:

- is interested or no longer interested to receive or transmit NR sidelink communication/discovery,
- is requesting assignment or release of transmission resource for NR sidelink communication/discovery,
- is reporting QoS parameters and QoS profile(s) related to NR sidelink communication,
- is reporting that a sidelink radio link failure or sidelink RRC reconfiguration failure has been detected,
- is reporting the sidelink UE capability information of the associated peer UE for unicast communication,
- is reporting the RLC mode information of the sidelink data radio bearer(s) received from the associated peer UE for unicast communication,
- is reporting the accepted sidelink DRX configuration received from the associated peer UE for NR sidelink unicast reception,
- is reporting the sidelink DRX assistance information received from the associated peer UE for NR sidelink unicast transmission, when the UE is configured with *sl-ScheduledConfig*,
- is reporting, for NR sidelink groupcast transmission, the sidelink DRX on/off indication for the associated Destination Layer-2 ID, when the UE is configured with *sl-ScheduledConfig*,
- is reporting, for NR sidelink groupcast or broadcast reception, the Destination Layer-2 ID and QoS profile(s) associated with its interested services to which sidelink DRX is applied,
- is reporting DRX configuration reject information from its associated peer UE for NR sidelink unicast transmission, when the UE is configured with *sl-ScheduledConfig*,
- is reporting parameters related to U2N relay operation.

#### 5.8.3.2 Initiation

A UE capable of NR sidelink communication or NR sidelink discovery or NR sidelink U2N relay operation that is in RRC\_CONNECTED may initiate the procedure to indicate it is (interested in) receiving or transmitting NR sidelink communication or NR sidelink discovery or NR sidelink U2N relay operation in several cases including upon successful connection establishment or resuming, upon change of interest, upon changing QoS profile(s), upon receiving *UECapabilityInformationSidelink* from the associated peer UE, upon RLC mode information updated from the associated peer UE or upon change to a PCell providing *SIB12* including *sl-ConfigCommonNR*. A UE capable of NR sidelink communication may initiate the procedure to request assignment of dedicated sidelink DRB configuration

and transmission resources for NR sidelink communication transmission. A UE capable of NR sidelink communication may initiate the procedure to report to the network that a sidelink radio link failure or sidelink RRC reconfiguration failure has been declared. A UE capable of NR sidelink discovery may initiate the procedure to request assignment of dedicated resources for NR sidelink discovery transmission or NR sidelink discovery reception. A UE capable of U2N relay operation may initiate the procedure to report/update parameters for acting as U2N Relay UE or U2N Remote UE (including L2 U2N Remote UE's source L2 ID).

A UE capable of NR sidelink operation that is in RRC\_CONNECTED may initiate the procedure to report the sidelink DRX configuration received from the associated peer UE for NR sidelink unicast reception, upon accepting the sidelink DRX configuration from the associated peer UE. A UE capable of NR sidelink communication that is configured with *sl-ScheduledConfig* and is performing sidelink unicast transmission may initiate the procedure to report the sidelink DRX assistance information or the sidelink DRX configuration reject information received from the associated peer UE, upon receiving either of them from the associated peer UE. A UE capable of NR sidelink communication that is configured with *sl-ScheduledConfig* and is performing sidelink groupcast transmission may initiate the procedure to report the sidelink DRX on/off indication for the associated Destination Layer-2 ID.

A UE capable of NR sidelink operation that is in RRC\_CONNECTED may initiate the procedure to report the Destination Layer-2 ID and QoS profile(s) associated with its interested service(s) that sidelink DRX is applied, for NR sidelink groupcast or broadcast reception.

Upon initiating this procedure, the UE shall:

- 1> if *SIB12* including *sl-ConfigCommonNR* is provided by the PCell:
  - 2> ensure having a valid version of *SIB12* for the PCell;
  - 2> if configured by upper layers to receive NR sidelink communication on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell:
    - 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering RRC\_CONNECTED state; or
    - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR*; or
    - 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-RxInterestedFreqList*; or if the frequency configured by upper layers to receive NR sidelink communication on has changed since the last transmission of the *SidelinkUEInformationNR* message:
      - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink communication reception frequency of interest in accordance with 5.8.3.3;
  - 2> else:
    - 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-RxInterestedFreqList*:
      - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it is no longer interested in NR sidelink communication reception in accordance with 5.8.3.3;
    - 2> if configured by upper layers to transmit non-relay NR sidelink communication on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell:
      - 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering RRC\_CONNECTED state; or
      - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR*; or
      - 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-TxResourceReqList*; or if the information carried by the *sl-TxResourceReqList* has changed since the last transmission of the *SidelinkUEInformationNR* message:
        - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink communication transmission resources required by the UE in accordance with 5.8.3.3;
    - 2> else:

- 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-TxResourceReqList*:
  - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it no longer requires NR sidelink communication transmission resources in accordance with 5.8.3.3;
- 2> if configured by upper layer to receive NR sidelink non-relay discovery messages on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-NonRelayDiscovery*:
  - 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering *RRC\_CONNECTED* state; or
  - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR* or connected to a PCell providing *SIB12* but not including *sl-NonRelayDiscovery*; or
  - 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-RxInterestedFreqListDisc*; or if the frequency configured by upper layers to receive NR sidelink non-relay discovery messages on has changed since the last transmission of the *SidelinkUEInformationNR* message:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink non-relay discovery reception frequency of interest in accordance with 5.8.3.3;
- 2> else:
  - 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-RxInterestedFreqListDisc*:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it is no longer interested in NR sidelink non-relay discovery messages reception in accordance with 5.8.3.3;
  - 2> if configured by upper layer to receive NR sidelink L2 U2N relay discovery messages on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-L2U2N-Relay*; or if configured by upper layer to receive NR sidelink L3 U2N relay discovery messages on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-L3U2N-RelayDiscovery*:
    - 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering *RRC\_CONNECTED* state; or
    - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR*; or connected to a PCell providing *SIB12* but not including *sl-L2U2N-Relay* in case of L2 U2N relay operation; or connected to a PCell providing *SIB12* but not including *sl-L3U2N-RelayDiscovery* in case of L3 U2N relay operation; or
    - 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-RxInterestedFreqListDisc*; or if the frequency configured by upper layers to receive NR sidelink relay discovery messages on has changed since the last transmission of the *SidelinkUEInformationNR* message:
      - 4> if the UE is capable of U2N Relay UE, and if *SIB12* includes *sl-RelayUE-ConfigCommon*; or
      - 4> if the UE is selecting a U2N Relay UE / has a selected U2N Relay UE, and if *SIB12* includes *sl-RemoteUE-ConfigCommon*:
        - 5> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink relay discovery reception frequency of interest in accordance with 5.8.3.3;
- 2> else:
  - 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-RxInterestedFreqListDisc*:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it is no longer interested in NR sidelink relay discovery messages reception in accordance with 5.8.3.3;
  - 2> if configured by upper layer to transmit NR sidelink non-relay discovery messages on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-NonRelayDiscovery*:

- 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering RRC\_CONNECTED state; or
  - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR* or connected to a PCell providing *SIB12* but not including *sl-NonRelayDiscovery*; or
  - 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-TxResourceReqListDisc*; or if the information carried by the *sl-TxResourceReqListDisc* has changed since the last transmission of the *SidelinkUEInformationNR* message:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink non-relay discovery messages resources required by the UE in accordance with 5.8.3.3;
- 2> else:
- 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-TxResourceReqListDisc*:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it no longer requires NR sidelink non-relay discovery messages resources in accordance with 5.8.3.3;
  - 2> if configured by upper layer to transmit NR sidelink L2 U2N relay discovery messages on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-L2U2N-Relay*; or if configured by upper layer to transmit NR sidelink L3 U2N relay discovery messages on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-L3U2N-RelayDiscovery*:
    - 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering RRC\_CONNECTED state; or
    - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR*; or connected to a PCell providing *SIB12* but not including *sl-L2U2N-Relay* in case of L2 U2N relay operation; or connected to a PCell providing *SIB12* but not including *sl-L3U2N-RelayDiscovery* in case of L3 U2N relay operation; or
    - 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-TxResourceReqListDisc*; or if the information carried by the *sl-TxResourceReqListDisc* has changed since the last transmission of the *SidelinkUEInformationNR* message:
      - 4> if the UE is capable of U2N Relay UE, and if *SIB12* includes *sl-RelayUE-ConfigCommon*, and if the U2N Relay UE threshold conditions as specified in 5.8.14.2 are met; or
      - 4> if the UE is selecting a U2N Relay UE / has a selected U2N Relay UE/ configured with measurement object associated to L2 U2N Relay UEs, and if *SIB12* includes *sl-RemoteUE-ConfigCommon*, and if the U2N Remote UE threshold conditions as specified in 5.8.15.2 are met:
        - 5> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink relay discovery messages resources required by the UE in accordance with 5.8.3.3;
- 2> else:
- 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-TxResourceReqListDisc*:
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it no longer requires NR sidelink relay discovery messages resources in accordance with 5.8.3.3;
  - 2> if configured by upper layer to transmit NR sidelink L2 U2N relay communication on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-L2U2N-Relay*; or if configured by upper layer to transmit NR sidelink L3 U2N relay communication on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell including *sl-L3U2N-RelayDiscovery*:
    - 3> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering RRC\_CONNECTED state; or
    - 3> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-ConfigCommonNR*; or connected to a PCell providing *SIB12* but

not including *sl-L2U2N-Relay* in case of L2 U2N relay operation; or connected to a PCell providing *SIB12* but not including *sl-L3U2N-RelayDiscovery* in case of L3 U2N relay operation; or

- 3> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-TxResourceReqL2U2N-Relay*; or if the information carried by the *sl-TxResourceReqL2U2N-Relay* has changed since the last transmission of the *SidelinkUEInformationNR* message; or if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-TxResourceReqL3U2N-Relay*; or if the information carried by the *sl-TxResourceReqL3U2N-Relay* has changed since the last transmission of the *SidelinkUEInformationNR* message; or
- 3> if configured by upper layers not to transmit either NR sidelink L2 U2N relay communication or NR sidelink L3 U2N relay communication, and if the last transmission of the *SidelinkUEInformationNR* message includes both *sl-TxResourceReqL2U2N-Relay* and *sl-TxResourceReqL3U2N-Relay*:
- 4> if the UE is capable of U2N Relay UE, and if *SIB12* includes *sl-RelayUE-ConfigCommon*, and if the U2N Relay UE threshold conditions as specified in 5.8.14.2 are met; or
- 4> if the UE is selecting a U2N Relay UE / has a selected U2N Relay UE, and if *SIB12* includes *sl-RemoteUE-ConfigCommon*, and if the U2N Remote UE threshold conditions as specified in 5.8.15.2 are met:
- 5> initiate transmission of the *SidelinkUEInformationNR* message to indicate the NR sidelink relay communication transmission resources required by the UE in accordance with 5.8.3.3;
- 2> else:
  - 3> if the last transmission of the *SidelinkUEInformationNR* message included *sl-TxResourceReqL2U2N-Relay* or *sl-TxResourceReqL3U2N-Relay*:
  - 4> initiate transmission of the *SidelinkUEInformationNR* message to indicate it no longer requires NR sidelink relay communication transmission resources in accordance with 5.8.3.3;
- 2> if configured by upper layers to perform NR sidelink reception on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell and if *sl-DRX-ConfigCommonGC-BC* is included in *SIB12-IEs*:
- 3> if the UE received a sidelink DRX configuration in the *RRCReconfigurationSidelink* message for NR sidelink unicast reception from the associated peer UE and the UE accepted the sidelink DRX configuration:
  - 4> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering *RRC\_CONNECTED* state; or
  - 4> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-DRX-ConfigCommonGC-BC*; or
  - 4> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-RxDRX-ReportList*; or if the information carried by *sl-RxDRX-ReportList* has changed since the last transmission of the *SidelinkUEInformationNR* message:
  - 5> initiate transmission of the *SidelinkUEInformationNR* message to report the sidelink DRX configuration in accordance with 5.8.3.3;
- 3> else:
  - 4> if the last transmission of the *SidelinkUEInformationNR* message included *sl-RxDRX-ReportList*:
  - 5> initiate transmission of the *SidelinkUEInformationNR* message to indicate the sidelink DRX configuration is no longer used in accordance with 5.8.3.3;
- 3> if the UE is performing NR sidelink groupcast or broadcast reception and is interested in a service that sidelink DRX is applied:
  - 4> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering *RRC\_CONNECTED* state; or

- 4> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-DRX-ConfigCommonGC-BC*; or
- 4> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-RxInterestedGC-BC-DestList*; or if the information carried by *sl-RxInterestedGC-BC-DestList* has changed since the last transmission of the *SidelinkUEInformationNR* message:
  - 5> initiate transmission of the *SidelinkUEInformationNR* message to report the Destination Layer-2 ID and QoS profile(s) associated with the service(s) in accordance with 5.8.3.3;
- 3> else:
  - 4> if the last transmission of the *SidelinkUEInformationNR* message included *sl-RxInterestedGC-BC-DestList*:
    - 5> initiate transmission of the *SidelinkUEInformationNR* message to indicate it is no longer interested in the service that sidelink DRX is applied in accordance with 5.8.3.3;
- 2> if configured by upper layers to perform NR sidelink transmission on the frequency included in *sl-FreqInfoList* in *SIB12* of the PCell and if *sl-DRX-ConfigCommonGC-BC* is included in *SIB12-IEs* and if the UE is configured with *sl-ScheduledConfig*:
- 3> if the UE received a sidelink DRX assistance information or a sidelink DRX configuration reject information from the associated peer UE for NR sidelink unicast transmission:
  - 4> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering *RRC\_CONNECTED* state; or
  - 4> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-DRX-ConfigCommonGC-BC*; or
  - 4> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-DRX-InfoFromRxList* or *sl-FailureList*; or if the information carried by *sl-DRX-InfoFromRxList* or *sl-FailureList* has changed since the last transmission of the *SidelinkUEInformationNR* message:
    - 5> initiate transmission of the *SidelinkUEInformationNR* message to report the sidelink DRX assistance information or the sidelink DRX configuration reject information in accordance with 5.8.3.3;

NOTE: After including the SL-DRX reject information in *sl-FailureList* in the last transmission of the *SidelinkUEInformationNR* message, it is up to UE implementation to consider another sidelink DRX rejection of a new SL DRX configuration from the same associated peer UE as "change" of *sl-FailureList*.

- 3> if the UE is performing NR sidelink groupcast transmission:
  - 4> if the UE did not transmit a *SidelinkUEInformationNR* message since last entering *RRC\_CONNECTED* state; or
  - 4> if since the last time the UE transmitted a *SidelinkUEInformationNR* message the UE connected to a PCell not providing *SIB12* including *sl-DRX-ConfigCommonGC-BC*; or
  - 4> if the last transmission of the *SidelinkUEInformationNR* message did not include *sl-DRX-Indication*; or if the information carried by *sl-DRX-Indication* has changed since the last transmission of the *SidelinkUEInformationNR* message:
    - 5> initiate transmission of the *SidelinkUEInformationNR* message to report sidelink DRX on/off indication for the corresponding destination in accordance with 5.8.3.3;

### 5.8.3.3 Actions related to transmission of *SidelinkUEInformationNR* message

The UE shall set the contents of the *SidelinkUEInformationNR* message as follows and shall include all concerned information, irrespective of what triggered the procedure:

- 1> if the UE initiates the procedure to indicate it is (no more) interested to receive NR sidelink communication; or

- 1> if the UE initiates the procedure to request (configuration/ release) of NR sidelink communication transmission resources or to report to the network that a sidelink radio link failure or sidelink RRC reconfiguration failure has been declared; or
- 1> if the UE initiates the procedure to report to the network the sidelink DRX configuration for NR sidelink unicast reception; or
- 1> if the UE initiates the procedure to report to the network the sidelink DRX assistance information or the sidelink DRX configuration reject information for NR sidelink unicast transmission; or
- 1> if the UE initiates the procedure to report to the network the Destination Layer-2 ID and QoS profile(s) associated with its interested service(s) that sidelink DRX is applied for NR sidelink groupcast or broadcast reception; or
- 1> if the UE initiates the procedure to report to the network the Destination Layer-2 ID and the sidelink DRX on/off indication for the corresponding destination for NR sidelink groupcast transmission; or
- 1> if the UE initiates the procedure to indicate it is (no more) interested to receive NR sidelink discovery messages; or
- 1> if the UE initiates the procedure to request (configuration/ release) of NR sidelink discovery messages transmission resources; or
- 1> if the UE initiates the procedure to request (configuration/ release) of NR sidelink U2N relay communication transmission resources or report other parameters related to U2N relay operation:
  - 2> if *SIB12* including *sl-ConfigCommonNR* is provided by the PCell:
    - 3> if configured by upper layers to receive NR sidelink communication:
      - 4> include *sl-RxInterestedFreqList* and set it to the frequency for NR sidelink communication reception;
    - 3> if configured by upper layers to transmit non-relay NR sidelink communication and/or to transmit NR sidelink relay communication:
      - 4> include *sl-TxResourceReqList* and set its fields (if needed) as follows for each destination for which it requests network to assign NR sidelink communication resource:
        - 5> set *sl-DestinationIdentity* to the destination identity configured by upper layer for NR sidelink communication transmission;
        - 5> set *sl-CastType* to the cast type of the associated destination identity configured by the upper layer for the NR sidelink communication transmission;
        - 5> set *sl-RLC-ModeIndicationList* to include the RLC mode(s) and optionally QoS profile(s) of the sidelink QoS flow(s) of the associated RLC mode(s), if the associated bi-directional sidelink DRB(s) have been established due to the configuration by *RRCReconfigurationSidelink*;
        - 5> set *sl-QoS-InfoList* to include QoS profile(s) of the sidelink QoS flow(s) of the associated destination configured by the upper layer for the NR sidelink communication transmission;
        - 5> set *sl-TxInterestedFreqList* to indicate the frequency of the associated destination for NR sidelink communication transmission;
        - 5> set *sl-TypeTxSyncList* to the current synchronization reference type used on the associated *sl-TxInterestedFreqList* for NR sidelink communication transmission;
        - 5> set *sl-CapabilityInformationSidelink* to include *UECapabilityInformationSidelink* message, if any, received from the associated peer UE;
      - 4> if a sidelink radio link failure or a sidelink RRC reconfiguration failure has been declared, according to clauses 5.8.9.3 and 5.8.9.1.8, respectively;
        - 5> include *sl-FailureList* and set its fields as follows for each destination for which it reports the NR sidelink communication failure:

- 6> set *sl-DestinationIdentity* to the destination identity configured by upper layer for NR sidelink communication transmission;
- 6> if the sidelink RLF is detected as specified in clause 5.8.9.3:
  - 7> set *sl-Failure* as *rlf* for the associated destination for the NR sidelink communication transmission;
- 6> else if *RRCReconfigurationFailureSidelink* is received:
  - 7> set *sl-Failure* as *configFailure* for the associated destination for the NR sidelink communication transmission;
- 3> if *SIB12* includes *sl-NonRelayDiscovery* and if configured by upper layers to receive NR sidelink non-relay discovery messages, or if *SIB12* includes *sl-L2U2N-Relay* and if configured by upper layers to receive NR sidelink L2 U2N relay discovery messages, or if *SIB12* includes *sl-L3U2N-RelayDiscovery* and if configured by upper layers to receive NR sidelink L3 U2N relay discovery messages:
  - 4> include *sl-RxInterestedFreqListDisc* and set it to the frequency for NR sidelink discovery messages reception;
- 3> if *SIB12* includes *sl-L2U2N-Relay* and the UE is capable of L2 U2N remote UE:
  - 4> include *sl-SourceIdentityRemoteUE* and set it to the source identity configured by upper layer for NR sidelink L2 U2N relay communication transmission;
- 3> if *SIB12* includes *sl-NonRelayDiscovery* and if configured by upper layers to transmit NR sidelink non-relay discovery messages, or if *SIB12* includes *sl-L2U2N-Relay* and if configured by upper layers to transmit NR sidelink L2 U2N relay discovery messages, or if *SIB12* includes *sl-L3U2N-RelayDiscovery* and if configured by upper layers to transmit NR sidelink L3 U2N relay discovery messages:
  - 4> include *sl-TxResourceReqListDisc* and set its fields (if needed) as follows for each destination for which it requests network to assign NR sidelink discovery messages resource:
    - 5> set *sl-DestinationIdentityDisc* to the destination identity configured by upper layer for NR sidelink discovery messages transmission;
    - 5> if the UE is acting as L2 U2N Relay UE:
      - 6> set *sl-SourceIdentityRelayUE* to the source identity configured by upper layer for NR sidelink L2 U2N relay discovery messages transmission;
    - 5> set *sl-CastTypeDisc* to the cast type of the associated destination identity for the NR sidelink discovery messages transmission;
    - 5> set *sl-TxInterestedFreqListDisc* to indicate the frequency of the associated destination for NR sidelink discovery messages transmission;
    - 5> set *sl-TypeTxSyncListDisc* to the current synchronization reference type used on the associated *sl-TxInterestedFreqListDisc* for NR sidelink discovery messages transmission;
    - 5> set *sl-DiscoveryType* to the current discovery type of the associated destination identity configured by the upper layer for NR sidelink discovery messages transmission;
  - 3> if *SIB12* includes *sl-L2U2N-Relay* and if configured by upper layers to transmit NR sidelink L2 U2N relay communication and the UE is acting as L2 U2N Relay UE:
    - 4> include *sl-TxResourceReqL2U2N-Relay* in *sl-TxResourceReqListCommRelay* and set its fields (if needed) as follows for each destination for which it requests network to assign NR sidelink L2 U2N relay communication resource:
      - 5> set *sl-DestinationIdentityL2U2N* to the destination identity configured by upper layer for NR sidelink L2 U2N relay communication transmission;
      - 5> set *sl-TxInterestedFreqListL2U2N* to indicate the frequency of the associated destination for NR sidelink L2 U2N relay communication transmission;

- 5> set *sl-TypeTxSyncListL2U2N* to the current synchronization reference type used on the associated *sl-TxInterestedFreqListL2U2N* for NR sidelink L2 U2N relay communication transmission;
- 5> set *sl-LocalID-Request* to request local ID for L2 U2N Remote UE transiting to RRC\_CONNECTED or in RRC\_CONNECTED state;
- 5> set *sl-PagingIdentityRemoteUE* to the paging UE ID received from peer L2 U2N Remote UE, if it is not released as in 5.8.9.8.3;
- 5> set *sl-CapabilityInformationSidelink* to include *UECapabilityInformationSidelink* message, if any, received from peer UE;
- 4> include *ue-Type* and set it to *relayUE*;
- 3> if *SIB12* includes *sl-L2U2N-Relay* and if configured by upper layers to transmit NR sidelink L2 U2N relay communication and the UE has a selected L2 U2N Relay UE:
  - 4> include *sl-TxResourceReqL2U2N-Relay* in *sl-TxResourceReqListCommRelay* and set its fields (if needed) as follows to request network to assign NR sidelink L2 U2N relay communication resource:
    - 5> set *sl-TxInterestedFreqListL2U2N* to indicate the frequency of the associated destination for NR sidelink L2 U2N relay communication transmission;
    - 5> set *sl-TypeTxSyncListL2U2N* to the current synchronization reference type used on the associated *sl-TxInterestedFreqListL2U2N* for NR sidelink L2 U2N relay communication transmission;
    - 5> set *sl-CapabilityInformationSidelink* to include *UECapabilityInformationSidelink* message, if any, received from peer UE;
  - 4> include *ue-Type* and set it to *remoteUE*;
- 3> if *SIB12* includes *sl-L3U2N-RelayDiscovery* and if configured by upper layers to transmit NR sidelink L3 U2N relay communication:
  - 4> include *sl-TxResourceReqL3U2N-Relay* in *sl-TxResourceReqListCommRelay* and set its fields (if needed) as follows for each destination for which it requests network to assign NR sidelink L3 U2N relay communication resource:
    - 5> set *sl-DestinationIdentity* to the destination identity configured by upper layer for NR sidelink L3 U2N relay communication transmission;
    - 5> set *sl-CastType* to the cast type of the associated destination identity configured by the upper layer for the NR sidelink L3 U2N relay communication transmission;
    - 5> set *sl-RLC-ModeIndicationList* to include the RLC mode(s) and optionally QoS profile(s) of the sidelink QoS flow(s) of the associated RLC mode(s), if the associated bi-directional sidelink DRB(s) have been established due to the configuration by *RRCReconfigurationSidelink*;
    - 5> set *sl-QoS-InfoList* to include QoS profile(s) of the sidelink QoS flow(s) of the associated destination configured by the upper layer for the NR sidelink L3 U2N relay communication transmission;
    - 5> set *sl-TxInterestedFreqList* to indicate the frequency of the associated destination for NR sidelink L3 U2N relay communication transmission;
    - 5> set *sl-TypeTxSyncList* to the current synchronization reference type used on the associated *sl-TxInterestedFreqList* for NR sidelink L3 U2N relay communication transmission;
    - 5> set *sl-CapabilityInformationSidelink* to include *UECapabilityInformationSidelink* message, if any, received from peer UE;
  - 4> include *ue-Type* and set it to *relayUE* if the UE is acting as NR sidelink L3 U2N Relay UE or to *remoteUE* otherwise;
- 3> if *sl-DRX-ConfigCommonGC-BC* is included in *SIB12-IEs*:

- 4> if configured by upper layers to perform NR sidelink reception:
  - 5> include *sl-RxDRX-ReportList* and set its fields (if needed) as follows for each destination for which it reports to network:
    - 6> set *sl-DRX-ConfigFromTx* to include the accepted sidelink DRX configuration of the associated destination for NR sidelink unicast communication, if received from the associated peer UE;
  - 5> include *sl-RxInterestedGC-BC-DestList* and set its fields (if needed) as follows for each Destination Layer-2 ID for which it reports to network:
    - 6> set *sl-RxInterestedQoS-InfoList* to include the QoS profile of its interested service(s) that sidelink DRX is applied for the associated destination for NR sidelink groupcast or broadcast reception;

NOTE 1: It is up to UE implementation to set the QoS profile in *sl-RxInterestedQoS-InfoList* for reception of NR sidelink discovery message or ProSe Direct Link Establishment Request message as described in TS 24.554 [72], or for reception of Direct Link Establishment Request message as described in TS 24.587 [57].

- 6> set *sl-DestinationIdentity* to the associated destination identity configured by upper layer for NR sidelink groupcast or broadcast reception;
  - 4> if configured by upper layers to perform NR sidelink transmission and configured with *sl-ScheduledConfig*:
    - 5> include *sl-TxResourceReqList* and/or *sl-TxResourceReqListCommRelay* and/or *sl-FailureList* and set its fields (if needed) as follows for each destination for which it reports to network:
      - 6> set *sl-DRX-InfoFromRxList* to include the sidelink DRX assistance information of the associated destination, if any, received from the associated peer UE;
      - 6> if the *RRCReconfigurationCompleteSidelink* message includes the *sl-DRX-ConfigReject*:
        - 7> set *sl-Failure* as *drxReject-v1710* for the associated destination for the NR sidelink communication transmission;
      - 6> set *sl-DRX-Indication* to include the sidelink DRX on/off indication for the associated destination for NR sidelink groupcast transmission;
  - 1> if the UE initiates the procedure while connected to an E-UTRA PCell:
    - 2> submit the *SidelinkUEInformationNR* to lower layers via SRB1, embedded in E-UTRA RRC message *ULInformationTransferIRAT* as specified in TS 36.331 [10], clause 5.6.28;
  - 1> else:
    - 2> submit the *SidelinkUEInformationNR* message to lower layers for transmission.
- NOTE 2: When multiple lists are reported in *SidelinkUEInformationNR*, a UE can report up to *maxNrofSL-Dest-r16* SL destinations in *sl-TxResourceReqList*, *sl-TxResourceReqListDisc* and *sl-TxResourceReqListCommRelay* in total.

## 5.8.4 Void

## 5.8.5 Sidelink synchronisation information transmission for NR sidelink communication/discovery

### 5.8.5.1 General

**Figure 5.8.5.1-1: Synchronisation information transmission for NR sidelink communication/discovery, in (partial) coverage**

**Figure 5.8.5.1-2: Synchronisation information transmission for NR sidelink communication/discovery, out of coverage**

The purpose of this procedure is to provide synchronisation information to a UE. This procedure also applies to NR sidelink discovery.

### 5.8.5.2 Initiation

A UE capable of NR sidelink communication/discovery and SLSS/PSBCH transmission shall, when transmitting NR sidelink communication/discovery, and if the conditions for NR sidelink communication/discovery operation are met and when the following conditions are met:

- 1> if in coverage on the frequency used for NR sidelink communication/discovery, as defined in TS 38.304 [20]; and has selected GNSS or the cell as synchronization reference as defined in 5.8.6.3; or
- 1> if out of coverage on the frequency used for NR sidelink communication/discovery, and the frequency used to transmit NR sidelink communication/discovery is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-FreqInfoList* within *SIB12*; and has selected GNSS or the cell as synchronization reference as defined in 5.8.6.3:
- 2> if in *RRC\_CONNECTED*; and if *networkControlledSyncTx* is configured and set to *on*; or
- 2> if *networkControlledSyncTx* is not configured; and for the concerned frequency *syncTxThreshIC* is configured; and the RSRP measurement of the reference cell, selected as defined in 5.8.6.3, for NR sidelink communication/discovery transmission is below the value of *syncTxThreshIC*:

- 3> transmit sidelink SSB on the frequency used for NR sidelink communication/discovery in accordance with 5.8.5.3 and TS 38.211 [16], including the transmission of SLSS as specified in 5.8.5.3 and transmission of *MasterInformationBlockSidelink* as specified in 5.8.9.4.3;

1> else:

- 2> for the frequency used for NR sidelink communication/discovery, if *syncTxThreshOoC* is included in *SidelinkPreconfigNR*; and the UE is not directly synchronized to GNSS, and the UE has no selected SyncRef UE or the PSBCH-RSRP measurement result of the selected SyncRef UE is below the value of *syncTxThreshOoC*; or
- 2> for the frequency used for NR sidelink communication/discovery, if the UE selects GNSS as the synchronization reference source:
- 3> transmit sidelink SSB on the frequency used for NR sidelink communication/discovery in accordance with 5.8.5.3 and TS 38.211 [16], including the transmission of SLSS as specified in 5.8.5.3 and transmission of *MasterInformationBlockSidelink* as specified in 5.8.9.4.3;

### 5.8.5.3 Transmission of SLSS

The UE shall select the SLSSID and the slot in which to transmit SLSS as follows:

- 1> if triggered by NR sidelink communication/discovery and in coverage on the frequency used for NR sidelink communication/discovery, as defined in TS 38.304 [20]; or
- 1> if triggered by NR sidelink communication/discovery, and out of coverage on the frequency used for NR sidelink communication/discovery, and the concerned frequency is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-FreqInfoList* within *SIB12*:
- 2> if the UE has selected GNSS as synchronization reference in accordance with 5.8.6.2:
  - 3> select SLSSID 0;
  - 3> use *sl-SSB-TimeAllocation1* included in the entry of configured *sl-SyncConfigList* corresponding to the concerned frequency, that includes *txParameters* and *gnss-Sync*;
  - 3> select the slot(s) indicated by *sl-SSB-TimeAllocation1*;
- 2> if the UE has selected a cell as synchronization reference in accordance with 5.8.6.2:
  - 3> select the SLSSID included in the entry of configured *sl-SyncConfigList* corresponding to the concerned frequency, that includes *txParameters* and does not include *gnss-Sync*;
  - 3> select the slot(s) indicated by *sl-SSB-TimeAllocation1*;
- 1> else if triggered by NR sidelink communication/discovery and the UE has GNSS as the synchronization reference:
  - 2> select SLSSID 0;
  - 2> if *sl-SSB-TimeAllocation3* is configured for the frequency used in *SidelinkPreconfigNR*:
    - 3> select the slot(s) indicated by *sl-SSB-TimeAllocation3*;
- 2> else:
  - 3> select the slot(s) indicated by *sl-SSB-TimeAllocation1*;
- 1> else:
  - 2> select the synchronisation reference UE (i.e. SyncRef UE) as defined in 5.8.6;
  - 2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlockSidelink* message received from this UE is set to *true*; or

- 2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlockSidelink* message received from this UE is set to *false* while the SLSS from this UE is part of the set defined for out of coverage, see TS 38.211 [16]:
  - 3> select the same SLSSID as the SLSSID of the selected SyncRef UE;
  - 3> select the slot in which to transmit the SLSS according to the *sl-SSB-TimeAllocation1* or *sl-SSB-TimeAllocation2* included in the preconfigured sidelink parameters corresponding to the concerned frequency, such that the timing is different from the SLSS of the selected SyncRef UE;
- 2> else if the UE has a selected SyncRef UE and the SLSS from this UE was transmitted on the slot(s) indicated *sl-SSB-TimeAllocation3*, which is configured for the frequency used in *SidelinkPreconfigNR*:
  - 3> select SLSSID 337;
  - 3> select the slot(s) indicated by *sl-SSB-TimeAllocation2*;
- 2> else if the UE has a selected SyncRef UE:
  - 3> select the SLSSID from the set defined for out of coverage having an index that is 336 more than the index of the SLSSID of the selected SyncRef UE, see TS 38.211 [16];
  - 3> select the slot in which to transmit the SLSS according to *sl-SSB-TimeAllocation1* or *sl-SSB-TimeAllocation2* included in the preconfigured sidelink parameters corresponding to the concerned frequency, such that the timing is different from the SLSS of the selected SyncRef UE;
- 2> else (i.e. no SyncRef UE selected):
  - 3> if the UE has not randomly selected an SLSSID:
    - 4> randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage except SLSSID 336 and 337, see TS 38.211 [16];
    - 4> select the slot in which to transmit the SLSS according to the *sl-SSB-TimeAllocation1* or *sl-SSB-TimeAllocation2* (arbitrary selection between these) included in the preconfigured sidelink parameters in *SidelinkPreconfigNR* corresponding to the concerned frequency;

## 5.8.5a Sidelink synchronisation information transmission for V2X sidelink communication

### 5.8.5a.1 General

Figure 5.8.5a.1-1: Synchronisation information transmission for V2X sidelink communication, in (partial) coverage

**Figure 5.8.5a.1-2: Synchronisation information transmission for V2X sidelink communication, out of coverage**

The purpose of this procedure is to provide synchronisation information to a UE.

### 5.8.5a.2 Initiation

A UE capable of V2X sidelink communication initiates the transmission of SLSS and *MasterInformationBlock-SL-V2X* according to the conditions and the procedures specified for V2X sidelink communication in clause 5.10.7 of TS 36.331 [10].

NOTE 1: When applying the procedure in this clause, *SIB13* and *SIB14* correspond to *SystemInformationBlockType21* and *SystemInformationBlockType26* specified in TS 36.331 [10] respectively.

## 5.8.6 Sidelink synchronisation reference

### 5.8.6.1 General

The purpose of this procedure is to select a synchronisation reference and used when transmitting NR sidelink communication/discovery. This procedure also applies to NR sidelink discovery.

### 5.8.6.2 Selection and reselection of synchronisation reference

The UE shall:

- 1> if the frequency used for NR sidelink communication/discovery is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-ConfigCommonNR* within *SIB12*, and *sl-SyncPriority* is configured for the concerned frequency and set to *gnbEnb*:
- 2> select a cell as the synchronization reference source as defined in 5.8.6.3:

NOTE 1: When an out of coverage L2 U2N Remote UE receives *SIB12* with *sl-SyncPriority* set to *gnbEnb*, the L2 U2N Remote UE continues using the current synchronization source until higher priority synchronization source is found or the current synchronization source becomes unreliable.

- 1> else if the frequency used for NR sidelink communication/discovery is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-ConfigCommonNR* within *SIB12*, and *sl-SyncPriority* for the concerned frequency is not configured or is set to *gnss*, and GNSS is reliable in accordance with TS 38.101-1 [15] and TS 38.133 [14]:
- 2> select GNSS as the synchronization reference source;
- 1> else if the frequency used for NR sidelink communication/discovery is included in *SL-PreconfigurationNR*, and *sl-SyncPriority* in *SidelinkPreconfigNR* is set to *gnss* and GNSS is reliable in accordance with TS 38.101-1 [15] and TS 38.133 [14]:
- 2> select GNSS as the synchronization reference source;
- 1> else:

- 2> perform a full search (i.e. covering all subframes and all possible SLSSIDs) to detect candidate SLSS, in accordance with TS 38.133 [14]
- 2> when evaluating the one or more detected SLSSIDs, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured *sl-FilterCoefficient* in *SL-SyncConfig*, before using the PSBCH-RSRP measurement results;
- 2> if the UE has selected a SyncRef UE:
  - 3> if the PSBCH-RSRP of the strongest candidate SyncRef UE exceeds the minimum requirement TS 38.133 [14] by *sl-SyncRefMinHyst* and the strongest candidate SyncRef UE belongs to the same priority group as the current SyncRef UE and the PSBCH-RSRP of the strongest candidate SyncRef UE exceeds the PSBCH-RSRP of the current SyncRef UE by *syncRefDiffHyst*; or
  - 3> if the PSBCH-RSRP of the candidate SyncRef UE exceeds the minimum requirement TS 38.133 [14] by *sl-SyncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than the current SyncRef UE; or
  - 3> if GNSS becomes reliable in accordance with TS 38.101-1 [15] and TS 38.133 [14], and GNSS belongs to a higher priority group than the current SyncRef UE; or
  - 3> if a cell is detected and gNB/eNB (if *sl-NbAsSync* is set to *true*) belongs to a higher priority group than the current SyncRef UE; or
  - 3> if the PSBCH-RSRP of the current SyncRef UE is less than the minimum requirement defined in TS 38.133 [14]:
    - 4> consider no SyncRef UE to be selected;
- 2> if the UE has selected GNSS as the synchronization reference for NR sidelink communication/discovery:
  - 3> if the PSBCH-RSRP of the candidate SyncRef UE exceeds the minimum requirement defined in TS 38.133 [14] by *sl-SyncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than GNSS; or
  - 3> if GNSS becomes not reliable in accordance with TS 38.101-1 [15] and TS 38.133 [14]:
    - 4> consider GNSS not to be selected;
- 2> if the UE has selected cell as the synchronization reference for NR sidelink communication/discovery:
  - 3> if the PSBCH-RSRP of the candidate SyncRef UE exceeds the minimum requirement defined in TS 38.133 [14] by *sl-SyncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than gNB/eNB; or
  - 3> if the selected cell is not detected:
    - 4> consider the cell not to be selected;
- 2> if the UE has not selected any synchronization reference:
  - 3> if the UE detects one or more SLSSIDs for which the PSBCH-RSRP exceeds the minimum requirement defined in TS 38.133 [14] by *sl-SyncRefMinHyst* and for which the UE received the corresponding *MasterInformationBlockSidelink* message (candidate SyncRef UEs), or if the UE detects GNSS that is reliable in accordance with TS 38.101-1 [15] and TS 38.133 [14], or if the UE detects a cell, select a synchronization reference according to the following priority group order:
    - 4> if *sl-SyncPriority* corresponding to the concerned frequency is set to *gnbEnb*:
      - 5> UEs of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *true*, starting with the UE with the highest PSBCH-RSRP result (priority group 1);
      - 5> UE of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCH-RSRP result (priority group 2);

- 5> GNSS that is reliable in accordance with TS 38.101-1 [15] and TS 38.133 [14] (priority group 3);
  - 5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *true*, or of which SLSSID is 0 and SLSS is transmitted on slot(s) indicated by *sl-SSB-TimeAllocation3*, starting with the UE with the highest PSBCH-RSRP result (priority group 4);
  - 5> UEs of which SLSSID is 0 and SLSS is not transmitted on slot(s) indicated by *sl-SSB-TimeAllocation3*, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCH-RSRP result (priority group 5);
  - 5> UEs of which SLSSID is 337 and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCH-RSRP result (priority group 5);
  - 5> Other UEs, starting with the UE with the highest PSBCH-RSRP result (priority group 6);
- 4> if *sl-SyncPriority* corresponding to the concerned frequency is set to *gnss*, and *sl-NbAsSync* is set to *true*:
- 5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *true*, or of which SLSSID is 0 and SLSS is transmitted on slot(s) indicated by *sl-SSB-TimeAllocation3*, starting with the UE with the highest PSBCH-RSRP result (priority group 1);
  - 5> UEs of which SLSSID is 0 and SLSS is not transmitted on slot(s) indicated by *sl-SSB-TimeAllocation3*, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCHS-RSRP result (priority group 2);
  - 5> UEs of which SLSSID is 337 and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCH-RSRP result (priority group 2);
  - 5> the cell detected by the UE as defined in 5.8.6.3 (priority group 3);
  - 5> UEs of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *true*, starting with the UE with the highest PSBCH-RSRP result (priority group 4);
  - 5> UE of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCH-RSRP result (priority group 5);
  - 5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 6);
- 4> if *sl-SyncPriority* corresponding to the concerned frequency is set to *gnss*, and *sl-NbAsSync* is set to *false*:
- 5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *true*, or of which SLSSID is 0 and SLSS is transmitted on slot(s) indicated by *sl-SSB-TimeAllocation3*, starting with the UE with the highest PSBCH-RSRP result (priority group 1);
  - 5> UEs of which SLSSID is 0 and SLSS is not transmitted on slot(s) indicated by *sl-SSB-TimeAllocation3*, and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCHS-RSRP result (priority group 2);
  - 5> UEs of which SLSSID is 337 and *inCoverage*, included in the *MasterInformationBlockSidelink* message received from this UE, is set to *false*, starting with the UE with the highest PSBCH-RSRP result (priority group 2);
  - 5> Other UEs, starting with the UE with the highest PSBCH-RSRP result (priority group 3);

NOTE 2: How the UE achieves subframe boundary alignment between V2X sidelink communication and NR sidelink communication/discovery (if both are performed by the UE) is as specified in TS 38.213, clause 16.7.

### 5.8.6.3 Sidelink communication transmission reference cell selection

A UE capable of NR sidelink communication/discovery that is configured by upper layers to transmit NR sidelink communication/discovery shall:

- 1> for the frequency used to transmit NR sidelink communication/discovery, select a cell to be used as reference for synchronization in accordance with the following:
  - 2> if the frequency concerns the primary frequency:
    - 3> use the PCell or the serving cell as reference;
  - 2> else if the frequency concerns a secondary frequency:
    - 3> use the concerned SCell as reference;
  - 2> else if the UE is in coverage of the concerned frequency:
    - 3> use the DL frequency paired with the one used to transmit NR sidelink communication/discovery as reference;
  - 2> else (i.e., out of coverage on the concerned frequency):
    - 3> use the PCell or the serving cell as reference, if needed;

### 5.8.7 Sidelink communication reception

A UE capable of NR sidelink communication that is configured by upper layers to receive NR sidelink communication shall:

- 1> if the conditions for NR sidelink communication operation as defined in 5.8.2 are met:
  - 2> if the frequency used for NR sidelink communication is included in *sl-FreqInfoToAddModList* in *RRCReconfiguration* message or *sl-FreqInfoList* included in *SIB12*:
    - 3> if the UE is configured with *sl-RxPool* included in *RRCReconfiguration* message with *reconfigurationWithSync* (i.e. handover):
      - 4> configure lower layers to monitor sidelink control information and the corresponding data using the pool(s) of resources indicated by *sl-RxPool*;
    - 3> else if the cell chosen for NR sidelink communication provides *SIB12*:
      - 4> configure lower layers to monitor sidelink control information and the corresponding data using the pool(s) of resources indicated by *sl-RxPool* in *SIB12*;
  - 2> else:
    - 3> configure lower layers to monitor sidelink control information and the corresponding data using the pool(s) of resources that were preconfigured by *sl-RxPool* in *SL-PreconfigurationNR*, as defined in clause 9.3.

### 5.8.8 Sidelink communication transmission

A UE capable of NR sidelink communication that is configured by upper layers to transmit NR sidelink communication and has related data to be transmitted shall:

- 1> if the conditions for NR sidelink communication operation as defined in 5.8.2 are met:

- 2> if the frequency used for NR sidelink communication is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-ConfigCommonNR* within *SIB12*:
- 3> if the UE is in *RRC\_CONNECTED* and uses the frequency included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message:
  - 4> if the UE is configured with *sl-ScheduledConfig*:
    - 5> if T310 for MCG or T311 is running; and if *sl-TxPoolExceptional* is included in *sl-FreqInfoList* for the concerned frequency in *SIB12* or included in *sl-ConfigDedicatedNR* in *RRCReconfiguration*; or
    - 5> if T301 is running and the cell on which the UE initiated RRC connection re-establishment provides *SIB12* including *sl-TxPoolExceptional* for the concerned frequency; or
    - 5> if T304 for MCG is running and the UE is configured with *sl-TxPoolExceptional* included in *sl-ConfigDedicatedNR* for the concerned frequency in *RRCReconfiguration*:
      - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection using the pool of resources indicated by *sl-TxPoolExceptional* as defined in TS 38.321 [3];
    - 5> else:
      - 6> configure lower layers to perform the sidelink resource allocation mode 1 for NR sidelink communication;
    - 5> if T311 is running, configure the lower layers to release the resources indicated by *rrc-ConfiguredSidelinkGrant* (if any);
  - 4> if the UE is configured with *sl-UE-SelectedConfig*:
    - 5> if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-TxPoolSelectedNormal* for the concerned frequency included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* is not available in accordance with TS 38.214 [19];
      - 6> if *sl-TxPoolExceptional* for the concerned frequency is included in *RRCReconfiguration*; or
      - 6> if the PCell provides *SIB12* including *sl-TxPoolExceptional* in *sl-FreqInfoList* for the concerned frequency:
        - 7> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection using the pool of resources indicated by *sl-TxPoolExceptional* as defined in TS 38.321 [3];
    - 5> else, if the *sl-TxPoolSelectedNormal* for the concerned frequency is included in the *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
      - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* (as defined in TS 38.321 [3] and TS 38.214 [19]) using the pools of resources indicated by *sl-TxPoolSelectedNormal* for the concerned frequency;
  - 3> else:
    - 4> if the cell chosen for NR sidelink communication transmission provides *SIB12*:
      - 5> if *SIB12* includes *sl-TxPoolSelectedNormal* for the concerned frequency, and a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in the *sl-TxPoolSelectedNormal* is available in accordance with TS 38.214 [19] or random selection, if allowed by *sl-AllowedResourceSelectionConfig*, is selected:
      - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* using the pools of

resources indicated by *sl-TxPoolSelectedNormal* for the concerned frequency as defined in TS 38.321 [3];

5> else if *SIB12* includes *sl-TxPoolExceptional* for the concerned frequency:

- 6> from the moment the UE initiates RRC connection establishment or RRC connection resume, until receiving an *RRCReconfiguration* including *sl-ConfigDedicatedNR*, or receiving an *RRCRelease* or an *RRCReject*; or
- 6> if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-TxPoolSelectedNormal* for the concerned frequency in *SIB12* is not available in accordance with TS 38.214 [19];
- 7> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection (as defined in TS 38.321 [3]) using the pool of resources indicated by *sl-TxPoolExceptional* for the concerned frequency;

2> else:

- 3> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* (as defined in TS 38.321 [3] and TS 38.214 [19]) using the pools of resources indicated by *sl-TxPoolSelectedNormal* in *SidelinkPreconfigNR* for the concerned frequency.

NOTE 1: The UE continues to use resources configured in *rrc-ConfiguredSidelinkGrant* (while T310 is running) until it is released (i.e. until T310 has expired). The UE does not use sidelink configured grant type 2 resources while T310 is running.

NOTE 2: In case of RRC reconfiguration with sync, the UE uses resources configured in *rrc-ConfiguredSidelinkGrant* (while T304 on the MCG is running) if provided by the target cell.

NOTE 3: It is up to UE implementation to determine, in accordance with TS 38.321[3], which resource pool to use if multiple resource pools are configured, and which resource allocation scheme is used in the AS based on UE capability (for a UE in RRC\_IDLE/RRC\_INACTIVE) and the allowed resource schemes *sl-AllowedResourceSelectionConfig* in the resource pool configuration.

NOTE 4: In case that the network does not provide resource pools in *SIB12*, a UE which is out of coverage, will be unable to obtain sidelink resources to send the first UL RRC message.

If configured to perform sidelink resource allocation mode 2, the UE capable of NR sidelink communication that is configured by upper layers to transmit NR sidelink communication shall perform resource selection operation according to *sl-AllowedResourceSelectionConfig* on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SidelinkPreconfigNR*, *sl-TxPoolSelectedNormal* in *sl-ConfigDedicatedNR*, or *sl-TxPoolSelectedNormal* in *SIB12* for the concerned frequency, as configured above.

## 5.8.9 Sidelink RRC procedure

### 5.8.9.1 Sidelink RRC reconfiguration

#### 5.8.9.1.1 General

**Figure 5.8.9.1.1-1: Sidelink RRC reconfiguration, successful**

**Figure 5.8.9.1.1-2: Sidelink RRC reconfiguration, failure**

The purpose of this procedure is to modify a PC5-RRC connection, e.g. to establish/modify/release sidelink DRBs or PC5 Relay RLC channels, to (re-)configure NR sidelink measurement and reporting, to (re-)configure sidelink CSI reference signal resources, to (re)configure CSI reporting latency bound, to (re)configure sidelink DRX, and to (re-)configure the latency bound of SL Inter-UE coordination report.

The UE may initiate the sidelink RRC reconfiguration procedure and perform the operation in clause 5.8.9.1.2 on the corresponding PC5-RRC connection in following cases:

- the release of sidelink DRBs associated with the peer UE, as specified in clause 5.8.9.1a.1;
- the establishment of sidelink DRBs associated with the peer UE, as specified in clause 5.8.9.1a.2;
- the modification for the parameters included in *SLRB-Config* of sidelink DRBs associated with the peer UE, as specified in clause 5.8.9.1a.2;
- the release of PC5 Relay RLC channels for L2 U2N Relay UE and Remote UE, as specified in clause 5.8.9.7.1;
- the establishment of PC5 Relay RLC channels for L2 U2N Relay UE and Remote UE, as specified in clause 5.8.9.7.2;
- the modification for the parameters included in *SL-RLC-ChannelConfigPC5* of PC5 Relay RLC channels for L2 U2N Relay UE and Remote UE, as specified in clause 5.8.9.7.2;
- the (re-)configuration of the peer UE to perform NR sidelink measurement and report.
- the (re-)configuration of the sidelink CSI reference signal resources and CSI reporting latency bound;
- the (re-)configuration of the peer UE to perform sidelink DRX;
- the (re-)configuration of the latency bound of SL Inter-UE coordination report.

In RRC\_CONNECTED, the UE applies the NR sidelink communications parameters provided in *RRCReconfiguration* (if any). In RRC\_IDLE or RRC\_INACTIVE, the UE applies the NR sidelink communications parameters provided in system information (if any). For other cases, UEs apply the NR sidelink communications parameters provided in *SidelinkPreconfigNR* (if any). When UE performs state transition between above three cases, the UE applies the NR sidelink communications parameters provided in the new state, after acquisition of the new configurations. Before acquisition of the new configurations, UE continues applying the NR sidelink communications parameters provided in the old state.

#### 5.8.9.1.2 Actions related to transmission of *RRCReconfigurationSidelink* message

The UE shall set the contents of *RRCReconfigurationSidelink* message as follows:

- 1> for each sidelink DRB that is to be released, according to clause 5.8.9.1a.1.1, due to configuration by *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR* or by upper layers:
  - 2> set the entry included in the *slrb-ConfigToReleaseList* corresponding to the sidelink DRB;
- 1> for each sidelink DRB that is to be established or modified, according to clause 5.8.9.1a.2.1, due to receiving *sl-ConfigDedicatedNR*, *SIB12* or *SidelinkPreconfigNR*:
  - 2> if a sidelink DRB is to be established:
    - 3> assign a new logical channel identity for the logical channel to be associated with the sidelink DRB and set *sl-MAC-LogicalChannelConfigPC5* in the *SLRB-Config* to include the new logical channel identity;
    - 2> set the *SLRB-Config* included in the *slrb-ConfigToAddModList*, according to the received *sl-RadioBearerConfig* and *sl-RLC-BearerConfig* corresponding to the sidelink DRB;
  - 1> set the *sl-MeasConfig* as follows:
    - 2> If the frequency used for NR sidelink communication is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-ConfigCommonNR* within *SIB12*:
      - 3> if UE is in RRC\_CONNECTED:
        - 4> set the *sl-MeasConfig* according to stored NR sidelink measurement configuration information for this destination;
      - 3> if UE is in RRC\_IDLE or RRC\_INACTIVE:
        - 4> set the *sl-MeasConfig* according to stored NR sidelink measurement configuration received from *SIB12*;
    - 2> else:
      - 3> set the *sl-MeasConfig* according to the *sl-MeasPreConfig* in *SidelinkPreconfigNR*;
  - 1> set the *sl-LatencyBoundIUC-Report*;
  - 1> start timer T400 for the destination;
  - 1> set the *sl-CSI-RS-Config*;
  - 1> set the *sl-LatencyBoundCSI-Report*;
  - 1> set the *sl-ResetConfig*;

NOTE 1: Whether/how to set the parameters included in *sl-LatencyBoundIUC-Report*, *sl-CSI-RS-Config*, *sl-LatencyBoundCSI-Report* and *sl-ResetConfig* is up to UE implementation.

- 1> set the *sl-DRX-ConfigUC-PC5* as follows:
  - 2> If the frequency used for NR sidelink communication is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message or included in *sl-ConfigCommonNR* within *SIB12*:

3> if UE is in RRC\_CONNECTED and if *sl-ScheduledConfig* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*:

4> set the *sl-DRX-ConfigUC-PC5* according to stored NR sidelink DRX configuration information for this destination;

NOTE 2: If UE is in RRC\_IDLE or in RRC\_INACTIVE or out of coverage, or in RRC\_CONNECTED and *sl-UE-SelectedConfig* is included in *sl-ConfigDedicatedNR* within *RRCReconfiguration*, it is up to UE implementation to set the *sl-DRX-ConfigUC-PC5*.

1> for each PC5 Relay RLC channel that is to be released due to configuration by *sl-ConfigDedicatedNR*:

2> set the *SL-RLC-ChannelID* corresponding to the PC5 Relay RLC channel in the *sl-RLC-ChannelToReleaseListPC5*;

1> for each PC5 Relay RLC channel that is to be established or modified due to receiving *sl-ConfigDedicatedNR*:

2> if a PC5 Relay RLC channel is to be established:

3> assign a new logical channel identity for the logical channel to be associated with the PC5 Relay RLC channel and set *sl-MAC-LogicalChannelConfigPC5* in the *SL-RLC-ChannelConfigPC5* to include the new logical channel identity;

2> set the *SL-RLC-ChannelConfigPC5* included in the *sl-RLC-ChannelToAddModListPC5* according to the received *SL-RLC-ChannelConfig* corresponding to the PC5 Relay RLC channel, including setting *sl-RLC-ChannelID-PC5* to the same value of *sl-RLC-ChannelID* received in *SL-RLC-ChannelConfig*;

The UE shall submit the *RRCReconfigurationSidelink* message to lower layers for transmission.

#### 5.8.9.1.3 Reception of an *RRCReconfigurationSidelink* by the UE

The UE shall perform the following actions upon reception of the *RRCReconfigurationSidelink*:

1> if the *RRCReconfigurationSidelink* includes the *sl-ResetConfig*:

2> perform the sidelink reset configuration procedure as specified in 5.8.9.1.10;

1> if the *RRCReconfigurationSidelink* includes the *slrb-ConfigToReleaseList*:

2> for each entry value included in the *slrb-ConfigToReleaseList* that is part of the current UE sidelink configuration;

3> perform the sidelink DRB release procedure, according to clause 5.8.9.1a.1;

1> if the *RRCReconfigurationSidelink* includes the *slrb-ConfigToAddModList*:

2> for each *slrb-PC5-ConfigIndex* value included in the *slrb-ConfigToAddModList* that is not part of the current UE sidelink configuration:

3> if *sl-MappedQoS-FlowsToAddList* is included:

4> apply the *SL-PQFI* included in *sl-MappedQoS-FlowsToAddList*;

3> perform the sidelink DRB addition procedure, according to clause 5.8.9.1a.2;

2> for each *slrb-PC5-ConfigIndex* value included in the *slrb-ConfigToAddModList* that is part of the current UE sidelink configuration:

3> if *sl-MappedQoS-FlowsToAddList* is included:

4> add the *SL-PQFI* included in *sl-MappedQoS-FlowsToAddList* to the corresponding sidelink DRB;

3> if *sl-MappedQoS-FlowsToReleaseList* is included:

4> remove the *SL-PQFI* included in *sl-MappedQoS-FlowsToReleaseList* from the corresponding sidelink DRB;

- 3> if the sidelink DRB release conditions as described in clause 5.8.9.1a.1.1 are met:
  - 4> perform the sidelink DRB release procedure according to clause 5.8.9.1a.1.2;
- 3> else if the sidelink DRB modification conditions as described in clause 5.8.9.1a.2.1 are met:
  - 4> perform the sidelink DRB modification procedure according to clause 5.8.9.1a.2.2;
- 1> if the *RRCReconfigurationSidelink* message includes the *sl-MeasConfig*:
  - 2> perform the sidelink measurement configuration procedure as specified in 5.8.10;
- 1> if the *RRCReconfigurationSidelink* message includes the *sl-CSI-RS-Config*:
  - 2> apply the sidelink CSI-RS configuration;
- 1> if the *RRCReconfigurationSidelink* message includes the *sl-LatencyBoundCSI-Report*:
  - 2> apply the configured sidelink CSI report latency bound;
- 1> if the *RRCReconfigurationSidelink* includes the *sl-RLC-ChannelToReleaseListPC5*:
  - 2> for each *SL-RLC-ChannelID* value included in the *sl-RLC-ChannelToReleaseListPC5* that is part of the current UE sidelink configuration;
    - 3> perform the PC5 Relay RLC channel release procedure, according to clause 5.8.9.7.1;
- 1> if the *RRCReconfigurationSidelink* includes the *sl-RLC-ChannelToAddModListPC5*:
  - 2> for each *sl-RLC-ChannelID-PC5* value included in the *sl-RLC-ChannelToAddModListPC5* that is not part of the current UE sidelink configuration;
    - 3> perform the PC5 Relay RLC channel addition procedure, according to clause 5.8.9.7.2;
  - 2> for each *sl-RLC-ChannelID-PC5* value included in the *sl-RLC-ChannelToAddModListPC5* that is part of the current UE sidelink configuration:
    - 3> perform the PC5 Relay RLC channel modification procedure according to clause 5.8.9.7.2;
- 1> if the *RRCReconfigurationSidelink* message includes the *sl-DRX-ConfigUC-PC5*; and
- 1> if the UE accepts the *sl-DRX-ConfigUC-PC5*:
  - 2> configure lower layers to perform sidelink DRX operation according to *sl-DRX-ConfigUC-PC5* for the associated destination as defined in TS 38.321 [3];
- 1> if the *RRCReconfigurationSidelink* message includes the *sl-LatencyBoundIUC-Report*:
  - 2> apply the configured sidelink IUC report latency bound;
- 1> if the UE is unable to comply with (part of) the configuration included in the *RRCReconfigurationSidelink* (i.e. sidelink RRC reconfiguration failure):
  - 2> continue using the configuration used prior to the reception of the *RRCReconfigurationSidelink* message;
  - 2> set the content of the *RRCReconfigurationFailureSidelink* message;
    - 3> submit the *RRCReconfigurationFailureSidelink* message to lower layers for transmission;
- 1> else:
  - 2> set the content of the *RRCReconfigurationCompleteSidelink* message;
    - 3> if the UE rejects the sidelink DRX configuration *sl-DRX-ConfigUC-PC5* received from the peer UE:
      - 4> include the *sl-DRX-ConfigReject* in the *RRCReconfigurationCompleteSidelink* message;
      - 4> consider no sidelink DRX to be applied for the corresponding sidelink unicast communication;

3> submit the *RRCReconfigurationCompleteSidelink* message to lower layers for transmission;

NOTE 1: When the same logical channel is configured with different RLC mode by another UE, the UE handles the case as sidelink RRC reconfiguration failure.

NOTE 2: It is up to the UE implementation whether or not to indicate the rejection to the peer UE for a received sidelink DRX configuration.

5.8.9.1.4          Void

5.8.9.1.5          Void

5.8.9.1.6          Void

5.8.9.1.7          Void

#### 5.8.9.1.8          Reception of an *RRCReconfigurationFailureSidelink* by the UE

The UE shall perform the following actions upon reception of the *RRCReconfigurationFailureSidelink*:

- 1> stop timer T400 for the destination, if running;
- 1> continue using the configuration used prior to corresponding *RRCReconfigurationSidelink* message;
- 1> if UE is in RRC\_CONNECTED:
  - 2> perform the sidelink UE information for NR sidelink communication procedure, as specified in 5.8.3.3 or clause 5.10.15 in TS 36.331 [10];

#### 5.8.9.1.9          Reception of an *RRCReconfigurationCompleteSidelink* by the UE

The UE shall perform the following actions upon reception of the *RRCReconfigurationCompleteSidelink*:

- 1> stop timer T400 for the destination, if running;
- 1> consider the configurations in the corresponding *RRCReconfigurationSidelink* message to be applied.
- 2> if the *RRCReconfigurationCompleteSidelink* message includes the *sl-DRX-ConfigReject*:
  - 3> consider no sidelink DRX to be applied for the corresponding sidelink unicast communication.

#### 5.8.9.1.10        Sidelink reset configuration

The UE shall:

- 1> release/clear current sidelink radio configuration of this destination received in the *RRCReconfigurationSidelink*;
- 1> release the sidelink DRBs of this destination, in according to clause 5.8.9.1a.1;
- 1> reset the sidelink specific MAC of this destination.

NOTE 1: Sidelink radio configuration is not just the resource configuration but may include other configurations included in the *RRCReconfigurationSidelink* message except the sidelink DRBs of this destination.

NOTE 2: After the sidelink DRB release procedure, UE may perform the sidelink DRB addition according to the current sidelink configuration of this destination, received in *sl-ConfigDedicatedNR*, *SIB12* and *SidelinkPreconfigNR*, according to clause 5.8.9.1a.2.

### 5.8.9.1a Sidelink radio bearer management

#### 5.8.9.1a.1 Sidelink DRB release

##### 5.8.9.1a.1.1 Sidelink DRB release conditions

For NR sidelink communication, a sidelink DRB release is initiated in the following cases:

- 1> for groupcast, broadcast and unicast, if *slrb-Uu-ConfigIndex* (if any) of the sidelink DRB is included in *sl-RadioBearerToReleaseList* in *sl-ConfigDedicatedNR*; or
- 1> for groupcast and broadcast, if no sidelink QoS flow with data indicated by upper layers is mapped to the sidelink DRB for transmission, which is (re)configured by receiving *SIB12* or *SidelinkPreconfigNR*; or
- 1> for groupcast, broadcast and unicast, if *SL-RLC-BearerConfigIndex* (if any) of the sidelink DRB is included in *sl-RLC-BearerToReleaseList* in *sl-ConfigDedicatedNR*; or
- 1> for unicast, if no sidelink QoS flow with data indicated by upper layers is mapped to the sidelink DRB for transmission, which is (re)configured by receiving *SIB12* or *SidelinkPreconfigNR*, and if no sidelink QoS flow mapped to the sidelink DRB, which is (re)configured by receiving *RRCReconfigurationSidelink*, has data; or
- 1> for unicast, if *SLRB-PC5-ConfigIndex* (if any) of the sidelink DRB is included in *slrb-ConfigToReleaseList* in *RRCReconfigurationSidelink* or if *sl-ResetConfig* is included in *RRCReconfigurationSidelink*; or
- 1> for unicast, when the corresponding PC5-RRC connection is released due to sidelink RLF being detected, according to clause 5.8.9.3; or
- 1> for unicast, when the corresponding PC5-RRC connection is released due to upper layer request according to clause 5.8.9.5.

##### 5.8.9.1a.1.2 Sidelink DRB release operations

For each sidelink DRB, whose sidelink DRB release conditions are met as in clause 5.8.9.1a.1.1, the UE capable of NR sidelink communication that is configured by upper layers to perform NR sidelink communication shall:

- 1> for groupcast and broadcast; or
- 1> for unicast, if the sidelink DRB release was triggered after the reception of the *RRCReconfigurationSidelink* message; or
- 1> for unicast, after receiving the *RRCReconfigurationCompleteSidelink* message, if the sidelink DRB release was triggered due to the configuration received within the *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR* or indicated by upper layers:
  - 2> release the PDCP entity for NR sidelink communication associated with the sidelink DRB;
  - 2> if SDAP entity for NR sidelink communication associated with this sidelink DRB is configured:
    - 3> indicate the release of the sidelink DRB to the SDAP entity associated with this sidelink DRB (TS 37.324 [24], clause 5.3.3);
  - 2> release SDAP entities for NR sidelink communication, if any, that have no associated sidelink DRB as specified in TS 37.324 [24] clause 5.1.2;
- 1> for groupcast and broadcast; or
- 1> for unicast, after receiving the *RRCReconfigurationCompleteSidelink* message, if the sidelink DRB release was triggered due to the configuration received within the *sl-ConfigDedicatedNR*:
  - 2> for each *sl-RLC-BearerConfigIndex* included in the received *sl-RLC-BearerToReleaseList* that is part of the current UE sidelink configuration:
    - 3> release the RLC entity and the corresponding logical channel for NR sidelink communication, associated with the *sl-RLC-BearerConfigIndex*.

- 1> for unicast, if the sidelink DRB release was triggered due to the reception of the *RRCReconfigurationSidelink* message; or
- 1> for unicast, after receiving the *RRCReconfigurationCompleteSidelink* message, if the sidelink DRB release was triggered due to the configuration received within the *SIB12*, *SidelinkPreconfigNR* or indicated by upper layers:
  - 2> release the RLC entity and the corresponding logical channel for NR sidelink communication associated with the sidelink DRB;
  - 2> perform the sidelink UE information procedure in clause 5.8.3 for unicast if needed.
- 1> if the sidelink radio link failure is detected for a specific destination:
  - 2> release the PDCP entity, RLC entity and the logical channel of the sidelink DRB for the specific destination.

### 5.8.9.1a.2 Sidelink DRB addition/modification

#### 5.8.9.1a.2.1 Sidelink DRB addition/modification conditions

For NR sidelink communication, a sidelink DRB addition is initiated only in the following cases:

- 1> if any sidelink QoS flow is (re)configured by *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR* and is to be mapped to one sidelink DRB, which is not established; or
- 1> if any sidelink QoS flow is (re)configured by *RRCReconfigurationSidelink* and is to be mapped to a sidelink DRB, which is not established;

For NR sidelink communication, a sidelink DRB modification is initiated only in the following cases:

- 1> if any of the sidelink DRB related parameters is changed by *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR* or *RRCReconfigurationSidelink* for one sidelink DRB, which is established;

#### 5.8.9.1a.2.2 Sidelink DRB addition/modification operations

For the sidelink DRB, whose sidelink DRB addition conditions are met as in clause 5.8.9.1a.2.1, the UE capable of NR sidelink communication that is configured by upper layers to perform NR sidelink communication shall:

- 1> for groupcast and broadcast; or
- 1> for unicast, if the sidelink DRB addition was triggered due to the reception of the *RRCReconfigurationSidelink* message; or
- 1> for unicast, after receiving the *RRCReconfigurationCompleteSidelink* message, if the sidelink DRB addition was triggered due to the configuration received within the *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR* or indicated by upper layers:
  - 2> if an SDAP entity for NR sidelink communication associated with the destination and the cast type of the sidelink DRB does not exist:
    - 3> establish an SDAP entity for NR sidelink communication as specified in TS 37.324 [24] clause 5.1.1;
  - 2> (re)configure the SDAP entity in accordance with the *sl-SDAP-ConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-SDAP-Config* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, associated with the sidelink DRB;
  - 2> establish a PDCP entity for NR sidelink communication and configure it in accordance with the *sl-PDCP-ConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-PDCP-Config* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, associated with the sidelink DRB;
  - 2> establish a RLC entity for NR sidelink communication and configure it in accordance with the *sl-RLC-ConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-RLC-Config* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, associated with sidelink DRB;
- 2> if this procedure was due to the reception of a *RRCReconfigurationSidelink* message:

- 3> configure the MAC entity with a logical channel in accordance with the *sl-MAC-LogicalChannelConfigPC5* received in the *RRCReconfigurationSidelink* associated with the sidelink DRB, and perform the sidelink UE information procedure in clause 5.8.3 for unicast if need;
- 2> else if this procedure was due to the reception of a *RRCReconfigurationCompleteSidelink* message:
  - 3> configure the MAC entity with a logical channel associated with the sidelink DRB, in accordance with the *sl-MAC-LogicalChannelConfig* received in the *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*;
- 2> else (i.e. for groupcast/broadcast):
  - 3> configure the MAC entity with a logical channel associated with the sidelink DRB, in accordance with the *sl-MAC-LogicalChannelConfig* received in the *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR* and assign a new LCID to this logical channel.

NOTE 1: When a sidelink DRB addition is due to the configuration by *RRCReconfigurationSidelink*, it is up to UE implementation to select the sidelink DRB configuration as necessary transmitting parameters for the sidelink DRB, from the received *sl-ConfigDedicatedNR* (if in RRC\_CONNECTED), *SIB12* (if in RRC\_IDLE/INACTIVE), *SidelinkPreconfigNR* (if out of coverage) with the same RLC mode as the one configured in *RRCReconfigurationSidelink*.

For the sidelink DRB, whose sidelink DRB modification conditions are met as in clause 5.8.9.1a.2.1, the UE capable of NR sidelink communication that is configured by upper layers to perform NR sidelink communication shall:

- 1> for groupcast and broadcast; or
- 1> for unicast, if the sidelink DRB modification was triggered due to the reception of the *RRCReconfigurationSidelink* message; or
- 1> for unicast, after receiving the *RRCReconfigurationCompleteSidelink* message, if the sidelink DRB modification was triggered due to the configuration received within the *sl-ConfigDedicatedNR*, *SIB12* or *SidelinkPreconfigNR*:
  - 2> reconfigure the SDAP entity of the sidelink DRB, in accordance with the *sl-SDAP-ConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-SDAP-Config* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, if included;
  - 2> reconfigure the PDCP entity of the sidelink DRB, in accordance with the *sl-PDCP-ConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-PDCP-Config* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, if included;
  - 2> reconfigure the RLC entity of the sidelink DRB, in accordance with the *sl-RLC-ConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-RLC-Config* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, if included;
  - 2> reconfigure the logical channel of the sidelink DRB, in accordance with the *sl-MAC-LogicalChannelConfigPC5* received in the *RRCReconfigurationSidelink* or *sl-MAC-LogicalChannelConfig* received in *sl-ConfigDedicatedNR*, *SIB12*, *SidelinkPreconfigNR*, if included.

### 5.8.9.1a.3 Sidelink SRB release

The UE shall:

- 1> if a PC5-RRC connection release for a specific destination is requested by upper layers or AS layer; or
- 1> if the sidelink radio link failure is detected for a specific destination:
  - 2> release the PDCP entity, RLC entity and the logical channel of the sidelink SRB for PC5-RRC message of the specific destination;
  - 2> consider the PC5-RRC connection is released for the destination.
- 1> if PC5-S transmission for a specific destination is terminated in upper layers:
  - 2> release the PDCP entity, RLC entity and the logical channel of the sidelink SRB(s) for PC5-S message of the specific destination;

- 1> if discovery transmission for a specific destination is terminated in upper layers:
- 2> release the PDCP entity, RLC entity and the logical channel of the sidelink SRB4 for discovery message of the specific destination;

#### 5.8.9.1a.4 Sidelink SRB addition

The UE shall:

- 1> if transmission of PC5-S message for a specific destination is requested by upper layers for sidelink SRB:
  - 2> establish PDCP entity, RLC entity and the logical channel of a sidelink SRB for PC5-S message, as specified in clause 9.1.1.4;
- 1> if transmission of discovery message for a specific destination is requested by upper layers for sidelink SRB:
  - 2> establish PDCP entity, RLC entity and the logical channel of a sidelink SRB4 for discovery message, as specified in clause 9.1.1.4;
- 1> if a PC5-RRC connection establishment for a specific destination is indicated by upper layers:
  - 2> establish PDCP entity, RLC entity and the logical channel of a sidelink SRB for PC5-RRC message of the specific destination, as specified in clause 9.1.1.4;
  - 2> consider the PC5-RRC connection is established for the destination.

### 5.8.9.2 Sidelink UE capability transfer

#### 5.8.9.2.1 General

This clause describes how the UE compiles and transfers its sidelink UE capability information for unicast to the initiating UE.

**Figure 5.8.9.2.1-1: Sidelink UE capability transfer**

#### 5.8.9.2.2 Initiation

The UE may initiate the sidelink UE capability transfer procedure upon indication from upper layer when it needs (additional) UE radio access capability information.

#### 5.8.9.2.3 Actions related to transmission of the *UECapabilityEnquirySidelink* by the UE

The initiating UE shall set the contents of *UECapabilityEnquirySidelink* message as follows:

- 1> include in UE radio access capabilities for sidelink within *ue-CapabilityInformationSidelink*, if needed;

NOTE 1: It is up to initiating UE to decide whether *ue-CapabilityInformationSidelink* should be included.

- 1> set *frequencyBandListFilterSidelink* to include frequency bands for which the peer UE is requested to provide supported bands and band combinations;

NOTE 2: The initiating UE is not allowed to send the *UECapabilityEnquirySidelink* message without including the field *frequencyBandListFilterSidelink*.

- 1> submit the *UECapabilityEnquirySidelink* message to lower layers for transmission.

#### 5.8.9.2.4 Actions related to reception of the *UECapabilityEnquirySidelink* by the UE

The peer UE shall set the contents of *UECapabilityInformationSidelink* message as follows:

- 1> include UE radio access capabilities for sidelink within *ue-CapabilityInformationSidelink*;
- 1> compile a list of "candidate band combinations" only consisting of bands included in *frequencyBandListFilterSidelink*, and prioritized in the order of *frequencyBandListFilterSidelink* (i.e. first include band combinations containing the first-listed band, then include remaining band combinations containing the second-listed band, and so on).
- 1> include into *supportedBandCombinationListSidelinkNR* as many band combinations as possible from the list of "candidate band combinations", starting from the first entry;
- 1> include the received *frequencyBandListFilterSidelink* in the field *appliedFreqBandListFilter* of the requested UE capability;
- 1> submit the *UECapabilityInformationSidelink* message to lower layers for transmission.

NOTE: If the UE cannot include all band combinations due to message size or list size constraints, it is up to UE implementation which band combinations it prioritizes.

#### 5.8.9.3 Sidelink radio link failure related actions

The UE shall:

- 1> upon indication from sidelink RLC entity that the maximum number of retransmissions for a specific destination has been reached; or
- 1> upon T400 expiry for a specific destination; or
- 1> upon indication from MAC entity that the maximum number of consecutive HARQ DTX for a specific destination has been reached; or
- 1> upon integrity check failure indication from sidelink PDCP entity concerning SL-SRB2 or SL-SRB3 for a specific destination:
  - 2> consider sidelink radio link failure to be detected for this destination;
  - 2> release the DRBs of this destination, according to clause 5.8.9.1a.1;
  - 2> release the SRBs of this destination, according to clause 5.8.9.1a.3;
  - 2> release the PC5 Relay RLC channels of this destination if configured, in according to clause 5.8.9.7.1;
  - 2> discard the NR sidelink communication related configuration of this destination;
  - 2> reset the sidelink specific MAC of this destination;
  - 2> consider the PC5-RRC connection is released for the destination;
  - 2> indicate the release of the PC5-RRC connection to the upper layers for this destination (i.e. PC5 is unavailable);
- 2> if UE is in RRC\_CONNECTED:
  - 3> if the UE is acting as L2 U2N Remote UE for the destination:
    - 4> initiate the RRC connection re-establishment procedure as specified in 5.3.7.
  - 3> else:
    - 4> perform the sidelink UE information for NR sidelink communication procedure, as specified in 5.8.3.3;

NOTE: It is up to UE implementation on whether and how to indicate to upper layers to maintain the keep-alive procedure [55].

#### 5.8.9.4 Sidelink common control information

##### 5.8.9.4.1 General

The sidelink common control information is carried by *MasterInformationBlockSidelink*. The sidelink common control information may change at any transmission, i.e. neither a modification period nor a change notification mechanism is used. This procedure also applies to NR sidelink discovery.

A UE configured to receive or transmit NR sidelink communication/discovery shall:

- 1> if the UE has a selected SyncRef UE, as specified in 5.8.6:
- 2> ensure having a valid version of the *MasterInformationBlockSidelink* message of that SyncRef UE;

##### 5.8.9.4.2 Actions related to reception of *MasterInformationBlockSidelink* message

Upon receiving *MasterInformationBlockSidelink*, the UE shall:

- 1> apply the values included in the received *MasterInformationBlockSidelink* message.

##### 5.8.9.4.3 Transmission of *MasterInformationBlockSidelink* message

The UE shall set the contents of the *MasterInformationBlockSidelink* message as follows:

- 1> if in coverage on the frequency used for the NR sidelink communication as defined in TS 38.304 [20].
  - 2> set *inCoverage* to *true*;
  - 2> if *tdd-UL-DL-ConfigurationCommon* is included in the received *SIB1*:
    - 3> set *sl-TDD-Config* to the value representing the same meaning as that is included in *tdd-UL-DL-ConfigurationCommon*, as described in TS 38.213, clause 16.1 [13];
  - 2> else:
    - 3> set *sl-TDD-Config* to the value as specified in TS 38.213 [13], clause 16.1;
  - 2> if *syncInfoReserved* is included in an entry of configured *sl-SyncConfigList* corresponding to the concerned frequency from the received *SIB12*:
    - 3> set *reservedBits* to the value of *syncInfoReserved* in the received *SIB12*;
  - 2> else:
    - 3> set all bits in *reservedBits* to 0;
- 1> else if out of coverage on the frequency used for NR sidelink communication as defined in TS 38.304 [20]; and the concerned frequency is included in *sl-FreqInfoToAddModList* in *RRCReconfiguration* or in *sl-FreqInfoList* within *SIB12*:
  - 2> set *inCoverage* to *true*;
  - 2> set *reservedBits* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *sl-PreconfigGeneral* in *SidelinkPreconfigNR* defined in 9.3);
  - 2> set *sl-TDD-Config* to the value representing the same meaning as that is included in the corresponding field included in the preconfigured sidelink parameters (i.e. *sl-PreconfigGeneral* in *SL-PreconfigurationNR* defined in 9.3) as described in TS 38.213, clause 16.1 [13];
- 1> else if out of coverage on the frequency used for NR sidelink communication as defined in TS 38.304 [20]; and the UE selects GNSS as the synchronization reference and *sl-SSB-TimeAllocation3* is not configured for the frequency used in *SidelinkPreconfigNR*:

- 2> set *inCoverage* to *true*;
  - 2> set *reservedBits* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *sl-PreconfigGeneral* in *SidelinkPreconfigNR* defined in 9.3);
  - 2> set *sl-TDD-Config* to the value representing the same meaning as that is included in the corresponding field included in the preconfigured sidelink parameters (i.e. *sl-PreconfigGeneral* in *SL-PreconfigurationNR* defined in 9.3) as described in TS 38.213, clause 16.1 [13];
- 1> else if the UE has a selected SyncRef UE (as defined in 5.8.6):
- 2> set *inCoverage* to *false*;
  - 2> set *sl-TDD-Config* and *reservedBits* to the value of the corresponding field included in the received *MasterInformationBlockSidelink*;
- 1> else:
- 2> set *inCoverage* to *false*;
  - 2> set *reservedBits* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *sl-PreconfigGeneral* in *SidelinkPreconfigNR* defined in 9.3);
  - 2> set *sl-TDD-Config* to the value representing the same meaning as that is included in the corresponding field included in the preconfigured sidelink parameters (i.e. *sl-PreconfigGeneral* in *SL-PreconfigurationNR* defined in 9.3) as described in TS 38.213, clause 16.1 [13];
- 1> set *directFrameNumber* and *slotIndex* according to the slot used to transmit the SLSS, as specified in 5.8.5.3;
- 1> submit the *MasterInformationBlockSidelink* to lower layers for transmission upon which the procedure ends;

#### 5.8.9.5 Actions related to PC5-RRC connection release requested by upper layers

The UE initiates the procedure when upper layers request the release of the PC5-RRC connection as specified in TS 24.587 [57] or TS 24.554 [72]. The UE shall not initiate the procedure for power saving purposes.

The UE shall:

- 1> if the PC5-RRC connection release for the specific destination is requested by upper layers:
  - 2> discard the NR sidelink communication related configuration of this destination;
  - 2> release the DRBs of this destination if configured, in according to clause 5.8.9.1a.1;
  - 2> release the SRBs of this destination, in according to clause 5.8.9.1a.3;
  - 2> release the PC5 Relay RLC channels if configured, in according to clause 5.8.9.7.1;
  - 2> reset the sidelink specific MAC of this destination.
  - 2> consider the PC5-RRC connection is released for the destination;

### 5.8.9.6 Sidelink UE assistance information

#### 5.8.9.6.1 General

**Figure 5.8.9.6.1-1: Sidelink UE assistance information**

The purpose of this procedure is for a UE to inform its peer UE of the sidelink DRX assistance information used to determine the sidelink DRX configuration for unicast communication.

For sidelink unicast, a UE may include its desired sidelink DRX configurations in the *UEAssistanceInformationSidelink* as the sidelink DRX assistance information which is transmitted to its peer UE.

**NOTE:** It is up to UE implementation to determine its desired sidelink DRX configurations for unicast communication.

#### 5.8.9.6.2 Initiation

For sidelink unicast, if both a RX UE and its peer TX UE for a direction of sidelink communication are capable of sidelink DRX, the RX UE that is interested in sending the sidelink DRX assistance information may send the *UEAssistanceInformationSidelink* as the sidelink DRX assistance information to its peer UE when the sidelink DRX assistance information has not been sent previously or when the previously transmitted sidelink DRX assistance information has changed.

#### 5.8.9.6.3 Actions related to reception of *UEAssistanceInformationSidelink* message

For sidelink unicast, when a UE is in RRC\_CONNECTED and is performing sidelink operation with resource allocation mode 1, it may report the sidelink DRX assistance information received within the *UEAssistanceInformationSidelink* from its peer UE to the network as specified in 5.8.3. For sidelink unicast, when a UE is in RRC\_CONNECTED and is performing sidelink operation with resource allocation mode 2 or is in RRC\_IDLE or RRC\_INACTIVE or out of coverage, regardless of whether the UE has obtained the sidelink DRX assistance information from the *UEAssistanceInformationSidelink* transmitted from its peer UE or not, it may determine the sidelink DRX configuration *SL-DRX-ConfigUC* for its peer UE.

**NOTE:** When UE determines the sidelink DRX configuration for its peer UE, it may take the sidelink DRX assistance information received from its peer UE into account.

### 5.8.9.7 PC5 Relay RLC channel management for L2 U2N relay

#### 5.8.9.7.1 PC5 Relay RLC channel release

The UE shall:

- 1> if the PC5 Relay RLC channel release was triggered after the reception of the *RRCReconfigurationSidelink* message; or
- 1> after receiving the *RRCReconfigurationCompleteSidelink* message, if the PC5 Relay RLC channel release was triggered due to the configuration received within the *sl-ConfigDedicatedNR*:
- 2> for each *SL-RLC-ChannelID* in *sl-RLC-ChannelToReleaseList* received in *sl-ConfigDedicatedNR* within *RRCReconfiguration* or for each *SL-RLC-ChannelID* included in the received *sl-RLC-ChannelToReleaseListPC5* that is part of the current UE sidelink configuration:
- 3> release the RLC entity and the corresponding logical channel associated with the *SL-RLC-ChannelID*;

- 1> if the PC5 Relay RLC channel release was triggered for a specific destination by upper layers as specified in 5.8.9.5 or due to sidelink RLF as specified in 5.8.9.3;
- 2> release the RLC entity and the corresponding logical channel associated with the *SL-RLC-ChannelID* of the specific destination;

#### 5.8.9.7.2 PC5 Relay RLC channel addition/modification

Upon PC5-RRC connection establishment between the L2 U2N Relay UE and L2 U2N Remote UE, the L2 U2N Relay UE shall:

- 1> establish a SRAP entity as specified in TS 38.351 [66], if no SRAP entity has been established;
- 1> apply RLC specified configuration of SL-RLC0 as specified in clause 9.1.1.4;
- 1> apply RLC default configuration of SL-RLC1 as defined in clause 9.2.4 if the L2 U2N Relay UE is in RRC\_IDLE/INACTIVE state;

The UE shall:

- 1> if the PC5 Relay RLC channel addition/modification was triggered due to the reception of the *RRCReconfigurationSidelink* message; or
- 1> after receiving the *RRCReconfigurationCompleteSidelink* message, if the PC5 Relay RLC channel addition/modification was triggered due to the configuration received within the *sl-ConfigDedicatedNR*:
- 2> if the current configuration contains a PC5 Relay RLC channel with the received *sl-RLC-ChannelID* or *sl-RLC-ChannelID-PC5*:
  - 3> reconfigure the sidelink RLC entity in accordance with the received *sl-RLC-Config* or *sl-RLC-ConfigPC5*;
  - 3> reconfigure the sidelink MAC entity with a logical channel in accordance with the received *sl-MAC-LogicalChannelConfig* or *sl-MAC-LogicalChannelConfigPC5*;
- 2> else (a PC5 Relay RLC channel with the received *sl-RLC-ChannelID* or *sl-RLC-ChannelID-PC5* was not configured before):
  - 3> establish a sidelink RLC entity in accordance with the received *sl-RLC-Config* or *sl-RLC-ConfigPC5*;
  - 3> configure the sidelink MAC entity with a logical channel in accordance with the received *sl-MAC-LogicalChannelConfig* or *sl-MAC-LogicalChannelConfigPC5*.

#### 5.8.9.8 Remote UE information

##### 5.8.9.8.1 General

**Figure 5.8.9.8.1-1: Remote UE information**

This procedure is used by the L2 U2N Remote UE in RRC\_IDLE/RRC\_INACTIVE to inform about the required SIB(s) and provide Paging related information to the connected L2 U2N Relay UE.

NOTE: MIB is not required by a L2 U2N Remote UE.

#### 5.8.9.8.2 Actions related to transmission of *RemoteUEInformationSidelink* message

When entering RRC\_IDLE or RRC\_INACTIVE, or upon change in any of the information in the *RemoteUEInformationSidelink* while in RRC\_IDLE or RRC\_INACTIVE, the L2 U2N Remote UE shall:

- 1> if the UE has SIB request information to provide (e.g. the UE has not stored a valid version of a SIB, in accordance with clause 5.2.2.2.1, of one or several required SIB(s) in accordance with clause 5.2.2.1 and the requested SIB has not been indicated in *RemoteUEInformationSidelink* message to the L2 U2N Relay UE before):
  - 2> include *sl-RequestedSIB-List* in the *RemoteUEInformationSidelink* to indicate the requested SIB(s);
- 1> if the UE has paging related information to provide (e.g. the UE has not sent *sl-PagingInfo-RemoteUE* in the *RemoteUEInformationSidelink* message to the L2 U2N Relay UE before), set *sl-PagingInfo-RemoteUE* as follows:
  - 2> if the L2 U2N Remote UE is in RRC\_IDLE:
    - 3> include *ng-5G-S-TMSI* in the *sl-PagingIdentityRemoteUE*;
    - 3> if the UE specific DRX cycle is configured by upper layer, set *sl-PagingCycleRemoteUE* to the value of UE specific Uu DRX cycle configured by upper layer;
  - 2> else if the L2 U2N Remote UE is in RRC\_INACTIVE:
    - 3> include *ng-5G-S-TMSI* and *fullI-RNTI* in the *sl-PagingIdentityRemoteUE*;
    - 3> if the UE specific DRX cycle is configured by upper layer,
      - 4> set *sl-PagingCycleRemoteUE* to the minimum value of UE specific Uu DRX cycles (configured by upper layer and configured by RRC);
  - 3> else:
    - 4> set *sl-PagingCycleRemoteUE* to the value of UE specific DRX cycle configured by RRC;
- 1> submit the *RemoteUEInformationSidelink* message to lower layers for transmission;

When entering RRC\_CONNECTED, if L2 U2N remote UE had sent *sl-RequestedSIB-List* and/or *sl-PagingInfo-RemoteUE*, the L2 U2N Remote UE shall:

- 1> set the *sl-RequestedSIB-List* to the value *release* if requested before;
- 1> set the *sl-PagingInfo-RemoteUE* to the value *release* if sent before;
- 1> submit the *RemoteUEInformationSidelink* message to lower layers for transmission;

#### 5.8.9.8.3 Reception of *RemoteUEInformationSidelink* message by the L2 U2N Relay UE

The L2 U2N Relay UE shall:

- 1> if the *RemoteUEInformationSidelink* includes the *sl-PagingInfo-RemoteUE*:
  - 2> if the UE is in RRC\_CONNECTED on an active BWP with common search space configured including *pagingSearchSpace*; or
  - 2> if the UE is in RRC\_IDLE or RRC\_INACTIVE:
    - 3> if the *sl-PagingInfo-RemoteUE* is set to *setup*:
      - 4> monitor the *Paging* message at the L2 U2N Remote UE's paging occasion calculated according to *sl-PagingIdentityRemoteUE* and *sl-PagingCycleRemoteUE* included in *sl-PagingInfo-RemoteUE*;
    - 3> else (the *sl-PagingInfo-RemoteUE* is set to *release*):
      - 4> stop monitoring the *Paging* message at the L2 U2N Remote UE's paging occasion;

- 4> release the received paging information in *sl-PagingInfo-RemoteUE*;
- 2> else (the UE is in RRC\_CONNECTED on an active BWP without *pagingSearchSpace* configured):
  - 3> if the *sl-PagingInfo-RemoteUE* is set to *setup*:
    - 4> include the received *sl-PagingIdentityRemoteUE* in *SidelinkUEInformationNR* message and perform Sidelink UE information transmission in accordance with 5.8.3;
  - 3> else (the *sl-PagingInfo-RemoteUE* is set to *release*):
    - 4> initiate transmission of the *SidelinkUEInformationNR* message to release the *sl-PagingIdentityRemoteUE* in *SidelinkUEInformationNR* message in accordance with 5.8.3;
    - 4> release the received paging information in *sl-PagingInfo-RemoteUE*;
- 1> if the *RemoteUEInformationSidelink* includes the *sl-RequestedSIB-List*:
  - 2> if the *sl-RequestedSIB-List* is set to *setup*:
    - 3> if the L2 U2N Relay UE has not stored a valid version of SIB(s) indicated in *sl-RequestedSIB-List*:
      - 4> perform acquisition of the system information indicated in *sl-RequestedSIB-List* in accordance with 5.2.2;
    - 3> perform the Uu message transfer procedure in accordance with 5.8.9.9;
  - 2> if the *sl-RequestedSIB-List* is set to *release*:
    - 3> release received SIB request in *sl-RequestedSIB-List*.

## 5.8.9.9 Uu message transfer in sidelink

### 5.8.9.9.1 General

**Figure 5.8.9.9.1-1: Uu message transfer in sidelink**

The purpose of this procedure is to transfer *Paging* message and System Information from the L2 U2N Relay UE to the L2 U2N Remote UE in RRC\_IDLE/RRC\_INACTIVE.

### 5.8.9.9.2 Actions related to transmission of *UuMessageTransferSidelink* message

The L2 U2N Relay UE initiates the Uu message transfer procedure when at least one of the following conditions is met:

- 1> upon receiving *Paging* message related to the connected L2 U2N Remote UE from network (including *Paging* message within *RRCReconfiguration* message);
- 1> upon acquisition of the SIB(s) requested by the connected L2 U2N Remote UE (as indicated in *sl-RequestedSIB-List* in the *RemoteUEInformationSidelink*) or upon receiving the updated SIB(s) from network which has been requested by the connected L2 U2N Remote UE;
- 1> upon unsolicited SIB1 forwarding to the connected L2 U2N Remote UE or upon receiving the updated *SIB1* from network;

For each associated L2 U2N Remote UE, the L2 U2N Relay UE shall set the contents of *UuMessageTransferSidelink* message as follows:

- 1> include *sl-PagingDelivery* if the *Paging* message received from network containing the *ue-Identity* of the L2 U2N Remote UE;
- 1> include *sl-SIB1-Delivery* if any of the conditions for initiating Uu message transfer procedure related to SIB1 are met;
- 1> include *sl-SystemInformationDelivery* if any of the conditions for initiating Uu message transfer procedure related to System Information are met;
- 1> submit the *UuMessageTransferSidelink* message to lower layers for transmission.

NOTE: The L2 U2N Relay UE may perform unsolicited forwarding of SIB1 to the L2 U2N Remote UE based on UE implementation.

#### 5.8.9.9.3 Reception of the *UuMessageTransferSidelink*

Upon receiving the *UuMessageTransferSidelink* message, the L2 U2N Remote UE shall:

- 1> if *sl-PagingDelivery* is included:
  - 2> perform the paging reception procedure as specified in clause 5.3.2.3;
- 1> if *sl-SystemInformationDelivery* and/or *sl-SIB1-Delivery* is included:
  - 2> perform the actions specified in clause 5.2.2.4.

#### 5.8.9.10 Notification Message

##### 5.8.9.10.1 General

**Figure 5.8.9.8.1-1: Notification message in sidelink**

This procedure is used by a U2N Relay UE to send notification to the connected U2N Remote UE.

##### 5.8.9.10.2 Initiation

The U2N Relay UE may initiate the procedure when one of the following conditions is met:

- 1> upon Uu RLF as specified in 5.3.10;
- 1> upon reception of an *RRCReconfiguration* including the *reconfigurationWithSync*;
- 1> upon cell reselection;
- 1> upon L2 U2N Relay UE's RRC connection failure including RRC connection reject as specified in 5.3.3.5 and 5.3.13.10, and T300 expiry as specified in 5.3.3.7, and RRC resume failure as specified in 5.3.13.5;

##### 5.8.9.10.3 Actions related to transmission of *NotificationMessageSidelink* message

The U2N Relay UE shall set the indication type as follows:

- 1> if the UE initiates transmission of the *NotificationMessageSidelink* message due to Uu RLF:
  - 2> set the *indicationType* as *relayUE-Uu-RLF*;

- 1> else if the UE initiates transmission of the *NotificationMessageSidelink* message due to reconfiguration with sync:
  - 2> set the *indicationType* as *relayUE-HO*;
- 1> else if the UE initiates transmission of the *NotificationMessageSidelink* message due to cell reselection:
  - 2> set the *indicationType* as *relayUE-CellReselection*;
- 1> if the UE initiates transmission of the *NotificationMessageSidelink* message due to Uu RRC connection establishment/Resume failure:
  - 2> set the *indicationType* as *relayUE-Uu-RRC-Failure*;
- 1> submit the *NotificationMessageSidelink* message to lower layers for transmission.

#### 5.8.9.10.4 Actions related to reception of *NotificationMessageSidelink* message

Upon receiving the *NotificationMessageSidelink*, the U2N Remote UE shall:

- 1> if the *indicationType* is included:
  - 2> if the UE is L2 U2N Remote UE in RRC\_CONNECTED:
    - 3> if T301 is not running, initiate the RRC connection re-establishment procedure as specified in 5.3.7;
  - 2> else (the UE is L3 U2N Remote UE, or L2 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE):
    - 3> if the PC5-RRC connection with the U2N Relay UE is determined to be released:
      - 4> indicate upper layers to trigger PC5 unicast link release;
    - 3> else (i.e., maintain the PC5 RRC connection):
      - 4> if the UE is L2 U2N Remote UE and the *indicationType* is *relayUE-HO* or *relayUE-CellReselection*:
        - 5> consider cell re-selection occurs;

NOTE 1: For L3 U2N Remote UE, or L2 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE, it is up to Remote UE implementation whether to release or keep the PC5 unicast link.

NOTE 2: The L2 U2N Remote UE may ignore the *NotificationMessageSidelink* if it does not release the PC5 unicast link in source side yet during an indirect-to-direct path switch, i.e. T304 is running.

## 5.8.10 Sidelink measurement

### 5.8.10.1 Introduction

The UE may configure the associated peer UE to perform NR sidelink measurement and report on the corresponding PC5-RRC connection in accordance with the NR sidelink measurement configuration for unicast by *RRCReconfigurationSidelink* message.

The NR sidelink measurement configuration includes the following parameters for a PC5-RRC connection:

1. **NR sidelink measurement objects:** Object(s) on which the associated peer UE shall perform the NR sidelink measurements.
  - For NR sidelink measurement, a NR sidelink measurement object indicates the NR sidelink frequency of reference signals to be measured.
2. **NR sidelink reporting configurations:** NR sidelink measurement reporting configuration(s) where there can be one or multiple NR sidelink reporting configurations per NR sidelink measurement object. Each NR sidelink reporting configuration consists of the following:

- Reporting criterion: The criterion that triggers the UE to send a NR sidelink measurement report. This can either be periodical or a single event description.
- RS type: The RS that the UE uses for NR sidelink measurement results. In this release, only DMRS is supported for NR sidelink measurement.
- Reporting format: The quantities that the UE includes in the measurement report. In this release, only RSRP measurement is supported.

**3. NR sidelink measurement identities:** A list of NR sidelink measurement identities where each NR sidelink measurement identity links one NR sidelink measurement object with one NR sidelink reporting configuration. By configuring multiple NR sidelink measurement identities, it is possible to link more than one NR sidelink measurement object to the same NR sidelink reporting configuration, as well as to link more than one NR sidelink reporting configuration to the same NR sidelink measurement object. The NR sidelink measurement identity is also included in the NR sidelink measurement report that triggered the reporting, serving as a reference to the network.

**4. NR sidelink quantity configurations:** The NR sidelink quantity configuration defines the NR sidelink measurement filtering configuration used for all event evaluation and related reporting, and for periodical reporting of that NR sidelink measurement. In each configuration, different filter coefficients can be configured for different NR sidelink measurement quantities.

Both UEs of the PC5-RRC connection maintains a NR sidelink measurement object list, a NR sidelink reporting configuration list, and a NR sidelink measurement identities list according to signalling and procedures in this specification.

## 5.8.10.2 Sidelink measurement configuration

### 5.8.10.2.1 General

The UE shall:

- 1> if the received *sl-MeasConfig* includes the *sl-MeasObjectToRemoveList* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink measurement object removal procedure as specified in 5.8.10.2.4;
- 1> if the received *sl-MeasConfig* includes the *sl-MeasObjectToAddModList* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink measurement object addition/modification procedure as specified in 5.8.10.2.5;
- 1> if the received *sl-MeasConfig* includes the *sl-ReportConfigToRemoveList* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink reporting configuration removal procedure as specified in 5.8.10.2.6;
- 1> if the received *sl-MeasConfig* includes the *sl-ReportConfigToAddModList* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink reporting configuration addition/modification procedure as specified in 5.8.10.2.7;
- 1> if the received *sl-MeasConfig* includes the *sl-QuantityConfig* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink quantity configuration procedure as specified in 5.8.10.2.8;
- 1> if the received *sl-MeasConfig* includes the *sl-MeasIdToRemoveList* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink measurement identity removal procedure as specified in 5.8.10.2.2;
- 1> if the received *sl-MeasConfig* includes the *sl-MeasIdToAddModList* in the *RRCReconfigurationSidelink*:
  - 2> perform the sidelink measurement identity addition/modification procedure as specified in 5.8.10.2.3;

### 5.8.10.2.2 Sidelink measurement identity removal

The UE shall:

- 1> for each *sl-MeasId* included in the received *sl-MeasIdToRemoveList* that is part of the current UE configuration in *VarMeasConfigSL*:
- 2> remove the entry with the matching *sl-MeasId* from the *sl-MeasIdList* within the *VarMeasConfigSL*;
- 2> remove the NR sidelink measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
- 2> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*.

NOTE: The UE does not consider the message as erroneous if the *sl-MeasIdToRemoveList* includes any *sl-MeasId* value that is not part of the current UE configuration.

#### 5.8.10.2.3 Sidelink measurement identity addition/modification

The UE shall:

- 1> for each *sl-MeasId* included in the received *sl-MeasIdToAddModList*:
- 2> if an entry with the matching *sl-MeasId* exists in the *sl-MeasIdList* within the *VarMeasConfigSL*:
  - 3> replace the entry with the value received for this *sl-MeasId*;
- 2> else:
  - 3> add a new entry for this *sl-MeasId* within the *VarMeasConfigSL*;
- 2> remove the measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
- 2> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*;

#### 5.8.10.2.4 Sidelink measurement object removal

The UE shall:

- 1> for each *sl-MeasObjectId* included in the received *sl-MeasObjectIdToRemoveList* that is part of *sl-MeasObjectList* in *VarMeasConfigSL*:
- 2> remove the entry with the matching *sl-MeasObjectId* from the *sl-MeasObjectList* within the *VarMeasConfigSL*;
- 2> remove all *sl-MeasId* associated with this *sl-MeasObjectId* from the *sl-MeasIdList* within the *VarMeasConfigSL*, if any;
- 2> if a *sl-MeasId* is removed from the *sl-MeasIdList*:
  - 3> remove the measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
  - 3> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*.

NOTE: The UE does not consider the message as erroneous if the *sl-MeasObjectIdToRemoveList* includes any *sl-MeasObjectId* value that is not part of the current UE configuration.

#### 5.8.10.2.5 Sidelink measurement object addition/modification

The UE shall:

- 1> for each *sl-MeasObjectId* included in the received *sl-MeasObjectIdToAddModList*:
- 2> if an entry with the matching *sl-MeasObjectId* exists in the *sl-MeasObjectList* within the *VarMeasConfigSL*, for this entry:

- 3> for each *sl-MeasId* associated with this *sl-MeasObjectId* included in the *sl-MeasIdList* within the *VarMeasConfigSL*, if any:
  - 4> remove the measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
  - 4> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*;
- 3> reconfigure the entry with the value received for this *sl-MeasObject*;
- 2> else:
  - 3> add a new entry for the received *sl-MeasObject* to the *sl-MeasObjectList* within *VarMeasConfigSL*.

#### 5.8.10.2.6 Sidelink reporting configuration removal

The UE shall:

- 1> for each *sl-ReportConfigId* included in the received *sl-ReportConfigToRemoveList* that is part of the current UE configuration in *VarMeasConfigSL*:
  - 2> remove the entry with the matching *sl-ReportConfigId* from the *sl-ReportConfigList* within the *VarMeasConfigSL*;
  - 2> remove all *sl-MeasId* associated with the *sl-ReportConfigId* from the *sl-MeasIdList* within the *VarMeasConfigSL*, if any;
  - 2> if a *sl-MeasId* is removed from the *sl-MeasIdList*:
    - 3> remove the measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
    - 3> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*.

NOTE: The UE does not consider the message as erroneous if the *sl-ReportConfigToRemoveList* includes any *sl-ReportConfigId* value that is not part of the current UE configuration.

#### 5.8.10.2.7 Sidelink reporting configuration addition/modification

The UE shall:

- 1> for each *sl-ReportConfigId* included in the received *sl-ReportConfigToAddModList*:
  - 2> if an entry with the matching *sl-ReportConfigId* exists in the *sl-ReportConfigList* within the *VarMeasConfigSL*, for this entry:
    - 3> reconfigure the entry with the value received for this *sl-ReportConfig*;
    - 3> for each *sl-MeasId* associated with this *sl-ReportConfigId* included in the *sl-MeasIdList* within the *VarMeasConfigSL*, if any:
      - 4> remove the measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
      - 4> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*;
  - 2> else:
    - 3> add a new entry for the received *sl-ReportConfig* to the *sl-ReportConfigList* within the *VarMeasConfigSL*.

#### 5.8.10.2.8 Sidelink quantity configuration

The UE shall:

- 1> for each received *sl-QuantityConfig*:
  - 2> set the corresponding parameter(s) in *sl-QuantityConfig* within *VarMeasConfigSL* to the value of the received *sl-QuantityConfig* parameter(s);
- 1> for each *sl-MeasId* included in the *sl-MeasIdList* within *VarMeasConfigSL*:
  - 2> remove the measurement reporting entry for this *sl-MeasId* from the *VarMeasReportListSL*, if included;
  - 2> stop the periodical reporting timer and reset the associated information (e.g. *sl-TimeToTrigger*) for this *sl-MeasId*.

### 5.8.10.3 Performing NR sidelink measurements

#### 5.8.10.3.1 General

A UE shall derive NR sidelink measurement results by measuring one or multiple DMRS associated per PC5-RRC connection as configured by the peer UE associated, as described in 5.8.10.3.2. For all NR sidelink measurement results the UE applies the layer 3 filtering as specified in clause 5.5.3.2, before using the measured results for evaluation of reporting criteria and measurement reporting. In this release, only NR sidelink RSRP can be configured as trigger quantity and reporting quantity.

The UE shall:

- 1> for each *sl-MeasId* included in the *sl-MeasIdList* within *VarMeasConfigSL*:
  - 2> if the *sl-MeasObject* is associated to NR sidelink and the *sl-RS-Type* is set to *dmrs*:
    - 3> derive the layer 3 filtered NR sidelink measurement result based on PSSCH DMRS for the trigger quantity and each measurement quantity indicated in *sl-ReportQuantity* using parameters from the associated *sl-MeasObject*, as described in 5.8.10.3.2.
  - 2> perform the evaluation of reporting criteria as specified in 5.8.10.4.

#### 5.8.10.3.2 Derivation of NR sidelink measurement results

The UE may be configured by the peer UE associated to derive NR sidelink RSRP measurement results per PC5-RRC connection associated to the NR sidelink measurement objects based on parameters configured in the *sl-MeasObject* and in the *sl-ReportConfig*.

The UE shall:

- 1> for each NR sidelink measurement quantity to be derived based on NR sidelink DMRS:
  - 2> derive the corresponding measurement of NR sidelink frequency indicated quantity based on PSSCH DMRS as described in TS 38.215 [9] in the concerned *sl-MeasObject*;
  - 2> apply layer 3 filtering as described in 5.5.3.2;

### 5.8.10.4 Sidelink measurement report triggering

#### 5.8.10.4.1 General

The UE shall:

- 1> for each *sl-MeasId* included in the *sl-MeasIdList* within *VarMeasConfigSL*:
  - 2> if the *sl-ReportType* is set to *sl-EventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *sl-EventId* of the corresponding *sl-ReportConfig* within *VarMeasConfigSL*, is fulfilled for NR sidelink frequency for all NR sidelink measurements after layer 3 filtering taken during *sl-TimeToTrigger* defined for this event within the *VarMeasConfigSL*, while the *VarMeasReportListSL* does not include a NR sidelink measurement reporting entry for this *sl-MeasId* (a first NR sidelink frequency triggers the event);

- 3> include a NR sidelink measurement reporting entry within the *VarMeasReportListSL* for this *sl-MeasId*;
- 3> set the *sl-NumberOfReportsSent* defined within the *VarMeasReportListSL* for this *sl-MeasId* to 0;
- 3> include the concerned NR sidelink frequency in the *sl-FrequencyTriggeredList* defined within the *VarMeasReportListSL* for this *sl-MeasId*;
- 3> initiate the NR sidelink measurement reporting procedure, as specified in 5.8.10.5;
- 2> else if the *sl-ReportType* is set to *sl-EventTriggered* and if the entry condition applicable for this event, i.e. the event corresponding with the *sl-EventId* of the corresponding *sl-ReportConfig* within *VarMeasConfigSL*, is fulfilled for NR sidelink frequency not included in the *sl-FrequencyTriggeredList* for all NR sidelink measurements after layer 3 filtering taken during *sl-TimeToTrigger* defined for this event within the *VarMeasConfigSL* (a subsequent NR sidelink frequency triggers the event):
  - 3> set the *sl-NumberOfReportsSent* defined within the *VarMeasReportListSL* for this *sl-MeasId* to 0;
  - 3> include the concerned NR sidelink frequency in the *sl-FrequencyTriggeredList* defined within the *VarMeasReportListSL* for this *sl-MeasId*;
  - 3> initiate the NR sidelink measurement reporting procedure, as specified in 5.8.10.5;
- 2> else if the *sl-ReportType* is set to *sl-EventTriggered* and if the leaving condition applicable for this event is fulfilled for NR sidelink frequency included in the *sl-FrequencyTriggeredList* defined within the *VarMeasReportListSL* for this *sl-MeasId* for all NR sidelink measurements after layer 3 filtering taken during *sl-TimeToTrigger* defined within the *VarMeasConfigSL* for this event:
  - 3> remove the concerned NR sidelink frequency in the *sl-FrequencyTriggeredList* defined within the *VarMeasReportListSL* for this *sl-MeasId*;
  - 3> if *sl-ReportOnLeave* is set to *true* for the corresponding reporting configuration:
    - 4> initiate the NR sidelink measurement reporting procedure, as specified in 5.8.10.5;
  - 3> if the *sl-FrequencyTriggeredList* defined within the *VarMeasReportListSL* for this *sl-MeasId* is empty:
    - 4> remove the NR sidelink measurement reporting entry within the *VarMeasReportListSL* for this *sl-MeasId*;
    - 4> stop the periodical reporting timer for this *sl-MeasId*, if running;
- 2> if *sl-ReportType* is set to *sl-Periodical* and if a (first) NR sidelink measurement result is available:
  - 3> include a NR sidelink measurement reporting entry within the *VarMeasReportListSL* for this *sl-MeasId*;
  - 3> set the *sl-NumberOfReportsSent* defined within the *VarMeasReportListSL* for this *sl-MeasId* to 0;
  - 3> initiate the NR sidelink measurement reporting procedure, as specified in 5.8.10.5, immediately after the quantity to be reported becomes available for the NR sidelink frequency;
- 2> upon expiry of the periodical reporting timer for this *sl-MeasId*:
  - 3> initiate the NR sidelink measurement reporting procedure, as specified in 5.8.10.5.

#### 5.8.10.4.2 Event S1 (Serving becomes better than threshold)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition S1-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition S1-2, as specified below, is fulfilled;
- 1> for this NR sidelink measurement, consider the NR sidelink frequency corresponding to the associated *sl-MeasObject* associated with this event.

Inequality S1-1 (Entering condition)

$$Ms - Hys > Thresh$$

Inequality S1-2 (Leaving condition)

$$Ms + Hys < Thresh$$

The variables in the formula are defined as follows:

***Ms*** is the NR sidelink measurement result of the NR sidelink frequency, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *sl-Hysteresis* as defined within *sl-ReportConfig* for this event).

***Thresh*** is the threshold parameter for this event (i.e. *s1-Threshold* as defined within *sl-ReportConfig* for this event).

***Ms*** is expressed in dBm in case of RSRP.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Ms***.

#### 5.8.10.4.3 Event S2 (Serving becomes worse than threshold)

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition S2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition S2-2, as specified below, is fulfilled;
- 1> for this NR sidelink measurement, consider the NR sidelink frequency indicated by the *sl-MeasObject* associated to this event.

Inequality S2-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality S2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

***Ms*** is the NR sidelink measurement result of the NR sidelink frequency, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *sl-Hysteresis* as defined within *sl-ReportConfig* for this event).

***Thresh*** is the threshold parameter for this event (i.e. *s2-Threshold* as defined within *sl-ReportConfig* for this event).

***Ms*** is expressed in dBm in case of RSRP.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Ms***.

#### 5.8.10.5 Sidelink measurement reporting

##### 5.8.10.5.1 General

Figure 5.8.10.5.1-1: NR sidelink measurement reporting

The purpose of this procedure is to transfer measurement results from the UE to the peer UE associated.

For the *sl-MeasId* for which the NR sidelink measurement reporting procedure was triggered, the UE shall set the *sl-MeasResults* within the *MeasurementReportSidelink* message as follows:

- 1> set the *sl-MeasId* to the measurement identity that triggered the NR sidelink measurement reporting;
- 1> if the *sl-ReportConfig* associated with the *sl-MeasId* that triggered the NR sidelink measurement reporting is set to *sl-EventTriggered* or *sl-Periodical*:
  - 2> set *sl-ResultDMRS* within *sl-MeasResult* to include the NR sidelink DMRS based quantity indicated in the *sl-ReportQuantity* within the concerned *sl-ReportConfig*;
- 1> increment the *sl-NumberOfReportsSent* as defined within the *VarMeasReportListSL* for this *sl-MeasId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *sl-NumberOfReportsSent* as defined within the *VarMeasReportListSL* for this *sl-MeasId* is less than the *sl-ReportAmount* as defined within the corresponding *sl-ReportConfig* for this *sl-MeasId*:
  - 2> start the periodical reporting timer with the value of *sl-ReportInterval* as defined within the corresponding *sl-ReportConfig* for this *sl-MeasId*;
- 1> else:
  - 2> if the *sl-ReportType* is set to *sl-Periodical*:
    - 3> remove the entry within the *VarMeasReportListSL* for this *sl-MeasId*;
    - 3> remove this *sl-MeasId* from the *sl-MeasIdList* within *VarMeasConfigSL*;
- 1> submit the *MeasurementReportSidelink* message to lower layers for transmission, upon which the procedure ends.

### 5.8.11 Zone identity calculation

The UE shall determine an identity of the zone (i.e. *Zone\_id*) in which it is located using the following formulae, if *sl-ZoneConfig* is configured:

$$x_1 = \text{Floor}(x / L) \bmod 64;$$

$$y_1 = \text{Floor}(y / L) \bmod 64;$$

$$\text{Zone\_id} = y_1 * 64 + x_1.$$

The parameters in the formulae are defined as follows:

**L** is the value of *sl-ZoneLength* included in *sl-ZoneConfig*;

**x** is the geodesic distance in longitude between UE's current location and geographical coordinates (0, 0) according to WGS84 model [58] and it is expressed in meters;

**y** is the geodesic distance in latitude between UE's current location and geographical coordinates (0, 0) according to WGS84 model [58] and it is expressed in meters.

NOTE: How the calculated *zone\_id* is used is specified in TS 38.321 [3].

### 5.8.12 DFN derivation from GNSS

When the UE selects GNSS as the synchronization reference source, the DFN, the subframe number within a frame and slot number within a frame used for NR sidelink communication/discovery are derived from the current UTC time, by the following formulae:

$$\text{DFN} = \text{Floor}(0.1 * (T_{\text{current}} - T_{\text{ref}} - \text{OffsetDFN})) \bmod 1024$$

$$\text{SubframeNumber} = \text{Floor}(T_{\text{current}} - T_{\text{ref}} - \text{OffsetDFN}) \bmod 10$$

$$\text{SlotNumber} = \text{Floor}((T_{\text{current}} - T_{\text{ref}} - \text{OffsetDFN}) * 2^{\mu}) \bmod (10 * 2^{\mu})$$

Where:

***T<sub>current</sub>*** is the current UTC time obtained from GNSS. This value is expressed in milliseconds;

***T<sub>ref</sub>*** is the reference UTC time 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Thursday, December 31, 1899 and Friday, January 1, 1900). This value is expressed in milliseconds;

***OffsetDFN*** is the value *sl-OffsetDFN* if configured, otherwise it is zero. This value is expressed in milliseconds.

$\mu=0/1/2/3$  corresponding to the 15/30/60/120 kHz of SCS for SL, respectively.

NOTE 1: In case of leap second change event, how UE obtains the scheduled time of leap second change to adjust *T<sub>current</sub>* correspondingly is left to UE implementation. How UE handles to avoid the sudden discontinuity of DFN is left to UE implementation.

NOTE 2: Void.

## 5.8.13 NR sidelink discovery

### 5.8.13.1 General

The purpose of this procedure is to perform NR sidelink discovery as specified in TS 23.304 [65].

### 5.8.13.2 NR sidelink discovery monitoring

A UE capable of NR sidelink discovery that is configured by upper layers to monitor NR sidelink discovery messages shall:

- 1> if the frequency used for NR sidelink discovery is included in *sl-FreqInfoToAddModList* in *RRCReconfiguration* message and *sl-DiscConfig* is included in *RRCReconfiguration*; or if the frequency used for NR sidelink discovery is included in *sl-FreqInfoList* included in *SIB12* and *sl-DiscConfigCommon* is included in *SIB12*:
  - 2> if the UE is configured with *sl-DiscRxPool* for NR sidelink discovery reception included in *RRCReconfiguration* message with *reconfigurationWithSync* (i.e. handover):
    - 3> configure lower layers to monitor sidelink control information and the corresponding data using the resource pool indicated by *sl-DiscRxPool* for NR sidelink discovery reception in *RRCReconfiguration*;
  - 2> else if the UE is configured with *sl-RxPool* for NR sidelink discovery reception included in *RRCReconfiguration* message with *reconfigurationWithSync* (i.e. handover):
    - 3> configure lower layers to monitor sidelink control information and the corresponding data using the resource pool indicated by *sl-RxPool* for NR sidelink discovery reception in *RRCReconfiguration*;
  - 2> else if the cell chosen for NR sidelink discovery reception provides *SIB12*:
    - 3> if *sl-DiscRxPool* for NR sidelink discovery reception is included in *SIB12*:
      - 4> configure lower layers to monitor sidelink control information and the corresponding data using the resource pool indicated by *sl-DiscRxPool* for NR sidelink discovery reception in *SIB12*;
    - 3> else if *sl-RxPool* for NR sidelink discovery reception is included in *SIB12*:
      - 4> configure lower layers to monitor sidelink control information and the corresponding data using the resource pool indicated by *sl-RxPool* for NR sidelink discovery reception in *SIB12*;
- 1> else:
  - 2> if out of coverage on the concerned frequency for NR sidelink discovery:
    - 3> if *sl-DiscRxPool* was preconfigured:

- 4> configure lower layers to monitor sidelink control information and the corresponding data using the resource pool that was preconfigured by *sl-DiscRxPool* for NR sidelink discovery reception in *SL-PreconfigurationNR*, as defined in clause 9.3;

3> else:

- 4> configure lower layers to monitor sidelink control information and the corresponding data using the resource pool that was preconfigured by *sl-RxPool* for NR sidelink discovery reception in *SL-PreconfigurationNR*, as defined in clause 9.3;

NOTE: If *sl-DiscRxPool* and *sl-RxPool* are both included in SIB12 or preconfigured, it is up to UE implementation whether to monitor sidelink control information and the corresponding data using the resource pool indicated by *sl-RxPool* for NR sidelink discovery reception.

### 5.8.13.3 NR sidelink discovery transmission

A UE capable of NR sidelink discovery that is configured by upper layer to transmit NR sidelink discovery message shall:

- 1> if the frequency used for NR sidelink discovery is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message; or if the frequency used for NR sidelink discovery is included in *sl-FreqInfoList* within *SIB12*:
- 2> if the UE is in *RRC\_CONNECTED* and uses the frequency included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message:
  - 3> if the UE is acting as NR sidelink U2N Relay UE and *sl-DiscConfig* is included in *RRCReconfiguration*, and if the NR sidelink U2N Relay UE threshold conditions as specified in 5.8.14.2 are met based on *sl-RelayUE-Config*; or
  - 3> if the UE is selecting NR sidelink U2N Relay UE / has a selected NR sidelink U2N Relay UE/ configured with measurement object associated to L2 U2N Relay UEs and *sl-DiscConfig* is included in *RRCReconfiguration*, and if the NR sidelink U2N Remote UE threshold conditions as specified in 5.8.15.2 are met based on *sl-RemoteUE-Config*; or
  - 3> if the UE is performing NR sidelink non-relay discovery:
    - 4> if the UE is configured with *sl-ScheduledConfig*:
      - 5> if T310 for MCG or T311 is running; and if *sl-TxPoolExceptional* is included in *sl-FreqInfoList* for the concerned frequency in *SIB12* or included in *sl-ConfigDedicatedNR* in *RRCReconfiguration*; or
      - 5> if T301 is running and the cell on which the UE initiated RRC connection re-establishment provides *SIB12* including *sl-TxPoolExceptional* for the concerned frequency; or
      - 5> if T304 for MCG is running and the UE is configured with *sl-TxPoolExceptional* included in *sl-ConfigDedicatedNR* for the concerned frequency in *RRCReconfiguration*:
        - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection using the resource pool indicated by *sl-TxPoolExceptional* as defined in TS 38.321 [3] for NR sidelink discovery transmission;
    - 5> else:
      - 6> configure lower layers to perform the sidelink resource allocation mode 1 using the resource pool indicated by *sl-DiscTxPoolScheduling* or *sl-TxPoolScheduling* for NR sidelink discovery transmission on the concerned frequency in *RRCReconfiguration*;
    - 5> if T311 is running, configure the lower layers to release the resources indicated by *rrc-ConfiguredSidelinkGrant* (if any);
  - 4> if the UE is configured with *sl-UE-SelectedConfig*:

- 5> if the *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency is included in the *sl-ConfigDedicatedNR* within *RRCReconfiguration*, and if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* is not available in accordance with TS 38.214 [19]; or
- 5> if the *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency is not included in the *sl-ConfigDedicatedNR* within *RRCReconfiguration*, and a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* is not available in accordance with TS 38.214 [19];
- 6> if *sl-TxPoolExceptional* for the concerned frequency is included in *RRCReconfiguration*; or
- 6> if the PCell provides *SIB12* including *sl-TxPoolExceptional* in *sl-FreqInfoList* for the concerned frequency:
  - 7> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection using the resource pool indicated by *sl-TxPoolExceptional* as defined in TS 38.321 [3] for NR sidelink discovery transmission;
- 5> else, if the *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency is included in the *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* (as defined in TS 38.321 [3] and TS 38.214 [19]) using the pools of resources indicated by *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency in *RRCReconfiguration*;
- 5> else, if the *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency is included in the *sl-ConfigDedicatedNR* within *RRCReconfiguration*:
  - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* (as defined in TS 38.321 [3] and TS 38.214 [19]) using the pools of resources indicated by *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency in *RRCReconfiguration*;
- 2> else if the cell chosen for NR sidelink discovery transmission provides *SIB12*:
  - 3> if the UE is acting as NR sidelink U2N Relay UE and *sl-DiscConfigCommon* is included in *SIB12*, and if the NR sidelink U2N Relay UE threshold conditions as specified in 5.8.14.2 are met based on *sl-RelayUE-ConfigCommon* in *SIB12*; or
  - 3> if the UE is selecting NR sidelink U2N Relay UE / has a selected NR sidelink U2N Relay UE and *sl-DiscConfigCommon* is included in *SIB12*, and if the NR sidelink U2N Remote UE threshold conditions as specified in 5.8.15.2 are met based on *sl-RemoteUE-ConfigCommon* in *SIB12*; or
  - 3> if the UE is performing NR sidelink non-relay discovery:
    - 4> if *SIB12* includes *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency, and a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in the *sl-DiscTxPoolSelected* for NR sidelink discovery transmission is available in accordance with TS 38.214 [19] or random selection, if allowed by *sl-AllowedResourceSelectionConfig*, is selected;
    - 5> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* using the pools of resources indicated by *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency in *SIB12* as defined in TS 38.321 [3];
    - 4> else if *SIB12* includes *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency, and a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in the *sl-TxPoolSelectedNormal* for NR

sidelink discovery transmission is available in accordance with TS 38.214 [19] or random selection, if allowed by *sl-AllowedResourceSelectionConfig*, is selected:

- 5> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* using the pools of resources indicated by *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency in *SIB12* as defined in TS 38.321 [3];
- 4> else if *SIB12* includes *sl-TxPoolExceptional* for the concerned frequency:
  - 5> from the moment the UE initiates RRC connection establishment or RRC connection resume, until receiving an *RRCReconfiguration* including *sl-ConfigDedicatedNR*, or receiving an *RRCRelease* or an *RRCReject*; or
  - 5> if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency in *SIB12* is not available in accordance with TS 38.214 [19]; or
  - 5> if *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency is not included in *SIB12* and if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency in *SIB12* is not available in accordance with TS 38.214 [19];
  - 6> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection (as defined in TS 38.321 [3]) using one of the pools of resources indicated by *sl-TxPoolExceptional* for NR sidelink discovery transmission on the concerned frequency;
- 1> else if out of coverage on the concerned frequency for NR sidelink discovery:
  - 2> if the UE is acting as L3 U2N Relay UE; or
  - 2> if the UE is selecting NR sidelink U2N Relay UE / has a selected NR sidelink U2N Relay UE and if the NR sidelink U2N Remote UE threshold conditions as specified in 5.8.15.2 are met based on *sl-PreconfigDiscConfig* in *SidelinkPreconfigNR*; or
  - 2> if the UE is performing NR sidelink non-relay discovery:
    - 3> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* (as defined in TS 38.321 [3] and TS 38.214 [19]) using the pools of resources indicated in *sl-DiscTxPoolSelected* or *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency in *SidelinkPreconfigNR*.

NOTE: It is up to UE implementation to determine, in accordance with TS 38.321[3], which resource pool to use if multiple resource pools are configured, and which resource allocation scheme is used in the AS based on UE capability (for a UE in RRC\_IDLE/RRC\_INACTIVE) and the allowed resource schemes *sl-AllowedResourceSelectionConfig* in the resource pool configuration.

## 5.8.14 NR sidelink U2N Relay UE operation

### 5.8.14.1 General

This procedure is used by a UE supporting NR sidelink U2N Relay UE operation configured by upper layers to transmit NR sidelink discovery messages to evaluate AS layer conditions.

### 5.8.14.2 NR sidelink U2N Relay UE threshold conditions

A UE capable of NR sidelink U2N Relay UE operation shall:

- 1> if the threshold conditions specified in this clause were previously not met:
- 2> if *threshHighRelay* is not configured; or the RSRP measurement of the PCell, or the cell on which the UE camps, is below *threshHighRelay* by *hystMaxRelay* if configured; and

2> if *threshLowRelay* is not configured; or the RSRP measurement of the PCell, or the cell on which the UE camps, is above *threshLowRelay* by *hystMinRelay* if configured:

3> consider the threshold conditions to be met (entry);

1> else:

2> if the RSRP measurement of the PCell, or the cell on which the UE camps, is above *threshHighRelay* if configured; or

2> if the RSRP measurement of the PCell, or the cell on which the UE camps, is below *threshLowRelay* if configured;

3> consider the threshold conditions not to be met (leave);

## 5.8.15 NR sidelink U2N Remote UE operation

### 5.8.15.1 General

This procedure is used by a UE supporting NR sidelink U2N Remote UE operation configured by upper layers to transmit NR sidelink discovery message to evaluate AS layer conditions. The procedure is also used to perform selection and reselection of NR sidelink U2N Relay UE.

### 5.8.15.2 NR Sidelink U2N Remote UE threshold conditions

A UE capable of NR sidelink U2N Remote UE operation shall:

1> if the threshold conditions specified in this clause were previously not met:

2> if *threshHighRemote* is not configured; or the RSRP measurement of the PCell, or the cell on which the UE camps, is below *threshHighRemote* by *hystMaxRemote* if configured, or

2> if the UE has no serving cell:

3> consider the threshold conditions to be met (entry);

1> else:

2> if the RSRP measurement of the PCell, or the cell on which the UE camps, is above *threshHighRemote* if configured;

3> consider the threshold conditions not to be met (leave);

The L2 U2N Remote UE considers the cell indicated by *sl-ServingCellInfo* in the *SL-AccessInfo-L2U2N-r17* received from the connected L2 U2N Relay UE as the PCell/camping cell.

### 5.8.15.3 Selection and reselection of NR sidelink U2N Relay UE

A UE capable of NR sidelink U2N Remote UE operation that is configured by upper layers to search for a NR sidelink U2N Relay UE shall:

1> if the UE has no serving cell; or

1> if the RSRP measurement of the cell on which the UE camps (for L2 and L3 U2N Remote UE in RRC\_IDLE or RRC\_INACTIVE)/ the PCell (for L3 U2N Remote UE in RRC\_CONNECTED) is below *threshHighRemote* within *sl-RemoteUE-ConfigCommon* / *sl-RemoteUE-Config*;

2> if the UE does not have a selected NR sidelink U2N Relay UE; or

2> if the UE has a selected NR sidelink U2N Relay UE, and SL-RSRP of the currently selected NR sidelink U2N Relay UE is available and is below *sl-RSRP-Thresh*; or

- 2> if the UE has a selected NR sidelink U2N Relay UE, and SL-RSRP of the currently selected NR sidelink U2N Relay UE is not available, and SD-RSRP of the currently selected U2N Relay UE is below *sl-RSRP-Thresh*; or

NOTE 1: U2N Remote UE uses SL-RSRP measurements for relay reselection trigger evaluation when there is data transmission from U2N Relay UE to U2N Remote UE, and it is left to UE implementation whether to use SL-RSRP or SD-RSRP for relay reselection trigger evaluation in case of no data transmission from U2N Relay UE to U2N Remote UE. If SD-RSRP is used, the discovery procedure will be performed between the U2N Remote UE and the selected U2N Relay UE.

- 2> if the UE has a selected NR sidelink U2N Relay UE, and upper layers indicate not to use the currently selected NR sidelink U2N Relay UE; or
- 2> if the UE has a selected NR sidelink U2N Relay UE, and upper layers request the release of the PC5-RRC connection; or
- 2> if the UE has a selected NR sidelink U2N Relay UE, and sidelink radio link failure is detected on the PC5-RRC connection with the current U2N Relay UE as specified in clause 5.8.9.3:
- 3> perform NR sidelink discovery procedure as specified in clause 5.8.13 in order to search for candidate NR sidelink U2N Relay UEs:
  - 4> when evaluating the one or more detected NR sidelink U2N Relay UEs, apply layer 3 filtering as specified in 5.5.3.2 across measurements that concern the same U2N Relay UE ID and using the *sl-FilterCoefficientRSRP* in *SIB12* (if in RRC\_IDLE/INACTIVE), the *sl-FilterCoefficientRSRP* in *sl-ConfigDedicatedNR* (if in RRC\_CONNECTED) or the *sl-FilterCoefficientRSRP* in *SidelinkPreconfigNR* (out of coverage), before using the SD-RSRP measurement results;
  - 4> consider a candidate NR sidelink U2N Relay UE for which SD-RSRP exceeds *sl-RSRP-Thresh* by *sl-HystMin* has met the AS criteria;
- 3> if the UE detects any suitable NR sidelink U2N Relay UE(s):
  - 4> consider one of the available suitable NR sidelink U2N relay UE(s) can be selected;

NOTE 2: A candidate NR sidelink U2N Relay UE which meets all AS layer criteria defined in 5.8.15.3 and higher layer criteria defined in TS 23.304 [65] can be regarded as suitable NR sidelink U2N Relay UE by the NR sidelink U2N Remote UE. If multiple suitable NR sidelink U2N Relay UEs are available, it is up to Remote UE implementation to choose one NR sidelink U2N Relay UE. The details of the interaction with upper layers are up to UE implementation.

NOTE 3: For L2 U2N Remote UEs in RRC\_IDLE/INACTIVE and L3 U2N Remote UEs, the cell (re)selection procedure and relay (re)selection procedure run independently. If both suitable cells and suitable NR sidelink U2N Relay UEs are available, it is up to NR sidelink U2N Remote UE implementation to select either a cell or a NR sidelink U2N Relay UE. Furthermore, L3 U2N Remote UE's selection on both cell and NR sidelink U2N Relay UE is also based on UE implementation.

3> else:

- 4> consider no NR sidelink U2N Relay UE to be selected.

When evaluating the currently selected NR sidelink U2N Relay UE, the U2N Remote UE should apply layer 3 filtering as specified in 5.5.3.2 using the *sl-FilterCoefficientRSRP* in *SIB12* (if in RRC\_IDLE/INACTIVE), the *sl-FilterCoefficientRSRP* in *sl-ConfigDedicatedNR* (if in RRC\_CONNECTED) or the *sl-FilterCoefficientRSRP* in *SidelinkPreconfigNR* (out of coverage), before using the SL-RSRP or SD-RSRP measurement results.

## 5.9 MBS Broadcast

### 5.9.1 Introduction

#### 5.9.1.1 General

UE receiving or interested to receive MBS broadcast service(s) applies MBS broadcast procedures described in this clause as well as the MBS Interest Indication procedure as specified in clause 5.9.4. The UE may acquire MBS broadcast only if the UE can acquire it without disrupting unicast, SDT or MBS multicast data reception.

MBS broadcast configuration information, except CFR configuration for MCCH/MTCH, is provided on MCCH logical channel. MCCH carries the *MBSBroadcastConfiguration* message which indicates the MBS broadcast sessions that are provided in the cell as well as the corresponding scheduling related information for these sessions. Optionally, the *MBSBroadcastConfiguration* message may also contain a list of neighbour cells providing the same broadcast MBS service(s) as provided in the current cell. The configuration information required by the UE to receive MCCH is provided in *SIB1* and *SIB20*. Additionally, System Information may provide information related to service continuity of MBS broadcast in *SIB21*.

#### 5.9.1.2 MCCH scheduling

The MCCH information (i.e. information transmitted in messages sent over MCCH) is transmitted periodically, using a configurable repetition period and within a configured transmission window. MCCH transmissions (and the associated radio resources and MCS) are indicated via the PDCCH addressed to MCCH-RNTI. PDCCH monitoring occasion(s) for MCCH transmission are determined according to the common search space indicated by *searchspaceMCCH*. If *searchspaceMCCH* is set to zero, PDCCH monitoring occasions for MCCH message reception in the MCCH transmission window are the same as PDCCH monitoring occasions for *SIB1* where the mapping between PDCCH monitoring occasions and SSBs is specified in TS 38.213[13]. If *searchspaceMCCH* is not set to zero, PDCCH monitoring occasions for MCCH message are determined based on search space indicated by *searchspaceMCCH*. PDCCH monitoring occasions for MCCH message which are not overlapping with UL symbols (determined according to *tdd-UL-DL-ConfigurationCommon*) are sequentially numbered from one in the MCCH transmission window. The  $[x \times N + K]^{\text{th}}$  PDCCH monitoring occasion for MCCH message in MCCH transmission window corresponds to the  $K^{\text{th}}$  transmitted SSB, where  $x = 0, 1, \dots, X-1$ ,  $K = 1, 2, \dots, N$ ,  $N$  is the number of actual transmitted SSBs determined according to *ssb-PositionsInBurst* in *SIB1* and  $X$  is equal to  $\text{CEIL}(\text{number of PDCCH monitoring occasions in MCCH transmission window} / N)$ . The actual transmitted SSBs are sequentially numbered from one in ascending order of their SSB indexes. The UE assumes that, in the MCCH transmission window, PDCCH for an MCCH message is transmitted in at least one PDCCH monitoring occasion corresponding to each transmitted SSB and thus the selection of SSB for the reception MCCH messages is up to UE implementation.

#### 5.9.1.3 MCCH information validity and notification of changes

Change of MCCH information only occurs at specific radio frames, i.e. the concept of a modification period is used. Within a modification period, the same MCCH information may be transmitted a number of times, as defined by its scheduling (which is based on a repetition period).

When the network changes (some of) the MCCH information, it notifies the UEs about the change starting from the beginning of the MCCH modification period via PDCCH which schedules the MCCH in every repetition in that modification period.

Upon receiving a change notification, a UE receiving or interested to receive MBS services transmitted using MBS broadcast acquires the new MCCH information starting from the same slot. The UE applies the previously acquired MCCH information until the UE acquires the new MCCH information. The notification is transmitted with a 2-bit bitmap, see TS 38.212 [17] clause 7.3.1.5.1. The MSB in the 2-bit bitmap, when set to '1', indicates the start of new MBS service(s). The LSB in the 2-bit bitmap, when set to '1', indicates modification of MCCH information other than the change caused by start of new MBS service(s), e.g. modification of a configuration of an on-going MBS session(s), MBS session(s) stop or neighbouring cell information modification.

## 5.9.2 MCCH information acquisition

### 5.9.2.1 General

**Figure 5.9.2.1-1: MCCH information acquisition**

The UE applies the MCCH information acquisition procedure to acquire the MBS broadcast configuration information broadcasted by the network. The procedure applies to MBS capable UEs interested to receive or that are receiving MBS broadcast services that are in RRC\_IDLE, RRC\_INACTIVE or RRC\_CONNECTED with an active BWP with common search space configured by *searchSpaceMCCH*.

### 5.9.2.2 Initiation

A UE shall apply the MCCH information acquisition procedure upon becoming interested to receive MBS broadcast services. A UE interested to receive MBS broadcast services shall apply the MCCH information acquisition procedure upon entering the cell providing *SIB20* (e.g. upon power on, following UE mobility), upon receiving *SIB20* of an SCell via dedicated signalling and upon receiving a notification that the MCCH information has changed due to the start of new MBS service(s). A UE that is receiving data via broadcast MRB shall apply the MCCH information acquisition procedure upon receiving a notification that the MCCH information has changed due to MCCH information modification other than the change caused by the start of new MBS service(s).

NOTE 1: It is up to UE implementation how to address a possibility of the UE missing an MCCH change notification.

NOTE 2: It is up to UE implementation to use the cell/tracking area list in the USD to avoid acquiring the MCCH when the UE is outside the MBS service area of the MBS broadcast service.

Unless explicitly stated otherwise in the procedural specification, the MCCH information acquisition procedure overwrites any stored MCCH information, i.e. delta configuration is not applicable for MCCH information and the UE discontinues using a field if it is absent in MCCH information.

### 5.9.2.3 MCCH information acquisition by the UE

An MBS capable UE interested to receive or receiving an MBS broadcast service shall:

- 1> if the procedure is triggered by an MCCH information change notification:
  - 2> start acquiring the *MBSBroadcastConfiguration* message on MCCH in the concerned cell from the slot in which the change notification was received;
- 1> if the UE enters a cell providing *SIB20*; or
- 1> if the UE receives *sCellSIB20*:
  - 2> acquire the *MBSBroadcastConfiguration* message on MCCH in the concerned cell at the next repetition period.

### 5.9.2.4 Actions upon reception of the *MBSBroadcastConfiguration* message

No UE requirements related to the contents of the *MBSBroadcastConfiguration* message apply other than those specified elsewhere e.g. within the corresponding field descriptions.

## 5.9.3 Broadcast MRB configuration

### 5.9.3.1 General

The broadcast MRB configuration procedure is used by the UE to configure PDCP, RLC, MAC and the physical layer upon starting and/or stopping to receive a broadcast MRB transmitted on MTCH, or upon modification of a configuration of a broadcast MRB received by the UE. The procedure applies to MBS capable UEs that are interested to receive or that are receiving an MBS broadcast service that are in RRC\_IDLE, RRC\_INACTIVE or RRC\_CONNECTED with an active BWP with common search space configured by *searchSpaceMTCH* or *searchSpaceMCCH*.

NOTE: How to perform a modification of a broadcast MRB which is already configured in the UE is left to UE implementation.

### 5.9.3.2 Initiation

The UE applies the broadcast MRB establishment procedure to start receiving an MBS session of an MBS broadcast service it is interested in. The procedure may be initiated e.g. upon start of the MBS session, upon entering a cell providing an MBS broadcast service the UE is interested in, upon becoming interested in the ongoing MBS broadcast service, upon removal of the UE capability limitations inhibiting reception of the ongoing MBS broadcast service UE is interested in.

The UE applies the broadcast MRB release procedure to stop receiving a session of an MBS broadcast service. The procedure may be initiated e.g. upon stop of the MBS session, upon leaving the cell broadcasting the MBS service the UE is interested in, upon losing interest in the MBS service, when capability limitations start inhibiting reception of the concerned service.

### 5.9.3.3 Broadcast MRB establishment

Upon a broadcast MRB establishment, the UE shall:

- 1> establish a PDCP entity and an RLC entity in accordance with *MRB-InfoBroadcast* for this broadcast MRB included in the *MBSBroadcastConfiguration* message and the configuration specified in 9.1.1.7;
- 1> configure the MAC layer in accordance with the *mtch-SchedulingInfo* (if included);
- 1> configure the physical layer in accordance with the *mbs-SessionInfoList*, *searchSpaceMTCH*, and *pdsch-ConfigMTCH*, applicable for the broadcast MRB;
- 1> if an SDAP entity with the received *mbs-SessionId* does not exist:
  - 2> establish an SDAP entity as specified in TS 37.324 [24] clause 5.1.1;
  - 2> indicate the establishment of the user plane resources for the *mbs-SessionId* to upper layers;
- 1> receive DL-SCH on the cell where the *MBSBroadcastConfiguration* message was received for the established broadcast MRB using *g-RNTI* and *mtch-SchedulingInfo* (if included) in this message for this MBS broadcast service.

### 5.9.3.4 Broadcast MRB release

Upon broadcast MRB release for MBS broadcast service, the UE shall:

- 1> release the PDCP entity, RLC entity as well as the related MAC and physical layer configuration;
- 1> if the SDAP entity associated with the corresponding *mbs-SessionId* has no associated MRB:
  - 2> release the SDAP entity, as specified in TS 37.324 [24] clause 5.1.2;
  - 2> indicate the release of the user plane resources for the *mbs-SessionId* to upper layers.

## 5.9.4 MBS Interest Indication

### 5.9.4.1 General

**Figure 5.9.4.1-1: MBS Interest Indication**

The purpose of this procedure is to inform the network that the UE in RRC\_CONNECTED is receiving or is interested to receive MBS broadcast service(s) and to inform the network about the priority of MBS broadcast versus unicast and multicast MRB reception. MBS Interest Indication can only be sent after AS security activation.

### 5.9.4.2 Initiation

An MBS capable UE in RRC\_CONNECTED may initiate the procedure in several cases including upon successful connection establishment/resume, upon entering or leaving the broadcast service area, upon MBS broadcast session start or stop, upon change of interest, upon change of priority between MBS broadcast reception and unicast/multicast reception, upon change to a PCell providing *SIB21* (i.e. where the *SIB1* scheduling information contains *SIB21*), upon receiving *SIB20* of an SCell via dedicated signalling, upon handover, and upon RRC connection re-establishment.

Upon initiating the procedure, the UE shall:

- 1> if *SIB21* is provided by the PCell:
    - 2> ensure having a valid version of *SIB21* for the PCell;
    - 2> if the UE did not transmit MBS Interest Indication since last entering RRC\_CONNECTED state; or
    - 2> if since the last time the UE transmitted an MBS Interest Indication, the UE connected to a PCell not providing *SIB21*:
    - 3> if the set of MBS broadcast frequencies of interest, determined in accordance with 5.9.4.3, is not empty:
      - 4> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate transmission of the *MBSInterestIndication* message;
    - 2> else:
      - 3> if the set of MBS broadcast frequencies of interest, determined in accordance with 5.9.4.3, is different from *mbs-FreqList* included in the last transmission of the MBS Interest Indication; or
      - 3> if the prioritisation of reception of all indicated MBS broadcast frequencies compared to reception of any of the established unicast bearers and multicast MRBs has changed since the last transmission of the MBS Interest Indication:
        - 4> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate transmission of the *MBSInterestIndication* message;
- NOTE: The UE may send MBS Interest Indication even when it is able to receive the MBS services it is interested in, i.e. to avoid that the network allocates a configuration inhibiting MBS broadcast reception.
- 3> else if *SIB20* is provided for the PCell or for the SCell:
    - 4> if since the last time the UE transmitted the MBS Interest Indication, the UE connected to a PCell not providing *SIB20* and the UE was not provided with *SIB20* for an SCell; or

- 4> if the set of MBS broadcast services of interest determined in accordance with 5.9.4.4 is different from *mbs-ServiceList* included in the last transmission of the MBS Interest Indication:
- 5> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate the transmission of *MBSInterestIndication* message.

#### 5.9.4.3 MBS frequencies of interest determination

The UE shall:

- 1> consider a frequency to be part of the MBS frequencies of interest if the following conditions are met:

- 2> at least one MBS session the UE is receiving or interested to receive via a broadcast MRB is ongoing or about to start; and

NOTE 1: The UE may determine whether the session is ongoing or about to start from the start and stop time indicated in the User Service Description (USD), see TS 38.300 [2] or TS 23.247 [67].

- 2> for at least one of these MBS sessions, *SIB21* acquired from the PCell includes mapping between the concerned frequency and one or more MBS FSAs indicated in the USD for this session, or for at least one of these MBS sessions, the concerned frequency is not included in *SIB21* but is indicated in the USD for this session; and

NOTE 2: The UE considers a frequency to be part of the MBS frequencies of interest even though NG-RAN may (temporarily) not employ a broadcast MRB for the concerned session, i.e., the UE does not verify if the session is indicated on MCCH.

- 2> the *supportedBandCombinationList* the UE included in *UE-NR-Capability* contains at least one band combination including the concerned MBS frequency.

NOTE 3: When evaluating which frequencies the UE is capable of receiving, the UE does not take into account whether they are currently configured as serving frequencies.

#### 5.9.4.4 MBS services of interest determination

The UE shall:

- 1> consider an MBS service to be part of the MBS services of interest if the following conditions are met:

- 2> the UE is receiving or interested to receive this service via a broadcast MRB; and

- 2> the session of this service is ongoing or about to start; and

- 2> one or more MBS FSAs in the USD for this service is included in *SIB21* acquired from the PCell for a frequency belonging to the set of MBS frequencies of interest, determined according to 5.9.4.3 or *SIB21* acquired from the PCell does not provide the frequency mapping for the concerned service but that frequency is included in the USD for this service.

NOTE: The UE may determine whether the session is ongoing or about to start from the start and stop time indicated in the User Service Description (USD), see TS 38.300 [2] or TS 23.247 [67].

#### 5.9.4.5 Setting of the contents of MBS Interest Indication

The UE shall set the contents of the MBS Interest Indication as follows:

- 1> if the set of MBS frequencies of interest, determined in accordance with 5.9.4.3, is not empty:

- 2> include *mbs-FreqList* and set it to include the MBS frequencies of interest sorted by decreasing order of interest, using the *absoluteFrequencySSB* for serving frequency, if applicable, and the *ARFCN-ValueNR(s)* as included in *SIB21* or in USD (for neighbouring frequencies);

- 2> include *mbs-Priority* if the UE prioritises reception of all indicated MBS frequencies above reception of any of the unicast bearers and multicast MRBs;

NOTE 1: If the UE prioritises MBS broadcast reception and unicast/multicast data cannot be supported because of congestion on the MBS carrier(s), NG-RAN may for example initiate release of unicast bearers/multicast MRBs.

2> if *SIB20* is provided for the PCell or for the SCell:

3> include *mbs-ServiceList* and set it to indicate the set of MBS services of interest sorted by decreasing order of interest determined in accordance with 5.9.4.4.

NOTE 2: The *mbs-ServiceList* is not required to be used by the NG-RAN to determine the frequency on which to enable MBS broadcast reception for the UE.

---

## 6 Protocol data units, formats and parameters (ASN.1)

### 6.1 General

#### 6.1.1 Introduction

The contents of each RRC message is specified in clause 6.2 using ASN.1 to specify the message syntax and using tables when needed to provide further detailed information about the fields specified in the message syntax. The syntax of the information elements that are defined as stand-alone abstract types is further specified in a similar manner in clause 6.3.

Usage of the text "Network always configures the UE with a value for this field" in the field description indicates that the network has to provide a value for the field in this or in a previous message based on delta configuration (for an optional field with Need M). It does not imply a mandatory presence of the field.

#### 6.1.2 Need codes and conditions for optional fields

The need for fields to be present in a message or an abstract type, i.e., the ASN.1 fields that are specified as OPTIONAL in the abstract notation (ASN.1), is specified by means of comment text tags attached to the OPTIONAL statement in the abstract syntax. All comment text tags are available for use in the downlink direction for RRC message and in the sidelink for PC5 RRC message. The meaning of each tag is specified in table 6.1.2-1.

If conditions are used, a conditional presence table is provided for the message or information element specifying the need of the field for each condition case. The table also specifies whether UE maintains or releases the value in case the field is absent. The conditions clarify what the UE may expect regarding the setting of the message by the network for the RRC message or by the peer UE in the sidelink RRC message. Violation of conditions is regarded as invalid network behaviour when transmitting downlink RRC message or invalid UE behavior when transmitting PC5 RRC message, which the UE is not required to cope with. Hence the general error handling defined in 10.4 does not apply in case a field is absent although it is mandatory according to the CondC or CondM condition.

For guidelines on the use of need codes and conditions, see Annex A.6 and A.7.

**Table 6.1.2-1: Meaning of abbreviations used to specify the need for fields to be present**

| Abbreviation       | Meaning                                                                                                                                                                                                                                                                                 |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cond conditionTag  | Conditionally present<br>Presence of the field is specified in a tabular form following the ASN.1 segment.                                                                                                                                                                              |
| CondC conditionTag | Configuration condition<br>Presence of the field is conditional to other configuration settings.                                                                                                                                                                                        |
| CondM conditionTag | Message condition<br>Presence of the field is conditional to other fields included in the message.                                                                                                                                                                                      |
| Need S             | <i>Specified</i><br>Used for (configuration) fields, whose field description or procedure <b>specifies</b> the UE behavior performed upon receiving a message with the field absent (and not if field description or procedure specifies the UE behavior when field is not configured). |
| Need M             | <i>Maintain</i><br>Used for (configuration) fields that are stored by the UE i.e. not one-shot. Upon receiving a message with the field absent, the UE maintains the current value.                                                                                                     |
| Need N             | <i>No action</i> (one-shot configuration that is not maintained)<br>Used for (configuration) fields that are not stored and whose presence causes a one-time action by the UE. Upon receiving message with the field absent, the UE takes no action.                                    |
| Need R             | <i>Release</i><br>Used for (configuration) fields that are stored by the UE i.e. not one-shot. Upon receiving a message with the field absent, the UE releases the current value.                                                                                                       |

NOTE: In this version of the specification, the condition tags CondC and CondM are not used.

Any field with Need M or Need N in system information shall be interpreted as Need R.

The need code used within a CondX definition only applies for the case (part of the condition) where it is defined: A condition may have different need codes for different parts of the condition. In particular, the CondX definition may contain the following "otherwise the field is absent" parts:

- "Otherwise, the field is absent": The field is not relevant or should not be configured when this part of the condition applies. In particular, the UE behaviour is not defined when the field is configured via another part of the condition and is reconfigured to this part of the condition. A need code is not provided when the transition from another part of the condition to this part of the condition is not supported, when the field clearly is a one-shot or there is no difference whether UE maintains or releases the value (e.g., in case the field is mandatory present according to the other part of the condition).
- "Otherwise, the field is absent, Need R": The field is released if absent when this part of the condition applies. This handles UE behaviour in case the field is configured via another part of the condition and this part of the condition applies (which means that network when transmitting downlink RRC message or peer UE transmitting PC5 RRC message can assume UE releases the field if this part of the condition is valid).
- "Otherwise, the field is absent, Need M": The UE retains the field if it was already configured when this part of the condition applies. This means the network when transmitting downlink RRC message or the peer UE when transmitting PC5 RRC message cannot release the field, but UE retains the previously configured value.

Use of different Need codes in different parts of a condition should be avoided.

For downlink RRC message and sidelink PC5 RRC messages, the need codes, conditions and ASN.1 defaults specified for a particular (child) field only apply in case the (parent) field including the particular field is present. Thus, if the parent is absent the UE shall not release the field unless the absence of the parent field implies that.

For (parent) fields without need codes in downlink RRC messages or sidelink PC5 RRC message, if the parent field is absent, UE shall follow the need codes of the child fields. Thus, if parent field is absent, the need code of each child field is followed (i.e. Need R child fields are released, Need M child fields are not modified and the actions for Need S child fields depend on the specified conditions of each field). Examples of (parent) fields in downlink RRC messages and sidelink PC5 RRC message without need codes where this rule applies are:

- *nonCriticalExtension* fields at the end of a message using empty SEQUENCE extension mechanism,
- groups of non-critical extensions using double brackets (referred to as extension groups), and
- non-critical extensions at the end of a message or at the end of a structure, contained in a BIT STRING or OCTET STRING (referred to as parent extension fields).

The handling of need codes as specified in the previous is illustrated by means of an example, as shown in the following ASN.1.

```
-- /example/ ASN1START

RRCTest-IEs ::=
  field1
  field2
  nonCriticalExtension
}

RRCTest-1570-IEs ::=
  field3
  nonCriticalExtension
}

RRCTest-v1640-IEs ::=
  field4
  nonCriticalExtension
}

InformationElement1 ::=
  field10
  field11
  field12
  ...
  [[
    field13
    field14
  ]]
}

InformationElement2 ::=
  field21
  ...
}

-- ASN1STOP
```

The handling of need codes as specified in the previous implies that:

- if *field1* in *RRCMessage-IEs* is absent, UE does not modify or take action on any child fields configured within *field1* (regardless of their need codes);
- if *field2* in *RRCMessage-IEs* is absent, UE releases the *field2* (and also its child field *field21*);
- if *field1* or *field2* in *RRCMessage-IEs* is present, UE retains or releases their child fields according to the child field presence conditions;
- if *field1* in *RRCMessage-IEs* is present but the extension group containing *field13* and *field14* is absent, the UE releases *field13* but does not modify *field14*;
- if *nonCriticalExtension* defined by IE *RRCMessage-v1570-IEs* is absent, the UE does not modify *field3* but releases *field4*;

### 6.1.3 General rules

In the ASN.1 of this specification, the first bit of a bit string refers to the leftmost bit, unless stated otherwise.

Upon reception of a list not using ToAddModList and ToReleaseList structure, the UE shall delete all entries of the list currently in the UE configuration before applying the received list and shall consider each entry as newly created. This applies also to lists whose size is extended (i.e. with a second list structure in the ASN.1 comprising additional entries), unless otherwise specified. This implies that Need M should not be used for fields in the entries of these lists; if used, UE will handle such fields equivalent to a Need R.

## 6.2 RRC messages

### 6.2.1 General message structure

#### — *NR-RRC-Definitions*

This ASN.1 segment is the start of the NR RRC PDU definitions.

```
-- ASN1START
-- TAG-NR-RRC-DEFINITIONS-START
```

```
NR-RRC-Definitions DEFINITIONS AUTOMATIC TAGS ::=
```

```
BEGIN
```

```
-- TAG-NR-RRC-DEFINITIONS-STOP
-- ASN1STOP
```

#### — *BCCH-BCH-Message*

The *BCCH-BCH-Message* class is the set of RRC messages that may be sent from the network to the UE via BCH on the BCCH logical channel.

```
-- ASN1START
-- TAG-BCCH-BCH-MESSAGE-START
```

```

BCCH-BCH-Message ::=
    message
    SEQUENCE {
        BCCH-BCH-MessageType
    }

BCCH-BCH-MessageType ::=
    CHOICE {
        mib MIB,
        messageClassExtension SEQUENCE {}
    }

-- TAG-BCCH-BCH-MESSAGE-STOP
-- ASN1STOP

```

### — *BCCH-DL-SCH-Message*

The *BCCH-DL-SCH-Message* class is the set of RRC messages that may be sent from the network to the UE via DL-SCH on the BCCH logical channel.

```

-- ASN1START
-- TAG-BCCH-DL-SCH-MESSAGE-START

BCCH-DL-SCH-Message ::=
    message
    SEQUENCE {
        BCCH-DL-SCH-MessageType
    }

BCCH-DL-SCH-MessageType ::=
    CHOICE {
        c1 CHOICE {
            systemInformation SystemInformation,
            systemInformationBlockType1 SIB1
        },
        messageClassExtension SEQUENCE {}
    }

-- TAG-BCCH-DL-SCH-MESSAGE-STOP
-- ASN1STOP

```

### — *DL-CCCH-Message*

The *DL-CCCH-Message* class is the set of RRC messages that may be sent from the Network to the UE on the downlink CCCH logical channel.

```

-- ASN1START
-- TAG-DL-CCCH-MESSAGE-START

DL-CCCH-Message ::=
    message
    SEQUENCE {
        DL-CCCH-MessageType
    }

DL-CCCH-MessageType ::=
    CHOICE {
        c1 CHOICE {
            rrcReject RRCReject,

```

```

        rrcSetup
        spare2
        spare1
    },
    messageClassExtension
}

-- TAG-DL-CCCH-MESSAGE-STOP
-- ASN1STOP

```

### — *DL-DCCH-Message*

The *DL-DCCH-Message* class is the set of RRC messages that may be sent from the network to the UE on the downlink DCCH logical channel.

```

-- ASN1START
-- TAG-DL-DCCH-MESSAGE-START

DL-DCCH-Message ::=
    message
}

DL-DCCH-MessageType ::=
    c1
        rrcReconfiguration
        rrcResume
        rrcRelease
        rrcReestablishment
        securityModeCommand
        dlInformationTransfer
        ueCapabilityEnquiry
        counterCheck
        mobilityFromNRCommand
        dlDedicatedMessageSegment-r16
        ueInformationRequest-r16
        dlInformationTransferMRDC-r16
        loggedMeasurementConfiguration-r16
        spare3 NULL, spare2 NULL, spare1 NULL
    },
    messageClassExtension
}

-- TAG-DL-DCCH-MESSAGE-STOP
-- ASN1STOP

```

### — *MCCH-Message*

The *MCCH-Message* class is the set of RRC messages that may be sent from the network to the UE on the MCCH logical channel.

```

-- ASN1START

```

```

-- TAG-MCCH-MESSAGE-START

MCCH-Message-r17 ::= SEQUENCE {
    message          MCCH-MessageType-r17
}

MCCH-MessageType-r17 ::= CHOICE {
    c1                CHOICE {
        mbsBroadcastConfiguration-r17  MBSBroadcastConfiguration-r17,
        spare1                          NULL
    },
    messageClassExtension SEQUENCE {}
}

-- TAG-MCCH-MESSAGE-STOP
-- ASN1STOP

```

## — *PCCH-Message*

The *PCCH-Message* class is the set of RRC messages that may be sent from the Network to the UE on the PCCH logical channel.

```

-- ASN1START
-- TAG-PCCH-PCH-MESSAGE-START

PCCH-Message ::= SEQUENCE {
    message          PCCH-MessageType
}

PCCH-MessageType ::= CHOICE {
    c1                CHOICE {
        paging        Paging,
        spare1        NULL
    },
    messageClassExtension SEQUENCE {}
}

-- TAG-PCCH-PCH-MESSAGE-STOP
-- ASN1STOP

```

## — *UL-CCCH-Message*

The *UL-CCCH-Message* class is the set of 48-bits RRC messages that may be sent from the UE to the Network on the uplink CCCH logical channel.

```

-- ASN1START
-- TAG-UL-CCCH-MESSAGE-START

UL-CCCH-Message ::= SEQUENCE {
    message          UL-CCCH-MessageType
}

```

```

}
UL-CCCH-MessageType ::=
    c1 CHOICE {
        rrcSetupRequest          RRCSetupRequest,
        rrcResumeRequest         RRCResumeRequest,
        rrcReestablishmentRequest RRCReestablishmentRequest,
        rrcSystemInfoRequest     RRCSystemInfoRequest
    },
    messageClassExtension SEQUENCE {}
}
-- TAG-UL-CCCH-MESSAGE-STOP
-- ASN1STOP

```

### — *UL-CCCH1-Message*

The *UL-CCCH1-Message* class is the set of 64-bits RRC messages that may be sent from the UE to the Network on the uplink CCCH1 logical channel.

```

-- ASN1START
-- TAG-UL-CCCH1-MESSAGE-START

UL-CCCH1-Message ::=
    message SEQUENCE {
        UL-CCCH1-MessageType
    }

UL-CCCH1-MessageType ::=
    c1 CHOICE {
        rrcResumeRequest1 RRCResumeRequest1,
        spare3 NULL,
        spare2 NULL,
        spare1 NULL
    },
    messageClassExtension SEQUENCE {}
}
-- TAG-UL-CCCH1-MESSAGE-STOP
-- ASN1STOP

```

### — *UL-DCCH-Message*

The *UL-DCCH-Message* class is the set of RRC messages that may be sent from the UE to the network on the uplink DCCH logical channel.

```

-- ASN1START
-- TAG-UL-DCCH-MESSAGE-START

UL-DCCH-Message ::=

## 6.2.2 Message definitions

### – *CounterCheck*

The *CounterCheck* message is used by the network to indicate the current COUNT MSB values associated to each DRB and to request the UE to compare these to its COUNT MSB values and to report the comparison results to the network.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: Network to UE

### *CounterCheck message*

```
-- ASN1START
-- TAG-COUNTERCHECK-START

CounterCheck ::=
    rrc-TransactionIdentifier      SEQUENCE {
    criticalExtensions              CHOICE {
        counterCheck              CounterCheck-IEs,
        criticalExtensionsFuture   SEQUENCE {}
    }
}

CounterCheck-IEs ::=
    drb-CountMSB-InfoList         SEQUENCE {
    lateNonCriticalExtension       OCTET STRING OPTIONAL,
    nonCriticalExtension           SEQUENCE {}      OPTIONAL
}

DRB-CountMSB-InfoList ::=
    SEQUENCE (SIZE (1..maxDRB)) OF DRB-CountMSB-Info

DRB-CountMSB-Info ::=
    drb-Identity                  SEQUENCE {
    countMSB-Uplink                INTEGER(0..33554431),
    countMSB-Downlink              INTEGER(0..33554431)
}

-- TAG-COUNTERCHECK-STOP
-- ASN1STOP
```

| CounterCheck-IEs field descriptions                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------|
| <b>drb-CountMSB-InfoList</b><br>Indicates the MSBs of the COUNT values of the DRBs.                                              |
| DRB-CountMSB-Info field descriptions                                                                                             |
| <b>countMSB-Downlink</b><br>Indicates the value of 25 MSBs from RX_NEXT – 1 (specified in TS 38.323 [5]) associated to this DRB. |
| <b>countMSB-Uplink</b><br>Indicates the value of 25 MSBs from TX_NEXT – 1 (specified in TS 38.323 [5]) associated to this DRB.   |

– CounterCheckResponse

The CounterCheckResponse message is used by the UE to respond to a CounterCheck message.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to Network

CounterCheckResponse message

| <i><b>DLDedicatedMessageSegment</b></i> field descriptions |                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i><b>segmentNumber</b></i>                                | Identifies the sequence number of a segment within the encoded DL DCCH message. The network transmits the segments with continuously increasing <i>segmentNumber</i> order so that the UE's RRC layer may expect to obtain them from lower layers in the correct order. Hence, the UE is not required to perform segment re-ordering on RRC level. |
| <i><b>rrc-MessageSegmentContainer</b></i>                  | Includes a segment of the encoded DL DCCH message. The size of the included segment in this container should be small enough so the resulting encoded RRC message PDU is less than or equal to the PDCP SDU size limit.                                                                                                                            |
| <i><b>rrc-MessageSegmentType</b></i>                       | Indicates whether the included DL DCCH message segment is the last segment of the message or not.                                                                                                                                                                                                                                                  |

– ***DLInformationTransfer***

The *DLInformationTransfer* message is used for the downlink transfer of NAS dedicated information, timing information for the 5G internal system clock, or IAB-DU specific F1-C related information.

Signalling radio bearer: SRB2 or SRB1 (only if SRB2 not established yet). If SRB2 is suspended, the network does not send this message until SRB2 is resumed. If only *dedicatedInfoF1c* is included, SRB2 is used.

RLC-SAP: AM

Logical channel: DCCH

Direction: Network to UE

**DLInformationTransfer message**

```

-- ASN1START
-- TAG-DLINFORMATIONTRANSFER-START

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>rxTxTimeDiff-gNB</b><br>Indicates the Rx-Tx time difference measurement at the gNB (see clause 5.2.3, TS 38.215 [9]). Upon receiving this field, the UE calculates the propagation delay based on the RTT-based PDC mechanism method as described in TS 38.300 [2]. The network does not configure this field, if the UE is configured with <i>ta-PDC</i> with value <i>activate</i> . |
| <b>sib9Fallback</b><br>Indicates that the UE fallbacks to receive <i>referenceTimeInfo</i> in SIB9.                                                                                                                                                                                                                                                                                       |
| <b>ta-PDC</b><br>Indicates whether the UE-side TA-based propagation delay compensation (PDC) is activated or de-activated. The network does not configure this field with <i>activate</i> , if the field <i>rxTxTimeDiff-gNB</i> is configured.                                                                                                                                           |

– *DLInformationTransferMRDC*

The *DLInformationTransferMRDC* message is used for the downlink transfer of RRC messages during fast MCG link recovery.

| <b>mbs-SessionInfoList</b><br>Provides the configuration of each MBS session provided by MBS broadcast in the current cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>mbs-NeighbourCellList</b><br>List of neighbour cells providing one or more MBS broadcast services via broadcast MRB that are provided by the current cell. This field is used by the UE together with <i>mtch-NeighbourCell</i> field signalled for each MBS session in the corresponding <i>MBS-SessionInfo</i> . When an empty <i>mbs-NeighbourCellList</i> list is signalled, the UE shall assume that MBS broadcast services signalled in <i>mbs-SessionInfoList</i> in the <i>MBSBroadcastConfiguration</i> message are not provided in any neighbour cell. When a non-empty <i>mbs-NeighbourCellList</i> is signalled, the current serving cell does not provide information about MBS broadcast services of a neighbour cell that is not included in <i>mbs-NeighbourCellList</i> , i.e., the UE cannot determine the presence or absence of an MBS service of a neighbour cell that is absent. When the field <i>mbs-NeighbourCellList</i> is absent, the current serving cell does not provide information about MBS broadcast services in the neighbouring cells, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. |

– *MBSInterestIndication*

The *MBSInterestIndication* message is used to inform network that the UE is receiving/ interested to receive or no longer receiving/ interested to receive MBS broadcast service(s) via a broadcast MRB.

This field is ignored by IAB-MT.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>pdccch-ConfigSIB1</b><br>Determines a common <i>ControlResourceSet</i> (CORESET), a common search space and necessary PDCCH parameters. If the field <i>ssb-SubcarrierOffset</i> indicates that <i>SIB1</i> is absent, the field <i>pdccch-ConfigSIB1</i> indicates the frequency positions where the UE may find SS/PBCH block with <i>SIB1</i> or the frequency range where the network does not provide SS/PBCH block with <i>SIB1</i> (see TS 38.213 [13], clause 13).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>ssb-SubcarrierOffset</b><br>Corresponds to $k_{SSB}$ (see TS 38.213 [13]), which is the frequency domain offset between SSB and the overall resource block grid in number of subcarriers. (See TS 38.211 [16], clause 7.4.3.1). For operation with shared spectrum channel access in FR1 (see 37.213 [48]), this field corresponds to $\bar{k}_{SSB}$ , and $k_{SSB}$ is obtained from $\bar{k}_{SSB}$ (see TS 38.211 [16], clause 7.4.3.1); the LSB of this field is used also for deriving the QCL relation between SS/PBCH blocks as specified in TS 38.213 [13], clause 4.1. The value range of this field may be extended by an additional most significant bit encoded within PBCH as specified in TS 38.213 [13]. This field may indicate that this cell does not provide <i>SIB1</i> and that there is hence no CORESET#0 configured in <i>MIB</i> (see TS 38.213 [13], clause 13). In this case, the field <i>pdccch-ConfigSIB1</i> may indicate the frequency positions where the UE may (not) find a SS/PBCH with a control resource set and search space for <i>SIB1</i> (see TS 38.213 [13], clause 13). |
| <b>subCarrierSpacingCommon</b><br>Subcarrier spacing for <i>SIB1</i> , Msg.2/4 and MsgB for initial access, paging and broadcast SI-messages. If the UE acquires this <i>MIB</i> on an FR1 carrier frequency, the value <i>scs15or60</i> corresponds to 15 kHz and the value <i>scs30or120</i> corresponds to 30 kHz. If the UE acquires this <i>MIB</i> on an FR2 carrier frequency, the value <i>scs15or60</i> corresponds to 60 kHz and the value <i>scs30or120</i> corresponds to 120 kHz. For operation with shared spectrum channel access in FR1 (see 37.213 [48]) and for operation in FR2-2, the subcarrier spacing for <i>SIB1</i> , Msg.2/4 and MsgB for initial access, paging and broadcast SI-messages is same as that for the corresponding SSB. For operation with shared spectrum channel access, this field instead is used for deriving the QCL relation between SS/PBCH blocks as specified in TS 38.213 [13], clause 4.1.                                                                                                                                                                           |
| <b>systemFrameNumber</b><br>The 6 most significant bits (MSB) of the 10-bit System Frame Number (SFN). The 4 LSB of the SFN are conveyed in the PBCH transport block as part of channel coding (i.e. outside the <i>MIB</i> encoding), as defined in clause 7.1 in TS 38.212 [17].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

– *MobilityFromNRCommand*

The *MobilityFromNRCommand* message is used to command handover from NR to E-UTRA/EPC, E-UTRA/5GC or UTRA-FDD.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: Network to UE

| <b>MobilityFromNRCommand-IEs field descriptions</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>nas-SecurityParamFromNR</b>                      | If <i>targetRAT-Type</i> is <i>eutra</i> , this field is used to deliver the key synchronisation and Key freshness for the NR to LTE/EPC handovers and a part of the downlink NAS COUNT as specified in TS 33.501 [11] and the content of the parameter is defined in TS 24.501 [23]. If <i>targetRAT-Type</i> is <i>utra-fdd</i> , this field is used to deliver the key synchronisation and Key freshness for the NR to FDD UTRAN handover and a part of the downlink NAS COUNT as specified in TS 33.501 [11] and the content of the parameter is defined in TS 24.501 [23]. |
| <b>targetRAT-MessageContainer</b>                   | The field contains a message specified in another standard, as indicated by the <i>targetRAT-Type</i> , and carries information about the target cell identifier(s) and radio parameters relevant for the target radio access technology. A complete message is included, as specified in the other standard. See NOTE 1                                                                                                                                                                                                                                                        |
| <b>targetRAT-Type</b>                               | Indicates the target RAT type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>voiceFallbackIndication</b>                      | Indicates the handover is triggered by EPS fallback for IMS voice as specified in TS 23.502 [43].                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

NOTE 1: The correspondence between the value of the *targetRAT-Type*, the standard to apply, and the message contained within the *targetRAT-MessageContainer* is shown in the table below:

| targetRAT-Type  | Standard to apply                | targetRAT-MessageContainer                                                |
|-----------------|----------------------------------|---------------------------------------------------------------------------|

| <b><i>RRCReconfiguration-IEs field descriptions</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>appLayerMeasConfig</i></b><br>This field is used to configure application layer measurements. This field is absent when the UE is configured to operate with shared spectrum channel access or if <i>sl-L2RemoteUE-Config-r17</i> is configured or not released.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>bap-Config</i></b><br>This field is used to configure the BAP entity for IAB nodes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>bap-Address</i></b><br>Indicates the BAP address of an IAB-node. The BAP address of an IAB-node cannot be changed once configured for the cell group to the BAP entity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>conditionalReconfiguration</i></b><br>Configuration of candidate target SpCell(s) and execution condition(s) for conditional handover, conditional PSCell addition or conditional PSCell change. The field is absent if any DAPS bearer is configured or if the <i>masterCellGroup</i> includes <i>ReconfigurationWithSync</i> or if the <i>sl-L2RemoteUE-Config</i> or <i>sl-L2RelayUE-Config</i> is configured. For conditional PSCell change, the field is absent if the <i>secondaryCellGroup</i> includes <i>ReconfigurationWithSync</i> . The <i>RRCReconfiguration</i> message contained in <i>DLInformationTransferMRDC</i> cannot contain the field <i>conditionalReconfiguration</i> for conditional PSCell change or for conditional PSCell addition.                                   |
| <b><i>daps-SourceRelease</i></b><br>Indicates to UE that the source cell part of DAPS operation is to be stopped and the source cell part of DAPS configuration is to be released.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>dedicatedNAS-MessageList</i></b><br>This field is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for each PDU in the list.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>dedicatedPagingDelivery</i></b><br>This field is used to transfer <i>Paging</i> message for the associated L2 U2N Remote UE to the L2 U2N Relay UE in <i>RRC_CONNECTED</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>dedicatedPosSysInfoDelivery</i></b><br>This field is used to transfer <i>SIBPos</i> to the UE in <i>RRC_CONNECTED</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>dedicatedSIB1-Delivery</i></b><br>This field is used to transfer <i>SIB1</i> to the UE (including L2 U2N Remote UE). The field has the same values as the corresponding configuration in <i>servingCellConfigCommon</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>dedicatedSystemInformationDelivery</i></b><br>This field is used to transfer <i>SIB6</i> , <i>SIB7</i> , <i>SIB8</i> , <i>SIB19</i> , <i>SIB20</i> , <i>SIB21</i> to the UE with an active BWP with no common search space configured or the L2 U2N Remote UE in <i>RRC_CONNECTED</i> . For UEs in <i>RRC_CONNECTED</i> (including L2 U2N Remote UE), this field is also used to transfer the SIBs requested on-demand.                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>defaultUL-BAP-RoutingID</i></b><br>This field is used for IAB-node to configure the default uplink Routing ID, which is used by IAB-node during IAB-node bootstrapping, migration, IAB-MT RRC resume and IAB-MT RRC re-establishment for <i>F1-C</i> and <i>non-F1</i> traffic. The <i>defaultUL-BAP-RoutingID</i> can be (re-)configured when IAB-node IP address for <i>F1-C</i> related traffic changes. This field is mandatory only for IAB-node bootstrapping.                                                                                                                                                                                                                                                                                                                               |
| <b><i>defaultUL-BH-RLC-Channel</i></b><br>This field is used for IAB-nodes to configure the default uplink BH RLC channel, which is used by IAB-node during IAB-node bootstrapping, migration, IAB-MT RRC resume and IAB-MT RRC re-establishment for <i>F1-C</i> and <i>non-F1</i> traffic. The <i>defaultUL-BH-RLC-Channel</i> can be (re-)configured when IAB-node IP address for <i>F1-C</i> related traffic changes, and the new IP address is anchored at a different IAB-donor-DU. This field is mandatory for IAB-node bootstrapping. If the IAB-MT is operating in EN-DC, the default uplink BH RLC channel is referring to an RLC channel on the SCG; Otherwise, it is referring to an RLC channel either on the MCG or on the SCG depending on whether the MN or the SN configures this field. |
| <b><i>flowControlFeedbackType</i></b><br>This field is only used for IAB-node that support hop-by-hop flow control to configure the type of flow control feedback. Value <i>perBH-RLC-Channel</i> indicates that the IAB-node shall provide flow control feedback per BH RLC channel, value <i>perRoutingID</i> indicates that the IAB-node shall provide flow control feedback per routing ID, and value <i>both</i> indicates that the IAB-node shall provide flow control feedback both per BH RLC channel and per routing ID.                                                                                                                                                                                                                                                                        |
| <b><i>fullConfig</i></b><br>Indicates that the full configuration option is applicable for the <i>RRCReconfiguration</i> message for intra-system intra-RAT HO. For inter-RAT HO from E-UTRA to NR, <i>fullConfig</i> indicates whether or not delta signalling of SDAP/PDCP from source RAT is applicable. This field is absent if any DAPS bearer is configured or when the <i>RRCReconfiguration</i> message is transmitted on SRB3, and in an <i>RRCReconfiguration</i> message for SCG contained in another <i>RRCReconfiguration</i> message (or <i>RRCConnectionReconfiguration</i> message, see TS 36.331 [10]) transmitted on SRB1.                                                                                                                                                             |

| Indicates whether UE shall derive a new $K_{gNB}$ . If <i>reconfigurationWithSync</i> is included, value <i>true</i> indicates that a $K_{gNB}$ key is derived from a $K_{AMF}$ key taken into use through the latest successful NAS SMC procedure, or N2 handover procedure with $K_{AMF}$ change, as described in TS 33.501 [11] for $K_{gNB}$ re-keying. Value <i>false</i> indicates that the new $K_{gNB}$ key is obtained from the current $K_{gNB}$ key or from the NH as described in TS 33.501 [11].                                                                                                                                                                                                                              |

| Indicates the MUSIM gap configuration and controls setup/release of MUSIM gaps. In this version of the specification, the network does not configure MUSIM gap together with concurrent measurement gap or preconfigured measurement gap for positioning.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

This field is always included either upon initial configuration of an NR SCG or upon configuration of the first RB with <i>keyToUse</i> set to <i>secondary</i>, whichever happens first. This field is absent if there is neither any NR SCG nor any RB with <i>keyToUse</i> set to <i>secondary</i>.</p>                                                                                                                                                                                                                                                                                                |
| <p><b>sl-ConfigDedicatedNR</b><br/>This field is used to provide the dedicated configurations for NR sidelink communication/discovery.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p><b>sl-ConfigDedicatedEUTRA-Info</b><br/>This field includes the E-UTRA <i>RRCConnectionReconfiguration</i> as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA <i>RRCConnectionReconfiguration</i> can only include sidelink related fields for V2X sidelink communication, i.e. <i>sl-V2X-ConfigDedicated</i>, <i>sl-V2X-SPS-Config</i>, <i>measConfig</i> and/or <i>otherConfig</i>.</p>                                                                                                                                                                                                                                                                                                                                                                 |
| <p><b>sl-TimeOffsetEUTRA</b><br/>This field indicates the possible time offset to (de)activation of V2X sidelink transmission after receiving DCI format 3_1 used for scheduling V2X sidelink communication. Value <i>ms0dpt75</i> corresponds to 0.75ms, <i>ms1</i> corresponds to 1ms and so on. The network includes this field only when <i>sl-ConfigDedicatedEUTRA</i> is configured.</p>                                                                                                                                                                                                                                                                                                                                                                                             |
| <p><b>targetCellSMTC-SCG</b><br/>The SSB periodicity/offset/duration configuration of target cell for NR PSCell addition and SN change. When UE receives this field, UE applies the configuration based on the timing reference of NR PCell for PSCell addition and PSCell change for the case of no reconfiguration with sync of MCG, and UE applies the configuration based on the timing reference of target NR PCell for the case of reconfiguration with sync of MCG. If both this field and the <i>smtc</i> in <i>secondaryCellGroup</i> -&gt; <i>SpCellConfig</i> -&gt; <i>reconfigurationWithSync</i> are absent, the UE uses the SMTC in the <i>measObjectNR</i> having the same SSB frequency and subcarrier spacing, as configured before the reception of the RRC message.</p> |
| <p><b>t316</b><br/>Indicates the value for timer T316 as described in clause 7.1. Value <i>ms50</i> corresponds to 50 ms, value <i>ms100</i> corresponds to 100 ms and so on. This field can be configured only if the UE is configured with split SRB1 or SRB3.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**ue-TxTEG-RequestUL-TDOA-Config**

Configures the periodicity of UE reporting for the association between Tx TEG and SRS Positioning resources. When configured with *oneShot* UE reports the association only one time. When configured with *periodicReporting* UE reports the association periodically and the *periodicReporting* indicates the periodicity. Value *ms160* corresponds to 160ms, value *ms320* corresponds to 320ms and so on.

**ul-GapFR2-Config**

Indicates the FR2 UL gap configuration to UE. In EN-DC and NGEN-DC, the SN decides and configures the FR2 UL gap pattern. In NE-DC, the MN decides and configures the FR2 UL gap pattern. In NR-DC without FR2-FR2 band combination, the network entity which is configured with FR2 serving cell(s) decides and configures the FR2 UL gap pattern.

| Conditional Presence   | Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b><i>cellReselectionPriorities</i></b><br>Dedicated priorities to be used for cell reselection as specified in TS 38.304 [20]. The maximum number of NR carrier frequencies that the network can configure through <i>FreqPriorityListNR</i> and <i>FreqPriorityListDedicatedSlicing</i> together is eight. If the same frequency is configured in both <i>FreqPriorityListNR</i> and <i>FreqPriorityListDedicatedSlicing</i> , the frequency is only counted once.                                                                                                                                                                    |
| <b><i>cnType</i></b><br>Indicate that the UE is redirected to EPC or 5GC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>deprioritisationReq</i></b><br>Indicates whether the current frequency or RAT is to be de-prioritised.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>deprioritisationTimer</i></b><br>Indicates the period for which either the current carrier frequency or NR is deprioritised. Value <i>minN</i> corresponds to N minutes.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>measIdleConfig</i></b><br>Indicates measurement configuration to be stored and used by the UE while in RRC_IDLE or RRC_INACTIVE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>mpsPriorityIndication</i></b><br>Indicates the UE can set the establishment cause to <i>mps-PriorityAccess</i> for a new connection following a redirect to NR or set the resume cause to <i>mps-PriorityAccess</i> for a resume following a redirect to NR. If the target RAT is E-UTRA, see TS 36.331 [10]. The gNB sets the indication only for UEs authorized to receive MPS treatment as indicated by ARP and/or QoS characteristics at the gNB, and it is applicable only for this instance of release with redirection to carrier/RAT included in the <i>redirectedCarrierInfo</i> field in the <i>RRCRelease</i> message. |
| <b><i>noLastCellUpdate</i></b><br>Presence of the field indicates that the last used cell for PEI shall not be updated. When the field is absent, the PEI-capable UE shall update its last used cell with the current cell. The UE shall not update its last used cell with the current cell if the AS security is not activated.                                                                                                                                                                                                                                                                                                       |
| <b><i>srs-PosRRC-Inactive</i></b><br>SRS for positioning configuration during RRC_INACTIVE state.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>suspendConfig</i></b><br>Indicates configuration for the RRC_INACTIVE state. The network does not configure <i>suspendConfig</i> when the network redirect the UE to an inter-RAT carrier frequency or if the UE is configured with a DAPS bearer.                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>redirectedCarrierInfo</i></b><br>Indicates a carrier frequency (downlink for FDD) and is used to redirect the UE to an NR or an inter-RAT carrier frequency, by means of cell selection at transition to RRC_IDLE or RRC_INACTIVE as specified in TS 38.304 [20]. Based on UE capability, the network may include <i>redirectedCarrierInfo</i> in <i>RRCRelease</i> message with <i>suspendConfig</i> if this message is sent in response to an <i>RRCResumeRequest</i> or an <i>RRCResumeRequest1</i> which is triggered by the NAS layer (see 5.3.1.4 in TS 24.501 [23]).                                                       |
| <b><i>voiceFallbackIndication</i></b><br>Indicates the RRC release is triggered by EPS fallback for IMS voice as specified in TS 23.502 [43].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>CarrierInfoNR field descriptions</b>                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>carrierFreq</b><br>Indicates the redirected NR frequency.                                                                                                                                                                                                                   |
| <b>ssbSubcarrierSpacing</b><br>Subcarrier spacing of SSB in the redirected SSB frequency.<br>Only the following values are applicable depending on the used frequency:<br>FR1: 15 or 30 kHz<br>FR2-1: 120 or 240 kHz<br>FR2-2: 120, 480, or 960 kHz                            |
| <b>smtc</b><br>The SSB periodicity/offset/duration configuration for the redirected SSB frequency. It is based on timing reference of PCell. If the field is absent, the UE uses the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. |

| <b>RAN-NotificationAreaInfo field descriptions</b>                               |
|----------------------------------------------------------------------------------|
| <b>cellList</b><br>A list of cells configured as RAN area.                       |
| <b>ran-AreaConfigList</b><br>A list of RAN area codes or RA code(s) as RAN area. |

| <b>PLMN-RAN-AreaConfig field descriptions</b>                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>plmn-Identity</b><br>PLMN Identity to which the cells in <i>ran-Area</i> belong. If the field is absent the UE not in SNPN access mode uses the ID of the registered PLMN. This field is not included for UE in SNPN access mode (for UE in SNPN access mode the <i>ran-Area</i> always belongs to the registered SNPN). |
| <b>ran-AreaCodeList</b><br>The total number of RAN-AreaCodes of all PLMNs does not exceed 32.                                                                                                                                                                                                                               |
| <b>ran-Area</b><br>Indicates whether TA code(s) or RAN area code(s) are used for the RAN notification area. The network uses only TA code(s) or both TA code(s) and RAN area code(s) to configure a UE. The total number of TACs across all PLMNs does not exceed 16.                                                       |

| <b>PLMN-RAN-AreaCell field descriptions</b>                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>plmn-Identity</b><br>PLMN Identity to which the cells in <i>ran-AreaCells</i> belong. If the field is absent the UE not in SNPN access mode uses the ID of the registered PLMN. This field is not included for UE in SNPN access mode (for UE in SNPN access mode the <i>ran-AreaCells</i> always belongs to the registered SNPN). |
| <b>ran-AreaCells</b><br>The total number of cells of all PLMNs does not exceed 32.                                                                                                                                                                                                                                                    |

| <b><i>SDT-Config</i> field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>sdt-DRB-ContinueROHC</i></b><br>Indicates whether the PDCP entity of the radio bearers configured for SDT continues or resets the ROHC header compression protocol during PDCP re-establishment during SDT procedure, as specified in TS 38.323 [5]. Value <i>cell</i> indicates that ROHC header compression continues when the UE resumes for SDT in the same cell as the PCell when the RRCRelease message was received. Value <i>rna</i> indicates that ROHC header compression continues when the UE resumes for SDT in a cell belonging to the same RNA as the PCell where the RRCRelease message was received. If the field is absent, the UE releases any stored value for this field and the PDCP entity of the radio bearers configured for SDT always resets the ROHC header compression protocol during PDCP re-establishment when SDT procedure is initiated, as specified in TS 38.323 [5]. |
| <b><i>sdt-DRB-List</i></b><br>Indicates the ID(s) of the DRB(s) that are configured for SDT. If size of the sequence is zero, then the UE assumes that none of the DRBs are configured for SDT. The network only configures MN terminated MCG bearers for SDT.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>sdt-SRB2-Indication</i></b><br>Indicates whether SRB2 is configured for SDT or not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>ncd-SSB-RedCapInitialBWP-SDT</i></b><br>Indicates that the UE uses the RedCap-specific initial DL BWP associated with the NCD-SSB for SDT. The network configures this field if a RedCap UE is configured with SDT in the RedCap-specific initial DL BWP not associated with CD-SSB. If configured, the NCD-SSB indicated by this field can only be used during the SDT procedure for CG-SDT or RA-SDT. In the MIB associated with this NCD-SSB, the <i>systemFrameNumber</i> field indicates the frame boundary and frame number of the NCD-SSB. The <i>subCarrierSpacingCommon</i> and <i>dmrs-TypeA-Position</i> in the MIBs associated with CD-SSB and NCD-SSB in the same cell are configured with the same values, respectively. |
| <b><i>ran-ExtendedPagingCycle</i></b><br>The extended DRX (eDRX) cycle for RAN-initiated paging to be applied by the UE. Value <i>rf256</i> corresponds to 256 radio frames, value <i>rf512</i> corresponds to 512 radio frames and so on. Value of the field indicates an eDRX cycle which is shorter or equal to the IDLE mode eDRX cycle configured for the UE.                                                                                                                                                                                                                                                                                                                                                                           |
| <b><i>ran-NotificationAreaInfo</i></b><br>Network ensures that the UE in RRC_INACTIVE always has a valid <i>ran-NotificationAreaInfo</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>ran-PagingCycle</i></b><br>Refers to the UE specific cycle for RAN-initiated paging. Value <i>rf32</i> corresponds to 32 radio frames, value <i>rf64</i> corresponds to 64 radio frames and so on.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b><i>sl-UEIdentityRemote</i></b><br>Indicates the C-RNTI to the L2 U2N Remote UE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b><i>t380</i></b><br>Refers to the timer that triggers the periodic RNAU procedure in UE. Value <i>min5</i> corresponds to 5 minutes, value <i>min10</i> corresponds to 10 minutes and so on.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Conditional Presence | Explanation                                                                                                                               |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <i>L2RemoteUE</i>    | The field is mandatory present for L2 U2N Remote UE's RNAU; otherwise it is absent.                                                       |
| <i>RANPaging</i>     | This field is optionally present, Need R, if the UE is configured with IDLE eDRX, see TS 24.501 [23]; otherwise the field is not present. |
| <i>Redirection2</i>  | The field is optionally present, Need R, if <i>redirectedCarrierInfo</i> is included; otherwise the field is not present.                 |

– **RRCResume**

The *RRCResume* message is used to resume the suspended RRC connection.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: Network to UE

|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>guami-Type</b>                       | This field is used to indicate whether the GUAMI included is native (derived from native 5G-GUTI) or mapped (from EPS, derived from EPS GUTI) as specified in TS 24.501 [23].                                                                                                                                                    |
| <b>iab-NodeIndication</b>               | This field is used to indicate that the connection is being established by an IAB-node as specified in TS 38.300 [2].                                                                                                                                                                                                            |
| <b>idleMeasAvailable</b>                | Indication that the UE has idle/inactive measurement report available.                                                                                                                                                                                                                                                           |
| <b>mobilityState</b>                    | This field indicates the UE mobility state (as defined in TS 38.304 [20], clause 5.2.4.3) just prior to UE going into RRC_CONNECTED state. The UE indicates the value of <i>medium</i> and <i>high</i> when being in Medium-mobility and High-mobility states respectively. Otherwise the UE indicates the value <i>normal</i> . |
| <b>ng-5G-S-TMSI-Part2</b>               | The leftmost 9 bits of 5G-S-TMSI.                                                                                                                                                                                                                                                                                                |
| <b>onboardingRequest</b>                | This field indicates that the connection is being established for UE onboarding in the selected onboarding SNPN, see TS 23.501 [32].                                                                                                                                                                                             |
| <b>registeredAMF</b>                    | This field is used to transfer the GUAMI of the AMF where the UE is registered, as provided by upper layers, see TS 23.003 [21].                                                                                                                                                                                                 |
| <b>selectedPLMN-Identity</b>            | Index of the PLMN or SNPN selected by the UE from the <i>plmn-IdentityInfoList</i> or <i>npn-IdentityInfoList</i> fields included in SIB1.                                                                                                                                                                                       |
| <b>ul-RRC-MaxCapaSegments</b>           | This field indicates that the UE supports uplink RRC segmentation of <i>UECapabilityInformation</i> according to the network indication <i>rrc-MaxCapaSegAllowed</i> .                                                                                                                                                           |
| <b>ul-RRC-Segmentation</b>              | This field indicates the UE supports uplink RRC segmentation of <i>UECapabilityInformation</i> according to the network indication <i>rrc-SegAllowed</i> .                                                                                                                                                                       |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>cellBarredNTN</b><br>Value <i>barred</i> means that the cell is barred for connectivity to NTN, as defined in TS 38.304 [20]. Value <i>notBarred</i> means that the cell is allowed for connectivity to NTN. If not present, the UE considers the cell is not allowed for connectivity to NTN, as defined in TS 38.304 [20]. This field is only applicable to NTN-capable UEs.                                                                                                                                                                                                  |
| <b>cellBarredRedCap1Rx</b><br>Value <i>barred</i> means that the cell is barred for a RedCap UE with 1 Rx branch, as defined in TS 38.304 [20]. This field is ignored by non-RedCap UEs.                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>cellBarredRedCap2Rx</b><br>Value <i>barred</i> means that the cell is barred for a RedCap UE with 2 Rx branches, as defined in TS 38.304 [20]. This field is ignored by non-RedCap UEs.                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>cellSelectionInfo</b><br>Parameters for cell selection related to the serving cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>eCallOverIMS-Support</b><br>Indicates whether the cell supports eCall over IMS services as defined in TS 23.501 [32]. If absent, eCall over IMS is not supported by the network in the cell.                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>eDRX-AllowedIdle</b><br>The presence of this field indicates that extended DRX for CN paging is allowed in the cell for UEs in RRC_IDLE or RRC_INACTIVE. The UE shall stop using extended DRX for CN paging in RRC_IDLE or RRC_INACTIVE if <i>eDRX-AllowedIdle</i> is not present.                                                                                                                                                                                                                                                                                              |
| <b>eDRX-AllowedInactive</b><br>The presence of this field indicates that extended DRX for RAN paging is allowed in the cell for UEs in RRC_INACTIVE. The UE shall stop using extended DRX for RAN paging in RRC_INACTIVE if <i>eDRX-AllowedInactive</i> is not present.                                                                                                                                                                                                                                                                                                            |
| <b>featurePriorities</b><br>Indicates priorities for features, such as RedCap, Slicing, SDT and MSG3-Repetitions for Coverage Enhancements. These priorities are used to determine which <i>FeatureCombinationPreambles</i> the UE shall use when a feature maps to more than one <i>FeatureCombinationPreambles</i> , as specified in TS 38.321 [3]. A lower value means a higher priority. The network does not signal the same priority for more than one feature. The network signals a priority for all feature that map to at least one <i>FeatureCombinationPreambles</i> . |
| <b>halfDuplexRedCap-Allowed</b><br>The presence of this field indicates that the cell supports half-duplex FDD RedCap UEs.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>hsdn-Cell</b><br>This field indicates this is a HSDN cell as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>hyperSFN</b><br>Indicates hyper SFN which increments by one when the SFN wraps around. This field is excluded when determining changes in system information, i.e. changes of hyper SFN should not result in system information change notifications.                                                                                                                                                                                                                                                                                                                           |
| <b>idleModeMeasurementsEUTRA</b><br>This field indicates that a UE that is configured for EUTRA idle/inactive measurements shall perform the measurements while camping in this cell and report availability of these measurements when establishing or resuming a connection in this cell. If absent, a UE is not required to perform EUTRA idle/inactive measurements.                                                                                                                                                                                                           |
| <b>idleModeMeasurementsNR</b><br>This field indicates that a UE that is configured for NR idle/inactive measurements shall perform the measurements while camping in this cell and report availability of these measurements when establishing or resuming a connection in this cell. If absent, a UE is not required to perform NR idle/inactive measurements.                                                                                                                                                                                                                    |
| <b>ims-EmergencySupport</b><br>Indicates whether the cell supports IMS emergency bearer services for UEs in limited service mode. If absent, IMS emergency call is not supported by the network in the cell for UEs in limited service mode.                                                                                                                                                                                                                                                                                                                                       |
| <b>intraFreqReselectionRedCap</b><br>Controls cell selection/reselection to intra-frequency cells for RedCap UEs when this cell is barred, or treated as barred by the RedCap UE, as specified in TS 38.304 [20]. If not present, a RedCap UE treats the cell as barred, i.e., the UE considers that the cell does not support RedCap.                                                                                                                                                                                                                                             |
| <b>q-QualMin</b><br>Parameter "Q <sub>qualmin</sub> " in TS 38.304 [20], applicable for serving cell. If the field is absent, the UE applies the (default) value of negative infinity for Q <sub>qualmin</sub> .                                                                                                                                                                                                                                                                                                                                                                   |
| <b>q-QualMinOffset</b><br>Parameter "Q <sub>qualminoffset</sub> " in TS 38.304 [20]. Actual value Q <sub>qualminoffset</sub> = field value [dB]. If the field is absent, the UE applies the (default) value of 0 dB for Q <sub>qualminoffset</sub> . Affects the minimum required quality level in the cell.                                                                                                                                                                                                                                                                       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>sl-RxDRX-ReportList</i></b><br>Indicates the accepted DRX configuration that is received from the peer UE and reported to the network for NR sidelink unicast communication.                                                                                                                                                                                                                                                                                  |
| <b><i>sl-RxInterestedFreqList</i></b><br>Indicates the index of frequency on which the UE is interested to receive NR sidelink communication. The value 1 corresponds to the frequency of first entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> , the value 2 corresponds to the frequency of second entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> and so on. In this release, only value 1 can be included in the interested frequency list. |
| <b><i>sl-RxInterestedGC-BC-DestList</i></b><br>Indicates the reported QoS profile and associated destination for which UE is interested in reception to the network for NR sidelink groupcast and broadcast communication, or for NR sidelink discovery or ProSe Direct Link Establishment Request as described in TS 24.554 [72], or for Direct Link Establishment Request (TS 24.587 [57]).                                                                       |
| <b><i>sl-SourceIdentityRemoteUE</i></b><br>This field is used to indicate the Source Layer-2 ID to be used to establish PC5 link with the target L2 U2N Relay UE for path switch.                                                                                                                                                                                                                                                                                   |
| <b><i>sl-TxResourceReq</i></b><br>Parameters to request the transmission resources for NR sidelink communication to the network in the Sidelink UE Information report.                                                                                                                                                                                                                                                                                              |
| <b><i>sl-TxResourceReqList</i></b><br>List of parameters to request the transmission resources for NR sidelink communication for the associated destination. If <i>sl-TxResourceReqList-v1700</i> is present, it shall contain the same number of entries, listed in the same order as in <i>sl-TxResourceReqList-r16</i> .                                                                                                                                         |
| <b><i>ue-Type</i></b><br>Indicates the UE is acting as U2N Relay UE or U2N Remote UE.                                                                                                                                                                                                                                                                                                                                                                               |

| <b>SL-TxResourceReq field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>sl-CapabilityInformationSidelink</b><br>Includes the <i>UECapabilityInformationSidelink</i> message (which can be also included in <i>ueCapabilityInformationSidelink-r16</i> in <i>UECapabilityEnquirySidelink</i> from peer UE) received from the peer UE.                                                                                                                                                                                                                                                                                     |
| <b>sl-CastType</b><br>Indicates the cast type for the corresponding destination for which to request the resource.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>sl-DestinationIdentity</b><br>Indicates the destination for which the TX resource request and allocation from the network are concerned.                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>sl-DRX-Indication</b><br>Indicates the sidelink DRX is applied (value <i>on</i> ) or not applied (value <i>off</i> ) for the associated destination. This field is only valid for NR sidelink groupcast communication.                                                                                                                                                                                                                                                                                                                           |
| <b>sl-DRX-InfoFromRxList</b><br>Indicates list of the sidelink DRX configurations as assistance information received from the peer UE for NR sidelink unicast communication.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>sl-QoS-InfoList</b><br>Includes the QoS profile of the sidelink QoS flow as specified in TS 23.287 [55].                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>sl-QoS-FlowIdentity</b><br>This identity uniquely identifies one sidelink QoS flow between the UE and the network in the scope of UE, which is unique for different destination and cast type.                                                                                                                                                                                                                                                                                                                                                   |
| <b>sl-RLC-ModeIndicationList</b><br>Each entry of this field indicates the RLC mode and optionally the related QoS profiles for the sidelink radio bearer, which has not been configured by the network and is initiated by another UE in unicast. The RLC mode for one sidelink radio bearer is aligned between UE and NW by the <i>sl-QoS-FlowIdentity</i> .                                                                                                                                                                                      |
| <b>sl-TxInterestedFreqList</b><br>Each entry of this field indicates the index of frequency on which the UE is interested to transmit NR sidelink communication. The value 1 corresponds to the frequency of first entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> , the value 2 corresponds to the frequency of second entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> and so on. In this release, only value 1 can be included in the interested frequency list. In this release, only one entry can be included in the list. |
| <b>sl-TypeTxSyncList</b><br>A list of synchronization reference used by the UE. The UE shall include the same number of entries, listed in the same order, as in <i>sl-TxInterestedFreqList</i> , i.e. one for each carrier frequency included in <i>sl-TxInterestedFreqList</i> .                                                                                                                                                                                                                                                                  |

| <b>SL-Failure field descriptions</b>                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>sl-DestinationIdentity</b><br>Indicates the destination for which the SL failure is reporting for unicast.                                                                                                                                                                           |
| <b>sl-Failure</b><br>Indicates the sidelink cause for the sidelink RLF (value <i>rlf</i> ), sidelink AS configuration failure (value <i>configFailure</i> ) and the rejection of sidelink DRX configuration (value <i>drxReject-v1710</i> ) for the associated destination for unicast. |

| <b>SL-RxDRX-Report field descriptions</b>                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>sl-DRX-ConfigFromTx</b><br>Indicates the sidelink DRX configuration received from the peer UE for NR sidelink unicast communication. |

| <b>SL-RxInterestedGC-BC-Dest field descriptions</b>                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>sl-RxInterestedQoS-InfoList</b><br>Indicates the QoS profile for which UE reports its interested service to which SL DRX is applied to the network, for NR sidelink groupcast or broadcast reception. |

| <b><i>SL-TxResourceReqDisc</i> field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>sl-CastTypeDisc</i></b><br>Indicates the cast type for the NR sidelink discovery messages. Only value <i>broadcast</i> can be set in this release.                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>sl-DestinationIdentityDisc</i></b><br>This field is used to indicate the destination L2 ID for which the TX resource request and allocation from the network are concerned for relay discovery and non-relay discovery.                                                                                                                                                                                                                                                                                                                              |
| <b><i>sl-SourceIdentityRelayUE</i></b><br>This field is used to indicate the source L2 ID of relay-related discovery transmission by L2 U2N Relay UE.                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>sl-TxInterestedFreqListDisc</i></b><br>Each entry of this field indicates the index of frequency on which the UE is interested to transmit NR sidelink discovery. The value 1 corresponds to the frequency of first entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> , the value 2 corresponds to the frequency of second entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> and so on. In this release, only value 1 can be included in the interested frequency list. In this release, only one entry can be included in the list. |

| <b><i>SL-TxResourceReqCommRelayInfo</i> field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>sl-RelayDRXConfig</i></b><br>This field is used to indicate the applied sidelink DRX configuration for the relay related communication.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>sl-DestinationIdentityL2U2N</i></b><br>This field is used to indicate the destination L2 ID for which the TX resource request and allocation from the network are concerned for the established PC5 link for relay by L2 U2N Relay UE.                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>sl-LocalID-Request</i></b><br>This field is used to request local UE ID for the corresponding destination by the L2 U2N Relay UE.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>affectedCarrierFreqCombList</b><br>Indicates a list of NR carrier frequency combinations that are affected by IDC problems due to Inter-Modulation Distortion and harmonics from NR when configured with UL CA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>bfd-MeasRelaxationState</b><br>Indicates the relaxation state of BFD measurements. Each bit corresponds to a serving cell of the cell group. A serving cell is mapped to the ( <i>servCellIndex</i> +1)-th bit, starting from MSB. A bit that is set to 1 indicates that the UE is performing BFD measurements relaxation on the serving cell mapped on the bit. A bit that is set to 0 indicates that the UE is not performing BFD measurements relaxation on the serving cell mapped on the bit. If a serving cell is not configured to the UE, the corresponding bit is set to 0.                                                                                                                                                     |
| <b>delayBudgetReport</b><br>Indicates the UE-preferred adjustment to connected mode DRX.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>interferenceDirection</b><br>Indicates the direction of IDC interference. Value <i>nr</i> indicates that only NR is victim of IDC interference, value <i>other</i> indicates that only another radio is victim of IDC interference and value <i>both</i> indicates that both NR and another radio are victims of IDC interference. The other radio refers to either the ISM radio or GNSS (see TR 36.816 [44]).                                                                                                                                                                                                                                                                                                                          |
| <b>minSchedulingOffsetPreference</b><br>Indicates the UE's preferences on <i>minimumSchedulingOffset</i> of cross-slot scheduling for power saving.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>minSchedulingOffsetPreferenceExt</b><br>Indicates the UE's preferences on <i>minimumSchedulingOffset</i> of cross-slot scheduling for power saving for SCS 480 kHz and/or 960 kHz.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>musim-GapPreferenceList</b><br>Indicates the UE's MUSIM gap preference and related MUSIM gap configuration, as defined in TS 38.133 [14] clause 9.1.10.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>musim-PreferredRRC-State</b><br>Indicates the UE's preferred RRC state when leaving RRC_CONNECTED.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>nonSDT-DataIndication</b><br>Informs the network about the arrival of data and/or signaling mapped to radio bearers not configured for SDT while SDT procedure is ongoing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>preferredDRX-InactivityTimer</b><br>Indicates the UE's preferred DRX inactivity timer length for power saving. Value in ms (milliSecond). <i>ms0</i> corresponds to 0, <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on. If the field is absent from the <i>DRX-Preference</i> IE, it is interpreted as the UE having no preference for the DRX inactivity timer. If secondary DRX group is configured, the <i>preferredDRX-InactivityTimer</i> only applies to the default DRX group.                                                                                                                                                                                                                          |
| <b>preferredDRX-LongCycle</b><br>Indicates the UE's preferred long DRX cycle length for power saving. Value in ms. <i>ms10</i> corresponds to 10ms, <i>ms20</i> corresponds to 20 ms, <i>ms32</i> corresponds to 32 ms, and so on. If <i>preferredDRX-ShortCycle</i> is provided, the value of <i>preferredDRX-LongCycle</i> shall be a multiple of the <i>preferredDRX-ShortCycle</i> value. If the field is absent from the <i>DRX-Preference</i> IE, it is interpreted as the UE having no preference for the long DRX cycle.                                                                                                                                                                                                            |
| <b>preferredDRX-ShortCycle</b><br>Indicates the UE's preferred short DRX cycle length for power saving. Value in ms. <i>ms2</i> corresponds to 2ms, <i>ms3</i> corresponds to 3 ms, <i>ms4</i> corresponds to 4 ms, and so on. If the field is absent from the <i>DRX-Preference</i> IE, it is interpreted as the UE having no preference for the short DRX cycle.                                                                                                                                                                                                                                                                                                                                                                          |
| <b>preferredDRX-ShortCycleTimer</b><br>Indicates the UE's preferred short DRX cycle timer for power saving. Value in multiples of <i>preferredDRX-ShortCycle</i> . A value of 1 corresponds to <i>preferredDRX-ShortCycle</i> , a value of 2 corresponds to 2 * <i>preferredDRX-ShortCycle</i> and so on. If the field is absent from the <i>DRX-Preference</i> IE, it is interpreted as the UE having no preference for the short DRX cycle timer. A preference for the short DRX cycle is indicated when a preference for the short DRX cycle timer is indicated.                                                                                                                                                                         |
| <b>preferredK0</b><br>Indicates the UE's preferred value of <i>k0</i> (slot offset between DCI and its scheduled PDSCH - see TS 38.214 [19], clause 5.1.2.1) for cross-slot scheduling for power saving. Value is defined for each subcarrier spacing (numerology) in units of slots. <i>s1</i> corresponds to 1 slot, <i>s2</i> corresponds to 2 slots, <i>s4</i> corresponds to 4 slots, and so on. If a value for a subcarrier spacing is absent, it is interpreted as the UE having no preference on <i>k0</i> for cross-slot scheduling for that subcarrier spacing. If the field is absent from the <i>MinSchedulingOffsetPreference</i> IE, it is interpreted as the UE having no preference on <i>k0</i> for cross-slot scheduling. |

| <b>UEAssistanceInformation field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>preferredK2</b><br/>Indicates the UE's preferred value of <i>k2</i> (slot offset between DCI and its scheduled PUSCH - see TS 38.214 [19], clause 6.1.2.1) for cross-slot scheduling for power saving. Value is defined for each subcarrier spacing (numerology) in units of slots. <i>s/1</i> corresponds to 1 slot, <i>s/2</i> corresponds to 2 slots, <i>s/4</i> corresponds to 4 slots, and so on. If a value for a subcarrier spacing is absent, it is interpreted as the UE having no preference on <i>k2</i> for cross-slot scheduling for that subcarrier spacing. If the field is absent from the <i>MinSchedulingOffsetPreference</i> IE, it is interpreted as the UE having no preference on <i>k2</i> for cross-slot scheduling.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p><b>preferredRRC-State</b><br/>Indicates the UE's preferred RRC state. The value <i>idle</i> is indicated if the UE prefers to be released from RRC_CONNECTED and transition to RRC_IDLE. The value <i>inactive</i> is indicated if the UE prefers to be released from RRC_CONNECTED and transition to RRC_INACTIVE. The value <i>connected</i> is indicated if the UE prefers to revert an earlier indication to leave RRC_CONNECTED state. The value <i>outOfConnected</i> is indicated if the UE prefers to be released from RRC_CONNECTED and has no preferred RRC state to transition to. The value <i>connected</i> can only be indicated if the UE is configured with <i>connectedReporting</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p><b>propagationDelayDifference</b><br/>Indicates the one-way service link propagation delay difference between serving cell and each neighbour cell included in <i>neighCellInfoList</i>, defined as neighbour cell's service link propagation delay minus serving cell's service link propagation delay, in number of ms. First entry in <i>propagationDelayDifference</i> corresponds to first entry in <i>neighCellInfoList</i>, second entry in <i>propagationDelayDifference</i> corresponds to second entry in <i>neighCellInfoList</i>, and so on.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p><b>reducedMaxBW-FR1</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum aggregated bandwidth across all downlink carrier(s) and across all uplink carrier(s) of FR1, to address overheating or power saving. This field is allowed to be reported only when UE is configured with serving cell(s) operating on FR1. The aggregated bandwidth across all downlink carrier(s) of FR1 is the sum of bandwidth of active downlink BWP(s) across all activated downlink carrier(s) of FR1. The aggregated bandwidth across all uplink carrier(s) of FR1 is the sum of bandwidth of active uplink BWP(s) across all activated uplink carrier(s) of FR1. If the field is absent from the <i>MaxBW-Preference</i> IE or the <i>OverheatingAssistance</i> IE, it is interpreted as the UE having no preference on the maximum aggregated bandwidth of FR1.<br/>When indicated to address overheating, this maximum aggregated bandwidth includes carrier(s) of FR1 of both the NR MCG and the SCG. This maximum aggregated bandwidth only includes carriers of FR1 of the SCG in (NG)EN-DC. Value <i>mhz0</i> is not used when indicated to address overheating.<br/>When indicated to address power saving, this maximum aggregated bandwidth includes carrier(s) of FR1 of the cell group that this UE assistance information is associated with. The aggregated bandwidth can only range up to the current active configuration when indicated to address power savings.</p> |
| <p><b>reducedMaxBW-FR2</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum aggregated bandwidth across all downlink carrier(s) and across all uplink carrier(s) of FR2-1, to address overheating or power saving. This field is allowed to be reported only when UE is configured with serving cell(s) operating on FR2-1. The aggregated bandwidth across all downlink carrier(s) of FR2-1 is the sum of bandwidth of active downlink BWP(s) across all activated downlink carrier(s) of FR2-1. The aggregated bandwidth across all uplink carrier(s) of FR2-1 is the sum of bandwidth of active uplink BWP(s) across all activated uplink carrier(s) of FR2-1. If the field is absent from the <i>MaxBW-Preference</i> IE or the <i>OverheatingAssistance</i> IE, it is interpreted as the UE having no preference on the maximum aggregated bandwidth of FR2-1.<br/>When indicated to address overheating, this maximum aggregated bandwidth includes carrier(s) of FR2-1 of both the NR MCG and the NR SCG. This maximum aggregated bandwidth only includes carriers of FR2-1 of the SCG in (NG)EN-DC.<br/>When indicated to address power saving, this maximum aggregated bandwidth includes carrier(s) of FR2-1 of the cell group that this UE assistance information is associated with. The aggregated bandwidth can only range up to the current active configuration when indicated to address power savings.</p>                                               |
| <p><b>reducedMaxBW-FR2-2</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum aggregated bandwidth across all downlink carrier(s) and across all uplink carrier(s) of FR2-2, to address overheating or power saving. This field is allowed to be reported only when UE is configured with serving cell(s) operating on FR2-2. The aggregated bandwidth across all downlink carrier(s) of FR2-2 is the sum of bandwidth of active downlink BWP(s) across all activated downlink carrier(s) of FR2-2. The aggregated bandwidth across all uplink carrier(s) of FR2-2 is the sum of bandwidth of active uplink BWP(s) across all activated uplink carrier(s) of FR2-2. If the field is absent from the <i>MaxBW-PreferenceFR2-2</i> IE or the <i>OverheatingAssistance</i> IE, it is interpreted as the UE having no preference on the maximum aggregated bandwidth of FR2-2.<br/>When indicated to address overheating, this maximum aggregated bandwidth includes carrier(s) of FR2-2 of both the NR MCG and the NR SCG. This maximum aggregated bandwidth only includes carriers of FR2-2 of the SCG in (NG)EN-DC.<br/>When indicated to address power saving, this maximum aggregated bandwidth includes carrier(s) of FR2-2 of the cell group that this UE assistance information is associated with. The aggregated bandwidth can only range up to the current active configuration when indicated to address power savings.</p>                                        |

| <b>UEAssistanceInformation field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>reducedCCsDL</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum number of downlink SCells indicated by the field, to address overheating or power saving.<br/>When indicated to address overheating, this maximum number includes SCells of the NR MCG, PSCell and SCells of the SCG. This maximum number only includes PSCell and SCells of the SCG in (NG)EN-DC.<br/>When indicated to address power saving, this maximum number includes PSCell and SCells of the cell group that this UE assistance information is associated with. The maximum number of downlink SCells can only range up to the current active configuration when indicated to address power savings.</p> |
| <p><b>reducedCCsUL</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum number of uplink SCells indicated by the field, to address overheating or power saving.<br/>When indicated to address overheating, this maximum number includes SCells of the NR MCG, PSCell and SCells of the SCG. This maximum number only includes PSCell and SCells of the SCG in (NG)EN-DC.<br/>When indicated to address power saving, this maximum number includes PSCell and SCells of the cell group that this UE assistance information is associated with. | <p><b>reducedMIMO-LayersFR2-2-DL</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum number of downlink MIMO layers of each serving cell operating on FR2-2 indicated by the field, to address overheating or power saving. This field is allowed to be reported only when UE is configured with serving cells operating on FR2-2. The maximum number of downlink MIMO layers can only range up to the maximum number of MIMO layers configured across all activated downlink carrier(s) of FR2-2 in the cell group when indicated to address power savings.</p>                                                                                                                        |
| <p><b>reducedMIMO-LayersFR2-2-UL</b><br/>Indicates the UE's preference on reduced configuration corresponding to the maximum number of uplink MIMO layers of each serving cell operating on FR2-2 indicated by the field, to address overheating or power saving (see NOTE 1). This field is allowed to be reported only when UE is configured with serving cells operating on FR2-2. The maximum number of uplink MIMO layers can only range up to the maximum number of MIMO layers configured across all activated uplink carrier(s) of FR2-2 in the cell group when indicated to address power savings.</p>                                                                                                                 |
| <p><b>referenceTimeInfoPreference</b><br/>Indicates whether the UE prefers being provisioned with the timing information specified in the IE <i>ReferenceTimeInfo</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <i><b>UEAssistanceInformation</b></i> field descriptions                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>resumeCause</b><br>Provides the resume cause based on the information received from the upper layers.                                                                                                                                                                                                                                  |
| <b>rlm-MeasRelaxationState</b><br>Indicates the relaxation state of RLM measurements. Value <i>true</i> indicates that the UE is performing relaxation of RLM measurements, and value <i>false</i> indicates that the UE is not performing relaxation of RLM measurements.                                                                |
| <b>rrm-MeasRelaxationFulfilment</b><br>Indicates whether the UE fulfils the relaxed measurement criterion for stationary UE in 5.7.4.4. Value <i>true</i> indicates that the UE fulfils the criterion, and value <i>false</i> indicates that the UE does not fulfil the criterion.                                                        |
| <b>sl-QoS-FlowIdentity</b><br>This identity uniquely identifies one sidelink QoS flow between the UE and the network in the scope of UE, which is unique for different destination and cast type.                                                                                                                                         |
| <b>sl-UE-AssistanceInformationNR</b><br>Indicates the traffic characteristic of sidelink logical channel(s), specified in the IE <i>SL-TrafficPatternInfo</i> , that are setup for NR sidelink communication.                                                                                                                             |
| <b>type1</b><br>Indicates the preferred amount of increment/decrement to the long DRX cycle length with respect to the current configuration. Value in number of milliseconds. Value <i>ms40</i> corresponds to 40 milliseconds, <i>msMinus40</i> corresponds to -40 milliseconds and so on.                                              |
| <b>ul-GapFR2-PatternPreference</b><br>Indicates the UE's preference on FR2 UL gap pattern as defined in TS 38.133 [14].                                                                                                                                                                                                                   |
| <b>victimSystemType</b><br>Indicate the list of victim system types to which IDC interference is caused from NR when configured with UL CA. Value <i>gps</i> , <i>glonass</i> , <i>bds</i> , <i>galileo</i> and <i>navIC</i> indicates the type of GNSS. Value <i>wlan</i> indicates WLAN and value <i>bluetooth</i> indicates Bluetooth. |

NOTE 1: The field may also indicate the UE's preference on reduced configuration corresponding to the maximum number of SRS ports (i.e. *nrofSRS-Ports*) of each serving cell operating on the associated frequency range.

| <i><b>SL-TrafficPatternInfo</b></i> field descriptions                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>messageSize</b><br>Indicates the maximum TB size based on the observed traffic pattern. The value refers to the index of TS 38.321 [3], table 6.1.3.1-2.                                                                   |
| <b>timingOffset</b><br>This field indicates the estimated timing for a packet arrival in a sidelink logical channel. Specifically, the value indicates the timing offset with respect to subframe#0 of SFN#0 in milliseconds. |
| <b>trafficPeriodicity</b><br>This field indicates the estimated data arrival periodicity in a sidelink logical channel. Value <i>ms20</i> corresponds to 20 ms, <i>ms50</i> corresponds to 50 ms and so on.                   |

## – *UECapabilityEnquiry*

The *UECapabilityEnquiry* message is used to request UE radio access capabilities for NR as well as for other RATs.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: Network to UE

| <b><i>absoluteTimeStamp</i></b><br>Indicates the absolute time when the logged measurement configuration logging is provided, as indicated by NR within <i>absoluteTimeInfo</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>anyCellSelectionDetected</i></b><br>This field is used to indicate the detection of <i>any cell selection</i> state, as defined in TS 38.304 [20]. The UE sets this field when performing the logging of measurement results in RRC_IDLE or RRC_INACTIVE and there is no suitable cell or no acceptable cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>inDeviceCoexDetected</i></b><br>Indicates that measurement logging is suspended due to IDC problem detection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>measResultServingCell</i></b><br>This field refers to the log measurement results taken in the Serving cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b><i>numberOfGoodSSB</i></b><br>Indicates the number of good beams (beams that are above <i>absThreshSS-BlocksConsolidation</i> , if configured by the network) associated to the cells within the R value range (which is configured by network for cell reselection) of the highest ranked cell as part of the beam level measurements. If the UE has no SSB of a neighbour cell whose measurement quantity is above the <i>absThreshSS-BlocksConsolidation</i> or if the network has not configured the <i>absThreshSS-BlocksConsolidation</i> , then the UE does not include <i>numberOfGoodSSB</i> for the corresponding neighbour cell. If the UE has no SSB of the serving cell whose measurement quantity is above the <i>absThreshSS-BlocksConsolidation</i> or if the network has not configured the <i>absThreshSS-BlocksConsolidation</i> , then the UE shall set the <i>numberOfGoodSSB</i> for the serving cell to one. |
| <b><i>relativeTimeStamp</i></b><br>Indicates the time of logging measurement results, measured relative to the <i>absoluteTimeStamp</i> . Value in seconds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b><i>perRASSBInfoList</i></b><br>This field provides detailed information about the successive random access attempts associated to the same SS/PBCH block.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><i>ra-InformationCommon</i></b><br>This field is used to provide information on random access attempts. This field is mandatory present.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>raPurpose</i></b><br>This field is used to indicate the RA scenario for which the RA report entry is triggered. The RA accesses associated to Initial access from RRC_IDLE, RRC re-establishment procedure, transition from RRC-INACTIVE. The indicator <i>beamFailureRecovery</i> is used in case of successful beam failure recovery related RA procedure in the SpCell [3]. The indicator <i>reconfigurationWithSync</i> is used if the UE executes a reconfiguration with sync. The indicator <i>ulUnSynchronized</i> is used if the random access procedure is initiated in a SpCell by DL or UL data arrival during RRC_CONNECTED when the timeAlignmentTimer is not running in the PTAG or if the RA procedure is initiated in a serving cell by a PDCCH order [3]. The indicator <i>schedulingRequestFailure</i> is used in case of SR failures [3]. The indicator <i>noPUCCHResourceAvailable</i> is used when the UE has no valid SR PUCCH resources configured [3]. The indicator <i>requestForOtherSI</i> is used for MSG1 based on demand SI request. The indicator <i>msg3RequestForOtherSI</i> is used in case of MSG3 based SI request. The field can also be used for the SCG-related RA-Report when the <i>raPurpose</i> is set to <i>beamFailureRecovery</i> , <i>reconfigurationWithSync</i> , <i>ulUnSynchronized</i> , <i>schedulingRequestFailure</i> and <i>noPUCCHResourceAvailable</i> . |
| <b><i>spCellID</i></b><br>This field is used to indicate the CGI of the SpCell of the cell group associated to the SCell in which the associated random access procedure was performed. If the UE performs RA procedure on a SCell associated to the MCG, then this field is set to the CGI of the PCell and if the UE performs RA procedure on a SCell associated to the SCG, then this field is set to the CGI of the PSCell. If the CGI of the PSCell is not available at the UE for the RA procedure performed on a SCell associated to the SCG or for the RA procedure on the PSCell, this field is set to the CGI of the PCell. Otherwise, the field is absent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>ssb-Index</i></b><br>This field is used to indicate the SS/PBCH index of the SS/PBCH block corresponding to the random access attempt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><i>ssbsForSI-Acquisition</i></b><br>This field indicates the SSB(s) (in the form of SSB index(es)) that the UE used to receive the requested SI message(s). The field is present if the purpose of the random access procedure was to request on-demand SI (i.e. if the <i>raPurpose</i> is set to <i>requestForOtherSI</i> or <i>msg3RequestForOtherSI</i> ). Otherwise, the field is absent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <i>RLF-Report</i> field descriptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b><i>choCandidateCellList</i></b><br>This field is used to indicate the list of candidate target cells for conditional handover included in <i>condRRCReconfig</i> at the time of connection failure. The field does not include the candidate target cells included in <i>measResultNeighCells</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><i>choCellId</i></b><br>This field is used to indicate the candidate target cell for conditional handover included in <i>condRRCReconfig</i> that the UE selected for CHO based recovery while T311 is running.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>connectionFailureType</i></b><br>This field is used to indicate whether the connection failure is due to radio link failure or handover failure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><i>csi-rsRLMConfigBitmap</i>, <i>csi-rsRLMConfigBitmap-v1650</i></b><br>These fields are used to indicate the CSI-RS indexes configured in the RLM configurations for the active BWP when the UE declares RLF or HOF. The UE first fills in the <i>csi-rsRLMConfigBitmap-r16</i> to indicate the first 96 CSI-RS indexes and then <i>csi-rsRLMConfigBitmap-v1650</i> to indicate the latter 96 CSI-RS indexes. The first/leftmost bit in <i>csi-rsRLMConfigBitmap-r16</i> corresponds to CSI-RS index 0, the second bit corresponds to CSI-RS index 1. The first/leftmost bit in <i>csi-rsRLMConfigBitmap-v1650</i> corresponds to CSI-RS index 96, the second bit corresponds to CSI-RS index 97. These fields are included only if the <i>RadioLinkMonitoringConfig</i> for the respective BWP is configured. |
| <b><i>c-RNTI</i></b><br>This field indicates the C-RNTI used in the PCell upon detecting radio link failure or the C-RNTI used in the source PCell upon handover failure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>failedPCellId</i></b><br>This field is used to indicate the PCell in which RLF is detected or the target PCell of the failed handover. For intra-NR handover <i>nrFailedPCellId</i> is included and for the handover from NR to EUTRA <i>eutraFailedPCellId</i> is included. The UE sets the ARFCN according to the frequency band used for transmission/ reception when the failure occurred.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>failedPCellId-EUTRA</i></b><br>This field is used to indicate the PCell in which RLF is detected or the source PCell of the failed handover in an E-UTRA RLF report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>lastHO-Type</i></b><br>This field is used to indicate the type of the last executed handover before the last detected connection failure. The field is set to <i>cho</i> if the last executed handover was initiated by a conditional reconfiguration execution. The field is set to <i>daps</i> if the last executed handover was a DAPS handover.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>measResultListEUTRA</i></b><br>This field refers to the last measurement results taken in the neighboring EUTRA Cells, when the radio link failure or handover failure happened.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b><i>segmentNumber</i></b><br>Identifies the sequence number of a segment within the encoded UL DCCH message.                                                                                                                                                         |
| <b><i>rrc-MessageSegmentContainer</i></b><br>Includes a segment of the encoded UL DCCH message. The size of the included segment in this container should be small enough that the resulting encoded RRC message PDU is less than or equal to the PDCP SDU size limit. |
| <b><i>rrc-MessageSegmentType</i></b><br>Indicates whether the included UL DCCH message segment is the last segment or not.                                                                                                                                             |

## – *ULInformationTransfer*

The *ULInformationTransfer* message is used for the uplink transfer of NAS or non-3GPP dedicated information, or IAB-DU specific F1-C related information.

Signalling radio bearer: SRB2 or SRB1 (only if SRB2 not established yet). If SRB2 is suspended, the UE does not send this message until SRB2 is resumed. If only *dedicatedInfoF1c* is included, SRB2 is used.

RLC-SAP: AM

Logical channel: DCCH

Direction: UE to network

In this version of the specification, the field is only used to transfer the NR RRC <i>MeasurementReport</i> , <i>RRCReconfigurationComplete</i> , <i>UEAssistanceInformation</i> , <i>FailureInformation</i> , and <i>IABOtherInformation</i> messages when sent via SRB1 and to transfer the NR <i>MCGFailureInformation</i> message when sent via SRB3. |
| <b>ul-DCCH-MessageEUTRA</b><br>Includes the <i>UL-DCCH-Message</i> . In this version of the specification, the field is only used to transfer the E-UTRA RRC <i>MeasurementReport</i> message when sent via SRB1 and to transfer the E-UTRA <i>MCGFailureInformation</i> message when sent via SRB3.                                                                                                                         |

## 6.3 RRC information elements

### 6.3.0 Parameterized types

#### – *SetupRelease*

*SetupRelease* allows the *ElementTypeParam* to be used as the referenced data type for the setup and release entries. See A.3.8 for guidelines.

```
-- ASN1START
-- TAG-SETUPRELEASE-START

SetupRelease { ElementTypeParam } ::= CHOICE {
    release      NULL,
    setup        ElementTypeParam
}

-- TAG-SETUPRELEASE-STOP
-- ASN1STOP
```

### 6.3.1 System information blocks

#### – *SIB2*

*SIB2* contains cell re-selection information common for intra-frequency, inter-frequency and/or inter-RAT cell re-selection (i.e. applicable for more than one type of cell re-selection but not necessarily all) as well as intra-frequency cell re-selection information other than neighbouring cell related.

#### ***SIB2* information element**

| SIB2 field descriptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>absThreshSS-BlocksConsolidation</i></b><br>Threshold for consolidation of L1 measurements per RS index. If the field is absent, the UE uses the measurement quantity as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>cellEdgeEvaluation</i></b><br>Indicates the criteria for a UE to detect that it is not at cell edge, in order to relax measurement requirements for cell reselection (see TS 38.304 [20], clause 5.2.4.9.2).                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>cellEdgeEvaluationWhileStationary</i></b><br>Indicates the criteria for a UE to detect that it is not at cell edge while stationary, in order to relax measurement requirements for cell reselection (see TS 38.304 [20], clause 5.2.4.9.4).                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>cellEquivalentSize</i></b><br>The number of cell count used for mobility state estimation for this cell as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>cellReselectionInfoCommon</i></b><br>Cell re-selection information common for intra-frequency, inter-frequency and/ or inter-RAT cell re-selection.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>cellReselectionServingFreqInfo</i></b><br>Information common for non-intra-frequency cell re-selection i.e. cell re-selection to inter-frequency and inter-RAT cells.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>combineRelaxedMeasCondition</i></b><br>When both <i>lowMobilityEvaluation</i> and <i>cellEdgeEvaluation</i> criteria are present in SIB2, this parameter configures the UE to fulfil both criteria in order to relax measurement requirements for cell reselection. If the field is absent, the UE is allowed to relax measurement requirements for cell reselection when either or both of the criteria are met. (See TS 38.304 [20], clause 5.2.4.9.0)                                                                                                                                             |
| <b><i>combineRelaxedMeasCondition2</i></b><br>When both <i>stationaryMobilityEvaluation</i> and <i>cellEdgeEvaluationWhileStationary</i> criteria are present in SIB2, this parameter configures the UE to fulfil both criteria in order to relax measurement requirements for cell reselection. If the field is absent, the UE is allowed to relax measurement requirements for cell reselection when only the stationary criteria is met. (See TS 38.304 [20], clause 5.2.4.9.0)                                                                                                                         |
| <b><i>deriveSSB-IndexFromCell</i></b><br>This field indicates whether the UE can utilize serving cell timing to derive the index of SS block transmitted by neighbour cell. If this field is set to <i>true</i> , the UE assumes SFN and frame boundary alignment across cells on the serving frequency as specified in TS 38.133 [14].                                                                                                                                                                                                                                                                    |
| <b><i>frequencyBandList</i></b><br>Indicates the list of frequency bands for which the NR cell reselection parameters apply. The UE behaviour in case the field is absent is described in clause 5.2.2.4.3.                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>highPriorityMeasRelax</i></b><br>Indicates whether measurements can be relaxed on high priority frequencies. If the field is absent, the UE shall not relax measurements on high priority frequencies beyond "T <sub>higher_priority_search</sub> " unless both low mobility and not at cell edge criteria are fulfilled (see TS 38.133 [14], clauses 4.2.2.7, 4.2.2.10 and 4.2.2.11).                                                                                                                                                                                                               |
| <b><i>intraFreqCellReselectionInfo</i></b><br>Cell re-selection information common for intra-frequency cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>lowMobilityEvaluation</i></b><br>Indicates the criteria for a UE to detect low mobility, in order to relax measurement requirements for cell reselection (see TS 38.304 [20], clause 5.2.4.9.1).                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b><i>nrofSS-BlocksToAverage</i></b><br>Number of SS blocks to average for cell measurement derivation. If the field is absent the UE uses the measurement quantity as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>p-Max</i></b><br>Value in dBm applicable for the intra-frequency neighbouring NR cells. If absent the UE applies the maximum power according to TS 38.101-1 [15] in case of an FR1 cell, TS 38.101-2 [39] in case of an FR2 cell or TS 38.101-5 [75] in case of an NTN cell. In this release of the specification, if <i>p-Max</i> is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39]. This field is ignored by IAB-MT. The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. |
| <b><i>q-Hyst</i></b><br>Parameter "Q <sub>hyst</sub> " in TS 38.304 [20], Value in dB. | <b><i>smtc</i></b><br>Measurement timing configuration for intra-frequency measurement. If this field is absent, the UE assumes that SSB periodicity is 5 ms for the intra-frequency cells. If the field is broadcast by an NTN cell, the <i>offset</i> (derived from parameter <i>periodicityAndOffset</i> ) is based on the assumption that the gNB-UE propagation delay difference between the serving cell and neighbour cells equals to 0 ms, and UE can adjust the actual <i>offset</i> based on the actual propagation delay difference.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>smtc2-LP</i></b><br>Measurement timing configuration for intra-frequency neighbour cells with a Long Periodicity (LP) indicated by periodicity in <i>smtc2-LP</i> . The timing offset and duration are equal to the offset and duration indicated in <i>smtc</i> in <i>intraFreqCellReselectionInfo</i> . The periodicity in <i>smtc2-LP</i> can only be set to a value strictly larger than the periodicity in <i>smtc</i> in <i>intraFreqCellReselectionInfo</i> (e.g. if <i>smtc</i> indicates sf20 the Long Periodicity can only be set to sf40, sf80 or sf160, if <i>smtc</i> indicates sf160, <i>smtc2-LP</i> cannot be configured). The <i>pci-List</i> , if present, includes the physical cell identities of the intra-frequency neighbour cells with Long Periodicity. If <i>smtc2-LP</i> is absent, the UE assumes that there are no intra-frequency neighbour cells with a Long Periodicity. This field is not configured together with <i>smtc4list</i> . |
| <b><i>smtc4list</i></b><br>Measurement timing configuration list for NTN deployments. The offset of each SSB-MTC4 in <i>smtc4list</i> is based on the assumption that the gNB-UE propagation delay difference between the serving cell and neighbour cells equals to 0 ms, and UE can adjust the actual <i>offset</i> based on the actual propagation delay difference. For a UE that supports less SMTCS than what is included in this list, it is up to the UE to select which SMTCS to consider.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>ssb-PositionQCL-Common</i></b><br>Indicates the QCL relation between SS/PBCH blocks for intra-frequency neighbor cells as specified in TS 38.213 [13], clause 4.1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## – SIB4

*SIB4* contains information relevant for inter-frequency cell re-selection (i.e. information about other NR frequencies and inter-frequency neighbouring cells relevant for cell re-selection), which can also be used for NR idle/inactive measurements. The IE includes cell re-selection parameters common for a frequency as well as cell specific re-selection parameters.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>absThreshSS-BlocksConsolidation</i></b><br>Threshold for consolidation of L1 measurements per RS index. If the field is absent, the UE uses the measurement quantity as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b><i>channelAccessMode2</i></b><br>If present, this field indicates that the neighbor cells on the inter-frequency apply channel access mode procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the neighbor cells on the inter-frequency do not apply any channel access procedure.                                                                                                                                                                                                                                                  |
| <b><i>deriveSSB-IndexFromCell</i></b><br>This field indicates whether the UE may use the timing of any detected cell on that frequency to derive the SSB index of all neighbour cells on that frequency. If this field is set to <i>true</i> , the UE assumes SFN and frame boundary alignment across cells on the neighbor frequency as specified in TS 38.133 [14].                                                                                                                                                                                                                                                |
| <b><i>dl-CarrierFreq</i></b><br>This field indicates center frequency of the SS block of the neighbour cells, where the frequency corresponds to a GSCN value as specified in TS 38.101-1 [15] or TS 38.101-5 [75].                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>frequencyBandList</i></b><br>Indicates the list of frequency bands for which the NR cell reselection parameters apply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>highSpeedMeasInterFreq</i></b><br>If the field is set to <i>true</i> and UE supports high speed inter-frequency IDLE/INACTIVE measurements, the UE shall apply the enhanced inter-frequency RRM requirements on the inter-frequency carrier to support high speed up to 500 km/h in RRC IDLE/RRC INACTIVE as specified in TS 38.133 [14].                                                                                                                                                                                                                                                                      |
| <b><i>interFreqAllowedCellList</i></b><br>List of allow-listed inter-frequency neighbouring cells, see TS 38.304 [20], clause 5.2.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>interFreqCAG-CellList</i></b><br>List of inter-frequency neighbouring CAG cells (as defined in TS 38.304 [20] per PLMN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>interFreqCarrierFreqList</i></b><br>List of neighbouring carrier frequencies and frequency specific cell re-selection information. If <i>interFreqCarrierFreqList-v1610</i> , <i>interFreqCarrierFreqList-v1700</i> , <i>interFreqCarrierFreqList-v1720</i> , <i>interFreqCarrierFreqList-v1730</i> or <i>interFreqCarrierFreqList-v1760</i> are present, they shall contain the same number of entries, listed in the same order as in <i>interFreqCarrierFreqList</i> (without suffix).                                                                                                                      |
| <b><i>interFreqExcludedCellList</i></b><br>List of exclude-listed inter-frequency neighbouring cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>interFreqNeighCellList</i></b><br>List of inter-frequency neighbouring cells with specific cell re-selection parameters. If <i>interFreqNeighCellList-v1610</i> is present, it shall contain the same number of entries, listed in the same order as in <i>interFreqNeighCellList</i> (without suffix).                                                                                                                                                                                                                                                                                                        |
| <b><i>interFreqNeighHSDN-CellList</i></b><br>List of inter-frequency neighbouring HSDN cells as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>nrofSS-BlocksToAverage</i></b><br>Number of SS blocks to average for cell measurement derivation. If the field is absent, the UE uses the measurement quantity as specified in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>plmn-IdentityIndex</i></b><br>Index of the PLMN across the <i>plmn-IdentityInfoList</i> and <i>npn-IdentityInfoList</i> fields included in SIB1.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>p-Max</i></b><br>Value in dBm applicable for the neighbouring NR cells on this carrier frequency. If absent the UE applies the maximum power according to TS 38.101-1 [15] in case of an FR1 cell, TS 38.101-2 [39] in case of an FR2 cell or TS 38.101-5 [75] in case of an NTN cell. In this release of the specification, if <i>p-Max</i> is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39]. This field is ignored by IAB-MT. The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. |

| <b><i>smtc</i></b><br>Measurement timing configuration for inter-frequency measurement. If this field is absent, the UE assumes that SSB periodicity is 5 ms in this frequency. If the field is broadcast by an NTN cell, the <i>offset</i> (derived from parameter <i>periodicityAndOffset</i> ) is based on the assumption that the gNB-UE propagation delay difference between the serving cell and neighbour cells equals to 0 ms, and UE can adjust the actual <i>offset</i> based on the actual propagation delay difference.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>smtc2-LP</i></b><br>Measurement timing configuration for inter-frequency neighbour cells with a Long Periodicity (LP) indicated by periodicity in <i>smtc2-LP</i> . The timing offset and duration are equal to the offset and duration indicated in <i>smtc</i> in <i>InterFreqCarrierFreqInfo</i> . The periodicity in <i>smtc2-LP</i> can only be set to a value strictly larger than the periodicity in <i>smtc</i> in <i>InterFreqCarrierFreqInfo</i> (e.g. if <i>smtc</i> indicates sf20 the Long Periodicity can only be set to sf40, sf80 or sf160, if <i>smtc</i> indicates sf160, <i>smtc2-LP</i> cannot be configured). The <i>pci-List</i> , if present, includes the physical cell identities of the inter-frequency neighbour cells with Long Periodicity. If <i>smtc2-LP</i> is absent, the UE assumes that there are no inter-frequency neighbour cells with a Long Periodicity. This field is not configured together with <i>smtc4list</i> . |
| <b><i>smtc4list</i></b><br>Measurement timing configuration list for NTN deployments. The offset of each SSB-MTC4 in <i>smtc4list</i> is based on the assumption that the gNB-UE propagation delay difference between the serving cell and neighbour cells equals to 0 ms, and UE can adjust the actual <i>offset</i> based on the actual propagation delay difference. For a UE that supports less SMTCs than what is included in this list, it is up to the UE to select which SMTCs to consider.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>ssb-PositionQCL</i></b><br>Indicates the QCL relation between SS/PBCH blocks for a specific neighbor cell as specified in TS 38.213 [13], clause 4.1. If provided, the cell specific value overwrites the common value signalled by <i>ssb-PositionQCL-Common</i> in <i>SIB4</i> for the indicated cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>ssb-PositionQCL-Common</i></b><br>Indicates the QCL relation between SS/PBCH blocks for inter-frequency neighbor cells as specified in TS 38.213 [13], clause 4.1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><i>ssb-ToMeasure</i></b><br>The set of SS blocks to be measured within the SMTc measurement duration (see TS 38.215 [9]). When the field is absent the UE measures on all SS-blocks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>ssbSubcarrierSpacing</i></b><br>Subcarrier spacing of SSB.<br>Only the following values are applicable depending on the used frequency:<br>FR1: 15 or 30 kHz<br>FR2-1: 120 or 240 kHz<br>FR2-2: 120, 480, or 960 kHz                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Mandatory            | The field is mandatory present in SIB4.                                                                                                                        |
| RSRQ                 | The field is mandatory present if <i>threshServingLowQ</i> is present in <i>SIB2</i> ; otherwise it is absent.                                                 |
| SharedSpectrum       | This field is mandatory present if this inter-frequency operates with shared spectrum channel access. Otherwise, it is absent, Need R.                         |
| SharedSpectrum2      | The field is optional present, Need R, if this inter-frequency or neighbor cell operates with shared spectrum channel access. Otherwise, it is absent, Need R. |

–
 **SIB5**

**SIB5** contains information relevant only for inter-RAT cell re-selection i.e. information about E-UTRA frequencies and E-UTRAs neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency.

**SIB5 information element**

|----------------------|----------------------------------------------------------------------------------------------|
| <i>Segment1</i>      | The field is mandatory present in the first segment of <i>SIB8</i> , otherwise it is absent. |

– SIB9

SIB9 contains information related to GPS time and Coordinated Universal Time (UTC). The UE may use the parameters provided in this system information block to obtain the UTC, the GPS and the local time.

NOTE: The UE may use the time information for numerous purposes, possibly involving upper layers e.g. to assist GPS initialisation, to synchronise the UE clock.

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>dayLightSavingTime</b><br>Indicates if and how daylight-saving time (DST) is applied to obtain the local time. The semantics are the same as the semantics of the <i>Daylight Saving Time</i> IE in TS 24.501 [23] and TS 24.008 [38]. The first/leftmost bit of the bit string contains the b2 of octet 3 and the second bit of the bit string contains b1 of octet 3 in the value part of the <i>Daylight Saving Time</i> IE in TS 24.008 [38].                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>leapSeconds</b><br>Number of leap seconds offset between GPS Time and UTC. UTC and GPS time are related i.e. GPS time -leapSeconds = UTC time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>localTimeOffset</b><br>Offset between UTC and local time in units of 15 minutes. Actual value = field value * 15 minutes. Local time of the day is calculated as UTC time + localTimeOffset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>timeInfoUTC</b><br>Coordinated Universal Time corresponding to the SFN boundary at or immediately after the ending boundary of the SI-window in which SIB9 is transmitted. In an NTN cell, the indicated time is referenced at the uplink time synchronization reference point (RP), i.e., UE should take into account the propagation delay between UE and RP when determining the UTC time at the UE. The field counts the number of UTC seconds in 10 ms units since 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900). See NOTE 1. This field is excluded when determining changes in system information, i.e. changes of <i>timeInfoUTC</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i> . |

NOTE 1: The UE may use this field together with the *leapSeconds* field to obtain GPS time as follows: GPS Time (in seconds) = timeInfoUTC (in seconds) - 2,524,953,600 (seconds) + leapSeconds, where 2,524,953,600 is the number of seconds between 00:00:00 on Gregorian calendar date 1 January, 1900 and 00:00:00 on Gregorian calendar date 6 January, 1980 (start of GPS time).

— SIB10

SIB10 contains the HRNNs of the NPNs listed in SIB1.

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>segmentContainer</b><br>This field includes a segment of the encoded <i>SIB12-IEs</i> . The size of the included segment in this container should be small enough that the SIB message size is less than or equal to the maximum size of a NR SI, i.e. 2976 bits when SIB12 is broadcast.                                                                                  |
| <b>segmentNumber</b><br>This field identifies the sequence number of a segment of <i>SIB12-IEs</i> . A segment number of zero corresponds to the first segment, A segment number of one corresponds to the second segment, and so on.                                                                                                                                         |
| <b>segmentType</b><br>This field indicates whether the included segment is the last segment or not.                                                                                                                                                                                                                                                                           |
| <b>sl-CSI-Acquisition</b><br>This field indicates whether CSI reporting is enabled in sidelink unicast. If not set, SL CSI reporting is disabled.                                                                                                                                                                                                                             |
| <b>sl-DRX-ConfigCommonGC-BC</b><br>This field indicates the sidelink DRX configuration for groupcast and broadcast communication, as specified in TS 38.321 [3]. This field, if present, also indicates the gNB is capable of sidelink DRX.                                                                                                                                   |
| <b>sl-EUTRA-AnchorCarrierFreqList</b><br>This field indicates the EUTRA anchor carrier frequency list, which can provide the NR sidelink communication configurations.                                                                                                                                                                                                        |
| <b>sl-FreqInfoList, sl-FreqInfoListExt</b><br>This field indicates the NR sidelink communication/discovery configuration on some carrier frequency (ies). In this release, only one entry can be configured in the list. If network includes <i>sl-FreqInfoListExt</i> , it includes the same number of entries, and listed in the same order, as in <i>sl-FreqInfoList</i> . |
| <b>sl-L2U2N-Relay</b><br>This field indicates the support of NR sidelink Layer-2 relay.                                                                                                                                                                                                                                                                                       |
| <b>sl-L3U2N-RelayDiscovery</b><br>This field indicates the support of L3 U2N relay AS-layer capability, i.e. NR sidelink relay discovery.                                                                                                                                                                                                                                     |
| <b>sl-MaxNumConsecutiveDTX</b><br>This field indicates the maximum number of consecutive HARQ DTX before triggering sidelink RLF. Value n1 corresponds to 1, value n2 corresponds to 2, and so on.                                                                                                                                                                            |
| <b>sl-MeasConfigCommon</b><br>This field indicates the measurement configurations (e.g. RSRP) for NR sidelink communication.                                                                                                                                                                                                                                                  |
| <b>sl-NonRelayDiscovery</b><br>This field indicates the support of NR sidelink non-relay discovery.                                                                                                                                                                                                                                                                           |
| <b>sl-NR-AnchorCarrierFreqList</b><br>This field indicates the NR anchor carrier frequency list, which can provide the NR sidelink communication/discovery configurations.                                                                                                                                                                                                    |
| <b>sl-OffsetDFN</b><br>Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on.                                                                                                                                                |
| <b>sl-RadioBearerConfigList</b><br>This field indicates one or multiple sidelink radio bearer configurations.                                                                                                                                                                                                                                                                 |
| <b>sl-RLC-BearerConfigList</b><br>This field indicates one or multiple sidelink RLC bearer configurations.                                                                                                                                                                                                                                                                    |
| <b>sl-SSB-PriorityNR</b><br>This field indicates the priority of NR sidelink SSB transmission and reception.                                                                                                                                                                                                                                                                  |
| <b>t400</b><br>Indicates the value for timer T400 as described in clause 7.1. Value ms100 corresponds to 100 ms, value ms200 corresponds to 200 ms and so on.                                                                                                                                                                                                                 |

| <b>commonPLMNsWithDisasterCondition</b><br>A list of PLMN(s) for which disaster condition applies and that disaster inbound roaming is accepted, which can be commonly applicable to the PLMNs sharing the cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>applicableDisasterInfoList</b><br>A list indicating the applicable disaster roaming information for the networks indicated in <i>plmn-IdentityInfoList</i> and <i>npn-IdentityInfoList-r16</i> . The network indicates in this list one entry for each entry of <i>plmn-IdentityInfoList</i> , followed by one entry for each entry of <i>npn-IdentityInfoList-r16</i> , meaning that this list will have as many entries as the number of entries of the combination of <i>plmn-IdentityInfoList</i> and <i>npn-IdentityInfoList-r16</i> . The first entry in this list indicates the disaster roaming information applicable for the network(s) in the first entry of <i>plmn-IdentityInfoList/npn-IdentityInfoList-r16</i> , the second entry in this list indicates the disaster roaming information applicable for the network(s) in the second entry of <i>plmn-IdentityInfoList/npn-IdentityInfoList-r16</i> , and so on. Each entry in this list can either be having the value <i>noDisasterRoaming</i> , <i>disasterRelatedIndication</i> , <i>commonPLMNs</i> , or <i>dedicatedPLMNs</i> . If an entry in this list takes the value <i>noDisasterRoaming</i> , disaster inbound roaming is not allowed in this network(s). If an entry in this list takes the value <i>disasterRelatedIndication</i> , the meaning of this field for this network(s) is as specified for "disaster related indication" in TS 23.122 [74], clause 4.4.3.1.1. If an entry in this list takes the value <i>commonPLMNs</i> , the PLMN(s) with disaster conditions indicated in the field <i>commonPLMNsWithDisasterCondition</i> apply for this network(s). If an entry in this list contains the value <i>dedicatedPLMNs</i> , the listed PLMN(s) are the PLMN(s) with disaster conditions that the network(s) corresponding to this entry accepts disaster inbound roamers from. For SNPNs, the network indicates the value <i>noDisasterRoaming</i> . |

— *SIB16*

SIB16 contains configurations of slice-based cell reselection information.

| <p><b>trs-ResourceSetConfig</b></p> <p>RS configuration of TRS occasion(s) for idle/inactive UE(s), in terms of a list of N&gt;=1 NZP TRS resource set(s). The maximum number of TRS resource sets configured by higher layer is 64. If a TRS resource is configured, the L1 based availability indication is always enabled based on that configuration. A UE which acquired <i>SIB17</i> with a TRS configuration but did not yet receive an associated L1-based availability indication considers the configured TRS as unavailable. If SIB scheduling indicates that <i>SIB17</i> has changed, the UE considers its configured TRS(s) as unavailable until it receives the associated L1-based availability indication(s).</p> |
| <p><b>validityDuration</b></p> <p>The valid time duration for L1 availability indication, time unit is one default paging cycle. When the field is absent, UE assumes a default time duration to be 2 default paging cycles. The field is only valid while the UE has a valid <i>SIB17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| TRS-ResourceSet field descriptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>gin-ElementList</b></p> <p>The <i>gin-ElementList</i> contains one or more GIN elements. Each GIN element contains either one GIN, which is identified by a PLMN ID and a NID, or multiple GINs that share the same PLMN ID. The total number of GINs indicated does not exceed maxGIN-r17. The GIN index <i>m</i> is defined as d1+d2+...+d(n-1)+i for the GIN included in the <i>n</i>-th entry of the <i>gin-ElementList</i> and the <i>i</i>-th entry of its corresponding <i>GIN-Element</i>, where <i>d(k)</i> is the number of GIN index values used in the <i>k</i>-th <i>gin-ElementList</i> entry.</p> |
| <p><b>gins-PerSNPN-List</b></p> <p>Indicates the supported GINs for each SNPN. The network includes the same number of entries as the number of SNPNS in <i>snpn-AccessInfoList</i> in provided in SIB1, and the <i>n</i>-th entry in this list corresponds to the <i>n</i>-th SNPN listed in <i>snpn-AccessInfoList</i> provided in SIB1. The network configures this field only if the cell broadcasts more than one SNPN in <i>SIB1</i>. If this field is absent, as in case of a single SNPN broadcasted in <i>SIB1</i>, the UE shall associate all GINs in <i>gin-ElementList</i> to that SNPN.</p>               |

| GINS-PerSNPN field descriptions                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>supportedGINS</b></p> <p>Indicates the GINs which are supported by the given SNPN. The first/leftmost bit corresponds to the GIN with GIN index 1, the second bit corresponds to the GIN with GIN index 2 and so on. A bit set to 1 indicates that the GIN is supported by the SNPN. If the field is not present, then the corresponding SNPN does not support any GINs.</p> |

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>distanceThresh</b><br>Distance from the serving cell reference location and is used in location-based measurement initiation in RRC_IDLE and RRC_INACTIVE, as defined in TS 38.304 [20]. Each step represents 50m.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>ntn-Config</b><br>Provides parameters needed for the UE to access NR via NTN access such as Ephemeris data, common TA parameters, k_offset, validity duration for UL sync information and epoch time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>ntn-NeighCellConfigList, ntn-NeighCellConfigListExt</b><br>Provides a list of NTN neighbour cells including their <i>ntn-Config</i> , carrier frequency and <i>PhysCellId</i> . This set includes all elements of <i>ntn-NeighCellConfigList</i> and all elements of <i>ntn-NeighCellConfigListExt</i> . If <i>ntn-Config</i> is absent for an entry in <i>ntn-NeighCellConfigListExt</i> , the <i>ntn-Config</i> provided in the entry at the same position in <i>ntn-NeighCellConfigList</i> applies. Network provides <i>ntn-Config</i> for the first entry of <i>ntn-NeighCellConfigList</i> . If the <i>ntn-Config</i> is absent for any other entry in <i>ntn-NeighCellConfigList</i> , the <i>ntn-Config</i> provided in the previous entry in <i>ntn-NeighCellConfigList</i> applies. |
| <b>referenceLocation</b><br>Reference location of the serving cell provided via NTN (quasi-)Earth fixed cell and is used in location-based measurement initiation in RRC_IDLE and RRC_INACTIVE, as defined in TS 38.304 [20].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>t-Service</b><br>Indicates the time information on when a cell provided via NTN quasi-Earth fixed cell is going to stop serving the area it is currently covering. The field indicates a time in multiples of 10 ms after 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900). The exact stop time is between the time indicated by the value of this field minus 1 and the time indicated by the value of this field. The reference point for <i>t-Service</i> is the uplink time synchronization reference point of the cell.                                                                                                                                                                                      |

— SIB20

SIB20 contains the information required to acquire the MCCH/MTCH configuration for MBS broadcast.

| SIB20 field descriptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>cfr-ConfigMCCH-MTCH</b><br>Common frequency resource used for MCCH and MTCH reception. If the field is absent, the CFR for broadcast has the same location and size as CORESET#0 and PDSCH configuration of MCCH is the same as PDSCH configuration provided in <i>initialDownlinkBWP</i> in <i>SIB1</i> .                                                                                                                                                                                                                         |
| <b>mcch-WindowDuration</b><br>Indicates, starting from the slot indicated by <i>mcch-WindowStartSlot</i> , the duration in slots during which MCCH may be scheduled. Absence of this field means that MCCH is only scheduled in the slot indicated by <i>mcch-WindowStartSlot</i> . The network always configures <i>mcch-WindowDuration</i> to be shorter or equal to the length of MCCH repetition period.                                                                                                                          |
| <b>mcch-ModificationPeriod</b><br>Defines periodically appearing boundaries, i.e. radio frames for which SFN mod <i>mcch-ModificationPeriod</i> = 0. The contents of different transmissions of MCCH information can only be different if there is at least one such boundary in-between them. Value rf2 corresponds to two radio frames, value rf4 corresponds to four radio frames and so on.                                                                                                                                       |
| <b>mcch-RepetitionPeriodAndOffset</b><br>Defines the length and the offset of the MCCH repetition period. rf1 corresponds to a repetition period length of one radio frame, rf2 corresponds to a repetition period length of two radio frames and so on. The corresponding integer value indicates the offset of the repetition period in the number of radio frames. MCCH is scheduled in the MCCH transmission window starting from each radio frame for which: SFN mod repetition period length = offset of the repetition period. |
| <b>mcch-WindowStartSlot</b><br>Indicates the slot in which MCCH transmission window starts.                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>areaScope</i></b><br>Indicates that a posSIB is area specific. If the field is absent, the posSIB is cell specific.                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>encrypted</i></b><br>The presence of this field indicates that the <i>pos-sib-type</i> is encrypted as specified in TS 37.355 [49].                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>gnss-id</i></b><br>The presence of this field indicates that the positioning SIB type is for a specific GNSS. Indicates a specific GNSS (see also TS 37.355 [49]).                                                                                                                                                                                                                                                                                                                          |
| <b><i>posSchedulingInfoList</i></b><br>List of scheduling information for SI messages. If <i>si-SchedulingInfo-v1700</i> is present, the network ensures that the total number of SI messages in the concatenated list of SI messages configured by <i>posSchedulingInfoList</i> in <i>posSI-SchedulingInfo</i> and SI messages containing type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> does not exceed the limit of <i>maxSI-Message</i> .               |
| <b><i>posSI-BroadcastStatus</i></b><br>Indicates if the SI message is being broadcasted or not. Change of <i>posSI-BroadcastStatus</i> should not result in system information change notifications in Short Message transmitted with P-RNTI over DCI (see clause 6.5). The value of the indication is valid until the end of the BCCH modification period when set to <i>broadcasting</i> .                                                                                                      |
| <b><i>posSI-RequestConfig</i></b><br>Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> .                                                                                                                                                                 |
| <b><i>posSI-RequestConfigRedCap</i></b><br>Configuration of Msg1 resources for <i>initialUplinkBWP-RedCap</i> that the RedCap UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> .                                                                                                                 |
| <b><i>posSI-RequestConfigSUL</i></b><br>Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> .                                                                                                                                                              |
| <b><i>posSIB-MappingInfo</i></b><br>List of the posSIBs mapped to this <i>SystemInformation</i> message.                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>posSibType</i></b><br>The positioning SIB type is defined in TS 37.355 [49].                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>posSI-Periodicity</i></b><br>Periodicity of the SI-message in radio frames, such that rf8 denotes 8 radio frames, rf16 denotes 16 radio frames, and so on. If the <i>offsetToSI-Used</i> is configured, the <i>posSI-Periodicity</i> of rf8 cannot be used.                                                                                                                                                                                                                                 |
| <b><i>offsetToSI-Used</i></b><br>This field, if present, indicates that all the SI messages in <i>posSchedulingInfoList</i> are scheduled with an offset of 8 radio frames compared to SI messages in <i>schedulingInfoList</i> . <i>offsetToSI-Used</i> may be present only if the shortest configured SI message periodicity for SI messages in <i>schedulingInfoList</i> is 80ms. If SI offset is used, this field is present in each of the SI messages in the <i>posSchedulingInfoList</i> . |
| <b><i>sbas-id</i></b><br>The presence of this field indicates that the positioning SIB type is for a specific SBAS. Indicates a specific SBAS (see also TS 37.355 [49]).                                                                                                                                                                                                                                                                                                                          |

| Conditional presence | Explanation                                                                                                                                                                                                                                                                                                                                                                                                                            |

It is absent otherwise.  |

– *SIBpos*

The IE *SIBpos* contains positioning assistance data as defined in TS 37.355 [49].

*SIBpos* information element

```
-- ASN1START
-- TAG-SIPOS-START

SIBpos-r16 ::= SEQUENCE {
    assistanceDataSIB-Element-r16      OCTET STRING,
    lateNonCriticalExtension            OCTET STRING OPTIONAL,
    ...
}

-- TAG-SIPOS-STOP
-- ASN1STOP
```

| <i>SIBpos</i> field descriptions                                                                                                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>assistanceDataSIB-Element</b><br>Parameter <i>AssistanceDataSIBelement</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit. |

6.3.2 Radio resource control information elements

– *AdditionalPCIIndex*

The IE *AdditionalPCIIndex* identifies an additional physical cell identity (PCI) configured with *additionalPCI-ToAddModList-r17* in *ServingCellConfig*.

*AdditionalPCIIndex* information element

```
-- ASN1START
-- TAG-ADDITIONALPCIINDEX-START
```

```
AdditionalPCIIndex-r17 ::= INTEGER(1..maxNrofAdditionalPCI-r17)
```

```
-- TAG-ADDITIONALPCIINDEX-STOP  
-- ASN1STOP
```

## — *AdditionalSpectrumEmission*

The IE *AdditionalSpectrumEmission* is used to indicate emission requirements to be fulfilled by the UE (see TS 38.101-1 [15], clause 6.2.3/6.2A.3, TS 38.101-2 [39], clause 6.2.3/6.2A.3, and TS 38.101-5 [75], clause 6.2.3). If an extension is signalled using the extended value range (as defined by the IE *AdditionalSpectrumEmission-v1760*), the corresponding original field, using the value range as defined by the IE *AdditionalSpectrumEmission* (without suffix) shall be set to value 7.

### *AdditionalSpectrumEmission* information element

```
-- ASN1START  
-- TAG-ADDITIONALSPECTRUMEMISSION-START
```

```
AdditionalSpectrumEmission ::= INTEGER (0..7)
```

```
AdditionalSpectrumEmission-v1760 ::= INTEGER (8..39)
```

```
-- TAG-ADDITIONALSPECTRUMEMISSION-STOP  
-- ASN1STOP
```

## — *Alpha*

The IE *Alpha* defines possible values of a the pathloss compensation coefficient for uplink power control. Value *alpha0* corresponds to the value 0, Value *alpha04* corresponds to the value 0.4, Value *alpha05* corresponds to the value 0.5 and so on. Value *alpha1* corresponds to value 1. See also clause 7.1 of TS 38.213 [13].

```
-- ASN1START  
-- TAG-ALPHA-START
```

```
Alpha ::= ENUMERATED {alpha0, alpha04, alpha05, alpha06, alpha07, alpha08, alpha09, alpha1}
```

```
-- TAG-ALPHA-STOP  
-- ASN1STOP
```

## — *AMF-Identifier*

The IE *AMF-Identifier* (AMFI) comprises of an AMF Region ID, an AMF Set ID and an AMF Pointer as specified in TS 23.003 [21], clause 2.10.1.

### *AMF-Identifier* information element

```
-- ASN1START
```

```
-- TAG-AMF-IDENTIFIER-START
```

```
AMF-Identifier ::= BIT STRING (SIZE (24))
```

```
-- TAG-AMF-IDENTIFIER-STOP  
-- ASN1STOP
```

## — *ARFCN-ValueEUTRA*

The IE *ARFCN-ValueEUTRA* is used to indicate the ARFCN applicable for a downlink, uplink or bi-directional (TDD) E-UTRA carrier frequency, as defined in TS 36.101 [22].

### *ARFCN-ValueEUTRA* information element

```
-- ASN1START  
-- TAG-ARFCN-VALUEEUTRA-START
```

```
ARFCN-ValueEUTRA ::= INTEGER (0..maxEARFCN)
```

```
-- TAG-ARFCN-VALUEEUTRA-STOP  
-- ASN1STOP
```

## — *ARFCN-ValueNR*

The IE *ARFCN-ValueNR* is used to indicate the ARFCN applicable for a downlink, uplink or bi-directional (TDD) NR global frequency raster, as defined in TS 38.101-1 [15], TS 38.101-2 [39] and TS 38.101-5 [75], clause 5.4.2.

```
-- ASN1START  
-- TAG-ARFCN-VALUENR-START
```

```
ARFCN-ValueNR ::= INTEGER (0..maxNARFCN)
```

```
-- TAG-ARFCN-VALUENR-STOP  
-- ASN1STOP
```

## — *ARFCN-ValueUTRA-FDD*

The IE *ARFCN-ValueUTRA-FDD* is used to indicate the ARFCN applicable for a downlink (Nd, FDD) UTRA-FDD carrier frequency, as defined in TS 25.331 [45].

### *ARFCN-ValueUTRA-FDD* information element

```
-- ASN1START  
-- TAG-ARFCN-ValueUTRA-FDD-START
```

ARFCN-ValueUTRA-FDD-r16 ::= **INTEGER** (0..16383)

-- TAG-ARFCN-ValueUTRA-FDD-STOP  
-- ASN1STOP

## – *AvailabilityCombinationsPerCell*

The IE *AvailabilityCombinationsPerCell* is used to configure the *AvailabilityCombinations* applicable for a cell of the IAB DU (see TS 38.213 [13], clause 14). Note that the IE *AvailabilityCombinationsPerCellIndex* can only be configured up to 511.

### *AvailabilityCombinationsPerCell* information element

-- ASN1START  
-- TAG-AVAILABILITYCOMBINATIONSPERCELL-START

```
AvailabilityCombinationsPerCell-r16 ::= SEQUENCE {

| <b><i>beamFailureRecoveryTimer</i></b><br>Timer for beam failure recovery timer. Upon expiration of the timer the UE does not use CFRA for BFR. Value in ms. Value <i>ms10</i> corresponds to 10 ms, value <i>ms20</i> corresponds to 20 ms, and so on.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>candidateBeamRSList</i>, <i>candidateBeamRSListExt-v1610</i></b><br>Set of reference signals (CSI-RS and/or SSB) identifying the candidate beams for recovery and the associated RA parameters. This set includes all elements of <i>candidateBeamRSList</i> (without suffix) and all elements of <i>candidateBeamRSListExt-v1610</i> . The UE maintains <i>candidateBeamRSList</i> and <i>candidateBeamRSListExt-v1610</i> separately: Receiving <i>candidateBeamRSListExt-v1610</i> set to <i>release</i> releases only the entries that were configured by <i>candidateBeamRSListExt-v1610</i> , and receiving <i>candidateBeamRSListExt-v1610</i> set to <i>setup</i> replaces only the entries that were configured by <i>candidateBeamRSListExt-v1610</i> with the newly signalled entries. The network configures these reference signals to be within the linked DL BWP (i.e., within the DL BWP with the same <i>bwp-Id</i> ) of the UL BWP in which the <i>BeamFailureRecoveryConfig</i> is provided. |
| <b><i>msg1-SubcarrierSpacing</i></b><br>Subcarrier spacing for contention free beam failure recovery (see TS 38.211 [16], clause 5.3.2).<br>Only the following values are applicable depending on the used frequency:<br>FR1: 15 or 30 kHz<br>FR2-1: 60 or 120 kHz<br>FR2-2: 120, 480, or 960 kHz                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b><i>rsrp-ThresholdSSB</i></b><br>L1-RSRP threshold used for determining whether a candidate beam may be used by the UE to attempt contention free random access to recover from beam failure (see TS 38.213 [13], clause 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>ra-prioritization</i></b><br>Parameters which apply for prioritized random access procedure for BFR (see TS 38.321 [3], clause 5.1.1).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>ra-PrioritizationTwoStep</i></b><br>Parameters which apply for prioritized 2-step random access procedure for BFR (see TS 38.321 [3], clause 5.1.1).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>ra-ssb-OccasionMaskIndex</i></b><br>Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3]. The mask is valid for all SSB resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>rach-ConfigBFR</i></b><br>Configuration of random access parameters for BFR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>recoverySearchSpaceId</i></b><br>Search space to use for BFR RAR. The network configures this search space to be within the linked DL BWP (i.e., within the DL BWP with the same <i>bwp-Id</i> ) of the UL BWP in which the <i>BeamFailureRecoveryConfig</i> is provided. The CORESET associated with the recovery search space cannot be associated with another search space. Network always configures the UE with a value for this field when contention free random access resources for BFR are configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>rootSequenceIndex-BFR</i></b><br>PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1) for beam failure recovery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>betaOffsetACK-Index1</i></b><br>Up to 2 bits HARQ-ACK (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 11.                  |
| <b><i>betaOffsetACK-Index2</i></b><br>Up to 11 bits HARQ-ACK (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 11.                 |
| <b><i>betaOffsetACK-Index3</i></b><br>Above 11 bits HARQ-ACK (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 11.                 |
| <b><i>betaOffsetCSI-Part1-Index1</i></b><br>Up to 11 bits of CSI part 1 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13. |
| <b><i>betaOffsetCSI-Part1-Index2</i></b><br>Above 11 bits of CSI part 1 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13. |
| <b><i>betaOffsetCSI-Part2-Index1</i></b><br>Up to 11 bits of CSI part 2 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13. |
| <b><i>betaOffsetCSI-Part2-Index2</i></b><br>Above 11 bits of CSI part 2 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13. |

## – *BetaOffsetsCrossPri*

The IE *BetaOffsetsCrossPri* is used to configure beta-offset values for cross-priority HARQ-ACK multiplexing on PUSCH.

### *BetaOffsetsCrossPri* information element

```
-- ASN1START
-- TAG-BETAOFFSETSCROSSPRI-START

BetaOffsetsCrossPri-r17 ::= SEQUENCE (SIZE(3)) OF INTEGER(0..31)

-- TAG-BETAOFFSETSCROSSPRI-STOP
-- ASN1STOP
```

## – *BH-LogicalChannelIdentity*

The IE *BH-LogicalChannelIdentity* is used to identify a logical channel between an IAB-node and its parent IAB-node or IAB-donor-DU.

### *BH-LogicalChannelIdentity* information element

```
-- ASN1START
-- TAG-BHLOGICALCHANNELIDENTITY-START

BH-LogicalChannelIdentity-r16 ::= CHOICE {
    bh-LogicalChannelIdentity-r16      LogicalChannelIdentity,
    bh-LogicalChannelIdentityExt-r16   BH-LogicalChannelIdentity-Ext-r16
}

-- TAG-BHLOGICALCHANNELIDENTITY-STOP
```

-- ASN1STOP

| BH-LogicalChannelIdentity field descriptions |                                      |
|----------------------------------------------|--------------------------------------|
| <b>bh-LogicalChannelIdentity</b>             | ID used for the MAC logical channel. |
| <b>bh-LogicalChannelIdentityExt</b>          | ID used for the MAC logical channel. |

— **BH-LogicalChannelIdentity-Ext**

The IE *BH-LogicalChannelIdentity-Ext* is used to identify a logical channel between an IAB-node and its parent node.

**BH-LogicalChannelIdentity-Ext information element**

```
-- ASN1START
-- TAG-BHLOGICALCHANNELIDENTITYEXT-START

BH-LogicalChannelIdentity-Ext-r16 ::=  INTEGER (320.. maxLC-ID-Iab-r16)

-- TAG-BHLOGICALCHANNELIDENTITYEXT-STOP
-- ASN1STOP
```

— **BH-RLC-ChannelConfig**

The IE *BH-RLC-ChannelConfig* is used to configure an RLC entity, a corresponding logical channel in MAC for BH RLC channel between IAB-node and its parent node.

**BH-RLC-ChannelConfig information element**

```
-- ASN1START
-- TAG-BHRLCCHANNELCONFIG-START

BH-RLC-ChannelConfig-r16 ::=  SEQUENCE {
    bh-LogicalChannelIdentity-r16  BH-LogicalChannelIdentity-r16  OPTIONAL,    -- Cond LCH-SetupOnly

— *BWP*

The IE *BWP* is used to configure generic parameters of a bandwidth part as defined in TS 38.211 [16], clause 4.5, and TS 38.213 [13], clause 12.

For each serving cell the network configures at least an initial downlink bandwidth part and one (if the serving cell is configured with an uplink) or two (if using supplementary uplink (SUL)) initial uplink bandwidth parts. Furthermore, the network may configure additional uplink and downlink bandwidth parts for a serving cell.

The uplink and downlink bandwidth part configurations are divided into common and dedicated parameters.

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>cyclicPrefix</b><br/>Indicates whether to use the extended cyclic prefix for this bandwidth part. If not set, the UE uses the normal cyclic prefix. Normal CP is supported for all subcarrier spacings and slot formats. Extended CP is supported only for 60 kHz subcarrier spacing. (see TS 38.211 [16], clause 4.2). Except for SUL, the network ensures the same cyclic prefix length is used in active DL BWP and active UL BWP within a serving cell. If RedCap-specific initial DL BWP is configured, the network ensures the same cyclic prefix length is configured for initial DL BWP and RedCap-specific initial DL BWP.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p><b>locationAndBandwidth</b><br/>Frequency domain location and bandwidth of this bandwidth part. The value of the field shall be interpreted as resource indicator value (RIV) as defined TS 38.214 [19] with assumptions as described in TS 38.213 [13], clause 12, i.e. setting <math>N_{\text{BWP}}^{\text{size}}=275</math>. The first PRB is a PRB determined by <i>subcarrierSpacing</i> of this BWP and <i>offsetToCarrier</i> (configured in <i>SCS-SpecificCarrier</i> contained within <i>FrequencyInfoDL</i> / <i>FrequencyInfoUL</i> / <i>FrequencyInfoUL-SIB</i> / <i>FrequencyInfoDL-SIB</i> within <i>ServingCellConfigCommon</i> / <i>ServingCellConfigCommonSIB</i>) corresponding to this subcarrier spacing. In case of TDD, a BWP-pair (UL BWP and DL BWP with the same <i>bwp-Id</i>) must have the same center frequency (see TS 38.213 [13], clause 12)</p>                                                                                                                                                                                                                                                                                                                               |
| <p><b>subcarrierSpacing</b><br/>Subcarrier spacing to be used in this BWP for all channels and reference signals unless explicitly configured elsewhere. Corresponds to subcarrier spacing according to TS 38.211 [16], table 4.2-1. The value <i>kHz15</i> corresponds to <math>\mu=0</math>, value <i>kHz30</i> corresponds to <math>\mu=1</math>, and so on.<br/>Only the following values are applicable depending on the used frequency:<br/>FR1: 15, 30, or 60 kHz<br/>FR2-1: 60 or 120 kHz<br/>FR2-2: 120, 480, or 960 kHz<br/>For the initial DL BWP and operation in licensed spectrum this field has the same value as the field <i>subCarrierSpacingCommon</i> in <i>MIB</i> of the same serving cell. Except for SUL, the network ensures the same subcarrier spacing is used in active DL BWP and active UL BWP within a serving cell. For the initial DL BWP and operation with shared spectrum channel access, the value of this field corresponds to the subcarrier spacing of the SSB associated to the initial DL BWP. If RedCap-specific initial DL BWP is configured, the network ensures the same subcarrier spacing is configured for initial DL BWP and RedCap-specific initial DL BWP.</p> |

— **BWP-Downlink**

The IE *BWP-Downlink* is used to configure an additional downlink bandwidth part (not for the initial BWP).

**BWP-Downlink information element**

```
-- ASN1START
-- TAG-BWP-DOWNLINK-START

BWP-Downlink ::=

OPTIONAL, -- Cond SetupOtherBWP

-- TAG-BWP-DOWNLINK-STOP
-- ASN1STOP
```

| BWP-Downlink field descriptions                                                                                                                                                                                                                                                                                                    |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>bwp-Id</b><br>An identifier for this bandwidth part. Other parts of the RRC configuration use the <i>BWP-Id</i> to associate themselves with a particular bandwidth part. The network configures the BWPs with consecutive IDs from 1. The Network does not include the value 0, since value 0 is reserved for the initial BWP. |  |

| Conditional Presence | Explanation                                                                                                            |
|----------------------|------------------------------------------------------------------------------------------------------------------------|
| <i>SetupOtherBWP</i> | The field is mandatory present upon configuration of a new DL BWP. The field is optionally present, Need M, otherwise. |

– *BWP-DownlinkCommon*

The IE *BWP-DownlinkCommon* is used to configure the common parameters of a downlink BWP. They are "cell specific" and the network ensures the necessary alignment with corresponding parameters of other UEs. The common parameters of the initial bandwidth part of the PCell are also provided via system information. For all other serving cells, the network provides the common parameters via dedicated signalling.

*BWP-DownlinkCommon* information element

```
-- ASN1START
-- TAG-BWP-DOWNLINKCOMMON-START

BWP-DownlinkCommon ::=
    genericParameters

| <b><i>beamFailureRecoverySCellConfig</i></b><br>Configuration of candidate RS for beam failure recovery on SCells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>beamFailureRecoverySpCellConfig</i></b><br>Configuration of candidate RS for beam failure recovery on the SpCell. This field can only be configured when <i>beamFailure-r17</i> is configured in <i>RadioLinkMonitoringConfig</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>cfr-ConfigMulticast</i></b><br>UE specific common frequency resource configuration for MBS multicast for one dedicated BWP. This field can be configured within at most one serving cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b><i>dl-PPW-PreConfigToAddModList</i></b><br>Indicates a list of DL-PRS processing window configurations to be added or modified for the dedicated DL BWP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>dl-PPW-PreConfigToReleaseList</i></b><br>Indicates a list of DL-PRS processing window configurations to be released for the dedicated DL BWP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>harq-FeedbackEnablingforSPSActive</i></b><br>If enabled, UE reports ACK/NACK for the first SPS PDSCH after activation, regardless of if HARQ feedback is enabled or disabled for the HARQ process corresponding to the first SPS PDSCH after activation. Otherwise, UE follows configuration of HARQ feedback enabled/disabled for the HARQ process corresponding to the first SPS PDSCH after activation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>nonCellDefiningSSB</i></b><br>If configured, the RedCap UE operating in this BWP uses this SSB for the purposes for which it would otherwise have used the CD-SSB of the serving cell (e.g. obtaining sync, measurements, RLM, BFD, beam management). Furthermore, other parts of the BWP configuration that refer to an SSB (e.g. the "SSB" configured in the <i>QCL-Info</i> IE; the "ssb-Index" configured in the <i>RadioLinkMonitoringRS</i> ; <i>CFRA-SSB-Resource</i> ; <i>PRACH-ResourceDedicatedBFR</i> ) refer implicitly to this NCD-SSB. The NCD-SSB has the same values for the properties (e.g., <i>ssb-PositionsInBurst</i> , <i>PCI</i> , <i>ssb-PBCH-BlockPower</i> ) of the corresponding CD-SSB apart from the values of the properties configured in the <i>NonCellDefiningSSB-r17</i> IE. In the MIB associated with this NCD-SSB, the <i>systemFrameNumber</i> field indicates the frame boundary and frame number of the NCD-SSB. The <i>subCarrierSpacingCommon</i> and <i>dmrs-TypeA-Position</i> field in the MIBs associated with CD-SSB and NCD-SSB in the same cell are configured with the same values, respectively. |
| <b><i>pdcch-Config</i></b><br>UE specific PDCCH configuration for one BWP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>pdsch-Config</i></b><br>UE specific PDSCH configuration for one BWP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>preConfigGapStatus</i></b><br>Indicates whether the pre-configured measurement gaps (i.e. the gaps configured with <i>preConfigInd</i> ) are activated or deactivated upon the switch to this BWP. If this field is configured, the UE shall apply network-controlled mechanism for activation and deactivation of the pre-configured measurement gaps, otherwise the UE shall apply the autonomous activation/deactivation mechanism, as specified in TS 38.133 [14]. The first/leftmost bit corresponds to the measurement gap with gap ID 1, the second bit corresponds to measurement gap with gap ID 2, and so on. Value 0 indicates that the corresponding pre-configured measurement gap is deactivated while value 1 indicates that the corresponding pre-configured measurement gap is activated. The UE shall ignore the bit if the corresponding measurement gap is not a pre-configured measurement gap.                                                                                                                                                                                                                                |
| <b><i>servingCellMO</i></b><br><i>measObjectID</i> of the <i>MeasObjectNR</i> in <i>MeasConfig</i> which is associated to the serving cell. For this <i>MeasObjectNR</i> , the following relationship applies between this <i>MeasObjectNR</i> and <i>nonCellDefiningSSB</i> in <i>BWP-DownlinkDedicated</i> of the associated downlink BWP: if <i>ssbFrequency</i> is configured, its value is the same as the <i>absoluteFrequencySSB</i> in the <i>nonCellDefiningSSB</i> . If the field is present in a downlink BWP and the BWP is activated, the RedCap UE uses this measurement object for serving cell measurements (e.g., including those used in measurement report triggering events), otherwise, the RedCap UE uses the <i>servingCellMO</i> in <i>ServingCellConfig</i> IE.                                                                                                                                                                                                                                                                                                                                                                  |
| <b><i>sps-Config</i></b><br>UE specific SPS (Semi-Persistent Scheduling) configuration for one BWP. Except for reconfiguration with sync, the NW does not reconfigure <i>sps-Config</i> when there is an active configured downlink assignment (see TS 38.321 [3]). However, the NW may release the <i>sps-Config</i> at any time. Network can only configure SPS in one BWP using either this field or <i>sps-ConfigToAddModList</i> . Network does not configure SPS in one BWP using this field and <i>sps-ConfigMulticastToAddModList-r17</i> simultaneously.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>sps-ConfigDeactivationStateList</i></b><br>Indicates a list of the deactivation states in which each state can be mapped to a single or multiple SPS configurations to be deactivated, see clause 10.2 in TS 38.213 [13]. If a state is mapped to multiple SPS configurations, each of these SPS configurations is configured with the same <i>harq-CodebookID</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>sps-ConfigToAddModList</b><br>Indicates a list of one or more DL SPS configurations to be added or modified in one BWP. Except for reconfiguration with sync, the NW does not reconfigure a SPS configuration when it is active (see TS 38.321 [3]).                                                                                                                               |
| <b>sps-ConfigToReleaseList</b><br>Indicates a list of one or more DL SPS configurations to be released. The NW may release a SPS configuration at any time.                                                                                                                                                                                                                           |
| <b>radioLinkMonitoringConfig</b><br>UE specific configuration of radio link monitoring for detecting cell- and beam radio link failure occasions. The maximum number of failure detection resources should be limited up to 8 for both cell and beam radio link failure detection. For SCells, only periodic 1-port CSI-RS can be configured in IE <i>RadioLinkMonitoringConfig</i> . |
| <b>sl-PDCCH-Config</b><br>Indicates the UE specific PDCCH configurations for receiving the SL grants (via SL-RNTI or SL-CS-RNTI) for NR sidelink communication/discovery.                                                                                                                                                                                                             |
| <b>sl-V2X-PDCCH-Config</b><br>Indicates the UE specific PDCCH configurations for receiving SL grants (i.e. sidelink SPS) for V2X sidelink communication.                                                                                                                                                                                                                              |

| Conditional Presence      | Explanation                                                                                                                                                                                                                                                             |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>MeasObject-NCD-SSB</i> | This field is optionally present Need S if the UE is a RedCap UE and <i>nonCellDefiningSSB</i> is configured in this DL BWP. It is absent otherwise.                                                                                                                    |
| <i>PreConfigMG</i>        | The field is optionally present, Need R, if there is at least one per UE gap configured with <i>preConfigInd</i> or there is at least one per FR gap of the same FR which the BWP belongs to and configured with <i>preConfigInd</i> . It is absent, Need R, otherwise. |
| <i>ScellOnly</i>          | The field is optionally present, Need M, in the <i>BWP-DownlinkDedicated</i> of an Scell. It is absent otherwise.                                                                                                                                                       |
| <i>SpCellOnly</i>         | The field is optionally present, Need M, in the <i>BWP-DownlinkDedicated</i> of an Spcell. It is absent otherwise.                                                                                                                                                      |

— *BWP-Id*

The IE *BWP-Id* is used to refer to Bandwidth Parts (BWP). The initial BWP (including RedCap-specific initial BWP, if configured) is referred to by *BWP-Id* 0. The other BWPs are referred to by *BWP-Id* 1 to *maxNrofBWPs*.

***BWP-Id* information element**

```
-- ASN1START
-- TAG-BWP-ID-START

BWP-Id ::= INTEGER (0..maxNrofBWPs)

-- TAG-BWP-ID-STOP
-- ASN1STOP
```

— *BWP-Uplink*

The IE *BWP-Uplink* is used to configure an additional uplink bandwidth part (not for the initial BWP).

BWP-Uplink information element

```

    BWP-Id,
    BWP-UplinkCommon
    BWP-UplinkDedicated
    OPTIONAL, -- Cond SetupOtherBWP
    OPTIONAL, -- Cond SetupOtherBWP
}

-- TAG-BWP-UPLINK-STOP
-- ASN1STOP

```

| BWP-Uplink field descriptions |                                                                                                                                                                                                                                                                                                                   |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>bwp-Id</b>                 | An identifier for this bandwidth part. Other parts of the RRC configuration use the <i>BWP-Id</i> to associate themselves with a particular bandwidth part. The network configures the BWPs with consecutive IDs from 1. The Network does not include the value 0, since value 0 is reserved for the initial BWP. |

| Conditional Presence | Explanation                                                                                                            |
|----------------------|------------------------------------------------------------------------------------------------------------------------|
| SetupOtherBWP        | The field is mandatory present upon configuration of a new UL BWP. The field is optionally present, Need M, otherwise. |

BWP-UplinkCommon

The IE *BWP-UplinkCommon* is used to configure the common parameters of an uplink BWP. They are "cell specific" and the network ensures the necessary alignment with corresponding parameters of other UEs. The common parameters of the initial bandwidth part of the PCell are also provided via system information. For all other serving cells, the network provides the common parameters via dedicated signalling.

| <b>BWP-UplinkCommon</b> field descriptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>additionalRACH-ConfigList</b><br/>List of feature or feature combination-specific RACH configurations, i.e. the RACH configurations configured in addition to the one configured by <i>rach-ConfigCommon</i> and by <i>msgA-ConfigCommon</i>. The network associates all possible preambles of an additional RACH configuration to one or more feature(s) or feature combination(s). The network does not configure this list to have more than 16 entries. If both <i>rach-ConfigCommon</i> and <i>msgA-ConfigCommon</i> are configured for a specific <i>FeatureCombination</i>, the network always provides them in the same <i>additionalRACH-Config</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p><b>enableRA-PrioritizationForSlicing</b><br/>Indicates whether or not the <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i> should override the <i>ra-PrioritizationForAccessIdentity</i>. The field is applicable only when the UE is configured by upper layers with both NSAG and Access Identity 1 or 2. If value <i>TRUE</i> is configured, the UE should only apply the <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i>. If value <i>FALSE</i> is configured, the UE should only apply <i>ra-PrioritizationForAccessIdentity</i>. If the field is absent, whether to use <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i> or <i>ra-PrioritizationForAccessIdentity</i> is up to UE implementation.</p>                                                                                                                                                                                                                                                                                                                                                                        |
| <p><b>mcs-Msg3-Repetitions</b><br/>Configuration of eight candidate MCS indexes for PUSCH transmission scheduled by RAR UL grant and DCI format 0_0 with CRC scrambled by TC-RNTI. Only the first 4 configured or default MCS indexes are used for PUSCH transmission scheduled by RAR UL grant. This field is only applicable when the UE selects Random Access resources indicating Msg3 repetition in this BWP. If this field is absent when the set(s) of Random Access resources with MSG3 repetition indication are configured in the <i>BWP-UplinkCommon</i>, the UE shall apply the values {0, 1, 2, 3, 4, 5, 6, 7} (see TS 38.214 [19], clause 6.1.4).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p><b>msgA-ConfigCommon</b><br/>Configuration of the cell specific PRACH and PUSCH resource parameters for transmission of MsgA in 2-step random access type procedure. The NW can configure <i>msgA-ConfigCommon</i> only for UL BWPs if the linked DL BWPs (same <i>bwp-Id</i> as UL-BWP) are the initial DL BWPs or DL BWPs containing the SSB associated to the initial DL BWP or for RedCap UEs DL BWPs associated with <i>nonCellDefiningSSB</i> or the RedCap-specific initial downlink BWP. The network configures <i>msgA-ConfigCommon</i> (without suffix) and/or <i>msgA-ConfigCommon-r17</i>, whenever it configures contention free 2-step random access, the UE then applies the corresponding configuration depending on the RACH resource set selected upon RACH initialization, as specified in TS 38.321 [3].</p>                                                                                                                                                                                                                                                                                                                   |
| <p><b>numberOfMsg3-RepetitionsList</b><br/>The number of repetitions for PUSCH transmission scheduled by RAR UL grant and DCI format 0_0 with CRC scrambled by TC-RNTI. This field is only applicable when the UE selects Random Access resources indicating Msg3 repetition in this BWP. If this field is absent when the set(s) of Random Access resources with MSG3 repetition indication are configured in the <i>BWP-UplinkCommon</i>, the UE shall apply the values {n1, n2, n3, n4} (see TS 38.214 [19], clause 6.1.2.1).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p><b>pucch-ConfigCommon</b><br/>Cell specific parameters for the PUCCH of this BWP.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p><b>pusch-ConfigCommon</b><br/>Cell specific parameters for the PUSCH of this BWP.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p><b>rach-ConfigCommon</b><br/>Configuration of cell specific random access parameters which the UE uses for contention based and contention free random access as well as for contention based beam failure recovery in this BWP. The NW configures SSB-based RA (and hence <i>RACH-ConfigCommon</i>) only for UL BWPs if the linked DL BWPs (same <i>bwp-Id</i> as UL-BWP) are the initial DL BWPs or DL BWPs containing the SSB associated to the initial DL BWP or for RedCap UEs DL BWPs associated with <i>nonCellDefiningSSB</i> or the RedCap-specific initial downlink BWP. The network configures <i>rach-ConfigCommon</i> (without suffix) and/or <i>rach-ConfigCommon-r17</i>, whenever it configures contention free 4-step random access (e.g. for reconfiguration with sync or for beam failure recovery or PDCCH order), the UE then applies the corresponding configuration depending on the RACH resource set selected upon RACH initialization, as specified in TS 38.321 [3]. For RedCap-specific initial uplink BWP, <i>rach-ConfigCommon</i> is always configured when <i>msgA-ConfigCommon</i> is configured in this BWP.</p> |
| <p><b>rach-ConfigCommonIAB</b><br/>Configuration of cell specific random access parameters for the IAB-MT. The IAB specific IAB RACH configuration is used by IAB-MT, if configured.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p><b>rsrp-ThresholdMsg3</b><br/>Threshold used by the UE for determining whether to select resources indicating Msg3 repetition in this BWP, as specified in TS 38.321 [3]. The field is mandatory if both set(s) of Random Access resources with MSG3 repetition indication and set(s) of Random Access resources without MSG3 repetition indication are configured in the BWP. It is absent otherwise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <p><b>useInterlacePUCCH-PUSCH</b><br/>If the field is present, the UE uses uplink frequency domain resource allocation Type 2 for cell-specific PUSCH, e.g., PUSCH scheduled by RAR UL grant (see TS 38.213 [13] clause 8.3 and TS 38.214 [19], clause 6.1.2.2) and uses interlaced PUCCH Format 0 and 1 for cell-specific PUCCH (see TS 38.213 [13], clause 9.2.1).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>beamFailureRecoveryConfig</b><br>Configuration of beam failure recovery. If <i>supplementaryUplink</i> is present, the field is present only in one of the uplink carriers, either UL or SUL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>configuredGrantConfig</b><br>A Configured-Grant of <i>type1</i> or <i>type2</i> . It may be configured for UL or SUL but in case of <i>type1</i> not for both at a time. Except for reconfiguration with sync, the NW does not reconfigure <i>configuredGrantConfig</i> when there is an active configured uplink grant Type 2 (see TS 38.321 [3]). However, the NW may release the <i>configuredGrantConfig</i> at any time. Network can only configure configured grant in one BWP using either this field or <i>configuredGrantConfigToAddModList</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>configuredGrantConfigToAddModList</b><br>Indicates a list of one or more configured grant configurations to be added or modified for one BWP. Except for reconfiguration with sync, the NW does not reconfigure a Type 2 configured grant configuration when it is active (see TS 38.321 [3]). The network configures multiple CG configurations for one BWP with either all configurations or no configuration configured with <i>cg-RetransmissionTimer-r16</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>configuredGrantConfigToReleaseList</b><br>Indicates a list of one or more UL Configured Grant configurations to be released. The NW may release a configured grant configuration at any time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>configuredGrantConfigType2DeactivationStateList</b><br>Indicates a list of the deactivation states in which each state can be mapped to a single or multiple Configured Grant type 2 configurations to be deactivated when the corresponding deactivation DCI is received, see clause 7.3.1 in TS 38.212 [17] and clause 10.2 in TS 38.213 [13].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>cp-ExtensionC2, cp-ExtensionC3</b><br>Configures the cyclic prefix (CP) extension (see TS 38.211 [16], clause 5.3.1). For 15 kHz SCS, {1..28} are valid for both <i>cp-ExtensionC2</i> and <i>cp-ExtensionC3</i> . For 30 kHz SCS, {1..28} are valid for <i>cp-ExtensionC2</i> and {2..28} are valid for <i>cp-ExtensionC3</i> . For 60 kHz SCS, {2..28} are valid for <i>cp-ExtensionC2</i> and {3..28} are valid for <i>cp-ExtensionC3</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>lbt-FailureRecoveryConfig</b><br>Configures parameters used for detection of consistent uplink LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>pathlossReferenceRSToAddModList</b><br>A list of Reference Signals (e.g. a CSI-RS config or a SS block) to be used for path loss estimation for PUSCH, PUCCH and SRS for unified TCI state operation. If <i>unifiedTCI-StateType</i> is not configured for the serving cell, no element in this list is configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>pucch-Config</b><br>PUCCH configuration for one BWP of the normal UL or SUL of a serving cell. If the UE is configured with SUL, the network configures PUCCH only on the BWPs of one of the uplinks (normal UL or SUL). The network configures <i>PUCCH-Config</i> at least on non-initial BWP(s) for SpCell and on all BWP(s) for PUCCH SCell. If supported by the UE, the network may configure at most one additional SCell of a cell group with <i>PUCCH-Config</i> (i.e. PUCCH SCell). If PUCCH cell switching is supported by the UE, the network may configure two TDD serving cells with <i>PUCCH-Config</i> within each PUCCH group. For supporting PUCCH cell switching in the PUCCH group with the SpCell, the TDD SpCell and one TDD SCell shall have <i>PUCCH-Config</i> on their normal UL. For supporting PUCCH cell switching in the PUCCH group with only SCells, two TDD SCells shall have <i>PUCCH-Config</i> on their normal UL.<br>In (NG)EN-DC and NE-DC, the NW configures at most one serving cell per frequency range with PUCCH. In (NG)EN-DC and NE-DC, if two PUCCH groups are configured, the serving cells of the NR PUCCH group in FR2 use the same numerology. For NR-DC, the maximum number of PUCCH groups in each cell group is one, and only the same numerology is supported for the cell group with carriers only in FR2.<br>The NW may configure PUCCH for a BWP when setting up the BWP. The network may also add/remove the <i>pucch-Config</i> in an <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> (for SpCell or PUCCH SCell) or with SCell release and add (for PUCCH SCell) to move the PUCCH between the UL and SUL carrier of one serving cell. In other cases, only modifications of a previously configured <i>pucch-Config</i> are allowed.<br>If one (S)UL BWP of a serving cell is configured with PUCCH, all other (S)UL BWPs must be configured with PUCCH, too. |
| <b>pucch-ConfigurationList</b><br>PUCCH configurations for two simultaneously constructed HARQ-ACK codebooks (see TS 38.213 [13], clause 9.1). Different PUCCH Resource IDs are configured in different <i>PUCCH-Config</i> within the <i>pucch-ConfigurationList</i> if configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>pucch-ConfigurationListMulticast1</b><br>PUCCH configurations for two simultaneously constructed HARQ-ACK codebooks for MBS multicast (see TS 38.213, clause 9).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Provides the serving cell and UL BWP where UL TCI states applicable to this UL BWP are defined. The value of <i>unifiedTCI-StateType</i> of current serving cell is the same in the serving cell indicated by <i>unifiedTCI-StateRef</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>useInterlacePUCCH-PUSCH</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| If the field is present, the UE uses uplink frequency domain resource allocation Type 2 for PUSCH (see TS 38.213 [13], clause 8.3 and TS 38.214 [19], clause 6.1.2.2) and uses interlaced PUCCH Format 0, 1, 2, and 3 for PUCCH (see TS 38.213 [13], clause 9.2.1).                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Conditional Presence | Explanation                                                                                                                                                                                                                                 |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>NoTCI-PC</i>      | The field is mandatory present if <i>unifiedTCI-StateType</i> is configured for this serving cell and <i>ul-powerControl</i> is not configured for any UL TCI state or joint TCI state of this serving cell. Otherwise it is absent, Need R |
| <i>SpCellOnly</i>    | The field is optionally present, Need M, in the <i>BWP-UplinkDedicated</i> of an SpCell. It is absent otherwise.                                                                                                                            |

NOTE 1: In case of *RRCReconfiguration* with *reconfigurationWithSync*, the UE performs a MAC reset, which involves releasing the PUCCH-CSI/SRS/SR configuration in accordance with clause 5.3.12 and TS 38.321 [3], clauses 5.12 and 5.2. Hence, for these parts of the dedicated radio resource configuration, delta signalling is not supported in the message when *reconfigurationWithSync* is included.

## – CandidateBeamRS

The IE *CandidateBeamRS* includes candidate beams for beam failure recovery in case of beam failure detection. See also TS 38.321 [3], clause 5.17.

CandidateBeamRS information element

```
-- ASN1START

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>extCH-Supported</b><br>Indicates whether the SNPN supports access using credentials from a Credentials Holder as specified in TS 23.501 [32].                                                                                                            |
| <b>extCH-WithoutConfigAllowed</b><br>Indicates whether the SNPN allows registration attempts with credentials from a Credentials Holder from UEs that are not explicitly configured to select the SNPN as specified in TS 23.501 [32].                      |
| <b>imsEmergencySupportForSNPN</b><br>Indicates whether the SNPN supports IMS emergency bearer services for UEs in limited service mode in the cell. If absent, IMS emergency call is not supported by the SNPN in the cell for UEs in limited service mode. |
| <b>onboardingEnabled</b><br>Indicates whether the onboarding SNPN allows registration for onboarding in the cell as specified in TS 23.501 [32].                                                                                                            |

– *CellAccessRelatedInfo-EUTRA-5GC*

The IE *CellAccessRelatedInfo-EUTRA-5GC* indicates cell access related information for an LTE cell connected to 5GC.

***CellAccessRelatedInfo-EUTRA-5GC* information element**

```
-- ASN1START
-- TAG-CELLACCESSRELATEDINFOEUTRA-5GC-START

CellAccessRelatedInfo-EUTRA-5GC ::= SEQUENCE {
    plmn-IdentityList-eutra-5gc    PLMN-IdentityList-EUTRA-5GC,
    trackingAreaCode-eutra-5gc    TrackingAreaCode,
    ranac-5gc                     RAN-AreaCode OPTIONAL,

}

PLMN-IdentityList-EUTRA-EPC ::= SEQUENCE (SIZE (1..maxPLMN)) OF PLMN-Identity

-- TAG-CELLACCESSRELATEDINFOEUTRA-EPC-STOP
-- ASN1STOP

```

**CellGroupConfig**

The *CellGroupConfig* IE is used to configure a master cell group (MCG) or secondary cell group (SCG). A cell group comprises of one MAC entity, a set of logical channels with associated RLC entities and of a primary cell (SpCell) and one or more secondary cells (SCells).

**CellGroupConfig information element**

```

| <b><i>f1c-TransferPath</i></b><br>The F1-C transfer path that an EN-DC IAB-MT should use for transferring F1-C packets to the IAB-donor-CU. If IAB-MT is configured with <i>lte</i> , IAB-MT can only use LTE leg for F1-C transfer. If IAB-MT is configured with <i>nr</i> , IAB-MT can only use NR leg for F1-C transfer. If IAB-MT is configured with <i>both</i> , it is up to IAB-MT to select an LTE leg or a NR leg for F1-C transfer. If the field is not configured, the IAB node uses the NR leg as the default one.                                                                                                                                                                                                           |
| <b><i>f1c-TransferPathNRDC</i></b><br>The F1-C transfer path that an NR-DC IAB-MT should use for transferring F1-C packets to the IAB-donor-CU. If IAB-MT is configured with <i>mcg</i> , IAB-MT can only use the MCG for F1-C transfer. If IAB-MT is configured with <i>scg</i> , IAB-MT can only use the SCG for F1-C transfer. If IAB-MT is configured with <i>both</i> , it is up to IAB-MT to select the MCG or the SCG for F1-C transfer.                                                                                                                                                                                                                                                                                          |
| <b><i>mac-CellGroupConfig</i></b><br>MAC parameters applicable for the entire cell group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b><i>npn-IdentityInfoList</i></b><br>This field is used to transfer <i>npn-IdentityInfoList</i> in <i>SIB1</i> of the SCell. The UE uses this field to translate the <i>plmn-Index</i> in MCCH of SCell to SNPN Identity. If this field and <i>plmn-IdentityInfoList</i> are both absent, the UE uses the <i>npn-IdentityInfoList</i> in <i>SIB1</i> of the PCell.                                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>plmn-IdentityInfoList</i></b><br>This field is used to transfer <i>plmn-IdentityInfoList</i> in <i>SIB1</i> of the SCell. The UE uses this field to translate the <i>plmn-Index</i> in MCCH of SCell to PLMN Identity. If this field and <i>npn-IdentityInfoList</i> are both absent, the UE uses the <i>plmn-IdentityInfoList</i> in <i>SIB1</i> of the PCell.                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>prioSCellPRACH-OverSP-PeriodicSRS</i></b><br>When configured, the UE applies UL power control prioritization by prioritizing PRACH transmission on SCell over semi-persistent and/or periodic SRS transmission as defined in clause 7.5 of TS 38.213 [13].                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>rlc-BearerToAddModList</i></b><br>Configuration of the MAC Logical Channel, the corresponding RLC entities and association with radio bearers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b><i>reportUplinkTxDirectCurrent</i></b><br>Enables reporting of uplink and supplementary uplink Direct Current location information upon BWP configuration and reconfiguration. This field is only present when the BWP configuration is modified or any serving cell is added or removed. This field is absent in the IE <i>CellGroupConfig</i> when provided as part of <i>RRCSetup</i> message. If UE is configured with SUL carrier, UE reports both UL and SUL Direct Current locations.                                                                                                                                                                                                                                          |
| <b><i>reportUplinkTxDirectCurrentMoreCarrier</i></b><br>Enables reporting of uplink Direct Current location information when the UE is configured with intra-band CA. This field is absent in the IE <i>CellGroupConfig</i> when provided as part of <i>RRCSetup</i> message. The UE only reports the uplink Direct Current location information that are related to the indicated <i>cc-CombinationList</i> . The network does not include carriers which locate in DL only spectrum described in TS 38.101-2 [39], clause 5.3A.4 and defined by Fsd according to Table 5.3A.4-3 in FR2 in the <i>IntraBandCC-CombinationReqList</i> . I.e. DL-only carrier in FR2 frequency spectrum is not used to calculate the default DC location. |
| <b><i>reportUplinkTxDirectCurrentTwoCarrier</i></b><br>Enables reporting of uplink Direct Current location information when the UE is configured with uplink intra-band CA with two carriers. This field is absent in the IE <i>CellGroupConfig</i> when provided as part of <i>RRCSetup</i> message.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>rlc-BearerToReleaseListExt</i></b><br>List of the RLC entities and the corresponding MAC Logical Channels to be released for multicast MRBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>rlminSyncOutOfSyncThreshold</i></b><br>BLER threshold pair index for IS/OOS indication generation, see TS 38.133 [14]. <i>n1</i> corresponds to the value 1. When the field is absent, the UE applies the value 0. Whenever this is reconfigured, UE resets N310 and N311, and stops T310, if running. Network does not include this field.                                                                                                                                                                                                                                                                                                                                                                                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| List of serving cells for which the Unified TCI States Activation/Deactivation MAC CE applies simultaneously, as specified in TS 38.321 [3] clause 6.1.3.47. The different lists shall not contain same serving cells. Network only configures in these lists serving cells that are configured with <i>unifiedTCI-StateType</i> .                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>spCellConfig</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Parameters for the SpCell of this cell group (PCell of MCG or PSCell of SCG).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Indicates which option is configured for dynamic UL Tx switching for inter-band UL CA or (NG)EN-DC. The field is set to <i>switchedUL</i> if network configures option 1 as specified in TS 38.214 [19], or <i>dualUL</i> if network configures option 2 as specified in TS 38.214 [19]. Network always configures UE with a value for this field in inter-band UL CA case and (NG)EN-DC case where UE supports dynamic UL Tx switching.                                                                                                                                                                                                                                                                                                  |
| <b>uplinkTxSwitchingPowerBoosting</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Indicates whether the UE is allowed to enable 3dB boosting on the maximum output power for transmission on carrier2 under the operation state in which 2-port transmission can be supported on carrier2 for inter-band UL CA case with dynamic UL Tx switching as defined in TS 38.101-1 [15]. Network can only configure this field for dynamic UL Tx switching in inter-band UL CA case with power Class 3 as defined in TS 38.101-1 [15].                                                                                                                                                                                                                                                                                              |
| <b>uplinkTxSwitching-2T-Mode</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Indicates 2Tx-2Tx switching mode is configured for inter-band UL CA or SUL, in which the switching gap duration for a triggered uplink switching (as specified in TS 38.214 [19]) is equal to the switching time capability value reported for the switching mode.<br>If this field is absent and <i>uplinkTxSwitching</i> is configured, it is interpreted that 1Tx-2Tx UL Tx switching is configured as specified in TS 38.214 [19]. In this case, there is one uplink (or one uplink band in case of intra-band) configured with <i>uplinkTxSwitching</i> , on which the maximum number of antenna ports among all configured P-SRS/A-SRS and activated SP-SRS resources should be 1 and non-codebook based UL MIMO is not configured. |
| <b>uplinkTxSwitching-DualUL-TxState</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Indicates the state of Tx chains if the state of Tx chains after the UL Tx switching is not unique (as specified in TS 38.214 [19]) in case of 2Tx-2Tx switching is configured and <i>uplinkTxSwitchingOption</i> is set to <i>dualUL</i> . Value <i>oneT</i> indicates 1Tx is assumed to be supported on the carriers on each band, value <i>twoT</i> indicates 2Tx is assumed to be supported on that carrier.                                                                                                                                                                                                                                                                                                                          |

| List of the Uu RLC entities and the corresponding MAC Logical Channels to be released.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

**DeactivatedSCG-Config field descriptions*****bfd-and-RLM***

If the field is set to *true*, the UE shall perform RLM and BFD on the PSCell when the SCG is deactivated and the network ensures that *beamFailure-r17* is not configured in the *radioLinkMonitoringConfig* of the DL BWP of the PSCell in which the UE performs BFD. If set to *false*, the UE is not required to perform RLM and BFD on the PSCell when the SCG is deactivated.

**DAPS-UplinkPowerConfig field descriptions*****p-DAPS-Source***

The maximum total transmit power to be used by the UE in the source cell group during DAPS handover.

***p-DAPS-Target***

The maximum total transmit power to be used by the UE in the target cell group during DAPS handover.

***uplinkPowerSharingDAPS-Mode***

Indicates the uplink power sharing mode that the UE uses in DAPS handover (see TS 38.213 [13]).

**GoodServingCellEvaluation field descriptions*****offset***

The parameter "X" (dB) for the good serving cell quality criterion in RRC\_CONNECTED, for a cell operating in FR1 and FR2, respectively. If this field is absent, the UE applies the (default) value of 0 dB for "X".

**IAB-ResourceConfig field descriptions*****iab-ResourceConfigID***

This ID is used to indicate the specific resource configuration addressed by the MAC CEs specified in TS 38.321 [3].

***periodicitySlotList***

Indicates the periodicity in ms of the list of slot indexes indicated in *slotList*.

***slotList***

Indicates the list of slot indexes to which the information indicated in the specific MAC CE applies to, as specified in TS 38.321 [3]. The values of the entries in the *slotList* are strictly less than the value of the *periodicitySlotList*.

***slotListSubcarrierSpacing***

Subcarrier spacing used as reference for the *slotList* configuration.

Only the following values are applicable depending on the used frequency:

FR1: 15 or 30 kHz

FR2-1: 60 or 120 kHz

FR2-2: 120 or 480 kHz

| <b><i>ReconfigurationWithSync</i> field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b><i>rach-ConfigDedicated</i></b><br/>Random access configuration to be used for the reconfiguration with sync (e.g. handover). The UE performs the RA according to these parameters in the <i>firstActiveUplinkBWP</i> (see <i>UplinkConfig</i>).</p> <p><b><i>smtc</i></b><br/>The SSB periodicity/offset/duration configuration of target cell for NR PSCell change and NR PCell change. The network sets the <i>periodicityAndOffset</i> to indicate the same periodicity as <i>ssb-periodicityServingCell</i> in <i>spCellConfigCommon</i> or sets to the same periodicity as <i>ssb-Periodicity-r17</i> in <i>nonCellDefiningSSB-r17</i> if the first active DL BWP included in this RRC message is configured with <i>nonCellDefiningSSB-r17</i> for RedCap.<br/>For case of NR PCell change, the <i>smtc</i> is based on the timing reference of (source) PCell. For case of NR PSCell change, it is based on the timing reference of source PSCell. If both this field and <i>targetCellSMTc-SCG</i> are absent, the UE uses the SMTc in the <i>measObjectNR</i> having the same SSB frequency and subcarrier spacing, as configured before the reception of the RRC message. For a RedCap UE, if the first active DL BWP included in this RRC message is configured with <i>nonCellDefiningSSB-r17</i>, this field corresponds to the NCD-SSB indicated by <i>nonCellDefiningSSB-r17</i>, otherwise, this field corresponds to the CD-SSB indicated by <i>absoluteFrequencySSB</i> in <i>frequencyInfoDL</i>.</p> |

| <b><i>ReportUplinkTxDirectCurrentMoreCarrier</i> field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <p><b><i>IntraBandCC-Combination</i></b><br/>Indicates the state of the carriers and BWPs indexes of the carriers in a CC combination, each carrier in this combination corresponds to an entry in <i>servCellIndexList</i> with same order. This IE shall have the same size as <i>servCellIndexList</i>.</p> <p><b><i>IntraBandCC-CombinationReqList</i></b><br/>Indicates the list of the requested carriers/BWPs combinations for an intra-band CA component.</p> <p><b><i>servCellIndexList</i></b><br/>indicates the list of cell index for an intra-band CA component.</p> |

| <i>SCellConfig</i> field descriptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b><i>goodServingCellEvaluationBFD</i></b><br/> Indicates the criterion for a UE to detect the good serving cell quality for BFD relaxation in an SCell in RRC_CONNECTED. This field is always configured when the network enables BFD relaxation for the UE in this SCell. This field is absent if <i>failureDetectionSetN</i> is present for the SCell.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p><b><i>preConfGapStatus</i></b><br/> Indicates whether the pre-configured measurement gaps (i.e. the gaps configured with <i>preConfigInd</i>) are activated or deactivated while this SCell is deactivated. If this field is configured, the UE shall apply network-controlled mechanism for activation and deactivation of the pre-configured measurement gaps, otherwise the UE shall apply the autonomous activation/deactivation mechanism, as specified in TS 38.133 [14]. The first/leftmost bit corresponds to the measurement gap with gap ID 1, the second bit corresponds to measurement gap with gap ID 2, and so on. Value 0 indicates that the corresponding pre-configured measurement gap is deactivated while value 1 indicates that the corresponding pre-configured measurement gap is activated. The UE shall ignore the bit if the corresponding measurement gap is not a pre-configured measurement gap.</p> |
| <p><b><i>sCellState</i></b><br/> Indicates whether the SCell shall be considered to be in activated state upon SCell configuration. If the field is included for an SCell configured with TRS for fast activation of the SCell, such TRS is not used for the corresponding SCell.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p><b><i>secondaryDRX-GroupConfig</i></b><br/> The field is used to indicate whether the SCell belongs to the secondary DRX group. All serving cells in the secondary DRX group shall belong to one Frequency Range and all serving cells in the default DRX group shall belong to another Frequency Range. If <i>drx-ConfigSecondaryGroup</i> is configured, the field is optionally present. The network always includes the field if the field was previously configured for this SCell and the SCell remains in the secondary DRX group. Removal of an individual SCell from the secondary DRX group is supported by using an SCell release and addition. Otherwise, if <i>drx-ConfigSecondaryGroup</i> is not configured, the field is absent and the UE shall release the field. The UE shall also release the field if <i>drx-ConfigSecondaryGroup</i> is released without including <i>sCellToAddModList</i>.</p>            |
| <p><b><i>smtc</i></b><br/> The SSB periodicity/offset/duration configuration of target cell for NR SCell addition. The network sets the <i>periodicityAndOffset</i> to indicate the same periodicity as <i>ssb-periodicityServingCell</i> in <i>sCellConfigCommon</i>. The <i>smtc</i> is based on the timing of the SpCell of associated cell group. In case of inter-RAT handover to NR, the timing reference is the NR PCell. In case of intra-NR PCell change (standalone NR) or NR PSCell change (EN-DC), the timing reference is the target SpCell. If the field is absent, the UE uses the SMTC in the <i>measObjectNR</i> having the same SSB frequency and subcarrier spacing, as configured before the reception of the RRC message.</p>                                                                                                                                                                                   |

| <b>SpCellConfig field descriptions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>deactivatedSCG-Config</b><br>Configuration applicable when the SCG is deactivated. The network always configures this field before or when indicating that the SCG is deactivated in an <i>RRCReconfiguration</i> , <i>RRCResume</i> , E-UTRA <i>RRCCConnectionReconfiguration</i> or E-UTRA <i>RRCCConnectionResume</i> message.                                                                                                                                                                                                                                                                                            |
| <b>goodServingCellEvaluationBFD</b><br>Indicates the criterion for a UE to detect the good serving cell quality for BFD relaxation in the SpCell in RRC_CONNECTED. The field is always configured when the network enables BFD relaxation for the UE in this SpCell. This field is absent if <i>failureDetectionSetN</i> is present for the SpCell.                                                                                                                                                                                                                                                                             |
| <b>goodServingCellEvaluationRLM</b><br>Indicates the criterion for a UE to detect the good serving cell quality for RLM relaxation in the SpCell in RRC_CONNECTED. The field is always configured when the network enables RLM relaxation for the UE in this SpCell.                                                                                                                                                                                                                                                                                                                                                            |
| <b>lowMobilityEvaluationConnected</b><br>Indicates the criterion for a UE to detect low mobility in RRC_CONNECTED in an SpCell. The <i>s-SearchDeltaP-Connected</i> is the parameter "S <sub>SearchDeltaP-connected</sub> ". Value <i>dB3</i> corresponds to 3 dB, <i>dB6</i> corresponds to 6 dB and so on. The <i>t-SearchDeltaP-Connected</i> is the parameter "T <sub>SearchDeltaP-Connected</sub> ". Value <i>s5</i> means 5 seconds, value <i>s10</i> means 10 seconds and so on. Low mobility criterion is configured in NR PCell for the case of NR SA/ NR CA/ NE-DC/NR-DC, and in the NR PSCell for the case of EN-DC. |
| <b>reconfigurationWithSync</b><br>Parameters for the synchronous reconfiguration to the target SpCell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>rlf-TimersAndConstants</b><br>Timers and constants for detecting and triggering cell-level radio link failure. For the SCG, <i>rlf-TimersAndConstants</i> can only be set to <i>setup</i> and is always included at SCG addition.                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>servCellIndex</b><br>Serving cell ID of a PSCell. The PCell of the Master Cell Group uses ID = 0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>SL-PathSwitchConfig field descriptions</b>                                                                 |
|---------------------------------------------------------------------------------------------------------------|
| <b>targetRelayUE-Identity</b><br>Indicates the L2 source ID of the target L2 U2N Relay UE during path switch. |
| <b>t420</b><br>Indicates the timer value of <i>T420</i> to be used during path switch.                        |

| Conditional Presence               | Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
