```

CGI-Info-Logging field descriptions
<p><b>cellIdentity</b> Unambiguously identify a cell within the context of the PLMN. It belongs the first <i>PLMN-IdentityInfo</i> IE of <i>PLMN-IdentityInfoList</i> in <i>SIB1</i>.</p>
<p><b>plmn-Identity</b> Identifies the PLMN of the cell for the reported <i>cellIdentity</i>: the first PLMN entry of <i>plmn-IdentityList</i> (in <i>SIB1</i>) in the instance of <i>PLMN-IdentityInfoList</i> that contained the reported <i>cellIdentity</i>.</p>
<p><b>trackingAreaCode</b> Indicates Tracking Area Code to which the cell indicated by <i>cellIdentity</i> field belongs.</p>

## – *CLI-RSSI-Range*

The IE *CLI-RSSI-Range* specifies the value range used in CLI-RSSI measurements and thresholds. The integer value for CLI-RSSI measurements is according to Table 10.1.22.2.2-1 in TS 38.133 [14].

### ***CLI-RSSI-Range* information element**

```

<b>CodebookConfig field descriptions</b>
<p><b>codebookMode</b> CodebookMode as specified in TS 38.214 [19], clause 5.2.2.2 8 and 5.2.2.9.</p>
<p><b>codebookType</b> CodebookType including possibly sub-types and the corresponding parameters for each (see TS 38.214 [19], clause 5.2.2.2).</p>
<p><b>n1-n2-codebookSubsetRestriction, n1-n2-codebookSubsetRestrictionList</b> Number of antenna ports in first (<i>n1</i>) and second (<i>n2</i>) dimension and codebook subset restriction (see TS 38.214 [19] clause 5.2.2.2.3). Value <i>no-cbsr</i> means no codebook subset restriction is configured for the <i>n1-n2</i> pair. If a codebook subset restriction is configured for the <i>n1-n2</i> pair, the number of elements in <i>cbsr-list</i> in <i>n1-n2-codebookSubSetRestrictionList</i> is up to the number of elements of <i>nzp-CSI-RS-Resources</i> in <i>NZP-CSI-RS-ResourceSet(s)</i> indicated by <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> in which the <i>CodebookConfig</i> is included. An element in the list corresponds to the element at the same position in <i>nzp-CSI-RS-Resources</i>.</p>
<p><b>n1-n2</b> Number of antenna ports in first (<i>n1</i>) and second (<i>n2</i>) dimension and codebook subset restriction (see TS 38.214 [19] clause 5.2.2.2.1).</p>
<p><b>ng-n1-n2</b> Codebook subset restriction for Type I Multi-panel codebook (see TS 38.214 [19], clause 5.2.2.2.2).</p>
<p><b>numberOfBeams</b> Number of beams, <i>L</i>, used for linear combination.</p>
<p><b>numberOfPMI-SubbandsPerCQI-Subband</b> Field indicates how PMI subbands are defined per CQI subband according to TS 38.214 [19], clause 5.2.2.2.5, 5.2.2.2.8 and 5.2.2.9.</p>
<p><b>paramCombination, paramCombination-CJT-r18, paramCombination-CJT-L-r18, paramCombination-CJT-PS-r18, paramCombination-CJT-PS-alpha, paramCombinationDoppler-r18, paramCombinationDoppler-PS-r18</b> Field describes supported parameter combination (<i>M, ,</i>) as specified in TS 38.214 [19] Clause 5.2.2. For fields <i>paramCombination-CJT-L-r18</i> or <i>paramCombination-CJT-PS-alpha</i> the number of elements is 1, 2 or 4, and the values are configured according to the number of <i>nzp-CSI-RS-Resources</i> in <i>NZP-CSI-RS-ResourceSet</i> elements from Tables 5.2.2.2.8-1 and 5.2.2.2.9-1 in TS 38.214 [19], respectively. The allowed configuration combinations for <i>paramCombination-CJT-r18</i> and <i>paramCombination-CJT-L-r18</i> are given in Table 5.2.2.2.8-3 in TS 38.214 [19]. The allowed configuration combinations for <i>paramCombination-CJT-PS-r18</i> and <i>paramCombination-CJT-PS-alpha-r18</i> are given in Table 5.2.2.2.9-3 in TS 38.214 [19].</p>
<p><b>phaseAlphabetSize</b> The size of the PSK alphabet, QPSK or 8-PSK.</p>
<p><b>portSelectionSamplingSize</b> The size of the port selection codebook (parameter <i>d</i>), see TS 38.214 [19] clause 5.2.2.2.6.</p>
<p><b>predictionDelay</b> Prediction delay for Doppler and Doppler port selection codebooks see TS 38.214 [19], Clause 5.2.1.4. The first value <i>m0</i> means that the first slot for which the CSI corresponds to is the slot where the CSI reference resource is located at. For the other three candidate values (<i>n0, n1, n2</i>), then the first slot for which the CSI corresponds to is given by <math>l = n + \delta</math>, where <math>\delta</math> can take on values of 0, 1, 2 and <i>n</i> the slot in which CSI is reported.</p>
<p><b>restrictedCMR-Selection</b> Enabling CSI-RS resource (CMR) restriction, (see TS 38.214 [19], clause 5.2.2.2.8)</p>
<p><b>ri-Restriction</b> Restriction for RI for <i>TypeI-MultiPanel-RI-Restriction</i> (see TS 38.214 [19], clause 5.2.2.2.2).</p>
<p><b>subbandAmplitude</b> If subband amplitude reporting is activated (<i>true</i>).</p>
<p><b>twoTX-CodebookSubsetRestriction</b> Codebook subset restriction for 2TX codebook (see TS 38.214 [19] clause 5.2.2.2.1).</p>
<p><b>typel-SinglePanel-codebookSubsetRestriction-i2</b> <i>i2</i> codebook subset restriction for Type I Single-panel codebook used when <i>reportQuantity</i> is CRI/Ri/i1/CQI (see TS 38.214 [19] clause 5.2.2.2.1).</p>
<p><b>typel-SinglePanel-ri-Restriction</b> Restriction for RI for <i>TypeI-SinglePanel-RI-Restriction</i> (see TS 38.214 [19], clause 5.2.2.2.1).</p>

<b>typel-SinglePanel-Group1, typel-SinglePanel-Group2</b> Configures codebooks for CSI calculation when UE is configured with two CMR Groups with <i>CMRGroupingAndPairing</i> in the <i>NZP-CSI-RS-ResourceSet</i> associated with the <i>CSI-ReportConfig</i> . Network configures the same number of ports for both codebooks.
<b>typel-SinglePanel-ri-RestrictionSDM, typel-SinglePanel-ri-RestrictionSTRP</b> Restriction for RI for <i>N</i> Resource Pairs when two CMR Groups are configured with <i>CMRGroupingAndPairing</i> in the <i>NZP-CSI-RS-ResourceSet</i> associated with the <i>CSI-ReportConfig</i> (see TS 38.214 [19], clause 5.2.1.4.2).
<b>typell-PortSelectionRI-Restriction</b> Restriction for RI for <i>Typell-PortSelection-RI-Restriction</i> (see TS 38.214 [19], clauses 5.2.2.2.4, 5.2.2.2.6 and 5.2.2.2.7).
<b>typell-RI-Restriction</b> Restriction for RI for <i>Typell-RI-Restriction</i> (see TS 38.214 [19], clauses 5.2.2.2.3 and 5.2.2.2.5).
<b>valueOfN</b> Field provides the value of parameter <i>N</i> as specified in TS 38.214 [19], clause 5.2.2.2.7. The field is present only when <i>M=2</i> set by <i>paramCombination</i> , see TS 38.214 [19].
<b>valueOfO3</b> O3: oversampling factor for frequency-domain basis selection offset Only applicable when <i>CodebookMode = 'Mode1'</i> .
<b>valueOfN-CJT</b> Field describes the size of the window of FD basis for FeType-II port selection codebook for multi-TRP CJT. For <i>M=2, N=2,4</i> (see TS 38.214 [19], clause 5.2.2.2.9)
<b>valueOfN-Doppler</b> Field describes the size of the window of FD basis for FeType-II port selection codebook for Doppler CSI. For <i>M=2, N=2,4</i> (see TS 38.214 [19], clause 5.2.2.2.9)

<b>TD-DD-Config field descriptions</b>
<b>aperiodicResourceOffset</b> Offset <i>m</i> between two consecutive aperiodic CSI-RS resources. See TS 38.214 [19], clause 5.2.1.4.
<b>tdCQI</b> Number of TD CQIs ( <i>X</i> ) in each SB and ref slot(s) + ref <i>W2</i> (s). 1-1: 1 TD CQI, ref = 1st slot and 1st <i>W2</i> 1-2: 1 TD CQI, ref = 1st and last slots, and 1st and last <i>W2</i> 2: 2 TC CQIs (see TS 38.214 [19], clause 5.2.1.4).
<b>unitDurationDD</b> DD/TD unit duration (in slots), for AP-CSI-RS only. Note: For P/SP-CSI-RS, <i>d</i> is set to CSI-RS periodicity (see TS 38.214 [19], clause 5.2.1.4). If the value of <i>aperiodicResourceOffset</i> is '1', network configures value ' <i>m1</i> ' for this field.
<b>vectorLengthDD</b> Doppler-/time-domain (DD/TD) basis vector length; See TS 38.214 [19], clause 5.2.1.4.

## – CommonLocationInfo

The IE *CommonLocationInfo* is used to transfer detailed location information available at the UE to correlate measurements and UE position information.

### CommonLocationInfo information element

```
-- ASN1START
-- TAG-COMMONLOCATIONINFO-START
```

```

CommonLocationInfo-r16 ::= SEQUENCE {
    gnss-TOD-msec-r16      OCTET STRING  OPTIONAL,
    locationTimestamp-r16 OCTET STRING  OPTIONAL,
    locationCoordinate-r16 OCTET STRING  OPTIONAL,
    locationError-r16     OCTET STRING  OPTIONAL,
    locationSource-r16    OCTET STRING  OPTIONAL,
    velocityEstimate-r16  OCTET STRING  OPTIONAL
}

-- TAG-COMMONLOCATIONINFO-STOP
-- ASN1STOP

```

#### **CommonLocationInfo field descriptions**

##### **gnss-TOD-msec**

Parameter type *gnss-TOD-msec* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

##### **locationTimeStamp**

Parameter type *DisplacementTimeStamp* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

##### **locationCoordinate**

Parameter type *LocationCoordinates* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

##### **locationError**

Parameter *LocationError* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

##### **locationSource**

Parameter *LocationSource* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

##### **velocityEstimate**

Parameter type *Velocity* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

## – *CondReconfigId*

The IE *CondReconfigId* is used to identify a CHO, CPA, CPC, subsequent CPAC, or CHO with candidate SCG(s) configuration.

#### **CondReconfigId information element**

```

-- ASN1START
-- TAG-CONDRECONFIGID-START

CondReconfigId-r16 ::=
    INTEGER (1.. maxNrofCondCells-r16)

-- TAG-CONDRECONFIGID-STOP
-- ASN1STOP

```

## – *CondReconfigToAddModList*

The IE *CondReconfigToAddModList* concerns a list of conditional reconfigurations to add or modify, with for each entry the *condReconfigId* and the associated fields.

**CondReconfigToAddModList** information element

```

-- ASN1START
-- TAG-CONDRECONFIGTOADDMODLIST-START

CondReconfigToAddModList-r16 ::= SEQUENCE (SIZE (1.. maxNrofCondCells-r16)) OF CondReconfigToAddMod-r16

CondReconfigToAddMod-r16 ::= SEQUENCE {
    condReconfigId-r16          CondReconfigId-r16,
    condExecutionCond-r16      SEQUENCE (SIZE (1..2)) OF MeasId          OPTIONAL,      -- Need M
    condRRCReconfig-r16       OCTET STRING (CONTAINING RRCReconfiguration) OPTIONAL,      -- Cond condReconfigAdd
    ...,
    [[
    condExecutionCondSCG-r17   OCTET STRING (CONTAINING CondReconfigExecCondSCG-r17) OPTIONAL      -- Need M
    ]],
    [[
    condExecutionCondPSCell-r18 SEQUENCE (SIZE (1..2)) OF MeasId          OPTIONAL,      -- Cond condReconfigCHO-WithSCG
    subsequentCondReconfig-r18 SubsequentCondReconfig-r18              OPTIONAL,      -- Need M

    scpac-ConfigComplete-r18  ENUMERATED {true}                        OPTIONAL,      -- Cond CPAC
    ]]
}

CondReconfigExecCondSCG-r17 ::= SEQUENCE (SIZE (1..2)) OF MeasId

SubsequentCondReconfig-r18 ::= SEQUENCE {
    condExecutionCondToReleaseList-r18 CondExecutionCondToReleaseList-r18 OPTIONAL,      -- Need N
    condExecutionCondToAddModList-r18  CondExecutionCondToAddModList-r18 OPTIONAL,      -- Need N
    ...
}

CondExecutionCondToAddModList-r18 ::= SEQUENCE (SIZE (1.. maxNrofCondCells-r16)) OF CondExecutionCondToAddMod-r18

CondExecutionCondToAddMod-r18 ::= SEQUENCE {
    subsequentCondReconfigId-r18      CondReconfigId-r16,
    subsequentCondExecutionCond-r18   SEQUENCE (SIZE (1..2)) OF MeasId          OPTIONAL,      -- Need M
    subsequentCondExecutionCondSCG-r18 OCTET STRING (CONTAINING CondReconfigExecCondSCG-r17) OPTIONAL,      -- Need M
    ...
}

CondExecutionCondToReleaseList-r18 ::= SEQUENCE (SIZE (1.. maxNrofCondCells-r16)) OF CondReconfigId-r16

-- TAG-CONDRECONFIGTOADDMODLIST-STOP
-- ASN1STOP

```

<b>CondReconfigToAddMod field descriptions</b>	
<b>condExecutionCond</b>	The execution condition that needs to be fulfilled in order to trigger the execution of a conditional reconfiguration for CHO, CPA, intra-SN CPC without MN involvement, MN initiated inter-SN CPC, MN initiated subsequent CPAC, or SN initiated intra-SN subsequent CPAC without MN involvement. When configuring 2 triggering events (Meas Ids) for a candidate cell, the network ensures that both refer to the same <i>measObject</i> . The network configures at most one from <i>condEventD1</i> , <i>condEventD2</i> or <i>condEventT1</i> for the same candidate cell. For CPA, MN-initiated inter-SN CPC, and for MN initiated subsequent CPAC, the network only indicates <i>MeasId(s)</i> associated with <i>condEventA4</i> . For intra-SN CPC and for SN initiated intra-SN subsequent CPAC without MN involvement, the network only indicates <i>MeasId(s)</i> associated with <i>condEventA3</i> or <i>condEventA5</i> .
<b>condExecutionCondPSCell</b>	The execution condition that needs to be fulfilled for the associated PSCell in order to trigger the execution of a conditional reconfiguration for CHO with candidate SCG(s). The Meas Ids refer to the <i>measConfig</i> associated with the MCG. When configuring 2 triggering events (Meas Ids) for a candidate cell, network ensures that both refer to the same <i>measObject</i> . The network only indicates <i>MeasId(s)</i> associated with <i>condEventA4</i> .
<b>condExecutionCondSCG</b>	Contains execution condition that needs to be fulfilled in order to trigger the execution of a conditional reconfiguration for SN initiated inter-SN CPC, SN initiated inter-SN subsequent CPAC, or SN initiated intra-SN subsequent CPAC with MN involvement. The Meas Ids refer to the <i>measConfig</i> associated with the SCG. When configuring 2 triggering events (Meas Ids) for a candidate cell, network ensures that both refer to the same <i>measObject</i> . For each <i>condReconfigId</i> , the network always configures either <i>condExecutionCond</i> or <i>condExecutionCondSCG</i> (not both). The network only indicates <i>MeasId(s)</i> associated with <i>condEventA3</i> or <i>condEventA5</i> .
<b>condRRCReconfig</b>	The <i>RRCReconfiguration</i> message to be applied when the condition(s) are fulfilled. The <i>RRCReconfiguration</i> message contained in <i>condRRCReconfig</i> cannot contain the field <i>conditionalReconfiguration</i> or the field <i>daps-Config</i> .
<b>securityCellSetId</b>	This field is used to determine whether the UE should perform security update when conditional reconfiguration containing <i>subsequentCondReconfig</i> is executed. If the field <i>servingSecurityCellSetId</i> is configured in <i>conditionalReconfiguration</i> , this field is configured for all the candidate configurations for subsequent CPAC.
<b>subsequentCondReconfig</b>	Contains the execution conditions that need to be fulfilled in order to trigger the execution of a subsequent CPAC. If the field is configured, the configuration of candidate PSCells for subsequent CPAC is supported. The subsequent execution condition is used for conditional reconfiguration evaluation for other candidate cells when the <i>RRCReconfiguration</i> message contained in <i>condRRCReconfig</i> has been applied.

<b>CondExecutionCondToAddMod field descriptions</b>	
<b>subsequentCondExecutionCond</b>	The execution condition that needs to be fulfilled in order to trigger the subsequent execution of a conditional reconfiguration for SN initiated intra-SN subsequent CPAC without MN involvement. When configuring 2 triggering events (Meas Ids) for a candidate cell, the network ensures that both refer to the same <i>measObject</i> . The network only indicates <i>MeasId(s)</i> associated with <i>condEventA3</i> or <i>condEventA5</i> .
<b>subsequentCondExecutionCondSCG</b>	Contains execution condition that needs to be fulfilled in order to trigger the subsequent execution of a conditional reconfiguration for SN initiated inter-SN subsequent CPAC, SN initiated intra-SN subsequent CPAC with MN involvement, or MN initiated subsequent CPAC. The Meas Ids refer to the <i>measConfig</i> associated with the SCG. When configuring 2 triggering events (Meas Ids) for a candidate cell, network ensures that both refer to the same <i>measObject</i> . The network only indicates <i>MeasId(s)</i> associated with <i>condEventA3</i> or <i>condEventA5</i> .

Conditional Presence	Explanation
<i>condReconfigAdd</i>	The field is mandatory present when a <i>condReconfigId</i> is being added. Otherwise the field is optional, need M.
<i>condReconfigCHO-WithSCG</i>	This field is optional present, need M, if the <i>RRCReconfiguration</i> message contained in corresponding <i>condRRCReconfig</i> includes the <i>nr-SCG</i> and <i>condExecutionCond</i> is configured. Otherwise, it is absent.
CPAC	The field is optionally present, need M, when the conditional reconfiguration includes at least one candidate PSCell supporting subsequent CPAC. Otherwise, the field is absent, need R.

## – ConditionalReconfiguration

The IE *ConditionalReconfiguration* is used to add, modify and release the configuration of conditional reconfiguration.

### ConditionalReconfiguration information element

```
-- ASN1START
-- TAG-CONDITIONALRECONFIGURATION-START

ConditionalReconfiguration-r16 ::= SEQUENCE {
  attemptCondReconfig-r16      ENUMERATED {true}          OPTIONAL,  -- Cond CHO
  condReconfigToRemoveList-r16 CondReconfigToRemoveList-r16 OPTIONAL,  -- Need N
  condReconfigToAddModList-r16 CondReconfigToAddModList-r16 OPTIONAL,  -- Need N
  ...,
  [[
  scpac-ReferenceConfiguration-r18 SetupRelease {ReferenceConfiguration-r18} OPTIONAL,  -- Need M
  servingSecurityCellSetId-r18     SecurityCellSetId-r18      OPTIONAL,  -- Need M
  sk-CounterConfiguration-r18      SK-CounterConfiguration-r18 OPTIONAL,  -- Need M
  ]]
}

CondReconfigToRemoveList-r16 ::= SEQUENCE (SIZE (1.. maxNrofCondCells-r16)) OF CondReconfigId-r16

SK-CounterConfiguration-r18 ::= SEQUENCE {
  sk-CounterConfigToReleaseList-r18 SEQUENCE (SIZE (1..maxSecurityCellSet-r18)) OF SecurityCellSetId-r18 OPTIONAL,  -- Need N
  sk-CounterConfigToAddModList-r18  SEQUENCE (SIZE (1..maxSecurityCellSet-r18)) OF SK-CounterConfig-r18  OPTIONAL,  -- Need N
}

SK-CounterConfig-r18 ::= SEQUENCE {
  securityCellSetId-r18 SecurityCellSetId-r18,
  sk-CounterList-r18    SEQUENCE (SIZE (1..maxSK-Counter-r18)) OF SK-Counter
}

SecurityCellSetId-r18 ::= INTEGER (1.. maxSecurityCellSet-r18)

-- TAG-CONDITIONALRECONFIGURATION-STOP
-- ASN1STOP
```

<b>ConditionalReconfiguration field descriptions</b>
<b>attemptCondReconfig</b> If present, the UE shall perform conditional reconfiguration if selected cell is a target candidate cell and it is the first cell selection after failure as described in clause 5.3.7.3.
<b>condReconfigToAddModList</b> List of the configuration of candidate SpCells to be added or modified for CHO, CPA or CPC.
<b>condReconfigToRemoveList</b> List of the configuration of candidate SpCells to be removed.
<b>scpac-ReferenceConfiguration</b> Includes the reference configuration for the candidate supporting subsequent CPAC.
<b>servicingSecurityCellSetId</b> This field identifies the security cell set for serving PSCell. The network does not provide this field for the conditional reconfiguration(s) generated by the SN.
<b>sk-counterConfiguration</b> Includes a list of <i>sk-Counter</i> from which the UE should select the <i>sk-counter</i> used to derive S-K <sub>gNB</sub> for inter-SN subsequent CPAC. The network does not provide this field for the conditional reconfiguration(s) generated by the SN.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>CHO</i>	The field is optional present, Need R, if the UE is configured with at least a candidate SpCell for CHO. Otherwise the field is not present.

## – *ConfiguredGrantConfig*

The IE *ConfiguredGrantConfig* is used to configure uplink transmission without dynamic grant according to two possible schemes. The actual uplink grant may either be configured via RRC (*type1*) or provided via the PDCCH (addressed to CS-RNTI) (*type2*). Multiple Configured Grant configurations may be configured in one BWP of a serving cell.

### **ConfiguredGrantConfig information element**

```
-- ASN1START

<b>ConfiguredGrantConfig field descriptions</b>
<p><b>antennaPort</b> Indicates the antenna port(s) to be used for this configuration, and the maximum bitwidth is 5. See TS 38.214 [19], clause 6.1.2, and TS 38.212 [17], clause 7.3.1. The UE ignores this field in case of CG-SDT or if <i>cg-RRC-Configuration</i> is configured.</p>
<p><b>applyIndicatedTCI-State</b> This field indicates, for PUSCH transmission(s) corresponding a Type1-CG configuration, if UE applies the first, the second or both "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 6.1. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.</p>
<p><b>autonomousTx</b> If this field is present, the Configured Grant configuration is configured with autonomous transmission, see TS 38.321 [3].</p>
<p><b>betaOffsetCG-UCI</b> Beta offset for CG-UCI in CG-PUSCH, see TS 38.213 [13], clause 9.3</p>
<p><b>betaOffsetUTO-UCI</b> Beta offset value for UTO-UCI multiplexing on CG PUSCH, see TS 38.213 [13], clause 9.3.</p>
<p><b>cg-betaOffsetsCrossPri0, cg-betaOffsetsCrossPri1</b> Selection between and configuration of dynamic and semi-static beta-offset for multiplexing HARQ-ACK in CG-PUSCH with different priorities. The field <i>cg-betaOffsetsCrossPri0</i> indicates multiplexing LP HARQ-ACK in HP CG-PUSCH. This field is configured only if <i>phy-PriorityIndex-r16</i> is configured with value <i>p1</i>. The field <i>cg-betaOffsetsCrossPri1</i> indicates multiplexing HP HARQ-ACK in LP CG-PUSCH. This field is configured only if <i>phy-PriorityIndex-r16</i> is configured with value <i>p0</i>.</p>
<p><b>cg-COT-SharingList</b> Indicates a table for COT sharing combinations (see 37.213 [48], clause 4.1.3). One row of the table can be set to noCOT-Sharing to indicate that there is no channel occupancy sharing. If the <i>cg-RetransmissionTimer-r16</i> is configured and the UE operates as an initiating device in semi-static channel access mode (see TS 37.213 [48], clause 4.3), then <i>cg-COT-SharingList-r16</i> is configured.</p>
<p><b>cg-COT-SharingOffset</b> Indicates the offset from the end of the slot where the COT sharing indication in UCI is enabled where the offset in symbols is equal to <math>14 \cdot n</math>, where <i>n</i> is the signaled value for <i>cg-COT-SharingOffset</i>. Applicable when <i>ul-toDL-COT-SharingED-Threshold-r16</i> is not configured (see 37.213 [48], clause 4.1.3).</p>
<p><b>cg-DMRS-Configuration</b> DMRS configuration (see TS 38.214 [19], clause 6.1.2.3).</p>
<p><b>cg-minDFI-Delay</b> Indicates the minimum duration (in unit of symbols) from the ending symbol of the PUSCH to the starting symbol of the PDCCH containing the downlink feedback indication (DFI) carrying HARQ-ACK for this PUSCH. The HARQ-ACK received before this minimum duration is not considered as valid for this PUSCH (see TS 38.213 [13], clause 10.5). The following minimum duration values are supported, depending on the configured subcarrier spacing [symbols]:  15 kHz: 7, <math>m \cdot 14</math>, where <math>m = \{1, 2, 3, 4\}</math>  30 kHz: 7, <math>m \cdot 14</math>, where <math>m = \{1, 2, 3, 4, 5, 6, 7, 8\}</math>  60 kHz: 7, <math>m \cdot 14</math>, where <math>m = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16\}</math>  120 kHz: 7, <math>m \cdot 14</math>, where <math>m = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32\}</math>  480 kHz: <math>m \cdot 14</math>, where <math>m = \{2, 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88, 92, 96, 100, 104, 108, 112, 116, 120, 124, 128\}</math>  960 kHz: <math>m \cdot 14</math>, where <math>m = \{4, 8, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96, 104, 112, 120, 128, 136, 144, 152, 160, 168, 176, 184, 192, 200, 208, 216, 224, 232, 240, 248, 256\}</math></p>
<p><b>cg-nrofPUSCH-InSlot</b> Indicates the number of consecutive PUSCH configured to CG within a slot where the SLIV indicating the first PUSCH and additional PUSCH appended with the same length (see TS 38.214 [19], clause 6.1.2.3). The network can only configure this field if <i>cg-RetransmissionTimer</i> is configured.</p>
<p><b>cg-nrofSlots</b> Indicates the number of allocated slots in a configured grant periodicity following the time instance of configured grant offset (see TS 38.214 [19], clause 6.1.2.3). <i>cg-nrofSlots-r17</i> is only applicable for operation with shared spectrum channel access in FR2-2. When <i>cg-nrofSlots-r17</i> is configured, the UE shall ignore <i>cg-nrofSlots-r16</i>. The network can only configure this field if <i>cg-RetransmissionTimer</i> is configured.</p>

<p><b>cg-RetransmissionTimer</b> Indicates the initial value of the configured retransmission timer (see TS 38.321 [3]) in multiples of <i>periodicity</i>. The value of <i>cg-RetransmissionTimer</i> is always less than or equal to the value of <i>configuredGrantTimer</i>. This field is always configured together with <i>harq-ProclD-Offset</i>. This field is not configured for operation in licensed spectrum or simultaneously with <i>harq-ProclD-Offset2</i>. The network does not configure this field for CG-SDT.</p>
<p><b>cg-SDT-PeriodicityExt</b> This field is used to calculate the periodicity for UL transmission without UL grant for type 1 (see TS 38.321 [3], clause 5.8.2) for extended CG-SDT periodicities. If this field is present, the fields <i>periodicity</i> and <i>periodicityExt</i> are ignored. The following periodicities are supported depending on the configured subcarrier spacing [symbols]: 15 kHz: <math>n \cdot 14 \cdot 1280</math>, where <math>n = \{1, 2, 4, 8, 48, 96, 240, 472, 944, 1408, 2816\}</math> 30 kHz: <math>n \cdot 14 \cdot 1280</math>, where <math>n = \{2, 4, 8, 16, 96, 192, 480, 944, 1888, 2816, 5632\}</math> 60 kHz with normal CP: <math>n \cdot 14 \cdot 1280</math>, where <math>n = \{4, 8, 16, 32, 192, 384, 960, 1888, 3776, 5632, 11264\}</math> 60 kHz with ECP: <math>n \cdot 12 \cdot 1280</math>, where <math>n = \{4, 8, 16, 32, 192, 384, 960, 1888, 3776, 5632, 11264\}</math> 120 kHz: <math>n \cdot 14 \cdot 1280</math>, where <math>n = \{8, 16, 32, 64, 384, 768, 1920, 3776, 7552, 11264, 22528\}</math> 480 kHz: <math>n \cdot 14 \cdot 1280</math>, where <math>n = \{32, 64, 128, 256, 1536, 3072, 7680, 15104, 30208, 45056, 90112\}</math> 960 kHz: <math>n \cdot 14 \cdot 1280</math>, where <math>n = \{64, 128, 256, 512, 3072, 6144, 15360, 30208, 60416, 90112, 180224\}</math></p>
<p><b>cg-StartingOffsets</b> This field is not applicable for a UE which is allowed to operate as an initiating device in semi-static channel access mode, i.e., not applicable for a UE configured with UE FFP parameters (e.g. period, offset) regardless whether the UE would initiate its own COT or would share gNB's COT.</p>
<p><b>cg-UCI-Multiplexing</b> If present, this field indicates that in the case of PUCCH overlapping with CG-PUSCH(s) including CG-UCI within a PUCCH group, HARQ-ACK is multiplexed on the CG-PUSCH including CG-UCI (see TS 38.213 [13], clause 9).</p>
<p><b>configuredGrantConfigIndex</b> Indicates the index of the Configured Grant configurations within the BWP.</p>
<p><b>configuredGrantConfigIndexMAC</b> Indicates the index of the Configured Grant configurations within the MAC entity.</p>
<p><b>disableCG-RetransmissionMonitoring</b> Indicates that the UE shall disable waking-up to monitor possible grants for retransmissions corresponding to this <i>ConfiguredGrantConfig</i> when DRX is configured. When this field is configured, the UE does not start the <i>drx-HARQ-RTT-TimerUL</i> for PUSCH transmissions using configured uplink grants corresponding to this <i>ConfiguredGrantConfig</i>. See TS 38.321 [3], clause 5.7.</p>
<p><b>configuredGrantTimer</b> Indicates the initial value of the configured grant timer (see TS 38.321 [3]) in multiples of periodicity. When <i>cg-RetransmissionTimer</i> is configured, if HARQ processes are shared among different configured grants on the same BWP, <i>configuredGrantTimer * periodicity</i> is set to the same value for the configurations that share HARQ processes on this BWP. The value of the extension <i>configuredGrantTimer</i> is 2 times the configured value.</p>
<p><b>dmrs-SeqInitialization</b> The network configures this field if <i>transformPrecoder</i> is disabled or when the value of <i>sdt-NrofDMRS-Sequences</i> is set to 1. Otherwise, the field is absent.</p>
<p><b>frequencyDomainAllocation</b> Indicates the frequency domain resource allocation, see TS 38.214 [19], clause 6.1.2, and TS 38.212 [17], clause 7.3.1).</p>
<p><b>frequencyHopping</b> The value <i>intraSlot</i> enables 'Intra-slot frequency hopping' and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. If the field is absent, frequency hopping is not configured. The field <i>frequencyHopping</i> applies to configured grant for 'pusch-RepTypeA' (see TS 38.214 [19], clause 6.3.1).</p>
<p><b>frequencyHoppingOffset</b> Frequency hopping offset used when frequency hopping is enabled (see TS 38.214 [19], clause 6.1.2 and clause 6.3).</p>
<p><b>frequencyHoppingPUSCH-RepTypeB</b> Indicates the frequency hopping scheme for Type 1 CG when <i>pusch-RepTypeIndicator</i> is set to 'pusch-RepTypeB' (see TS 38.214 [19], clause 6.1). The value <i>interRepetition</i> enables 'Inter-repetition frequency hopping', and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. If the field is absent, the frequency hopping is not enabled for Type 1 CG.</p>

<b>harq-ProclD-Offset</b>
For operation with shared spectrum channel access configured with <i>cg-RetransmissionTimer-r16</i> , this configures the range of HARQ process IDs which can be used for this configured grant where the UE can select a HARQ process ID within [ <i>harq-proclD-offset</i> , ..., ( <i>harq-proclD-offset</i> + <i>nrofHARQ-Processes</i> – 1)]. <i>harq-ProclD-Offset-v1730</i> is only applicable for operation with shared spectrum channel access in FR2-2. If the field <i>harq-ProclD-Offset-v1730</i> is present, the UE shall ignore the <i>harq-ProclD-Offset-r16</i> . The network does not configure this field for CG-SDT.
<b>harq-ProclD-Offset2</b>
Indicates the offset used in deriving the HARQ process IDs, see TS 38.321 [3], clause 5.4.1. This field is not configured together with <i>cg-RetransmissionTimer-r16</i> . If the field <i>harq-ProclD-Offset2-v1700</i> is present, the UE shall ignore the <i>harq-ProclD-Offset2-r16</i> .
<b>mappingPattern</b>
Indicates whether the UE should follow Cyclical mapping pattern or Sequential mapping pattern when two SRS resource sets are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook' for PUSCH transmission with a Type 1 configured grant and/or a Type 2 configured grant as described in clause 6.1.2.3 of TS 38.214 [19]
<b>mcs-Table</b>
Indicates the MCS table the UE shall use for PUSCH without transform precoding. If the field is absent the UE applies the value <i>qam64</i> .
<b>mcs-TableTransformPrecoder</b>
Indicates the MCS table the UE shall use for PUSCH with transform precoding. If the field is absent the UE applies the value <i>qam64</i> .
<b>mcsAndTBS</b>
The modulation order, target code rate and TB size (see TS 38.214 [19], clause 6.1.2). The NW does not configure the values 28–31 in this version of the specification.
<b>nrofBitsInUTO-UCI</b>
Indicates the number of bits in the UTO-UCI bitmap (see TS 38.212 [17], clause 6.2.7, 6.3.2, TS 38.213 [13], clause 9.3.1, TS 38.214 [19], clause 5.2.3). When this field is configured, UTO-UCI is enabled for the UE.
<b>nrofHARQ-Processes</b>
The number of HARQ processes configured. It applies for both Type 1 and Type 2. See TS 38.321 [3], clause 5.4.1. If the UE is configured with <i>nrofHARQ-Processes-v1700</i> , the UE shall ignore <i>nrofHARQ-Processes</i> ( <i>without suffix</i> ). The network sets the value of this field to 1 when <i>cg-LTM-Configuration</i> is configured.
<b>nrofSlotsInCG-Period</b>
Number of consecutive slots for CG PUSCH transmission occasions in a period of a single CG PUSCH configuration, see TS 38.214 [19], clause 6.1. The network does not configure this field for operation on shared spectrum.
<b>pathlossReferenceIndex</b>
Indicates the reference signal index used as PUSCH pathloss reference (see TS 38.213 [13], clause 7.1.1). In case of CG-SDT or if <i>cg-RRC-Configuration</i> is configured, the UE does not use this field.
<b>pathlossReferenceIndex2</b>
Indicates the reference signal used as PUSCH pathloss reference for the second SRS resource set. When this field is present, <i>pathlossReferenceIndex</i> indicates the reference signal used as PUSCH pathloss reference for the first SRS resource set. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
<b>p0-PUSCH-Alpha</b>
Index of the <i>P0-PUSCH-AlphaSet</i> to be used for this configuration.
<b>p0-PUSCH-Alpha2</b>
Index of the <i>P0-PUSCH-AlphaSet</i> to be used for second SRS resource set. If this field is present, the <i>p0-PUSCH-Alpha</i> provides index for the <i>P0-PUSCH-AlphaSet</i> to be used for first SRS resource set.

<p><b>periodicity</b> Periodicity for UL transmission without UL grant for type 1 and type 2 (see TS 38.321 [3], clause 5.8.2). The following periodicities are supported depending on the configured subcarrier spacing [symbols]:</p> <p>15 kHz: 2, 7, <math>n \cdot 14</math>, where <math>n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 320, 640\}</math>  30 kHz: 2, 7, <math>n \cdot 14</math>, where <math>n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 640, 1280\}</math>  60 kHz with normal CP: 2, 7, <math>n \cdot 14</math>, where <math>n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1280, 2560\}</math>  60 kHz with ECP: 2, 6, <math>n \cdot 12</math>, where <math>n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1280, 2560\}</math>  120 kHz: 2, 7, <math>n \cdot 14</math>, where <math>n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1024, 1280, 2560, 5120\}</math>  480 and 960 kHz: <math>n \cdot 14</math>, where <math>n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1024, 1280, 2560, 5120\}</math>  In case of SDT, the network does not configure periodicity values less than 5ms.</p>
<p><b>periodicityExt</b> This field is used to calculate the periodicity for UL transmission without UL grant for type 1 and type 2 (see TS 38.321 [3], clause 5.8.2). If this field is present, the UE shall ignore field <i>periodicity</i> (without suffix). Network does not configure <i>periodicityExt-r17</i> together with <i>periodicityExt-r16</i>. The following periodicities are supported depending on the configured subcarrier spacing [symbols]:</p> <p>15 kHz: <i>periodicityExt</i><sup>*</sup>14, where <i>periodicityExt</i> has a value between 1 and 640.  30 kHz: <i>periodicityExt</i><sup>*</sup>14, where <i>periodicityExt</i> has a value between 1 and 1280.  60 kHz with normal CP: <i>periodicityExt</i><sup>*</sup>14, where <i>periodicityExt</i> has a value between 1 and 2560.  60 kHz with ECP: <i>periodicityExt</i><sup>*</sup>12, where <i>periodicityExt</i> has a value between 1 and 2560.  120 kHz: <i>periodicityExt</i><sup>*</sup>14, where <i>periodicityExt</i> has a value between 1 and 5120.  480 kHz: <i>periodicityExt</i><sup>*</sup>14, where <i>periodicityExt</i> has a value between 1 and 20480.  960 kHz: <i>periodicityExt</i><sup>*</sup>14, where <i>periodicityExt</i> has a value between 1 and 40960.  In case of SDT, the network does not configure periodicity values less than 5ms.</p>
<p><b>phy-PriorityIndex</b> Indicates the PHY priority of CG PUSCH at least for PHY-layer collision handling. Value <i>p0</i> indicates low priority and value <i>p1</i> indicates high priority. The network does not configure this for CG-SDT.</p>
<p><b>powerControlLoopToUse</b> Closed control loop to apply (see TS 38.213 [13], clause 7.1.1).</p>
<p><b>powerControlLoopToUse2</b> Closed control loop to apply to second SRS resource set (see TS 38.213 [13], clause 7.1.1). If this field is present, the <i>powerControlLoopToUse</i> applies to the first SRS resource set.</p>
<p><b>precodingAndNumberOfLayers</b> Indicates the precoding and number of layers (see TS 38.212 [17], clause 7.3.1.1.2, and TS 38.214 [19], clause 6.1.2.3). In case of CG-SDT or if <i>cg-RRC-Configuration</i> is configured, network sets this field to 1.</p>
<p><b>precodingAndNumberOfLayers2</b> Indicates the precoding and number of layers for the second SRS resource set. When this field is present, <i>precodingAndNumberOfLayers</i> indicated the precoding and number of layers for the first SRS resource set. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.</p>
<p><b>pusch-RepTypeIndicator</b> Indicates whether UE follows the behavior for PUSCH repetition type A or the behavior for PUSCH repetition type B for each Type 1 configured grant configuration. The value <i>pusch-RepTypeA</i> enables the 'PUSCH repetition type A' and the value <i>pusch-RepTypeB</i> enables the 'PUSCH repetition type B' (see TS 38.214 [19], clause 6.1.2.3). The value <i>pusch-RepTypeB</i> is not configured simultaneously with <i>nrofSlotsInCG-Period-r18</i>. The network does not configure this field if <i>cg-RetransmissionTimer-r16</i> is configured for CG operation with shared spectrum channel access.</p>
<p><b>rbg-Size</b> Selection between configuration 1 and configuration 2 for RBG size for PUSCH. The UE does not apply this field if <i>resourceAllocation</i> is set to <i>resourceAllocationType1</i>. Otherwise, the UE applies the value <i>config1</i> when the field is absent. Note: <i>rbg-Size</i> is used when the <i>transformPrecoder</i> parameter is disabled.</p>
<p><b>repK-RV</b> The redundancy version (RV) sequence to use. See TS 38.214 [19], clause 6.1.2. The network configures this field if repetitions are used, i.e., if <i>repK</i> is set to <i>n2</i>, <i>n4</i> or <i>n8</i>. This field is not configured when <i>cg-RetransmissionTimer</i> is configured. Otherwise, the field is absent.</p>

<b>repK</b> Number of repetitions K, see TS 38.214 [19]. If the field <i>repK-v1710</i> is present, the UE shall ignore the <i>repK</i> (without suffix).
<b>resourceAllocation</b> Configuration of resource allocation type 0 and resource allocation type 1. For Type 1 UL data transmission without grant, <i>resourceAllocation</i> should be <i>resourceAllocationType0</i> or <i>resourceAllocationType1</i> .
<b>rrc-ConfiguredUplinkGrant</b> Configuration for "configured grant" transmission with fully RRC-configured UL grant (Type1). If this field is absent the UE uses UL grant configured by DCI addressed to CS-RNTI (Type2).
<b>sequenceOffsetForRV</b> Configures the RV offset for the starting RV for the first repetition (first actual repetition in PUSCH repetition Type B) towards the second 'SRS resource set' for PUSCH configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.
<b>srs-ResourceSetId</b> Indicates the associated SRS resource set for PUSCH+PUSCH simultaneous uplink transmission for CG-type 1 PUSCH. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
<b>srs-ResourceIndicator</b> Indicates the SRS resource to be used. The network does not configure this for CG-SDT or if <i>cg-RRC-Configuration</i> is configured.
<b>srs-ResourceIndicator2</b> Indicates the SRS resource to be used for the second SRS resource set. When this field is present, the <i>srs-ResourceIndicator</i> is used for the first SRS resource set. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
<b>startingFromRV0</b> This field is used to determine the initial transmission occasion of a transport block for a given RV sequence, see TS 38.214 [19], clause 6.1.2.3.1. The network does not configure this field if <i>cg-RetransmissionTimer-r16</i> is configured for CG operation.
<b>timeDomainAllocation, timeDomainAllocation-v1710</b> Indicates a combination of start symbol and length and PUSCH mapping type, see TS 38.214 [19], clause 6.1.2 and TS 38.212 [17], clause 7.3.1. If the field <i>timeDomainAllocation-v1710</i> is present, the UE shall ignore <i>timeDomainAllocation</i> field (without suffix).
<b>timeDomainOffset</b> Offset related to the reference SFN indicated by <i>timeReferenceSFN</i> , see TS 38.321 [3], clause 5.8.2. <i>timeDomainOffset-r17</i> is only applicable to 480 kHz and 960 kHz. If <i>timeDomainOffset-r17</i> is present, the UE shall ignore <i>timeDomainOffset</i> (without suffix).
<b>timeReferenceHyperSFN</b> Indicates H-SFN used for determination of the offset of a resource in time domain. The UE uses the closest H-SFN with the indicated number preceding the reception of the configured grant configuration, see TS 38.321 [3], clause 5.8.2. If the field <i>timeReferenceHyperSFN</i> is not present, the reference hyper SFN is 0.
<b>timeReferenceSFN</b> Indicates SFN used for determination of the offset of a resource in time domain. The UE uses the closest SFN with the indicated number preceding the reception of the configured grant configuration, see TS 38.321 [3], clause 5.8.2. If the field <i>timeReferenceSFN</i> is not present, the reference SFN is 0.
<b>transformPrecoder</b> Enables or disables transform precoding for <i>type1</i> and <i>type2</i> . If the field is absent, the UE enables or disables transform precoding in accordance with the field <i>msg3-transformPrecoder</i> in <i>RACH-ConfigCommon</i> from <i>rach-ConfigCommon</i> included directly within BWP configuration (i.e., not included in <i>additionalRACH-ConfigList</i> ), see TS 38.214 [19], clause 6.1.3.
<b>uci-OnPUSCH</b> Selection between and configuration of dynamic and semi-static beta-offset. For Type 1 UL data transmission without grant, <i>uci-OnPUSCH</i> should be set to <i>semiStatic</i> . The network does not configure this for CG-SDT.

<b>CG-COT-Sharing field descriptions</b>
<p><b>channelAccessPriority</b> Indicates the Channel Access Priority Class that the gNB can assume when sharing the UE initiated COT (see 37.213 [48], clause 4.1.3).</p>
<p><b>duration</b> Indicates the number of DL transmission slots within UE initiated COT (see 37.213 [48], clause 4.1.3).</p>
<p><b>offset</b> Indicates the number of DL transmission slots from the end of the slot where CG-UCI is detected after which COT sharing can be used (see 37.213 [48], clause 4.1.3).</p>

<b>CG-StartingOffsets field descriptions</b>
<p><b>cg-StartingFullBW-InsideCOT</b> A set of configured grant PUSCH transmission starting offsets (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation includes all interlaces in the allocated RB set(s) and the CG PUSCH resource is inside gNB COT (see TS 38.214 [19], clause 6.1.2.3).</p>
<p><b>cg-StartingFullBW-OutsideCOT</b> A set of configured grant PUSCH transmission starting offset indices (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation includes all interlaces in the allocated RB set(s) and the CG PUSCH resource is outside gNB COT (see TS 38.214 [19], clause 6.1.2.3).</p>
<p><b>cg-StartingPartialBW-InsideCOT</b> A set of configured grant PUSCH transmission starting offset index (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation does not include all interlaces in the allocated RB set(s) and the CG PUSCH resource is inside gNB COT (see TS 38.214 [19], clause 6.1.2.3).</p>
<p><b>cg-StartingPartialBW-OutsideCOT</b> A set of configured grant PUSCH transmission starting offset index (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation does not include all interlaces in the allocated RB set(s) and the CG PUSCH resource is outside gNB COT (see TS 38.214 [19], clause 6.1.2.3).</p>

<b>CG-SDT-Configuration and CG-RRC-Configuration field descriptions</b>	
<b>cg-RRC-RSRP-ThresholdSSB</b>	An RSRP threshold configured for SSB selection for the CG as specified in TS 38.321 [3]. This field is absent in <i>cg-LTM-Configuration</i> .
<b>cg-SDT-RetransmissionTimer, cg-RRC-RetransmissionTimer</b>	Indicates the initial value of the configured grant retransmission timer used for the initial transmission of CG with CCCH (for CG-SDT) or DCCH message (see TS 38.321 [3]) in multiples of <i>periodicity</i> . The field <i>cg-RRC-RetransmissionTimer</i> is not configured together with the field <i>harq-ProclD-Offset</i> for operations in unlicensed spectrum.
<b>sdt-DMRS-Ports, rrc-DMRS-Ports</b>	Indicates the set of DMRS ports for SSB to PUSCH mapping (see TS 38.213 [13]). The first (left-most / most significant) bit corresponds to DMRS port 0, the second most significant bit corresponds to DMRS port 1, and so on. A bit set to 1 indicates that this DMRS port is used for mapping. In case of an RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB. Otherwise, the SSB is the CD-SSB.
<b>sdt-NrofDMRS-Sequences, rrc-NrofDMRS-Sequences</b>	Indicates the number of DMRS sequences for SSB to PUSCH mapping (see TS 38.213 [13]). In case of an RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB. Otherwise, the SSB is the CD-SSB.
<b>sdt-SSB-Subset, rrc-SSB-Subset</b>	Indicates SSB subset for SSB to CG PUSCH mapping within one CG configuration. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not included in the SSB subset for SSB to CG PUSCH mapping while value 1 indicates that the corresponding SS/PBCH block is included in SSB subset for SSB to CG PUSCH mapping. If this field is absent, UE assumes the SSB set includes all actually transmitted SSBs. In case of an RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB. Otherwise, the SSB is the CD-SSB.
<b>sdt-SSB-PerCG-PUSCH, rrc-SSB-PerCG-PUSCH</b>	The number of SSBs per CG PUSCH (see TS 38.213 [13]). Value <i>one</i> corresponds to 1 SSBs per CG PUSCH, value <i>two</i> corresponds to 2 SSBs per CG PUSCH and so on. In case of an RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB. Otherwise, the SSB is the CD-SSB.
<b>sdt-P0-PUSCH, rrc-P0-PUSCH</b>	Indicates P0 value for PUSCH in steps of 1dB (see TS 38.213 [13]). When this field is configured, the UE ignores the <i>p0-PUSCH-Alpha</i> . This field is absent in <i>cg-LTM-Configuration</i> .
<b>sdt-Alpha, rrc-Alpha</b>	Indicates alpha value for PUSCH. <i>alpha0</i> indicates value 0 is used, <i>alpha04</i> indicates value 4 is used and so on (see TS 38.213 [13]). When this field is configured, the UE ignores the <i>p0-PUSCH-Alpha</i> . This field is absent in <i>cg-LTM-Configuration</i> .

Conditional Presence	Explanation
<i>LCH-BasedPrioritization</i>	This field is optionally present, Need R, if <i>lch-BasedPrioritization</i> is configured in the MAC entity. It is absent otherwise.
<i>RACH-LessHO</i>	The field is optionally present, Need N, if <i>rach-LessHO</i> is present in <i>reconfigurationWithSync</i> . It is absent otherwise.
<i>RepTypeB</i>	The field is optionally present if <i>pusch-RepTypeIndicator</i> is set to <i>pusch-RepTypeB</i> , Need S, and absent otherwise.
<i>CG-List</i>	The field is mandatory present when included in <i>configuredGrantConfigToAddModList-r16</i> , otherwise the field is absent.
<i>CG-IndexMAC</i>	The field is mandatory present if at least one configured grant is configured by <i>configuredGrantConfigToAddModList-r16</i> in any BWP of this MAC entity, otherwise it is optionally present, need R.
<i>CG-SDT1</i>	This field is optionally present, Need R, if <i>cg-SDT-Configuration</i> is configured, otherwise it is absent.
<i>CG-SDT2</i>	This field is optionally present, Need S, if <i>cg-SDT-PeriodicityExt</i> is configured, otherwise it is absent.
<i>LTM</i>	The field is optionally present, Need R, in an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE. Otherwise, the field is absent.
<i>SRSsets</i>	This field is mandatory present when UE is configured with two SRS sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage codebook or non-codebook and none of <i>multipanelSchemeSDM</i> or <i>multipanelSchemeSFN</i> or <i>sTx-2Panel</i> is configured. Otherwise it is absent, Need R

## – *ConfiguredGrantConfigIndex*

The IE *ConfiguredGrantConfigIndex* is used to indicate the index of one of multiple UL Configured Grant configurations in one BWP.

### **ConfiguredGrantConfigIndex information element**

```
-- ASN1START
-- TAG-CONFIGUREDGRANTCONFIGINDEX-START

ConfiguredGrantConfigIndex-r16 ::= INTEGER (0.. maxNrofConfiguredGrantConfig-1-r16)

-- TAG-CONFIGUREDGRANTCONFIGINDEX-STOP
-- ASN1STOP
```

## – *ConfiguredGrantConfigIndexMAC*

The IE *ConfiguredGrantConfigIndexMAC* is used to indicate the unique Configured Grant configurations index per MAC entity.

### **ConfiguredGrantConfigIndexMAC information element**

```
-- ASN1START
-- TAG-CONFIGUREDGRANTCONFIGINDEXMAC-START

ConfiguredGrantConfigIndexMAC-r16 ::= INTEGER (0.. maxNrofConfiguredGrantConfigMAC-1-r16)

-- TAG-CONFIGUREDGRANTCONFIGINDEXMAC-STOP
-- ASN1STOP
```

## – *ConnEstFailureControl*

The IE *ConnEstFailureControl* is used to configure parameters for connection establishment failure control.

### **ConnEstFailureControl information element**

```
-- ASN1START
-- TAG-CONNESTFAILURECONTROL-START

ConnEstFailureControl ::= SEQUENCE {
    connEstFailCount          ENUMERATED {n1, n2, n3, n4},
    connEstFailOffsetValidity ENUMERATED {s30, s60, s120, s240, s300, s420, s600, s900},
    connEstFailOffset        INTEGER (0..15)
}

-- TAG-CONNESTFAILURECONTROL-STOP
-- ASN1STOP
```

OPTIONAL -- Need S

<b>ConnEstFailureControl field descriptions</b>
<b>connEstFailCount</b> Number of times that the UE detects T300 expiry on the same cell before applying <i>connEstFailOffset</i> .
<b>connEstFailOffset</b> Parameter "Qoffset <sub>temp</sub> " in TS 38.304 [20]. If the field is absent, the value of infinity shall be used for "Qoffset <sub>temp</sub> ".
<b>connEstFailOffsetValidity</b> Amount of time that the UE applies <i>connEstFailOffset</i> before removing the offset from evaluation of the cell. Value s30 corresponds to 30 seconds, value s60 corresponds to 60 seconds, and so on.

## – ControlResourceSet

The IE *ControlResourceSet* is used to configure a time/frequency control resource set (CORESET) in which to search for downlink control information (see TS 38.213 [13], clause 10.1). For the UE not supporting *multipleCORESET* in FR1, in order to receive MBS multicast in CFR within the UE's active BWP, if a CORESET is not configured within the *PDCCH-ConfigMulticast*, the CORESET other than CORESET#0 configured within the UE's active BWP for scheduling unicast can be used for scheduling MBS multicast, and the CORESET is expected to be included completely within the CFR and the parameters configured in the CORESET are expected to be supported by the UE for MBS multicast.

### ControlResourceSet information element

```
-- ASN1START
-- TAG-CONTROLRESOURCESET-START

ControlResourceSet ::=
    controlResourceSetId          SEQUENCE {
        frequencyDomainResources  BIT STRING (SIZE (45)),

    ]]  
}  
  
-- TAG-CONTROLRESOURCESET-STOP  
-- ASN1STOP
```

<b>ControlResourceSet field descriptions</b>
<p><b>applyIndicatedTCI-State</b> This field indicates, for PDCCH reception on this CORESET, if UE applies the first, the second, both or none "indicated" DL only TCI or joint TCI as specified in TS 38.213 [13], clause 10.1.</p>
<p><b>cce-REG-MappingType</b> Mapping of Control Channel Elements (CCE) to Resource Element Groups (REG) (see TS 38.211 [16], clauses 7.3.2.2 and 7.4.1.3.2).</p>
<p><b>controlResourceSetId</b> Identifies the instance of the <i>ControlResourceSet</i> IE. Value 0 identifies the common CORESET configured in <i>MIB</i> and in <i>ServingCellConfigCommon</i> (<i>controlResourceSetZero</i>) and is hence not used here in the <i>ControlResourceSet</i> IE. Other values identify CORESETs configured by dedicated signalling or in <i>SIB1</i> or <i>SIB20</i>. The <i>controlResourceSetId</i> is unique among the BWPs of a serving cell. If the field <i>controlResourceSetId-v1610</i> is present, the UE shall ignore the <i>controlResourceSetId</i> field (without suffix).</p>
<p><b>coresetPoolIndex</b> The index of the CORESET pool for this CORESET as specified in TS 38.213 [13] (clauses 9 and 10) and TS 38.214 [19] (clauses 5.1 and 6.1). If the field is absent, the UE applies the value 0.</p>
<p><b>duration</b> Contiguous time duration of the CORESET in number of symbols (see TS 38.211 [16], clause 7.3.2.2).</p>
<p><b>followUnifiedTCI-State</b> When set to enabled, for PDCCH reception on this CORESET, the UE applies the "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5.</p>
<p><b>frequencyDomainResources</b> Frequency domain resources for the CORESET. Each bit corresponds a group of 6 RBs, with grouping starting from the first RB group in the BWP or MBS CFR where the CORESET is configured. When at least one search space is configured with <i>freqMonitorLocation-r16</i>, only the first <math>N_{RBG, set}^{size}</math> bits are valid (see TS 38.213 [13], clause 10.1). The first (left-most / most significant) bit corresponds to the first RB group in the BWP or MBS CFR where the CORESET is configured, and so on. A bit that is set to 1 indicates that this RB group belongs to the frequency domain resource of this CORESET. Bits corresponding to a group of RBs not fully contained in the bandwidth part within which the CORESET is configured are set to zero (see TS 38.211 [16], clause 7.3.2.2).</p>
<p><b>interleaverSize</b> Interleaver-size (see TS 38.211 [16], clause 7.3.2.2).</p>
<p><b>pdccch-DMRS-ScramblingID</b> PDCCH DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.3.1). When the field is absent the UE applies the value of the <i>physCellId</i> configured for this serving cell.</p>
<p><b>precoderGranularity</b> Precoder granularity in frequency domain (see TS 38.211 [16], clauses 7.3.2.2 and 7.4.1.3.2).</p>
<p><b>rb-Offset</b> Indicates the RB level offset in units of RB from the first RB of the first 6RB group to the first RB of BWP (see 38.213 [13], clause 10.1).</p>
<p><b>reg-BundleSize</b> Resource Element Groups (REGs) can be bundled to create REG bundles. This parameter defines the size of such bundles (see TS 38.211 [16], clause 7.3.2.2).</p>
<p><b>shiftIndex</b> When the field is absent the UE applies the value of the <i>physCellId</i> configured for this serving cell (see TS 38.211 [16], clause 7.3.2.2).</p>
<p><b>tcI-PresentInDCI</b> This field indicates if TCI field is present or absent in DCI format 1_1, DCI format 1_3 and DCI format 4_2. When the field is absent the UE considers the TCI to be absent/disabled. In case of cross carrier scheduling, the network sets this field to enabled for the <i>ControlResourceSet</i> used for cross carrier scheduling in DCI format 1_1 in the scheduling cell if <i>enableDefaultBeamForCCS</i> is not configured (see TS 38.214 [19], clause 5.1.5).</p>
<p><b>tcI-PresentDCI-1-2</b> Configures the number of bits for "Transmission configuration indicator" in DCI format 1_2. When the field is absent the UE applies the value of 0 bit for the "Transmission configuration indicator" in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.5). In case of cross carrier scheduling, the network configures this field for the <i>ControlResourceSet</i> used for cross carrier scheduling in DCI format 1_2 in the scheduling cell if <i>enableDefaultBeamForCCS</i> is not configured (see TS 38.214 [19], clause 5.1.5).</p>

***tci-StatesPDCCH-ToAddList***

A subset of the TCI states defined in *pdsch-Config*, either with *tci-StatesToAddModList* or *dl-OrJointTCI-StateList*, included in the *BWP-DownlinkDedicated* corresponding to the serving cell and to the DL BWP to which the *ControlResourceSet* belong to. They are used for providing QCL relationships between the DL RS(s) in one RS Set (TCI-State) and the PDCCH DMRS ports (see TS 38.213 [13], clause 6.). The network configures at most *maxNrofTCI-StatesPDCCH* entries. The QCL relationships defined herein do not apply to MBS broadcast.

Conditional Presence	Explanation
<i>FollowUTC1</i>	The field is absent if the field <i>followUnifiedTCI-State</i> is present or if more than one value for the field <i>coresetPoolIndex</i> is configured in <i>controlResourceSet</i> for the same bandwidthpart. Otherwise, it is optionally present, Need R.
<i>NotSIB-initialBWP</i>	The field is absent in <i>SIB1/SIB20</i> and in the <i>PDCCH-ConfigCommon</i> of the initial BWP in <i>ServingCellConfigCommon</i> , if <i>SIB1/SIB20</i> is broadcasted. Otherwise, it is optionally present, Need N.

## – *ControlResourceSetId*

The *ControlResourceSetId* IE concerns a short identity, used to identify a control resource set within a serving cell. The *ControlResourceSetId* = 0 identifies the *ControlResourceSet#0* configured via PBCH (*MIB*) and in *controlResourceSetZero* (*ServingCellConfigCommon*). The ID space is used across the BWPs and MBS CFRs of a Serving Cell.

### ***ControlResourceSetId* information element**

```
-- ASN1START
-- TAG-CONTROLRESOURCESETID-START

ControlResourceSetId ::=
    INTEGER (0..maxNrofControlResourceSets-1)

ControlResourceSetId-r16 ::=
    INTEGER (0..maxNrofControlResourceSets-1-r16)

ControlResourceSetId-v1610 ::=
    INTEGER (maxNrofControlResourceSets..maxNrofControlResourceSets-1-r16)

-- TAG-CONTROLRESOURCESETID-STOP
-- ASN1STOP
```

## – *ControlResourceSetZero*

The IE *ControlResourceSetZero* is used to configure CORESET#0 of the initial BWP (see TS 38.213 [13], clause 13).

### ***ControlResourceSetZero* information element**

```
-- ASN1START
-- TAG-CONTROLRESOURCESETZERO-START

ControlResourceSetZero ::=
    INTEGER (0..15)

-- TAG-CONTROLRESOURCESETZERO-STOP
```

```
-- ASN1STOP
```

## – CrossCarrierSchedulingConfig

The IE *CrossCarrierSchedulingConfig* is used to specify the configuration when the cross-carrier scheduling is used in a cell.

### CrossCarrierSchedulingConfig information element

```
-- ASN1START
-- TAG-CROSSCARRIERSCHEDULINGCONFIG-START

CrossCarrierSchedulingConfig ::=
  schedulingCellInfo
    own
      cif-Presence
    },
    other
      schedulingCellId
      cif-InSchedulingCell
  },
  ...,

INTEGER (0..3)

OPTIONAL, -- Cond CIF-PRESENCE

OPTIONAL -- Need S

ENUMERATED {oneSeventh, threeFourteenth, twoSeventh, threeSeventh,

oneHalf, fourSeventh, fiveSeventh, spare1} OPTIONAL -- Need R

<b>CrossCarrierSchedulingConfig field descriptions</b>	
<b>carrierIndicatorSizeDCI-0-2, carrierIndicatorSizeDCI-1-2</b> Configures the number of bits for the field of carrier indicator in PDCCH DCI format 0_2/1_2. The field <i>carrierIndicatorSizeDCI-0-2</i> refers to DCI format 0_2 and the field <i>carrierIndicatorSizeDCI-1-2</i> refers to DCI format 1_2, respectively (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 10.1).	
<b>ccs-BlindDetectionSplit</b> Indicates the share of blind detection candidates and non-overlapping CCEs for PDCCH monitoring on an SpCell and an SCell when cross-carrier scheduling is configured from the SCell for the SpCell (see TS 38.213 [13], clause 10.1.1). The network only configures this field when it sets the field <i>other</i> for an SpCell, i.e., when it configures cross-carrier scheduling of the SpCell by a PDCCH on an SCell.	
<b>cif-Presence</b> The field is used to indicate whether carrier indicator field is present (value <i>true</i> ) or not (value <i>false</i> ) in PDCCH DCI formats, see TS 38.213 [13]. If <i>cif-Presence</i> is set to <i>true</i> , the CIF value indicating a grant or assignment for this cell is 0.	
<b>cif-InSchedulingCell</b> The field indicates the CIF value used in the scheduling cell to indicate a grant or assignment applicable for this cell, see TS 38.213 [13]. If configured for an SpCell, the non-fallback DCI formats on the SpCell include same number of CIF bits as the corresponding non-fallback DCI formats on the scheduling cell, and the CIF bits are considered reserved.	
<b>enableDefaultBeamForCCS</b> This field indicates whether default beam selection for cross-carrier scheduled PDSCH or aperiodic CSI-RS is enabled, see TS 38.214 [19]. If not present, the default beam selection behaviour is not applied, i.e. Rel-15 behaviour is applied. This field can only be configured in the cross-scheduled SCell or SpCell.	
<b>other</b> Parameters for cross-carrier scheduling. If configured for an SpCell, the SpCell can be scheduled by the PDCCH on another SCell as well as by the PDCCH on the SpCell. If configured for an SCell, the SCell is scheduled by a PDDCH on another cell.	
<b>own</b> Parameters for self-scheduling, i.e., a serving cell is scheduled by its own PDCCH.	
<b>schedulingCellId</b> If configured for an SpCell, this field indicates which SCell, in addition to the SpCell, signals the downlink allocations and uplink grants, if applicable, for the concerned SpCell. If configured for an SCell, this field indicates which cell signals the downlink allocations and uplink grants, if applicable, for the concerned SCell. In case the UE is configured with DC, the scheduling cell is part of the same cell group (i.e. MCG or SCG) as the scheduled cell. In case the UE is configured with two PUCCH groups, the scheduling cell and the scheduled cell are within the same PUCCH group. If <i>drx-ConfigSecondaryGroup</i> is configured in the <i>MAC-CellGroupConfig</i> associated with this serving cell, the scheduling cell and the scheduled cell belong to the same Frequency Range. In addition, the serving cell with an aperiodic CSI trigger and the PUSCH resource scheduled for the report are on the same carrier and serving cell, but the cell for which CSI is reported may belong to the same or a different Frequency Range. The network should not trigger a CSI request for a serving cell in the other Frequency Range when that serving cell is outside Active Time.	

Conditional Presence	Explanation
<i>CIF-PRESENCE</i>	The field is mandatory present if the <i>cif-Presence</i> is set to <i>true</i> . The field is absent otherwise.

– **CSI-AperiodicTriggerStateList**

The *CSI-AperiodicTriggerStateList* IE is used to configure the UE with a list of aperiodic trigger states. Each codepoint of the DCI field "CSI request" is associated with one trigger state (see TS 38.321 [3], clause 6.1.3.13). Upon reception of the value associated with a trigger state, the UE will perform measurement of CSI-RS, CSI-IM and/or SSB (reference signals) and aperiodic reporting on L1 according to all entries in the *associatedReportConfigInfoList* for that trigger state.

**CSI-AperiodicTriggerStateList information element**

**CSI-AperiodicTriggerState field descriptions*****Itm-AssociatedReportConfigInfo***

This field configures the aperiodic CSI reports of LTM candidate cells. If *Itm-associatedReportConfigInfo* is configured the UE shall ignore the field *associatedReportConfigInfoList*.

<b>CSI-AssociatedReportConfigInfo field descriptions</b>
<p><b>ap-CSI-MultiplexingMode</b> Indicates if the behavior of transmitting aperiodic CSI on the first PUSCH repetitions corresponding to two SRS resource sets configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook' is enabled or not.</p>
<p><b>applyIndicatedTCI-State, applyIndicatedTCI-State2</b> This field indicates, for an aperiodic CSI-RS resource set (perSet) or for CSI-RS resource (perResource), if UE applies the first or the second "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.2.1.5.1. The <i>applyIndicatedTCI-State</i> is for <i>ResourcesForChannel</i>, and <i>applyIndicatedTCI-State2</i> is for <i>ResourcesForChannel2</i>. When <i>applyIndicatedTCI-State</i> and <i>applyIndicatedTCI-State2</i> are absent, the UE shall use <i>qcl-info</i> for <i>ResourcesForChannel</i> and use <i>qcl-info2</i> for <i>ResourcesForChannel2</i>.</p>
<p><b>csi-IM-ResourcesForInterference</b> <i>CSI-IM-ResourceSet</i> for interference measurement. Entry number in <i>csi-IM-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>csi-IM-ResourcesForInterference</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on). The indicated <i>CSI-IM-ResourceSet</i> should have exactly the same number of resources like the <i>NZP-CSI-RS-ResourceSet</i> indicated in <i>resourceSet</i> within <i>nzp-CSI-RS</i>.</p>
<p><b>csi-ReportSubConfigTriggerList</b> A list of sub-configuration ID(s) of N sub-configurations out of L configured sub-configurations within a <i>CSI-ReportConfig</i> associated with a triggering state for aperiodic CSI reporting on PUSCH.</p>
<p><b>csi-SSB-ResourceSet, csi-SSB-ResourceSet2</b> <i>CSI-SSB-ResourceSet</i> for channel measurements. Entry number in <i>csi-SSB-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).</p>
<p><b>nzp-CSI-RS-ResourcesForInterference</b> <i>NZP-CSI-RS-ResourceSet</i> for interference measurement. Entry number in <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>nzp-CSI-RS-ResourcesForInterference</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).</p>
<p><b>qcl-info, qcl-info2</b> List of references to TCI-States for providing the QCL source and QCL type for each <i>NZP-CSI-RS-Resource</i> listed in <i>nzp-CSI-RS-Resources</i> of the <i>NZP-CSI-RS-ResourceSet</i> indicated by <i>resourceSet</i> within <i>nzp-CSI-RS</i>. Each <i>TCI-StateId</i> refers to the <i>TCI-State</i> which has this value for <i>tcI-StateId</i> and is defined in <i>tcI-StatesToAddModList</i> or in <i>dl-OrJointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> corresponding to the serving cell and to the DL BWP to which the <i>resourcesForChannelMeasurement</i> (in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above) belong to. First entry in <i>qcl-info</i> corresponds to first entry in <i>nzp-CSI-RS-Resources</i> of that <i>NZP-CSI-RS-ResourceSet</i>, second entry in <i>qcl-info</i> corresponds to second entry in <i>nzp-CSI-RS-Resources</i>, and so on (see TS 38.214 [19], clause 5.2.1.5.1). When this field is absent for aperiodic CSI RS, and <i>applyIndicatedTCI-State</i> or <i>applyIndicatedTCI-State2</i> is not configured, the UE shall use QCL information included in the "indicated" DL only/Joint TCI state as specified in TS 38.214 [19].</p>
<p><b>reportConfigId</b> The <i>reportConfigId</i> of one of the <i>CSI-ReportConfigToAddMod</i> configured in <i>CSI-MeasConfig</i></p>
<p><b>resourcesForChannel2</b> Configures reference signals for channel measurement corresponding to the second resource set for L1-RSRP measurement as configured in IE <i>CSI-ResourceConfig</i> when <i>nrofReportedGroups-r17</i> is configured in IE <i>CSI-ReportConfig</i>. If this is present, network configures <i>csi-SSB-ResourceSetExt</i> instead of <i>csi-SSB-ResourceSet</i> and the UE ignores <i>csi-SSB-ResourceSet</i> in <i>resourcesForChannel</i>, and the <i>resourcesForChannel</i> configures the reference signals for channel measurement corresponding to the first resource set for L1-RSRP measurement (see TS 38.214 [19], clause 5.2.1.4).</p>
<p><b>resourcesForChannelTDCP</b> Configures reference signals for channel measurement corresponding to the second resource set and third resource set for TDCP reporting. All CSI resources of these two resource sets always share the same QCL-info with the resource sets indicated by <i>resourcesForChannel</i> as specified in TS 38.214 [19].</p>
<p><b>resourceSet</b> <i>NZP-CSI-RS-ResourceSet</i> for channel measurements. Entry number in <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).</p>

Conditional Presence	Explanation
<i>Aperiodic</i>	The field is mandatory present if the <i>NZP-CSI-RS-Resources</i> in the associated <i>resourceSet</i> have the <i>resourceType</i> <i>aperiodic</i> and <i>unifiedTCI-StateType</i> is not configured. The field is optionally present, Need R, if the <i>NZP-CSI-RS-Resources</i> in the associated <i>resourceSet</i> have the <i>resourceType</i> <i>aperiodic</i> and <i>unifiedTCI-StateType</i> is configured. The field is absent otherwise.
<i>ApplyIndicatedTCI</i>	The field is optionally present, need R, if <i>resourceForChannel</i> has <i>aperiodic</i> CSI-RS and <i>unifiedTCI-StateType</i> is configured. This field is absent otherwise.
<i>CSI-IM-ForInterference</i>	This field is mandatory present if the <i>CSI-ReportConfig</i> identified by <i>reportConfigId</i> is configured with <i>csi-IM-ResourcesForInterference</i> ; otherwise it is absent.
<i>NZP-CSI-RS-ForInterference</i>	This field is mandatory present if the <i>CSI-ReportConfig</i> identified by <i>reportConfigId</i> is configured with <i>nzp-CSI-RS-ResourcesForInterference</i> ; otherwise it is absent.
<i>SecondCSICMR</i>	This field is mandatory present if <i>resourcesForChannel2</i> is configured with <i>aperiodic</i> CSI-RS and <i>applyIndicatedTCI-State</i> is configured. It is absent otherwise.
<i>TDCP</i>	This field is absent if <i>resourcesForChannel2</i> is configured. It is optionally present, Need R, otherwise.

## – CSI-FrequencyOccupation

The IE *CSI-FrequencyOccupation* is used to configure the frequency domain occupation of a channel state information measurement resource (e.g. *NZP-CSI-RS-Resource*, *CSI-IM-Resource*).

### CSI-FrequencyOccupation information element

```
-- ASN1START
-- TAG-CSI-FREQUENCYOCCUPATION-START

CSI-FrequencyOccupation ::=          SEQUENCE {
    startingRB          INTEGER (0..maxNrofPhysicalResourceBlocks-1),
    nrofRBs            INTEGER (24..maxNrofPhysicalResourceBlocksPlus1),
    ...
}

-- TAG-CSI-FREQUENCYOCCUPATION-STOP
-- ASN1STOP
```

CSI-FrequencyOccupation field descriptions
<b><i>nrofRBs</i></b> Number of PRBs across which this CSI resource spans. Only multiples of 4 are allowed. The smallest configurable number is the minimum of 24 and the width of the associated BWP. If the configured value is larger than the width of the corresponding BWP, the UE shall assume that the actual CSI-RS bandwidth is equal to the width of the BWP.
<b><i>startingRB</i></b> PRB where this CSI resource starts in relation to common resource block #0 (CRB#0) on the common resource block grid. Only multiples of 4 are allowed (0, 4, ...)

## – CSI-IM-Resource

The IE *CSI-IM-Resource* is used to configure one CSI Interference Management (IM) resource.

### CSI-IM-Resource information element

```

-- ASN1START
-- TAG-CSI-IM-RESOURCE-START

CSI-IM-Resource ::=
  csi-IM-ResourceId          SEQUENCE {
    CSI-IM-ResourceId,
  csi-IM-ResourceElementPattern CHOICE {
    pattern0 SEQUENCE {
      subcarrierLocation-p0 ENUMERATED { s0, s2, s4, s6, s8, s10 },
      symbolLocation-p0     INTEGER (0..12)
    },
    pattern1 SEQUENCE {
      subcarrierLocation-p1 ENUMERATED { s0, s4, s8 },
      symbolLocation-p1     INTEGER (0..13)
    }
  }
  freqBand                  OPTIONAL, -- Need M
  periodicityAndOffset     OPTIONAL, -- Need M
  ...                       OPTIONAL, -- Cond PeriodicOrSemiPersistent
}

-- TAG-CSI-IM-RESOURCE-STOP
-- ASN1STOP

```

<b>CSI-IM-Resource field descriptions</b>	
<b>csi-IM-ResourceElementPattern</b>	The resource element pattern (Pattern0 (2,2) or Pattern1 (4,1)) with corresponding parameters (see TS 38.214 [19], clause 5.2.2.4)
<b>freqBand</b>	Frequency-occupancy of CSI-IM (see TS 38.214 [19], clause 5.2.2.4)
<b>periodicityAndOffset</b>	Periodicity and slot offset for periodic/semi-persistent CSI-IM. Network always configures the UE with a value for this field for periodic and semi-persistent CSI-IM-Resources (as indicated in CSI-ResourceConfig). A change of configuration between periodic or semi-persistent and aperiodic for a CSI-IM-Resource is not supported without a release and add.
<b>subcarrierLocation-p0</b>	OFDM subcarrier occupancy of the CSI-IM resource for Pattern0 (see TS 38.214 [19], clause 5.2.2.4)
<b>subcarrierLocation-p1</b>	OFDM subcarrier occupancy of the CSI-IM resource for Pattern1 (see TS 38.214 [19], clause 5.2.2.4)
<b>symbolLocation-p0</b>	OFDM symbol location of the CSI-IM resource for Pattern0 (see TS 38.214 [19], clause 5.2.2.4)
<b>symbolLocation-p1</b>	OFDM symbol location of the CSI-IM resource for Pattern1 (see TS 38.214 [19], clause 5.2.2.4)

Conditional Presence	Explanation
<i>PeriodicOrSemiPersistent</i>	The field is optionally present, Need M, for periodic and semi-persistent CSI-IM-Resources (as indicated in CSI-ResourceConfig). The field is absent otherwise.

### – *CSI-IM-ResourceId*

The IE *CSI-IM-ResourceId* is used to identify one *CSI-IM-Resource*.

#### **CSI-IM-ResourceId information element**

```
-- ASN1START
-- TAG-CSI-IM-RESOURCEID-START

CSI-IM-ResourceId ::=                INTEGER (0..maxNrofCSI-IM-Resources-1)

-- TAG-CSI-IM-RESOURCEID-STOP
-- ASN1STOP
```

### – *CSI-IM-ResourceSet*

The IE *CSI-IM-ResourceSet* is used to configure a set of one or more CSI Interference Management (IM) resources (their IDs) and set-specific parameters.

#### **CSI-IM-ResourceSet information element**

```
-- ASN1START
-- TAG-CSI-IM-RESOURCESET-START

CSI-IM-ResourceSet ::=                SEQUENCE {
    csi-IM-ResourceSetId                CSI-IM-ResourceSetId,
    csi-IM-Resources                    SEQUENCE (SIZE(1..maxNrofCSI-IM-ResourcesPerSet)) OF CSI-IM-ResourceId,
    ...
}

-- TAG-CSI-IM-RESOURCESET-STOP
-- ASN1STOP
```

#### **CSI-IM-ResourceSet field descriptions**

##### ***csi-IM-Resources***

*CSI-IM-Resources* associated with this *CSI-IM-ResourceSet* (see TS 38.214 [19], clause 5.2).

### – *CSI-IM-ResourceSetId*

The IE *CSI-IM-ResourceSetId* is used to identify *CSI-IM-ResourceSets*.

**CSI-IM-ResourceSetId information element**

```

-- ASN1START
-- TAG-CSI-IM-RESOURCESETID-START

CSI-IM-ResourceSetId ::=
    INTEGER (0..maxNrofCSI-IM-ResourceSets-1)

-- TAG-CSI-IM-RESOURCESETID-STOP
-- ASN1STOP

```

**CSI-MeasConfig**

The IE *CSI-MeasConfig* is used to configure CSI-RS (reference signals) belonging to the serving cell in which *CSI-MeasConfig* is included, channel state information reports to be transmitted on PUCCH on the serving cell in which *CSI-MeasConfig* is included and channel state information reports on PUSCH triggered by DCI received on the serving cell in which *CSI-MeasConfig* is included. See also TS 38.214 [19], clause 5.2.

**CSI-MeasConfig information element**

```

-- ASN1START
-- TAG-CSI-MEASCONFIG-START

CSI-MeasConfig ::=
    SEQUENCE {
        nzp-CSI-RS-ResourceToAddModList SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-Resources)) OF NZP-CSI-RS-Resource OPTIONAL, -- Need N
        nzp-CSI-RS-ResourceToReleaseList SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-Resources)) OF NZP-CSI-RS-ResourceId OPTIONAL, -- Need N
        nzp-CSI-RS-ResourceSetToAddModList SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-ResourceSets)) OF NZP-CSI-RS-ResourceSet OPTIONAL, -- Need N
        nzp-CSI-RS-ResourceSetToReleaseList SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-ResourceSets)) OF NZP-CSI-RS-ResourceSetId OPTIONAL, -- Need N
        csi-IM-ResourceToAddModList SEQUENCE (SIZE (1..maxNrofCSI-IM-Resources)) OF CSI-IM-Resource OPTIONAL, -- Need N
        csi-IM-ResourceToReleaseList SEQUENCE (SIZE (1..maxNrofCSI-IM-Resources)) OF CSI-IM-ResourceId OPTIONAL, -- Need N
        csi-IM-ResourceSetToAddModList SEQUENCE (SIZE (1..maxNrofCSI-IM-ResourceSets)) OF CSI-IM-ResourceSet OPTIONAL, -- Need N
        csi-IM-ResourceSetToReleaseList SEQUENCE (SIZE (1..maxNrofCSI-IM-ResourceSets)) OF CSI-IM-ResourceSetId OPTIONAL, -- Need N
        csi-SSB-ResourceSetToAddModList SEQUENCE (SIZE (1..maxNrofCSI-SSB-ResourceSets)) OF CSI-SSB-ResourceSet OPTIONAL, -- Need N
        csi-SSB-ResourceSetToReleaseList SEQUENCE (SIZE (1..maxNrofCSI-SSB-ResourceSets)) OF CSI-SSB-ResourceSetId OPTIONAL, -- Need N
        csi-ResourceConfigToAddModList SEQUENCE (SIZE (1..maxNrofCSI-ResourceConfigurations)) OF CSI-ResourceConfig OPTIONAL, -- Need N

                                                                    OPTIONAL -- Need N
]]
}
-- TAG-CSI-MEASCONFIG-STOP
-- ASN1STOP

```

<b>CSI-MeasConfig field descriptions</b>
<b>aperiodicTriggerStateList</b> Contains trigger states for dynamically selecting one or more aperiodic and semi-persistent reporting configurations and/or triggering one or more aperiodic CSI-RS resource sets for channel and/or interference measurement (see TS 38.214 [19], clause 5.2.1).
<b>csi-IM-ResourceSetToAddModList</b> Pool of <i>CSI-IM-ResourceSet</i> which can be referred to from <i>CSI-ResourceConfig</i> or from MAC CEs.
<b>csi-IM-ResourceToAddModList</b> Pool of <i>CSI-IM-Resource</i> which can be referred to from <i>CSI-IM-ResourceSet</i> .
<b>csi-ReportConfigToAddModList</b> Configured CSI report settings as specified in TS 38.214 [19] clause 5.2.1.1.
<b>csi-ResourceConfigToAddModList</b> Configured CSI resource settings as specified in TS 38.214 [19] clause 5.2.1.2.
<b>csi-SSB-ResourceSetToAddModList</b> Pool of <i>CSI-SSB-ResourceSet</i> which can be referred to from <i>CSI-ResourceConfig</i> .
<b>ltm-CSI-ReportConfigToAddModList</b> Configured CSI report settings for LTM as specified in TS 38.214 [19].
<b>nzp-CSI-RS-ResourceSetToAddModList</b> Pool of <i>NZP-CSI-RS-ResourceSet</i> which can be referred to from <i>CSI-ResourceConfig</i> or from MAC CEs.
<b>nzp-CSI-RS-ResourceToAddModList</b> Pool of <i>NZP-CSI-RS-Resource</i> which can be referred to from <i>NZP-CSI-RS-ResourceSet</i> .
<b>reportTriggerSize, reportTriggerSizeDCI-0-2</b> Size of CSI request field in DCI (bits) (see TS 38.214 [19], clause 5.2.1.5.1). The field <i>reportTriggerSize</i> applies to DCI format 0_1 and the field <i>reportTriggerSizeDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 5.2.1.5.1).
<b>scellActivationRS-ConfigToAddModList</b> Configured RS for fast SCell activation as specified in TS 38.214 [19] clause 5.2.1.5.3.

## – CSI-ReportConfig

The IE *CSI-ReportConfig* is used to configure a periodic or semi-persistent report sent on PUCCH on the cell in which the *CSI-ReportConfig* is included, or to configure a semi-persistent or aperiodic report sent on PUSCH triggered by DCI received on the cell in which the *CSI-ReportConfig* is included (in this case, the cell on which the report is sent is determined by the received DCI). See TS 38.214 [19], clause 5.2.1.

**CSI-ReportConfig** information element

```

-- ASN1START
-- TAG-CSI-REPORTCONFIG-START

CSI-ReportConfig ::=
    SEQUENCE {
        reportConfigId

<b>CSI-ReportConfig field descriptions</b>
<p><b>carrier</b> Indicates in which serving cell the <i>CSI-ResourceConfig</i> indicated below are to be found. If the field is absent, the resources are on the same serving cell as this report configuration.</p>
<p><b>codebookConfig</b> Codebook configuration for Type-1 or Type-2 including codebook subset restriction. Network can only configure one of <i>codebookConfig</i>, <i>codebookConfig-r16</i> or <i>codebookConfig-r17</i> or <i>codebookConfig-r18</i> in a <i>CSI-ReportConfig</i>. The network includes <i>codebookConfig-v1730</i> only if <i>codebookConfig-r17</i> is configured.</p>
<p><b>cqi-BitsPerSubband</b> This field can only be present if <i>cqi-FormatIndicator</i> is set to <i>subbandCQI</i>. If the field is configured with <i>bits4</i>, the UE uses 4-bit sub-band CQI. If the field is not present and <i>cqi-FormatIndicator</i> is set to <i>subbandCQI</i>, the UE uses 2-bit sub-band differential CQI.</p>
<p><b>cqi-FormatIndicator</b> Indicates whether the UE shall report a single (wideband) or multiple (subband) CQI (see TS 38.214 [19], clause 5.2.1.4).</p>
<p><b>cqi-Table</b> Which CQI table to use for CQI calculation (see TS 38.214 [19], clause 5.2.2.1). For an (e)RedCap UE, CQI table 2 is only supported if the UE indicates support of 256QAM for PDSCH.</p>
<p><b>csi-IM-ResourcesForInterference</b> CSI IM resources for interference measurement. <i>csi-ResourceConfigId</i> of a <i>CSI-ResourceConfig</i> included in the configuration of the serving cell indicated with the field "carrier" above. The <i>CSI-ResourceConfig</i> indicated here contains only CSI-IM resources. The <i>bwpld</i> in that <i>CSI-ResourceConfig</i> is the same value as the <i>bwpld</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i>.</p>
<p><b>csi-ReportingBand</b> Indicates a contiguous or non-contiguous subset of subbands in the bandwidth part which CSI shall be reported for. Each bit in the bit-string represents one subband in order of frequency position in the BWP. The right-most bit in the bit string represents the lowest subband with the lowest frequency position in the BWP. The choice determines the number of subbands (subbands3 for 3 subbands, subbands4 for 4 subbands, and so on) (see TS 38.214 [19], clause 5.2.1.4). This field is absent if there are less than 24 PRBs (no sub band) and present otherwise (see TS 38.214 [19], clause 5.2.1.4). NOTE: In TS 38.212 [17] clause 6.3.1.1.2 and TS 38.214 [19] clause 5.2.1.4, only subbands to be reported are numbered, e.g. subband #0 is the subband corresponding to the right-most bit set to 1.</p>
<p><b>csi-ReportMode</b> Configures the CSI report modes Mode1 or Mode 2 (see TS 38.214 [19], clause 5.2.1.4.2)</p>
<p><b>csi-ReportSubConfigToAddModList</b> List of CSI-ReportSubConfiguration(s) in a CSI report configuration to add or modify. No simultaneous configuration of <i>portSubsetIndicator</i> and a list of <i>nzp-CSI-RS-resources</i> in a same CSI report sub-configuration. The number of elements in a list is at least 2.</p>
<p><b>csi-ReportSubConfigToReleaseList</b> List of CSI-ReportSubConfiguration(s) in a CSI report configuration to release.</p>
<p><b>dummy</b> This field is not used in the specification. If received it shall be ignored by the UE.</p>
<p><b>groupBasedBeamReporting</b> Turning on/off group beam based reporting (see TS 38.214 [19], clause 5.2.1.4). If <i>groupBasedBeamReporting</i> (without suffix) is set to disabled, <i>groupBasedBeamReporting-v1710</i> and <i>groupBasedBeamReporting-v1800</i> is absent.</p>

<p><b>non-PMI-PortIndication</b> Port indication for RI/CQI calculation. For each CSI-RS resource in the linked ResourceConfig for channel measurement, a port indication for each rank R, indicating which R ports to use. Applicable only for non-PMI feedback (see TS 38.214 [19], clause 5.2.1.4.2). The first entry in <i>non-PMI-PortIndication</i> corresponds to the NZP-CSI-RS-Resource indicated by the first entry in <i>nzp-CSI-RS-Resources</i> in the <i>NZP-CSI-RS-ResourceSet</i> indicated in the first entry of <i>nzp-CSI-RS-ResourceSetList</i> of the <i>CSI-ResourceConfig</i> whose <i>CSI-ResourceConfigId</i> is indicated in a CSI-MeasId together with the above <i>CSI-ReportConfigId</i>; the second entry in <i>non-PMI-PortIndication</i> corresponds to the NZP-CSI-RS-Resource indicated by the second entry in <i>nzp-CSI-RS-Resources</i> in the <i>NZP-CSI-RS-ResourceSet</i> indicated in the first entry of <i>nzp-CSI-RS-ResourceSetList</i> of the same <i>CSI-ResourceConfig</i>, and so on until the NZP-CSI-RS-Resource indicated by the last entry in <i>nzp-CSI-RS-Resources</i> in the in the <i>NZP-CSI-RS-ResourceSet</i> indicated in the first entry of <i>nzp-CSI-RS-ResourceSetList</i> of the same <i>CSI-ResourceConfig</i>. Then the next entry corresponds to the NZP-CSI-RS-Resource indicated by the first entry in <i>nzp-CSI-RS-Resources</i> in the <i>NZP-CSI-RS-ResourceSet</i> indicated in the second entry of <i>nzp-CSI-RS-ResourceSetList</i> of the same <i>CSI-ResourceConfig</i> and so on.</p>
<p><b>nrofReportedGroups</b> Number of reported resource groups per CSI-report. Value <i>n1</i> means one resource group, <i>n2</i> means 2 resource groups, and so on. If <i>nrofReportedGroups</i> is configured, the UE ignores groupBasedBeamReporting (without suffix).</p>
<p><b>nrofReportedRS</b> The number (N) of measured RS resources to be reported per report setting in a non-group-based report. <math>N \leq N_{max}</math>, where <math>N_{max}</math> is either 2 or 4 depending on UE capability. (see TS 38.214 [19], clause 5.2.1.4) When the field is absent the UE applies the value 1.</p>
<p><b>numberOfSingleTRP-CSI-Mode1</b> Configures the number of reported X CSIs when <i>csi-ReportMode</i> is set to 'Mode 1' as described in TS 38.214 [19], clause 5.2.1.4.2. The field is present only if <i>csi-ReportMode</i> configures Mode 1.</p>
<p><b>nzp-CSI-RS-ResourcesForInterference</b> NZP CSI RS resources for interference measurement. <i>csi-ResourceConfigId</i> of a <i>CSI-ResourceConfig</i> included in the configuration of the serving cell indicated with the field "carrier" above. The <i>CSI-ResourceConfig</i> indicated here contains only NZP-CSI-RS resources. The <i>bwp-Id</i> in that <i>CSI-ResourceConfig</i> is the same value as the <i>bwp-Id</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i>.</p>
<p><b>p0alpha</b> Index of the p0-alpha set determining the power control for this CSI report transmission (see TS 38.214 [19], clause 6.2.1.2).</p>
<p><b>pdsch-BundleSizeForCSI</b> PRB bundling size to assume for CQI calculation when <i>reportQuantity</i> is CRI/RI/i1/CQI. If the field is absent, the UE assumes that no PRB bundling is applied (see TS 38.214 [19], clause 5.2.1.4.2).</p>
<p><b>pmi-FormatIndicator</b> Indicates whether the UE shall report a single (wideband) or multiple (subband) PMI. (see TS 38.214 [19], clause 5.2.1.4).</p>
<p><b>pucch-CSI-ResourceList</b> Indicates which PUCCH resource to use for reporting on PUCCH.</p>
<p><b>reportConfigType</b> Time domain behavior of reporting configuration.</p>
<p><b>reportFreqConfiguration</b> Reporting configuration in the frequency domain. (see TS 38.214 [19], clause 5.2.1.4).</p>
<p><b>reportQuantity</b> The CSI related quantities to report. see TS 38.214 [19], clause 5.2.1. If the field <i>reportQuantity-r16</i>, <i>reportQuantity-r17</i> or <i>reportQuantity-r18</i> is present, UE shall ignore <i>reportQuantity</i> (without suffix). Network does not configure <i>reportQuantity-r17</i> or <i>reportQuantity-r18</i> together with <i>reportQuantity-r16</i>.</p>
<p><b>reportingMode</b> Configures the UE with reporting mode for group based reporting.(see TS 38.214 [19] clause 5.2.1.4).</p>
<p><b>reportSlotConfig</b> Periodicity and slot offset (see TS 38.214 [19], clause 5.2.1.4). If the field <i>reportSlotConfig-v1530</i> is present, the UE shall ignore the value provided in <i>reportSlotConfig</i> (without suffix).</p>

<p><b>reportSlotOffsetList, reportSlotOffsetListDCI-0-1, reportSlotOffsetListDCI-0-2</b>  Timing offset Y for semi persistent reporting using PUSCH. This field lists the allowed offset values. This list must have the same number of entries as the <i>pusch-TimeDomainAllocationList</i> in <i>PUSCH-Config</i>. A particular value is indicated in DCI. The network indicates in the DCI field of the UL grant, which of the configured report slot offsets the UE shall apply. The DCI value 0 corresponds to the first report slot offset in this list, the DCI value 1 corresponds to the second report slot offset in this list, and so on. The first report is transmitted in slot <math>n+Y</math>, second report in <math>n+Y+P</math>, where P is the configured periodicity.</p> <p>Timing offset Y for aperiodic reporting using PUSCH. This field lists the allowed offset values. This list must have the same number of entries as the <i>pusch-TimeDomainAllocationList</i> in <i>PUSCH-Config</i>. A particular value is indicated in DCI. The network indicates in the DCI field of the UL grant, which of the configured report slot offsets the UE shall apply. The DCI value 0 corresponds to the first report slot offset in this list, the DCI value 1 corresponds to the second report slot offset in this list, and so on (see TS 38.214 [19], clause 6.1.2.1).</p> <p>The field <i>reportSlotOffsetListDCI-0-1</i> applies to DCI format 0_1 and the field <i>reportSlotOffsetListDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.2.1). The fields <i>reportSlotOffsetList-r17</i>, <i>reportSlotOffsetListDCI-0-1-r17</i> and <i>reportSlotOffsetListDCI-0-2-r17</i> are only applicable for SCS 480 kHz and 960 kHz and if they are configured, the UE shall ignore the fields <i>reportSlotOffsetList</i> (without suffix), <i>reportSlotOffsetListDCI-0-1</i> (without suffix) and <i>reportSlotOffsetListDCI-0-2</i> (without suffix) for SCS 480 kHz and 960 kHz.</p>
<p><b>resourcesForChannelMeasurement</b>  Resources for channel measurement. <i>csi-ResourceConfigId</i> of a <i>CSI-ResourceConfig</i> included in the configuration of the serving cell indicated with the field "carrier" above. The <i>CSI-ResourceConfig</i> indicated here contains only NZP-CSI-RS resources and/or SSB resources. This <i>CSI-ReportConfig</i> is associated with the DL BWP indicated by <i>bwp-Id</i> in that <i>CSI-ResourceConfig</i>.</p>
<p><b>sharedCMR</b>  Enables sharing of channel measurement resources between different CSI measurement hypotheses when (1) <i>csi-ReportMode</i> is set to 'Mode1' and <i>numberOfSingleTRP-CSI-Mode1</i> is set to 1 or 2; or (2) <i>csi-ReportMode</i> is set to 'Mode2' (see TS 38.214 [19], clause 5.2.1.4.2).</p>
<p><b>subbandSize</b>  Indicates one out of two possible BWP-dependent values for the subband size as indicated in TS 38.214 [19], table 5.2.1.4-2 . If <i>csi-ReportingBand</i> is absent, the UE shall ignore this field.</p>
<p><b>timeRestrictionForChannelMeasurements</b>  Time domain measurement restriction for the channel (signal) measurements (see TS 38.214 [19], clause 5.2.1.1).</p>
<p><b>timeRestrictionForInterferenceMeasurements</b>  Time domain measurement restriction for interference measurements (see TS 38.214 [19], clause 5.2.1.1).</p>

<b>CSI-ReportSubConfig field descriptions</b>
<p><b>codebookSubConfig</b> Applicable codebook parameters for the ports indicated by <i>portSubsetIndicator</i>. Applicable value ranges for codebook subset restriction, rank restriction, N1, N2, and Ng and twoTX-CodebookSubsetRestriction follow existing specification according to the <i>codebookConfig</i> configured within the <i>CSI-ReportConfig</i>, and apply for the number of ports determined by <i>portSubsetIndicator</i> (see TS 38.214 [19], clause 5.2.1.4.2). In this field, the network always sets the <i>codebookType</i> to <i>type1</i>. When <i>reportQuantity</i> is set to 'cri-RI-i1-CQI', the parameter <i>type1SinglePanel-codebookSubsetRestriction-i2</i> is mandatory to be configured in the <i>codebookSubConfig</i> for each sub-configuration that includes <i>portSubsetIndicator</i>.</p>
<p><b>non-PMI-PortIndication</b> Port indication for RI/CQI calculation applicable only for non-PMI feedback. The field shall be configured only if the <i>portSubsetIndicator-r18</i> is configured. For each CSI-RS resource in the linked <i>CSI-ResourceConfig</i> for channel measurement, a port indication for each rank R, indicating which R ports out of P ports to use within the sub-configuration. P corresponds to the number of bits with value 1 in the bitmap <i>portSubsetIndicator-r18</i>.</p>
<p><b>nzp-CSI-RS-ResourceList</b> List of NZP CSI RS resources for the sub-configuration that is a (sub)set of NZP CSI-RS resource(s) of the CSI-RS resource set for channel measurement associated with the sub-configuration in the CSI report configuration. Value 0 refers to the first NZP CSI RS resource of the CSI-RS resource set, value 1 refers to the second NZP CSI RS resource of the CSI-RS resource set, and so on.</p>
<p><b>portSubsetIndicator</b> Indicates the (sub)set of CSI-RS antenna ports used for CSI calculation of the sub-configuration. In the bit string, each bit corresponds to an antenna port. When a bit is set to 1, the corresponding port is enabled for CSI calculation corresponding to the sub-configuration. When the bit is set to zero, the corresponding port is not enabled for CSI calculation corresponding to the sub-configuration. The size of the bit string equals P bits, where <math>P=2/4/8/12/16/24/32</math> represents the number of ports of the NZP CSI-RS resource(s) in the resource set for channel measurement associated with the <i>CSI-ReportConfig</i>.</p>
<p><b>powerOffset</b> When <i>powerControlOffset</i> is configured in NZP CSI-RS resources in the resource set for channel measurement associated with the <i>CSI-ReportConfig</i>, the power offset of PDSCH EPRE to NZP CSI-RS EPRE is equal to <i>powerControlOffset</i> - <i>powerOffset</i>.</p>
<p><b>reportSubConfigParams</b> Indicates the parameters to be used for the CSI report sub-configuration, which includes either <i>a1-parameters</i> that contain the antenna port subset and the associated parameters relevant to the sub-configuration or <i>a2-parameters</i> that contain the list of NZP CSI-RS resources for the sub-configuration (see TS 38.214 [19], clause 5.2.1.4.2).</p>

<b>PortIndexFor8Ranks field descriptions</b>
<p><b>portIndex8</b> Port-Index configuration for up to rank 8. If present, the network configures port indexes for at least one of the ranks.</p>
<p><b>portIndex4</b> Port-Index configuration for up to rank 4. If present, the network configures port indexes for at least one of the ranks.</p>
<p><b>portIndex2</b> Port-Index configuration for up to rank 2. If present, the network configures port indexes for at least one of the ranks.</p>
<p><b>portIndex1</b> Port-Index configuration for rank 1.</p>

<b>TDCP field descriptions</b>
<p><b>delayDSetofLengthY</b> Configures a set of Y delay values for TDCP reporting, see reference TS 38.214 clause 5.2.1.4. The <i>symp4</i> denotes 4 symbols, the <i>slot1</i> denotes 1 slot, the <i>slot2</i> denotes 2 slots and so on. The value <i>slot10</i> is applicable only to SCS <math>\geq 30</math>kHz. The parameter Y, see reference TS38.214 clause 5.2.1.4, is given by the length of the set of D values.</p>
<p><b>phaseReporting</b> Configures the UE for phase reporting for TDCP reporting see reference TS 38.214 clause 5.2.1.4</p>

### – *CSI-ReportConfigId*

The IE *CSI-ReportConfigId* is used to identify one *CSI-ReportConfig*.

#### ***CSI-ReportConfigId* information element**

```
-- ASN1START
-- TAG-CSI-REPORTCONFIGID-START

CSI-ReportConfigId ::=                INTEGER (0..maxNrofCSI-ReportConfigurations-1)

-- TAG-CSI-REPORTCONFIGID-STOP
-- ASN1STOP
```

### – *CSI-ReportSubConfigId*

The IE *CSI-ReportSubConfigId* is used to indicate the index of one *CSI-ReportSubConfig* within a CSI report configuration.

#### ***CSI-ReportSubConfigId* information element**

```
-- ASN1START
-- TAG-CSI-REPORTSUBCONFIGID-START

CSI-ReportSubConfigId-r18 ::=        INTEGER (0..maxNrofCSI-ReportSubconfigPerCSI-ReportConfig-1-r18)

-- TAG-CSI-REPORTSUBCONFIGID-STOP
-- ASN1STOP
```

### – *CSI-ReportSubConfigTriggerList*

The IE *CSI-ReportSubConfigTriggerList* is used to configure a list of sub-configuration ID(s) of N sub-configurations out of L configured sub-configurations within a CSI-ReportConfig associated with a triggering state for semi-persistent CSI reporting on PUSCH and aperiodic CSI reporting.

#### ***CSI-ReportSubConfigTriggerList* information element**

```
-- ASN1START
-- TAG-CSI-REPORTSUBCONFIGTRIGGERLIST-START

CSI-ReportSubConfigTriggerList-r18 ::= SEQUENCE (SIZE(1..maxNrofCSI-ReportSubconfigPerCSI-ReportConfig-r18)) OF CSI-ReportSubConfigId-r18

-- TAG-CSI-REPORTSUBCONFIGTRIGGERLIST-STOP
-- ASN1STOP
```

– *CSI-ResourceConfig*

The IE *CSI-ResourceConfig* defines a group of one or more *NZP-CSI-RS-ResourceSet*, *CSI-IM-ResourceSet* and/or *CSI-SSB-ResourceSet*.

**CSI-ResourceConfig information element**

```

-- ASN1START
-- TAG-CSI-RESOURCECONFIG-START

CSI-ResourceConfig ::= SEQUENCE {
  csi-ResourceConfigId      CSI-ResourceConfigId,
  csi-RS-ResourceSetList    CHOICE {
    nzp-CSI-RS-SSB          SEQUENCE {
      nzp-CSI-RS-ResourceSetList SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-ResourceSetsPerConfig)) OF NZP-CSI-RS-ResourceSetId
      OPTIONAL, -- Need R
    },
    csi-SSB-ResourceSetList SEQUENCE (SIZE (1..maxNrofCSI-SSB-ResourceSetsPerConfig)) OF CSI-SSB-ResourceSetId
    OPTIONAL, -- Need R
  },

```

<b>CSI-ResourceConfig field descriptions</b>
<p><b><i>bwp-Id</i></b> The DL BWP which the CSI-RS associated with this <i>CSI-ResourceConfig</i> are located in (see TS 38.214 [19], clause 5.2.1.2).</p>
<p><b><i>csi-IM-ResourceSetList</i></b> List of references to CSI-IM resources used for CSI measurement and reporting in a CSI-RS resource set. Contains up to <i>maxNrofCSI-IM-ResourceSetsPerConfig</i> resource sets if <i>resourceType</i> is 'aperiodic' and 1 otherwise (see TS 38.214 [19], clause 5.2.1.2).</p>
<p><b><i>csi-ResourceConfigId</i></b> Used in <i>CSI-ReportConfig</i> to refer to an instance of <i>CSI-ResourceConfig</i>.</p>
<p><b><i>csi-SSB-ResourceSetList, csi-SSB-ResourceSetListExt</i></b> List of references to SSB resources used for CSI measurement and reporting in a CSI-RS resource set (see TS 38.214 [19], clause 5.2.1.2). The <i>csi-SSB-ResourceSetListExt</i> provides additional references and can only be configured if <i>csi-SSB-ResourceSetList</i> is configured and <i>groupBasedBeamReporting-v1710</i> is configured in the <i>CSI-ReportConfig</i> that indicates this <i>CSI-ResourceConfig</i> as <i>resourcesForChannelMeasurement</i>. If <i>groupBasedBeamReporting-v1710</i> is configured in the IE <i>CSI-ReportConfig</i> that indicates this <i>CSI-ResourceConfig</i> as <i>resourcesForChannelMeasurement</i>, the network configures 2 resource sets, which may be two CSI SSB resource sets (see TS 38.214 [19], clause 5.2.1.2 and 5.2.1.4.2). In this case, in TS 38.212 [17] Table 6.3.1.1.2-8B, the first resource set is indicated by a resource set indicator set to 0 and the second resource set by a resource set indicator set to 1.</p>
<p><b><i>nzp-CSI-RS-ResourceSetList</i></b> List of references to NZP CSI-RS resources used for beam measurement and reporting in a CSI-RS resource set. If <i>resourceType</i> is set to 'aperiodic', the network configures up to <i>maxNrofNZP-CSI-RS-ResourceSetsPerConfig</i> resource sets. If <i>resourceType</i> is set to 'periodic' or 'semiPersistent' and <i>groupBasedBeamReporting-v1710</i> is not configured in IE <i>CSI-ReportConfig</i>, the network configures 1 resource set. If <i>resourceType</i> is set to 'periodic' or 'semiPersistent' and <i>groupBasedBeamReporting-v1710</i> is configured, the network configures 2 resource sets, which may be two NZP CSI-RS resource sets (see TS 38.214 [19], clause 5.2.1.2 and 5.2.1.4.2). In this case, in TS 38.212 [17] Table 6.3.1.1.2-8B, the first resource set is indicated by a resource set indicator set to 0 and the second resource set by a resource set indicator set to 1. If <i>resourceType</i> is set to 'periodic' and <i>reportQuantity</i> is set to 'TDCP', the network configures up to 3 resource sets, see TS 38.214 [19] clause 5.2.1.2.</p>
<p><b><i>resourceType</i></b> Time domain behavior of resource configuration (see TS 38.214 [19], clause 5.2.1.2). It does not apply to resources provided in the <i>csi-SSB-ResourceSetList</i>.</p>

– ***CSI-ResourceConfigId***

The IE *CSI-ResourceConfigId* is used to identify a *CSI-ResourceConfig*.

**CSI-ResourceConfigId information element**

```
-- ASN1START
-- TAG-CSI-RESOURCECONFIGID-START

CSI-ResourceConfigId ::=
    INTEGER (0..maxNrofCSI-ResourceConfigurations-1)

-- TAG-CSI-RESOURCECONFIGID-STOP
-- ASN1STOP
```

## – *CSI-ResourcePeriodicityAndOffset*

The IE *CSI-ResourcePeriodicityAndOffset* is used to configure a periodicity and a corresponding offset for periodic and semi-persistent CSI resources, and for periodic and semi-persistent reporting on PUCCH. both, the periodicity and the offset are given in number of slots. The periodicity value *slots4* corresponds to 4 slots, value *slots5* corresponds to 5 slots, and so on.

### ***CSI-ResourcePeriodicityAndOffset* information element**

```
-- ASN1START
-- TAG-CSI-RESOURCEPERIODICITYANDOFFSET-START

CSI-ResourcePeriodicityAndOffset ::= CHOICE {
  slots4          INTEGER (0..3),
  slots5          INTEGER (0..4),

    ms5
    ms10
    ms20
    ms40
  }
  ]]
}

CSI-RS-Index ::=
  INTEGER (0..maxNrofCSI-RS-ResourcesRRM-1)

-- TAG-CSI-RS-RESOURCECONFIGMOBILITY-STOP
-- ASN1STOP

```

<b>CSI-RS-CellMobility field descriptions</b>
<p><b><i>csi-rs-ResourceList-Mobility</i></b> List of CSI-RS resources for mobility. The maximum number of CSI-RS resources that can be configured per <i>measObjectNR</i> depends on the configuration of <i>associatedSSB</i> and the support of <i>increasedNumberOfCSIRSPerMO</i> capability (see TS 38.214 [19], clause 5.1.6.1.3).</p>
<p><b><i>density</i></b> Frequency domain density for the 1-port CSI-RS for L3 mobility. See TS 38.211 [16], clause 7.4.1.</p>
<p><b><i>nrofPRBs</i></b> Allowed size of the measurement BW in PRBs. See TS 38.211 [16], clause 7.4.1.</p>
<p><b><i>startPRB</i></b> Starting PRB index of the measurement bandwidth. See TS 38.211 [16], clause 7.4.1.</p>

<b>CSI-RS-ResourceConfigMobility field descriptions</b>
<p><b><i>csi-RS-CellList-Mobility</i></b> List of cells for CSI-RS based RRM measurements.</p>
<p><b><i>refServCellIndex</i></b> Indicates the serving cell providing the timing reference for CSI-RS resources without <i>associatedSSB</i>. The field may be present only if there is at least one CSI-RS resource configured without <i>associatedSSB</i>. If this field is absent, the UE shall use the timing of the PCell for measurements on the CSI-RS resources without <i>associatedSSB</i>. The CSI-RS resources and the serving cell indicated by <i>refServCellIndex</i> for timing reference should be located in the same band.</p>
<p><b><i>subcarrierSpacing</i></b> Subcarrier spacing of CSI-RS. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz</p>

<b>CSI-RS-Resource-Mobility field descriptions</b>
<p><b>associatedSSB</b> If this field is present, the UE may base the timing of the CSI-RS resource indicated in <i>CSI-RS-Resource-Mobility</i> on the timing of the cell indicated by the <i>cellId</i> in the <i>CSI-RS-CellMobility</i>. In this case, the UE is not required to monitor that CSI-RS resource if the UE cannot detect the SS/PBCH block indicated by this <i>associatedSSB</i> and <i>cellId</i>. If this field is absent, the UE shall base the timing of the CSI-RS resource indicated in <i>CSI-RS-Resource-Mobility</i> on the timing of the serving cell indicated by <i>refServCellIndex</i>. In this case, the UE is required to measure the CSI-RS resource even if SS/PBCH block(s) with <i>cellId</i> in the <i>CSI-RS-CellMobility</i> are not detected. CSI-RS resources with and without <i>associatedSSB</i> may be configured in accordance with the rules in TS 38.214 [19], clause 5.1.6.1.3.</p>
<p><b>csi-RS-Index</b> CSI-RS resource index associated to the CSI-RS resource to be measured (and used for reporting).</p>
<p><b>firstOFDMSymbolInTimeDomain</b> Time domain allocation within a physical resource block. The field indicates the first OFDM symbol in the PRB used for CSI-RS, see TS 38.211 [16], clause 7.4.1.5.3.</p>
<p><b>frequencyDomainAllocation</b> Frequency domain allocation within a physical resource block in accordance with TS 38.211 [16], clause 7.4.1.5.3 including table 7.4.1.5.2-1. The number of bits that may be set to one depend on the chosen row in that table.</p>
<p><b>isQuasiColocated</b> Indicates that the CSI-RS resource is quasi co-located with the associated SS/PBCH block, see TS 38.214 [19], clause 5.1.6.1.3.</p>
<p><b>sequenceGenerationConfig</b> Scrambling ID for CSI-RS (see TS 38.211 [16], clause 7.4.1.5.2).</p>
<p><b>slotConfig</b> Indicates the CSI-RS periodicity (in milliseconds) and for each periodicity the offset (in number of slots). When <i>subcarrierSpacing</i> is set to <i>kHz15</i>, the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 3/4/9/19/39 slots. When <i>subcarrierSpacing</i> is set to <i>kHz30</i>, the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 7/9/19/39/79 slots. When <i>subcarrierSpacing</i> is set to <i>kHz60</i>, the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 15/19/39/79/159 slots. When <i>subcarrierSpacing</i> is set to <i>kHz120</i>, the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 31/39/79/159/319 slots. When <i>subcarrierSpacing</i> is set to <i>kHz480</i>, the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 127/159/319/639/1279 slots. When <i>subcarrierSpacing</i> is set to <i>kHz960</i>, the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 255/319/639/1279/2559 slots. If <i>slotConfig-r17</i> is present, UE shall ignore the <i>slotConfig</i> (without suffix).</p>

## – CSI-RS-ResourceMapping

The IE *CSI-RS-ResourceMapping* is used to configure the resource element mapping of a CSI-RS resource in time- and frequency domain.

### **CSI-RS-ResourceMapping information element**

```

-- ASN1START
-- TAG-CSI-RS-RESOURCEMAPPING-START

CSI-RS-ResourceMapping ::=
    frequencyDomainAllocation          SEQUENCE {
        CHOICE {
            row1          BIT STRING (SIZE (4)),
            row2          BIT STRING (SIZE (12)),
            row4          BIT STRING (SIZE (3)),
            other         BIT STRING (SIZE (6))
        },
        nrofPorts          ENUMERATED {p1,p2,p4,p8,p12,p16,p24,p32},
        firstOFDMSymbolInTimeDomain    INTEGER (0..13),
        firstOFDMSymbolInTimeDomain2   INTEGER (2..12) OPTIONAL, -- Need R
        cdm-Type           ENUMERATED {noCDM, fd-CDM2, cdm4-FD2-TD2, cdm8-FD2-TD4},
    }

```

```

density          CHOICE {
  dot5           ENUMERATED {evenPRBs, oddPRBs},
  one           NULL,
  three         NULL,
  spare         NULL
},
freqBand        CSI-FrequencyOccupation,
...
}
-- TAG-CSI-RS-RESOURCEMAPPING-STOP
-- ASN1STOP

```

### CSI-RS-ResourceMapping field descriptions

<b>cdm-Type</b> CDM type (see TS 38.214 [19], clause 5.2.2.3.1).
<b>density</b> Density of CSI-RS resource measured in RE/port/PRB (see TS 38.211 [16], clause 7.4.1.5.3). Values 0.5 ( <i>dot5</i> ), 1 ( <i>one</i> ) and 3 ( <i>three</i> ) are allowed for X=1, values 0.5 ( <i>dot5</i> ) and 1 ( <i>one</i> ) are allowed for X=2, 16, 24 and 32, value 1 ( <i>one</i> ) is allowed for X=4, 8, 12. For density = 1/2, includes 1-bit indication for RB level comb offset indicating whether odd or even RBs are occupied by CSI-RS.
<b>firstOFDMSymbolInTimeDomain2</b> Time domain allocation within a physical resource block. See TS 38.211 [16], clause 7.4.1.5.3.
<b>firstOFDMSymbolInTimeDomain</b> Time domain allocation within a physical resource block. The field indicates the first OFDM symbol in the PRB used for CSI-RS. See TS 38.211 [16], clause 7.4.1.5.3.
<b>freqBand</b> Wideband or partial band CSI-RS, (see TS 38.214 [19], clause 5.2.2.3.1).
<b>frequencyDomainAllocation</b> Frequency domain allocation within a physical resource block in accordance with TS 38.211 [16], clause 7.4.1.5.3. The applicable row number in table 7.4.1.5.3-1 is determined by the <i>frequencyDomainAllocation</i> for rows 1, 2 and 4, and for other rows by matching the values in the column Ports, Density and CDMtype in table 7.4.1.5.3-1 with the values of <i>nrofPorts</i> , <i>cdm-Type</i> and <i>density</i> below and, when more than one row has the 3 values matching, by selecting the row where the column (k bar, l bar) in table 7.4.1.5.3-1 has indexes for k ranging from 0 to 2*n-1 where n is the number of bits set to 1 in <i>frequencyDomainAllocation</i> .
<b>nrofPorts</b> Number of ports (see TS 38.214 [19], clause 5.2.2.3.1).

### – CSI-SemiPersistentOnPUSCH-TriggerStateList

The *CSI-SemiPersistentOnPUSCH-TriggerStateList* IE is used to configure the UE with list of trigger states for semi-persistent reporting of channel state information on L1. See also TS 38.214 [19], clause 5.2.

### CSI-SemiPersistentOnPUSCH-TriggerStateList information element

```

-- ASN1START
-- TAG-CSI-SEMIPERSISTENTONPUSCHTRIGGERSTATELIST-START

```

```
CSI-SemiPersistentOnPUSCH-TriggerStateList ::= SEQUENCE(SIZE (1..maxNrOfSemiPersistentPUSCH-Triggers)) OF CSI-SemiPersistentOnPUSCH-TriggerState
```

```

CSI-SemiPersistentOnPUSCH-TriggerState ::= SEQUENCE {
    associatedReportConfigInfo          CSI-ReportConfigId,
    . . . ,
    [[
    sp-CSI-MultiplexingMode-r17         ENUMERATED {enabled}           OPTIONAL  -- Need R
    ]],
    [[
    csi-ReportSubConfigTriggerList-r18  CSI-ReportSubConfigTriggerList-r18  OPTIONAL, -- Need R
    ltm-AssociatedReportConfigInfo-r18  LTM-CSI-ReportConfigId-r18         OPTIONAL  -- Need R
    ]]
}

-- TAG-CSI-SEMIPERSISTENTONPUSCHTRIGGERSTATELIST-STOP
-- ASN1STOP

```

#### **CSI-SemiPersistentOnPUSCH-TriggerStateList field descriptions**

##### **csi-ReportSubConfigTriggerList**

A list of sub-configuration ID(s) of N sub-configurations out of L configured sub-configurations within a *CSI-ReportConfig* associated with a triggering state for semi-persistent CSI reporting on PUSCH.

##### **ltm-AssociatedReportConfigInfo**

This field configures semi-persistent CSI reports on PUSCH of LTM candidate cells. If *ltm-associatedReportConfigInfo* is configured the UE shall ignore the field *associatedReportConfigInfo*.

##### **sp-CSI-MultiplexingMode**

Indicates if the behavior of transmitting SP-CSI on the first PUSCH repetitions corresponding to two SRS resource sets configured in *srs-ResourceSetToAddModList* or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook' is enabled or not.

## – CSI-SSB-ResourceSet

The IE *CSI-SSB-ResourceSet* is used to configure one SS/PBCH block resource set which refers to SS/PBCH as indicated in *ServingCellConfigCommon* and *ServingCellConfig*.

#### **CSI-SSB-ResourceSet information element**

```

-- ASN1START
-- TAG-CSI-SSB-RESOURCESET-START

CSI-SSB-ResourceSet ::= SEQUENCE {
    csi-SSB-ResourceSetId          CSI-SSB-ResourceSetId,
    csi-SSB-ResourceList          SEQUENCE (SIZE(1..maxNrofCSI-SSB-ResourcePerSet)) OF SSB-Index,
    . . . ,
    [[
    servingAdditionalPCIList-r17   SEQUENCE (SIZE(1..maxNrofCSI-SSB-ResourcePerSet)) OF ServingAdditionalPCIIndex-r17  OPTIONAL  -- Need R
    ]],
}

ServingAdditionalPCIIndex-r17 ::= INTEGER(0..maxNrofAdditionalPCI-r17)

-- TAG-CSI-SSB-RESOURCESET-STOP
-- ASN1STOP

```

**CSI-SSB-ResourceSet field descriptions*****servingAdditionalPCList***

Indicates the physical cell IDs (PCI) of the SSBs in the *csi-SSB-ResourceList*. If present, the list has the same number of entries as *csi-SSB-ResourceList*. The first entry of the list indicates the value of the PCI for the first entry of *csi-SSB-ResourceList*, the second entry of this list indicates the value of the PCI for the second entry of *csi-SSB-ResourceList*, and so on. For each entry, the following applies:

- If the value is zero, the PCI is the PCI of the serving cell in which this *CSI-SSB-ResourceSet* is defined;
- otherwise, the value is *additionalPCIIndex-r17* of an *SSB-MTC-AdditionalPCI-r17* configured using the *additionalPCI-ToAddModList-r17* in *ServingCellConfig*, and the PCI is the *additionalPCI-r17* in this *SSB-MTC-AdditionalPCI-r17*.

– ***CSI-SSB-ResourceSetId***

The IE *CSI-SSB-ResourceSetId* is used to identify one SS/PBCH block resource set.

***CSI-SSB-ResourceId* information element**

```
-- ASN1START
-- TAG-CSI-SSB-RESOURCESETID-START

CSI-SSB-ResourceSetId ::=          INTEGER (0..maxNrofCSI-SSB-ResourceSets-1)

-- TAG-CSI-SSB-RESOURCESETID-STOP
-- ASN1STOP
```

– ***DedicatedNAS-Message***

The IE *DedicatedNAS-Message* is used to transfer UE specific NAS layer information between the 5GC CN and the UE. The RRC layer is transparent for this information.

***DedicatedNAS-Message* information element**

```
-- ASN1START
-- TAG-DEDICATED-NAS-MESSAGE-START

DedicatedNAS-Message ::=          OCTET STRING

-- TAG-DEDICATED-NAS-MESSAGE-STOP
-- ASN1STOP
```

## – DL-PPW-PreConfig

The IE *DL-PPW-PreConfig* provides configuration for a measurement window where a UE is expected to measure the DL PRS, if it is inside the active DL BWP and with the same numerology as the active DL BWP. Based upon the indication received in the configuration, the UE identifies whether the DL PRS priority is higher than that of the other DL signals or channels and accordingly determines, for example, the UE is expected to measure the DL PRS and is not expected to receive other DL signals and channels.

### DL-PPW-PreConfig information element

```
-- ASN1START
-- TAG-DL-PPW-PRECONFIG-START

DL-PPW-PreConfig-r17 ::= SEQUENCE {
    dl-PPW-ID-r17                DL-PPW-ID-r17,
    dl-PPW-PeriodicityAndStartSlot-r17  DL-PPW-PeriodicityAndStartSlot-r17,
    length-r17                   INTEGER (1..160),
    type-r17                     ENUMERATED {type1A, type1B, type2}
    priority-r17                 ENUMERATED {st1, st2, st3}
}

DL-PPW-ID-r17 ::= INTEGER (0..maxNrofPPW-ID-1-r17)

DL-PPW-PeriodicityAndStartSlot-r17 ::= CHOICE {
    scs15
        CHOICE {
            n4           INTEGER (0..3),

```

<b>DL-PPW-PreConfig field descriptions</b>	
<b>dl-PPW-ID</b>	Indicates the pre-configured ID for DL-PRS processing window configuration.
<b>dl-PPW-PeriodicityAndStartSlot</b>	Indicates the periodicity in slots and the offset of the starting slot with respect to SFN #0 slot #0 of the serving cell where the DL-PRS processing window is configured.
<b>length</b>	Indicates the length of DL-PRS processing window in slots. Value 1 indicates <i>length</i> of one slot, value 2 indicates <i>length</i> of two slots and so on.
<b>priority</b>	Indicates the priority between PDCCH/PDSCH/CSI-RS and PRS as specified in TS 38.214 [19].
<b>type</b>	Indicates the DL-PRS processing window type as specified in TS 38.214 [19].

<b>Conditional Presence</b>	<b>Explanation</b>
<i>MultiType</i>	The field is mandatory present when the UE reports its capability on supporting multiple processing types, otherwise it is absent.
<i>MultiState</i>	The field is mandatory present when the UE reports its capability on supporting option 1 or option 2 for the configured type, otherwise it is absent.

## – **DMRS-BundlingPUCCH-Config**

The IE *DMRS-BundlingPUCCH-Config-r17* is used to configure DMRS bundling for PUCCH.

### **DMRS-BundlingPUCCH-Config information element**

```
-- ASN1START
-- TAG-DMRS-BUNDLINGPUCCH-CONFIG-START

DMRS-BundlingPUCCH-Config-r17 ::= SEQUENCE {
    pucch-DMRS-Bundling-r17          ENUMERATED {enabled}          OPTIONAL, -- Need R
    pucch-TimeDomainWindowLength-r17 INTEGER (2..8)              OPTIONAL, -- Need S
    pucch-WindowRestart-r17         ENUMERATED {enabled}          OPTIONAL, -- Need R
    pucch-FrequencyHoppingInterval-r17 ENUMERATED {s2, s4, s5, s10} OPTIONAL, -- Need S
    ...
}

-- TAG-DMRS-BUNDLINGPUCCH-CONFIG-STOP
-- ASN1STOP
```

<b>DMRS-BundlingPUCCH-Config field descriptions</b>
<p><b><i>pucch-DMRS-Bundling</i></b> Indicates whether DMRS bundling and time domain window for PUCCH are jointly enabled.</p>
<p><b><i>pucch-FrequencyHoppingInterval</i></b> Configures the number of consecutive slots for the UE to perform inter-slot frequency hopping with inter-slot bundling for PUCCH. When both inter-frequency hopping and DMRS bundling are enabled for PUCCH repetitions, the UE is expected to be configured with at least one <i>pucch-FrequencyHoppingInterval-r17</i> and <i>pucch-TimeDomainWindowLength-r17</i>. When DMRS bundling for PUCCH is enabled by <i>pucch-DMRS-Bundling-r17</i>, PUCCH frequency hopping interval is only determined by the configuration of PUCCH hopping interval if PUCCH hopping interval is configured. If the field is absent, the number of consecutive slots for the UE to perform inter-slot PUCCH frequency hopping is indicated by <i>pucch-TimeDomainWindowLength-r17</i>.</p>
<p><b><i>pucch-TimeDomainWindowLength</i></b> Configures the length of a nominal time domain window in slots for DMRS bundling for PUCCH. The value shall not exceed the maximum duration for DMRS bundling for PUCCH as specified in TS 38.306 [26]. If this field is absent, the UE shall apply the default value that is the minimum value in the unit of consecutive slots of the time duration for the transmission of all PUCCH repetitions and the maximum duration for DMRS bundling for PUCCH as specified in TS 38.306 [26].</p>
<p><b><i>pucch-WindowRestart</i></b> Indicates whether UE bundles PUCCH DMRS remaining in a nominal time domain window after event(s) triggered by DCI or MAC CE that violate power consistency and phase continuity requirements is enabled (see TS 38.214 [19], clause 6.1.7). NOTE: Events, which are triggered by DCI or MAC CE, but do not require UE capability to resume maintaining power consistency and/or phase continuity as specified in clause 6.1.7 of TS 38.214 [19], are excluded.</p>

## – **DMRS-BundlingPUSCH-Config**

The IE *DMRS-BundlingPUSCH-Config-r17* is used to configure DMRS bundling for PUSCH.

### **DMRS-BundlingPUSCH-Config information element**

```

-- ASN1START
-- TAG-DMRS-BUNDLINGPUSCH-CONFIG-START

DMRS-BundlingPUSCH-Config-r17 ::=
    pusch-DMRS-Bundling-r17          ENUMERATED {enabled}          OPTIONAL, -- Need R
    pusch-TimeDomainWindowLength-r17 INTEGER (2..32)              OPTIONAL, -- Need S
    pusch-WindowRestart-r17         ENUMERATED {enabled}          OPTIONAL, -- Need R
    pusch-FrequencyHoppingInterval-r17 ENUMERATED {s2, s4, s5, s6, s8, s10, s12, s14, s16, s20} OPTIONAL, -- Need S
    ...
}

-- TAG-DMRS-BUNDLINGPUSCH-CONFIG-STOP
-- ASN1STOP

```

<b>DMRS-BundlingPUSCH-Config field descriptions</b>
<p><b>pusch-DMRS-Bundling</b> Indicates whether DMRS bundling and time domain window for PUSCH are jointly enabled.</p>
<p><b>pusch-FrequencyHoppingInterval</b> Configures the number of consecutive slots for the UE to perform inter-slot frequency hopping with inter-slot bundling for PUSCH. When both inter-frequency hopping and DMRS bundling are enabled for PUSCH repetitions, the UE is expected to be configured with at least one <i>pusch-FrequencyHoppingInterval-r17</i> and <i>pusch-TimeDomainWindowLength-r17</i>. This parameter is shared for both DG-PUSCH and CG-PUSCH. When DMRS bundling for PUSCH is enabled by <i>pusch-DMRS-Bundling-r17</i>, PUSCH frequency hopping interval is only determined by the configuration of PUSCH hopping interval if PUSCH hopping interval is configured. If the field is absent, the number of consecutive slots for the UE to perform inter-slot PUSCH frequency hopping is indicated by <i>pusch-TimeDomainWindowLength-r17</i>. Note: For unpaired spectrum, the UE is not expected to be configured the value of s6, s8, s12, s14 and s16.</p>
<p><b>pusch-TimeDomainWindowLength</b> Configures the length of a nominal time domain window in number of consecutive slots for DMRS bundling for PUSCH. The value shall not exceed the maximum duration for DMRS bundling for PUSCH as specified in TS 38.306 [26]. For PUSCH repetition type A/B, if this field is absent, the UE shall apply the default value that is the minimum value in the unit of consecutive slots of the time duration for the transmission of all PUSCH repetitions and the maximum duration for DMRS bundling for PUSCH as specified in TS 38.306 [26]. For TBoMS, if this field is absent, the UE shall apply the default value that is the minimum value in the unit of consecutive slots of the duration of TBoMS transmission (including repetition of TBoMS) and the maximum duration for DMRS bundling for PUSCH as specified in TS 38.306 [26].</p>
<p><b>pusch-WindowRestart</b> Indicates whether UE bundles PUSCH DMRS remaining in a nominal time domain window after event(s) triggered by DCI or MAC CE that violate power consistency and phase continuity requirements is enabled (see TS 38.214 [19], clause 6.1.7). NOTE: Events, which are triggered by DCI or MAC CE, but do not require UE capability to resume maintaining power consistency and/or phase continuity as specified in clause 6.1.7 of TS 38.214 [19], are excluded.</p>

## – DMRS-DownlinkConfig

The IE *DMRS-DownlinkConfig* is used to configure downlink demodulation reference signals for PDSCH.

### DMRS-DownlinkConfig information element

```

-- ASN1START
-- TAG-DMRS-DOWNLINKCONFIG-START

DMRS-DownlinkConfig ::=
    SEQUENCE {
        dmrs-Type                ENUMERATED {type2}                OPTIONAL, -- Need S
        dmrs-AdditionalPosition  ENUMERATED {pos0, pos1, pos3}    OPTIONAL, -- Need S
        maxLength                ENUMERATED {len2}                OPTIONAL, -- Need S
        scramblingID0             INTEGER (0..65535)              OPTIONAL, -- Need S
        scramblingID1             INTEGER (0..65535)              OPTIONAL, -- Need S
        phaseTrackingRS           SetupRelease { PTRS-DownlinkConfig } OPTIONAL, -- Need M
        ...
        [[
            dmrs-Downlink-r16     ENUMERATED {enabled}           OPTIONAL -- Need R
        ]],
        [[
            dmrs-TypeEnh-r18      ENUMERATED {enabled}           OPTIONAL -- Need R
        ]]
    }

-- TAG-DMRS-DOWNLINKCONFIG-STOP

```

-- ASN1STOP

<b>DMRS-DownlinkConfig field descriptions</b>	
<b>dmrs-AdditionalPosition</b>	Position for additional DM-RS in DL, see Tables 7.4.1.1.2-3 and 7.4.1.1.2-4 in TS 38.211 [16]. If the field is absent, the UE applies the value pos2. See also clause 7.4.1.1.2 for additional constraints on how the network may set this field depending on the setting of other fields.
<b>dmrs-Downlink</b>	This field indicates whether low PAPR DMRS is used, as specified in TS38.211 [16], clause 7.4.1.1.1.
<b>dmrs-Type</b>	Selection of the DMRS type to be used for DL (see TS 38.211 [16], clause 7.4.1.1.1). If the field is absent, the UE uses DMRS type 1.
<b>dmrs-TypeEnh</b>	This field is used in TS 38.211 [16], clause 7.4.1.1.2.
<b>maxLength</b>	The maximum number of OFDM symbols for DL front loaded DMRS. <i>len1</i> corresponds to value 1. <i>len2</i> corresponds to value 2. If the field is absent, the UE applies value <i>len1</i> . If set to <i>len2</i> , the UE determines the actual number of DM-RS symbols by the associated DCI. (see TS 38.211 [16], clause 7.4.1.1.2).
<b>phaseTrackingRS</b>	Configures downlink PTRS. If the field is not configured, the UE assumes that downlink PTRS are absent. See TS 38.214 [19] clause 5.1.6.3.
<b>scramblingID0</b>	DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value <i>physCellId</i> configured for this serving cell.
<b>scramblingID1</b>	DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value <i>physCellId</i> configured for this serving cell.

## – DMRS-UplinkConfig

The IE *DMRS-UplinkConfig* is used to configure uplink demodulation reference signals for PUSCH.

### DMRS-UplinkConfig information element

```

-- ASN1START
-- TAG-DMRS-UPLINKCONFIG-START

DMRS-UplinkConfig ::=

<b>DMRS-UplinkConfig field descriptions</b>
<p><b>dmrs-AdditionalPosition</b> Position for additional DM-RS in UL (see TS 38.211 [16], clause 6.4.1.1.3). If the field is absent, the UE applies the value pos2. See also clause 6.4.1.1.3 for additional constraints on how the network may set this field depending on the setting of other fields.</p>
<p><b>dmrs-Type</b> Selection of the DMRS type to be used for UL (see TS 38.211 [16], clause 6.4.1.1.3) If the field is absent, the UE uses DMRS type 1.</p>
<p><b>dmrs-TypeEnh</b> This field is used in TS 38.211 [16], clause 6.4.1.1.3.</p>
<p><b>dmrs-Uplink</b> This field indicates whether low PAPR DMRS is used, as specified in TS38.211 [16], clause 6.4.1.1.1.1.</p>
<p><b>dmrs-UplinkTransformPrecoding</b> This field indicates whether low PAPR DMRS is used for PUSCH with pi/2 BPSK modulation, as specified in TS38.211 [16], clause 6.4.1.1.1.2. The network configures this field only if <i>tp-pi2BPSK</i> is configured in <i>PUSCH-Config</i>.</p>
<p><b>maxLength</b> The maximum number of OFDM symbols for UL front loaded DMRS. <i>len1</i> corresponds to value 1. <i>len2</i> corresponds to value 2. If the field is absent, the UE applies value <i>len1</i>. If set to <i>len2</i>, the UE determines the actual number of DM-RS symbols by the associated DCI. (see TS 38.211 [16], clause 6.4.1.1.3).</p>
<p><b>nPUSCH-Identity</b> Parameter: N_ID^(PUSCH) for DFT-s-OFDM DMRS. If the value is absent or released, the UE uses the value Physical cell ID (<i>physCellId</i>). See TS 38.211 [16].</p>
<p><b>phaseTrackingRS</b> Configures uplink PTRS (see TS 38.211 [16]).</p>
<p><b>pi2BPSK-ScramblingID0, pi2BPSK-ScramblingID1</b> UL DMRS scrambling initialization for pi/2 BPSK DMRS for PUSCH (see TS 38.211 [16], Clause 6.4.1.1.2). When the field is absent the UE applies the value Physical cell ID (<i>physCellId</i>) of the serving cell.</p>
<p><b>scramblingID0</b> UL DMRS scrambling initialization for CP-OFDM (see TS 38.211 [16], clause 6.4.1.1.1.1). When the field is absent the UE applies the value Physical cell ID (<i>physCellId</i>).</p>
<p><b>scramblingID1</b> UL DMRS scrambling initialization for CP-OFDM. (see TS 38.211 [16], clause 6.4.1.1.1.1). When the field is absent the UE applies the value Physical cell ID (<i>physCellId</i>).</p>
<p><b>sequenceGroupHopping</b> For DMRS transmission with transform precoder the NW may configure group hopping by the cell-specific parameter <i>groupHoppingEnabledTransformPrecoding</i> in <i>PUSCH-ConfigCommon</i>. In this case, the NW may include this UE specific field to disable group hopping for PUSCH transmission except for Msg3, i.e., to override the configuration in <i>PUSCH-ConfigCommon</i> (see TS 38.211 [16]). If the field is absent, the UE uses the same hopping mode as for Msg3.</p>
<p><b>sequenceHopping</b> Determines if sequence hopping is enabled for DMRS transmission with transform precoder for PUSCH transmission other than Msg3 (sequence hopping is always disabled for Msg3). If the field is absent, the UE uses the same hopping mode as for msg3. The network does not configure simultaneous group hopping and sequence hopping. See TS 38.211 [16], clause 6.4.1.1.1.2.</p>
<p><b>transformPrecodingDisabled</b> DMRS related parameters for Cyclic Prefix OFDM.</p>
<p><b>transformPrecodingEnabled</b> DMRS related parameters for DFT-s-OFDM (Transform Precoding).</p>

– **DownlinkConfigCommon**

The IE *DownlinkConfigCommon* provides common downlink parameters of a cell.

**DownlinkConfigCommon** information element

```

-- ASN1START
-- TAG-DOWNLINKCONFIGCOMMON-START

DownlinkConfigCommon ::= SEQUENCE {
    frequencyInfoDL          FrequencyInfoDL          OPTIONAL, -- Cond InterFreqHOAndServCellAdd
    initialDownlinkBWP      BWP-DownlinkCommon      OPTIONAL, -- Cond ServCellAdd
    ...
    [[
        initialDownlinkBWP-RedCap-r17 BWP-DownlinkCommon OPTIONAL -- Need R
    ]]
}

-- TAG-DOWNLINKCONFIGCOMMON-STOP
-- ASN1STOP

```

<b>DownlinkConfigCommon</b> field descriptions	
<b>frequencyInfoDL</b>	Basic parameters of a downlink carrier and transmission thereon.
<b>initialDownlinkBWP</b>	The initial downlink BWP configuration for a serving cell. The network configures the <i>locationAndBandwidth</i> so that the initial downlink BWP contains the entire CORESET#0 of this serving cell in the frequency domain.
<b>initialDownlinkBWP-RedCap</b>	If present, (e)RedCap UEs use this DL BWP instead of <i>initialDownlinkBWP</i> . If absent, (e)RedCap UEs use <i>initialDownlinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).

<b>Conditional Presence</b>	<b>Explanation</b>
<i>InterFreqHOAndServCellAdd</i>	This field is mandatory present for inter-frequency handover, and upon serving cell (PSCell/SCell) addition. Otherwise, the field is optionally present, Need M.
<i>ServCellAdd</i>	This field is mandatory present upon serving cell addition (for PSCell and SCell) and upon handover from E-UTRA to NR. It is optionally present, Need M otherwise.

-- TAG-DOWNLINKCONFIGCOMMONSIB-STOP
-- ASN1STOP

```

OPTIONAL, -- Need R

OPTIONAL, -- Need S

### DownlinkConfigCommonSIB field descriptions

<b>bcch-Config</b> The modification period related configuration.
<b>frequencyInfoDL-SIB</b> Basic parameters of a downlink carrier and transmission thereon.
<b>initialDownlinkBWP</b> The initial downlink BWP configuration for a PCell. The network configures the <i>locationAndBandwidth</i> so that the initial downlink BWP contains the entire CORESET#0 of this serving cell in the frequency domain. The UE applies the <i>locationAndBandwidth</i> upon reception of this field (e.g. to determine the frequency position of signals described in relation to this <i>locationAndBandwidth</i> ) but it keeps CORESET#0 until after reception of <i>RRCSetup/RRCResume/RRCReestablishment</i> .
<b>initialDownlinkBWP-RedCap</b> If present, (e)RedCap UEs use this DL BWP instead of <i>initialDownlinkBWP</i> . If the <i>locationAndBandwidth</i> of this BWP contains the entire CORESET#0, the UE applies the <i>locationAndBandwidth</i> upon reception of this field (e.g. to determine the frequency position of signals described in relation to this <i>locationAndBandwidth</i> ) but it keeps CORESET#0 until after reception of <i>RRCSetup/RRCResume/RRCReestablishment</i> . Otherwise, i.e., if the <i>locationAndBandwidth</i> of this BWP does not contain the entire CORESET#0, the UE uses this BWP for receiving DL messages during initial access (Msg2, MsgB, Msg4) and after initial access. If absent, (e)RedCap UEs use <i>initialDownlinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).
<b>lastUsedCellOnly</b> When present, the field indicates that the UE monitors PEI only if the latest received <i>RRCRelease</i> without <i>noLastCellUpdate</i> is from this cell. A PEI-capable UE stores its last used cell information.
<b>pcch-Config</b> The paging related configuration.
<b>pei-Config</b> The PEI related configuration.
<b>subgroupConfig</b> The paging subgroup related configuration.

<b>BCCH-Config field descriptions</b>
<p><b>modificationPeriodCoeff</b> Actual modification period, expressed in number of radio frames <math>m = \text{modificationPeriodCoeff} * \text{defaultPagingCycle}</math>, see clause 5.2.2.2.2. <math>n2</math> corresponds to value 2, <math>n4</math> corresponds to value 4, and so on.</p>
<b>PCCH-Config field descriptions</b>
<p><b>defaultPagingCycle</b> Default paging cycle, used to derive 'T' in TS 38.304 [20]. Value <math>rf32</math> corresponds to 32 radio frames, value <math>rf64</math> corresponds to 64 radio frames and so on.</p>
<p><b>firstPDCCH-MonitoringOccasionOfPO</b> Points out the first PDCCH monitoring occasion for paging of each PO of the PF, see TS 38.304 [20].</p>
<p><b>nAndPagingFrameOffset</b> Used to derive the number of total paging frames in T (corresponding to parameter N in TS 38.304 [20]) and paging frame offset (corresponding to parameter PF_offset in TS 38.304 [20]). A value of <math>oneSixteenthT</math> corresponds to <math>T / 16</math>, a value of <math>oneEighthT</math> corresponds to <math>T / 8</math>, and so on. If <i>pagingSearchSpace</i> is set to zero and if SS/PBCH block and CORESET multiplexing pattern is 2 or 3 (as specified in TS 38.213 [13]):</p> <ul style="list-style-type: none"> <li>- for <i>ssb-periodicityServingCell</i> of 5 or 10 ms, N can be set to one of {<math>oneT</math>, <math>halfT</math>, <math>quarterT</math>, <math>oneEighthT</math>, <math>oneSixteenthT</math>}</li> <li>- for <i>ssb-periodicityServingCell</i> of 20 ms, N can be set to one of {<math>halfT</math>, <math>quarterT</math>, <math>oneEighthT</math>, <math>oneSixteenthT</math>}</li> <li>- for <i>ssb-periodicityServingCell</i> of 40 ms, N can be set to one of {<math>quarterT</math>, <math>oneEighthT</math>, <math>oneSixteenthT</math>}</li> <li>- for <i>ssb-periodicityServingCell</i> of 80 ms, N can be set to one of {<math>oneEighthT</math>, <math>oneSixteenthT</math>}</li> <li>- for <i>ssb-periodicityServingCell</i> of 160 ms, N can be set to <math>oneSixteenthT</math></li> </ul> <p>If <i>pagingSearchSpace</i> is set to zero and if SS/PBCH block and CORESET multiplexing pattern is 1 (as specified in TS 38.213 [13]), N can be set to one of {<math>halfT</math>, <math>quarterT</math>, <math>oneEighthT</math>, <math>oneSixteenthT</math>}</p> <p>If <i>pagingSearchSpace</i> is not set to zero, N can be configured to one of {<math>oneT</math>, <math>halfT</math>, <math>quarterT</math>, <math>oneEighthT</math>, <math>oneSixteenthT</math>}</p>
<p><b>nrofPDCCH-MonitoringOccasionPerSSB-InPO</b> The number of PDCCH monitoring occasions corresponding to an SSB within a Paging Occasion, see TS 38.304 [20], clause 7.1.</p>
<p><b>ns</b> Number of paging occasions per paging frame.</p>
<p><b>ranPagingInIdlePO</b> Indicates that the network supports to send RAN paging in PO that corresponds to the <i>i_s</i> as determined by UE in RRC_IDLE state, see TS38.304 [20].</p>
<b>PEI-Config field descriptions</b>
<p><b>payloadSizeDCI-2-7</b> Payload size of PEI DCI, i.e., DCI format 2_7. The size is no larger than the payload size of paging DCI which has maximum of 41 bits and 43 bits for licensed and unlicensed spectrums, respectively.</p>
<p><b>pei-FrameOffset</b> Offset, in number of frames from the start of a reference frame for PEI-O to the start of a first paging frame of the paging frames associated with the PEI-O, see TS 38.213 [13], clause 10.4A.</p>
<p><b>po-NumPerPEI</b> The number of PO(s) associated with one PEI monitoring occasion. It is a factor of the total PO number in a paging cycle, i.e <math>N \times N_s</math>, as specified in TS 38.304 [20]. The maximum number of PF associated with one PEI monitoring occasion is 2. The number of PO mapping to one PEI should be multiple of <math>N_s</math> when <i>po-NumPerPEI</i> is larger than <math>N_s</math>.</p>

<b>SubgroupConfig field descriptions</b>
<p><b>subgroupsNumPerPO</b> Total number of subgroups per Paging Occasion (PO) for UE to read subgroups indication from physical-layer signaling. The field represents the sum of CN-assigned and UEID-based subgroups supported by the network. When <i>PEI-Config</i> is configured, there is always at least one subgroup (UEID-based subgroup or CN-assigned subgroup) configured.</p>
<p><b>subgroupsNumForUEID</b> Number of subgroups per Paging Occasion (PO) for UE to read subgroups indication from physical-layer signaling, for UEID-based subgrouping method. When present, the field is set to an integer smaller than or equal to <i>subgroupsNumPerPO</i>. <i>subgroupsNumPerPO</i> equals to <i>subgroupsNumForUEID</i> when the network does not configure CN-assigned subgrouping. When <i>pei-Config</i> is configured, the field is absent when the network only configures CN-assigned subgrouping. Both this field and <i>subgroupsNumPerPO</i> are equal to 1 when the network does not configure subgrouping. When <i>pei-Config</i> is configured, if the field is absent, the UE uses subgrouping according to TS 38.304 [20], clause 7.3.0.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SharedSpectrum2</i>	The field is optional present, Need R, if this cell operates with shared spectrum channel access. Otherwise, it is absent, Need R.

## – DownlinkPreemption

The IE *DownlinkPreemption* is used to configure the UE to monitor PDCCH for the INT-RNTI (interruption).

### **DownlinkPreemption information element**

```

-- ASN1START
-- TAG-DOWNLINKPREEMPTION-START

DownlinkPreemption ::= SEQUENCE {
    int-RNTI                RNTI-Value,
    timeFrequencySet        ENUMERATED {set0, set1},
    dci-PayloadSize         INTEGER (0..maxINT-DCI-PayloadSize),
    int-ConfigurationPerServingCell SEQUENCE (SIZE (1..maxNrofServingCells)) OF INT-ConfigurationPerServingCell,
    ...
}

INT-ConfigurationPerServingCell ::= SEQUENCE {
    servingCellId          ServCellIndex,
    positionInDCI          INTEGER (0..maxINT-DCI-PayloadSize-1)
}

-- TAG-DOWNLINKPREEMPTION-STOP
-- ASN1STOP

```

<i>DownlinkPreemption</i> field descriptions
<b><i>dci-PayloadSize</i></b> Total length of the DCI payload scrambled with INT-RNTI (see TS 38.213 [13], clause 11.2).
<b><i>int-ConfigurationPerServingCell</i></b> Indicates (per serving cell) the position of the 14 bit INT values inside the DCI payload (see TS 38.213 [13], clause 11.2).
<b><i>int-RNTI</i></b> RNTI used for indication pre-emption in DL (see TS 38.213 [13], clause 10).
<b><i>timeFrequencySet</i></b> Set selection for DL-preemption indication (see TS 38.213 [13], clause 11.2) The set determines how the UE interprets the DL preemption DCI payload.

<i>INT-ConfigurationPerServingCell</i> field descriptions
<b><i>positionInDCI</i></b> Starting position (in number of bit) of the 14 bit INT value applicable for this serving cell ( <i>servingCellId</i> ) within the DCI payload (see TS 38.213 [13], clause 11.2). Must be multiples of 14 (bit).

## – *DRB-Identity*

The IE *DRB-Identity* is used to identify a DRB used by a UE.

### *DRB-Identity* information element

```
-- ASN1START
-- TAG-DRB-IDENTITY-START

DRB-Identity ::=                INTEGER (1..32)

-- TAG-DRB-IDENTITY-STOP
-- ASN1STOP
```

## – *DRX-Config*

The IE *DRX-Config* is used to configure DRX related parameters.

### *DRX-Config* information element

```
-- ASN1START
-- TAG-DRX-CONFIG-START

DRX-Config ::=

OPTIONAL, -- Need R  
OPTIONAL -- Need N

<b>DRX-Config field descriptions</b>
<p><b>drx-HARQ-RTT-TimerDL</b> Value in number of symbols of the BWP where the transport block was received. <i>drx-HARQ-RTT-TimerDL-r17</i> is only applicable for SCS 480 kHz and 960 kHz. If configured, the UE shall ignore <i>drx-HARQ-RTT-TimerDL</i> (without suffix) for SCS 480 kHz and 960 kHz.</p>
<p><b>drx-HARQ-RTT-TimerUL</b> Value in number of symbols of the BWP where the transport block was transmitted. <i>drx-HARQ-RTT-TimerUL-r17</i> is only applicable for SCS 480 kHz and 960 kHz. If configured, the UE shall ignore <i>drx-HARQ-RTT-TimerUL</i> (without suffix) for SCS 480 kHz and 960 kHz.</p>
<p><b>drx-InactivityTimer</b> Value in multiple integers of 1 ms. <i>ms0</i> corresponds to 0, <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on.</p>
<p><b>drx-LongCycleStartOffset</b> <i>drx-LongCycle</i> in ms and <i>drx-StartOffset</i> in multiples of 1 ms. If <i>drx-ShortCycle</i> is configured, the value of <i>drx-LongCycle</i> shall be a multiple of the <i>drx-ShortCycle</i> value.</p>
<p><b>drx-NonIntegerLongCycleStartOffset</b> <i>drx-NonIntegerLongCycle</i> in non-integer number of ms (e.g. <i>ms1001over240</i> corresponds to 1001/240 ms, <i>ms25over6</i> corresponds to 25/6 ms and so on) and <i>drx-StartOffset</i> in multiples of 1 ms. If <i>drx-NonIntegerShortCycle</i> is configured, the value of <i>drx-NonIntegerLongCycle</i> shall be a multiple of the <i>drx-NonIntegerShortCycle</i> value. If <i>drx-NonIntegerLongCycleStartOffset-r18</i> is configured, the UE shall ignore <i>drx-LongCycleStartOffset</i>.</p>
<p><b>drx-NonIntegerShortCycle</b> Value in non-integer number of ms, e.g. <i>ms1001over240</i> corresponds to 1001/240 ms, <i>ms25over6</i> corresponds to 25/6 ms and so on.</p>
<p><b>drx-onDurationTimer</b> Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on.</p>
<p><b>drx-RetransmissionTimerDL</b> Value in number of slot lengths of the BWP where the transport block was received. value <i>s0</i> corresponds to 0 slots, <i>s1</i> corresponds to 1 slot, <i>s2</i> corresponds to 2 slots, and so on.</p>
<p><b>drx-RetransmissionTimerUL</b> Value in number of slot lengths of the BWP where the transport block was transmitted. <i>s0</i> corresponds to 0 slots, <i>s1</i> corresponds to 1 slot, <i>s2</i> corresponds to 2 slots, and so on.</p>
<p><b>drx-ShortCycleTimer</b> Value in multiples of <i>drx-ShortCycle</i> or <i>drx-NonIntegerShortCycle</i> (depending on which one is configured). A value of 1 corresponds to <i>drx-ShortCycle</i> or <i>drx-NonIntegerShortCycle</i>, a value of 2 corresponds to 2 * <i>drx-ShortCycle</i> or 2 * <i>drx-NonIntegerShortCycle</i> and so on.</p>
<p><b>drx-ShortCycle</b> Value in ms. <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on.</p>
<p><b>drx-SlotOffset</b> Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on.</p>
<p><b>drx-TimeReferenceSFN</b> Indicates how the UE initializes the counter DRX_SF_N_COUNTER, see TS 38.321 [3], clause 5.7.</p>
<p><b>shortDRX</b> Configuration of a short DRX cycle. The network configures only one of <i>shortDRX</i> (without a suffix) or <i>shortDRX-r18</i>.</p>

## – DRX-ConfigSecondaryGroup

The IE *DRX-ConfigSecondaryGroup* is used to configure DRX related parameters for the second DRX group as specified in TS 38.321 [3].

### **DRX-ConfigSecondaryGroup information element**

```
-- ASN1START
-- TAG-DRX-CONFIGSECONDARYGROUP-START
```

```

DRX-ConfigSecondaryGroup-r16 ::= SEQUENCE {
    drx-onDurationTimer-r16 CHOICE {

        spare7, spare6, spare5, spare4, spare3, spare2, spare1}
    }
}
-- TAG-DRX-CONFIGSECONDARYGROUP-STOP
-- ASN1STOP

```

#### **DRX-ConfigSecondaryGroup field descriptions**

##### ***drx-InactivityTimer***

Value in multiple integers of 1 ms. *ms0* corresponds to 0 ms, *ms1* corresponds to 1 ms, *ms2* corresponds to 2 ms, and so on, as specified in TS 38.321 [3]. The network configures a *drx-InactivityTimer* value for the second DRX group that is smaller than the *drx-InactivityTimer* configured for the default DRX group in IE *DRX-Config*.

##### ***drx-onDurationTimer***

Value in multiples of 1/32 ms (subMilliseconds) or in ms (milliseconds). For the latter, value *ms1* corresponds to 1 ms, value *ms2* corresponds to 2 ms, and so on, as specified in TS 38.321 [3]. The network configures a *drx-onDurationTimer* value for the second DRX group that is smaller than the *drx-onDurationTimer* configured for the default DRX group in IE *DRX-Config*.

## – DRX-ConfigSL

The IE *DRX-ConfigSL* is used to configure additional DRX parameters for the UE performing sidelink operation with resource allocation mode 1, as specified in TS 38.321 [3].

#### **DRX-ConfigSL information element**

```

-- ASN1START
-- TAG-DRX-CONFIGSL-START

DRX-ConfigSL-r17 ::= SEQUENCE {
    drx-HARQ-RTT-TimerSL-r17 INTEGER (0..56),
    drx-RetransmissionTimerSL-r17 ENUMERATED {s10, s11, s12, s14, s16, s18, s116, s124, s133, s140, s164, s180, s196, s1112, s1128,
        s1160, s1320, spare15, spare14, spare13, spare12, spare11, spare10, spare9, spare8,
        spare7, spare6, spare5, spare4, spare3, spare2, spare1}
    }
}
-- TAG-DRX-CONFIGSL-STOP
-- ASN1STOP

```

<i>DRX-ConfigSL</i> field descriptions
<p><b><i>drx-HARQ-RTT-TimerSL</i></b>            For sidelink configured grant Type 1, value in number of symbols of the activated DL BWP of PCell. For other cases, value in number of symbols of the BWP where the PDCCH was transmitted. Value 0 is used in case <i>sl-PUCCH-Config</i> is not configured and the corresponding resource pool is not configured with PSFCH.</p>
<p><b><i>drx-RetransmissionTimerSL</i></b>            For sidelink configured grant Type 1, value in number of slot lengths of the activated DL BWP of PCell. For other cases, value in number of slot lengths of the BWP where the PDCCH was transmitted. <i>sl0</i> corresponds to 0 slots, <i>sl1</i> corresponds to 1 slot, <i>sl2</i> corresponds to 2 slots, and so on.</p>

## – *EarlyUL-SyncConfig*

The IE *EarlyUL-SyncConfig* is used to configure random access resources for the early UL synchronization procedure.

### *EarlyUL-SyncConfig* information element

```

-- ASN1START
-- TAG-EARLYUL-SYNCCONFIG-START

EarlyUL-SyncConfig-r18 ::=          SEQUENCE {

<i>EarlyUL-SyncConfig field descriptions</i>
<p><b>frequencyInfoUL</b> This field provides basic parameters of an uplink carrier for PRACH transmission on a candidate cell.</p>
<p><b>ltm-PRACH-SubcarrierSpacing</b> Indicates subcarrier spacing of PRACH for LTM (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz If absent, the UE applies the SCS as derived from the <i>prach-ConfigurationIndex</i> in <i>RACH-ConfigGeneric</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]).</p>
<p><b>n-TimingAdvanceOffset</b> The N_TA-Offset to be applied for all uplink transmissions on a candidate cell. If the field is absent, the UE applies the value as defined in TS 38.133 [14], table 7.1.2-2.</p>
<p><b>rach-ConfigGeneric</b> RACH parameters for performing a random access procedure on a candidate cell.</p>
<p><b>ssb-PerRACH-Occasion</b> This field indicated the number of SSBs for RACH occasion.</p>

Conditional Presence	Explanation
<i>L139</i>	The field is mandatory present if <i>prach-RootSequenceIndex</i> L=139, otherwise the field is absent, Need S.
<i>TDD</i>	This field is optionally present, Need R, for TDD LTM candidate cells. It is absent otherwise.

## – EphemerisInfo

The IE *EphemerisInfo* provides satellite ephemeris. Ephemeris may be expressed either in format of position and velocity state vector in ECEF or in format of orbital parameters in ECI. Note: The ECI and ECEF coincide at *epochTime*, i.e., x,y,z axis in ECEF are aligned with x,y,z axis in ECI at *epochTime*.

### *EphemerisInfo* information element

```

-- ASN1START
-- TAG-EPHEMERISINFO-START

EphemerisInfo-r17 ::= CHOICE {
    positionVelocity-r17    PositionVelocity-r17,

```

<b>EphemerisInfo field descriptions</b>
<p><b>eccentricity</b> Satellite orbital parameter: eccentricity e, see NIMA TR 8350.2 [71]. Unit is radian. Step of <math>1.431 * 10^{-8}</math>. Actual value = field value * (<math>1.431 * 10^{-8}</math>).</p>
<p><b>inclination</b> Satellite orbital parameter: inclination i, see NIMA TR 8350.2 [71]. Unit is radian. Step of <math>2.341 * 10^{-8}</math> rad. Actual value = field value * (<math>2.341 * 10^{-8}</math>).</p>
<p><b>longitude</b> Satellite orbital parameter: longitude of ascending node <math>\Omega</math>, see NIMA TR 8350.2 [71]. Unit is radian. Step of <math>2.341 * 10^{-8}</math> rad. Actual value = field value * (<math>2.341 * 10^{-8}</math>).</p>
<p><b>meanAnomaly</b> Satellite orbital parameter: Mean anomaly M at epoch time, see NIMA TR 8350.2 [71]. Unit is radian. Step of <math>2.341 * 10^{-8}</math> rad. Actual value = field value * (<math>2.341 * 10^{-8}</math>).</p>
<p><b>periapsis</b> Satellite orbital parameter: argument of periapsis <math>\omega</math>, see NIMA TR 8350.2 [71]. Unit is radian. Step of <math>2.341 * 10^{-8}</math> rad. Actual value = field value * (<math>2.341 * 10^{-8}</math>).</p>
<p><b>positionX, positionY, positionZ</b> X, Y, Z coordinate of satellite position state vector in ECEF. Unit is meter. Step of 1.3 m. Actual value = field value * 1.3.</p>
<p><b>semiMajorAxis</b> Satellite orbital parameter: semi major axis <math>\alpha</math>, see NIMA TR 8350.2 [71]. Unit is meter. Step of <math>4.249 * 10^{-3}</math> m. Actual value = <math>6500000 + \text{field value} * (4.249 * 10^{-3})</math>.</p>
<p><b>velocityVX, velocityVY, velocityVZ</b> X, Y, Z coordinate of satellite velocity state vector in ECEF. Unit is meter/second. Step of 0.06 m/s. Actual value = field value * 0.06.</p>

## – *EpochTime*

The IE *EpochTime* is used to indicate the epoch time for the NTN assistance information, and it is defined as the starting time of a DL sub-frame, indicated by a SFN and a sub-frame number signaled together with the assistance information. The reference point for *EpochTime* of the serving or neighbour NTN payload ephemeris and Common TA

parameters is the uplink time synchronization reference point of the serving cell when this field is provided in an NTN cell and the gNB when this field is provided in a TN cell. In case of handover or conditional handover, the reference point for *EpochTime* of the target NTN payload ephemeris and Common TA parameters is the uplink time synchronization reference point of the target cell. In case of handover or conditional handover, *EpochTime* is based on the timing of the target cell, i.e. the SFN and sub-frame number indicated refers to the SFN and sub-frame of the target cell. Otherwise, *EpochTime* is used based on the timing of the serving cell, i.e. the SFN and sub-frame number indicated refers to the SFN and sub-frame of the serving cell.

### *EpochTime* information element

```
-- ASN1START
-- TAG-EPOCHTIME-START

EpochTime-r17 ::=          SEQUENCE {
    sfn-r17                INTEGER(0..1023),
    subFrameNR-r17        INTEGER(0..9)
}

-- TAG-EPOCHTIME-STOP
-- ASN1STOP
```

#### *EpochTime* field descriptions

<p><b><i>sfn</i></b>  For serving cell, it indicates the current SFN or the next upcoming SFN after the frame where the message indicating the <i>epochTime</i> is received. For neighbour or target cell, it indicates the SFN nearest to the frame where the message indicating the <i>epochTime</i> is received.</p>
---

### – *EUTRA-C-RNTI*

The IE *EUTRA-C-RNTI* identifies a UE having a RRC connection within an E-UTRA cell.

### *EUTRA-C-RNTI* information element

```
-- ASN1START
-- TAG-EUTRACRNTI-START

EUTRA-C-RNTI ::=          BIT STRING (SIZE (16))

-- TAG-EUTRACRNTI-STOP
-- ASN1STOP
```

### – *FeatureCombination*

The IE *FeatureCombination* indicates a feature or a combination of features to be associated with a set of Random Access resources (i.e. an instance of *FeatureCombinationPreambles*).

**FeatureCombination** information element

```

-- ASN1START
-- TAG-FEATURECOMBINATION-START

FeatureCombination-r17 ::= SEQUENCE {
    redCap-r17          ENUMERATED {true}          OPTIONAL, -- Need R
    smallData-r17      ENUMERATED {true}          OPTIONAL, -- Need R
    nsag-r17           NSAG-List-r17              OPTIONAL, -- Need R
    msg3-Repetitions-r17 ENUMERATED {true}        OPTIONAL, -- Need R
    msg1-Repetitions-r18 ENUMERATED {true}        OPTIONAL, -- Need R
    eRedCap-r18        ENUMERATED {true}          OPTIONAL, -- Need R
    spare2             ENUMERATED {true}          OPTIONAL, -- Need R
    spare1             ENUMERATED {true}          OPTIONAL, -- Need R
}

NSAG-List-r17 ::= SEQUENCE (SIZE (1.. maxSliceInfo-r17)) OF NSAG-ID-r17

-- TAG-FEATURECOMBINATION-STOP
-- ASN1STOP

```

**FeatureCombination** field descriptions**eRedCap**

If present, this field indicates that eRedCap is part of this feature combination. The fields *redCap* and *eRedCap* shall not be both set to *true*. If the UE is an eRedCap UE and there is no set of configured RA resources with *eRedCap* set to *true* among all sets of configured RA resources, the UE considers *redCap* to be applicable for random access procedure. This field is not configured in a set of preambles that is configured with 2-step random-access type.

**msg1-Repetitions**

If present, this field indicates that signalling of msg1 repetition is part of this feature combination. This field is not configured in a set of preambles that is configured with 2-step random-access type.

**msg3-Repetitions**

If present, this field indicates that signalling of msg3 repetition is part of this feature combination. This field is not configured in a set of preambles that is configured with 2-step random-access type.

**nsag**

If present, this field indicates NSAG(s) that are part of this feature combination.

**redCap**

If present, this field indicates that RedCap is part of this feature combination.

**smallData**

If present, this field indicates that Small Data is part of this feature combination.

– **FeatureCombinationPreambles**

The IE *FeatureCombinationPreambles* associates a set of preambles with a feature combination. For parameters which can be provided in this IE, the UE applies this field value when performing Random Access using a preamble in this *FeatureCombinationPreambles*, otherwise the UE applies the corresponding value as determined by applicable Need Code, e.g. Need S. On a specific BWP, there can be at most one set of preambles associated with a given feature combination per RA Type (i.e. 4-step RACH or 2-step RACH) per MSG1 repetition number.

**FeatureCombinationPreambles** information element

```

-- ASN1START
-- TAG-FEATURECOMBINATIONPREAMBLES-START

FeatureCombinationPreambles-r17 ::= SEQUENCE {
    featureCombination-r17          FeatureCombination-r17,

    [[
    msg1-RepetitionNum-r18            ENUMERATED {n2, n4, n8, spare1}                OPTIONAL, -- Cond Msg1Rep2
    msg1-RepetitionTimeOffsetROGroup-r18  ENUMERATED {n4, n8, n16, spare1}        OPTIONAL, -- Cond Msg1Rep3
    ]]
}

-- TAG-FEATURECOMBINATIONPREAMBLES-STOP
-- ASN1STOP

```

<b>FeatureCombinationPreambles</b> field descriptions
<p><b>deltaPreamble</b> Power offset between msg3 or msgA-PUSCH and RACH preamble transmission. If configured, this parameter overrides <i>msg3-DeltaPreamble</i> or <i>msgA-DeltaPreamble</i>, Actual value = field value * 2 [dB] (see TS 38.213 [13], clause 7.1). If <i>msgA-DeltaPreamble</i> is configured in <i>separateMsgA-PUSCH-Config-r17</i>, this field is absent. This field is set to the same value for all <i>FeatureCombinationPreambles</i> for MSG1 repetitions.</p>
<p><b>featureCombination</b> Indicates which combination of features that the preambles indicated by this IE are associated with. Network ensures that at least one field within the <i>featureCombination</i> is configured. The UE ignores a RACH resource defined by this <i>FeatureCombinationPreambles</i> if any feature within the <i>featureCombination</i> is not supported by the UE or if any of the spare fields within the <i>featureCombination</i> is set to <i>true</i>.</p>
<p><b>messagePowerOffsetGroupB</b> Threshold for preamble selection. Value is in dB. Value <i>minusinfinity</i> corresponds to <math>-\infty</math>. Value <i>dB0</i> corresponds to 0 dB, <i>dB5</i> corresponds to 5 dB and so on (see TS 38.321 [3], clause 5.1.2).</p>
<p><b>msg1-RepetitionNum</b> Indicates which MSG1-repetition number that this <i>FeatureCombinationPreambles</i> is associated with.</p>
<p><b>msg1-RepetitionTimeOffsetROGroup</b> Indicates a time offset of the starting ROs between two successive RO groups for a given repetition number (2, 4 or 8) associated with this <i>FeatureCombinationPreambles</i> for each frequency resource index within a time period (see TS 38.213 [13]). If this field is absent, the time offset is implicitly determined (see TS 38.213 [13]).</p> <p>For each MSG1 repetition number, the following values are applicable.</p> <ul style="list-style-type: none"> <li>• {n16}, for RO groups for MSG1 repetition number 8</li> <li>• {n8, n16}, for RO groups for MSG1 repetition number 4</li> <li>• {n4, n8, n16}, for RO groups for MSG1 repetition number 2</li> </ul>
<p><b>msgA-RSRP-Threshold</b> The UE selects 2-step random access type to perform random access based on this threshold (see TS 38.321 [3], clause 5.1.1). This field is only present if both 2-step and 4-step RA type are configured for the concerned feature combination in the BWP. If configured, this parameter overrides <i>msgA-RSRP-Threshold-r16</i>. If absent, the UE applies <i>msgA-RSRP-Threshold-r16</i>, if configured</p>
<p><b>numberOfPreamblesPerSSB-ForThisPartition</b> It determines how many consecutive preambles are associated to the Feature Combination starting from the starting preamble(s) per SSB.</p>
<p><b>numberOfRA-PreamblesGroupA</b> It determines how many consecutive preambles per SSB are associated to Group A starting from the starting preamble(s). The remaining preambles associated to the Feature Combination are associated to Group B</p>
<p><b>ra-SizeGroupA</b> Transport Blocks size threshold in bits below which the UE shall use a contention-based RA preamble of group A. (see TS 38.321 [3], clause 5.1.2). If this feature combination preambles are associated to a <i>RACH-ConfigCommon-twostepRA</i>, this field correspond to <i>ra-MsgA-SizeGroupA</i>, otherwise it corresponds to <i>ra-Msg3SizeGroupA</i>.</p>
<p><b>rsrp-ThresholdSSB</b> UE may select the SS block and corresponding PRACH resource for path-loss estimation and (re)transmission based on SS blocks that satisfy the threshold (see TS 38.213 [13]). If this parameter is included in <i>FeatureCombinationPreambles</i> which is included in <i>RACH-ConfigCommonTwoStepRA</i>, it corresponds to <i>msgA-RSRP-ThresholdSSB</i>, as defined in TS 38.321 [3]. If this parameter is included in <i>FeatureCombinationPreambles</i> which is included in <i>RACH-ConfigCommon</i>, it corresponds to <i>rsrp-ThresholdSSB</i>, as defined in TS 38.321 [3].</p>
<p><b>separateMsgA-PUSCH-Config</b> If present, it specifies how the 2-step RACH preambles identified by this <i>FeatureCombinationPreambles</i> are mapped to a PUSCH slot separate from the one defined in <i>MsgA-ConfigCommon-r16</i>. If the field is absent, the UE should apply the corresponding parameter in the <i>RACH-ConfigCommonTwoStepRA</i> of the BWP which includes the <i>FeatureCombinationPreambles</i> IE.</p>

**ssb-SharedRO-MaskIndex**

Mask index (see TS 38.321 [3]).

Indicates a subset of ROs where preambles are allocated for this feature combination.

If this field is configured within *FeatureCombinationPreambles* which is included in *RACH-ConfigCommonTwoStepRA*:

- in case of separate ROs are configured for 4-step and 2-step random access, this field indicates a subset of ROs configured within this *RACH-ConfigCommonTwoStepRA*;
- in case shared ROs are used for 4-step and 2-step random access, it indicates the subset of ROs configured within *RACH-ConfigCommon*, which are the subset of ROs configured for 2-step random access.

This field is configured when there is more than one RO per SSB. If the field is absent, all ROs configured in *RACH-ConfigCommon* or *RACH-ConfigCommonTwoStepRA* containing this *FeatureCombinationPreambles* are shared. The network does not configure this field, if the field *msg1-RepetitionNum* is configured.

**startPreambleForThisPartition**

It defines the first preamble associated with the Feature Combination. If the UE is provided with a number N of SSB block indexes associated with one PRACH occasion, and  $N < 1$ , the first preamble in each PRACH occasion is the one having the same index as indicated by this field. If  $N \geq 1$ , N blocks of preambles associated with the Feature

Combination are defined, each having start index  $n \cdot N + startPreambleForThisPartition$ , where n refers to SSB block index (see TS 38.213 [13], clause 8.1).

Conditional Presence	Explanation
<i>MsgAConfigCommon</i>	The field is optionally present, Need S, if <i>FeatureCombinationPreambles</i> is included in <i>RACH-ConfigCommonTwoStepRA</i> . Otherwise, it is absent. If the field is absent in <i>FeatureCombinationPreambles</i> included in <i>RACH-ConfigCommonTwoStepRA</i> , the UE applies <i>MsgA-PUSCH-Config</i> included in the corresponding <i>MsgA-ConfigCommon</i> .
<i>Msg1Rep2</i>	The field is mandatory present, if <i>msg1-Repetitions</i> is included in <i>FeatureCombination</i> for this concerned <i>FeatureCombinationPreambles</i> . Otherwise, it is absent.
<i>Msg1Rep3</i>	The field is optionally present, Need S, if <i>msg1-Repetitions</i> is included in <i>FeatureCombination</i> for this concerned <i>FeatureCombinationPreambles</i> . Otherwise, it is absent.

## – *FilterCoefficient*

The IE *FilterCoefficient* specifies the measurement filtering coefficient. Value *fc0* corresponds to  $k = 0$ , *fc1* corresponds to  $k = 1$ , and so on.

### **FilterCoefficient information element**

```
-- ASN1START
```

```
-- TAG-FILTERCOEFFICIENT-START
```

```
FilterCoefficient ::= ENUMERATED { fc0, fc1, fc2, fc3, fc4, fc5, fc6, fc7, fc8, fc9, fc11, fc13, fc15, fc17, fc19, spare1, ... }
```

```
-- TAG-FILTERCOEFFICIENT-STOP
```

```
-- ASN1STOP
```

## – *FreqBandIndicatorNR*

The IE *FreqBandIndicatorNR* is used to convey an NR frequency band number as defined in TS 38.101-1 [15], TS 38.101-2 [39] and TS 38.101-5 [75].

### ***FreqBandIndicatorNR* information element**

```
-- ASN1START
-- TAG-FREQBANDINDICATORNR-START

FreqBandIndicatorNR ::=                INTEGER (1..1024)

-- TAG-FREQBANDINDICATORNR-STOP
-- ASN1STOP
```

## – *FreqPriorityListDedicatedSlicing*

The IE *FreqPriorityListDedicatedSlicing* provides dedicated cell reselection priorities for slicing in *RRCRelease*.

### ***FreqPriorityListDedicatedSlicing* information element**

```
-- ASN1START
-- TAG-FREQPRIORITYLISTDEDICATEDSLICING-START

FreqPriorityListDedicatedSlicing-r17 ::= SEQUENCE (SIZE (1.. maxFreq)) OF FreqPriorityDedicatedSlicing-r17

FreqPriorityDedicatedSlicing-r17 ::= SEQUENCE {
    dl-ExplicitCarrierFreq-r17          ARFCN-ValueNR,

        sliceExcludedCellListNR-r17 SliceCellListNR-r17
    }
}
OPTIONAL -- Need R

SliceCellListNR-r17 ::= SEQUENCE (SIZE (1..maxCellSlice-r17)) OF PCI-Range

-- TAG-FREQPRIORITYLISTSLICING-STOP
-- ASN1STOP
```

### *FreqPriorityListSlicing* field descriptions

#### ***dl-ImplicitCarrierFreq***

Indicates the downlink carrier frequency to which *sliceInfoList* is associated with. The frequency is signalled implicitly, value 0 corresponds to the serving frequency, value 1 corresponds to the first frequency indicated by the *InterFreqCarrierFreqList* in SIB4, and value 2 corresponds to the second frequency indicated by the *InterFreqCarrierFreqList* in SIB4, and so on.

**SliceInfo field descriptions****sliceAllowedCellListNR**

List of allow-listed cells for slicing. If present, the cells listed in this list support the corresponding nsag-frequency pair, and the cells not listed in this list do not support the corresponding nsag-frequency pair, according to TS 38.304 [20], clause 5.2.4.11.

**sliceCellListNR**

Contains either the list of allow-listed or exclude-listed cells for slicing. If absent, it implies all the cells support the corresponding nsag-frequency pair, according to 38.304 [20], clause 5.2.4.11.

**sliceExcludedCellListNR**

List of exclude-listed cells for slicing. If present, the cells listed in this list do not support the corresponding nsag-frequency pair, and the cells not listed in this list support the corresponding nsag-frequency pair, according to TS 38.304 [20], clause 5.2.4.11.

Conditional Presence	Explanation
Mandatory	The field is mandatory present.

– **FrequencyInfoDL**

The IE *FrequencyInfoDL* provides basic parameters of a downlink carrier and transmission thereon.

**FrequencyInfoDL information element**

```

-- ASN1START
-- TAG-FREQUENCYINFODL-START

FrequencyInfoDL ::=
    absoluteFrequencySSB          SEQUENCE {
        ARFCN-ValueNR              OPTIONAL, -- Cond SpCellAdd
        frequencyBandList          MultiFrequencyBandListNR,
        absoluteFrequencyPointA    ARFCN-ValueNR,

```

<i>FrequencyInfoDL</i> field descriptions
<p><b><i>absoluteFrequencyPointA</i></b> Absolute frequency position of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). Note that the lower edge of the actual carrier is not defined by this field but rather in the <i>scs-SpecificCarrierList</i>.</p>
<p><b><i>absoluteFrequencySSB</i></b> Frequency of the SSB to be used for this serving cell. SSB related parameters (e.g. SSB index) provided for a serving cell refer to this SSB frequency unless mentioned otherwise. The CD-SSB of the PCell is always on the sync raster. Frequencies are considered to be on the sync raster if they are also identifiable with a GSCN value (see TS 38.101-1 [15] or TS 38.101-5 [75]). If the field is absent, the SSB related parameters should be absent, e.g. <i>ssb-PositionsInBurst</i>, <i>ssb-periodicityServingCell</i> and <i>subcarrierSpacing</i> in <i>ServingCellConfigCommon</i> IE. If the field is absent, the UE obtains timing reference from the intra-band SpCell or intra-band SCell if applicable as described in TS 38.213 [13], clause 4.1, or from the SpCell or an SCell indicated by <i>referenceCell</i>, or from the reference serving cell defined in TS 38.133 [14]. This is supported in case the SCell for which the UE obtains the timing reference is in the same or different frequency band as the cell (i.e. the SpCell or the SCell, respectively) from which the UE obtains the timing reference. For PCell, this field corresponds to the CD-SSB.</p>
<p><b><i>frequencyBandList</i></b> List containing only one frequency band to which this carrier(s) belongs. Multiple values are not supported.</p>
<p><b><i>referenceCell</i></b> Indicates the reference cell, i.e. the cell which provides the timing reference and AGC source for the inter-band SSB-less SCell. If the reference cell is an SCell or PSCell, it should be an activated SCell or activated PSCell. If this field is absent for an inter-band SSB-less SCell, the reference serving cell is defined in TS 38.133 [14].</p>
<p><b><i>scs-SpecificCarrierList</i></b> A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A. The network configures a <i>scs-SpecificCarrier</i> at least for each numerology (SCS) that is used e.g. in a BWP (see TS 38.211 [16], clause 5.3).</p>

Conditional Presence	Explanation
<i>SpCellAdd</i>	The field is mandatory present if this <i>FrequencyInfoDL</i> is for SpCell. Otherwise the field is optionally present, Need S.
<i>SSBlessSCell</i>	The field is optionally present, Need S, if the inter-band SSB-less SCell is configured for this cell and <i>absoluteFrequencySSB</i> is absent. It is absent otherwise, Need R.

## – *FrequencyInfoDL-SIB*

The IE *FrequencyInfoDL-SIB* provides basic parameters of a downlink carrier and transmission thereon.

### *FrequencyInfoDL-SIB* information element

```
-- ASN1START
-- TAG-FREQUENCYINFODL-SIB-START

FrequencyInfoDL-SIB ::=
    SEQUENCE {
        frequencyBandList      MultiFrequencyBandListNR-SIB,
        offsetToPointA         INTEGER (0..2199),
        scs-SpecificCarrierList SEQUENCE (SIZE (1..maxSCSs)) OF SCS-SpecificCarrier
    }

FrequencyInfoDL-SIB-v1760 ::=
    SEQUENCE {
        frequencyBandList-v1760 MultiFrequencyBandListNR-SIB-v1760
    }
```

```

}
FrequencyInfoDL-SIB-v1800 ::= SEQUENCE {
    frequencyBandListAerial-r18 MultiFrequencyBandListNR-Aerial-SIB-r18
}
-- TAG-FREQUENCYINFODL-SIB-STOP
-- ASN1STOP

```

#### FrequencyInfoDL-SIB field descriptions

##### **offsetToPointA**

Represents the offset to Point A as defined in TS 38.211 [16], clause 4.4.4.2.

##### **frequencyBandList**

List of one or multiple frequency bands to which this carrier(s) belongs. If *frequencyBandList-v1760* is present, it shall contain the same number of entries, listed in the same order as in *frequencyBandList* (without suffix).

##### **scs-SpecificCarrierList**

A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A (see TS 38.211 [16], clause 5.3). The network configures this for all SCSs that are used in DL BWPs in this serving cell.

## – FrequencyInfoUL

The IE *FrequencyInfoUL* provides basic parameters of an uplink carrier and transmission thereon.

#### FrequencyInfoUL information element

```

-- ASN1START
-- TAG-FREQUENCYINFOUL-START

FrequencyInfoUL ::= SEQUENCE {
    frequencyBandList MultiFrequencyBandListNR OPTIONAL, -- Cond FDD-OrSUL
    absoluteFrequencyPointA ARFCN-ValueNR OPTIONAL, -- Cond FDD-OrSUL
    scs-SpecificCarrierList SEQUENCE (SIZE (1..maxSCSs)) OF SCS-SpecificCarrier,
    additionalSpectrumEmission AdditionalSpectrumEmission OPTIONAL, -- Need S
    p-Max P-Max OPTIONAL, -- Need S
    frequencyShift7p5khz ENUMERATED {true} OPTIONAL, -- Cond FDD-TDD-OrSUL-Optional
    ...,
    [[
    additionalSpectrumEmission-v1760 AdditionalSpectrumEmission-v1760 OPTIONAL -- Need S
    ]],
    [[
    additionalSpectrumEmissionAerial-r18 AdditionalSpectrumEmission-r18 OPTIONAL -- Need S
    ]]
}

-- TAG-FREQUENCYINFOUL-STOP
-- ASN1STOP

```

<b>FrequencyInfoUL field descriptions</b>	
<b>absoluteFrequencyPointA</b>	Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). Note that the lower edge of the actual carrier is not defined by this field but rather in the <i>scs-SpecificCarrierList</i> .
<b>additionalSpectrumEmission</b>	The additional spectrum emission requirements to be applied by the UE on this uplink. If both <i>additionalSpectrumEmission</i> (without suffix) and <i>additionalSpectrumEmission-v1760</i> are absent, the UE uses value 0 for the <i>additionalSpectrumEmission</i> (see TS 38.101-1 [15], tables 6.2.3.1-1A, 6.2A.3.1.1-2 and 6.2A.3.1.2-2, TS 38.101-2 [39], tables 6.2.3.1-2 and 6.2A.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A). Network configures the same value in <i>additionalSpectrumEmission</i> for all uplink carrier(s) of the same band with UL configured and if signalled, the same value in <i>additionalSpectrumEmission-v1760</i> for all uplink carrier(s) of the same band with UL configured, except for <i>additionalSpectrumEmission</i> value corresponding to NS_55/NS_57. If NS_55/NS_57 (see TS 38.101-1 [15], table 6.2.3.1-1) is applicable for at least one uplink carrier, the network may configure either NS_55/NS_57 or NS_01 for these uplink carriers, and NS_01 for the remaining uplink carrier(s) of band n77. The <i>additionalSpectrumEmission</i> is applicable for all uplink carriers of the same band with UL configured.
<b>additionalSpectrumEmissionAerial</b>	The additional spectrum emission requirements to be applied by the aerial UE on this uplink (see TS 38.101-1 [15], clause 6.2K). If the field is absent, the aerial UE uses value indicated by the field <i>additionalSpectrumEmission/ additionalSpectrumEmission-v1760</i> .
<b>frequencyBandList</b>	List containing only one frequency band to which this carrier(s) belongs. Multiple values are not supported.
<b>frequencyShift7p5khz</b>	Enable the NR UL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.
<b>p-Max</b>	Maximum transmit power allowed in this serving cell. The maximum transmit power that the UE may use on this serving cell may be additionally limited by <i>p-NR-FR1</i> (configured for the cell group) and by <i>p-UE-FR1</i> (configured total for all serving cells operating on FR1). If absent, the UE applies the maximum power according to TS 38.101-1 [15] in case of an FR1 cell, TS 38.101-2 [39] in case of an FR2 cell or TS 38.101-5 [75] in case of an NTN cell. In this release of the specification, if p-Max is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39] for FR2-1/2 or according to TS 38.101-5 [75] for FR2-NTN. Value in dBm. This field is ignored by IAB-MT and NCR-MT. The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The NCR-MT applies output power and emission requirements as specified in TS 38.106 [79].
<b>scs-SpecificCarrierList</b>	A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A. The network configures a <i>scs-SpecificCarrier</i> at least for each numerology (SCS) that is used e.g. in a BWP (see TS 38.211 [16], clause 5.3).

Conditional Presence	Explanation
<i>FDD-OrSUL</i>	The field is mandatory present if this <i>FrequencyInfoUL</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL</i> ) or if this <i>FrequencyInfoUL</i> is for a supplementary uplink (SUL). It is absent, Need R, otherwise (if this <i>FrequencyInfoUL</i> is for an unpaired UL (TDD)).
<i>FDD-TDD-OrSUL-Optional</i>	The field is optionally present, Need R, if this <i>FrequencyInfoUL</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL</i> ), or if this <i>FrequencyInfoUL</i> is for an unpaired UL (TDD) in certain bands (as defined in clause 5.4.2.1 of TS 38.101-1 and in clause 5.4.2.1 of TS 38.104 [12]), or if this <i>FrequencyInfoUL</i> is for a supplementary uplink (SUL). It is absent, Need R, otherwise.

– **FrequencyInfoUL-SIB**

The IE *FrequencyInfoUL-SIB* provides basic parameters of an uplink carrier and transmission thereon.

**FrequencyInfoUL-SIB information element**

```

-- ASN1START
-- TAG-FREQUENCYINFOUL-SIB-START

FrequencyInfoUL-SIB ::=
    frequencyBandList          SEQUENCE {
        absoluteFrequencyPointA  MultiFrequencyBandListNR-SIB          OPTIONAL, -- Cond FDD-OrSUL
        scs-SpecificCarrierList  ARFCN-ValueNR                          OPTIONAL, -- Cond FDD-OrSUL
        p-Max                    SEQUENCE (SIZE (1..maxSCSs)) OF SCS-SpecificCarrier,
        frequencyShift7p5khz     P-Max                                  OPTIONAL, -- Need S
        ..,                       ENUMERATED {true}                    OPTIONAL, -- Cond FDD-TDD-OrSUL-Optional
        ..,
        [
            frequencyBandListAerial-r18  MultiFrequencyBandListNR-Aerial-SIB-r18  OPTIONAL -- Need S
        ]
    }

FrequencyInfoUL-SIB-v1760 ::=
    frequencyBandList-v1760     SEQUENCE {
        MultiFrequencyBandListNR-SIB-v1760
    }

-- TAG-FREQUENCYINFOUL-SIB-STOP
-- ASN1STOP

```

**FrequencyInfoUL-SIB field descriptions****absoluteFrequencyPointA**

Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). Note that the lower edge of the actual carrier is not defined by this field but rather in the *scs-SpecificCarrierList*.

**frequencyBandList**

Provides the frequency band indicator and a list of *additionalPmax* and *additionalSpectrumEmission* values as defined in TS 38.101-1 [15], table 6.2.3.1-1, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1. The UE shall apply the first listed band which it supports in the *frequencyBandList* field. If *frequencyBandList-v1760* is present, it shall contain the same number of entries, listed in the same order as in *frequencyBandList* (without suffix).

**frequencyBandListAerial**

Provides the frequency band indicator and a list of *additionalPmax* and *additionalSpectrumEmission* values for aerial UE as defined in TS 38.101-1 [15], clause 6.2K. If the field is present, the aerial UE shall apply the first listed band which it supports in the *frequencyBandListAerial* field. If the field is absent, *frequencyBandList* applies.

**frequencyShift7p5khz**

Enable the NR UL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.

**p-Max**

Value in dBm applicable for the cell. If absent the UE applies the maximum power according to TS 38.101-1 [15] in case of an FR1 cell, TS 38.101-2 [39] in case of an FR2 cell or TS 38.101-5 [75] in case of an NTN cell. In this release of the specification, if p-Max is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39] for FR2-1/2 or according to TS 38.101-5 [75] for FR2-NTN. This field is ignored by IAB-MT and NCR-MT. The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The NCR-MT applies output power and emission requirements as specified in TS 38.106 [79].

**scs-SpecificCarrierList**

A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A (see TS 38.211 [16], clause 5.3). The network configures this for all SCSs that are used in UL BWPs configured in this serving cell.

Conditional Presence	Explanation
<i>FDD-OrSUL</i>	The field is mandatory present if this <i>FrequencyInfoUL-SIB</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL-SIB</i> ) or if this <i>FrequencyInfoUL-SIB</i> is for a supplementary uplink (SUL). It is absent otherwise (if this <i>FrequencyInfoUL-SIB</i> is for an unpaired UL (TDD)).
<i>FDD-TDD-OrSUL-Optional</i>	The field is optionally present, Need R, if this <i>FrequencyInfoUL-SIB</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL-SIB</i> ), or if this <i>FrequencyInfoUL-SIB</i> is for an unpaired UL (TDD) in certain bands (as defined in clause 5.4.2.1 of TS 38.101-1 and in clause 5.4.2.1 of TS 38.104 [12]), or if this <i>FrequencyInfoUL-SIB</i> is for a supplementary uplink (SUL). It is absent otherwise.

## – *GapPriority*

The IE *GapPriority* is used to identify the priority of a gap configuration.

### **GapPriority information element**

```
-- ASN1START
-- TAG-GAPRIORITY-START

GapPriority-r17 ::=                INTEGER (1..maxNrOfGapPri-r17)

-- TAG-GAPRIORITY-STOP
-- ASN1STOP
```

## – *HighSpeedConfig*

The IE *HighSpeedConfig* is used to configure parameters for high speed scenarios.

### **HighSpeedConfig information element**

```
-- ASN1START
-- TAG-HIGHSPEEDCONFIG-START

HighSpeedConfig-r16 ::= SEQUENCE {
    highSpeedMeasFlag-r16    ENUMERATED {true}          OPTIONAL,  -- Cond SpCellOnly

highSpeedLargeOneStepUL-TimingFR2-r17 ENUMERATED {true}          OPTIONAL, -- Need R
...
}
-- TAG-HIGHSPEEDCONFIG-STOP
-- ASN1STOP

```

### HighSpeedConfig field descriptions

#### HighSpeedDemodCA-Scell

If the field is present and UE supports *demodulationEnhancementCA-r17*, the UE shall apply the enhanced demodulation processing for HST-SFN joint transmission scheme with velocity up to 500km/h as specified in TS 38.101-4 [59]. This parameter only applies to SCell.

#### highSpeedDemodFlag

If the field is present and UE supports *demodulationEnhancement-r16*, the UE shall apply the enhanced demodulation processing for HST-SFN joint transmission scheme with velocity up to 500km/h as specified in TS 38.101-4 [59]. This parameter only applies to SpCell.

#### highSpeedDeploymentTypeFR2

If the field is present, and field value is *unidirectional*, the UE shall assume uni-directional deployment or if field value is *birectional* the UE shall assume bidirectional deployment for FR2 up to 350km/h as specified in TS 38.133 [14].

#### highSpeedLargeOneStepUL-TimingFR2

If the field is present, large one step UE autonomous uplink transmit timing adjustment for FR2 up to 350km/h as specified in TS 38.133 [14] is enabled.

#### highSpeedMeasCA-Scell

If the field is present and UE supports *measurementEnhancementCA-r17*, the UE shall apply the enhanced RRM requirements to the serving frequency of SCell for carrier aggregation to support high speed up to 500 km/h as specified in TS 38.133 [14].

#### highSpeedMeasFlag

If the field is present and UE supports *measurementEnhancement-r16*, the UE shall apply the enhanced intra-NR and inter-RAT EUTRAN RRM requirements to support high speed up to 500 km/h as specified in TS 38.133 [14].  
 If the field is present and UE supports *intraNR-MeasurementEnhancement-r16*, the UE shall apply enhanced intra-NR RRM requirement to support high speed up to 500 km/h as specified in TS 38.133 [14].  
 If the field is present and UE supports *interRAT-MeasurementEnhancement-r16*, the UE shall apply enhanced inter-RAT EUTRAN RRM requirement to support high speed up to 500 km/h as specified in TS 38.133 [14].  
 This parameter only applies to the serving frequency of SpCell.

#### highSpeedMeasFlagFR2

If the field is present and UE supports *ue-PowerClass-v1700* set to *pc6*, the UE shall apply enhanced intra-frequency RRM requirement to the serving frequency of SpCell to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14].  
 If the field is present and the UE supports enhanced inter-frequency RRM requirements for FR2 HST in RRC\_IDLE and RRC\_INACTIVE, the UE shall apply enhanced inter-frequency RRM requirement to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14] in RRC\_IDLE and RRC\_INACTIVE.  
 If the field is present for SpCell and the UE supports *measEnhCAInterFreqFR2-r18*, the UE shall apply enhanced inter-frequency RRM requirement to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14] in RRC\_CONNECTED.  
 If the field is present for SCell(s) and the UE supports *measEnhCAInterFreqFR2-r18*, the UE shall apply enhanced intra-frequency RRM requirements to the serving frequency of the corresponding SCell to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14] in RRC\_CONNECTED. If the UE is configured with intra-band CA and the field *highSpeedMeasFlagFR2* is present, the network configures the same value for all serving cells.  
 The field value, *set1* or *set2*, is applied as specified in TS38.133 [14].

#### highSpeedMeasInterFreq

If the field is present and UE supports *measurementEnhancementInterFreq-r17*, the UE shall apply the enhanced RRM requirements for inter-frequency measurement in RRC\_CONNECTED to support high speed up to 500 km/h as specified in TS 38.133 [14].

Conditional Presence	Explanation
<i>SCellOnly</i>	The field is optionally present, Need R, in <i>ServingCellConfigCommon</i> of an SCell. It is absent otherwise.
<i>SpCellOnly</i>	The field is optionally present, Need R, in <i>ServingCellConfigCommonSIB</i> or in the <i>ServingCellConfigCommon</i> of an SpCell. It is absent otherwise.
<i>SpCellOnly2</i>	The field is optionally present, Need R, in <i>ServingCellConfigCommon</i> of an SpCell. It is absent otherwise.

### – *Hysteresis*

The IE *Hysteresis* is a parameter used within the entry and leave condition of an event triggered reporting condition. The actual value is field value \* 0.5 dB.

#### ***Hysteresis* information element**

```
-- ASN1START
-- TAG-HYSTERESIS-START

Hysteresis ::=
    INTEGER (0..30)

-- TAG-HYSTERESIS-STOP
-- ASN1STOP
```

### – *HysteresisAltitude*

The IE *HysteresisAltitude* is a parameter used within the entry and leave condition of an altitude-based event triggered reporting condition and within altitude range based parameter configuration. The actual value is field value in meters.

#### ***HysteresisAltitude* information element**

```
-- ASN1START
-- TAG-HYSTERESISALTITUDE-START

HysteresisAltitude-r18 ::=
    INTEGER (0..64)

-- TAG-HYSTERESISALTITUDE-STOP
-- ASN1STOP
```

### – *HysteresisLocation*

The IE *HysteresisLocation* is a parameter used within entry and leave condition of a location based event triggered reporting condition. The actual value is field value \* 10 meters.

***HysteresisLocation*** information element

```

-- ASN1START
-- TAG-HYSTERESISLOCATION-START

HysteresisLocation-r17 ::=          INTEGER (0..32768)

-- TAG-HYSTERESISLOCATION-STOP
-- ASN1STOP

```

– ***InvalidSymbolPattern***

The IE *InvalidSymbolPattern* is used to configure one invalid symbol pattern for PUSCH transmission repetition type B applicable for both DCI format 0\_1 and 0\_2, see TS 38.214 [19], clause 6.1.

***InvalidSymbolPattern*** information element

```

-- ASN1START
-- TAG-INVALIDSYMBOLPATTERN-START

InvalidSymbolPattern-r16 ::= SEQUENCE {
  symbols-r16          CHOICE {
    oneSlot            BIT STRING (SIZE (14)),
    twoSlots           BIT STRING (SIZE (28))
  },
  periodicityAndPattern-r16 CHOICE {
    n2                 BIT STRING (SIZE (2)),
    n4                 BIT STRING (SIZE (4)),
    n5                 BIT STRING (SIZE (5)),
    n8                 BIT STRING (SIZE (8)),
    n10                BIT STRING (SIZE (10)),
    n20                BIT STRING (SIZE (20)),
    n40                BIT STRING (SIZE (40))
  }
  ...
}
OPTIONAL, -- Need M

-- TAG-INVALIDSYMBOLPATTERN-STOP
-- ASN1STOP

```

**InvalidSymbolPattern field descriptions****periodicityAndPattern**

A time domain repetition pattern at which the pattern defined by *symbols* recurs. This slot pattern repeats itself continuously. When the field is not configured, the UE uses the value *n1* (see TS 38.214 [19], clause 6.1).

**symbols**

A symbol level bitmap in time domain (see TS 38.214[19], clause 6.1).

For *oneSlot*, if ECP is configured, the first 12 bits represent the symbols within the slot and the last two bits within the bitstring are ignored by the UE; Otherwise, the 14 bits represent the symbols within the slot.

For *twoSlots*, if ECP is configured, the first 12 bits represent the symbols within the first slot and the next 12 bits represent the symbols in the second slot and the last four bits within the bit string are ignored by the UE; Otherwise, the first 14 bits represent the symbols within the first slot and the next 14 bits represent the symbols in the second slot.

For the bits representing symbols in a slot, the most significant bit of the bit string represents the first symbol in the slot and the second most significant bit represents the second symbol in the slot and so on.

This pattern recurs (in time domain) with the configured *periodicityAndPattern*.

– ***I-RNTI-Value***

The IE *I-RNTI-Value* is used to identify the suspended UE context of a UE in RRC\_INACTIVE.

***I-RNTI-Value* information element**

```
-- ASN1START
-- TAG-I-RNTI-VALUE-START

I-RNTI-Value ::=                BIT STRING (SIZE(40))

-- TAG-I-RNTI-VALUE-STOP
-- ASN1STOP
```

– ***LBT-FailureRecoveryConfig***

The IE *LBT-FailureRecoveryConfig-r16* is used to configure the parameters used for detection of consistent uplink LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].

***LBT-FailureRecoveryConfig* information element**

```
-- ASN1START
-- TAG-LBT-FAILURERECOVERYCONFIG-START

LBT-FailureRecoveryConfig-r16 ::= SEQUENCE {
    lbt-FailureInstanceMaxCount-r16  ENUMERATED {n4, n8, n16, n32, n64, n128},
    lbt-FailureDetectionTimer-r16     ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320},
    ...
}

-- TAG-LBT-FAILURERECOVERYCONFIG-STOP
```

```
-- ASN1STOP
```

### ***LBT-FailureRecoveryConfig* field descriptions**

#### ***lbt-FailureDetectionTimer***

Timer for consistent uplink LBT failure detection (see TS 38.321 [3]). Value *ms10* corresponds to 10 ms, value *ms20* corresponds to 20 ms, and so on.

#### ***lbt-FailureInstanceMaxCount***

This field determines after how many LBT failure indications received from the physical layer the UE triggers uplink LBT failure recovery (see TS 38.321 [3]). Value *n4* corresponds to 4, value *n8* corresponds to 8, and so on.

## – ***LocationInfo***

The IE *LocationInfo* is used to transfer available detailed location information, Bluetooth, WLAN and sensor available measurement results at the UE.

### ***LocationInfo* information element**

```
-- ASN1START
-- TAG-LOCATIONINFO-START

LocationInfo-r16 ::= SEQUENCE {
    commonLocationInfo-r16      CommonLocationInfo-r16      OPTIONAL,

    ...
}

-- TAG-LOCATIONMEASUREMENTINFO-STOP
-- ASN1STOP

```

#### **LocationMeasurementInfo field descriptions**

##### **carrierFreq**

The EARFCN value of the carrier received from upper layers for which the UE needs to perform the inter-RAT RSTD measurements.

##### **measPRS-Offset**

Indicates the requested gap offset for performing RSTD measurements towards E-UTRA. It is the smallest subframe offset from the beginning of subframe 0 of SFN=0 of the serving cell of the requested gap for measuring PRS positioning occasions in the carrier frequency *carrierFreq* for which the UE needs to perform the inter-RAT RSTD measurements. The PRS positioning occasion information is received from upper layers. The value of *measPRS-Offset* is obtained by mapping the starting subframe of the PRS positioning occasion in the measured cell onto the corresponding subframe in the serving cell and is calculated as the serving cell's number of subframes from SFN=0 mod 40.

The UE shall take into account any additional time required by the UE to start PRS measurements on the other carrier when it does this mapping for determining the *measPRS-Offset*.

NOTE: Figure 6.2.2-1 in TS 36.331[10] illustrates the *measPRS-Offset* field.

##### **dl-PRS-PointA**

The ARFCN value of the carrier received from upper layers for which the UE needs to perform the NR DL-PRS measurements.

##### **nr-MeasPRS-RepetitionAndOffset**

Indicates the gap periodicity in ms and offset in number of subframes of the requested measurement gap for performing NR DL-PRS measurements.

##### **nr-MeasPRS-length**

Indicates measurement gap length in ms of the requested measurement gap for performing NR DL-PRS measurements. The measurement gap length is according to in Table 9.1.2-1 in TS 38.133 [14].

## – LogicalChannelConfig

The IE *LogicalChannelConfig* is used to configure the logical channel parameters.

### LogicalChannelConfig information element

```

-- ASN1START
-- TAG-LOGICALCHANNELCONFIG-START

LogicalChannelConfig ::=
    SEQUENCE {
        ul-SpecificParameters
            SEQUENCE {

-- TAG-LOGICALCHANNELCONFIG-STOP
-- ASN1STOP

```

<b>LogicalChannelConfig field descriptions</b>
<p><b>allowedCG-List</b> This restriction applies only when the UL grant is a configured grant. If present, UL MAC SDUs from this logical channel can only be mapped to the indicated configured grant configuration. If the size of the sequence is zero, then UL MAC SDUs from this logical channel cannot be mapped to any configured grant configurations. If the field is not present, UL MAC SDUs from this logical channel can be mapped to any configured grant configurations. If the field <i>configuredGrantType1Allowed</i> is present, only those configured grant type 1 configuration indicated in this sequence are allowed for use by this logical channel; otherwise, this sequence shall not include any configured grant type 1 configuration. Corresponds to "allowedCG-List" as specified in TS 38.321 [3]. This field is ignored when SDT procedure is ongoing.</p>
<p><b>allowedHARQ-mode</b> Indicates the allowed HARQ mode of a HARQ process mapped to this logical channel. If the parameter is absent, there is no restriction for HARQ mode for the mapping. This field applies to SRB1, SRB2, SRB4 and DRBs.</p>
<p><b>allowedPHY-PriorityIndex</b> This restriction applies only when the UL grant is a dynamic grant. If the field is present and the dynamic grant has a PHY-priority index, UL MAC SDUs from this logical channel can only be mapped to the dynamic grants indicating PHY-priority index equal to the values configured by this field. If the field is present and the dynamic grant does not have a PHY-priority index, UL MAC SDUs from this logical channel can only be mapped to this dynamic grant if the value of the field is <i>p0</i>, see TS 38.213 [13], clause 9. If the field is not present, UL MAC SDUs from this logical channel can be mapped to any dynamic grants. Corresponds to "allowedPHY-PriorityIndex" as specified in TS 38.321 [3].</p>
<p><b>allowedSCS-List</b> If present, UL MAC SDUs from this logical channel can only be mapped to the indicated numerology. Otherwise, UL MAC SDUs from this logical channel can be mapped to any configured numerology. Corresponds to '<i>allowedSCS-List</i>' as specified in TS 38.321 [3]. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz</p>
<p><b>allowedServingCells</b> If present, UL MAC SDUs from this logical channel can only be mapped to the serving cells indicated in this list. Otherwise, UL MAC SDUs from this logical channel can be mapped to any configured serving cell of this cell group. Corresponds to '<i>allowedServingCells</i>' in TS 38.321 [3].</p>
<p><b>bitRateMultiplier</b> Bit rate multiplier for recommended bit rate MAC CE as specified in TS 38.321 [3]. Value <i>x40</i> indicates bit rate multiplier 40, value <i>x70</i> indicates bit rate multiplier 70 and so on.</p>
<p><b>bitRateQueryProhibitTimer</b> The timer is used for bit rate recommendation query in TS 38.321 [3], in seconds. Value <i>s0</i> means 0 s, <i>s0dot4</i> means 0.4 s and so on.</p>
<p><b>bucketSizeDuration</b> Value in ms. <i>ms5</i> corresponds to 5 ms, value <i>ms10</i> corresponds to 10 ms, and so on.</p>
<p><b>channelAccessPriority</b> Indicates the Channel Access Priority Class (CAPC), as specified in TS 38.300 [2], to be used on uplink transmissions for operation with shared spectrum channel access in FR1. The network configures this field only for SRB2 and DRBs.</p>
<p><b>configuredGrantType1Allowed</b> If present, or if the capability <i>lcp-Restriction</i> as specified in TS 38.306 [26] is not supported, UL MAC SDUs from this logical channel can be transmitted on a configured grant type 1. Otherwise, UL MAC SDUs from this logical channel cannot be transmitted on a configured grant type 1. Corresponds to '<i>configuredGrantType1Allowed</i>' in TS 38.321 [3]. This field is ignored when SDT procedure is ongoing.</p>
<p><b>logicalChannelGroup, logicalChannelGroupIAB-Ext</b> ID of the logical channel group, as specified in TS 38.321 [3], which the logical channel belongs to. The <i>logicalChannelGroupIAB-Ext</i> is only applicable to the IAB-MT. When <i>logicalChannelGroupIAB-Ext</i> is configured, <i>logicalChannelGroup</i> shall be ignored.</p>
<p><b>logicalChannelSR-Mask</b> Controls SR triggering when a configured uplink grant of <i>type1</i> or <i>type2</i> is configured. <i>true</i> indicates that SR masking is configured for this logical channel as specified in TS 38.321 [3].</p>
<p><b>logicalChannelSR-DelayTimerApplied</b> Indicates whether to apply the delay timer for SR transmission for this logical channel. Set to <i>false</i> if <i>logicalChannelSR-DelayTimer</i> is not included in <i>BSR-Config</i>.</p>

<b>maxPUSCH-Duration</b>
If present, UL MAC SDUs from this logical channel can only be transmitted using uplink grants that result in a PUSCH duration shorter than or equal to the duration indicated by this field. Otherwise, UL MAC SDUs from this logical channel can be transmitted using an uplink grant resulting in any PUSCH duration. Corresponds to "maxPUSCH-Duration" in TS 38.321 [3]. The PUSCH duration is calculated based on the same length of all symbols, and the shortest length applies if the symbol lengths are different.
<b>priority</b>
Logical channel priority, as specified in TS 38.321 [3].
<b>prioritisedBitRate</b>
Value in kiloBytes/s. Value <i>kBps0</i> corresponds to 0 kiloBytes/s, value <i>kBps8</i> corresponds to 8 kiloBytes/s, value <i>kBps16</i> corresponds to 16 kiloBytes/s, and so on. For SRBs, the value can only be set to <i>infinity</i> .
<b>schedulingRequestId</b>
If present, it indicates the scheduling request configuration applicable for this logical channel, as specified in TS 38.321 [3].

Conditional Presence	Explanation
<i>PDCP-CADuplication</i>	The field is mandatory present if the DRB/SRB associated with this logical channel is configured with PDCP CA duplication in UL in the cell group in which this IE is included (i.e. the PDCP entity is associated with multiple RLC entities belonging to this cell group). Otherwise the field is optionally present, need R.
<i>UL</i>	The field is mandatory present for a logical channel with uplink if it serves DRB or multicast MRB. It is optionally present, Need R, for a logical channel with uplink if it serves an SRB. Otherwise it is absent.

### – *LogicalChannelIdentity*

The IE *LogicalChannelIdentity* is used to identify one logical channel (*LogicalChannelConfig*) and the corresponding RLC bearer (*RLC-BearerConfig*) or BH RLC channel (*BH-RLC-ChannelConfig*) or Uu Relay RLC channel (*Uu-RelayRLC-ChannelConfig*) or PC5 Relay RLC channel (*SL-RLC-ChannelConfigPC5*).

#### **LogicalChannelIdentity information element**

```
-- ASN1START
-- TAG-LOGICALCHANNELIDENTITY-START

LogicalChannelIdentity ::=          INTEGER (1..maxLC-ID)

-- TAG-LOGICALCHANNELIDENTITY-STOP
-- ASN1STOP
```

### – *LTE-NeighCellsCRS-AssistInfoList*

The IE *LTE-NeighCellsCRS-AssistInfoList-r17* is used to provide configuration information of neighbour LTE cells to assist the UE to perform CRS interference mitigation (CRS-IM) in scenarios with overlapping spectrum for LTE and NR.

#### **LTE-NeighCellsCRS-AssistInfoList information element**

```
-- ASN1START
-- TAG-LTE-NEIGHCELLSCRS-ASSISTINFOLIST-START
```

```

LTE-NeighCellsCRS-AssistInfoList-r17 ::= SEQUENCE (SIZE (1..maxNrofCRS-IM-InterfCell-r17)) OF LTE-NeighCellsCRS-AssistInfo-r17

LTE-NeighCellsCRS-AssistInfo-r17 ::= SEQUENCE {
    neighCarrierBandwidthDL-r17      ENUMERATED {n6, n15, n25, n50, n75, n100, spare2, spare1}  OPTIONAL,  -- Cond CRS-IM
    neighCarrierFreqDL-r17          INTEGER (0..16383)                                     OPTIONAL,  -- Need S
    neighCellId-r17                 EUTRA-PhysCellId                                       OPTIONAL,  -- Need S
    neighCRS-muting-r17             ENUMERATED {enabled}                                       OPTIONAL,  -- Need R
    neighMBSFN-SubframeConfigList-r17 EUTRA-MBSFN-SubframeConfigList                 OPTIONAL,  -- Need S
    neighNrofCRS-Ports-r17         ENUMERATED {n1, n2, n4}                                       OPTIONAL,  -- Need S
    neighV-Shift-r17               ENUMERATED {n0, n1, n2, n3, n4, n5}                       OPTIONAL,  -- Cond NotCellID
}

-- TAG-LTE-NEIGHCELLSCRS-ASSISTINFOLIST-STOP
-- ASN1STOP

```

#### **LTE-NeighCellsCRS-AssistInfo field descriptions**

##### **neighCarrierBandwidthDL**

Indicates the channel bandwidth of the neighbour LTE cell in number of PRBs. If the field is absent, the UE applies the value of *carrierBandwidthDL* indicated in *RateMatchPatternLTE-CRS* for this serving cell, if configured.

##### **neighCarrierFreqDL**

Indicates the downlink centre frequency of the neighbour LTE cell. If the field is absent, the UE applies the value of *carrierFreqDL* indicated in *RateMatchPatternLTE-CRS* for this serving cell, if configured.

##### **neighCellId**

Indicates the physical cell ID of the neighbour LTE cell for which the other fields within the same *LTE-NeighCellsCRS-AssistInfo* apply. If the IE *LTE-NeighCellsCRS-AssistInfoList* contains multiple list entries, either this field or *neighV-Shift* is included in each instance. If the IE *LTE-NeighCellsCRS-AssistInfoList* contains multiple list entries, the entry with *neighV-Shift* is only used for neighbour LTE cells for which *neighCellId* is not provided (i.e. the entry with *neighCellId* takes precedence over the entry with *neighV-Shift*, if provided). If the IE *LTE-NeighCellsCRS-AssistInfoList* contains one list entry with neither this field nor *neighV-Shift*, the information within the entry applies to all neighbour LTE cells.

##### **neighCRS-muting**

Indicates whether the CRS interference mitigation is enabled in the neighbour LTE cell, as specified in TS 36.133 [40], clause 3.6.1.1.

##### **neighMBSFN-SubframeConfigList**

Indicates the MBSFN subframe configuration of the neighbour LTE cell. If *RateMatchPatternLTE-CRS* is configured for this serving cell and the field is absent, the UE applies the value of *mbsfn-SubframeConfigList* indicated in *RateMatchPatternLTE-CRS* for this serving cell if configured; otherwise, if the field is absent, the UE assumes MBSFN is not configured in the neighbour LTE cell.

##### **neighNrofCRS-Ports**

Indicates the CRS antenna ports number of the neighbour LTE cell. If the field is absent, the UE applies the value of *nrofCRS-Ports* indicated in *RateMatchPatternLTE-CRS* for this serving cell, if configured. If *RateMatchPatternLTE-CRS* is not configured for this serving cell and the field is absent, the UE applies the default value n4.

##### **neighV-Shift**

Indicates the shifting value v-shift of neighbour LTE cells for which the other fields within the same *LTE-NeighCellsCRS-AssistInfo* apply.

Conditional Presence	Explanation
<i>CRS-IM</i>	For the serving cell with 15kHz SCS, this field is mandatory present for the UE supporting the capability of <i>crs-IM-nonDSS-NWA-15kHzSCS-r17</i> , but not supporting <i>crs-IM-nonDSS-15kHzSCS-r17</i> , if <i>RateMatchPatternLTE-CRS</i> is not configured for this serving cell. Otherwise it is optionally present, Need S if <i>RateMatchPatternLTE-CRS</i> is configured for this serving cell; Need M otherwise. For the serving cell with 30kHz SCS, this field is mandatory present for the UE supporting the capability of <i>crs-IM-nonDSS-NWA-30kHzSCS-r17</i> , but not supporting <i>crs-IM-nonDSS-30kHzSCS-r17</i> , if <i>RateMatchPatternLTE-CRS</i> is not configured for this serving cell. Otherwise it is optionally present, Need S if <i>RateMatchPatternLTE-CRS</i> is configured for this serving cell; Need M otherwise.
<i>NotCellID</i>	If the field <i>neighCellId</i> is present, this field shall be absent; otherwise, it is optionally present if the IE <i>LTE-NeighCellsCRS-AssistInfoList</i> contains one list entry, Need S, or it is mandatory present if the IE <i>LTE-NeighCellsCRS-AssistInfoList</i> contains multiple list entries.

### – *LTM-CandidateId*

The IE *LTM-CandidateId* is used to identify an LTM candidate configuration.

#### *LTM-CandidateId* information element

```
-- ASN1START
-- TAG-LTM-CANDIDATEID-START

```

<b>LTM-Candidate field descriptions</b>
<p><b><i>ltm-CandidateConfig</i></b> This field includes an RRCReconfiguration message used to configure an LTM candidate configuration.</p>
<p><b><i>ltm-CandidatePCI</i></b> This field identifies the PCI of the SpCell of the LTM candidate configuration contained in <i>ltm-CandidateConfig</i>.</p>
<p><b><i>ltm-EarlyUL-SyncConfig, ltm-EarlyUL-SyncConfigSUL</i></b> A configuration used to perform the early UL synchronization procedure over an UL or SUL carrier.</p>
<p><b><i>ltm-NoResetID</i></b> If the network configures this field for one LTM candidate configuration, the network configures also for all LTM candidate configurations within <i>ltm-CandidateToAddModList</i> in <i>LTM-Config</i> and ensures that the UE has stored a value for <i>ltm-ServingCellNoResetID</i> within <i>VarLTM-ServingCellNoResetID</i>.</p>
<p><b><i>ltm-UE-MeasuredTA-ID</i></b> If the network configures this field for one LTM candidate configuration, the network configures also for all LTM candidate configurations within <i>ltm-CandidateToAddModList</i> in <i>LTM-Config</i> and ensures that the UE has stored a value for <i>ltm-ServingCellUE-MeasuredTA-ID</i> within <i>VarLTM-ServingCellUE-MeasuredTA-ID</i>. This field is absent if <i>tag2</i> is present for this LTM candidate configuration.</p>

## – LTM-Config

The IE *LTM-Config* is used to provide LTM configurations.

### **LTM-Config information element**

```

-- ASN1START
-- TAG-LTM-CONFIG-START

LTM-Config-r18 ::= SEQUENCE {
    ltm-ReferenceConfiguration-r18    SetupRelease {ReferenceConfiguration-r18}          OPTIONAL,    -- Need M
    ltm-CandidateToReleaseList-r18    SEQUENCE (SIZE (1..maxNrofLTM-Configs-r18)) OF LTM-CandidateId-r18          OPTIONAL,    -- Need N
}

```

```

ltm-CandidateToAddModList-r18          SEQUENCE (SIZE (1..maxNrofLTM-Configs-r18)) OF LTM-Candidate-r18    OPTIONAL, -- Need N
ltm-ServingCellNoResetID-r18          INTEGER (1..maxNrofLTM-Configs-plus1-r18)                    OPTIONAL, -- Need N
ltm-CSI-ResourceConfigToAddModList-r18 SEQUENCE (SIZE (1..maxNrofLTM-CSI-ResourceConfigurations-r18)) OF LTM-CSI-ResourceConfig-r18
                                        OPTIONAL, -- Need N
ltm-CSI-ResourceConfigToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofLTM-CSI-ResourceConfigurations-r18)) OF LTM-CSI-ResourceConfigId-r18
                                        OPTIONAL, -- Need N
attemptLTM-Switch-r18                 ENUMERATED {true}                                          OPTIONAL, -- Cond LTM-MCG
ltm-ServingCellUE-MeasuredTA-ID-r18   INTEGER (1..maxNrofLTM-Configs-plus1-r18)                    OPTIONAL, -- Need N
...
}
-- TAG-LTM-CONFIG-STOP
-- ASN1STOP

```

Conditional Presence	Explanation
<i>LTM-MCG</i>	This field is optional present for the MCG, Need R, if the UE is configured with at least an LTM candidate configuration associated to the MCG. Otherwise, the field absent.

## – *LTM-CSI-ReportConfig*

The IE *LTM-CSI-ReportConfig* is used to configure report on the cell in which the *LTM-CSI-ReportConfig* is included.

### *LTM-CSI-ReportConfig* information element

```

-- ASN1START
-- TAG-LTM-CSI-REPORTCONFIG-START

LTM-CSI-ReportConfig-r18 ::= SEQUENCE {
    ltm-CSI-ReportConfigId-r18          LTM-CSI-ReportConfigId-r18,
    ltm-ResourcesForChannelMeasurement-r18 LTM-CSI-ResourceConfigId-r18,
    ltm-ReportConfigType-r18          CHOICE {
        periodic-r18                  SEQUENCE {
            reportSlotConfig-r18      CSI-ReportPeriodicityAndOffset,
            pucch-CSI-ResourceList-r18 SEQUENCE (SIZE (1..maxNrofBWPs)) OF PUCCH-CSI-Resource
        },
        semiPersistentOnPUCCH-r18     SEQUENCE {

}

-- TAG-LTM-CSI-REPORTCONFIG-STOP
-- ASN1STOP

```

#### ***LTM-CSI-ReportConfig* field descriptions**

##### ***ltm-ReportContent***

This field defines the content of the LTM L1 measurement report.

##### ***reportSlotConfig***

Periodicity and slot offset (see TS 38.214 [19], clause 5.2.1.4).

##### ***reportSlotOffsetList, reportSlotOffsetListDCI-0-1, reportSlotOffsetListDCI-0-2***

Timing offset Y for semi persistent reporting using PUSCH and aperiodic reporting.

#### ***LTM-ReportContent* field descriptions**

##### ***nrOfReportedCells***

This field defines how many cells are reported within a single L1 measurement report instance.

##### ***nrOfReportedRS-PerCell***

This field defines how many RSs per cell are reported within a single L1 measurement report instance.

##### ***spCellInclusion***

This field indicates whether the UE shall include a L1 measurement report associated to the current SpCell. This field can only be configured if the current SpCell is configured as an SpCell of an LTM candidate configuration and the *LTM-CSI-ResourceConfig* IE associated to the *LTM-CSI-ReportConfig* IE includes resources for the current SpCell.

## – ***LTM-CSI-ReportConfigId***

The IE *LTM-CSI-ReportConfigId* is used to identify an *LTM-CSI-ReportConfig*.

### ***LTM-CSI-ReportConfigId* information element**

```

-- ASN1START
-- TAG-LTM-CSI-REPORTCONFIGID-START

LTM-CSI-ReportConfigId-r18 ::= INTEGER (0..maxNrofLTM-CSI-ReportConfigurations-1-r18)

-- TAG-LTM-CSI-REPORTCONFIGID-STOP

```

```
-- ASN1STOP
```

## – *LTM-CSI-ResourceConfig*

The IE *LTM-CSI-ResourceConfig* defines a group of one or more CSI resources for one or more LTM candidate configurations.

### *LTM-CSI-ResourceConfig* information element

```
-- ASN1START
-- TAG-LTM-CSI-RESOURCECONFIG-START

LTM-CSI-ResourceConfig-r18 ::= SEQUENCE {
    ltm-CSI-ResourceConfigId-r18    LTM-CSI-ResourceConfigId-r18,
    ltm-CSI-SSB-ResourceSet-r18     LTM-CSI-SSB-ResourceSet-r18,
    ...
}

LTM-CSI-SSB-ResourceSet-r18 ::= SEQUENCE {
    ltm-CSI-SSB-ResourceList-r18    SEQUENCE (SIZE (1..maxNrofLTM-CSI-SSB-ResourcesPerSet-r18)) OF SSB-Index,
    ltm-CandidateIdList-r18         SEQUENCE (SIZE (1..maxNrofLTM-CSI-SSB-ResourcesPerSet-r18)) OF LTM-CandidateId-r18,
    ...
}

-- TAG-LTM-CSI-RESOURCECONFIG-STOP
-- ASN1STOP
```

#### *LTM-CSI-SSB-ResourceSet* field descriptions

##### ***ltm-CandidateIdList***

This field indicates the LTM candidate configuration IDs related to the SSBs in the *ltm-CSI-SSB-ResourceList*. The list has the same number of entries as *ltm-CSI-SSB-ResourceList*. The first entry in this list shall be associated to the first entry in *ltm-CSI-SSB-ResourceList*, the second entry of this list shall be associated to the second entry in *ltm-CSI-SSB-ResourceList*, and so on.

##### ***ltm-CSI-SSB-ResourceList***

This field is used to indicate on SS/PBCH block resources from one or more LTM candidate cells.

## – *LTM-CSI-ResourceConfigId*

The IE *LTM-CSI-ResourceConfigId* is used to identify an *LTM-CSI-ResourceConfig*.

### *LTM-CSI-ResourceConfigId* information element

```
-- ASN1START
-- TAG-LTM-CSI-RESOURCECONFIGID-START

LTM-CSI-ResourceConfigId-r18 ::= INTEGER (0..maxNrofLTM-CSI-ResourceConfigurations-1-r18)
```

```
-- TAG-LTM-CSI-RESOURCECONFIGID-STOP
-- ASN1STOP
```

## – LTM-TCI-Info

The IE *LTM-TCI-Info* is used to configure TCI related information for an LTM candidate configuration to be used during activation of TCI state(s) and/or upon the reception of the LTM Cell Switch procedure.

### LTM-TCI-Info information element

```
-- ASN1START
-- TAG-LTM-TCI-INFO-START

LTM-TCI-Info-r18 ::= SEQUENCE {
  ltm-DL-OrJointTCI-StateToAddModList-r18 SEQUENCE (SIZE (1..maxNrofCandidateTCI-State-r18)) OF CandidateTCI-State-r18
                                          OPTIONAL, -- Need N
  ltm-DL-OrJointTCI-StateToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofCandidateTCI-State-r18)) OF TCI-StateId
                                          OPTIONAL, -- Need N
  ltm-UL-TCI-StateToAddModList-r18 SEQUENCE (SIZE (1..maxNrofCandidateUL-TCI-r18)) OF CandidateTCI-UL-State-r18
                                   OPTIONAL, -- Need N
  ltm-UL-TCI-StateToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofCandidateUL-TCI-r18)) OF TCI-UL-StateId-r17
                                   OPTIONAL, -- Need N
  ltm-NZP-CSI-RS-ResourceToAddModList-r18 SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-Resources)) OF NZP-CSI-RS-Resource
                                           OPTIONAL, -- Need N
  ltm-NZP-CSI-RS-ResourceToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-Resources)) OF NZP-CSI-RS-ResourceId
                                           OPTIONAL, -- Need N
  ltm-NZP-CSI-RS-ResourceSetToAddModList-r18 SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-ResourceSets)) OF NZP-CSI-RS-ResourceSet
                                              OPTIONAL, -- Need N
  ltm-NZP-CSI-RS-ResourceSetToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofNZP-CSI-RS-ResourceSets)) OF NZP-CSI-RS-ResourceSetId
                                              OPTIONAL, -- Need N
  pathlossReferenceRS-ToAddModList-r18 SEQUENCE (SIZE (1..maxNrofPathlossReferenceRSs-r17)) OF PathlossReferenceRS-r17
                                       OPTIONAL, -- Need N
  pathlossReferenceRS-ToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofPathlossReferenceRSs-r17)) OF PathlossReferenceRS-Id-r17
                                       OPTIONAL, -- Need N
  unifiedTCI-StateType-r18 ENUMERATED {separate, joint}
  ...
}
-- TAG-LTM-TCI-INFO-STOP
-- ASN1STOP
```

#### LTM-TCI-Info field descriptions

##### ***unifiedTCI-StateType***

Indicates the unified TCI states type the UE is configured for this LTM candidate configuration. The value *separate* means this LTM candidate configuration is configured with *ltm-DL-OrJointTCI-StateToAddModList* for DL TCI states and *ltm-UL-TCI-StateToAddModList* for UL TCI states. The value *joint* means this LTM candidate configuration is configured with *ltm-DL-OrJointTCI-StateToAddModList* for joint TCI states for UL and DL operation. The network always configures this field.

– **MAC-CellGroupConfig**

The IE *MAC-CellGroupConfig* is used to configure MAC parameters for a cell group, including DRX.

**MAC-CellGroupConfig** information element

```

-- ASN1START
-- TAG-MAC-CELLGROUPCONFIG-START

MAC-CellGroupConfig ::=
    drx-Config                SetupRelease { DRX-Config }                OPTIONAL, -- Need M

```

<b>MAC-CellGroupConfig field descriptions</b>
<p><b>additionalBS-TableAllowed</b> Indicates whether a UE is allowed to utilize the refined buffer size levels, as specified in TS 38.321 [3], for a certain Logical Channel Group. The leftmost bit corresponds to LCG ID=0, second leftmost bit to LCG ID=1 and so on. The UE is allowed to utilize the refined buffer size levels for a Logical Channel Group only when the corresponding bit is set to 1.</p>
<p><b>allowCSI-SRS-Tx-MulticastDRX-Active</b> Used to control the CSI/SRS transmission during MBS multicast DRX ActiveTime, see TS 38.321 [3].</p>
<p><b>csi-Mask</b> If set to true, the UE limits CSI reports to the on-duration period of the DRX cycle, see TS 38.321 [3].</p>
<p><b>dataInactivityTimer</b> Releases the RRC connection upon data inactivity as specified in clause 5.3.8.5 and in TS 38.321 [3]. Value <i>s1</i> corresponds to 1 second, value <i>s2</i> corresponds to 2 seconds, and so on.</p>
<p><b>drx-Config, drx-ConfigExt, drx-ConfigExt2</b> Used to configure DRX as specified in TS 38.321 [3]. Network only configures <i>drx-ConfigExt</i> or <i>drx-ConfigExt2</i> when <i>drx-Config</i> is configured.</p>
<p><b>drx-ConfigSecondaryGroup</b> Used to configure DRX related parameters for the second DRX group as specified in TS 38.321 [3]. The network does not configure secondary DRX group with DCP simultaneously nor secondary DRX group with a dormant BWP simultaneously.</p>
<p><b>drx-ConfigSL</b> Used to configure additional DRX parameters for the UE performing sidelink operation with resource allocation mode 1, as specified in TS 38.321 [3]. Network only configures this field if <i>sl-ScheduledConfig</i> is configured and <i>drx-Config</i> is configured.</p>
<p><b>drx-LastTransmissionUL</b> If this field is present, the start of the <i>drx-HARQ-RTT-TimerUL</i> is after the last transmission within a bundle, see TS 38.321 [3].</p>
<p><b>dss-ConfigToAddModList</b> List of LCG-specific DSR configurations to add or modify.</p>
<p><b>dss-ConfigToReleaseList</b> List of LCG-specific DSR configurations to release.</p>
<p><b>g-RNTI-ConfigToAddModList</b> List of G-RNTI configurations to add or modify. Up to 8 G-RNTIs can be configured in total in this release based on the UE capability.</p>
<p><b>g-RNTI-ConfigToReleaseList</b> List of G-RNTI configurations to release.</p>
<p><b>g-CS-RNTI-ConfigToAddModList</b> List of G-CS-RNTI configurations to add or modify. Up to 8 G-CS-RNTIs can be configured in total in this release based on the UE capability.</p>
<p><b>g-CS-RNTI-ConfigToReleaseList</b> List of G-CS-RNTI configurations to release.</p>
<p><b>intraCG-Prioritization</b> Used to enable HARQ process ID selection based on LCH-priority for one CG as specified in TS 38.321 [3].</p>
<p><b>lch-BasedPrioritization</b> If this field is present, the corresponding MAC entity of the UE is configured with prioritization between overlapping grants and between scheduling request and overlapping grants based on LCH priority, see TS 38.321 [3]. The network does not configure <i>lch-BasedPrioritization</i> with <i>enhancedSkipUplinkTxDynamic</i> simultaneously nor <i>lch-BasedPrioritization</i> with <i>enhancedSkipUplinkTxConfigured</i> simultaneously.</p>
<p><b>posMG-Request</b> Indicates whether UE is configured to send UL MAC CE for Positioning Measurement Gap Activation/Deactivation Request, as specified in TS 38.321 [3].</p>
<p><b>schedulingRequestID-BFR-SCell</b> Indicates the scheduling request configuration applicable for BFR on SCell, as specified in TS 38.321 [3].</p>

<b>schedulingRequestID-BFR</b>
Indicates the scheduling request configuration (SchedulingRequestConfig) that the UE shall use upon detecting a beam failure on the detection resources configured in <i>failureDetectionSet1</i> of a serving cell while beam failure is not detected on resources configured in <i>failureDetectionSet2</i> of the same serving cell.
<b>schedulingRequestID-BFR2</b>
Indicates the scheduling request configuration (SchedulingRequestConfig) that the UE shall use upon detecting a beam failure on the detection resources configured in <i>failureDetectionSet2</i> of a serving cell while beam failure is not detected on resources configured in <i>failureDetectionSet1</i> of the same serving cell.
<b>schedulingRequestID-LBT-SCell</b>
Indicates the scheduling request configuration applicable for consistent uplink LBT recovery on SCell, as specified in TS 38.321 [3].
<b>schedulingRequestID-PosMG-Request</b>
Indicates the scheduling request configuration applicable for Positioning Measurement Gap Activation/Deactivation Request, as specified in TS 38.321 [3].
<b>skipUplinkTxDynamic, enhancedSkipUplinkTxDynamic, enhancedSkipUplinkTxConfigured</b>
If set to <i>true</i> , the UE skips UL transmissions as described in TS 38.321 [3]. If the UE is configured with <i>enhancedSkipUplinkTxDynamic</i> or <i>enhancedSkipUplinkTxConfigured</i> with value <i>true</i> , REPETITION_NUMBER (as specified in TS 38.321 [3], clause 5.4.2.1) of the corresponding PUSCH transmission of the uplink grant shall be equal to 1. The network does not configure <i>enhancedSkipUplinkTxDynamic</i> or <i>enhancedSkipUplinkTxConfigured</i> with value <i>true</i> together with <i>numberOfSlotsTBoMS-r17</i> .
<b>tag-Config</b>
The field is used to configure parameters for a time-alignment group. The field is not present if any DAPS bearer is configured.
<b>usePreBSR</b>
If set to true, the MAC entity of the IAB-MT may use the Pre-emptive BSR, see TS 38.321 [3].

<b>MBS-RNTI-SpecificConfig field descriptions</b>
<b>drx-ConfigPTM</b>
Used to configure DRX for PTM transmission as specified in TS 38.321 [3].
<b>g-CS-RNTI</b>
Used to scramble the SPS group-common PDSCH and activation/deactivation of SPS group-common PDSCH for one or more MBS multicast services.
<b>g-RNTI</b>
Used to scramble the scheduling and transmission of PTM for one or more MBS multicast services.
<b>groupCommon-RNTI</b>
Used to configure g-RNTI or g-CS-RNTI.
<b>harq-FeedbackEnablerMulticast</b>
Indicates whether the UE shall provide HARQ feedback for MBS multicast. Value <i>dci-enabler</i> means that whether the UE shall provide HARQ feedback for MBS multicast is indicated by DCI as specified in TS 38.213 [13]. Value <i>enabled</i> means the UE shall always provide HARQ feedback for MBS multicast. When the field is absent, the UE behavior is specified in TS 38.213 [13].
<b>harq-FeedbackOptionMulticast</b>
Indicates the feedback mode for MBS multicast dynamically scheduled PDSCH or SPS PDSCH.
<b>mbs-RNTI-SpecificConfigId</b>
An identifier of the RNTI specific configuration for MBS multicast.
<b>pdsch-AggregationFactor</b>
Number of repetitions for dynamically scheduled MBS multicast data (see TS 38.214 [19], clause 5.1.2.1). When the field is absent and <i>groupCommon-RNTI</i> is set to <i>g-RNTI</i> , the UE applies the value 1.

<b>LCG-DSR-Config field descriptions</b>	
<b><i>lcg-Id</i></b>	Identifier of the Logical Channel Group which the DSR configuration refers to.
<b><i>remainingTimeThreshold</i></b>	Remaining time threshold used for triggering DSR for the logical channels belonging to this Logical Channel Group, as specified in TS 38.321 [3]. Value in number of milliseconds.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>G-RNTI</i>	This field is optionally present, Need S, if <i>groupCommon-RNTI</i> is set to <i>g-RNTI</i> . The field is absent when <i>groupCommon-RNTI</i> is set to <i>g-CS-RNTI</i> .
<i>HARQFeedback</i>	The field is mandatory present when <i>harq-FeedbackEnablerMulticast</i> is present. It is absent otherwise.
<i>MCG-Only</i>	This field is optionally present, Need M, for the <i>MAC-CellGroupConfig</i> of the MCG. It is absent otherwise.
<i>LCH-PrioWithReTxTimer</i>	This field is optionally present, Need R, if <i>lch-BasedPrioritization-r16</i> is configured in this MAC entity and <i>cg-RetransmissionTimer-r16</i> is configured for any configured grant configuration associated with this MAC entity. It is absent otherwise, Need R.

## – *MeasConfig*

The IE *MeasConfig* specifies measurements to be performed by the UE, and covers intra-frequency, inter-frequency and inter-RAT mobility as well as configuration of measurement gaps.

### ***MeasConfig* information element**

-- TAG-MEASCONFIG-STOP
-- ASN1STOP

```

<b>MeasConfig field descriptions</b>
<p><b>effectiveMeasWindowConfig</b> Used to setup and release effective measurement window in NR for E-UTRA measurements.</p>
<p><b>interFrequencyConfig-NoGap-r16</b> If the field is set to true, UE is configured to perform SSB based inter-frequency measurement without measurement gaps when the inter-frequency SSB is completely contained in the active DL BWP of the UE, as specified in TS 38.133 [14], clause 9.3. Otherwise, the SSB based inter-frequency measurement is performed within measurement gaps. In NR-DC, the field can only be configured in the <i>measConfig</i> associated with MCG, and when configured, it applies to all the inter-frequency measurements configured by MN and SN.</p>
<p><b>measGapConfig</b> Used to setup and release measurement gaps in NR.</p>
<p><b>measIdToAddModList</b> List of measurement identities to add and/or modify.</p>
<p><b>measIdToRemoveList</b> List of measurement identities to remove.</p>
<p><b>measObjectToAddModList</b> List of measurement objects to add and/or modify.</p>
<p><b>measObjectToRemoveList</b> List of measurement objects to remove.</p>
<p><b>reportConfigToAddModList</b> List of measurement reporting configurations to add and/or modify.</p>
<p><b>reportConfigToRemoveList</b> List of measurement reporting configurations to remove.</p>
<p><b>s-MeasureConfig</b> Threshold for NR SpCell RSRP measurement controlling when the UE is required to perform measurements on non-serving cells. Choice of <i>ssb-RSRP</i> corresponds to cell RSRP based on SS/PBCH block and choice of <i>csi-RSRP</i> corresponds to cell RSRP of CSI-RS. This field is also applicable to L1 measurements configured with <i>Itm-CSI-ResourceConfigToAddModList-r18</i>. This field is not configured to a UE configured with event(s) related to the L2 U2N Relay UE.</p>
<p><b>measGapSharingConfig</b> Specifies the measurement gap sharing scheme and controls setup/ release of measurement gap sharing.</p>

– **MeasGapConfig**

The IE *MeasGapConfig* specifies the measurement gap configuration and controls setup/release of measurement gaps.

<b>MeasGapConfig field descriptions</b>
<p><b>gapAssociationPRS</b> Indicates that PRS measurement is associated with this measurement gap. The network only includes this field for one per-UE gap or for one per-FR gap. If concurrent gap (i.e. one of the gap combination as defined in Table 9.1.8-1 in TS 38.133 [14]) is configured and no gap is configured with this field, the PRS measurement is associated with the gap configured via <i>GapConfig</i> (without suffix), if available. If both per-UE gap and per-FR gap are configured via <i>GapConfig</i> and/or <i>GapConfig-r17</i>, the PRS measurement is always associated with the per-UE gap.</p>
<p><b>gapFR1</b> Indicates measurement gap configuration that applies to FR1 only. In (NG)EN-DC, <i>gapFR1</i> cannot be set up by NR RRC (i.e. only LTE RRC can configure FR1 measurement gap). In NE-DC, <i>gapFR1</i> can only be set up by NR RRC (i.e. LTE RRC cannot configure FR1 gap). In NR-DC, <i>gapFR1</i> can only be set up in the <i>measConfig</i> associated with MCG. <i>gapFR1</i> can not be configured together with <i>gapUE</i>. The applicability of the FR1 measurement gap is according to Table 9.1.2-2 and Table 9.1.2-3 in TS 38.133 [14].</p>
<p><b>gapFR2</b> Indicates measurement gap configuration applies to FR2 only. In (NG)EN-DC or NE-DC, <i>gapFR2</i> can only be set up by NR RRC (i.e. LTE RRC cannot configure FR2 gap). In NR-DC, <i>gapFR2</i> can only be set up in the <i>measConfig</i> associated with MCG. <i>gapFR2</i> cannot be configured together with <i>gapUE</i>. The applicability of the FR2 measurement gap is according to Table 9.1.2-2 and Table 9.1.2-3 in TS 38.133 [14].</p>
<p><b>gapOffset</b> Value <i>gapOffset</i> is the gap offset of the gap pattern with MGRP indicated in the field <i>mgrp</i>. The value range is from 0 to <i>mgrp</i>-1. If <i>ncsgInd-r17</i> is present, this offset value refers to the starting point of VIL1 (the visible interruption length before the ML).</p>
<p><b>gapPriority</b> Indicates the priority of this measurement gap (see TS 38.133 [14]). Value 1 indicates highest priority, value 2 indicates second level priority, and so on.</p>
<p><b>gapSharing</b> Indicates the measurement gap sharing scheme that applies to this <i>GapConfig</i>. For applicability of the different gap sharing schemes, see TS 38.133 [14]. Value <i>scheme00</i> corresponds to scheme "00", value <i>scheme01</i> corresponds to scheme "01", and so on.</p>
<p><b>gapToAddModList</b> A list of of measurement gap configuration to be added or modified. If more than one measurement gap is configured (i.e. concurrent measurement gap as specified in TS 38.133[14], clause 9.1.8 for TN or clause 9.1C.8 for NTN), the maximum number of configured measurement gap is limited by the gap combinations defined in Table 9.1.8-1 in TS 38.133 [14] for TN. For NTN the maximum number of configured measurement gap is limited by UE capability indicated in <i>parallelMeasurementGap</i>. In this version of the specification, the network configures this field only in NR standalone. This field is used only for a UE that supports pre-configured measurement gap, concurrent measurement gap, or NCSG. In this version of the specification, the network does not configure concurrent measurement gap together with preconfigured measurement gap for positioning. For the UE not supporting the capability of <i>musim-GapPriorityPreference</i>, the network does not configure concurrent measurement gap together with MUSIM gap.</p>
<p><b>gapToReleaseList</b> A list of measurement gap configuration to be released.</p>
<p><b>gapType</b> Indicates the type of this measurement gap. Value <i>perUE</i> indicates that it is a per UE measurement gap, value <i>perFR1</i> indicates that it is an FR1 measurement gap, and value <i>perFR2</i> indicates that it is an FR2 measurement gap.</p>
<p><b>gapUE</b> Indicates measurement gap configuration that applies to all frequencies (FR1 and FR2). In (NG)EN-DC, <i>gapUE</i> cannot be set up by NR RRC (i.e. only LTE RRC can configure per UE measurement gap). In NE-DC, <i>gapUE</i> can only be set up by NR RRC (i.e. LTE RRC cannot configure per UE gap). In NR-DC, <i>gapUE</i> can only be set up in the <i>measConfig</i> associated with MCG. If <i>gapUE</i> is configured, then neither <i>gapFR1</i> nor <i>gapFR2</i> can be configured. For TN, the applicability of the per UE measurement gap is according to Table 9.1.2-2 and Table 9.1.2-3 for non-RedCap UEs, and Table 9.1A.2-2 for RedCap UEs in TS 38.133 [14]. For NTN, the applicability of per UE measurement gap is according to subclause 9.1C.2 in TS 38.133 [14].</p>
<p><b>measGapId</b> The ID of this measurement gap configuration.</p>
<p><b>mgl</b> Value <i>mgl</i> is the measurement gap length in ms of the measurement gap. If <i>ncsgInd-r17</i> is not present, the measurement gap length is according to Table 9.1.2-1 for non-RedCap UEs in TN, Table 9.1A.2-1 for RedCap UEs in TN, and Table 9.1C.2-1 for NTN in TS 38.133 [14]. If <i>ncsgInd-r17</i> is present, this field indicates the measurement length (ML) in NCSG pattern and is configured according to Table 9.1.9.3-1 in TS 38.133 [14]. Value <i>ms1dot5</i> corresponds to 1.5 ms, <i>ms3</i> corresponds to 3 ms and so on. If <i>mgl-r16</i> is present, UE shall ignore the <i>mgl</i> (without suffix). Value <i>ms1</i>, <i>ms2</i>, and <i>ms5</i> can only be configured if <i>ncsgInd</i> is present.</p>

<b><i>mgrp</i></b> If <i>ncsglnd-r17</i> is not present, the <i>mgrp</i> field indicates the measurement gap repetition period in (ms) of the measurement gap according to Table 9.1.2-1 for non-RedCap UEs in TN, Table 9.1A.2-1 for RedCap UEs in TN, and Table 9.1C.2-1 for NTN in TS 38.133 [14]. If <i>ncsglnd-r17</i> is present, the <i>mgrp</i> field indicates the Visible Interruption Repetition Period (VIRP) of NCSG pattern and is configured according to Table 9.1.9.3-1 in TS 38.133 [14].
<b><i>mgta</i></b> Value <i>mgta</i> is the measurement gap timing advance in ms. The applicability of the measurement gap timing advance is according to clause 9.1.2 for non-RedCap UEs in TN, clause 9.1A.2 for RedCap UEs in TN, and clause 9.1C.2 for NTN of TS 38.133 [14], or according to clause 9.1.9 of TS 38.133 [14] if <i>ncsglnd</i> is present. Value <i>ms0</i> corresponds to 0 ms, <i>ms0dot25</i> corresponds to 0.25 ms, <i>ms0dot5</i> corresponds to 0.5 ms and <i>ms0dot75</i> corresponds to 0.75 ms. For FR2, the network only configures 0 ms and 0.25 ms if <i>ncsglnd</i> is not present. If <i>ncsglnd</i> is present, the network only configures 0ms for per-UE NCSG and FR1 NCSG and only configures 0ms or 0.75ms for FR2 NCSG. Value <i>ms0dot75</i> can only be configured if <i>ncsglnd</i> is present.
<b><i>ncsglnd</i></b> Indicates that the measurement gap is a NCSG as specified in 38.133 [14].
<b><i>posMeasGapPreConfigToAddModList</i></b> List of preconfigured measurement gap for positioning to add and/or modify. All the gaps configured are associated with the measurement of PRS for RSTD, UE-RxTx Time Difference, PRS-RSRP and PRS-RSRPP as defined in TS 38.215 [9]. In this version of the specification, the network does not configure preconfigured measurement gap for positioning together with concurrent measurement gap or MUSIM gap.
<b><i>posMeasGapPreConfigToReleaseList</i></b> List of preconfigured measurement gap for positioning to release.
<b><i>preConfigInd</i></b> Indicates whether the measurement gap is a pre-configured measurement gap.
<b><i>refFR2ServCellAsyncCA</i></b> Indicates the FR2 serving cell identifier whose SFN and subframe is used for FR2 gap calculation for this gap pattern with asynchronous CA involving FR2 carrier(s).
<b><i>refServCellIndicator</i></b> Indicates the serving cell whose SFN and subframe are used for gap calculation for this gap pattern. Value pCell corresponds to the PCell, pSCell corresponds to the PSCell, and mcg-FR2 corresponds to a serving cell on FR2 frequency in MCG.

Conditional Presence	Explanation
<i>AsyncCA</i>	This field is mandatory present when configuring and reconfiguring FR2 gap pattern to UE in: - (NG)EN-DC or NR SA with asynchronous CA involving FR2 carrier(s); - NE-DC or NR-DC with asynchronous CA involving FR2 carrier(s), if the field <i>refServCellIndicator</i> is set to <i>mcg-FR2</i> . Otherwise, it is absent, Need R.
<i>NEDCorNRDC</i>	This field is mandatory present when configuring and reconfiguring gap pattern to UE in NE-DC or NR-DC. Otherwise, it is absent, Need R.
<i>PRS</i>	This field is optionally present, Need R, when configuring gap pattern to UE for measurements of DL-PRS configured via LPP (TS 37.355 [49]). Otherwise, it is absent.

– ***MeasGapId***

The IE *MeasGapId* used to identify a per UE or per FR measurement gap configuration.

#### *MeasGapSharingConfig* field descriptions

##### ***gapSharingFR1***

Indicates the measurement gap sharing scheme that applies to the gap set via *gapFR1*. In (NG)EN-DC, *gapSharingFR1* cannot be set up by NR RRC (i.e. only LTE RRC can configure FR1 gap sharing). In NE-DC, *gapSharingFR1* can only be set up by NR RRC (i.e. LTE RRC cannot configure FR1 gap sharing). In NR-DC, *gapSharingFR1* can only be set up in the *measConfig* associated with MCG. *gapSharingFR1* can not be configured together with *gapSharingUE*. For the applicability of the different gap sharing schemes, see TS 38.133 [14]. Value *scheme00* corresponds to scheme "00", value *scheme01* corresponds to scheme "01", and so on.

##### ***gapSharingFR2***

Indicates the measurement gap sharing scheme that applies to the gap set via *gapFR2*. In (NG)EN-DC or NE-DC, *gapSharingFR2* can only be set up by NR RRC (i.e. LTE RRC cannot configure FR2 gap sharing). In NR-DC, *gapSharingFR2* can only be set up by MCG in the *measConfig* associated with MCG. *gapSharingFR2* cannot be configured together with *gapSharingUE*. For applicability of the different gap sharing schemes, see TS 38.133 [14]. Value *scheme00* corresponds to scheme "00", value *scheme01* corresponds to scheme "01", and so on.

##### ***gapSharingUE***

Indicates the measurement gap sharing scheme that applies to the gap set via *gapUE*. In (NG)EN-DC, *gapSharingUE* cannot be set up by NR RRC (i.e. only LTE RRC can configure per UE gap sharing). In NE-DC, *gapSharingUE* can only be set up by NR RRC (i.e. LTE RRC cannot configure per UE gap sharing). In NR-DC, *gapSharingUE* can only be set up in the *measConfig* associated with MCG. If *gapSharingUE* is configured, then neither *gapSharingFR1* nor *gapSharingFR2* can be configured. For the applicability of the different gap sharing schemes, see TS 38.133 [14]. Value *scheme00* corresponds to scheme "00", value *scheme01* corresponds to scheme "01", and so on.

## – *MeasId*

The IE *MeasId* is used to identify a measurement configuration, i.e., linking of a measurement object and a reporting configuration.

### *MeasId* information element

```
-- ASN1START
-- TAG-MEASID-START

MeasId ::=                               INTEGER (1..maxNrofMeasId)

-- TAG-MEASID-STOP
-- ASN1STOP
```

## – *MeasIdleConfig*

The IE *MeasIdleConfig* is used to convey information to UE about measurements requested to be done while in RRC\_IDLE or RRC\_INACTIVE.

### *MeasIdleConfig* information element

```
-- ASN1START
-- TAG-MEASIDLECONFIG-START

```

<b>MeasIdleConfig field descriptions</b>
<b>absThreshSS-BlocksConsolidation</b> Threshold for consolidation of L1 measurements per RS index.
<b>beamMeasConfigIdle</b> Indicates the beam level measurement configuration.
<b>carrierFreq</b> Indicates the NR carrier frequency to be used for measurements during RRC_IDLE or RRC_INACTIVE.
<b>carrierFreqEUTRA</b> Indicates the E-UTRA carrier frequency to be used for measurements during RRC_IDLE or RRC_INACTIVE.
<b>deriveSSB-IndexFromCell</b> This field indicates whether the UE may use the timing of any detected cell on that frequency to derive the SSB index of all neighbour cells on that frequency. If this field is set to true, the UE assumes SFN and frame boundary alignment across cells on the neighbor frequency as specified in TS 38.133 [14].
<b>frequencyBandList</b> Indicates the list of frequency bands for which the NR idle/inactive measurement parameters apply. The UE shall select the first listed band which it supports in the frequencyBandList field to represent the NR neighbour carrier frequency.
<b>includeBeamMeasurements</b> Indicates whether or not the UE shall include beam measurements in the NR idle/inactive measurement results.
<b>maxNrofRS-IndexesToReport</b> Max number of beam indices to include in the idle/inactive measurement result.
<b>measCellListEUTRA</b> Indicates the list of E-UTRA cells which the UE is requested to measure and report for idle/inactive measurements.
<b>measCellListNR</b> Indicates the list of NR cells which the UE is requested to measure and report for idle/inactive measurements.
<b>measIdleCarrierListEUTRA</b> Indicates the E-UTRA carriers to be measured during RRC_IDLE or RRC_INACTIVE.
<b>measIdleCarrierListNR</b> Indicates the NR carriers to be measured during RRC_IDLE or RRC_INACTIVE.
<b>measIdleCarrierListNR-LessThan5MHz</b> Indicates the NR carriers to be measured during RRC_IDLE or RRC_INACTIVE for the cell(s) supporting 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13]. Total number of <i>MeasIdleCarrierNR</i> included in <i>measIdleCarrierListNR</i> and <i>measIdleCarrierListNR-LessThan5MHz</i> does not exceed <i>maxFreqIdle-r16</i> .
<b>measIdleDuration</b> Indicates the duration for performing idle/inactive measurements while in RRC_IDLE or RRC_INACTIVE. Value sec10 correspond to 10 seconds, value sec30 to 30 seconds and so on.
<b>measIdleValidityDuration, measReselectionValidityDuration</b> Indicates time values for UE to determine validity of reported idle/inactive and reselection measurements as defined in TS 38.133[14]. Value s5 correspond to 5 seconds, value s10 correspond to 10 seconds and so on.
<b>measReselectionCarrierListNR</b> Indicates the NR carriers for reselection measurement reporting.
<b>measReselectionCarrierListNR-LessThan5MHz</b> Indicates the NR carriers for reselection measurement reporting for the cell(s) supporting 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13]. Total number of <i>MeasReselectionCarrierNR</i> included in <i>measReselectionCarrierListNR</i> and <i>measReselectionCarrierListNR-LessThan5MHz</i> does not exceed <i>maxFreqIdle-r16</i> .
<b>nrofSS-BlocksToAverage</b> Number of SS blocks to average for cell measurement derivation.

<b>qualityThreshold</b>	Indicates the quality thresholds for reporting the measured cells for idle/inactive NR measurements.
<b>qualityThresholdEUTRA</b>	Indicates the quality thresholds for reporting the measured cells for idle/inactive E-UTRA measurements.
<b>reportQuantities</b>	Indicates which measurement quantities UE is requested to report in the idle/inactive measurement report.
<b>reportQuantitiesEUTRA</b>	Indicates which E-UTRA measurement quantities the UE is requested to report in the idle/inactive measurement report.
<b>reportQuantityRS-Indexes</b>	Indicates which measurement information per beam index the UE shall include in the NR idle/inactive measurement results.
<b>smtc</b>	Indicates the measurement timing configuration for inter-frequency measurement. If this field is absent in <i>VarMeasIdleConfig</i> , the UE assumes that SSB periodicity is 5 ms in this frequency.
<b>ssbSubcarrierSpacing</b>	Indicates subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz
<b>ssb-ToMeasure</b>	The set of SS blocks to be measured within the SMTC measurement duration (see TS 38.215 [9]). When the field is absent in <i>VarMeasIdleConfig</i> , the UE measures on all SS-blocks.
<b>ss-RSSI-Measurement</b>	Indicates the SSB-based RSSI measurement configuration. If the field is absent in <i>VarMeasIdleConfig</i> , the UE behaviour is defined in TS 38.215 [89], clause 5.1.3.
<b>validityAreaList</b>	Indicates the list of frequencies and optionally, for each frequency, a list of cells within which the UE is required to perform measurements while in RRC_IDLE and RRC_INACTIVE.

Conditional Presence	Explanation
<i>LessThan5MHz</i>	The field is mandatory present if the <i>carrierBandwidth</i> in SIB1 indicates UL or DL transmission bandwidth other than 15 PRB and the corresponding neighbour cell(s) support(s) 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13]. Otherwise, the field is optional, Need R.

## – *MeasIdToAddModList*

The IE *MeasIdToAddModList* concerns a list of measurement identities to add or modify, with for each entry the *measId*, the associated *measObjectId* and the associated *reportConfigId*.

### ***MeasIdToAddModList* information element**

```
-- ASN1START
-- TAG-MEASIDTOADDMODLIST-START
```

```
MeasIdToAddModList ::= SEQUENCE (SIZE (1..maxNrofMeasId)) OF MeasIdToAddMod
```

```

MeasIdToAddMod ::=
    SEQUENCE {
        measId
        measObjectId
        reportConfigId
    }

-- TAG-MEASIDTOADDMODLIST-STOP
-- ASN1STOP

```

## – *MeasObjectCLI*

The IE *MeasObjectCLI* specifies information applicable for SRS-RSRP measurements and/or CLI-RSSI measurements.

### *MeasObjectCLI* information element

```

-- ASN1START
-- TAG-MEASOBJECTCLI-START

MeasObjectCLI-r16 ::=
    SEQUENCE {
        cli-ResourceConfig-r16
        ...
    }

CLI-ResourceConfig-r16 ::=
    SEQUENCE {
        srs-ResourceConfig-r16
        rssi-ResourceConfig-r16

        INTEGER (0..13),
        INTEGER (1..14),
        RSSI-PeriodicityAndOffset-r16,
        ServCellIndex
        OPTIONAL, -- Need S
        ...
    }

```

```

}
RSSI-ResourceId-r16 ::=                INTEGER (0.. maxNrofCLI-RSSI-Resources-1-r16)
RSSI-PeriodicityAndOffset-r16 ::=     CHOICE {
    s110                                INTEGER(0..9),
    s120                                INTEGER(0..19),
    s140                                INTEGER(0..39),
    s180                                INTEGER(0..79),
    s1160                               INTEGER(0..159),
    s1320                               INTEGER(0..319),
    s1640                               INTEGER(0..639),
    ...
}
-- TAG-MEASOBJECTCLI-STOP
-- ASN1STOP

```

<b>CLI-ResourceConfig field descriptions</b>
<b>srs-ResourceConfig</b> SRS resources to be used for CLI measurements.
<b>rsi-ResourceConfig</b> CLI-RSSI resources to be used for CLI measurements.

<b>MeasObjectCLI field descriptions</b>
<b>cli-ResourceConfig</b> SRS and/or CLI-RSSI resource configuration for CLI measurement.

<b>SRS-ResourceConfigCLI field descriptions</b>
<b>refBWP</b> DL BWP id that is used to derive the reference point of the SRS resource (see TS 38.211[16], clause 6.4.1.4.3)
<b>refServCellIndex</b> The index of the reference serving cell that the <i>refBWP</i> belongs to. If this field is absent, the reference serving cell is PCell.
<b>srs-SCS</b> Subcarrier spacing for SRS. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz

<b>RSSI-ResourceConfigCLI field descriptions</b>
<p><b>nrofPRBs</b> Allowed size of the measurement BW. Only multiples of 4 are allowed. The smallest configurable number is the minimum of 4 and the width of the active DL BWP. If the configured value is larger than the width of the active DL BWP, the UE shall assume that the actual CLI-RSSI resource bandwidth is within the active DL BWP.</p>
<p><b>nrofSymbols</b> Within a slot that is configured for CLI-RSSI measurement (see slotConfiguration), the UE measures the RSSI from <i>startPosition</i> to <i>startPosition</i> + <i>nrofSymbols</i> - 1. The configured CLI-RSSI resource does not exceed the slot boundary of the reference SCS. If the SCS of configured DL BWP(s) is larger than the reference SCS, network configures <i>startPosition</i> and <i>nrofSymbols</i> such that the configured CLI-RSSI resource not to exceed the slot boundary corresponding to the configured BWP SCS. If the reference SCS is larger than SCS of configured DL BWP(s), network ensures <i>startPosition</i> and <i>nrofSymbols</i> are integer multiple of reference SCS divided by configured BWP SCS.</p>
<p><b>refServCellIndex</b> The index of the reference serving cell. Frequency reference point of the RSSI resource is subcarrier 0 of CRB0 of the reference serving cell. If this field is absent, the reference serving cell is PCell.</p>
<p><b>rss-PeriodicityAndOffset</b> Periodicity and slot offset for this CLI-RSSI resource. All values are in "number of slots". Value <i>s1</i> corresponds to a periodicity of 1 slot, value <i>s2</i> corresponds to a periodicity of 2 slots, and so on. For each periodicity the corresponding offset is given in number of slots.</p>
<p><b>rss-SCS</b> Reference subcarrier spacing for CLI-RSSI measurement. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz UE performs CLI-RSSI measurement with the SCS of the active bandwidth part within the configured CLI-RSSI resource in the active BWP regardless of the reference SCS of the measurement resource.</p>
<p><b>startPosition</b> OFDM symbol location of the CLI-RSSI resource within a slot.</p>
<p><b>startPRB</b> Starting PRB index of the measurement bandwidth. For the case where the reference subcarrier spacing is smaller than subcarrier spacing of active DL BWP(s), network configures startPRB and nrofPRBs are as a multiple of active BW SCS divided by reference SCS.</p>

## – MeasObjectEUTRA

The IE *MeasObjectEUTRA* specifies information applicable for E-UTRA cells.

### **MeasObjectEUTRA information element**

```
-- ASN1START
-- TAG-MEASOBJECTEUTRA-START
```

```
MeasObjectEUTRA ::= SEQUENCE {
    carrierFreq          ARFCN-ValueEUTRA,
    allowedMeasBandwidth EUTRA-AllowedMeasBandwidth,
    cellsToRemoveListEUTRAN EUTRA-CellIndexList OPTIONAL, -- Need N
    cellsToAddModListEUTRAN SEQUENCE (SIZE (1..maxCellMeasEUTRA)) OF EUTRA-Cell OPTIONAL, -- Need N
    excludedCellsToRemoveListEUTRAN EUTRA-CellIndexList OPTIONAL, -- Need N
    excludedCellsToAddModListEUTRAN SEQUENCE (SIZE (1..maxCellMeasEUTRA)) OF EUTRA-ExcludedCell OPTIONAL, -- Need N
}
```

```

    eutra-PresenceAntennaPort1          EUTRA-PresenceAntennaPort1,
    eutra-Q-OffsetRange                 EUTRA-Q-OffsetRange
    widebandRSRQ-Meas                   BOOLEAN,
    . . .
    [[
    associatedMeasGap-r17                 MeasGapId-r17
    ]],
    [[
    measSequence-r18                    MeasSequence-r18
    ]]
}

EUTRA-CellIndexList ::=
SEQUENCE (SIZE (1..maxCellMeasEUTRA)) OF EUTRA-CellIndex

EUTRA-CellIndex ::=
INTEGER (1..maxCellMeasEUTRA)

EUTRA-Cell ::=
cellIndexEUTRA                         SEQUENCE {
physCellId                             EUTRA-CellIndex,
cellIndividualOffset                   EUTRA-PhysCellId,
                                        EUTRA-Q-OffsetRange
}

EUTRA-ExcludedCell ::=
cellIndexEUTRA                         SEQUENCE {
physCellIdRange                       EUTRA-CellIndex,
                                        EUTRA-PhysCellIdRange
}

-- TAG-MEASOBJECTEUTRA-STOP
-- ASN1STOP

```

<i>EUTRAN-ExcludedCell</i> field descriptions
<b>cellIndexEUTRA</b> Entry index in the cell list.
<b>physicalCellIdRange</b> Physical cell identity or a range of physical cell identities.

<i>EUTRAN-Cell</i> field descriptions
<b>physicalCellId</b> Physical cell identity of a cell in the cell list.
<b>cellIndividualOffset</b> Cell individual offset applicable to a specific cell. Value <i>dB-24</i> corresponds to -24 dB, <i>dB-22</i> corresponds to -22 dB and so on.

<b>MeasObjectEUTRA field descriptions</b>
<b>allowedMeasBandwidth</b> The maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "N <sub>RB</sub> " TS 36.104 [33].
<b>associatedMeasGap</b> Indicates the associated measurement gap for measuring this EUTRA frequency. If this field is absent, the associated measurement gap is the gap configured via <i>gapFR1</i> or <i>gapUE</i> .
<b>carrierFreq</b> Identifies E-UTRA carrier frequency for which this configuration is valid. Network does not configure more than one <i>MeasObjectEUTRA</i> for the same physical frequency, regardless of the E-ARFCN used to indicate this.
<b>cellsToAddModListEUTRAN</b> List of cells to add/ modify in the cell list.
<b>cellsToRemoveListEUTRAN</b> List of cells to remove from the cell list.
<b>eutra-PresenceAntennaPort1</b> When set to <i>true</i> , the UE may assume that at least two cell-specific antenna ports are used in all neighbouring cells.
<b>eutra-Q-OffsetRange</b> Used to indicate a cell, or frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB. Value <i>dB-24</i> corresponds to -24 dB, value <i>dB-22</i> corresponds to -22 dB and so on.
<b>excludedCellsToAddModListEUTRAN</b> List of cells to add/ modify in the exclude-list of cells.
<b>excludedCellsToRemoveListEUTRAN</b> List of cells to remove from the exclude-list of cells.
<b>measSequence</b> Indicates the recommended sequence for intra/inter-RAT intra/inter-frequency measurement. Value 1 means the corresponding frequency is measured firstly. Value 2 means the corresponding frequency is measured secondly and so on. If more than one frequency is configured with the same value, it means no recommended sequence among these frequencies. If not configured, it means there is no recommended sequence for the corresponding frequency. This field is only configured for NR standalone or if the <i>measObject</i> is associated to the MCG.
<b>widebandRSRQ-Meas</b> If set to <i>true</i> , the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [40]. The network may set the field to <i>true</i> if the measurement bandwidth indicated by <i>allowedMeasBandwidth</i> is 50 resource blocks or larger; otherwise the network sets this field to <i>false</i> .

## – *MeasObjectId*

The IE *MeasObjectId* used to identify a measurement object configuration.

### ***MeasObjectId* information element**

```
-- ASN1START
-- TAG-MEASOBJECTID-START

MeasObjectId ::=
    INTEGER (1..maxNrofObjectId)

-- TAG-MEASOBJECTID-STOP
-- ASN1STOP
```

– *MeasObjectNR*

The IE *MeasObjectNR* specifies information applicable for SS/PBCH block(s) intra/inter-frequency measurements and/or CSI-RS intra/inter-frequency measurements.

***MeasObjectNR* information element**

```

-- ASN1START
-- TAG-MEASOBJECTNR-START

MeasObjectNR ::=

```

<b>CellsToAddMod field descriptions</b>
<b>cellIndividualOffset</b> Cell individual offsets applicable to a specific cell.
<b>ntn-NeighbourCellInfo</b> Includes satellite assistance information of an NTN neighbour cell.
<b>physCellId</b> Physical cell identity of a cell in the cell list.
<b>referenceLocation</b> Reference location of a neighbor NTN Earth-moving cell for the evaluation of the trigger criteria of an associated <i>ReportConfig</i> which contains <i>EventD2</i> or <i>condEventD2</i> .

<b>MeasObjectNR field descriptions</b>
<p><b>absThreshCSI-RS-Consolidation</b> Absolute threshold for the consolidation of measurement results per CSI-RS resource(s) from L1 filter(s). The field is used for the derivation of cell measurement results as described in 5.5.3.3 and the reporting of beam measurement information per CSI-RS resource as described in 5.5.5.2.</p>
<p><b>absThreshSS-BlocksConsolidation</b> Absolute threshold for the consolidation of measurement results per SS/PBCH block(s) from L1 filter(s). The field is used for the derivation of cell measurement results as described in 5.5.3.3 and the reporting of beam measurement information per SS/PBCH block index as described in 5.5.5.2.</p>
<p><b>allowedCellsToAddModList</b> List of cells to add/modify in the allow-list of cells. It applies only to SSB resources.</p>
<p><b>allowedCellsToRemoveList</b> List of cells to remove from the allow-list of cells.</p>
<p><b>associatedMeasGapSSB</b> Indicates the associated measurement gap for SSB measuring identified by <i>ssb-ConfigMobility</i> in this measurement object. When multiple <i>MeasObjectNR</i> with the same SSB frequency are configured, the network configures the same measurement gap ID in this field for each <i>MeasObjectNR</i>. If this field is absent, the associated measurement gap is the gap configured via <i>gapFR1</i>, <i>gapFR2</i>, or <i>gapUE</i>.</p>
<p><b>associatedMeasGapSSB2</b> Indicates the associated additional measurement gap for SSB measuring identified by <i>ssb-ConfigMobility</i> in this measurement object for NTN deployments. When multiple <i>MeasObjectNR</i> with the same SSB frequency are configured, the network configures the same measurement gap ID in this field for each <i>MeasObjectNR</i>. If this field is absent, the associated measurement gap is the gap indicated by <i>associatedMeasGapSSB</i>.</p>
<p><b>associatedMeasGapCSIRS</b> Indicates the associated measurement gap for CSI-RS measuring identified by <i>csi-rs-ResourceConfigMobility</i> in this measurement object. If this field is absent, the associated measurement gap is the gap configured via <i>gapFR1</i>, <i>gapFR2</i>, or <i>gapUE</i>.</p>
<p><b>associatedMeasGapCSIRS2</b> Indicates the associated additional measurement gap for CSI-RS measuring identified by <i>csi-rs-ResourceConfigMobility</i> in this measurement object for NTN deployments. If this field is absent, the associated measurement gap is the gap indicated by <i>associatedMeasGapCSIRS</i>. In this release of the specification, this field is not configured for NTN deployments.</p>
<p><b>cellsToAddModList</b> List of cells to add/modify in the cell list. If the network includes <i>cellsToAddModListExt-v1710</i> and/or <i>cellsToAddModListExt-v1800</i>, it contains the same number of entries listed in the same order as in <i>cellsToAddModList</i> (i.e without suffix).</p>
<p><b>cellsToRemoveList</b> List of cells to remove from the cell list.</p>
<p><b>excludedCellsToAddModList</b> List of cells to add/modify in the exclude-list of cells. It applies only to SSB resources.</p>
<p><b>excludedCellsToRemoveList</b> List of cells to remove from the exclude-list of cells.</p>
<p><b>freqBandIndicatorNR</b> The frequency band in which the SSB and/or CSI-RS indicated in this <i>MeasObjectNR</i> are located and according to which the UE shall perform the RRM measurements. This field is always provided when the network configures measurements with this <i>MeasObjectNR</i>.</p>
<p><b>measCyclePSCell</b> The parameter is used only when the PSCell is configured on the frequency indicated by the <i>measObjectNR</i> and the SCG is deactivated, see TS 38.133 [14]. The field may also be configured when the PSCell is not configured on that frequency. The network always configures <i>measCyclePSCell</i> for the <i>measObjectNR</i> associated with the PSCell if <i>bfd-and-RLM</i> is set to <i>true</i> and the SCG is deactivated. Value <i>ms160</i> corresponds to 160 ms, value <i>ms256</i> corresponds to 256 ms and so on.</p>
<p><b>measCycleSCell</b> The parameter is used only when an SCell is configured on the frequency indicated by the <i>measObjectNR</i> and is in deactivated state, see TS 38.133 [14]. gNB configures the parameter whenever an SCell is configured on the frequency indicated by the <i>measObjectNR</i>, but the field may also be signalled when an SCell is not configured. Value <i>sf160</i> corresponds to 160 sub-frames, value <i>sf256</i> corresponds to 256 sub-frames and so on.</p>

<b>measSequence</b>	Indicates the recommended sequence for intra/inter-RAT intra/inter-frequency measurement. Value 1 means the corresponding frequency is measured firstly. Value 2 means the corresponding frequency is measured secondly and so on. If more than one frequency is configured with the same value, it means no recommended sequence among these frequencies. If not provided, it means there is no recommended sequence for the corresponding frequency. This field is only configured for NR standalone or if the <i>measObject</i> is associated to the MCG.
<b>nrofCSI-RS-ResourcesToAverage</b>	Indicates the maximum number of measurement results per beam based on CSI-RS resources to be averaged. The same value applies for each detected cell associated with this <i>MeasObjectNR</i> .
<b>nrofSS-BlocksToAverage</b>	Indicates the maximum number of measurement results per beam based on SS/PBCH blocks to be averaged. The same value applies for each detected cell associated with this <i>MeasObject</i> .
<b>ntn-PolarizationDL</b>	If present, this parameter indicates polarization information for downlink transmission on service link: including Right hand, Left hand circular polarizations (RHCP, LHCP) and Linear polarization.
<b>ntn-PolarizationUL</b>	If present, this parameter indicates polarization information for uplink transmission on service link. If not present and <i>ntn-PolarizationDL</i> is present, UE assumes the same polarization for UL and DL.
<b>offsetMO</b>	Offset values applicable to all measured cells with reference signal(s) indicated in this <i>MeasObjectNR</i> .
<b>quantityConfigIndex</b>	Indicates the <i>n</i> -th element of <i>quantityConfigNR-List</i> provided in <i>MeasConfig</i> .
<b>referenceSignalConfig</b>	RS configuration for SS/PBCH block and CSI-RS.
<b>refFreqCSI-RS</b>	Point A which is used for mapping of CSI-RS to physical resources according to TS 38.211 [16] clause 7.4.1.5.3.
<b>smtc1</b>	Primary measurement timing configuration. (see clause 5.5.2.10).
<b>smtc2</b>	Secondary measurement timing configuration for SS corresponding to this <i>MeasObjectNR</i> with PCI listed in <i>pci-List</i> . For these SS, the periodicity is indicated by <i>periodicity</i> in <i>smtc2</i> and the timing offset is equal to the offset indicated in <i>periodicityAndOffset</i> modulo <i>periodicity</i> . <i>periodicity</i> in <i>smtc2</i> can only be set to a value strictly shorter than the periodicity indicated by <i>periodicityAndOffset</i> in <i>smtc1</i> (e.g. if <i>periodicityAndOffset</i> indicates <i>sf10</i> , <i>periodicity</i> can only be set of <i>sf5</i> , if <i>periodicityAndOffset</i> indicates <i>sf5</i> , <i>smtc2</i> cannot be configured).
<b>smtc3list</b>	Measurement timing configuration list for SS corresponding to IAB-MT. This is used for the IAB-node's discovery of other IAB-nodes and the IAB-Donor-DUs.
<b>smtc4list</b>	Measurement timing configuration list for NTN deployments, see clause 5.5.2.10.
<b>ssbFrequency</b>	Indicates the frequency of the SS associated to this <i>MeasObjectNR</i> . For operation with shared spectrum channel access, this field is a $k \cdot 30$ kHz shift from the sync raster where $k = 0, 1, 2$ , and so on if the <i>reportType</i> within the corresponding <i>ReportConfigNR</i> is set to <i>reportCGI</i> (see TS 38.211 [16], clause 7.4.3.1). Frequencies are considered to be on the sync raster if they are also identifiable with a GSCN value (see TS 38.101-1 [15], or TS 38.101-5 [75]).
<b>ssb-PositionQCL-Common</b>	Indicates the QCL relationship between SS/PBCH blocks for all measured cells as specified in TS 38.213 [13], clause 4.1.

**ssbSubcarrierSpacing**

Subcarrier spacing of SSB.

Only the following values are applicable depending on the used frequency:

FR1: 15 or 30 kHz

FR2-1/FR2-NTN: 120 or 240 kHz

FR2-2: 120, 480, or 960 kHz

**t312**

The value of timer T312. Value ms0 represents 0 ms, ms50 represents 50 ms and so on.

**ReferenceSignalConfig field descriptions****csi-rs-ResourceConfigMobility**

CSI-RS resources to be used for CSI-RS based RRM measurements.

**ssb-ConfigMobility**

SSB configuration for mobility (nominal SSBs, timing configuration).

<b><i>RMTC-Config</i> field descriptions</b>
<p><b><i>measDurationSymbols</i></b>  Number of consecutive symbols for which the Physical Layer reports samples of RSSI (see TS 38.215 [9], clause 5.1.21). Value <i>sym1</i> corresponds to one symbol, <i>sym14or12</i> corresponds to 14 symbols of the reference numerology for NCP and 12 symbols for ECP, and so on.  If <i>measDurationSymbols-v1700</i> is signalled, the UE ignores <i>measDurationSymbols-r16</i>.</p>
<p><b><i>ref-BWPId</i></b>  Indicates the reference BWP for the TCI state indicated in <i>tcj-StateInfo</i>. Network includes this field if <i>tcj-StateInfo</i> is present. This field is only applicable for operation with shared spectrum channel access in FR2-2 and network does not configure this if the UE does not have any serving cells in FR2-2.</p>
<p><b><i>ref-SCS-CP</i></b>  Indicates a reference subcarrier spacing and cyclic prefix to be used for RSSI measurements (see TS 38.215 [9]). Value kHz15 corresponds to 15kHz, kHz30 corresponds to 30 kHz, value kHz60-NCP corresponds to 60 kHz using normal cyclic prefix (NCP), and kHz60-ECP corresponds to 60 kHz using extended cyclic prefix (ECP).  If <i>ref-SCS-CP-v1700</i> is signalled, the UE ignores <i>ref-SCS-CP-r16</i>.</p>
<p><b><i>ref-ServCellId</i></b>  Indicates the FR2-2 reference serving cell index for the TCI state. Network includes this field if <i>tcj-StateInfo</i> is present. This field is only applicable for operation with shared spectrum channel access in FR2-2 and network does not configure this if the UE does not have any serving cells in FR2-2.</p>
<p><b><i>rmtc-Bandwidth</i></b>  Indicates the bandwidth for the RSSI measurement (see TS 38. 215 [9], clause 5.1.21).</p>
<p><b><i>rmtc-Frequency</i></b>  Indicates the center frequency of the measured bandwidth for a frequency which operates with shared spectrum channel access (see TS 38. 215 [9], clause 5.1.21).</p>
<p><b><i>rmtc-Periodicity</i></b>  Indicates the RSSI measurement timing configuration (RMTC) periodicity (see TS 38.215 [9], clause 5.1.21).</p>
<p><b><i>rmtc-SubframeOffset</i></b>  Indicates the RSSI measurement timing configuration (RMTC) subframe offset for this frequency (see TS 38.215 [9], clause 5.1.21). For inter-frequency measurements, this field is optional present and if it is not configured, the UE chooses a random value as <i>rmtc-SubframeOffset</i> for <i>measDurationSymbols</i> which shall be selected to be between 0 and the configured <i>rmtc-Periodicity</i> with equal probability.</p>
<p><b><i>tcj-StateId</i></b>  Indicates the TCI state to be used for RSSI measurements. This field is only applicable for shared spectrum channel access in FR2-2. Network does not configure this if the UE does not have any serving cells in FR2-2 and in such a case, it is up to UE implementation how to determine the spatial domain filter for the inter-frequency RSSI measurement in FR2-2.</p>

<b>SSB-ConfigMobility field descriptions</b>
<p><b>cca-CellsToAddModList, cca-CellsToRemoveList</b> Lists of cells to be added or removed from the list of neighbor cells that apply channel access mode procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2.</p>
<p><b>deriveSSB-IndexFromCell</b> If this field is set to <i>true</i>, UE assumes SFN and frame boundary alignment across cells on the same frequency carrier as specified in TS 38.133 [14]. Hence, if the UE is configured with a serving cell for which (<i>absoluteFrequencySSB, subcarrierSpacing</i>) in <i>ServingCellConfigCommon</i> is equal to (<i>ssbFrequency, ssbSubcarrierSpacing</i>) in this <i>MeasObjectNR</i>, this field indicates whether the UE can utilize the timing of this serving cell to derive the index of SS block transmitted by neighbour cell. Otherwise, this field indicates whether the UE may use the timing of any detected cell on that target frequency to derive the SSB index of all neighbour cells on that frequency.</p>
<p><b>deriveSSB-IndexFromCellInter</b> If this field is present, UE assumes SFN and frame boundary alignment between the reference serving cell indicated by <i>ServCellIndex</i> and all neighbour cells in this <i>MeasObjectNR</i> as specified in TS 38.133 [14]. This field also indicates that the UE can utilize the timing of the reference serving cell indicated by <i>ServCellIndex</i> to derive the index of SS block transmitted by all inter-frequency neighbour cells on the frequency indicated by the <i>MeasObjectNR</i>. When this field is included, the network should set <i>deriveSSB-IndexFromCell</i> to <i>true</i>.</p>
<p><b>ssb-ToMeasure</b> The set of SS blocks to be measured within the SMTC measurement duration. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not to be measured while value 1 indicates that the corresponding SS/PBCH block is to be measured (see TS 38.215 [9]). When the field is not configured the UE measures on all SS blocks. Regardless of the value of this field, SS/PBCH blocks outside of the applicable <i>smtc</i> are not to be measured. See TS 38.215 [9] clause 5.1.1.</p>
<p><b>ssb-ToMeasureAltitudeBasedList</b> List of altitude-dependent <i>ssb-ToMeasure</i>. When the UE is within an altitude range indicated by <i>altitudeRange</i>, it ignores the <i>ssb-ToMeasure</i> (without suffix), and applies the corresponding <i>ssb-ToMeasure-r18</i> if present, otherwise (i.e., the UE is within an altitude range indicated by <i>altitudeRange</i> and <i>ssb-ToMeasure-r18</i> is absent) it measures on all SS-blocks. When the UE is outside all the altitude ranges indicated by <i>altitudeRange</i> (if any), <i>ssb-ToMeasure</i> (without suffix) applies. For each altitude range, <i>altitudeMin</i> indicates the minimum altitude in meters relative to sea level, <i>altitudeMax</i> indicates the maximum altitude in meters relative to sea level, and if included, <i>altitudeHyst</i> indicates hysteresis in meters for determination of the altitude range. I.e., when <i>altitudeHyst</i> is configured for an altitude range, the UE considers itself to have entered the range if <math>altitudeMin \leq UE \text{ altitude} \leq altitudeMax</math> and after entering the range considers itself to be in the range while <math>(altitudeMin - altitudeHyst) \leq UE \text{ altitude} \leq (altitudeMax + altitudeHyst)</math>. For each <i>altitudeRange</i>, if <i>altitudeMin</i> is absent, value <i>minAltitude-r18</i> is used and if <i>altitudeMax</i> is absent, value <i>maxAltitude-r18</i> is used.</p>
<b>SSB-PositionQCL-CellsToAddMod field descriptions</b>
<p><b>physCellId</b> Physical cell identity of a cell in the cell list.</p>
<p><b>ssb-PositionQCL</b> Indicates the QCL relation between SS/PBCH blocks for a specific cell as specified in TS 38.213 [13], clause 4.1. If provided, the cell specific value overwrites the value signalled by <i>ssb-PositionQCL-Common</i>.</p>

Conditional Presence	Explanation
<i>AssociatedGapCSIIRS</i>	This field is optionally present, Need R if <i>associatedMeasGapCSIIRS</i> is configured, otherwise, it is absent.
<i>AssociatedGapSSB</i>	This field is optionally present, Need R if <i>associatedMeasGapSSB</i> is configured, otherwise, it is absent.
<i>CSI-RS</i>	This field is mandatory present if <i>csi-rs-ResourceConfigMobility</i> is configured, otherwise, it is absent.
<i>IntraFreqConnected</i>	This field is optionally present, Need R if the UE is configured with a serving cell for which (absoluteFrequencySSB, subcarrierSpacing) in <i>ServingCellConfigCommon</i> is equal to ( <i>ssbFrequency</i> , <i>ssbSubcarrierSpacing</i> ) in this <i>MeasObjectNR</i> , otherwise, it is absent.
<i>SCG</i>	This field is optionally present, Need R, in the <i>measConfig</i> associated with the SCG. It is absent in the <i>measConfig</i> associated with the MCG.
<i>NeighbourCell</i>	This field is mandatory present if this <i>MeasObject</i> is configured by the serving cell for a neighbour cell served by a NTN Earth-moving cell and is associated with a <i>ReportConfig</i> which contains <i>EventD2</i> or <i>condEventD2</i> . Otherwise, it is optional, Need R.
<i>SharedSpectrum</i>	This field is mandatory present if this <i>MeasObject</i> is for a frequency which operates with shared spectrum channel access in FR1. Otherwise, it is absent, Need R.
<i>SharedSpectrum2</i>	This field is optionally present if this <i>MeasObject</i> is for a frequency which operates with shared spectrum channel access in FR2-2, Need R. Otherwise, it is absent, Need R.
<i>SSBorAssociatedSSB</i>	This field is mandatory present if <i>ssb-ConfigMobility</i> is configured or <i>associatedSSB</i> is configured in at least one cell. Otherwise, it is absent, Need R.

## – *MeasObjectNR-SL*

The IE *MeasObjectNR-SL* concerns a measurement object including a list of transmission resource pool(s) for which CBR measurement is performed for NR sidelink communication/discovery.

### *MeasObjectNR-SL* information element

```

-- ASN1START
-- TAG-MEASOBJECTNR-SL-START

MeasObjectNR-SL-r16 ::= SEQUENCE {
    tx-PoolMeasToRemoveList-r16 Tx-PoolMeasList-r16 OPTIONAL, -- Need N

-- TAG-MEASOBJECTNR-SL-STOP
-- ASN1STOP

```

**MeasObjectNR-SL field descriptions****sl-Frequency**

Indicates the sidelink frequency associated to this *MeasObjectNR-SL*. The value 1 corresponds to the frequency of first entry in *sl-FreqInfoList* broadcast in *SIB12*, the value 2 corresponds to the frequency of first entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12*, the value 3 corresponds to the frequency of second entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12* and so on.

– **MeasObjectRxTxDiff**

The IE *MeasObjectRxTxDiff* is used to configure the measurement object for UE Rx-Tx time difference measurement.

**MeasObjectRxTxDiff information element**

```
-- ASN1START
-- TAG-MEASOBJECTRXTXDIF-START

MeasObjectRxTxDiff-r17 ::= SEQUENCE {
    dl-Ref-r17 CHOICE {
        prs-Ref-r17 NULL,
        csi-RS-Ref-r17 NULL,
        ...
    } OPTIONAL, -- Need R
    ...
}

-- TAG-MEASOBJECTRXTXDIF-STOP
-- ASN1STOP
```

**MeasObjectRxTxDiff field descriptions****dl-Ref**

configures the DL references signals to measure Rx-Tx time difference. *prs-Ref-r17* indicates PRS is chosen, and *csi-RS-Ref-r17* indicates that CSI-RS for tracking is chosen. Only one PRS resource set is configured by the network. Only one *NZP-CSI-RS-ResourceSet* can be configured with *pd-Info-r17* set to *true* and it is used for UE Rx-Tx time difference measurement. Only reference signals from the PCell of the MCG can be configured by the network.

– **MeasObjectToAddModList**

The IE *MeasObjectToAddModList* concerns a list of measurement objects to add or modify.

**MeasObjectToAddModList information element**

```
-- ASN1START
-- TAG-MEASOBJECTTOADDMODLIST-START

MeasObjectToAddModList ::= SEQUENCE (SIZE (1..maxNrofObjectId)) OF MeasObjectToAddMod
```

```

MeasObjectToAddMod ::=
  measObjectId
  measObject
    measObjectNR
    . . .
    measObjectEUTRA
    measObjectUTRA-FDD-r16
    measObjectNR-SL-r16
    measObjectCLI-r16
    measObjectRxTxDiff-r17
    measObjectRelay-r17
    measObjectNR-SL-r18
  }
}

-- TAG-MEASOBJECTTOADDMODLIST-STOP
-- ASN1STOP

```

```

SEQUENCE {
  MeasObjectId,
  CHOICE {
    MeasObjectNR,
    MeasObjectEUTRA,
    MeasObjectUTRA-FDD-r16,
    MeasObjectNR-SL-r16,
    MeasObjectCLI-r16,
    MeasObjectRxTxDiff-r17,
    SL-MeasObject-r16,
    MeasObjectNR-SL-r18
  }
}

```

## – *MeasObjectUTRA-FDD*

The IE *MeasObjectUTRA-FDD* specifies information applicable for inter-RAT UTRA-FDD neighbouring cells.

### ***MeasObjectUTRA-FDD* information element**

```

-- ASN1START
-- TAG-MEASOBJECTUTRA-FDD-START

MeasObjectUTRA-FDD-r16 ::=
  carrierFreq-r16
  utra-FDD-Q-OffsetRange-r16
  cellsToRemoveList-r16
  cellsToAddModList-r16
  . . .
}

CellsToAddModListUTRA-FDD-r16 ::=
  SEQUENCE (SIZE (1..maxCellMeasUTRA-FDD-r16)) OF CellsToAddModUTRA-FDD-r16

CellsToAddModUTRA-FDD-r16 ::=
  SEQUENCE {
    cellIndexUTRA-FDD-r16
    physCellId-r16
  }

UTRA-FDD-CellIndexList-r16 ::=
  SEQUENCE (SIZE (1..maxCellMeasUTRA-FDD-r16)) OF UTRA-FDD-CellIndex-r16

UTRA-FDD-CellIndex-r16 ::=
  INTEGER (1..maxCellMeasUTRA-FDD-r16)

-- TAG-MEASOBJECTUTRA-FDD-STOP
-- ASN1STOP

```

```

OPTIONAL, -- Need R
OPTIONAL, -- Need N
OPTIONAL, -- Need N

```

<b>MeasObjectUTRA-FDD field descriptions</b>
<b>carrierFreq</b> Identifies UTRA-FDD carrier frequency for which this configuration is valid. NR does not configure more than one measurement object for the same physical frequency regardless of the ARFCN used to indicate this.
<b>cellIndexUTRA-FDD</b> Entry index in the neighbouring cell list.
<b>cellsToAddModList</b> List of UTRA-FDD cells to add/modify in the neighbouring cell list.
<b>cellsToRemoveList</b> List of cells to remove from the neighbouring cell list.
<b>utra-FDD-Q-OffsetRange</b> Used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB.

– **MeasResultCellListSFTD-NR**

The IE *MeasResultCellListSFTD-NR* consists of SFN and radio frame boundary difference between the PCell and an NR cell as specified in TS 38.215 [9] and TS 38.133 [14].

**MeasResultCellListSFTD-NR information element**

```
-- ASN1START
-- TAG-MEASRESULTCELLLISTSFTD-NR-START

MeasResultCellListSFTD-NR ::=
    SEQUENCE (SIZE (1..maxCellSFTD)) OF MeasResultCellSFTD-NR

MeasResultCellSFTD-NR ::=
    SEQUENCE {
        physCellId          PhysCellId,
        sfn-OffsetResult    INTEGER (0..1023),
        frameBoundaryOffsetResult    INTEGER (-30720..30719),
        rsrp-Result         RSRP-Range                OPTIONAL
    }

-- TAG-MEASRESULTCELLLISTSFTD-NR-STOP
-- ASN1STOP
```

<b>MeasResultCellSFTD-NR field descriptions</b>
<b>sfn-OffsetResult</b> Indicates the SFN difference between the PCell and the NR cell as an integer value according to TS 38.215 [9].
<b>frameBoundaryOffsetResult</b> Indicates the frame boundary difference between the PCell and the NR cell as an integer value according to TS 38.215 [9].

– **MeasResultCellListSFTD-EUTRA**

The IE *MeasResultCellListSFTD-EUTRA* consists of SFN and radio frame boundary difference between the PCell and an E-UTRA PSCell.

**MeasResultCellListSFTD-EUTRA information element**

```

-- ASN1START
-- TAG-MEASRESULTCELLLISTSFTD-EUTRA-START

MeasResultCellListSFTD-EUTRA ::=
    SEQUENCE (SIZE (1..maxCellSFTD)) OF MeasResultSFTD-EUTRA

MeasResultSFTD-EUTRA ::=
    SEQUENCE {
        eutra-PhysCellId          EUTRA-PhysCellId,
        sfn-OffsetResult          INTEGER (0..1023),
        frameBoundaryOffsetResult INTEGER (-30720..30719),
        rsrp-Result                RSRP-Range
    }

-- TAG-MEASRESULTCELLLISTSFTD-EUTRA-STOP
-- ASN1STOP

```

**MeasResultSFTD-EUTRA field descriptions****eutra-PhysCellId**

Identifies the physical cell identity of the E-UTRA cell for which the reporting is being performed.

**sfn-OffsetResult**

Indicates the SFN difference between the PCell and the E-UTRA cell as an integer value according to TS 38.215 [9].

**frameBoundaryOffsetResult**

Indicates the frame boundary difference between the PCell and the E-UTRA cell as an integer value according to TS 38.215 [9].

– **MeasResults**

The IE *MeasResults* covers measured results for intra-frequency, inter-frequency, inter-RAT mobility and measured results for NR sidelink communication/discovery/positioning.

**MeasResults information element**

```

-- ASN1START
-- TAG-MEASRESULTS-START

MeasResults ::=

**MeasResultEUTRA field descriptions*****eutra-PhysCellId***

Identifies the physical cell identity of the E-UTRA cell for which the reporting is being performed. The UE reports a value in the range 0..503, other values are reserved.

<b>MeasResultNR field descriptions</b>
<p><b>averageDelay</b> Indicates average delay for the packets during the reporting period, as specified in TS 38.314 [53]. Value 0 corresponds to 0 millisecond, value 1 corresponds to 0.1 millisecond, value 2 corresponds to 0.2 millisecond, and so on.</p>
<p><b>cellResults</b> Cell level measurement results.</p>
<p><b>cellsMetReportOnLeaveList</b> This field indicates the list of cells which met the event leaving condition.</p>
<p><b>choCandidate</b> This field indicates whether the associated cell is a candidate target cell for conditional handover or conditional PSCell change or addition. This field may be included only in the <i>SuccessHO-Report</i> or <i>SuccessPSCell-Report</i> within <i>UEInformationResponse</i> message.</p>
<p><b>choConfig</b> If the associated cell is a candidate target cell for conditional handover, this field indicates the conditional handover execution condition for each <i>measId</i> within <i>condTriggerConfig</i> associated to the cell. This field may be included only in the <i>rlf-report</i> within <i>UEInformationResponse</i> message.</p>
<p><b>drb-Id</b> Indicates DRB value for which uplink PDCP delay ratio or value is provided, according to TS 38.314 [53].</p>
<p><b>entering</b> This field indicates if the event entering condition for the cell is satisfied and the cell has been just added within <i>cellsTriggeredList</i>.</p>
<p><b>firstTriggeredEvent</b> This field is set to <i>condFirstEvent</i> if the execution condition associated to the first entry of <i>choConfig</i> was fulfilled first in time. This field is set to <i>condSecondEvent</i> if the execution condition associated to the second entry of <i>choConfig</i> was fulfilled first in time. This field may be included in <i>rlf-report</i> within <i>UEInformationResponse</i> message or in <i>SCGFailureInformation</i> message.</p>
<p><b>locationInfo</b> Positioning related information and measurements.</p>
<p><b>physCellId</b> The physical cell identity of the NR cell for which the reporting is being performed.</p>
<p><b>resultsSSB-Cell</b> Cell level measurement results based on SS/PBCH related measurements.</p>
<p><b>resultsSSB-Indexes</b> Beam level measurement results based on SS/PBCH related measurements.</p>
<p><b>resultsCSI-RS-Cell</b> Cell level measurement results based on CSI-RS related measurements.</p>
<p><b>resultsCSI-RS-Indexes</b> Beam level measurement results based on CSI-RS related measurements.</p>
<p><b>rsIndexResults</b> Beam level measurement results.</p>
<p><b>timeBetweenEvents</b> Indicates the time elapsed between fulfilling the conditional execution conditions included in <i>choConfig</i>. Value in milliseconds. The maximum value 1023 means 1023ms or longer. This field may be included in the reports associated to <i>UEInformationResponse</i> message, e.g., <i>rlf-Report</i> or in the <i>SCGFailureInformation</i> message.</p>

<b><i>MeasResultUTRA-FDD</i></b> field descriptions
<b><i>physCellId</i></b> The physical cell identity of the UTRA-FDD cell for which the reporting is being performed.
<b><i>utra-FDD-EcN0</i></b> According to CPICH_Ec/No in TS 25.133 [46] for FDD.
<b><i>utra-FDD-RSCP</i></b> According to CPICH_RSCP in TS 25.133 [46] for FDD.

<b>MeasResults field descriptions</b>
<p><b>coarseLocationInfo</b> This field indicates the coarse location information reported by the UE. This field is coded as the <i>Ellipsoid-Point</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit. The least significant bits of <i>degreesLatitude</i> and <i>degreesLongitude</i> are set to 0 to meet the accuracy requirement corresponds to a granularity of approximately 2 km. It is up to UE implementation how many LSBs are set to 0 to meet the accuracy requirement</p>
<p><b>excessDelay</b> Indicates the ratio of packets in UL per DRB exceeding the configured delay threshold among the UL PDCP SDUs, according to the UL PDCP Excess Packet Delay per DRB mapping table, as defined in TS 38.314 [53], Table 4.3.1.e-1.</p>
<p><b>measId</b> Identifies the measurement identity for which the reporting is being performed.</p>
<p><b>measQuantityResults</b> The value <i>sinr</i> is not included when it is used for <i>LogMeasReport-r16</i>.</p>
<p><b>measResultCellListSFTD-NR</b> SFTD measurement results between the PCell and the NR neighbour cell(s) in NR standalone.</p>
<p><b>measResultCLI</b> CLI measurement results.</p>
<p><b>measResultEUTRA</b> Measured results of an E-UTRA cell.</p>
<p><b>measResultForRSSI</b> Includes measured RSSI result in dBm (see TS 38.215 [9]) and <i>channelOccupancy</i> which is the percentage of samples when the RSSI was above the configured <i>channelOccupancyThreshold</i> for the associated <i>reportConfig</i>.</p>
<p><b>measResultListEUTRA</b> List of measured results for the maximum number of reported best cells for an E-UTRA measurement identity.</p>
<p><b>measResultListNR</b> List of measured results for the maximum number of reported best cells for an NR measurement identity.</p>
<p><b>measResultListUTRA-FDD</b> List of measured results for the maximum number of reported best cells for a UTRA-FDD measurement identity.</p>
<p><b>measResultNR</b> Measured results of an NR cell.</p>
<p><b>measResultServFreqListEUTRA-SCG</b> Measured results of the E-UTRA SCG serving frequencies: the measurement result of PSCell and each SCell, if any, and of the best neighbouring cell on each E-UTRA SCG serving frequency.</p>
<p><b>measResultServFreqListNR-SCG</b> Measured results of the NR SCG serving frequencies: the measurement result of PSCell and each SCell, if any, and of the best neighbouring cell on each NR SCG serving frequency.</p>
<p><b>measResultServingMOList</b> Measured results of measured cells with reference signals indicated in the serving cell measurement objects including measurement results of SpCell, configured SCell(s) and best neighbouring cell within measured cells with reference signals indicated in on each serving cell measurement object. If the sending of the <i>MeasurementReport</i> message is triggered by a measurement configured by the field <i>sl-ConfigDedicatedForNR</i> received within an E-UTRA <i>RRCCConnectionReconfiguration</i> message (i.e. CBR measurements), this field is not applicable and its contents is ignored by the network.</p>
<p><b>measResultSFTD-EUTRA</b> SFTD measurement results between the PCell and the E-UTRA PScell in NE-DC.</p>
<p><b>measResultSFTD-NR</b> SFTD measurement results between the PCell and the NR PScell in NR-DC.</p>

<i>MeasResults</i> field descriptions
<p><b><i>coarseLocationInfo</i></b> This field indicates the coarse location information reported by the UE. This field is coded as the <i>Ellipsoid-Point</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit. The least significant bits of <i>degreesLatitude</i> and <i>degreesLongitude</i> are set to 0 to meet the accuracy requirement corresponds to a granularity of approximately 2 km. It is up to UE implementation how many LSBs are set to 0 to meet the accuracy requirement</p>
<p><b><i>excessDelay</i></b> Indicates the ratio of packets in UL per DRB exceeding the configured delay threshold among the UL PDCP SDUs, according to the UL PDCP Excess Packet Delay per DRB mapping table, as defined in TS 38.314 [53], Table 4.3.1.e-1.</p>
<p><b><i>measResultsSL</i></b> CBR measurements results for NR sidelink communication/discovery/positioning.</p>
<p><b><i>measResultUTRA-FDD</i></b> Measured result of a UTRA-FDD cell.</p>
<p><b><i>sl-MeasResultsCandRelay</i></b> Measurement result(s) of candidate L2 U2N relay UE(s).</p>
<p><b><i>sl-MeasResultServingRelay</i></b> Measurement result of serving L2 U2N relay UE.</p>

## – *MeasResult2EUTRA*

OPTIONAL,  
OPTIONAL  
OPTIONAL

#### **MeasResultIdleNR field descriptions**

<b>carrierFreq</b>
Indicates the NR carrier frequency.
<b>measIdleResultNR</b>
Idle/inactive measurement results for an NR cell (optionally including beam level measurements).
<b>measResultServingCell</b>
Measured results of the serving cell (i.e., PCell) from idle/inactive measurements.
<b>measResultsPerCellListIdleNR</b>
List of idle/inactive measured results for the maximum number of reported best cells for a given NR carrier.
<b>resultsSSB-Indexes</b>
Beam level measurement results (indexes and optionally, beam measurements).

#### – **MeasResultRxTxTimeDiff**

The IE *MeasResultRxTxTimeDiff* is used to provide Rx-Tx time difference measurement result.

#### **MeasResultRxTxTimeDiff information element**

```

-- ASN1START
-- TAG-MEASRESULTRXTXTIMEDIFF-START
MeasResultRxTxTimeDiff-r17 ::= SEQUENCE {
  rxTxTimeDiff-ue-r17      RxTxTimeDiff-r17    OPTIONAL,
  ...
}
-- TAG-MEASRESULTRXTXTIMEDIFF-STOP
-- ASN1STOP

```

**MeasResultRxTxTimeDiff field descriptions****rxTxTimeDiff-ue**

indicates the Rx-Tx Time difference measurement at the UE (see clause 5.1.30, TS 38.215 [9]).

## – **MeasResultSCG-Failure**

The IE *MeasResultSCG-Failure* is used to provide information regarding failures detected by the UE in (NG)EN-DC and NR-DC.

**MeasResultSCG-Failure information element**

```
-- ASN1START
-- TAG-MEASRESULTSCG-FAILURE-START

MeasResultSCG-Failure ::=          SEQUENCE {
    measResultPerMOList             MeasResultList2NR,
    ...,
    [ [
        locationInfo-r16            LocationInfo-r16          OPTIONAL
    ] ]
}

MeasResultList2NR ::=              SEQUENCE (SIZE (1..maxFreq)) OF MeasResult2NR

-- TAG-MEASRESULTSCG-FAILURE-STOP
-- ASN1STOP
```

## – **MeasResultsSL**

The IE *MeasResultsSL* covers measured results for NR sidelink communication/discovery/positioning.

**MeasResultsSL information element**

```
-- ASN1START
-- TAG-MEASRESULTSSL-START

MeasResultsSL-r16 ::=              SEQUENCE {
    measResultsListSL-r16           CHOICE {
        measResultNR-SL-r16        MeasResultNR-SL-r16,
        ...,
        [ [
            measResultNR-SL-r18    MeasResultNR-SL-r18
        ] ]
    },
    ...
}

MeasResultNR-SL-r16 ::=            SEQUENCE {
```

```

    measResultListCBR-NR-r16      SEQUENCE (SIZE (1.. maxNrofSL-PoolToMeasureNR-r16)) OF MeasResultCBR-NR-r16,
    ...
}

MeasResultCBR-NR-r16 ::= SEQUENCE {
    sl-poolReportIdentity-r16     SL-ResourcePoolID-r16,
    sl-CBR-ResultsNR-r16         SL-CBR-r16,
    ...
}

MeasResultNR-SL-r18 ::= SEQUENCE {
    measResultListCBR-DedicatedSL-PRS-r18 SEQUENCE (SIZE (1..maxNrofDedicatedSL-PRS-PoolToMeas-r18)) OF MeasResultCBR-DedicatedSL-PRS-r18,
    ...
}

MeasResultCBR-DedicatedSL-PRS-r18 ::= SEQUENCE {
    sl-PRS-ResourcePoolID-r18     SL-PRS-ResourcePoolID-r18,
    sl-CBR-ResultsDedicatedSL-PRS-RP-r18 SL-CBR-r16,
    ...
}

-- TAG-MEASRESULTSSL-STOP
-- ASN1STOP

```

<b>MeasResultsSL field descriptions</b>
---

<b>measResultNR-SL</b>
------------------------

Include the measured results for NR sidelink communication/discovery/positioning.
---

<b>MeasResultNR-SL field descriptions</b>
---

<b>measResultListCBR-DedicatedSL-PRS</b>
--

CBR measurement results for NR sidelink positioning for dedicated SL PRS resource pool.
---

<b>measResultListCBR-NR</b>
-----------------------------

CBR measurement results for NR sidelink communication/discovery.
--

<b>sl-poolReportIdentity</b>
------------------------------

The identity of the transmission resource pool which is corresponding to the <i>sl-ResourcePoolID</i> configured in a resource pool for NR sidelink communication/discovery.
--

<b>sl-PRS-ResourcePoolID</b>
------------------------------

The ID of the transmission resource pool which is corresponding to the <i>sl-PRS-ResourcePoolID</i> configured in a resource pool for NR sidelink positioning.
--

## – MeasSequence

The IE *MeasSequence* is used to configure a recommended sequence for intra/inter-RAT intra/inter-frequency measurement.

### **MeasSequence information element**

```

-- ASN1START
-- TAG-MEASSEQUENCE-START

```

```
MeasSequence-r18 ::= INTEGER (1..maxMeasSequence-r18)
-- TAG-MEASSEQUENCE-STOP
-- ASN1STOP
```

## – *MeasTriggerQuantityEUTRA*

The IE *MeasTriggerQuantityEUTRA* is used to configure the trigger quantity and reporting range for E-UTRA measurements. The RSRP, RSRQ and SINR ranges correspond to *RSRP-Range*, *RSRQ-Range* and *RS-SINR-Range* in TS 36.331 [10], respectively.

### *MeasTriggerQuantityEUTRA* information element

```
-- ASN1START
-- TAG-MEASTRIGGERQUANTITYEUTRA-START

MeasTriggerQuantityEUTRA ::= CHOICE {
    rsrp          RSRP-RangeEUTRA,
    rsrq          RSRQ-RangeEUTRA,
    sinr          SINR-RangeEUTRA
}

RSRP-RangeEUTRA ::= INTEGER (0..97)
RSRQ-RangeEUTRA ::= INTEGER (0..34)
SINR-RangeEUTRA ::= INTEGER (0..127)

-- TAG-MEASTRIGGERQUANTITYEUTRA-STOP
-- ASN1STOP
```

## – *MeasurementValidityDuration*

The IE *MeasurementValidityDuration* indicates time values for validation of reported idle/inactive and reselection measurements as defined in TS 38.133[14]. Value s5 correspond to 5 seconds, value s10 correspond to 10 seconds and so on.

### *MeasurementValidityDuration* information element

```
-- ASN1START
-- TAG-MEASUREMENTVALIDITYDURATION-START

MeasurementValidityDuration-r18 ::= ENUMERATED {s5, s10, s20, s50, s100, spare3, spare2, spare1}

-- TAG-MEASUREMENTVALIDITYDURATION-STOP
-- ASN1STOP
```

## – *MeasWindowConfig*

The IE *MeasWindowConfig* specifies the effective measurement window configuration for inter-RAT E-UTRA measurement.

### ***MeasWindowConfig* information element**

```
-- ASN1START
-- TAG-MEASWINDOWCONFIG-START

MeasWindowConfig-r18 ::= SEQUENCE {
    windowOffsetPeriodicity CHOICE {
        periodicityMs40     INTEGER (0..39),
        periodicityMs80     INTEGER (0..79),
        ...
    },
    windowDuration          ENUMERATED {ms2, ms5, ms5dot5, spare1},
    ...
}

-- TAG-MEASWINDOWCONFIG-STOP
-- ASN1STOP
```

#### ***MeasWindowConfig* field descriptions**

##### ***windowDuration***

Value *windowDuration* is the measurement window length in ms of effective measurement window. Value *ms2* corresponds to 2 ms, value *ms5* corresponds to 5 ms, and Value *ms5dot5* corresponds to 5.5 ms.

##### ***windowOffsetPeriodicity***

Indicates the periodicity and offset of effective measurement window. The choice determines the periodicity (*periodicityMs40* for 40ms and *periodicityMs80* for 80 ms). The field value indicates the offset in ms.

## – *MobilityStateParameters*

The IE *MobilityStateParameters* contains parameters to determine UE mobility state.

### ***MobilityStateParameters* information element**

```
-- ASN1START
-- TAG-MOBILITYSTATEPARAMETERS-START

MobilityStateParameters ::= SEQUENCE{
    t-Evaluation          ENUMERATED {
        s30, s60, s120, s180, s240, spare3, spare2, spare1},
    t-HystNormal          ENUMERATED {
        s30, s60, s120, s180, s240, spare3, spare2, spare1},
    n-CellChangeMedium   INTEGER (1..16),
    n-CellChangeHigh     INTEGER (1..16)
}

-- TAG-MOBILITYSTATEPARAMETERS-STOP
-- ASN1STOP
```

```
-- TAG-MOBILITYSTATEPARAMETERS-STOP
-- ASN1STOP
```

#### **MobilityStateParameters field descriptions**

##### ***n-CellChangeHigh***

The number of cell changes to enter high mobility state. Corresponds to  $N_{CR\_H}$  in TS 38.304 [20].

##### ***n-CellChangeMedium***

The number of cell changes to enter medium mobility state. Corresponds to  $N_{CR\_M}$  in TS 38.304 [20].

##### ***t-Evaluation***

The duration for evaluating criteria to enter mobility states. Corresponds to  $T_{CRmax}$  in TS 38.304 [20]. Value in seconds, *s30* corresponds to 30 s and so on.

##### ***t-HystNormal***

The additional duration for evaluating criteria to enter normal mobility state. Corresponds to  $T_{CRmaxHyst}$  in TS 38.304 [20]. Value in seconds, value *s30* corresponds to 30 seconds and so on.

## – *MRB-Identity*

The IE *MRB-Identity* is used to identify a multicast MRB used by a UE.

#### ***MRB-Identity* information element**

```
-- ASN1START
-- TAG-MRB-IDENTITY-START

MRB-Identity-r17 ::=
    INTEGER (1..512)

-- TAG-MRB-IDENTITY-STOP
-- ASN1STOP
```

## – *MsgA-ConfigCommon*

The IE *MsgA-ConfigCommon* is used to configure the PRACH and PUSCH resource for transmission of MsgA in 2-step random access type procedure.

```
-- ASN1START
-- TAG-MSGACONFIGCOMMON-START

MsgA-ConfigCommon-r16 ::=
    SEQUENCE {
        rach-ConfigCommonTwoStepRA-r16    RACH-ConfigCommonTwoStepRA-r16,
        msgA-PUSCH-Config-r16             MsgA-PUSCH-Config-r16
    }
    OPTIONAL --Cond InitialBWPConfig

-- TAG-MSGACONFIGCOMMON-STOP
-- ASN1STOP
```

**MsgA-ConfigCommon field descriptions****msgA-PUSCH-Config**

Configuration of cell-specific MsgA PUSCH parameters which the UE uses for contention-based MsgA PUSCH transmission of this BWP. If the field is not configured for the selected UL BWP, the UE shall use the MsgA PUSCH configuration of initial UL BWP.

**rach-ConfigCommonTwoStepRA**

Configuration of cell specific random access parameters which the UE uses for contention based and contention free 2-step random access type procedure as well as for 2-step RA type contention based beam failure recovery in this BWP.

Conditional Presence	Explanation
<i>InitialBWPConfig</i>	The field is mandatory present when <i>MsgA-ConfigCommon</i> is configured for the initial uplink BWP, or when <i>MsgA-ConfigCommon</i> is configured for a non-initial uplink BWP and <i>MsgA-ConfigCommon</i> is not configured for the initial uplink BWP, otherwise the field is optionally present, Need S.

– **MsgA-PUSCH-Config**

The IE *MsgA-PUSCH-Config* is used to specify the PUSCH allocation for MsgA in 2-step random access type procedure.

**MsgA-PUSCH-Config information element**

```

-- ASN1START
-- TAG-MSG-A-PUSCH-CONFIG-START

MsgA-PUSCH-Config-r16 ::=
    msgA-PUSCH-ResourceGroupA-r16          SEQUENCE {
        msgA-PUSCH-ResourceGroupA-r16     MsgA-PUSCH-Resource-r16          OPTIONAL, -- Cond InitialBWPConfig
        msgA-PUSCH-ResourceGroupB-r16     MsgA-PUSCH-Resource-r16          OPTIONAL, -- Cond GroupBConfigured

  msgA-ScramblingID0-r16           INTEGER (0..65535)
  msgA-ScramblingID1-r16           INTEGER (0..65535)
}

-- TAG-MSGA-PUSCH-CONFIG-STOP
-- ASN1STOP

```

<b>MsgA-PUSCH-Config field descriptions</b>	
<b>msgA-DataScramblingIndex</b>	Identifier used to initiate data scrambling (c_init) for msgA PUSCH. If the field is absent the UE applies the value Physical cell ID ( <i>physCellID</i> ).
<b>msgA-DeltaPreamble</b>	Power offset of msgA PUSCH relative to the preamble received target power. Actual value = field value * 2 [dB] (see TS 38.213 [13], clause 7.1).
<b>msgA-PUSCH-ResourceGroupA</b>	MsgA PUSCH resources that the UE shall use when performing MsgA transmission using preambles group A. If field is not configured for the selected UL BWP, the UE shall use the MsgA PUSCH configuration for group A of initial UL BWP or RedCap-specific initial UL BWP (if configured) for (e)RedCap UEs.
<b>msgA-PUSCH-ResourceGroupB</b>	MsgA PUSCH resources that the UE shall use when performing MsgA transmission using preambles group B.
<b>msgA-TransformPrecoder</b>	Enables or disables the transform precoder for MsgA transmission (see clause 6.1.3 of TS 38.214 [19]).

<b><i>MsgA-PUSCH-Resource</i> field descriptions</b>
<b><i>guardBandMsgA-PUSCH</i></b> PRB-level guard band between FDMed PUSCH occasions (see TS 38.213 [13], clause 8.1A). If interlaced PUSCH is configured, value 0 is applied.
<b><i>guardPeriodMsgA-PUSCH</i></b> Guard period between PUSCH occasions in the unit of symbols (see TS 38.213 [13], clause 8.1A).
<b><i>frequencyStartMsgA-PUSCH</i></b> Offset of lowest PUSCH occasion in frequency domain with respect to PRB 0 (see TS 38.213 [13], clause 8.1A).
<b><i>interlaceIndexFirstPO-MsgA-PUSCH</i></b> Interlace index of the first PUSCH occasion in frequency domain if interlaced PUSCH is configured. For 30kHz SCS only the integers 1, 2, 3, 4, 5 are applicable (see TS 38.213 [13], clause 8.1A).
<b><i>mappingTypeMsgA-PUSCH</i></b> PUSCH mapping type A or B. If the field is absent, the UE shall use the parameter <i>msgA-PUSCH-TimeDomainAllocation</i> (see TS 38.213 [13], clause 8.1A).
<b><i>msgA-Alpha</i></b> Dedicated alpha value for MsgA PUSCH. If the field is absent, the UE shall use the value of <i>msg3-Alpha</i> if configured, else UE applies value 1 (see TS 38.213 [13], clause 7.1.1).
<b><i>msgA-DMRS-Config</i></b> DMRS configuration for msgA PUSCH (see TS 38.213 [13], clause 8.1A and TS 38.214 [19] clause 6.2.2).
<b><i>msgA-HoppingBits</i></b> Value of hopping bits to indicate which frequency offset to be used for second hop. See Table 8.3-1 in TS 38.213 [13].
<b><i>msgA-IntraSlotFrequencyHopping</i></b> Intra-slot frequency hopping per PUSCH occasion (see TS 38.213 [13], clause 8.1A).
<b><i>msgA-MCS</i></b> Indicates the MCS index for msgA PUSCH from the Table 6.1.4.1-1 for DFT-s-OFDM and Table 5.1.3.1-1 for CP-OFDM in TS 38.214 [19].
<b><i>msgA-PUSCH-TimeDomainAllocation</i></b> Indicates a combination of start symbol and length and PUSCH mapping type from the TDRA table ( <i>PUSCH-TimeDomainResourceAllocationList</i> if provided in <i>PUSCH-ConfigCommon</i> , or else the default Table 6.1.2.1.1-2 in 38.214 [19] is used if <i>pusch-TimeDomainAllocationList</i> is not provided in <i>PUSCH-ConfigCommon</i> ). The parameter K2 in the table is not used for msgA PUSCH. The network configures one of <i>msgA-PUSCH-TimeDomainAllocation</i> and <i>startSymbolAndLengthMsgA-PO</i> , but not both. If the field is absent, the UE shall use the value of <i>startSymbolAndLengthMsgA-PO</i> .
<b><i>msgA-PUSCH-TimeDomainOffset</i></b> A single time offset with respect to the start of each PRACH slot (with at least one valid RO), counted as the number of slots (based on the numerology of active UL BWP). See TS 38.213 [13], clause 8.1A.
<b><i>nrofDMRS-Sequences</i></b> Number of DMRS sequences for MsgA PUSCH for CP-OFDM. In case of single PUSCH configuration or if the DMRS symbols of multiple configurations are not overlapped, if the DMRS resources configured in one PUSCH occasion is no larger than 8 (for <i>len2</i> ) or 4 (for <i>len1</i> ), then only DMRS port is configured.
<b><i>nrofInterlacesPerMsgA-PO</i></b> Number of consecutive interlaces per PUSCH occasion if interlaced PUSCH is configured. For 30kHz SCS only the integers 1, 2, 3, 4, 5 are applicable (see TS 38.213 [13], clause 8.1A).
<b><i>nrofMsgA-PO-FDM</i></b> The number of msgA PUSCH occasions FDMed in one time instance (see TS 38.213 [13], clause 8.1A).
<b><i>nrofMsgA-PO-PerSlot</i></b> Number of time domain PUSCH occasions in each slot. PUSCH occasions including guard period are contiguous in time domain within a slot (see TS 38.213 [13], clause 8.1A).
<b><i>nrofPRBs-PerMsgA-PO</i></b> Number of PRBs per PUSCH occasion (see TS 38.213 [13], clause 8.1A). An eRedcap UE ignores the PRACH and PUSCH resource parameters for transmission of MsgA in 2-step random access type procedure if configured number of PRBs per PUSCH occasion for Preambles group A is larger than the maximum number of PRBs that can be configured per slot or per hop. If configured number of PRBs per PUSCH occasion for Preambles group B is larger than the maximum number of PRBs that can be configured per slot or per hop, an eRedCap UE ignores the PRACH and PUSCH resource parameters for transmission of MsgA using Preambles group B.

<b><i>nrofSlotsMsgA-PUSCH</i></b> Number of slots (in active UL BWP numerology) containing one or multiple PUSCH occasions, each slot has the same time domain resource allocation (see TS 38.213 [13], clause 8.1A).
<b><i>startSymbolAndLengthMsgA-PO</i></b> An index giving valid combinations of start symbol, length and mapping type as start and length indicator (SLIV) for the first msgA PUSCH occasion, for RRC_CONNECTED UEs in non-initial BWP as described in TS 38.214 [19] clause 6.1.2. The network configures the field so that the allocation does not cross the slot boundary. The number of occupied symbols excludes the guard period. If the field is absent, the UE shall use the value in <i>msgA-PUSCH-TimeDomainAllocation</i> (see TS 38.213 [13], clause 8.1A). The network configures one of <i>msgA-PUSCH-TimeDomainAllocation</i> and <i>startSymbolAndLengthMsgA-PO</i> , but not both. If the field is absent, the UE shall use the value of <i>msgA-PUSCH-TimeDomainAllocation</i> .

<b><i>MsgA-DMRS-Config</i> field descriptions</b>
<b><i>msgA-DMRS-AdditionalPosition</i></b> Indicates the position for additional DM-RS. If the field is absent, the UE applies value <i>pos2</i> .
<b><i>msgA-MaxLength</i></b> indicates single-symbol or double-symbol DMRS. If the field is absent, the UE applies value <i>len1</i> .
<b><i>msgA-PUSCH-DMRS-CDM-Group</i></b> 1-bit indication of indices of CDM group(s). If the field is absent, then both CDM groups are used.
<b><i>msgA-PUSCH-NrofPorts</i></b> 0 indicates 1 port per CDM group, 1 indicates 2 ports per CDM group. If the field is absent then 4 ports per CDM group are used (see TS 38.213 [13], clause 8.1A).
<b><i>msgA-ScramblingID0</i></b> UL DMRS scrambling initialization for CP-OFDM. If the field is absent the UE applies the value Physical cell ID ( <i>physCellID</i> ).
<b><i>msgA-ScramblingID1</i></b> UL DMRS scrambling initialization for CP-OFDM. If the field is absent the UE applies the value Physical cell ID ( <i>physCellID</i> ).

<b>Conditional Presence</b>	<b>Explanation</b>
<i>FreqHopConfigured</i>	This field is mandatory present when the field <i>msgA-IntraSlotFrequencyHopping</i> is configured. Otherwise, the field is absent.
<i>GroupBConfigured</i>	The field is mandatory present if <i>groupB-ConfiguredTwoStepRA</i> is configured in <i>RACH-ConfigCommonTwoStepRA</i> , otherwise the field is absent.
<i>InitialBWPConfig</i>	The field is mandatory present when <i>MsgA-ConfigCommon</i> is configured for the initial uplink BWP, or when <i>MsgA-ConfigCommon</i> is configured for a non-initial uplink BWP and <i>MsgA-ConfigCommon</i> is not configured for the initial uplink BWP, otherwise the field is optionally present, Need S.

## – *MultiFrequencyBandListNR*

The IE *MultiFrequencyBandListNR* is used to configure a list of one or multiple NR frequency bands.

### ***MultiFrequencyBandListNR* information element**

```
-- ASN1START
-- TAG-MULTIFREQUENCYBANDLISTNR-START
```

```
MultiFrequencyBandListNR ::= SEQUENCE (SIZE (1..maxNrofMultiBands)) OF FreqBandIndicatorNR
```

```
-- TAG-MULTIFREQUENCYBANDLISTNR-STOP
-- ASN1STOP
```

## – MultiFrequencyBandListNR-SIB

The IE *MultiFrequencyBandListNR-SIB* indicates the list of frequency bands, for which cell (re-)selection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

### **MultiFrequencyBandListNR-SIB information element**

```
-- ASN1START
-- TAG-MULTIFREQUENCYBANDLISTNR-SIB-START

MultiFrequencyBandListNR-SIB ::= SEQUENCE (SIZE (1.. maxNrofMultiBands)) OF NR-MultiBandInfo

NR-MultiBandInfo ::= SEQUENCE {
    freqBandIndicatorNR          OPTIONAL, -- Cond OptULNotSIB2
    nr-NS-PmaxList                OPTIONAL  -- Need S
}

MultiFrequencyBandListNR-SIB-v1760 ::= SEQUENCE (SIZE (1.. maxNrofMultiBands)) OF NR-MultiBandInfo-v1760

NR-MultiBandInfo-v1760 ::= SEQUENCE {
    nr-NS-PmaxList-v1760          OPTIONAL  -- Need S
}

MultiFrequencyBandListNR-Aerial-SIB-r18 ::= SEQUENCE (SIZE (1.. maxNrofMultiBands)) OF NR-MultiBandInfoAerial-r18

NR-MultiBandInfoAerial-r18 ::= SEQUENCE {
    freqBandIndicatorNR-Aerial-r18  OPTIONAL, -- Cond OptULNotSIB2
    nr-NS-PmaxListAerial-r18        OPTIONAL  -- Need S
}

-- TAG-MULTIFREQUENCYBANDLISTNR-SIB-STOP
-- ASN1STOP
```

<b>NR-MultiBandInfo field descriptions</b>	
<b>freqBandIndicatorNR</b>	Provides an NR frequency band number as defined in TS 38.101-1 [15], TS 38.101-2 [39], table 5.2-1, and TS 38.101-5 [75], table 5.2.2-1.
<b>freqBandIndicatorNR-Aerial</b>	Provides an NR frequency band number for aerial UE(s), as defined in TS 38.101-1 [15], TS 38.101-2 [39], table 5.2-1, and TS 38.101-5 [75], table 5.2.2-1.
<b>nr-NS-PmaxList</b>	Provides a list of <i>additionalPmax</i> and <i>additionalSpectrumEmission</i> values. If the field is absent the UE uses value 0 for the <i>additionalSpectrumEmission</i> (see TS 38.101-1 [15] table 6.2.3.1-1A, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A). This field is ignored by IAB-MT and wide area NCR-MT (see TS 38.106 [79]). The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The wide area NCR-MT applies output power and emissions requirements as specified in TS 38.106 [79]. If <i>nr-NS-PmaxList-v1760</i> is present, it shall contain the same number of entries, listed in the same order as in <i>nr-NS-PmaxList</i> (without suffix).
<b>nr-NS-PmaxListAerial</b>	Provides a list of <i>additionalPmax</i> and <i>additionalSpectrumEmission</i> values for aerial UE(s) as defined in TS 38.101-1 [15], clause 6.2K. If the field is absent, the value indicated by the corresponding field within <i>frequencyBandList</i> for the same NR frequency band number applies, if present. Otherwise (i.e. the field is not present for the same NR frequency band number in any of the <i>nr-NS-PmaxList</i> , <i>nr-NS-PmaxList-v1760</i> or <i>nr-NS-PmaxListAerial</i> ), the UE uses value 0 for the <i>additionalSpectrumEmission</i> (see TS 38.101-1 [15] table 6.2.3.1-1A, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A). This field is ignored by IAB-MT and wide area NCR-MT (see TS 38.106 [79]). The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The wide area NCR-MT applies output power and emissions requirements as specified in TS 38.106 [79].

<b>Conditional Presence</b>	<b>Explanation</b>
<i>OptULNotSIB2</i>	The field is absent for <i>SIB2</i> and is mandatory present if the parent IE is included in <i>SIB4</i> or <i>frequencyInfoDL-SIB</i> . Otherwise, if the field is absent in <i>frequencyInfoUL-SIB</i> in <i>UplinkConfigCommonSIB</i> , the UE will use the frequency band indicated in <i>frequencyInfoDL-SIB</i> in <i>DownlinkConfigCommonSIB</i> .

## – MUSIM-GapConfig

The IE *MUSIM-GapConfig* specifies the MUSIM gap configuration and controls setup/release of MUSIM gaps.

### **MUSIM-GapConfig information element**

```

-- ASN1START
-- TAG-MUSIM-GAPCONFIG-START

MUSIM-GapConfig-r17 ::=
    SEQUENCE {
        musim-GapToReleaseList-r17          SEQUENCE (SIZE (1..3)) OF MUSIM-GapId-r17          OPTIONAL, -- Need N
        musim-GapToAddModList-r17          SEQUENCE (SIZE (1..3)) OF MUSIM-Gap-r17          OPTIONAL, -- Need N
        musim-AperiodicGap-r17             MUSIM-GapInfo-r17          OPTIONAL, -- Need N
        . . .
        [
            musim-GapToAddModListExt-v1820 SEQUENCE (SIZE (1..3)) OF MUSIM-GapExt-v1820 OPTIONAL, -- Need N
            musim-GapKeep-r18              ENUMERATED {true}          OPTIONAL, -- Need N
        ]
    }

MUSIM-Gap-r17 ::=
    SEQUENCE {
        musim-GapId-r17          MUSIM-GapId-r17,
        musim-GapInfo-r17       MUSIM-GapInfo-r17
    }

```

```

}
MUSIM-GapExt-v1820 ::=
    gapPriority-r18          SEQUENCE {
    }                          GapPriority-r17
-- TAG-MUSIM-GAPCONFIG-STOP
-- ASN1STOP

```

#### **MUSIM-GapConfig field descriptions**

##### **musim-AperiodicGap**

Indicates the MUSIM aperiodic gap as specified in TS 38.133 [14] clause 9.1.10. If UE indicates the *musim-Starting-SFN-AndSubframe* when requesting aperiodic gap the network can only configure the aperiodic gap with the same start point or no aperiodic gap. If the field *musim-Starting-SFN-AndSubframe* is absent for aperiodic gap, network can configure any timing as the starting point for aperiodic gap or configure no aperiodic gap.

##### **musim-GapInfo**

Indicates the values for *musim-GapLength* and *musim-GapRepetitionAndOffset*. When network provides periodic gap, network always signals the *musim-GapLength* and *musim-GapRepetitionAndOffset* as indicated by the UE's preferred MUSIM gap configuration.

##### **musim-GapKeep**

Indicates the UE is allowed to use "keep solution" for colliding MUSIM periodic/aperiodic gaps. If "keep solution" is not granted, collisions between MUSIM periodic gaps are resolved based on the assigned MUSIM gap priorities as specified in TS 38.133[14].

##### **musim-GapToAddModListExt**

Indicates the priority of MUSIM periodic gap(s).  
If the network includes *musim-GapToAddModListExt-v1820*, it includes the same number of entries, and listed in the same order, as in *musim-GapToAddModList-r17*.  
For the priority of MUSIM aperiodic gap, the MUSIM aperiodic gap is always kept (not dropped) from UE perspective in case of collisions with other gaps (i.e. all gaps including MUSIM gaps, etc).

##### **musim-GapToAddModList**

List of MUSIM periodic gap patterns to add or modify.

##### **musim-GapToReleaseList**

List of MUSIM periodic gap patterns to release.

## – MUSIM-GapId

The IE *MUSIM-GapId* is used to identify UE periodic MUSIM gap(s) to add, modify or release.

#### **MUSIM-GapId information element**

```

-- ASN1START
-- TAG-MUSIM-GAPID-START
MUSIM-GapId-r17 ::=
    INTEGER (0..2)
-- TAG-MUSIM-GAPID-STOP
-- ASN1STOP

```

## – MUSIM-GapInfo

The IE *MUSIM-GapInfo* is used to indicate MUSIM gap parameters.

### **MUSIM-GapInfo information element**

```

-- ASN1START
-- TAG-MUSIM-GAPINFO-START

MUSIM-GapInfo-r17 ::= SEQUENCE {
    musim-Starting-SFN-AndSubframe-r17 MUSIM-Starting-SFN-AndSubframe-r17 OPTIONAL, -- Cond aperiodic
    musim-GapLength-r17 ENUMERATED {ms3, ms4, ms6, ms10, ms20} OPTIONAL, -- Cond gapSetup
    musim-GapRepetitionAndOffset-r17 CHOICE {
        ms20-r17 INTEGER (0..19),
        ms40-r17 INTEGER (0..39),
        ms80-r17 INTEGER (0..79),
        ms160-r17 INTEGER (0..159),
        ms320-r17 INTEGER (0..319),
        ms640-r17 INTEGER (0..639),
        ms1280-r17 INTEGER (0..1279),
        ms2560-r17 INTEGER (0..2559),
        ms5120-r17 INTEGER (0..5119),
        ...
    } OPTIONAL -- Cond periodic
}

MUSIM-Starting-SFN-AndSubframe-r17 ::= SEQUENCE {
    starting-SFN-r17 INTEGER (0..1023),
    startingSubframe-r17 INTEGER (0..9)
}

-- TAG-MUSIM-GAPINFO-STOP
-- ASN1STOP

```

#### **MUSIM-GapInfo field descriptions**

##### ***musim-GapLength***

Indicates the length of the UE's MUSIM gap as specified in TS 38.133 [14] clause 9.1.10. This field is mandatory present for both periodic gap and aperiodic gap preference indication.

##### ***musim-GapRepetitionAndOffset***

Indicates the gap repetition period in ms and gap offset in number of subframes for the periodic MUSIM gap as specified in TS 38.133 [14] clause 9.1.10. This field is mandatory present for the periodic MUSIM gap preference indication.

##### ***musim-Starting-SFN-AndSubframe***

Indicates gap starting position for the aperiodic MUSIM gap. This field is optionally present for the aperiodic MUSIM gap preference indication.

##### ***starting-SFN***

Indicates gap starting SFN number for the aperiodic MUSIM gap.

##### ***startingSubframe***

Indicates gap starting subframe number for the aperiodic MUSIM gap.

Conditional Presence	Explanation
<i>aperiodic</i>	This field is mandatory present in case of aperiodic MUSIM gap configuration. Otherwise it is absent.
<i>gapSetup</i>	The field is mandatory present upon configuration of a new MUSIM gap. The field is optionally present, Need M, otherwise.
<i>periodic</i>	This field is mandatory present in case of periodic MUSIM gap configuration. Otherwise it is absent.

### – *N3C-IndirectPathConfigRelay*

The IE *N3C-IndirectPathConfigRelay* indicates the N3C indirect path related configuration used by N3C relay UE in MP.

#### ***N3C-IndirectPathConfigRelay* information element**

```
-- ASN1START
-- TAG-N3C-INDIRECTPATHCONFIGRELAY-START

N3C-IndirectPathConfigRelay-r18 ::= SEQUENCE {
    n3c-MappingToReleaseList-r18      SEQUENCE (SIZE (1..maxLC-ID)) OF SL-RemoteUE-RB-Identity-r17      OPTIONAL, -- Need N
    n3c-MappingToAddModList-r18      SEQUENCE (SIZE (1..maxLC-ID)) OF N3C-MappingConfig-r18      OPTIONAL, -- Need N
    ...
}

N3C-MappingConfig-r18 ::= SEQUENCE {
    n3c-RemoteUE-RB-Identity-r18      SL-RemoteUE-RB-Identity-r17,
    n3c-RLC-ChannelUu-r18             Uu-RelayRLC-ChannelID-r17,
    ...
}

-- TAG-N3C-INDIRECTPATHCONFIGRELAY-STOP
-- ASN1STOP
```

#### ***N3C-IndirectPathConfigRelay* field descriptions**

##### ***n3c-MappingToAddModList***

Indicates the list of mappings between the bearer identity of the N3C remote UE and the Uu Relay RLC channel to be added or modified. The Uu Relay RLC channel is associated to only one N3C remote UE's end-to-end bearer.

##### ***n3c-MappingToReleaseList***

Indicates the list of mappings between the bearer identity of the N3C remote UE and the Uu Relay RLC channel to be released.

### – *N3C-IndirectPathAddChange*

The IE *N3C-IndirectPathAddChange* indicates the N3C indirect path related configuration used by N3C remote UE.

#### ***N3C-IndirectPathAddChange* information element**

```
-- ASN1START
-- TAG-N3C-INDIRECTPATHADDCHANGE-START
```

```

N3C-IndirectPathAddChange-r18 ::= SEQUENCE {
    n3c-RelayIdentification-r18      N3C-RelayUE-Info-r18,
    ...
}
-- TAG-N3C-INDIRECTPATHADDCHANGE-STOP
-- ASN1STOP

```

<i>N3C-IndirectPathAddChange</i> field descriptions
<p><b><i>n3c-RelayIdentification</i></b> Indicates the NCGI and C-RNTI of N3C relay UE.</p>

### – *N3C-RelayUE-Info*

The IE *N3C-RelayUE-Info* includes the information of N3C relay UE.

#### ***N3C-RelayUE-Info* information element**

```

-- ASN1START
-- TAG-N3CRELAYUEINFO-START

N3C-RelayUE-Info-r18 ::= SEQUENCE {
    n3c-CellGlobalId-r18      SEQUENCE {
        n3c-PLMN-Id-r18      PLMN-Identity,
        n3c-CellIdentity-r18 CellIdentity
    },
    n3c-C-RNTI-r18           RNTI-Value
}

-- TAG-N3CRELAYUEINFO-STOP
-- ASN1STOP

```

### – *NCR-AperiodicFwdConfig*

The IE *NCR-AperiodicFwdConfig* is used to configure a list of aperiodic forwarding time resources for NCR-Fwd access link (see TS 38.212 [17], clause 7.3.1.3.9 and TS 38.213 [13], clause 20).

#### ***NCR-AperiodicFwdConfig* information element**

```

-- ASN1START
-- TAG-NCR-APERIODICFWDCONFIG-START

NCR-AperiodicFwdConfig-r18 ::= SEQUENCE {
    aperiodicFwdTimeRsrcToAddModList-r18 SEQUENCE (SIZE (1..maxNrofAperiodicFwdTimeResource-r18)) OF NCR-AperiodicFwdTimeResource-r18
}

```

```

aperiodicFwdTimeRsrcToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofAperiodicFwdTimeResource-r18)) OF NCR-AperiodicFwdTimeResourceId-r18
OPTIONAL, -- Need N
referenceSCS-r18 SubcarrierSpacing OPTIONAL, -- Need M
aperiodicBeamFieldWidth-r18 INTEGER (1..6) OPTIONAL, -- Need M
numberOfFields-r18 INTEGER (1..32) OPTIONAL, -- Need M
...
}
NCR-AperiodicFwdTimeResource-r18 ::= SEQUENCE {
aperiodicFwdTimeRsrcId-r18 NCR-AperiodicFwdTimeResourceId-r18,
slotOffsetAperiodic-r18 INTEGER (0..14),
symbolOffset-r18 INTEGER (0..maxNrofSymbols-1),
durationInSymbols-r18 INTEGER (1..28),
...
}
NCR-AperiodicFwdTimeResourceId-r18 ::= INTEGER (0..maxNrofAperiodicFwdTimeResource-1-r18)
-- TAG-NCR-APERIODICFWDCONFIG-STOP
-- ASN1STOP

```

<b><i>NCR-AperiodicFwdConfig</i> field descriptions</b>	
<b><i>aperiodicBeamFieldWidth</i></b>	Indicates the bitwidth of each beam index field in DCI carrying aperiodic beam indication.
<b><i>aperiodicFwdTimeRsrcToAddModList</i></b>	List of aperiodic forwarding time resources to be added or modified.
<b><i>durationInSymbols</i></b>	Indicates the time duration in number of symbols.
<b><i>numberOfFields</i></b>	Indicates the number of time resource fields in DCI carrying aperiodic beam indication.
<b><i>referenceSCS</i></b>	Indicates the reference subcarrier spacing for all the time resources in the list. Only values <i>kHz15</i> , <i>kHz30</i> , <i>kHz60</i> , <i>kHz120</i> and <i>kHz240</i> are applicable.
<b><i>slotOffsetAperiodic</i></b>	Indicates the slot offset used to define the start slot of aperiodic time resource.
<b><i>symbolOffset</i></b>	Indicates the symbol offset in one slot.

## – *NCR-FwdConfig*

The IE *NCR-FwdConfig* contains configuration related to periodic, aperiodic and semi-persistent beam indication for NCR-Fwd access link.

### ***NCR-FwdConfig* information element**

```

-- ASN1START
-- TAG-NCR-FWDCONFIG-START

```

```

NCR-FwdConfig-r18 ::= SEQUENCE {
    periodicFwdRsrcSetToAddModList-r18 SEQUENCE (SIZE (1..maxNrofPeriodicFwdResourceSet-r18)) OF NCR-PeriodicFwdResourceSet-r18
    periodicFwdRsrcSetToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofPeriodicFwdResourceSet-r18)) OF NCR-PeriodicFwdResourceSetId-r18
    aperiodicFwdConfig-r18 SetupRelease {NCR-AperiodicFwdConfig-r18}
    semiPersistentFwdRsrcSetToAddModList-r18 SEQUENCE (SIZE (1..maxNrofSemiPersistentFwdResourceSet-r18)) OF NCR-SemiPersistentFwdResourceSet-r18
    semiPersistentFwdRsrcSetToReleaseList-r18 SEQUENCE (SIZE (1..maxNrofSemiPersistentFwdResourceSet-r18)) OF NCR-SemiPersistentFwdResourceSetId-r18
    ...
}
-- TAG-NCR-FWDCONFIG-STOP
-- ASN1STOP

```

#### **NCR-FwdConfig field descriptions**

##### ***aperiodicFwdConfig***

Aperiodic time resource configuration for beam indication for NCR. The configuration includes a list of time domain resources that can be selected for aperiodic forwarding.

##### ***periodicFwdRsrcSetToAddModList***

List of periodic forwarding resource configurations to be added or modified.

##### ***periodicFwdRsrcSetToReleaseList***

List of periodic forwarding resource configurations to be released.

##### ***semiPersistentFwdRsrcSetToAddModList***

List of semi-persistent forwarding resource configurations to be added or modified.

## – *NCR-PeriodicityAndOffset*

The IE *NCR-PeriodicityAndOffset* is used to indicate the periodicity (in slot or ms) and offset (in slot) for periodic forwarding resource and semi-persistent forwarding resource.

#### **NCR-PeriodicityAndOffset information element**

```

-- ASN1START
-- TAG-NCR-PERIODICITYANDOFFSET-START
NCR-PeriodicityAndOffset-r18 ::= CHOICE {

    periodicTimeRsrc-r18              SEQUENCE {
        periodicityAndOffset-r18     NCR-PeriodicityAndOffset-r18,
        symbolOffset-r18             INTEGER (0..maxNrofSymbols-1),
        durationInSymbols-r18        INTEGER (1..112)
    },
    ...
}

NCR-PeriodicFwdResourceId-r18 ::= INTEGER (0..maxNrofPeriodicFwdResource-1-r18)

-- TAG-NCR-PERIODICFWDRESOURCESET-STOP
-- ASN1STOP
```

<b><i>NCR-PeriodicFwdResourceSet</i> field descriptions</b>	
<b><i>beamIndex</i></b>	Indicates the logical beam index for NCR-Fwd access link. NCR-Fwd is assumed to be ON over the indicated time domain resource if there is beam indication.
<b><i>durationInSymbols</i></b>	Indicates the time duration in number of symbols.
<b><i>periodicFwdRsrcToAddModList</i></b>	List of periodic forwarding resources to be added or modified.
<b><i>periodicityAndOffset</i></b>	Indicates the periodicity and slot offset for the periodic forwarding resource. All the periodic forwarding resources configured within the same resource set should have the same periodicity. If the periodicity is expressed in [ms], the value range of slot offset is from 0 to Periodicity[ms] * referenceSCS[kHz]/15 -1.
<b><i>priorityFlag</i></b>	Indicates the priority for the list of periodic forwarding resources, as specified in TS 38.213 [13], clause 20.
<b><i>referenceSCS</i></b>	Indicates the reference subcarrier spacing for all the time resources in the list. Only values <i>kHz15</i> , <i>kHz30</i> , <i>kHz60</i> , <i>kHz120</i> and <i>kHz240</i> are applicable.
<b><i>symbolOffset</i></b>	Indicates the symbol offset in one slot.

### – *NCR-PeriodicFwdResourceSetId*

The IE *NCR-PeriodicFwdResourceSetId* is used to identify one *NCR-PeriodicFwdResourceSet*.

#### ***NCR-PeriodicFwdResourceSetId* information element**

```
-- ASN1START
-- TAG-NCR-PERIODICFWDRESOURCESETID-START

```

#### **NeedForGapsInfoNR field descriptions**

##### **intraFreq-needForGap**

Indicates the measurement gap requirement information for NR intra-frequency measurement.

##### **interFreq-needForGap**

Indicates the measurement gap requirement information for NR inter-frequency measurement.

#### **NeedForGapsIntraFreq field descriptions**

##### **servCellId**

Indicates the serving cell which contains the target SSB (associated with the initial DL BWP) to be measured.

##### **gapIndicationIntra**

Indicates whether measurement gap is required for the UE to perform intra-frequency SSB based measurements on the concerned serving cell. Value *gap* indicates that a measurement gap is needed if any of the UE configured BWPs (except the BWP(s) configured with *servingCellMO* associated with NCD-SSB) do not contain the frequency domain resources of the SSB associated to the initial DL BWP (CD-SSB). Value *no-gap* indicates a measurement gap is not needed to measure the SSB associated to the initial DL BWP (CD-SSB) for all configured BWPs (except the BWP(s) configured with *servingCellMO* associated with NCD-SSB), no matter the SSB is within the configured BWP or not. This field shall be set to 'no-gap' for the serving cell(s) belonging to the corresponding band(s) where *bwpOperationMeasWithoutInterrupt-r18* is supported by the UE.

#### **NeedForGapsNR field descriptions**

##### **bandNR**

Indicates the NR target band to be measured.

##### **gapIndication**

Indicates whether measurement gap is required for the UE to perform SSB based measurements on the concerned NR target band while NR-DC or NE-DC is not configured. The UE determines this information based on the resultant configuration of the *RRCReconfiguration* or *RRCResume* message that triggers this response. Value *gap* indicates that a measurement gap is needed, value *no-gap* indicates a measurement gap is not needed.

– *NeedForGapNCSG-ConfigEUTRA*

The IE *NeedForGapNCSG-ConfigEUTRA* contains configuration related to the reporting of measurement gap and NCSG requirement information.

***NeedForGapNCSG-ConfigEUTRA* information element**

```
-- ASN1START
-- TAG-NeedForGapNCSG-ConfigEUTRA-START

NeedForGapNCSG-ConfigEUTRA-r17 ::= SEQUENCE {
    requestedTargetBandFilterNCSG-EUTRA-r17 SEQUENCE (SIZE (1..maxBandsEUTRA)) OF FreqBandIndicatorEUTRA OPTIONAL -- Need R
}

-- TAG-NeedForGapNCSG-ConfigEUTRA-STOP
-- ASN1STOP
```

***NeedForGapNCSG-ConfigEUTRA* field descriptions**

***requestedTargetBandFilterNCSG-EUTRA***

Indicates the target E-UTRA bands that the UE is requested to report the measurement gap and NCSG requirement information.

– *NeedForGapNCSG-ConfigNR*

The IE *NeedForGapNCSG-ConfigNR* contains configuration related to the reporting of measurement gap and NCSG requirement information.

***NeedForGapNCSG-ConfigNR* information element**

```
-- ASN1START
-- TAG-NEEDFORGAPNCSG-CONFIGNR-START

NeedForGapNCSG-ConfigNR-r17 ::= SEQUENCE {
    requestedTargetBandFilterNCSG-NR-r17 SEQUENCE (SIZE (1..maxBands)) OF FreqBandIndicatorNR OPTIONAL -- Need R
}

-- TAG-NEEDFORGAPNCSG-CONFIGNR-STOP
-- ASN1STOP
```

***NeedForGapNCSG-ConfigNR* field descriptions**

***requestedTargetBandFilterNCSG-NR***

Indicates the target NR bands that the UE is requested to report the measurement gap and NCSG requirement information.

– *NeedForGapNCSG-InfoEUTRA*

The IE *NeedForGapNCSG-InfoEUTRA* indicates whether measurement gap or NCSG is required for the UE to perform measurements on an E-UTRA target band while NR-DC or NE-DC is not configured.

***NeedForGapNCSG-InfoEUTRA* information element**

```
-- ASN1START
-- TAG-NEEDFORGAPNCSG-INFOEUTRA-START

NeedForGapNCSG-InfoEUTRA-r17 ::= SEQUENCE {
    needForNCSG-EUTRA-r17          SEQUENCE (SIZE (1..maxBandsEUTRA)) OF NeedForNCSG-EUTRA-r17
}

NeedForNCSG-EUTRA-r17 ::= SEQUENCE {
    bandEUTRA-r17                 FreqBandIndicatorEUTRA,

}

-- TAG-NEEDFORGAPNCSG-INFOEUTRA-STOP
-- ASN1STOP
```

***NeedForGapNCSG-InfoEUTRA* field descriptions**

***needForNCSG-EUTRA***

Indicates the measurement gap and NCSG requirement information for E-UTRA measurement.

***NeedForNCSG-EUTRA* field descriptions**

***bandEUTRA***

Indicates the E-UTRA target band to be measured.

***gapIndication***

Indicates whether measurement gap or NCSG is required for the UE to perform measurements on the concerned E-UTRA target band while NR-DC or NE-DC is not configured. The UE determines this information based on the resultant configuration of the *RRCReconfiguration* message or *RRCResume* message that triggers this response. Value *gap* indicates that a measurement gap is needed, value *ncsg* indicates that NCSG is needed, value *nogap-noncsg* indicates neither a measurement gap nor a NCSG is needed. Value *nogap-noncsg* also indicates interruption is not needed.

– *NeedForGapNCSG-InfoNR*

The IE *NeedForGapNCSG-InfoNR* indicates whether measurement gap or NCSG is required for the UE to perform SSB based measurements on an NR target band while NR-DC or NE-DC is not configured.

```

#### **NeedForGapNCSG-InfoNR field descriptions**

##### ***intraFreq-needForNCSG***

Indicates the measurement gap and NCSG requirement information for NR intra-frequency measurement.

##### ***interFreq-needForNCSG***

Indicates the measurement gap and NCSG requirement information for NR inter-frequency measurement.

#### **NeedForNCSG-IntraFreq field descriptions**

##### ***servCellId***

Indicates the serving cell which contains the target SSB (associated with the initial DL BWP) to be measured.

##### ***gapIndicationIntra***

Indicates whether measurement gap or NCSG is required for the UE to perform intra-frequency SSB based measurements on the concerned serving cell. Value *gap* indicates that a measurement gap is needed if any of the UE configured BWPs (except the BWP(s) configured with *servCellMO* associated with NCD-SSB) do not contain the frequency domain resources of the SSB associated to the initial DL BWP (CD-SSB). Value *ncsg* indicates that a NCSG is needed if any of the UE configured BWPs do not contain the frequency domain resources of the SSB associated to the initial DL BWP. Value *nogap-noncsg* indicates that neither a measurement gap nor a NCSG is needed to measure the SSB associated to the initial DL BWP (CD-SSB) for all configured BWPs (except the BWP(s) configured with *servCellMO* associated with NCD-SSB), no matter the SSB is within the configured BWP or not. This field shall be set to '*nogap-noncsg*' for the serving cell cell(s) belonging to the corresponding band(s) where *bwpOperationMeasWithoutInterrupt-r18* is supported by the UE. Value *nogap-noncsg* also indicates interruption is not needed.

**NeedForNCSG-NR field descriptions****bandNR**

Indicates the NR target band to be measured.

**gapIndication**

Indicates whether measurement gap or NCSG is required for the UE to perform SSB based measurements on the concerned NR target band while NR-DC or NE-DC is not configured. The UE determines this information based on the resultant configuration of the *RRCReconfiguration* or *RRCResume* message that triggers this response. Value *gap* indicates that a measurement gap is needed, value *ncsg* indicates that a NCSG is needed, and value *nogap-noncs* indicates neither a measurement gap nor a NCSG is needed. Value *nogap-noncs* also indicates interruption is not needed.

– **NeedForInterruptionInfoNR**

The IE *NeedForInterruptionInfoNR* indicates whether interruption is needed for the UE to perform SSB based measurements on an NR target band without measurement gap while NR-DC or NE-DC is not configured.

**NeedForInterruptionInfoNR information element**

```
-- ASN1START
-- TAG-NeedForInterruptionInfoNR-START

NeedForInterruptionInfoNR-r18 ::= SEQUENCE {
    intraFreq-needForInterruption-r18    NeedForInterruptionIntraFreqList-r18,
    interFreq-needForInterruption-r18    NeedForInterruptionBandListNR-r18,
    ...
}

NeedForInterruptionIntraFreqList-r18 ::= SEQUENCE (SIZE (1.. maxNrofServingCells)) OF NeedForInterruptionNR-r18

NeedForInterruptionBandListNR-r18 ::= SEQUENCE (SIZE (1..maxBands)) OF NeedForInterruptionNR-r18

NeedForInterruptionNR-r18 ::= SEQUENCE {
    interruptionIndication-r18          ENUMERATED {no-gap-with-interruption, no-gap-no-interruption} OPTIONAL
}

-- TAG-NeedForInterruptionInfoNR-STOP
-- ASN1STOP
```

**NeedForInterruptionInfoNR field descriptions****intraFreq-needForInterruption**

Indicates the interruption requirement information for NR intra-frequency measurement. Each entry in the list is associated to the entry in list *intraFreq-needForGap-r16* with the same index. This field shall be set to *no-gap-no-interruption* for the serving cell(s) belonging to the corresponding band(s) where *bwpOperationMeasWithoutInterrupt-r18* is supported by the UE.

**interFreq-needForInterruption**

Indicates the interruption requirement information for NR inter-frequency measurement. Each entry in the list is associated to the entry in list *interFreq-needForGap-r16* with the same index.

**NeedForInterruptionNR field descriptions*****interruptionIndication***

Indicates whether interruption is needed for the UE to perform SSB based measurements without measurement gap. Value *no-gap-with-interruption* indicates that interruption is needed. Value *no-gap-no-interruption* indicates interruption is not needed.

– ***NextHopChainingCount***

The IE *NextHopChainingCount* is used to update the  $K_{gNB}$  key and corresponds to parameter NCC: See TS 33.501 [11].

***NextHopChainingCount* information element**

```
-- ASN1START
-- TAG-NEXTHOPCHAININGCOUNT-START
```

```
NextHopChainingCount ::=                INTEGER (0..7)
```

```
-- TAG-NEXTHOPCHAININGCOUNT-STOP
-- ASN1STOP
```

– ***NG-5G-S-TMSI***

The IE *NG-5G-S-TMSI* contains a 5G S-Temporary Mobile Subscription Identifier (5G-S-TMSI), a temporary UE identity provided by the 5GC which uniquely identifies the UE within the tracking area, see TS 23.003 [21].

***NG-5G-S-TMSI* information element**

```
-- ASN1START
-- TAG-NG-5G-S-TMSI-START
```

```
NG-5G-S-TMSI ::=                        BIT STRING (SIZE (48))
```

```
-- TAG-NG-5G-S-TMSI-STOP
-- ASN1STOP
```

– ***NonCellDefiningSSB***

The IE *NonCellDefiningSSB* is used to configure a NCD-SSB to be used while the UE operates in an RedCap-specific initial BWP that does not contain the CD-SSB or a dedicated BWP that does not contain the CD-SSB.

***NonCellDefiningSSB* information element**

```
-- ASN1START
-- TAG-NONCELLDEFININGSSB-START
```

```

NonCellDefiningSSB-r17 ::=          SEQUENCE {
  absoluteFrequencySSB-r17         ARFCN-ValueNR,
  ssb-Periodicity-r17              ENUMERATED { ms5, ms10, ms20, ms40, ms80, ms160, spare2, spare1 }   OPTIONAL, -- Need S
  ssb-TimeOffset-r17               ENUMERATED { ms5, ms10, ms15, ms20, ms40, ms80, spare2, spare1 }   OPTIONAL, -- Need S
  ...
}

-- TAG-NONCELLDEFININGSSB-STOP
-- ASN1STOP

```

#### **NonCellDefiningSSB field descriptions**

##### **absoluteFrequencySSB**

Frequency of the NCD-SSB. The network configures this field so that the SSB is within the bandwidth of the BWP configured in *BWP-DownlinkCommon*.

##### **ssb-Periodicity**

The periodicity of this NCD-SSB. The network configures only periodicities that are larger than the periodicity of serving cell's CD-SSB. If the field is absent, the UE applies the SSB periodicity of the CD-SSB (*ssb-periodicityServingCell* configured in *ServingCellConfigCommon* or *ServingCellConfigCommonSIB*).

##### **ssb-TimeOffset**

The time offset between CD-SSB of the serving cell and this NCD-SSB. Value *ms5* means the first burst of NCD-SSB is transmitted 5ms later than the first burst of CD-SSB transmitted after the first symbol of SFN=0 of the serving cell, value *ms10* means the first burst of NCD-SSB is transmitted 10ms later than the first burst of CD-SSB transmitted after the first symbol in SFN=0 of the serving cell, and so on. If the field is absent, UE considers that the time offset between the first burst of CD-SSB transmitted in the serving cell and the first burst of this NCD-SSB transmitted is zero. For UEs in TDD cells, the network configures this time offset to be an integer multiple of the periodicity of the serving cell's CD-SSB.

## – *NPN-Identity*

The IE *NPN-Identity* includes either a list of CAG-IDs or a list of NIDs per PLMN Identity. Further information regarding how to set the IE is specified in TS 23.003 [21].

#### ***NPN-Identity* information element**

```

-- ASN1START
-- TAG-NPN-IDENTITY-START

NPN-Identity-r16 ::=          CHOICE {
  pni-npn-r16                 SEQUENCE {
    plmn-Identity-r16         PLMN-Identity,
    cag-IdentityList-r16      SEQUENCE (SIZE (1..maxNPN-r16)) OF CAG-IdentityInfo-r16
  },
  snpn-r16                    SEQUENCE {
    plmn-Identity-r16         PLMN-Identity,
    nid-List-r16              SEQUENCE (SIZE (1..maxNPN-r16)) OF NID-r16
  }
}

CAG-IdentityInfo-r16 ::=      SEQUENCE {
  cag-Identity-r16            BIT STRING (SIZE (32)),
  manualCAGselectionAllowed-r16  ENUMERATED {true}   OPTIONAL -- Need R
}

```

```
NID-r16 ::= BIT STRING (SIZE (44))

-- TAG-NPN-IDENTITY-STOP
-- ASN1STOP
```

<i>NPN-Identity</i> field descriptions
<b>cag-Identity</b> A CAG-ID as specified in TS 23.003 [21]. The PLMN ID and a CAG ID in the <i>NPN-Identity</i> identifies a PNI-NPN.
<b>cag-IdentityList</b> The <i>cag-IdentityList</i> contains one or more CAG IDs. All CAG IDs associated to the same PLMN ID are listed in the same <i>cag-IdentityList</i> entry.
<b>manualCAGselectionAllowed</b> The <i>manualCAGselectionAllowed</i> indicates that the CAG ID can be selected manually even if it is outside the UE's allowed CAG list.
<b>NID</b> A NID as specified in TS 23.003 [21]. The PLMN ID and a NID in the <i>NPN-Identity</i> identifies a SNPN.
<b>nid-List</b> The <i>nid-List</i> contains one or more <i>NID</i> .

## – *NPN-IdentityInfoList*

The IE *NPN-IdentityInfoList* includes a list of NPN identity information.

### *NPN-IdentityInfoList* information element

```
-- ASN1START
-- TAG-NPN-IDENTITYINFOLIST-START

NPN-IdentityInfoList-r16 ::= SEQUENCE (SIZE (1..maxNPN-r16)) OF NPN-IdentityInfo-r16

NPN-IdentityInfo-r16 ::= SEQUENCE {
    npn-IdentityList-r16          SEQUENCE (SIZE (1..maxNPN-r16)) OF NPN-Identity-r16,
    trackingAreaCode-r16        TrackingAreaCode,
    ranac-r16                    RAN-AreaCode                               OPTIONAL,      -- Need R
    cellIdentity-r16            CellIdentity,
    cellReservedForOperatorUse-r16 ENUMERATED {reserved, notReserved},
    iab-Support-r16             ENUMERATED {true}                          OPTIONAL,      -- Need S
    ...,
    [[
    gNB-ID-Length-r17           INTEGER (22..32)                            OPTIONAL      -- Need R
    ]],
    [[
    mobileIAB-Support-r18       ENUMERATED {true}                          OPTIONAL      -- Need S
    ]]
}

-- TAG-NPN-IDENTITYINFOLIST-STOP
-- ASN1STOP
```

<b><i>NPN-IdentityInfoList</i> field descriptions</b>
<p><b><i>iab-Support</i></b> This field combines both the support of IAB and the cell status for IAB. If the field is present, the cell supports IAB and the cell is also considered as a candidate for cell (re)selection for IAB-nodes; if the field is absent, the cell does not support IAB and/or the cell is barred for IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell.</p>
<p><b><i>gNB-ID-Length</i></b> Indicates the length of the gNB ID out of the 36-bit long <i>cellIdentity</i>. This field is always present if the <i>mobileIAB-Support</i> is broadcasted.</p>
<p><b><i>mobileIAB-Support</i></b> This field indicates the support of mobile IAB and whether the cell can be considered as a candidate for cell (re)selection for mobile IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell. If the field is absent, the cell is barred for mobile IAB-node.</p>
<p><b><i>NPN-IdentityInfo</i></b> The <i>NPN-IdentityInfo</i> contains one or more NPN identities and additional information associated with those NPNs. Only the same type of NPNs (either SNPNs or PNI-NPNs) can be listed in a <i>NPN-IdentityInfo</i> element.</p>
<p><b><i>nnp-IdentityList</i></b> The <i>nnp-IdentityList</i> contains one or more NPN Identity elements.</p>
<p><b><i>trackingAreaCode</i></b> Indicates the Tracking Area Code to which the cell indicated by <i>cellIdentity</i> field belongs.</p>
<p><b><i>ranac</i></b> Indicates the RAN Area Code to which the cell indicated by <i>cellIdentity</i> field belongs.</p>
<p><b><i>cellReservedForOperatorUse</i></b> Indicates whether the cell is reserved for operator use (for the NPN(s) identified in the <i>nnp-IdentityList</i>) as defined in TS 38.304 [20]. This field is ignored by NPN capable IAB-MT and NPN capable NCR-MT.</p>

## – *NR-DL-PRS-PDC-Info*

The IE *NR-DL-PRS-PDC-Info* defines downlink PRS configuration for PDC.

### ***NR-DL-PRS-PDC-Info* information element**

#### **NR-DL-PRS-PDC-ResourceSet field descriptions**

##### ***dl-PRS-ResourceBandwidth***

This field specifies the number of PRBs allocated for all the DL-PRS Resource (allocated DL-PRS bandwidth) in multiples of 4 PRBs in this resource set. All DL-PRS Resources of the DL-PRS-PDC Resource Set have the same bandwidth. Integer value 1 corresponds to 24 PRBs, value 2 corresponds to 28 PRBs, value 3 corresponds to 32 PRBs and so on.

##### ***dl-PRS-StartPRB***

This field specifies the start PRB index defined as offset with respect to subcarrier 0 in common resource block 0 for the DL-PRS Resource. All DL-PRS Resources of the DL-PRS-PDC Resource Set have the same value of dl-PRS-StartPRB.

##### ***numSymbols***

This field specifies the number of symbols per DL-PRS Resource within a slot. The UE does not expect to be configured for PDC with a PRS with *numSymbols* equals to n1 unless an SSB index is provided as a *typeC* or *typeC-plus-typeD* QCL source, or another PRS resource with *numSymbols* more than n1 is provided as QCL source.

##### ***periodicityAndOffset***

This field specifies the periodicity of DL-PRS allocation in slots and the slot offset with respect to SFN #0 slot #0 in the PCell where the DL-PRS-PDC Resource Set is configured (i.e., slot where the first DL-PRS Resource of DL-PRS-PDC Resource Set occurs).

##### ***repFactorAndTimeGap***

If this field is absent, the value for *repetitionFactor* is 1 (i.e., no resource repetition).

#### **RepFactorAndTimeGap field descriptions**

##### ***repetitionFactor***

This field specifies how many times each DL-PRS Resource is repeated for a single instance of the DL-PRS Resource Set. It is applied to all resources of the DL-PRS Resource Set. Enumerated values n2, n4, n6, n8, n16, n32 correspond to 2, 4, 6, 8, 16, 32 resource repetitions, respectively.

##### ***timeGap***

This field specifies the offset in units of slots between two repeated instances of a DL-PRS Resource corresponding to the same DL-PRS Resource ID within a single instance of the DL-PRS Resource Set. The time duration spanned by one DL-PRS Resource Set containing repeated DL-PRS Resources should not exceed the periodicity configured by *periodicityAndOffset*.

**NR-DL-PRS-Resource field description*****dl-PRS-ResourceSymbolOffset***

This field specifies the starting symbol of the *DL-PRS Resource* within a slot. If *dl-PRS-ResourceSymbolOffset-v1800* is present, the UE shall ignore *dl-PRS-ResourceSymbolOffset-r17*.

– ***NR-NS-PmaxList***

The IE *NR-NS-PmaxList* is used to configure a list of *additionalPmax* and *additionalSpectrumEmission*, as defined in TS 38.101-1 [15], table 6.2.3.1-1A, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A for a given frequency band.

***NR-NS-PmaxList* information element**

```

```

<b>NTN-Config field descriptions</b>
<p><b><i>ephemerisInfo</i></b> This field provides satellite ephemeris either in format of position and velocity state vector or in format of orbital parameters. This field is excluded when determining changes in system information, i.e. changes to <i>ephemerisInfo</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>.</p>
<p><b><i>epochTime</i></b> If this field is absent for the NTN serving cell, the epoch time is the end of SI window where this <i>SIB19</i> is scheduled. This field is mandatory present when <i>ntn-Config</i> is provided in dedicated configuration. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> or <i>SatSwitchWithReSync</i> in an NTN cell, the UE uses epoch time of the serving cell, otherwise the field is based on the timing of the serving cell, i.e. the SFN and sub-frame number indicated in this field refers to the SFN and sub-frame of the serving cell. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> in a TN cell, the epoch time is the end of SI window where this <i>SIB19</i> is scheduled. In case of satellite switch with resynchronization, this field is based on the timing of the cell served by the source satellite. This field is excluded when determining changes in system information, i.e. changes to <i>epochTime</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>.</p>
<p><b><i>cellSpecificKoffset</i></b> Scheduling offset used for the timing relationships that are modified for NTN (see TS 38.213 [13]). The unit of the field <i>K_offset</i> is number of slots for a given subcarrier spacing of 15 kHz. If the field is absent UE assumes value 0.</p>
<p><b><i>kmac</i></b> Scheduling offset provided by network if downlink and uplink frame timing are not aligned at gNB. If the field is absent UE assumes value 0. The unit of <i>kmac</i> is number of slots for a given subcarrier spacing of 15 kHz.</p>
<p><b><i>ntn-PolarizationDL</i></b> If present, this parameter indicates polarization information for downlink transmission on service link: including Right hand, Left hand circular polarizations (RHCP, LHCP) and Linear polarization.</p>
<p><b><i>ntn-PolarizationUL</i></b> If present, this parameter indicates Polarization information for uplink service link. If not present and <i>ntn-PolarizationDL</i> is present, UE assumes the same polarization for UL and DL.</p>
<p><b><i>ntn-UISyncValidityDuration</i></b> A validity duration configured by the network for assistance information (i.e. Serving and/or neighbour satellite ephemeris and Common TA parameters) which indicates the maximum time duration (from <i>epochTime</i>) during which the UE can apply assistance information without having acquired new assistance information. The unit of <i>ntn-UISyncValidityDuration</i> is second. Value <i>s5</i> corresponds to 5 s, value <i>s10</i> indicate 10 s and so on. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> or <i>SatSwitchWithReSync</i> in an NTN cell, the UE uses validity duration from the serving cell assistance information. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> in a TN cell, how the UE sets the validity duration is left to UE implementation. This field is excluded when determining changes in system information, i.e. changes of <i>ntn-UISyncValidityDuration</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>. <i>ntn-UISyncValidityDuration</i> is only updated when at least one of <i>epochTime</i>, <i>ta-Info</i>, <i>ephemerisInfo</i> is updated.</p>
<p><b><i>ta-Common</i></b> Network-controlled common timing advanced value and it may include any timing offset considered necessary by the network. <i>ta-Common</i> with value of 0 is supported. The granularity of <i>ta-Common</i> is <math>4.072 \times 10^{-3}</math> <math>\mu</math>s. Values are given in unit of corresponding granularity. This field is excluded when determining changes in system information, i.e. changes of <i>ta-Common</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>.</p>
<p><b><i>ta-CommonDrift</i></b> Indicate drift rate of the common TA. The granularity of <i>ta-CommonDrift</i> is <math>0.2 \times 10^{-3}</math> <math>\mu</math>s/s. Values are given in unit of corresponding granularity. This field is excluded when determining changes in system information, i.e. changes of <i>ta-CommonDrift</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>.</p>
<p><b><i>ta-CommonDriftVariant</i></b> Indicate drift rate variation of the common TA. The granularity of <i>ta-CommonDriftVariant</i> is <math>0.2 \times 10^{-4}</math> <math>\mu</math>s/s<sup>2</sup>. Values are given in unit of corresponding granularity. This field is excluded when determining changes in system information, i.e. changes of <i>ta-CommonDriftVariant</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>.</p>
<p><b><i>ta-Report</i></b> When this field is included in <i>SIB19</i>, it indicates reporting of timing advanced is enabled during Random Access due to RRC connection establishment or RRC connection resume, and during RRC connection reestablishment. When this field is included in <i>ServingCellConfigCommon</i> within dedicated signalling, it indicates TA reporting is enabled during reconfiguration with sync (see TS 38.321 [3], clause 5.4.8).</p>

Conditional Presence	Explanation
<i>SIB19</i>	The field is mandatory present for the serving cell in <i>SIB19</i> . The field is optionally present, Need R, otherwise.

## – *NZP-CSI-RS-Resource*

The IE *NZP-CSI-RS-Resource* is used to configure Non-Zero-Power (NZP) CSI-RS transmitted in the cell where the IE is included, which the UE may be configured to measure on (see TS 38.214 [19], clause 5.2.2.3.1). A change of configuration between periodic, semi-persistent or aperiodic for an *NZP-CSI-RS-Resource* is not supported without a release and add.

### *NZP-CSI-RS-Resource* information element

```

-- ASN1START
-- TAG-NZP-CSI-RS-RESOURCE-START

NZP-CSI-RS-Resource ::=

    ]
  }

-- TAG-NZP-CSI-RS-RESOURCE-STOP
-- ASN1STOP

```

<b>NZP-CSI-RS-Resource field descriptions</b>	
<b>periodicityAndOffset</b>	Periodicity and slot offset <i>s1</i> corresponds to a periodicity of 1 slot, <i>s2</i> to a periodicity of two slots, and so on. The corresponding offset is also given in number of slots (see TS 38.214 [19], clause 5.2.2.3.1). Network always configures the UE with a value for this field for periodic and semi-persistent NZP-CSI-RS-Resource (as indicated in <i>CSI-ResourceConfig</i> ).
<b>powerControlOffset</b>	Power offset of PDSCH EPRE to NZP CSI-RS EPRE. Value in dB (see TS 38.214 [19], clauses 5.2.2.3.1 and 4.1). The UE shall ignore this field in case <i>NZP-CSI-RS-Resources</i> is received as part of an <i>LTM-Candidate IE</i> .
<b>powerControlOffsetSS</b>	Power offset of NZP CSI-RS EPRE to SS/PBCH block EPRE. Value in dB (see TS 38.214 [19], clause 5.2.2.3.1).
<b>qcl-InfoPeriodicCSI-RS</b>	For a target periodic CSI-RS, contains a reference to one <i>TCI-State</i> in <i>TCI-States</i> for providing the QCL source and QCL type. For periodic CSI-RS, the source can be SSB or another periodic-CSI-RS. Refers to the <i>TCI-State</i> or <i>dl-OrJoint-TCI-State</i> which has this value for <i>tcI-StateId</i> and is defined in <i>tcI-StatesToAddModList</i> or in <i>dl-OrJointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> corresponding to the serving cell and to the DL BWP to which the resource belongs to (see TS 38.214 [19], clause 5.2.2.3.1). In case <i>NZP-CSI-RS-Resources</i> is received as part of an <i>LTM-Candidate IE</i> , it refers to the TCI state identifier in <i>CandidateTCI-State</i> and is defined in <i>ltn-DL-OrJointTCI-StateToAddModList</i> within the <i>LTM-Candidate IE</i> .
<b>resourceMapping</b>	OFDM symbol location(s) in a slot and subcarrier occupancy in a PRB of the CSI-RS resource.
<b>scramblingID</b>	Scrambling ID (see TS 38.214 [19], clause 5.2.2.3.1).

Conditional Presence	Explanation
<i>LTM</i>	The field is optionally present in an <i>LTM-Candidate IE</i> . Otherwise, the field is absent.
<i>Periodic</i>	The field is optionally present, Need M, for periodic <i>NZP-CSI-RS-Resources</i> (as indicated in <i>CSI-ResourceConfig</i> ). The field is absent otherwise.
<i>PeriodicOrSemiPersistent</i>	The field is optionally present, Need M, for periodic and semi-persistent <i>NZP-CSI-RS-Resources</i> (as indicated in <i>CSI-ResourceConfig</i> ). The field is absent otherwise.

– ***NZP-CSI-RS-ResourceId***

The IE *NZP-CSI-RS-ResourceId* is used to identify one NZP-CSI-RS-Resource.

***NZP-CSI-RS-ResourceId* information element**

```
-- ASN1START
-- TAG-NZP-CSI-RS-RESOURCEID-START

NZP-CSI-RS-ResourceId ::=
    INTEGER (0..maxNrofNZP-CSI-RS-Resources-1)

-- TAG-NZP-CSI-RS-RESOURCEID-STOP
-- ASN1STOP
```

– *NZP-CSI-RS-ResourceSet*

The IE *NZP-CSI-RS-ResourceSet* is a set of Non-Zero-Power (NZP) CSI-RS resources (their IDs) and set-specific parameters.

***NZP-CSI-RS-ResourceSet* information element**

```

-- ASN1START
-- TAG-NZP-CSI-RS-RESOURCESET-START

```

<b>NZP-CSI-RS-ResourceSet field descriptions</b>
<p><b><i>aperiodicTriggeringOffset, aperiodicTriggeringOffset-r16, aperiodicTriggeringOffset-r17</i></b>  Offset X between the slot containing the DCI that triggers a set of aperiodic NZP CSI-RS resources and the slot in which the CSI-RS resource set is transmitted. For <i>aperiodicTriggeringOffset</i>, the value 0 corresponds to 0 slots, value 1 corresponds to 1 slot, value 2 corresponds to 2 slots, value 3 corresponds to 3 slots, value 4 corresponds to 4 slots, value 5 corresponds to 16 slots, value 6 corresponds to 24 slots. For <i>aperiodicTriggeringOffset-r16</i> and <i>aperiodicTriggeringOffset-r17</i>, the value indicates the number of slots. <i>aperiodicTriggeringOffset-r17</i> is applicable to SCS 480 kHz and 960 kHz, and only the values of integer multiples of 4 are valid, i.e. 0, 4, 8, and so on. The network configures only one of the fields. When neither field is included, the UE applies the value 0. This field is not present in case <i>NZP-CSI-RS-ResourceSet</i> is received as part of an <i>LTM-Candidate</i> IE.</p>
<p><b><i>aperiodicTriggeringOffsetL2</i></b>  Indicates triggering offset of aperiodic NZP CSI-RS resources used for fast activation of the SCell (see clause 5.2.1.5.3 of TS 38.214 [19]), when the NZP CSI-RS resources are activated by the MAC CE (see clause 5.9 of TS 38.321 [3]). The value indicates the number of slots. This field is not present in case <i>NZP-CSI-RS-ResourceSet</i> is received as part of an <i>LTM-Candidate</i> IE.</p>
<p><b><i>cmrGroupingAndPairing</i></b>  Configures CMR groups and pairs. The first <i>nrofResourcesGroup1</i> resources in the NZP-CSI-RS resource set belong to Group 1 and the remaining resources in the NZP-CSI-RS resource set belong to Group 2. <i>nrofResourcesGroup1</i> is <math>K_1</math> and the number of remaining resources in the NZP-CSI-RS resource set belonging to Group 2 is <math>K_2</math> as specified in TS 38.214 clause 5.2.1.4.1. Maximum total number in Group 1 and Group 2 is 8 (see TS 38.214 [19], clauses 5.2.1.4.1 and 5.2.1.4.2). This field is not present in case <i>NZP-CSI-RS-ResourceSet</i> is received as part of an <i>LTM-Candidate</i> IE.</p>
<p><b><i>pair1OfNZP-CSI-RS, pair2OfNZP-CSI-RS</i></b>  A pair of NZP CSI-RS resources. In one pair, one resource shall belong to group 1 and the other resource shall belong to group 2 (see TS 38.214 [19], clause 5.2.1.4.1).</p>
<p><b><i>nzp-CSI-RS-Resources</i></b>  NZP-CSI-RS-Resources associated with this NZP-CSI-RS resource set (see TS 38.214 [19], clause 5.2). For CSI, there are at most 8 NZP CSI RS resources per resource set. If the <i>NZP-CSI-RS-ResourceSet</i> is indicated in a <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in a <i>CSI-ReportConfig</i>, if the <i>codebookType</i> in the <i>codebookConfig</i> in the <i>CSI-ReportConfig</i> is <i>typell-Doppler-r18</i> or <i>typell-DopplerPortSelection-r18</i>, there are at most 1 periodic or semi-persistent NZP CSI-RS resource and 4, 8 or 12 aperiodic NZP CSI-RS resources and if the <i>codebookType</i> is <i>typell-CJT-r18</i> or <i>typell-CJT-PortSelection-r18</i>, there are 1, 2, 3, or 4 aperiodic, periodic or semi-persistent NZP-CSI-RS resources, see TS 38.214 5.2.1.4.</p>
<p><b><i>nzp-CSI-RS-ResourceId1, nzp-CSI-RS-ResourceId2</i></b>  The <i>nzp-CSI-RS-ResourceId1-r17</i> represents the index of the NZP CSI-RS resource in Resource Group 1, and <i>nzp-CSI-RS-ResourceId2-r17</i> represents the index of the NZP CSI-RS resource in Resource Group 2.</p>
<p><b><i>pdic-Info</i></b>  Indicates that this NZP-CSI-RS-ResourceSet, if configured also with <i>trs-Info</i>, is used for propagation delay compensation. The field can be present only if <i>trs-info</i> is present. The field can be present in only one <i>NZP-CSI-RS-ResourceSet</i>. If network configures this field for an <i>NZP-CSI-RS-ResourceSet</i>, the UE measures the UE Rx-Tx time difference based on resources configured in this resource set. This field is not present in case <i>NZP-CSI-RS-ResourcesSet</i> is received as part of an <i>LTM-Candidate</i> IE.</p>
<p><b><i>repetition</i></b>  Indicates whether repetition is on/off. If the field is set to <i>off</i> or if the field is absent, the UE may not assume that the NZP-CSI-RS resources within the resource set are transmitted with the same downlink spatial domain transmission filter (see TS 38.214 [19], clauses 5.2.2.3.1 and 5.1.6.1.2). It can only be configured for CSI-RS resource sets which are associated with <i>CSI-ReportConfig</i> with report of L1 RSRP, L1 SINR or "no report". This field is not present in case <i>NZP-CSI-RS-ResourcesSet</i> is received as part of an <i>LTM-Candidate</i> IE.</p>
<p><b><i>resourceType</i></b>  Time domain behavior of resource configuration (see TS 38.214 [19], clause 5.2.1.2).</p>
<p><b><i>trs-Info</i></b>  Indicates that the antenna port for all NZP-CSI-RS resources in the CSI-RS resource set is same. If the field is absent or released the UE applies the value <i>false</i> (see TS 38.214 [19], clause 5.2.2.3.1).</p>

Conditional Presence	Explanation
<i>LTM</i>	The field is optionally present, Need R, in an <i>LTM-Candidate</i> IE. Otherwise, the field is absent.

– *NZP-CSI-RS-ResourceSetId*

The IE *NZP-CSI-RS-ResourceSetId* is used to identify one *NZP-CSI-RS-ResourceSet*.

***NZP-CSI-RS-ResourceSetId* information element**

```
-- ASN1START
-- TAG-NZP-CSI-RS-RESOURCESETID-START

NZP-CSI-RS-ResourceSetId ::=          INTEGER (0..maxNrofNZP-CSI-RS-ResourceSets-1)

-- TAG-NZP-CSI-RS-RESOURCESETID-STOP
-- ASN1STOP
```

– *P-Max*

The IE *P-Max* is used to limit the UE's uplink transmission power on a carrier frequency, in TS 38.101-1 [15] and in TS 38.101-5 [75], and is used to calculate the parameter *Pcompensation* defined in TS 38.304 [20]. In ATG cell, actual value of *P-Max* = 9 + field value [dBm].

***P-Max* information element**

```
-- ASN1START
-- TAG-P-MAX-START

P-Max ::=          INTEGER (-30..33)

-- TAG-P-MAX-STOP
-- ASN1STOP
```

– *PathlossReferenceRS*

The IE *PathlossReferenceRS* is used to configure a Reference Signal (e.g. a CSI-RS config or a SS block) to be used for path loss estimation for PUSCH, PUCCH and SRS for unified TCI state operation.

***PathlossReferenceRS* information element**

```
-- ASN1START
-- TAG-PATHLOSSREFERENCERS-START

PathlossReferenceRS-r17 ::= SEQUENCE {
```

```

pathlossReferenceRS-Id-r17      PathlossReferenceRS-Id-r17,
referenceSignal-r17            CHOICE {
    ssb-Index                  SSB-Index,
    csi-RS-Index               NZP-CSI-RS-ResourceId
},
additionalPCI-r17              AdditionalPCIIndex-r17
}

-- TAG-PATHLOSSREFERENCERS-STOP
-- ASN1STOP
    
```

OPTIONAL -- Cond RS-SSB

<i>PathlossReferenceRS</i> field descriptions
<b>additionalPCI</b> Indicates the physical cell ID (PCI) of the SSB for the referenceSignal.

Conditional Presence	Explanation
RS-SSB	The field is optionally present, Need R, if <i>ssb-Index</i> is configured for <i>referenceSignal</i> . Otherwise it is absent, Need R.

– *PathlossReferenceRS-Id*

The IE *PathlossReferenceRS-Id* is an ID for a reference signal (RS) configured as PUSCH, PUCCH and SRS pathloss reference RS for unified TCI state operation.

***PathlossReferenceRS-Id* information element**

```

-- ASN1START
-- TAG-PATHLOSSREFERENCERS-ID-START

PathlossReferenceRS-Id-r17 ::= INTEGER (0..maxNrofPathlossReferenceRSs-1-r17)

-- TAG-PATHLOSSREFERENCERS-ID-STOP
-- ASN1STOP
    
```

– *PCI-ARFCN-EUTRA*

The IE *PCI-ARFCN-EUTRA* is used to encode EUTRA PCI and ARFCN.

***PCI-ARFCN-EUTRA* information element**

```

-- ASN1START
-- TAG-PCIARFCNEUTRA-START

PCI-ARFCN-EUTRA-r16 ::= SEQUENCE {
    physCellId-r16      EUTRA-PhysCellId,
    
```

```

    carrierFreq-r16                ARFCN-ValueEUTRA
}
-- TAG-PCIARFCNEUTRA-STOP
-- ASN1STOP

```

## – *PCI-ARFCN-NR*

The IE *PCI-ARFCN-NR* is used to encode NR PCI and ARFCN.

### *PCI-ARFCN-NR* information element

```

-- ASN1START
-- TAG-PCIARFCNNR-START

PCI-ARFCN-NR-r16 ::=          SEQUENCE {
    physCellId-r16            PhysCellId,
    carrierFreq-r16          ARFCN-ValueNR
}

-- TAG-PCIARFCNNR-STOP
-- ASN1STOP

```

## – *PCI-List*

The IE *PCI-List* concerns a list of physical cell identities, which may be used for different purposes.

### *PCI-List* information element

```

-- ASN1START
-- TAG-PCI-LIST-START

PCI-List ::=                SEQUENCE (SIZE (1..maxNrofCellMeas)) OF PhysCellId

-- TAG-PCI-LIST-STOP
-- ASN1STOP

```

## – PCI-Range

The IE *PCI-Range* is used to encode either a single or a range of physical cell identities. The range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range. For fields comprising multiple occurrences of *PCI-Range*, the Network may configure overlapping ranges of physical cell identities.

### PCI-Range information element

```
-- ASN1START
-- TAG-PCI-RANGE-START

PCI-Range ::=
    start          SEQUENCE {
                   PhysCellId,
                   range          ENUMERATED {n4, n8, n12, n16, n24, n32, n48, n64, n84,
                                           n96, n128, n168, n252, n504, n1008, spare1}
    }
    }
-- TAG-PCI-RANGE-STOP
-- ASN1STOP
```

OPTIONAL -- Need S

#### PCI-Range field descriptions

##### **range**

Indicates the number of physical cell identities in the range (including *start*). Value *n4* corresponds with 4, value *n8* corresponds with 8 and so on. The UE shall apply value 1 in case the field is absent, in which case only the physical cell identity value indicated by *start* applies.

##### **start**

Indicates the lowest physical cell identity in the range.

## – PCI-RangeElement

The IE *PCI-RangeElement* is used to define a PCI-Range as part of a list (e.g. AddMod list).

### PCI-RangeElement information element

```
-- ASN1START
-- TAG-PCI-RANGEELEMENT-START

PCI-RangeElement ::=
    pci-RangeIndex PCI-RangeIndex,
    pci-Range       PCI-Range
}
-- TAG-PCI-RANGEELEMENT-STOP
-- ASN1STOP
```

**PCI-RangeElement field descriptions*****pci-Range***

Physical cell identity or a range of physical cell identities.

– ***PCI-RangeIndex***The IE *PCI-RangeIndex* identifies a physical cell id range, which may be used for different purposes.***PCI-RangeIndex* information element**

```
-- ASN1START
-- TAG-PCI-RANGEINDEX-START

PCI-RangeIndex ::=                INTEGER (1..maxNrofPCI-Ranges)

-- TAG-PCI-RANGEINDEX-STOP
-- ASN1STOP
```

– ***PCI-RangeIndexList***The IE *PCI-RangeIndexList* concerns a list of indexes of physical cell id ranges, which may be used for different purposes.***PCI-RangeIndexList* information element**

```
-- ASN1START
-- TAG-PCI-RANGEINDEXLIST-START

PCI-RangeIndexList ::=            SEQUENCE (SIZE (1..maxNrofPCI-Ranges)) OF PCI-RangeIndex

-- TAG-PCI-RANGEINDEXLIST-STOP
-- ASN1STOP
```

– ***PDCCH-Config***

The IE *PDCCH-Config* is used to configure UE specific PDCCH parameters or MBS multicast PDCCH parameters such as control resource sets (CORESET), search spaces and additional parameters for acquiring the PDCCH. If this IE is used for the scheduled SCell in case of cross carrier scheduling, the fields other than *searchSpacesToAddModList* and *searchSpacesToReleaseList* are absent. If the IE is used for a dormant BWP, the fields other than *controlResourceSetToAddModList* and *controlResourceSetToReleaseList* are absent. If this IE is used for MBS CFR, the field *downlinkPreemption, tpc-PUSCH, tpc-SRS, uplinkCancellation, monitoringCapabilityConfig*, and *searchSpaceSwitchConfig* are absent.

***PDCCH-Config* information element**

```
-- ASN1START
```

```

-- TAG-PDCCH-CONFIG-START

-- TAG-PDCCH-CONFIG-STOP
-- ASN1STOP

```

<b>PDCCH-Config field descriptions</b>
<p><b><i>controlResourceSetToAddModList, controlResourceSetToAddModListSizeExt</i></b> List of UE specifically configured Control Resource Sets (CORESETs) to be used by the UE. The network restrictions on configuration of CORESETs per DL BWP are specified in TS 38.213 [13], clause 10.1 and TS 38.306 [26]. The UE shall consider entries in <i>controlResourceSetToAddModList</i> and in <i>controlResourceSetToAddModListSizeExt</i> as a single list, i.e. an entry created using <i>controlResourceSetToAddModList</i> can be modified using <i>controlResourceSetToAddModListSizeExt</i> (or deleted using <i>controlResourceSetToReleaseListSizeExt</i>) and vice-versa. In case network reconfigures control resource set with the same <i>ControlResourceSetId</i> as used for <i>commonControlResourceSet</i> or <i>commonControlResourceSetExt</i> configured via <i>PDCCH-ConfigCommon</i> or via <i>SIB20</i>, the configuration from <i>PDCCH-Config</i> always takes precedence and should not be updated by the UE based on <i>servingCellConfigCommon</i> or based on <i>SIB20</i>.</p>
<p><b><i>controlResourceSetToReleaseList, controlResourceSetToReleaseListSizeExt</i></b> List of UE specifically configured Control Resource Sets (CORESETs) to be released by the UE. This field only applies to CORESETs configured by <i>controlResourceSetToAddModList</i> or <i>controlResourceSetToAddModListSizeExt</i> and does not release the field <i>commonControlResourceSet</i> configured by <i>PDCCH-ConfigCommon</i> and <i>commonControlResourceSetExt</i> configured by <i>SIB20</i>.</p>
<p><b><i>downlinkPreemption</i></b> Configuration of downlink preemption indications to be monitored in this cell (see TS 38.213 [13], clause 11.2).</p>
<p><b><i>monitoringCapabilityConfig</i></b> Configures either Rel-15 PDCCH monitoring capability, Rel-16 PDCCH monitoring capability or Rel-17 PDCCH monitoring capability for PDCCH monitoring on a serving cell (see TS 38.213 [13], clause 10.1). Value <i>r15monitoringcapability</i> enables the Rel-15 monitoring capability, and value <i>r16monitoringcapability</i> enables the Rel-16 PDCCH monitoring capability. <i>r17monitoringcapability</i> enables the Rel-17 PDCCH multi-slot monitoring capability. For 480 and 960 kHz SCS, only value <i>r17monitoringcapability</i> is applicable.</p>
<p><b><i>pdccch-MonitoringResumptionAfterNack</i></b> This field is used to enable UE PDCCH monitoring resumption after PDCCH skipping has started, if the UE transmits a NACK due to incorrectly decoding a PDSCH scheduled by a DCI format received from the serving cell (see TS 38.213 [13], clause 10.4).</p>
<p><b><i>pdccch-SkippingDurationList</i></b> Provides one or more values to derive the skipping duration in unit of slots, as specified in TS 38.213 [13], clause 10.4. The DCI which schedules data indicates which of the values is to be applied (see TS 38.213 [13], clause 10.4). For the 15kHz SCS, for each entry, only the first 26 values are valid and correspond to {1, 2, 3, ..., 20, 30, 40, 50, 60, 80, 100}. For the 30kHz SCS, for each entry, only the first 46 values are valid and correspond to {1, 2, 3, ..., 40, 60, 80, 100, 120, 160, 200}. For the 60kHz SCS, for each entry, only the first 86 values are valid and correspond to {1, 2, 3, ..., 80, 120, 160, 200, 240, 320, 400}. For the 120kHz SCS, for each entry, the 166 values correspond to {1, 2, 3, ..., 160, 240, 320, 400, 480, 640, 800}. For the 480kHz SCS, for each entry, the 166 values correspond to {4, 8, 12, ..., 640, 960, 1280, 1600, 1920, 2560, 3200}. For the 960kHz SCS, for each entry, the 166 values correspond to {8, 16, 24, ..., 1280, 1920, 2560, 3200, 3840, 5120, 6400}.</p>
<p><b><i>searchSpacesToAddModList, searchSpacesToAddModListExt</i></b> List of UE specifically configured Search Spaces or MBS multicast Search Spaces. The network configures at most 10 Search Spaces per BWP per cell (including UE-specific and common Search Spaces). If the network includes <i>searchSpacesToAddModListExt</i>, it includes the same number of entries, and listed in the same order, as in <i>searchSpacesToAddModList</i> in each of them.</p>
<p><b><i>searchSpaceSwitchConfig</i></b> Configuration to control the UE behavior to switch from search space group X back to search space group 0, as specified in clause 10 of TS 38.213 [13]. The network only configures either <i>searchSpaceSwitchConfig-r16</i> or <i>searchSpaceSwitchConfig-r17</i> for a UE.</p>
<p><b><i>tpc-PUCCH</i></b> Enable and configure reception of group TPC commands for PUCCH.</p>
<p><b><i>tpc-PUSCH</i></b> Enable and configure reception of group TPC commands for PUSCH.</p>
<p><b><i>tpc-SRS</i></b> Enable and configure reception of group TPC commands for SRS.</p>
<p><b><i>uplinkCancellation</i></b> Configuration of uplink cancellation indications to be monitored in this cell (see TS 38.213 [13], clause 11.2A).</p>

**SearchSpaceSwitchConfig field descriptions****cellGroupsForSwitchList**

The list of serving cells which are bundled for the search space group switching purpose (see TS 38.213 [13], clause 10.4). A serving cell can belong to only one *CellGroupForSwitch*. The network configures the same list for all BWPs of serving cells in the same *CellGroupForSwitch*.

**searchSpaceSwitchDelay**

Indicates the value to be applied by a UE for Search Space Set Group switching; corresponds to the P value in TS 38.213 [13], clause 10.4. The network configures the same value for all BWPs of serving cells in the same *CellGroupForSwitch*. For 120/480/960 kHz SCS, only values 40,41, ... 52 are valid and the actual value = field value \* SCS/120 kHz i.e. field value 40 corresponds to 40 with 120 kHz SCS, 160 with 480 kHz SCS and 320 with 960 kHz SCS, and so on.

**searchSpaceSwitchTimer**

Timer (in unit of slots) to control the UE behavior to switch from search space group X back to search space group 0, as specified in clause 10 of TS 38.213 [13]. For the 15kHz SCS, only the first 26 values are valid and correspond to {1, 2, 3, ..., 20, 30, 40, 50, 60, 80, 100}. For the 30kHz SCS, only the first 46 values are valid and correspond to {1, 2, 3, ..., 40, 60, 80, 100, 120, 160, 200}. For the 60kHz SCS, only the first 86 values are valid and correspond to {1, 2, 3, ..., 80, 120, 160, 200, 240, 320, 400}. For the 120kHz SCS, the 166 values correspond to {1, 2, 3, ..., 160, 240, 320, 400, 480, 640, 800}. For the 480kHz SCS, the 166 values correspond to {4, 8, 12, ..., 640, 960, 1280, 1600, 1920, 2560, 3200}. For the 960kHz SCS, the 166 values correspond to {8, 16, 24, ..., 1280, 1920, 2560, 3200, 3840, 5120, 6400}.

– **PDCCH-ConfigCommon**

The IE *PDCCH-ConfigCommon* is used to configure cell specific PDCCH parameters provided in SIB as well as in dedicated signalling.

**PDCCH-ConfigCommon information element**

```

```

<b>PDCCH-ConfigCommon</b> field descriptions
<p><b>applyIndicatedTCI-State</b> This field indicates, for PDCCH reception in CORESET #0, if UE applies the first, the second, both or none of the "indicated" DL only TCI or joint TCI as specified in TS 38.213 [13], clause 10.1.</p>
<p><b>commonControlResourceSet</b> An additional common control resource set which may be configured and used for any common or UE-specific search space. If the network configures this field, it uses a <i>ControlResourceSetId</i> other than 0 for this <i>ControlResourceSet</i>. The network configures the <i>commonControlResourceSet</i> in <i>SIB1</i> so that it is contained in the bandwidth of CORESET#0. If the RedCap-specific initial downlink BWP does not contain the entire CORESET#0, the network configures the <i>commonControlResourceSet</i> in the RedCap-specific initial downlink BWP in <i>SIB1</i> for (e)RedCap such that it does not have to be contained in the bandwidth of CORESET#0.</p>
<p><b>commonSearchSpaceList, commonSearchSpaceListExt, commonSearchSpaceListExt2</b> A list of additional common search spaces. If the network configures this field, it uses the <i>SearchSpaceIds</i> other than 0. If the field is included, it replaces any previous list, i.e. all the entries of the list are replaced and each of the <i>SearchSpace</i> entries is considered to be newly created and the conditions and Need codes for setup of the entry apply. If the network includes <i>commonSearchSpaceListExt/commonSearchSpaceListExt2</i>, it includes the same number of entries, and listed in the same order, as in <i>commonSearchSpaceList</i>.</p>
<p><b>controlResourceSetZero</b> Parameters of the common CORESET#0 which can be used in any common or UE-specific search spaces. The values are interpreted like the corresponding bits in <i>MIB pdccch-ConfigSIB1</i>. Even though this field is only configured in the initial BWP (BWP#0) <i>controlResourceSetZero</i> can be used in search spaces configured in other DL BWP(s) than the initial DL BWP if the conditions defined in TS 38.213 [13], clause 10 are satisfied.</p>
<p><b>firstPDCCH-MonitoringOccasionOfPEI-O</b> Offset, in number of symbols, from the start of the reference frame for PEI-O to the start of the first PDCCH monitoring occasion of PEI-O on this BWP, see TS 38.213 [13], clause 10.4A. For the case <i>po-NumPerPEI</i> is smaller than <math>N_s</math>, UE applies the <math>(\text{floor}(i_s/\text{po-NumPerPEI})+1)</math>-th value out of <math>(N_s/\text{po-NumPerPEI})</math> configured values in <i>firstPDCCH-MonitoringOccasionOfPEI-O</i> for the symbol-level offset. When <i>po-NumPerPEI</i> is one or multiple of <math>N_s</math>, UE applies the first configured value in <i>firstPDCCH-MonitoringOccasionOfPEI-O</i> for the symbol-level offset.</p>
<p><b>firstPDCCH-MonitoringOccasionOfPO</b> Indicates the first PDCCH monitoring occasion of each PO of the PF on this BWP, see TS 38.304 [20]. The field <i>sCS120KHZquarterT-SCS60KHZZoneEighthT-SCS30KHZZoneSixteenthT</i>, <i>sCS120KHZZoneEighthT-SCS60KHZZoneSixteenthT</i> and <i>sCS120KHZZoneSixteenthT</i> can be applied for SCS 480kHz, corresponding to <i>sCS480KHZZoneT-SCS120KHZquarterT-SCS60KHZZoneEighthT-SCS30KHZZoneSixteenthT</i>, <i>sCS480KHZhalfT-SCS120KHZZoneEighthT-SCS60KHZZoneSixteenthT</i> and <i>sCS480KHZquarterT-SCS120KHZZoneSixteenthT</i> in IE <i>DownlinkConfigCommonSIB</i> respectively.</p>
<p><b>followUnifiedTCI-State</b> When set to enabled, for PDCCH reception in CORESET #0, the UE applies the "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5.</p>
<p><b>pagingSearchSpace</b> ID of the search space for paging (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive paging in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_INACTIVE while SDT procedure is ongoing and T319a is not running, if CG-SDT is selected and if extended CG-SDT periodicity is configured (i.e. <i>cg-SDT-PeriodicityExt</i> is configured), or an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE while SDT procedure is not ongoing, shall monitor paging in the initial DL BWP that includes CORESET#0.</p>
<p><b>pei-ConfigBWP</b> Provides the configuration for PEI reception in this BWP. If the field is absent, the UE does not receive PEI in this BWP. For the <i>initialDownlinkBWP-RedCap</i> not including CD-SSB and the entire CORESET#0, an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE while SDT procedure is not ongoing monitors PEI in the <i>initialDownlinkBWP</i> that includes CORESET#0, if the <i>initialDownlinkBWP</i> is configured with <i>pei-ConfigBWP</i>.</p>
<p><b>pei-SearchSpace</b> ID of dedicated search space for PEI. It can be configured to one of up to 4 common SS sets configured by <i>commonSearchSpaceList</i> with <i>SearchSpaceId</i> &gt; 0. The CCE aggregation levels and maximum number of PDCCH candidates per CCE aggregation level follows Table 10.1-1 of TS38.213 [13]. <i>SearchSpaceId</i> = 0 can be configured for the case of SS/PBCH block and CORESET multiplexing pattern 2 or 3.</p>
<p><b>ra-SearchSpace</b> ID of the Search space for random access procedure (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive RAR in this BWP. This field is mandatory present in the DL BWP(s) if the conditions described in TS 38.321 [3], clause 5.15 are met.</p>

<b><i>sdt-SearchSpace</i></b> Common search space for CG-SDT and RA-SDT (see TS 38.213 [13]). If an <i>existingSearchSpace</i> is used, the network only signals the search space ID of the <i>ra-SearchSpace</i> .
<b><i>searchSpaceMCCH</i></b> ID of the search space for MCCH. If the field is absent, the UE does not receive MCCH in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, the (e)RedCap UE in RRC_IDLE or RRC_INACTIVE may receive MCCH using <i>searchSpaceMCCH</i> in the initial DL BWP that includes CD-SSB and the entire CORESET#0.
<b><i>searchSpaceMTCH</i></b> ID of the search space for MTCH of MBS broadcast. If the field is absent, the UE applies <i>searchSpaceMCCH</i> also for MTCH, (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, the (e)RedCap UE in RRC_IDLE or RRC_INACTIVE may receive MTCH using <i>searchSpaceMTCH</i> in the initial DL BWP that includes CD-SSB and the entire CORESET#0.
<b><i>searchSpaceMulticastMCCH</i></b> ID of the search space for multicast MCCH. If the field is absent, the UE does not receive multicast MCCH in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0.
<b><i>searchSpaceMulticastMTCH</i></b> ID of the search space for multicast MTCH. If the field is absent, the UE applies <i>searchSpaceMulticastMCCH</i> also for multicast MTCH, (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0.
<b><i>searchSpaceOtherSystemInformation</i></b> ID of the Search space for other system information, i.e., <i>SIB2</i> and beyond (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive other system information in this BWP. This field is absent for the RedCap-specific initial DL BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE shall monitor PDCCH to receive other system information using <i>searchSpaceOtherSystemInformation</i> in the initial DL BWP that includes CD-SSB and the entire CORESET#0.
<b><i>searchSpaceSIB1</i></b> ID of the search space for <i>SIB1</i> message. In the initial DL BWP of the UE's PCell, the network sets this field to 0. If the field is absent, the UE does not receive <i>SIB1</i> in this BWP. (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial DL BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE shall monitor PDCCH to receive <i>SIB1</i> using <i>searchSpaceSIB1</i> in the initial DL BWP that includes CD-SSB and the entire CORESET#0.
<b><i>searchSpaceZero</i></b> Parameters of the common SearchSpace#0. The values are interpreted like the corresponding bits in <i>MIB pdccch-ConfigSIB1</i> . Even though this field is only configured in the initial BWP (BWP#0), <i>searchSpaceZero</i> can be used in search spaces configured in other DL BWP(s) than the initial DL BWP if the conditions described in TS 38.213 [13], clause 10, are satisfied.

Conditional Presence	Explanation
<i>FollowUTC1</i>	The field is absent if the field <i>followUnifiedTCI-State</i> is present or if more than one value for the field <i>coresetPoolIndex</i> is configured in <i>controlResourceSet</i> for the same bandwidthpart. Otherwise, it is optionally present, Need R.
<i>InitialBWP-Only</i>	If <i>SIB1</i> is broadcast the field is mandatory present in the <i>PDCCH-ConfigCommon</i> of the initial BWP (BWP#0) in <i>ServingCellConfigCommon</i> except it is the RedCap-specific initial BWP not including CD-SSB and the entire CORESET#0 in which case the field is absent, Need R; it is absent in other BWPs and when sent in system information. If <i>SIB1</i> is not broadcast and there is an SSB associated to the cell, the field is optionally present, Need M, in the <i>PDCCH-ConfigCommon</i> of the initial BWP (BWP#0) in <i>ServingCellConfigCommon</i> (still with the same setting for all UEs). In other cases, the field is absent.
<i>InitialBWP-Paging</i>	This field is optionally present, Need R, if this BWP is the <i>initialDownlinkBWP</i> or <i>initialDownlinkBWP-RedCap</i> including CD-SSB and the entire CORESET#0, and <i>pei-Config</i> is configured in <i>DownlinkConfigCommonSIB</i> . Otherwise, this field is absent.
<i>OtherBWP</i>	This field is optionally present, Need R, if this BWP is not the <i>initialDownlinkBWP</i> and <i>pagingSearchSpace</i> is configured in this BWP. Otherwise this field is absent.

## – PDCCH-ConfigSIB1

The IE *PDCCH-ConfigSIB1* is used to configure CORESET#0 and search space#0.

### PDCCH-ConfigSIB1 information element

```
-- ASN1START
-- TAG-PDCCH-CONFIGSIB1-START

PDCCH-ConfigSIB1 ::=
    controlResourceSetZero
    searchSpaceZero
}

SEQUENCE {
    ControlResourceSetZero,
    SearchSpaceZero
}

-- TAG-PDCCH-CONFIGSIB1-STOP
-- ASN1STOP
```

#### PDCCH-ConfigSIB1 field descriptions

<b>controlResourceSetZero</b>
Determines a common ControlResourceSet (CORESET) with ID #0, see TS 38.213 [13], clause 13.
<b>searchSpaceZero</b>
Determines a common search space with ID #0, see TS 38.213 [13], clause 13.

## – PDCCH-ServingCellConfig

The IE *PDCCH-ServingCellConfig* is used to configure UE specific PDCCH parameters applicable across all bandwidth parts of a serving cell.

### PDCCH-ServingCellConfig information element

```
-- ASN1START
-- TAG-PDCCH-SERVINGCELLCONFIG-START

PDCCH-ServingCellConfig ::=
    slotFormatIndicator
    . . .
    [[
    availabilityIndicator-r16
    searchSpaceSwitchTimer-r16
    ]],
    [[
    searchSpaceSwitchTimer-v1710
    ]],
}

SEQUENCE {
    SetupRelease { SlotFormatIndicator } OPTIONAL, -- Need M
    SetupRelease {AvailabilityIndicator-r16} OPTIONAL, -- Need M
    INTEGER (1..80) OPTIONAL -- Need R
    INTEGER (81..1280) OPTIONAL -- Need R
}

-- TAG-PDCCH-SERVINGCELLCONFIG-STOP
-- ASN1STOP
```

<b>PDCCH-ServingCellConfig field descriptions</b>
<p><b>availabilityIndicator</b> Use to configure monitoring a PDCCH for Availability Indicators (AI).</p>
<p><b>searchSpaceSwitchTimer</b> The value of the timer in slots for monitoring PDCCH in the active DL BWP of the serving cell before moving to the default search space group (see TS 38.213 [13], clause 10.4). For 15 kHz SCS, {1..20} are valid. For 30 kHz SCS, {1..40} are valid. For 60kHz SCS, {1..80} are valid. For 120 kHz SCS, {1..160} are valid. For 480 kHz SCS, {1..640} are valid. For 960 kHz SCS, {1..1280} are valid. The network configures the same value for all serving cells in the same <i>CellGroupForSwitch</i>.</p>
<p><b>slotFormatIndicator</b> Configuration of Slot-Format-Indicators to be monitored in the correspondingly configured PDCCHs of this serving cell.</p>

## – PDCP-Config

The IE *PDCP-Config* is used to set the configurable PDCP parameters for signalling, MBS multicast and data radio bearers.

```

<b>PDCP-Config field descriptions</b>
<p><b><i>cipheringDisabled</i></b> If included, ciphering is disabled for this DRB regardless of which ciphering algorithm is configured for the SRB/DRBs. The field may only be included if the UE is connected to 5GC. Otherwise the field is absent. The network configures all DRBs with the same PDU-session ID with same value for this field. The value for this field cannot be changed after the DRB is set up.</p>
<p><b><i>discardTimer</i></b> Value in ms of <i>discardTimer</i> specified in TS 38.323 [5]. Value <i>ms10</i> corresponds to 10 ms, value <i>ms20</i> corresponds to 20 ms and so on. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.</p>
<p><b><i>discardTimerExt</i></b> Value in ms of <i>discardTimer</i> specified in TS 38.323 [5]. Value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms1</i> corresponds to 1ms and so on. If this field is present, the field <i>discardTimer</i> is ignored and <i>discardTimerExt</i> is used instead.</p>
<p><b><i>discardTimerExt2</i></b> Value in ms of <i>discardTimerExt</i> specified in TS 38.323 [5]. Value <i>ms2000</i> corresponds to 2000 ms. If this field is present, the field <i>discardTimer</i> and <i>discardTimerExt</i> are ignored and <i>discardTimerExt2</i> is used instead.</p>
<p><b><i>discardTimerForLowImportance</i></b> Value in ms of <i>discardTimerForLowImportance</i> specified in TS 38.323 [5]. Value <i>ms0</i> corresponds to 0 ms, value <i>ms2</i> corresponds to 2 ms and so on. The value of this timer for a PDCP entity is always configured shorter than <i>discardTimer</i>, <i>discardTimerExt</i> or <i>discardTimerExt2</i>, whichever is used for the PDCP entity. The presence of this field indicates that PSI-based SDU discard is configured for a DRB. The network configures at most 8 DRBs with <i>discardTimerForLowImportance</i>.</p>
<p><b><i>drb-ContinueROHC</i></b> Indicates whether the PDCP entity continues or resets the ROHC header compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. This field is configured only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated. The network does not include the field if the bearer is configured as DAPS bearer. This field can be configured for both DRB and multicast MRB.</p>
<p><b><i>duplicationState</i></b> This field indicates the uplink PDCP duplication state for the associated RLC entities at the time of receiving this IE. If set to <i>true</i>, the PDCP duplication state is activated for the associated RLC entity. The index for the indication is determined by ascending order of logical channel ID of all RLC entities other than the primary RLC entity indicated by <i>primaryPath</i> in the order of MCG and SCG, as in clause 6.1.3.32 of TS 38.321 [3]. For MP, the index for the indication is determined by ascending order of direct path (where <i>i</i> is ascending order of logical channel ID of secondary RLC entities) and indirect path, as in clause 6.1.3.32 of TS 38.321 [3]. If the number of associated RLC entities other than the primary RLC entity is two, UE ignores the value in the largest index of this field. If the field is absent, the PDCP duplication states are deactivated for all associated RLC entities.</p>
<p><b><i>ethernetHeaderCompression</i></b> This fields configures Ethernet Header Compression. This field can only be configured for a bi-directional DRB or a bi-directional multicast MRB. The network reconfigures <i>ethernetHeaderCompression</i> only upon reconfiguration involving PDCP re-establishment and with neither <i>drb-ContinueEHC-DL</i> nor <i>drb-ContinueEHC-UL</i> configured. Network only configures this field when <i>uplinkDataCompression</i> is not configured.</p>
<p><b><i>headerCompression</i></b> If rohc is configured, the UE shall apply the configured ROHC profile(s) in both uplink and downlink. If <i>uplinkOnlyROHC</i> is configured, the UE shall apply the configured ROHC profile(s) in uplink (there is no header compression in downlink). ROHC can be configured for any bearer type. ROHC and EHC can be both configured simultaneously for a DRB or a multicast MRB. The network reconfigures <i>headerCompression</i> only upon reconfiguration involving PDCP re-establishment or involving PDCP entity reconfiguration to configure DAPS bearer(s), and without any <i>drb-ContinueROHC</i>. Network configures <i>headerCompression</i> to <i>notUsed</i> when <i>outOfOrderDelivery</i> is configured. Network only configures this field when <i>uplinkDataCompression</i> is not configured.</p>
<p><b><i>initialRX-DELIV</i></b> Indicates the initial value of RX_DELIV during PDCP window initialization for multicast MRB as specified in TS 38.323 [5]. The first/leftmost bit of the bit string contains the most significant bit.</p>
<p><b><i>integrityProtection</i></b> Indicates whether or not integrity protection is configured for this radio bearer. The network configures all DRBs with the same PDU-session ID with same value for this field. The value for this field cannot be changed after the DRB is set up.</p>

<b>PDCP-Config field descriptions</b>
<p><b>maxCID</b> Indicates the value of the MAX_CID parameter as specified in TS 38.323 [5]. The total value of MAX_CIDs across all bearers for the UE should be less than or equal to the value of <i>maxNumberROHC-ContextSessions</i> parameter as indicated by the UE.</p>
<p><b>moreThanOneRLC</b> This field configures UL data transmission when more than one RLC entity is associated with the PDCP entity. This field is not present if the bearer is configured as DAPS bearer.</p>
<p><b>moreThanTwoRLC-DRB</b> This field configures UL data transmission when more than two RLC entities are associated with the PDCP entity for DRBs.</p>
<p><b>outOfOrderDelivery</b> Indicates whether or not <i>outOfOrderDelivery</i> specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the radio bearer is established.</p>
<p><b>pdcp-Duplication</b> Indicates whether or not uplink duplication status at the time of receiving this IE is configured and activated as specified in TS 38.323 [5]. The presence of this field indicates that duplication is configured. PDCP duplication is not configured for CA packet duplication of LTE RLC bearer. The value of this field, when the field is present, indicates the state of the duplication at the time of receiving this IE. If set to <i>true</i>, duplication is activated. The value of this field is always <i>true</i>, when configured for a SRB. For PDCP entity with more than two associated RLC entities for UL transmission, this field is always present. If the field <i>moreThanTwoRLC-DRB</i> is present, the value of this field is ignored and the state of the duplication is indicated by <i>duplicationState</i>. For PDCP entity with more than two associated RLC entities, only NR RLC bearer is supported.</p>
<p><b>pdcp-SN-SizeDL</b> PDCP sequence number size for downlink, 12 or 18 bits, as specified in TS 38.323 [5]. For SRBs only the value <i>len12bits</i> is applicable. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.</p>
<p><b>pdcp-SN-SizeUL</b> PDCP sequence number size for uplink, 12 or 18 bits, as specified in TS 38.323 [5]. For SRBs only the value <i>len12bits</i> is applicable. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.</p>
<p><b>pdu-SetDiscard</b> If set to true, the UE shall perform PDU Set based discarding for this PDCP entity, as specified in TS 38.323 [5]. This field is only configured for a DRB.</p>
<p><b>primaryPath</b> Indicates the cell group ID and LCID of the primary RLC entity as specified in TS 38.323 [5], clause 5.2.1 for UL data transmission when more than one RLC entity is associated with the PDCP entity. In this version of the specification, only cell group ID corresponding to MCG is supported for SRBs, except for the split SRB2 of the IAB-MT, and except when the UE is required to set the <i>primaryPath</i> to refer to the SCG or indirect path as specified in clause 5.7.3b.4. In this last case, if the network sends an <i>RRCReconfiguration</i> message (in NR-DC) or an EUTRA <i>RRCConnectionReconfiguration</i> message (in (NG)EN-DC) keeping SRB1 as split SRB, the network explicitly configures the <i>primaryPath</i> for the PDCP entity of SRB1 to refer to the MCG. In this version of the specification, only cell group ID corresponding to MCG is supported for DRBs when the SCG is deactivated. In MR-DC, the NW indicates <i>cellGroup</i> for split bearers using logical channels in different cell groups. The NW always indicates <i>logicalChannel</i> if CA based PDCP duplication is configured in the cell group indicated by <i>cellGroup</i> of this field. This field is also used for configuring Multi-path Primary Path defined in [5] for MP operation. In MP, when the primary path is indirect path, the field <i>cellGroup</i> and <i>logicalChannel</i> are absent, and the field <i>primaryPathOnIndirectPath</i> is set to true.</p>
<p><b>primaryPathOnIndirectPath</b> Indicates that the primary path is SL indirect path, or primary path is associated with the N3C indirect path, for DRB when MP is configured.</p>
<p><b>sn-GapReport</b> Indicates whether the PDCP entity is configured to send a PDCP SN gap report in the uplink, as specified in TS 38.323 [5]. This field is only configured for DRBs. This field can be included only if <i>outOfOrderDelivery</i> is not configured.</p>
<p><b>splitSecondaryPath</b> Indicates the LCID of the split secondary RLC entity as specified in TS 38.323 [5] for fallback to split bearer operation when UL data transmission with more than two RLC entities is associated with the PDCP entity. This RLC entity belongs to a cell group that is different from the cell group indicated by <i>cellGroup</i> in the field <i>primaryPath</i>. This RLC entity belongs to the cell group of the direct path if <i>primaryPathOnIndirectPath</i> is set to <i>true</i> in MP case.</p>

<b>PDCP-Config field descriptions</b>
<p><b>statusReportRequired</b> For AM DRBs, AM MRBs and DAPS UM DRBs, indicates whether the DRB or the multicast MRB is configured to send a PDCP status report in the uplink, as specified in TS 38.323 [5]. For DAPS AM DRBs, it also indicates whether the DRB is configured to send a second PDCP status report in the uplink, as specified in TS 38.323 [5].</p>
<p><b>survivalTimeStateSupport</b> Indicates whether the DRB associated with this PDCP entity has survival time state support. If this field is configured to be true, all associated RLC entities are activated for PDCP duplication upon reception of a retransmission grant addressed to CS-RNTI, as specified in TS 38.321 [3].</p>
<p><b>t-Reordering</b> Value in ms of t-Reordering specified in TS 38.323 [5]. Value <i>ms0</i> corresponds to 0 ms, value <i>ms20</i> corresponds to 20 ms, value <i>ms40</i> corresponds to 40 ms, and so on. When the field is absent the UE applies the value <i>infinity</i>. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.</p>
<p><b>ul-DataSplitThreshold</b> Parameter specified in TS 38.323 [5]. Value <i>b0</i> corresponds to 0 bytes, value <i>b100</i> corresponds to 100 bytes, value <i>b200</i> corresponds to 200 bytes, and so on. The network sets this field to <i>infinity</i> for UEs not supporting <i>splitDRB-withUL-Both-MCG-SCG</i> and when the SCG is deactivated or for multi-path U2N Remote UEs not supporting <i>splitDRB-WithUL-BothDirectIndirect</i>. If the field is absent when the split bearer is configured for the radio bearer first time, then the default value <i>infinity</i> is applied.</p>
<p><b>uplinkDataCompression</b> Indicates the UDC configuration that the UE shall apply. Network does not configure <i>uplinkDataCompression</i> for a DRB, if <i>headerCompression</i> or <i>ethernetHeaderCompression</i> is already configured or <i>outOfOrderDelivery</i> or DAPS is configured for the DRB. The maximum number of DRBs where <i>uplinkDataCompression</i> can be applied is two. The network reconfigures <i>uplinkDataCompression</i> only upon reconfiguration involving PDCP re-establishment. If the field is set to <i>drb-ContinueUDC</i>, the PDCP entity continues the uplink data compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. The field is set to <i>drb-ContinueUDC</i> only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated.</p>

<b>EthernetHeaderCompression field descriptions</b>
<p><b>drb-ContinueEHC-DL</b> Indicates whether the PDCP entity continues or resets the downlink EHC header compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. The field is configured only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated.</p>
<p><b>drb-ContinueEHC-UL</b> Indicates whether the PDCP entity continues or resets the uplink EHC header compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. The field is configured only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated.</p>
<p><b>ehc-CID-Length</b> Indicates the length of the CID field for EHC packet. The value <i>bits7</i> indicates the length is 7 bits, and the value <i>bits15</i> indicates the length is 15 bits. Once the field <i>ethernetHeaderCompression-r16</i> is configured for a DRB or a multicast MRB, the value of the field <i>ehc-CID-Length</i> for this DRB or multicast MRB is not reconfigured to a different value.</p>
<p><b>ehc-Common</b> Indicates the configurations that apply for both downlink and uplink.</p>
<p><b>ehc-Downlink</b> Indicates the configurations that apply for only downlink. If the field is configured, then Ethernet header compression is configured for downlink. Otherwise, it is not configured for downlink.</p>
<p><b>ehc-Uplink</b> Indicates the configurations that apply for only uplink. If the field is configured, then Ethernet header compression is configured for uplink. Otherwise, it is not configured for uplink.</p>
<p><b>maxCID-EHC-UL</b> Indicates the value of the MAX_CID_EHC_UL parameter as specified in TS 38.323 [5]. The total value of MAX_CID_EHC_UL across all bearers for the UE should be less than or equal to the value of <i>maxNumberEHC-Contexts</i> parameter as indicated by the UE.</p>

<b>UplinkDataCompression field descriptions</b>	
<b>bufferSize</b>	This field indicates the buffer size applied for UDC as specified in TS 38.323 [5]. Value <i>kbyte2</i> means 2048 bytes, <i>kbyte4</i> means 4096 bytes and so on.
<b>dictionary</b>	This field indicates which pre-defined dictionary is used for UDC as specified in TS 38.323 [5]. The value <i>sip-SDP</i> means that UE shall prefill the buffer with standard dictionary for SIP and SDP defined in TS 38.323 [5], and the value <i>operator</i> means that UE shall prefill the buffer with operator-defined dictionary.

<b>Conditional presence</b>	<b>Explanation</b>
<i>DRB</i>	This field is mandatory present when the corresponding DRB/multicast MRB is being set up, absent for SRBs. Otherwise this field is optionally present, need M.
<i>DRB2</i>	This field is optionally present in case of DRB, need M. Otherwise, it is absent for SRBs and MRBs.
<i>Drb-Duplication</i>	For SRBs, this field is absent. For DRBs, this field is absent if duplication is not configured. Otherwise, this field is optional, need R.
<i>MoreThanOneRLC</i>	This field is mandatory present upon RRC reconfiguration with setup of a PDCP entity for a radio bearer (except for multicast MRB) with more than one associated logical channel and upon RRC reconfiguration with the association of additional logical channels to the PDCP entity. The field is also mandatory present in case the field <i>moreThanTwoRLC-DRB</i> is included in <i>PDCP-Config</i> . Upon RRC reconfiguration when a PDCP entity is associated with multiple logical channels, this field is optionally present need M. Otherwise, this field is absent. Need R.
<i>MoreThanTwoRLC-DRB</i>	For SRBs, this field is absent. For DRBs, this field is mandatory present upon RRC reconfiguration with setup of a PDCP entity for a radio bearer with more than two associated logical channels and upon RRC reconfiguration with the association of one or more additional logical channel(s) to the PDCP entity so that the PDCP entity has more than two associated logical channels. Upon RRC reconfiguration when a PDCP entity is associated with more than two logical channels, this field is optionally present, Need M. Otherwise, the field is absent, Need R.
<i>Rlc-AM</i>	For RLC AM, the field is optionally present, need M. Otherwise, the field is absent.
<i>Rlc-AM-UM</i>	In case of DRB, for RLC UM (if the UE supports DAPS handover) or RLC AM, the field is optionally present, need R. In case of multicast MRB, if multicast MRB is associated with at least one RLC AM entity, the field is optionally present, need R. Otherwise, the field is absent.
<i>Setup</i>	The field is mandatory present in case of DRB setup. Otherwise the field is optionally present, need M.
<i>SplitBearer</i>	The field is absent for SRBs. Otherwise, the field is optional present, need M, in case of radio bearer with more than one associated RLC mapped to different cell groups.
<i>SplitBearer2</i>	The field is mandatory present, in case of a split bearer. Otherwise the field is absent.
<i>SplitBearerMP</i>	The field is absent for SRBs. Otherwise, the field is optionally present, need R, when MP is configured.
<i>ConnectedTo5GC</i>	The field is optionally present, need R, if the UE is connected to 5GC. Otherwise the field is absent.
<i>ConnectedTo5GC1</i>	The field is optionally present, need R, if the UE is connected to NR/5GC or if the UE supports user plane integrity protection when connected to E-UTRA/EPC (as specified in TS 33.401 [30]). Otherwise the field is absent.
<i>Setup1</i>	This field is mandatory present in case of DRB setup for RLC-AM and RLC-UM. Otherwise, this field is absent, Need M.
<i>Setup2</i>	This field is mandatory present in case for radio bearer setup for RLC-AM and RLC-UM. Otherwise, this field is absent, Need M.
<i>MRB-Initialization</i>	This field is mandatory present in case of multicast MRB setup or in case UE configured with multicast reception in RRC_INACTIVE resumes the RRC connection. In case of PDCP re-establishment for multicast MRB, this field is optionally present, Need N. Otherwise, this field is absent, Need N.

## – PDSCH-Config

The *PDSCH-Config* IE is used to configure the UE specific PDSCH parameters. If this IE is used for MBS CFR, the following fields shall be absent: *tcI-StatesToAddModList*, *tcI-StatesToReleaseList*, *zp-CSI-RS-ResourceToAddModList*, *minimumSchedulingOffsetK0*, *antennaPortsFieldPresenceDCI-1-2*, *aperiodicZP-CSI-RS-ResourceSetsToAddModListDCI-1-2*, *aperiodicZP-CSI-RS-ResourceSetsToReleaseListDCI-1-2*, *dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2*, *dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2*, *dmrs-SequenceInitializationDCI-1-2*, *harq-ProcessNumberSizeDCI-1-2*, *mcs-TableDCI-1-2*, *numberOfBitsForRV-DCI-1-2*, *pdsch-AggregationFactor*, *pdsch-TimeDomainAllocationListDCI-1-2*, *prb-BundlingTypeDCI-1-2*, *priorityIndicatorDCI-1-2*, *rateMatchPatternGroup1DCI-1-2*, *rateMatchPatternGroup2DCI-1-2*, *resourceAllocationType1GranularityDCI-1-2*, *vrB-ToPRB-InterleaverDCI-1-2*, *referenceOfSLIVDCI-1-2*, *resourceAllocationDCI-1-2*, *dataScramblingIdentityPDSCH2-r16*, *repetitionSchemeConfig*, *pdsch-ConfigDCI-1-3*.

<b>PDSCH-Config field descriptions</b>
<p><b>advancedReceiver-MU-MIMO</b> A set of assistance information for R-ML (reduced complexity ML) receivers with enhanced inter-user interference suppression for MU-MIMO transmissions.</p>
<p><b>antennaPortsFieldPresenceDCI-1-2</b> Configure the presence of "Antenna ports" field in DCI format 1_2. When the field is configured, then the "Antenna ports" field is present in DCI format 1_2. Otherwise, the field size is set to 0 for DCI format 1_2 (See TS 38.212 [17], clause 7.3.1.1.3). If neither <i>dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2</i> nor <i>dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2</i> is configured, this field is absent.</p>
<p><b>aperiodic-ZP-CSI-RS-ResourceSetsToAddModList, aperiodic-ZP-CSI-RS-ResourceSetsToAddModListDCI-1-2</b> AddMod/Release lists for configuring aperiodically triggered zero-power CSI-RS resource sets. Each set contains a <i>ZP-CSI-RS-ResourceSetId</i> and the IDs of one or more <i>ZP-CSI-RS-Resources</i> (the actual resources are defined in the <i>zp-CSI-RS-ResourceToAddModList</i>). The network configures the UE with at most 3 aperiodic <i>ZP-CSI-RS-ResourceSets</i> and it uses only the <i>ZP-CSI-RS-ResourceSetId</i> 1 to 3. The network triggers a set by indicating its <i>ZP-CSI-RS-ResourceSetId</i> in the DCI payload. The DCI codepoint '01' triggers the resource set with <i>ZP-CSI-RS-ResourceSetId</i> 1, the DCI codepoint '10' triggers the resource set with <i>ZP-CSI-RS-ResourceSetId</i> 2, and the DCI codepoint '11' triggers the resource set with <i>ZP-CSI-RS-ResourceSetId</i> 3 (see TS 38.214 [19], clause 5.1.4.2). The field <i>aperiodic-ZP-CSI-RS-ResourceSetsToAddModList</i> applies to DCI format 1_1 and the field <i>aperiodic-ZP-CSI-RS-ResourceSetsToAddModListDCI-1-2</i> applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.4.2 and TS 38.212 [17] clause 7.3.1).</p>
<p><b>beamAppTime</b> Indicates the first slot to apply the unified TCI indicated by DCI as specified in TS 38.214 Clause 5.1.5. The value n1 means 1 symbol, n2 two symbols and so on. The first slot is at least Y symbols indicated by beamAppTime parameter after the last symbol of the acknowledgment of the joint or separate DL/UL beam indication. The same value shall be configured for all serving cells in any one of the <i>simultaneousU-TCI-UpdateListN</i> configured in IE <i>CellGroupConfig</i> based on the smallest SCS of the active BWP.</p>
<p><b>dataScramblingIdentityPDSCH, dataScramblingIdentityPDSCH2</b> Identifier(s) used to initialize data scrambling (<i>c_init</i>) for PDSCH as specified in TS 38.211 [16], clause 7.3.1.1. The <i>dataScramblingIdentityPDSCH2</i> is configured if <i>coresetPoolIndex</i> is configured with 1 for at least one CORESET in the same BWP.</p>
<p><b>dl-OrJointTCI-StateToAddModList</b> A list of Transmission Configuration Indicator (TCI) states indicating a transmission configuration which includes QCL-relationships between the DL RSs in one RS set and the PDSCH DMRS ports, PDCCH DMRS ports, and CSI-RS, and in case of join mode, also the PUSCH, PUCCH and SRS (see TS 38.214 [19], clause 5.1.5).</p>
<p><b>dmrs-DownlinkForPDSCH-MappingTypeA, dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2</b> DMRS configuration for PDSCH transmissions using PDSCH mapping type A (chosen dynamically via <i>PDSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i>, <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-DownlinkForPDSCH-MappingTypeA</i> applies to DCI formats 1_1 and 1_3, and the field <i>dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>dmrs-DownlinkForPDSCH-MappingTypeB, dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2</b> DMRS configuration for PDSCH transmissions using PDSCH mapping type B (chosen dynamically via <i>PDSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i>, <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-DownlinkForPDSCH-MappingTypeB</i> applies to DCI formats 1_1 and 1_3, and the field <i>dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>dmrs-FD-OCC-DisabledForRank1-PDSCH</b> If configured, the UE may assume that the set of remaining orthogonal antenna ports, which are within the same code division multiplexing (CDM) group and have different frequency domain orthogonal cover codes (FD-OCC), are not associated with the PDSCH of another UE (see TS 38.214 [19], clause 5.1.6.2). It is applicable for PDSCH SCS of 480 and 960 kHz when rank 1 PDSCH with type-1 or type-2 DMRS is scheduled. If <i>dmrs-TypeEnh-r18</i> is configured, this field is not configured.</p>
<p><b>dmrs-SequenceInitializationDCI-1_2</b> Configure whether the field "DMRS Sequence Initialization" is present or not in DCI format 1_2. If the field is absent, then the UE applies the value of 0 bit for the field "DMRS Sequence Initialization" in DCI format 1_2. If the field is present, then the UE applies the value of 1 bit as in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>dummy</b> This field is not used in the specification. If received it shall be ignored by the UE.</p>
<p><b>harq-ProcessNumberSizeDCI-1-2</b> Configure the number of bits for the field "HARQ process number" in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).</p>

<p><b>maxMIMO-Layers</b> Indicates the maximum number of MIMO layers to be used for PDSCH in this DL BWP. If not configured, the UE uses the <i>maxMIMO-Layers</i> configuration in IE <i>PDSCH-ServingCellConfig</i> of the serving cell to which this BWP belongs, when the UE operates in this BWP. The value of <i>maxMIMO-Layers</i> for a DL BWP shall be smaller than or equal to the value of <i>maxMIMO-Layers</i> configured in IE <i>PDSCH-ServingCellConfig</i> of the serving cell to which this BWP belongs. For MBS multicast, indicates the maximum number of MIMO layers to be used for group-common PDSCH of MBS multicast in this CFR. If not configured for CFR, the UE applies value 1. The value of <i>maxMIMO-Layers</i> for a CFR shall be smaller than or equal to the value of <i>maxMIMO-Layers</i> configured in <i>PDSCH-ServingCellConfig</i> IE of the serving cell to which this CFR belongs.</p>
<p><b>maxNrofCodeWordsScheduledByDCI</b> Maximum number of code words that a single DCI may schedule. This changes the number of MCS/RV/NDI bits in the DCI message from 1 to 2.</p>
<p><b>mcs-Table</b> Indicates which MCS table the UE shall use for PDSCH for DCI formats 1_0, 1_1 and 1_3 (see TS 38.214 [19], clause 5.1.3.1). If all fields are absent the UE applies the value 64QAM. If the field <i>mcs-Table-r17</i> is present for DCI formats 1_1 and 1_3, the network does not configure the field <i>mcs-Table</i> (without suffix). For an (e)RedCap UE, the 256QAM MCS table for PDSCH is only supported if the UE indicates support of 256QAM for PDSCH.</p>
<p><b>mcs-TableDCI-1-2</b> Indicates which MCS table the UE shall use for PDSCH for DCI format 1_2 (see TS 38.214 [19], clause 5.1.3.1). If all fields are absent the UE applies the value 64QAM. If the field <i>mcs-TableDCI-1-2-r17</i> is present, the network does not configure the field <i>mcs-TableDCI-1-2-r16</i>. For an (e)RedCap UE, the 256QAM MCS table for PDSCH is only supported if the UE indicates support of 256QAM for PDSCH.</p>
<p><b>minimumSchedulingOffsetK0</b> List of minimum K0 values. Minimum K0 parameter denotes minimum applicable value(s) for the TDRA table for PDSCH and for A-CSI RS triggering Offset(s) (see TS 38.214 [19], clause 5.3.1).</p>
<p><b>numberOfBitsForRV-DCI-1-2</b> Configures the number of bits for "Redundancy version" in the DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.2.1).</p>
<p><b>pdsch-AggregationFactor</b> Number of repetitions for data (see TS 38.214 [19], clause 5.1.2.1). When the field is absent in <i>PDSCH-Config</i> which is not used for MBS CFR, the UE applies the value 1.</p>
<p><b>pdsch-HARQ-ACK-EnhType3DCI-1-2</b> When configured, enhanced Type 3 HARQ-ACK codebook triggering by DCI format 1_2 is enabled.</p>
<p><b>pdsch-HARQ-ACK-EnhType3DCI-Field-1-2</b> Enables the enhanced Type 3 codebook through a new DCI field to indicate the enhanced Type 3 HARQ-ACK codebook in DCI format 1_2 if the more than one enhanced Type 3 HARQ-ACK codebook is configured for the primary PUCCH cell group.</p>
<p><b>pdsch-HARQ-ACK-OneShotFeedbackDCI-1-2</b> When configured, DCI format 1_2 can request the UE to report A/N for all HARQ processes and all component carriers configured in the PUCCH group (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>pdsch-HARQ-ACK-RetxDCI-1-2</b> When configured, DCI format 1_2 can request the UE to perform a HARQ-ACK re-transmission on a PUCCH resource (see TS 38.213 [13], clause 9.1.5).</p>
<p><b>pdsch-TimeDomainAllocationList, pdsch-TimeDomainAllocationListDCI-1-2, pdsch-TimeDomainAllocationListForMultiPDSCH</b> List of time-domain configurations for timing of DL assignment to DL data. The field <i>pdsch-TimeDomainAllocationList</i> (with or without suffix) applies to DCI format 1_0, DCI format 1_1 and DCI format 1_3 (see table 5.1.2.1.1-1 in TS 38.214 [19]), and if the field <i>pdsch-TimeDomainAllocationListDCI-1-2</i> is not configured, to DCI format 1_2. If the field <i>pdsch-TimeDomainAllocationListDCI-1-2</i> is configured, it applies to DCI format 1_2 (see table 5.1.2.1.1-1A in TS 38.214 [19]). The field <i>pdsch-TimeDomainAllocationListForMultiPDSCH</i> applies to DCI format 1_1. The network does not configure the <i>pdsch-TimeDomainAllocationList-r16</i> simultaneously with the <i>pdsch-TimeDomainAllocationList</i> (without suffix) in the same <i>PDSCH-Config</i>.</p>
<p><b>prb-BundlingType, prb-BundlingTypeDCI-1-2</b> Indicates the PRB bundle type and bundle size(s) (see TS 38.214 [19], clause 5.1.2.3). If <i>dynamic</i> is chosen, the actual <i>bundleSizeSet1</i> or <i>bundleSizeSet2</i> to use is indicated via DCI. Constraints on <i>bundleSize(Set)</i> setting depending on <i>vrb-ToPRB-Interleaver</i> and <i>rbg-Size</i> settings are described in TS 38.214 [19], clause 5.1.2.3. If a <i>bundleSize(Set)</i> value is absent, the UE applies the value <i>n2</i>. The field <i>prb-BundlingType</i> applies to DCI formats 1_1 and 1_3, and the field <i>prb-BundlingTypeDCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.2.3).</p>

<p><b>priorityIndicatorDCI-1-1, priorityIndicatorDCI-1-2, priorityIndicatorDCI-4-2</b> Configure the presence of "priority indicator" in DCI format 1_1/1_2/4_2. When the field is absent in the IE, then 0 bit for "priority indicator" in DCI format 1_1/1_2/4_2. The field <i>priorityIndicatorDCI-1-1</i> applies to DCI format 1_1, the field <i>priorityIndicatorDCI-1-2</i> applies to DCI format 1_2 and the field <i>priorityIndicatorDCI-4-2</i> applies to DCI format 4_2, respectively (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9).</p>
<p><b>pucch-sCellDynDCI-1-2</b> When configured, PUCCH cell switching based on dynamic indication in DCI format 1_2 is enabled (see TS 38.213 [13], clause 9.A).</p>
<p><b>p-ZP-CSI-RS-ResourceSet</b> A set of periodically occurring ZP-CSI-RS-Resources (the actual resources are defined in the <i>zp-CSI-RS-ResourceToAddModList</i>). The network uses the ZP-CSI-RS-ResourceSetId=0 for this set. If <i>p-ZP-CSI-RS-ResourceSet</i> is configured in both <i>PDSCH-Config</i> for MBS CFR and <i>PDSCH-Config</i> for the associated BWP, it is subject to UE capability whether the <i>p-ZP-CSI-RS-ResourceSet</i> configured in <i>PDSCH-Config</i> for MBS CFR can be different from the <i>p-ZP-CSI-RS-ResourceSet</i> configured in <i>PDSCH-Config</i> for the associated BWP.</p>
<p><b>rateMatchPatternGroup1, rateMatchPatternGroup1DCI-1-2</b> The IDs of a first group of <i>RateMatchPatterns</i> defined in <i>PDSCH-Config-&gt;rateMatchPatternToAddModList</i> (BWP level) or in <i>ServingCellConfig-&gt;rateMatchPatternToAddModList</i> (cell level). These patterns can be activated dynamically by DCI (see TS 38.214 [19], clause 5.1.4.1). The field <i>rateMatchPatternGroup1</i> applies to DCI formats 1_1 and 1_3, and the field <i>rateMatchPatternGroup1DCI-1-2</i> applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.4.1).</p>
<p><b>rateMatchPatternGroup2, rateMatchPatternGroup2DCI-1-2</b> The IDs of a second group of <i>RateMatchPatterns</i> defined in <i>PDSCH-Config-&gt;rateMatchPatternToAddModList</i> (BWP level) or in <i>ServingCellConfig-&gt;rateMatchPatternToAddModList</i> (cell level). These patterns can be activated dynamically by DCI (see TS 38.214 [19], clause 5.1.4.1). The field <i>rateMatchPatternGroup2</i> applies to DCI formats 1_1 and 1_3, and the field <i>rateMatchPatternGroup2DCI-1-2</i> applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.4.1).</p>
<p><b>rateMatchPatternToAddModList</b> Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns (see TS 38.214 [19], clause 5.1.4.1). If a <i>RateMatchPattern</i> with the same <i>RateMatchPatternId</i> is configured in both MBS CFR and its associated BWP, the entire <i>RateMatchPattern</i> configuration, including the set of RBs/REs indicated by the patterns for the rate matching around, shall be the same and they are counted as a single rate match pattern in the total configured rate match patterns as defined in TS 38.214 [19].</p>
<p><b>rbg-Size</b> Selection between config 1 and config 2 for RBG size for PDSCH except PDSCH scheduled by DCI format 1_3. The UE ignores this field if <i>resourceAllocation</i> is set to <i>resourceAllocationType1</i> (see TS 38.214 [19], clause 5.1.2.2.1).</p>
<p><b>referenceOfSLIVDCI-1-2</b> Enable using the starting symbol of the PDCCH monitoring occasion in which the DL assignment is detected as the reference of the SLIV for DCI format 1_2. When the RRC parameter enables the utilization of the new reference, the new reference is applied for TDRA entries with K0=0. For other entries (if any) in the same TDRA table, the reference is slot boundary as in Rel-15. PDSCH mapping type A is not supported with the new reference. The new reference of SLIV is not configured for a serving cell configured to be scheduled by cross-carrier scheduling on a scheduling cell with different numerology (see TS 38.212 [17] clause 7.3.1 and TS 38.214 [19] clause 5.1.2.1).</p>
<p><b>repetitionSchemeConfig</b> Configure the UE with repetition schemes. The network does not configure <i>repetitionSchemeConfig-r16</i> and <i>repetitionSchemeConfig-v1630</i> simultaneously to <i>setup</i> in the same <i>PDSCH-Config</i>. The network does not configure this parameter and <i>sfnSchemePDSCH</i> in <i>MIMOParam-r17</i> simultaneously in the same serving cell.</p>
<p><b>resourceAllocation, resourceAllocationDCI-1-2</b> Configuration of resource allocation type 0 and resource allocation type 1 for non-fallback DCI (see TS 38.214 [19], clause 5.1.2.2). The field <i>resourceAllocation</i> applies to DCI format 1_1, and the field <i>resourceAllocationDCI-1-2</i> applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.2.2).</p>
<p><b>resourceAllocationType1GranularityDCI-1-2</b> Configure the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 1_2. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 5.1.2.2.2).</p>
<p><b>sizeDCI-4-2</b> Indicates the size of DCI format 4-2 (see TS 38.213 [13], clause 10.1).</p>
<p><b>sp-ZP-CSI-RS-ResourceSetsToAddModList</b> AddMod/Release lists for configuring semi-persistent zero-power CSI-RS resource sets. Each set contains a <i>ZP-CSI-RS-ResourceSetId</i> and the IDs of one or more <i>ZP-CSI-RS-Resources</i> (the actual resources are defined in the <i>zp-CSI-RS-ResourceToAddModList</i>) (see TS 38.214 [19], clause 5.1.4.2).</p>

<b><i>tcI-StatesToAddModList</i></b> A list of Transmission Configuration Indicator (TCI) states indicating a transmission configuration which includes QCL-relationships between the DL RSs in one RS set and the PDSCH DMRS ports (see TS 38.214 [19], clause 5.1.5). If <i>unifiedTCI-StateType</i> is configured for the serving cell, no element in this list is configured.
<b><i>unifiedTCI-StateRef</i></b> Provides the serving cell and BWP where the configuration for <i>dl-OrJointTCI-StateToAddModList-r17</i> are defined. When this field is present, <i>dl-OrJointTCI-StateToAddModList</i> and <i>dl-OrJointTCI-StateToReleaseList</i> are not present. The value of <i>unifiedTCI-StateType</i> of current serving cell is the same in the serving cell indicated by <i>unifiedTCI-StateRef</i> .
<b><i>vrB-ToPRB-Interleaver, vrB-ToPRB-InterleaverDCI-1-2</i></b> Interleaving unit configurable between 2 and 4 PRBs (see TS 38.211 [16], clause 7.3.1.6). When the field is absent, the UE performs non-interleaved VRB-to-PRB mapping.
<b><i>xOverheadMulticast</i></b> Accounts for an overhead from CSI-RS, CORESET etc. If the field is absent, the UE applies value xOh0 (see TS 38.214 [19]).
<b><i>zp-CSI-RS-ResourceToAddModList</i></b> A list of Zero-Power (ZP) CSI-RS resources used for PDSCH rate-matching. Each resource in this list may be referred to from only one type of resource set, i.e., aperiodic, semi-persistent or periodic (see TS 38.214 [19]).

<b><i>PDSCH-ConfigDCI-1-3</i></b> field descriptions
<b><i>harq-ProcessNumberSizeDCI-1-3</i></b> Configure the number of bits for the field "HARQ process number" in DCI format 1_3 (see TS 38.212 [17], clause 7.3.1).
<b><i>numberOfBitsForRV-DCI-1-3</i></b> Configures the number of bits for "Redundancy version" in the DCI format 1_3 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.2.1).
<b><i>rbg-SizeDCI-1-3</i></b> Selection among config 1, config 2 and config 3 for RBG size for PDSCH scheduled by DCI format 1_3. The UE ignores this field if resourceAllocationDCI-1-3 is set to resourceAllocationType1. (see TS 38.214 [19], clause 5.1.2.2.1).
<b><i>resourceAllocationDCI-1-3</i></b> Configuration of resource allocation type 0 and resource allocation type 1 for DCI format 1_3 (see TS 38.214 [19], clause 5.1.2.2).
<b><i>resourceAllocationType1GranularityDCI-1-3</i></b> Configure the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 1_3. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 5.1.2.2.2).

<b>Conditional Presence</b>	<b>Explanation</b>
<i>DCI-1-3</i>	This field is mandatory present when <i>ScheduledCellListDCI-1-3</i> is configured to the serving cell. Otherwise, it is absent, Need R.

## – *PDSCH-ConfigCommon*

The IE *PDSCH-ConfigCommon* is used to configure cell specific PDSCH parameters.

### ***PDSCH-ConfigCommon*** information element

```
-- ASN1START
-- TAG-PDSCH-CONFIGCOMMON-START

PDSCH-ConfigCommon ::=
    pdsch-TimeDomainAllocationList          SEQUENCE {
                                            PDSCH-TimeDomainResourceAllocationList          OPTIONAL,  -- Need R
```

```

}
...
-- TAG-PDSCH-CONFIGCOMMON-STOP
-- ASN1STOP

```

<i>PDSCH-ConfigCommon</i> field descriptions
<b><i>pdsch-TimeDomainAllocationList</i></b> List of time-domain configurations for timing of DL assignment to DL data (see table 5.1.2.1.1-1 in TS 38.214 [19]).

## – *PDSCH-ServingCellConfig*

The IE *PDSCH-ServingCellConfig* is used to configure UE specific PDSCH parameters that are common across the UE's BWPs of one serving cell.

### *PDSCH-ServingCellConfig* information element

```

-- ASN1START
-- TAG-PDSCH-SERVINGCELLCONFIG-START

PDSCH-ServingCellConfig ::=
    SEQUENCE {
        codeBlockGroupTransmission      SetupRelease { PDSCH-CodeBlockGroupTransmission }      OPTIONAL, -- Need M
        xOverhead                       ENUMERATED { xOh6, xOh12, xOh18 }          OPTIONAL, -- Need S
        nrofHARQ-ProcessesForPDSCH      ENUMERATED {n2, n4, n6, n10, n12, n16}    OPTIONAL, -- Need S
        pucch-Cell                      ServCellIndex                          OPTIONAL, -- Cond SCellAddOnly
        ...
        [[
            maxMIMO-Layers              INTEGER (1..8)                          OPTIONAL, -- Need M
            processingType2Enabled       BOOLEAN                                  OPTIONAL, -- Need M
        ]],
        [[
            pdsch-CodeBlockGroupTransmissionList-r16 SetupRelease { PDSCH-CodeBlockGroupTransmissionList-r16 } OPTIONAL -- Need M
        ]],
        [[
            downlinkHARQ-FeedbackDisabled-r17 SetupRelease { DownlinkHARQ-FeedbackDisabled-r17 } OPTIONAL, -- Need M
            nrofHARQ-ProcessesForPDSCH-v1700 ENUMERATED {n32}                      OPTIONAL, -- Need R
        ]]
    }

PDSCH-CodeBlockGroupTransmission ::= SEQUENCE {
    maxCodeBlockGroupsPerTransportBlock    ENUMERATED {n2, n4, n6, n8},
    codeBlockGroupFlushIndicator           BOOLEAN,
    ...
}

PDSCH-CodeBlockGroupTransmissionList-r16 ::= SEQUENCE (SIZE (1..2)) OF PDSCH-CodeBlockGroupTransmission

DownlinkHARQ-FeedbackDisabled-r17 ::= BIT STRING (SIZE (32))

-- TAG-PDSCH-SERVINGCELLCONFIG-STOP

```

-- ASN1STOP

<b>PDSCH-CodeBlockGroupTransmission field descriptions</b>
<p><b>codeBlockGroupFlushIndicator</b> Indicates whether CBGFI for CBG based (re)transmission in DL is enabled (true). (see TS 38.212 [17], clause 7.3.1.2.2).</p>
<p><b>maxCodeBlockGroupsPerTransportBlock</b> Maximum number of code-block-groups (CBGs) per TB. In case of multiple CW, the maximum CBG is 4 (see TS 38.213 [13], clause 9.1.1).</p>

<b>PDSCH-ServingCellConfig field descriptions</b>
<p><b>codeBlockGroupTransmission</b> Enables and configures code-block-group (CBG) based transmission (see TS 38.213 [13], clause 9.1.1). Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group. The network does not configure this field if</p> <ul style="list-style-type: none"> <li>- the SCS of at least one DL BWP configured in the cell is 480 or 960 kHz</li> <li>- Type-1 HARQ-ACK codebook is configured and <i>pdsch-TimeDomainAllocationListForMultiPDSCH-r17</i> for this serving cell contains <i>pdsch-AllocationList</i> with multiple entries (multiple PDSCH)</li> <li>- Type-2 HARQ-ACK codebook is configured and <i>pdsch-TimeDomainAllocationListForMultiPDSCH-r17</i> for any cell in the same PUCCH cell group associated with this serving cell contains <i>pdsch-AllocationList</i> with multiple entries (multiple PDSCH)</li> </ul>
<p><b>downlinkHARQ-FeedbackDisabled</b> Used to disable the DL HARQ feedback, sent in the uplink, per HARQ process ID. The first/leftmost bit corresponds to HARQ process ID 0, the next bit to HARQ process ID 1 and so on. Bits corresponding to HARQ process IDs that are not configured shall be ignored. The bit(s) set to one identify HARQ processes with disabled DL HARQ feedback and the bit(s) set to zero identify HARQ processes with enabled DL HARQ feedback.</p>
<p><b>maxMIMO-Layers</b> Indicates the maximum number of MIMO layers to be used for PDSCH in all BWPs of this serving cell. (see TS 38.212 [17], clause 5.4.2.1).</p>
<p><b>nrofHARQ-ProcessesForPDSCH</b> The number of HARQ processes to be used on the PDSCH of a serving cell. Value <i>n2</i> corresponds to 2 HARQ processes, value <i>n4</i> to 4 HARQ processes, and so on. If both <i>nrofHARQ-ProcessesForPDSCH</i> and <i>nrofHARQ-ProcessesForPDSCH-v1700</i> are absent, the UE uses 8 HARQ processes (see TS 38.214 [19], clause 5.1).</p>
<p><b>pdsch-CodeBlockGroupTransmissionList</b> A list of configurations for up to two simultaneously constructed HARQ-ACK codebooks (see TS 38.213 [13], clause 9.3).</p>
<p><b>processingType2Enabled</b> Enables configuration of advanced processing time capability 2 for PDSCH (see 38.214 [19], clause 5.3).</p>
<p><b>pucch-Cell</b> The ID of the serving cell (of the same cell group) to use for PUCCH. If the field is absent, the UE sends the HARQ feedback on the PUCCH of the SpCell of this cell group, or on this serving cell if it is a PUCCH SCell.</p>
<p><b>xOverhead</b> Accounts for overhead from CSI-RS, CORESET, etc. If the field is absent, the UE applies value <i>xOh0</i> (see TS 38.214 [19], clause 5.1.3.2).</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SCellAddOnly</i>	It is optionally present, Need S, for (non-PUCCH) SCells when adding a new SCell. The field is absent, Need M, when reconfiguring SCells. The field is also absent for the SpCells as well as for a PUCCH SCell.

– *PDSCH-TimeDomainResourceAllocationList*

The IE *PDSCH-TimeDomainResourceAllocation* is used to configure a time domain relation between PDCCH and PDSCH. The *PDSCH-TimeDomainResourceAllocationList* contains one or more of such *PDSCH-TimeDomainResourceAllocations*. The network indicates in the DL assignment which of the configured time domain allocations the UE shall apply for that DL assignment. The UE determines the bit width of the DCI field based on the number of entries in the *PDSCH-TimeDomainResourceAllocationList*. Value 0 in the DCI field refers to the first element in this list, value 1 in the DCI field refers to the second element in this list, and so on.

***PDSCH-TimeDomainResourceAllocationList* information element**

```
-- ASN1START
-- TAG-PDSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-START

PDSCH-TimeDomainResourceAllocationList ::= SEQUENCE (SIZE(1..maxNrofDL-Allocations)) OF PDSCH-TimeDomainResourceAllocation

PDSCH-TimeDomainResourceAllocation ::= SEQUENCE {
    k0                                INTEGER(0..32)                                OPTIONAL,    -- Need S
    mappingType                       ENUMERATED {typeA, typeB},
    startSymbolAndLength              INTEGER (0..127)
}

PDSCH-TimeDomainResourceAllocationList-r16 ::= SEQUENCE (SIZE(1..maxNrofDL-Allocations)) OF PDSCH-TimeDomainResourceAllocation-r16

PDSCH-TimeDomainResourceAllocation-r16 ::= SEQUENCE {
    k0-r16                            INTEGER(0..32)                                OPTIONAL,    -- Need S
    mappingType-r16                   ENUMERATED {typeA, typeB},
    startSymbolAndLength-r16          INTEGER (0..127),
    repetitionNumber-r16              ENUMERATED {n2, n3, n4, n5, n6, n7, n8, n16} OPTIONAL, -- Cond Formats1-0_1-1_4-0_4-1_4-2
    ...
    [[
    k0-v1710                          INTEGER(33..128)                                OPTIONAL    -- Need S
    ]],
    [[

MultiPDSCH-TDRA-List-r17 ::= SEQUENCE (SIZE(1.. maxNrofDL-AllocationsExt-r17)) OF MultiPDSCH-TDRA-r17

MultiPDSCH-TDRA-r17 ::= SEQUENCE {
    pdsch-TDRA-List-r17              SEQUENCE (SIZE(1..maxNrofMultiplePDSCHs-r17)) OF PDSCH-TimeDomainResourceAllocation-r16,
    ...
}

-- TAG-PDSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-STOP
-- ASN1STOP
```

<b><i>PDSCH-TimeDomainResourceAllocation</i> field descriptions</b>
<b><i>k0</i></b> Slot offset between DCI and its scheduled PDSCH (see TS 38.214 [19], clause 5.1.2.1). <i>k0-v1710</i> is only applicable for PDSCH SCS of 480 kHz and 960 kHz. If multiple PDSCHs are configured per PDCCH, the network always configures this field. Otherwise, when the field is absent and only one PDSCH is configured per PDCCH, the UE applies the value 0.
<b><i>mappingType</i></b> PDSCH mapping type (see TS 38.214 [19], clause 5.3).
<b><i>repetitionNumber</i></b> Indicates the number of PDSCH transmission occasions for slot-based repetition scheme in IE <i>RepetitionSchemeConfig</i> . The parameter is used as specified in 38.214 [19].
<b><i>startSymbolAndLength</i></b> An index giving valid combinations of start symbol and length (jointly encoded) as start and length indicator (SLIV). The network configures the field so that the allocation does not cross the slot boundary (see TS 38.214 [19], clause 5.1.2.1).

<b><i>MultiPDSCH-TimeDomainResourceAllocation</i> field descriptions</b>
<b><i>pdsch-TDRA-List</i></b> One or multiple PDSCHs which can be in consecutive or non-consecutive slots (see TS 38.214 [19], clause 5.1.2.1).

<b>Conditional Presence</b>	<b>Explanation</b>
<i>Format1-2</i>	In <i>pdsch-TimeDomainAllocationListDCI-1-2</i> , this field is optionally present, Need R. It is absent, Need R, otherwise.
<i>Formats1-0_1-1_4-0_4-1_4-2</i>	In <i>pdsch-TimeDomainAllocationListDCI-1-2</i> , <i>pdsch-TimeDomainAllocationListForMultiPDSCH</i> , and <i>SIB20</i> , this field is absent. Otherwise, in <i>pdsch-TimeDomainResourceAllocationList-r16</i> , this field is optionally present, Need R.

## – *PDU-SessionID*

The IE *PDU-SessionID* identifies the PDU Session.

    numberOfN-r17             INTEGER(1..4),
    ...
}

-- TAG-PHR-CONFIG-STOP
-- ASN1STOP

```

<b>PHR-Config field descriptions</b>
<p><b><i>dpc-Reporting-FR1</i></b> Indicates if the delta power class (DPC) is reported, as specified in TS 38.321 [3].</p>
<p><b><i>dummy</i></b> This field is not used in this version of the specification and the UE ignores the received value.</p>
<p><b><i>mpe-ProhibitTimer</i></b> Value in number of subframes for MPE reporting, as specified in TS 38.321 [3]. Value <i>sf10</i> corresponds to 10 subframes, and so on.</p>
<p><b><i>mpe-Reporting-FR2</i></b> Indicates whether the UE shall report MPE P-MPR in the PHR MAC control element, as specified in TS 38.321 [3].</p>
<p><b><i>mpe-Threshold</i></b> Value of the P-MPR threshold in dB for reporting MPE P-MPR when FR2 is configured, as specified in TS 38.321 [3]. The same value applies for each serving cell (although the associated functionality is performed independently for each cell).</p>
<p><b><i>multiplePHR</i></b> Indicates if power headroom shall be reported using the Single Entry PHR MAC control element or Multiple Entry PHR MAC control element defined in TS 38.321 [3]. True means to use Multiple Entry PHR MAC control element and False means to use the Single Entry PHR MAC control element defined in TS 38.321 [3]. The network configures this field to <i>true</i> for MR-DC and UL CA for NR, and to <i>false</i> in all other cases.</p>
<p><b><i>numberOfN</i></b> Number of reported P-MPR values in a PHR MAC CE.</p>
<p><b><i>phr-AssumedPUSCH-Reporting</i></b> Indicates if the PHR with an assumed PUSCH is reported, as specified in TS 38.321 [3]. The network ensures <i>phr-AssumedPUSCH-Reporting-r18</i> and <i>twoPHRMode-r17</i> are not configured at the same time for a UE.</p>
<p><b><i>phr-ModeOtherCG</i></b> Indicates the mode (i.e. real or virtual) used for the PHR of the activated cells that are part of the other Cell Group (i.e. MCG or SCG), when DC is configured. If the UE is configured with only one cell group (no DC), it ignores the field.</p>
<p><b><i>phr-PeriodicTimer</i></b> Value in number of subframes for PHR reporting as specified in TS 38.321 [3]. Value <i>sf10</i> corresponds to 10 subframes, value <i>sf20</i> corresponds to 20 subframes, and so on.</p>
<p><b><i>phr-ProhibitTimer</i></b> Value in number of subframes for PHR reporting as specified in TS 38.321 [3]. Value <i>sf0</i> corresponds to 0 subframe, value <i>sf10</i> corresponds to 10 subframes, value <i>sf20</i> corresponds to 20 subframes, and so on.</p>
<p><b><i>phr-Tx-PowerFactorChange</i></b> Value in dB for PHR reporting as specified in TS 38.321 [3]. Value <i>dB1</i> corresponds to 1 dB, <i>dB3</i> corresponds to 3 dB and so on. The same value applies for each serving cell (although the associated functionality is performed independently for each cell).</p>
<p><b><i>phr-Type2OtherCell</i></b> If set to true, the UE shall report a PHR type 2 for the SpCell of the other MAC entity. See TS 38.321 [3], clause 5.4.6. Network sets this field to <i>false</i> if the UE is not configured with an E-UTRA MAC entity.</p>
<p><b><i>twoPHRMode</i></b> Indicates if the power headroom shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not. The network ensures <i>phr-AssumedPUSCH-Reporting-r18</i> and <i>twoPHRMode-r17</i> are not configured at the same time for a UE.</p>

– *PhysCellId*

The *PhysCellId* identifies the physical cell identity (PCI).

**PhysCellId** information element

```

<b>PhysicalCellGroupConfig field descriptions</b>
<p><b>ackNackFeedbackMode</b> Indicates which among the joint and separate ACK/NACK feedback modes to use within a slot as specified in TS 38.213 [13] (clause 9).</p>
<p><b>bdFactorR</b> Parameter for determining and distributing the maximum numbers of BD/CCE for mPDCCH based mPDSCH transmission as specified in TS 38.213 [13] Clause 10.1.</p>
<p><b>cs-RNTI</b> RNTI value for downlink SPS (see <i>SPS-Config</i>) and uplink configured grant (see <i>ConfiguredGrantConfig</i>).</p>
<p><b>downlinkAssignmentIndexDCI-0-2</b> Indicates if "Downlink assignment index" is present or absent in DCI format 0_2. If the field "<i>downlinkAssignmentIndexDCI-0-2</i>" is absent, then 0 bit for "Downlink assignment index" in DCI format 0_2. If the field "<i>downlinkAssignmentIndexDCI-0-2</i>" is present, then the bitwidth of "Downlink assignment index" in DCI format 0_2 is defined in the same way as that in DCI format 0_1 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.1).</p>
<p><b>downlinkAssignmentIndexDCI-1-2</b> Configures the number of bits for "Downlink assignment index" in DCI format 1_2. If the field is absent, then 0 bit is applied for "Downlink assignment index" in DCI format 1_2. Note that 1 bit and 2 bits are applied if only one serving cell is configured in the DL and <i>pdsch-HARQ-ACK-Codebook</i> is set to <i>dynamic</i>. 4 bits is applied if more than one serving cell are configured in the DL and <i>pdsch-HARQ-ACK-Codebook</i> is set to <i>dynamic</i> (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.1).</p>
<p><b>enableDiffCB-Size</b> This field indicates whether a different codebook size from the size determined based on HARQ-ACK information associated with PDSCH reception(s) scheduled before a UL grant, is determined or not to include HARQ-ACK information associated with PDSCH reception(s) scheduled after a UL grant scheduling a PUSCH transmission with repetitions and the HARQ-ACK information are multiplexed on a repetition of the PUSCH transmission other than a first repetition. If enabled, a different HARQ codebook size might be determined. See clause 9 in TS 38.213 [13].</p>
<p><b>enableDiffPUCCH-Resource</b> This field indicates whether a different PUCCH resource in time domain in a slot from the PUCCH resource indicated by the last DCI format before a UL grant in the slot, is determined or not to include HARQ-ACK information associated with PDSCH reception(s) scheduled after a UL grant scheduling a PUSCH transmission with repetitions and the HARQ-ACK information are multiplexed on a repetition of the PUSCH transmission other than a first repetition in the same slot. If enabled, a different PUCCH resource in time domain might be determined. See clause 9 in TS 38.213 [13].</p>
<p><b>enableType1HARQ-ACK-MuxForDL-AssignmentAfterUL-Grant</b> If enabled, UE multiplexes Type-1 HARQ-ACK codebook on a repetition of a PUSCH transmission other than a first repetition, where the HARQ-ACK codebook includes HARQ-ACK information associated with PDSCH reception(s) scheduled after the UL grant scheduling the PUSCH transmission. See clause 9 in TS 38.213 [13]. This feature is not simultaneously enabled with PUCCH cell switching.</p>
<p><b>enableType2HARQ-ACK-MuxForDL-AssignmentAfterUL-Grant</b> If enabled, UE multiplexes Type-2 HARQ-ACK codebook on a repetition of a PUSCH transmission other than a first repetition, where the HARQ-ACK codebook includes HARQ-ACK information associated with PDSCH reception(s) scheduled after the UL grant scheduling the PUSCH transmission. See clause 9 in TS 38.213 [13]. This feature is not simultaneously enabled with PUCCH cell switching.</p>
<p><b>enableType3HARQ-ACK-MuxForDL-AssignmentAfterUL-Grant</b> If enabled, UE multiplexes Type-3 HARQ-ACK codebook on a repetition of a PUSCH transmission other than a first repetition, where the HARQ-ACK codebook includes HARQ-ACK information associated with PDSCH reception(s) scheduled after the UL grant scheduling the PUSCH transmission. See clause 9 in TS 38.213 [13]. This feature is not simultaneously enabled with PUCCH cell switching.</p>
<p><b>harq-ACK-SpatialBundlingPUCCH</b> Enables spatial bundling of HARQ ACKs. It is configured per cell group (i.e. for all the cells within the cell group) for PUCCH reporting of HARQ-ACK. It is only applicable when more than 4 layers are possible to schedule. When the field is absent, the spatial bundling of PUCCH HARQ ACKs for the primary PUCCH group is disabled (see TS 38.213 [13], clause 9.1.2.1). If the field <i>harq-ACK SpatialBundlingPUCCH-secondaryPUCCHgroup</i> is present, <i>harq-ACK-SpatialBundlingPUCCH</i> is only applied to primary PUCCH group. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.</p>
<p><b>harq-ACK-SpatialBundlingPUCCH-secondaryPUCCHgroup</b> Indicates whether spatial bundling of PUCCH HARQ ACKs for the secondary PUCCH group is enabled or disabled. The field is only applicable when more than 4 layers are possible to schedule (see TS 38.213 [13], clause 9.1.2.1). When the field is absent, the use of spatial bundling of PUCCH HARQ ACKs for the secondary PUCCH group is indicated by <i>harq-ACK-SpatialBundlingPUCCH</i>. See TS 38.213 [13], clause 9.1.2.1. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.</p>

<p><b>harq-ACK-SpatialBundlingPUSCH</b> Enables spatial bundling of HARQ ACKs. It is configured per cell group (i.e. for all the cells within the cell group) for PUSCH reporting of HARQ-ACK. It is only applicable when more than 4 layers are possible to schedule. When the field is absent, the spatial bundling of PUSCH HARQ ACKs for the primary PUCCH group is disabled (see TS 38.213 [13], clauses 9.1.2.2 and 9.1.3.2). If the field <i>harq-ACK SpatialBundlingPUSCH-secondaryPUCCHgroup</i> is present, <i>harq-ACK-SpatialBundlingPUSCH</i> is only applied to primary PUCCH group. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.</p>
<p><b>harq-ACK-SpatialBundlingPUSCH-secondaryPUCCHgroup</b> Indicates whether spatial bundling of PUSCH HARQ ACKs for the secondary PUCCH group is enabled or disabled. The field is only applicable when more than 4 layers are possible to schedule (see TS 38.213 [13], clauses 9.1.2.2 and 9.1.3.2). When the field is absent, the use of spatial bundling of PUSCH HARQ ACKs for the secondary PUCCH group is indicated by <i>harq-ACK-SpatialBundlingPUSCH</i>. See TS 38.213 [13], clauses 9.1.2.2 and 9.1.3.2. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.</p>
<p><b>intraBandNC-PRACH-simulTx</b> Enables parallel PRACH and SRS/PUCCH/PUSCH transmissions across CCs in intra-band non-contiguous CA (see TS 38.213 [13], clause 8.1 and TS 38.214 [19], clause 6.2.1). This field is absent in the IE <i>CellGroupConfig</i> when provided as part of <i>RRCSetup</i> message.</p>
<p><b>mcs-C-RNTI</b> RNTI to indicate use of <i>qam64LowSE</i> for grant-based transmissions. When the <i>mcs-C-RNTI</i> is configured, RNTI scrambling of DCI CRC is used to choose the corresponding MCS table.</p>
<p><b>ncr-RNTI</b> RNTI value for NCR-MT, used to scramble the PDCCHs carrying side control information (see TS 38.213 [13], clause 10.1).</p>
<p><b>nfi-TotalDAI-Included</b> Indicates whether the NFI and total DAI fields of the non-scheduled PDSCH group is included in the non-fallback DL grant DCI (see TS 38.212 [17], clause 7.3.1). The network configures this only when enhanced dynamic codebook is configured (<i>pdscH-HARQ-ACK-Codebook</i> is set to <i>enhancedDynamic</i>).</p>
<p><b>nrdc-PCmode-FR1</b> Indicates the uplink power sharing mode that the UE uses in NR-DC in frequency range 1 (FR1) (see TS 38.213 [13], clause 7.6).</p>
<p><b>nrdc-PCmode-FR2</b> Indicates the uplink power sharing mode that the UE uses in NR-DC in frequency range 2 (FR2) (see TS 38.213 [13], clause 7.6).</p>
<p><b>pdccH-BlindDetection, pdccH-BlindDetection2, pdccH-BlindDetection3, pdccH-BlindDetection4</b> Indicates the reference number of cells for PDCCH blind detection for the CG. Network configures the field for each CG when the UE is in NR DC and sets the value in accordance with the constraints specified in TS 38.213 [13]. The network configures <i>pdccH-BlindDetection</i> only if the UE is in NR-DC. The network configures <i>pdccH-BlindDetection2</i> only if the UE is in NR-DC with at least one downlink cell using Rel-16 PDCCH monitoring capability. The network configures <i>pdccH-BlindDetection3</i> only if the UE is in NR-DC with at least one downlink cell using Rel-15 PDCCH monitoring capability. The network configures <i>pdccH-BlindDetection4</i> only if the UE is in NR-DC with at least one downlink cell using Rel-17 PDCCH monitoring capability.</p>
<p><b>pdccH-BlindDetectionCA-CombIndicator</b> Configure one combination of <i>pdccH-BlindDetectionCA1</i> (for R15) and <i>pdccH-BlindDetectionCA2</i> (for R16) for UE to use for scaling PDCCH monitoring capability if the number of serving cells configured to a UE is larger than the reported capability, and if UE reports more than one combination of <i>pdccH-BlindDetectionCA1</i> and <i>pdccH-BlindDetectionCA2</i> as UE capability. The combination of <i>pdccH-BlindDetectionCA1</i> and <i>pdccH-BlindDetectionCA2</i> configured by <i>pdccH-BlindDetectionCA-CombIndicator</i> is from the more than one combination of <i>pdccH-BlindDetectionCA1</i> and <i>pdccH-BlindDetectionCA2</i> reported by UE (see TS 38.213 [13], clause 10). <i>pdccH-BlindDetectionCA-CombIndicator-r17</i> is used to configure one combination of <i>pdccH-BlindDetectionCA1</i> (for R15), <i>pdccH-BlindDetectionCA2</i> (for R16) and <i>pdccH-BlindDetectionCA3</i> (for R17) for UE to use for scaling PDCCH monitoring capability if the number of serving cells configured to a UE is larger than the reported capability, and if UE reports more than one combination of <i>pdccH-BlindDetectionCA1</i>, <i>pdccH-BlindDetectionCA2</i> and <i>pdccH-BlindDetectionCA3</i> as UE capability. The combination of <i>pdccH-BlindDetectionCA1</i>, <i>pdccH-BlindDetectionCA2</i> and <i>pdccH-BlindDetectionCA3</i> configured by <i>pdccH-BlindDetectionCA-CombIndicator-r17</i> is from the more than one combination of <i>pdccH-BlindDetectionCA1</i>, <i>pdccH-BlindDetectionCA2</i> and <i>pdccH-BlindDetectionCA3</i> reported by UE (see TS 38.213 [13], clause 10). <i>pdccH-BlindDetectionCA-CombIndicator-r16</i> and <i>pdccH-BlindDetectionCA-CombIndicator-r17</i> are not configured simultaneously.</p>
<p><b>p-NR-FR1</b> The maximum total transmit power to be used by the UE in this NR cell group across all serving cells in frequency range 1 (FR1). The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i>) and by <i>p-UE-FR1</i> (configured total for all serving cells operating on FR1).</p>

<b>p-NR-FR2</b>
The maximum total transmit power to be used by the UE in this NR cell group across all serving cells in frequency range 2 (FR2). The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i> ) and by <i>p-UE-FR2</i> (configured total for all serving cells operating on FR2). This field is only used in NR-DC. A UE does not expect to be configured with this parameter in this release of the specification.
<b>prioLowDG-HighCG</b>
Enable PHY prioritization for the case where low-priority dynamic grant-PUSCH collides with high-priority configured grant-PUSCH on a BWP of a serving cell (see TS 38.213 [13], clause 9), when the UE has generated transport blocks for both DG-PUSCH and CG-PUSCH as described in TS 38.321 [3].
<b>prioHighDG-LowCG</b>
Enable PHY prioritization for the case where high-priority dynamic grant PUSCH collides with low-priority configured grant PUSCH on a BWP of a serving cell (see TS 38.213 [13], clause 9), when the UE has generated transport blocks for both DG-PUSCH and CG-PUSCH as described in TS 38.321 [3].
<b>ps-RNTI</b>
RNTI value for scrambling CRC of DCI format 2-6 used for power saving (see TS 38.213 [13], clause 10.1).
<b>ps-Offset</b>
The start of the search-time of DCI format 2-6 with CRC scrambled by PS-RNTI relative to the start of the <i>drx-onDurationTimer</i> of Long DRX (see TS 38.213 [13], clause 10.3). Value in multiples of 0.125ms (milliseconds). 1 corresponds to 0.125 ms, 2 corresponds to 0.25 ms, 3 corresponds to 0.375 ms and so on.
<b>ps-WakeUp</b>
Indicates the UE to wake-up if DCI format 2-6 is not detected outside active time (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not wake-up if DCI format 2-6 is not detected outside active time.
<b>ps-PositionDCI-2-6</b>
Starting position of UE wakeup and SCell dormancy indication in DCI format 2-6 (see TS 38.213 [13], clause 10.3).
<b>ps-TransmitPeriodicL1-RSRP</b>
Indicates the UE to transmit periodic L1-RSRP report(s) when the <i>drx-onDurationTimer</i> does not start (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not transmit periodic L1-RSRP report(s) when the <i>drx-onDurationTimer</i> does not start.
<b>ps-TransmitOtherPeriodicCSI</b>
Indicates the UE to transmit periodic CSI report(s) other than L1-RSRP reports when the <i>drx-onDurationTimer</i> does not start (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not transmit periodic CSI report(s) other than L1-RSRP reports when the <i>drx-onDurationTimer</i> does not start.
<b>p-UE-FR1</b>
The maximum total transmit power to be used by the UE across all serving cells in frequency range 1 (FR1) across all cell groups. The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i> ) and by <i>p-NR-FR1</i> (configured for the cell group).
<b>p-UE-FR2</b>
The maximum total transmit power to be used by the UE across all serving cells in frequency range 2 (FR2) across all cell groups. The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i> ) and by <i>p-NR-FR2</i> (configured for the cell group). A UE does not expect to be configured with this parameter in this release of the specification.
<b>pdsch-HARQ-ACK-Codebook</b>
The PDSCH HARQ-ACK codebook is either semi-static or dynamic. This is applicable to both CA and non-CA operation (see TS 38.213 [13], clauses 9.1.2 and 9.1.3). If <i>pdsch-HARQ-ACK-Codebook-r16</i> is signalled, UE shall ignore the <i>pdsch-HARQ-ACK-Codebook</i> (without suffix). For the HARQ-ACK for sidelink, if <i>pdsch-HARQ-ACK-Codebook-r16</i> is signalled, the UE uses <i>pdsch-HARQ-ACK-Codebook</i> (without suffix) and ignores <i>pdsch-HARQ-ACK-Codebook-r16</i> . If the field <i>pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup</i> is present, <i>pdsch-HARQ-ACK-Codebook</i> is applied to primary PUCCH group. Otherwise, this field is applied to the cell group (i.e. for all the cells within the cell group). For the HARQ-ACK for sidelink, if the field <i>pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup</i> is present, <i>pdsch-HARQ-ACK-Codebook</i> is applied to primary and secondary PUCCH group and the UE ignores <i>pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup</i> .
<b>pdsch-HARQ-ACK-CodebookList</b>
A list of configurations for one or two HARQ-ACK codebooks. Each configuration in the list is defined in the same way as <i>pdsch-HARQ-ACK-Codebook</i> (see TS 38.212 [17], clause 7.3.1.2.2 and TS 38.213 [13], clauses 7.2.1, 9.1.2, 9.1.3 and 9.2.1). If this field is present, the field <i>pdsch-HARQ-ACK-Codebook</i> is ignored. If this field is present, the value of this field is applied for primary PUCCH group and for secondary PUCCH group (if configured). For the HARQ-ACK for sidelink, the UE uses <i>pdsch-HARQ-ACK-Codebook</i> and ignores <i>pdsch-HARQ-ACK-CodebookList</i> if this field is present.

<p><b><i>pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup</i></b> The PDSCH HARQ-ACK codebook is either semi-static or dynamic. This is applicable to CA operation (see TS 38.213 [13], clauses 9.1.2 and 9.1.3). It is configured for secondary PUCCH group.</p>
<p><b><i>pdsch-HARQ-ACK-EnhType3DCI-Field, pdsch-HARQ-ACK-EnhType3DCI-FieldSecondaryPUCCHgroup</i></b> Indicates the enhanced Type 3 codebook through a new DCI field to indicate the enhanced Type 3 HARQ-ACK codebook in the primary PUCCH group if the more than one enhanced Type 3 HARQ-ACK codebook is configured for the primary PUCCH group, or in the secondary PUCCH group if the more than one enhanced Type 3 HARQ-ACK code is configured for the secondary PUCCH group, respectively.</p>
<p><b><i>pdsch-HARQ-ACK-EnhType3ToAddModList, pdsch-HARQ-ACK-EnhType3SecondaryToAddModList</i></b> Configure the list of enhanced Type 3 HARQ-ACK codebooks for the primary PUCCH group and the secondary PUCCH group, respectively. When configured, DCI format 1_1 can request the UE to report A/N for one of the configured enhanced Type 3 HARQ-ACK codebooks in the corresponding PUCCH group (see TS 38.213 [13], clause 9.1.4). The network can configure <i>pdsch-HARQ-ACK-EnhType3SecondaryToAddModList</i> only if secondary PUCCH group is configured.</p>
<p><b><i>pdsch-HARQ-ACK-OneShotFeedback</i></b> When configured, the DCI format 1_1 can request the UE to report A/N for all HARQ processes and all CCs configured in the PUCCH group (see TS 38.212 [17], clause 7.3.1).</p>
<p><b><i>pdsch-HARQ-ACK-OneShotFeedbackCBG</i></b> When configured, the DCI format 1_1 can request the UE to include CBG level A/N for each CC with CBG level transmission configured. When not configured, the UE will report TB level A/N even if CBG level transmission is configured for a CC. The network configures this only when <i>pdsch-HARQ-ACK-OneShotFeedback</i> is configured.</p>
<p><b><i>pdsch-HARQ-ACK-OneShotFeedbackNDI</i></b> When configured, the DCI format 1_1 can request the UE to include NDI for each A/N reported. The network configures this only when <i>pdsch-HARQ-ACK-OneShotFeedback</i> is configured.</p>
<p><b><i>pdsch-HARQ-ACK-Retx, pdsch-HARQ-ACK-RetxSecondaryPUCCHgroup</i></b> When configured, the DCI format 1_1 can request the UE to perform a HARQ-ACK re-transmission on a PUCCH resource in the primary PUCCH group and the secondary PUCCH group, respectively (see TS 38.213 [13], clause 9.1.5).</p>
<p><b><i>pucch-sSCell, pucch-sSCellSecondaryPUCCHgroup</i></b> indicates the alternative PUCCH cells for PUCCH cell switching in the primary and the secondary PUCCH group, respectively. For the primary PUCCH group, it is configured for cells on top of SpCell. For the secondary PUCCH group, it is configured for cell on top of the PUCCH SCell.</p>
<p><b><i>pucch-sSCellDyn, pucch-sSCellDynsecondaryPUCCHgroup</i></b> When configured, PUCCH cell switching based on dynamic indication in DCI format 1_1 is enabled (see TS 38.213 [13], clause 9.A, clause 9.1.5), respectively for the primary PUCCH group and the secondary PUCCH group.</p>
<p><b><i>pucch-sSCellPattern, pucch-sSCellPatternSecondaryPUCCHgroup</i></b> When configured, the UE applies the semi-static PUCCH cell switching (see TS 38.213 [13], clause 9.A) using the time domain pattern of applicable PUCCH cells indicated by this field, respectively for the primary PUCCH group and the secondary PUCCH group.</p>
<p><b><i>simultaneousPUCCH-PUSCH, simultaneousPUCCH-PUSCH-SecondaryPUCCHgroup</i></b> Enables simultaneous PUCCH and PUSCH transmissions with different priorities for the primary PUCCH group and the secondary PUCCH group, respectively.</p>
<p><b><i>simultaneousPUCCH-PUSCH-SamePriority, simultaneousPUCCH-PUSCH-SamePriority-SecondaryPUCCHgroup</i></b> Enables simultaneous PUCCH and PUSCH transmissions on different cells in different bands with same priority for the primary PUCCH group and the secondary PUCCH group, respectively, as specified in clause 9 of TS 38.213 [13].</p>
<p><b><i>simultaneousSR-PUSCH-diffPUCCH-Groups</i></b> Enables simultaneous SR and PUSCH transmissions in different PUCCH groups (see TS 38.321 [3], clause 5.4.1, clause 5.4.4).</p>
<p><b><i>sizeDCI-2-6</i></b> Size of DCI format 2-6 (see TS 38.213 [13], clause 10.3).</p>
<p><b><i>sp-CSI-RNTI</i></b> RNTI for Semi-Persistent CSI reporting on PUSCH (see <i>CSI-ReportConfig</i>) (see TS 38.214 [19], clause 5.2.1.5.2). Network always configures the UE with a value for this field when at least one <i>CSI-ReportConfig</i> with <i>reportConfigType</i> set to <i>semiPersistentOnPUSCH</i> is configured.</p>
<p><b><i>tpc-PUCCH-RNTI</i></b> RNTI used for PUCCH TPC commands on DCI (see TS 38.213 [13], clause 10.1).</p>

<b><i>tpc-PUSCH-RNTI</i></b> RNTI used for PUSCH TPC commands on DCI (see TS 38.213 [13], clause 10.1).
<b><i>tpc-SRS-RNTI</i></b> RNTI used for SRS TPC commands on DCI (see TS 38.213 [13], clause 10.1).
<b><i>twoQCL-TypeD-ForMultiDCI</i></b> Indicates whether a UE is expected to identify and monitor two QCL-TypeD properties for multiple overlapping CORESETs, where the first QCL-TypeD is associated with <i>coresetPoolIndex</i> value 0, and the second QCL-TypeD is associated with <i>coresetPoolIndex</i> value 1. (See TS 38,213 [13], clause 10).
<b><i>twoQCLTypeDforPDCCHRepetition</i></b> Indicates whether a UE is expected UE to identify and monitor two QCL-TypeD properties for multiple overlapping CORESETs in the case of PDCCH repetition.
<b><i>uci-MuxWithDiffPrio, uci-MuxWithDiffPrio-secondaryPUCCHgroup</i></b> When configured, enables multiplexing a high-priority (HP) HARQ-ACK UCI and a low-priority (LP) HARQ-ACK UCI into a PUCCH or PUSCH for the primary PUCCH group and the secondary PUCCH group, respectively.
<b><i>ul-TotalDAI-Included</i></b> Indicates whether the total DAI fields of the additional PDSCH group is included in the non-fallback UL grant DCI (see TS 38.212 [17], clause 7.3.1). The network configures this only when enhanced dynamic codebook is configured ( <i>pdsch-HARQ-ACK-Codebook</i> is set to <i>enhancedDynamic</i> ).
<b><i>xScale</i></b> The UE is allowed to drop NR only if the power scaling applied to NR results in a difference between scaled and unscaled NR UL of more than <i>xScale</i> dB (see TS 38.213 [13]). If the value is not configured for dynamic power sharing, the UE assumes default value of 6 dB.

#### ***MulticastConfig* field descriptions**

<b><i>pdsch-HARQ-ACK-CodebookListMulticast</i></b> A list of configurations for one or two HARQ-ACK codebooks for MBS multicast. Each configuration in the list is defined in the same way as <i>pdsch-HARQ-ACK-Codebook</i> (see TS 38.212 [17], clause 7.3.1.2.2 and TS 38.213 [13], clauses 7.2.1, 9.1.2, 9.1.3 and 9.2.1). If this field is present, the field <i>pdsch-HARQ-ACK-Codebook</i> is ignored. If this field is present, the value of this field is applied for primary PUCCH group and for secondary PUCCH group (if configured).
<b><i>type1CodebookGenerationMode</i></b> Indicates the mode of Type-1 HARQ-ACK codebook generation, as specified in TS 38.213 [13]. Mode 1 is based on the k1 values that are in the intersection of K1 set for unicast and K1 set for multicast. Mode 2 is based on the k1 values that are in the union of K1 set for unicast and K1 set for multicast.

#### ***PDSCH-HARQ-ACK-EnhType3* field descriptions**

<b><i>pdsch-HARQ-ACK-EnhType3CBG</i></b> When configured, the DCI format 1_1 or DCI format 1_2 can request the UE to include CBG level A/N for each CC with CBG level transmission configured of the enhanced Type 3 HARQ-ACK codebook. When not configured, the UE will report TB level A/N even if CBG level transmission is configured for a CC.
<b><i>pdsch-HARQ-ACK-EnhType3NDI</i></b> When configured, the DCI format 1_1 or DCI format 1_2 can request the UE to include NDI for each A/N reported of the enhanced Type 3 HARQ-ACK codebook.
<b><i>perCC</i></b> Configures enhanced Type 3 HARQ-ACK codebook using per CC configuration.
<b><i>perHARQ, perHARQ-Ext</i></b> Configures enhanced Type 3 HARQ-ACK codebook using per HARQ process and CC configuration. <i>perHARQ-Ext</i> is present only when <i>nrofHARQ-ProcessesForPDSCH-v1700</i> is present in <i>pdsch-ServingCellConfig</i> of at least one serving cell in the PUCCH group. If <i>perHARQ-Ext</i> is present, the UE ignores <i>perHARQ</i> .

<i>CellDTRX-DCI-config</i> field descriptions	
<b>cellDTRX-RNTI</b>	The RNTI value for scrambling CRC of DCI format 2_9 for activating and/or deactivating Cell DTX and/or Cell DRX and/or NES mode for CHO indication.
<b>sizeDCI-2-9</b>	The size of DCI format 2_9.

Conditional Presence	Explanation
<i>MCG-Only</i>	This field is optionally present, Need R, in the <i>PhysicalCellGroupConfig</i> of the MCG. It is absent otherwise.
<i>NCR</i>	This field is optionally present, Need M for NCR-MT. It is absent otherwise.
<i>SCG-Only</i>	This field is optionally present, Need S, in the <i>PhysicalCellGroupConfig</i> of the SCG in (NG)EN-DC as defined in TS 38.213 [13]. It is absent otherwise.
<i>twoPUCCHgroup</i>	This field is optionally present, Need R, if secondary PUCCH group is configured. It is absent otherwise, Need R.

## – *PLMN-Identity*

The IE *PLMN-Identity* identifies a Public Land Mobile Network. Further information regarding how to set the IE is specified in TS 23.003 [21].

### *PLMN-Identity* information element

```

-- ASN1START
-- TAG-PLMN-IDENTITY-START

PLMN-Identity ::=
    SEQUENCE {
        mcc          MCC          OPTIONAL,          -- Cond MCC
        mnc          MNC
    }

MCC ::=
    SEQUENCE (SIZE (3)) OF MCC-MNC-Digit

MNC ::=
    SEQUENCE (SIZE (2..3)) OF MCC-MNC-Digit

MCC-MNC-Digit ::=
    INTEGER (0..9)

-- TAG-PLMN-IDENTITY-STOP
-- ASN1STOP

```

<i>PLMN-Identity</i> field descriptions	
<b>mcc</b>	The first element contains the first MCC digit, the second element the second MCC digit and so on. If the field is absent, it takes the same value as the <i>mcc</i> of the immediately preceding IE <i>PLMN-Identity</i> . See TS 23.003 [21].
<b>mnc</b>	The first element contains the first MNC digit, the second element the second MNC digit and so on. See TS 23.003 [21].

Conditional Presence	Explanation
MCC	This field is mandatory present when PLMN-Identity is not used in a list or if it is the first entry of PLMN-Identity in a list. Otherwise it is optionally present, Need S.

– *PLMN-IdentityInfoList*

The IE *PLMN-IdentityInfoList* includes a list of PLMN identity information.

***PLMN-IdentityInfoList* information element**

```

-- ASN1START
-- TAG-PLMN-IDENTITYINFOLIST-START

PLMN-IdentityInfoList ::=          SEQUENCE (SIZE (1..maxPLMN)) OF PLMN-IdentityInfo

PLMN-IdentityInfo ::=             SEQUENCE {
  plmn-IdentityList                SEQUENCE (SIZE (1..maxPLMN)) OF PLMN-Identity,
  trackingAreaCode                  TrackingAreaCode                OPTIONAL,           -- Need R
  ranac                             RAN-AreaCode                  OPTIONAL,           -- Need R
  cellIdentity                       CellIdentity,
  cellReservedForOperatorUse        ENUMERATED {reserved, notReserved},
  ...
  [[
  iab-Support-r16                   ENUMERATED {true}                OPTIONAL           -- Need S
  ]],
  [[
  trackingAreaList-r17              SEQUENCE (SIZE (1..maxTAC-r17)) OF TrackingAreaCode  OPTIONAL,           -- Need R
  gNB-ID-Length-r17                INTEGER (22..32)                OPTIONAL           -- Cond eventID-TSS
  ]],
  [[
  mobileIAB-Support-r18            ENUMERATED {true}                OPTIONAL           -- Need S
  ]]
}
-- TAG-PLMN-IDENTITYINFOLIST-STOP
-- ASN1STOP

```

<b>PLMN-IdentityInfo field descriptions</b>	
<b>cellReservedForOperatorUse</b>	Indicates whether the cell is reserved for operator use (per PLMN), as defined in TS 38.304 [20]. This field is ignored by IAB-MT and NCR-MT.
<b>gNB-ID-Length</b>	Indicates the length of the gNB ID out of the 36-bit long <i>cellIdentity</i> . This field is always present if the <i>mobileIAB-Support</i> is broadcasted.
<b>iab-Support</b>	This field combines both the support of IAB and the cell status for IAB. If the field is present, the cell supports IAB and the cell is also considered as a candidate for cell (re)selection for IAB-node; if the field is absent, the cell does not support IAB and/or the cell is barred for IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell.
<b>mobileIAB-Support</b>	This field indicates the support of mobile IAB and whether the cell can be considered as a candidate for cell (re)selection for mobile IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell. If the field is absent, the cell is barred for mobile IAB-node.
<b>trackingAreaCode</b>	Indicates Tracking Area Code to which the cell indicated by <i>cellIdentity</i> field belongs. The absence of the field indicates that the cell only supports PSCell/SCell functionality (per PLMN) or is an NTN cell.
<b>trackingAreaList</b>	List of Tracking Areas to which the cell indicated by <i>cellIdentity</i> field belongs. If this field is present, network does not configure <i>trackingAreaCode</i> . Total number of different TACs across different <i>PLMN-IdentityInfos</i> shall not exceed <i>maxTAC</i> . This field is only present in an NTN cell.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>eventID-TSS</i>	If <i>eventID-TSS</i> is present in SIB9, this field is mandatory present in the <i>PLMN-IdentityInfo</i> IE of <i>PLMN-IdentityInfoList</i> in SIB1. Otherwise, the field is optionally present, Need R.

## – *PLMN-IdentityList2*

Includes a list of PLMN identities.

### ***PLMN-IdentityList2* information element**

```
-- ASN1START
-- TAG-PLMNIDENTITYLIST2-START

PLMN-IdentityList2-r16 ::= SEQUENCE (SIZE (1..16)) OF PLMN-Identity

-- TAG-PLMNIDENTITYLIST2-STOP
-- ASN1STOP
```

## – *PRB-Id*

The IE *PRB-Id* identifies a Physical Resource Block (PRB) position within a carrier.

***PRB-Id* information element**

```

-- ASN1START
-- TAG-PRB-ID-START

PRB-Id ::=
    INTEGER (0..maxNrofPhysicalResourceBlocks-1)

-- TAG-PRB-ID-STOP
-- ASN1STOP

```

***PTRS-DownlinkConfig***

The IE *PTRS-DownlinkConfig* is used to configure downlink phase tracking reference signals (PTRS) (see TS 38.214 [19] clause 5.1.6.3)

***PTRS-DownlinkConfig* information element**

```

-- ASN1START
-- TAG-PTRS-DOWNLINKCONFIG-START

PTRS-DownlinkConfig ::=
    SEQUENCE {

```

<i><b>PTRS-DownlinkConfig</b></i> field descriptions
<p><b><i>epre-Ratio</i></b> EPRE ratio between PTRS and PDSCH. Value 0 corresponds to the codepoint "00" in table 4.1-2. Value 1 corresponds to codepoint "01", and so on. If the field is not provided, the UE applies value 0 (see TS 38.214 [19], clause 4.1).</p>
<p><b><i>frequencyDensity</i></b> Presence and frequency density of DL PT-RS as a function of Scheduled BW. If the field is absent, the UE uses <math>K_{PT-RS} = 2</math> (see TS 38.214 [19], clause 5.1.6.3, table 5.1.6.3-2).</p>
<p><b><i>maxNrofPorts</i></b> The maximum number of DL PTRS ports specified in TS 38.214 [19] (clause 5.1.6.3). 2 PT-RS ports can only be configured for a DL BWP that is configured, as specified in TS 38.214 [19] clause 5.1, with a mode where a single PDSCH has association between the DM-RS ports and the TCI states as defined in TS 38.214 [19] clause 5.1.6.2.</p>
<p><b><i>resourceElementOffset</i></b> Indicates the subcarrier offset for DL PTRS. If the field is absent, the UE applies the value offset00 (see TS 38.211 [16], clause 7.4.1.2.2).</p>
<p><b><i>timeDensity</i></b> Presence and time density of DL PT-RS as a function of MCS. The value 29 is only applicable for MCS Table 5.1.3.1-1 (TS 38.214 [19]). If the field is absent, the UE uses <math>L_{PT-RS} = 1</math> (see TS 38.214 [19], clause 5.1.6.3, table 5.1.6.3-1).</p>

## – *PTRS-UplinkConfig*

The IE *PTRS-UplinkConfig* is used to configure uplink Phase-Tracking-Reference-Signals (PTRS).

-- ASN1STOP

```

<b><i>PTRS-UplinkConfig</i> field descriptions</b>
<b><i>frequencyDensity</i></b> Presence and frequency density of UL PT-RS for CP-OFDM waveform as a function of scheduled BW. If the field is absent, the UE uses $K_{PT-RS} = 2$ (see TS 38.214 [19], clause 6.1).
<b><i>maxNrofPorts, maxNrofPorts-SDM</i></b> The maximum number of UL PTRS ports for CP-OFDM (see TS 38.214 [19], clause 6.2.3.1).
<b><i>ptrs-Power</i></b> UL PTRS power boosting factor per PTRS port (see TS 38.214 [19], clause 6.1, table 6.2.3.1.3).
<b><i>resourceElementOffset</i></b> Indicates the subcarrier offset for UL PTRS for CP-OFDM. If the field is absent, the UE applies the value <code>offset00</code> (see TS 38.211 [16], clause 6.4.1.2.2).
<b><i>sampleDensity</i></b> Sample density of PT-RS for DFT-s-OFDM, pre-DFT, indicating a set of thresholds $T = \{NRB_n, n=0,1,2,3,4\}$ , that indicates dependency between presence of PT-RS and scheduled BW and the values of X and K the UE should use depending on the scheduled BW, see TS 38.214 [19], clause 6.1, table 6.2.3.2-1.
<b><i>timeDensity</i></b> Presence and time density of UL PT-RS for CP-OFDM waveform as a function of MCS. If the field is absent, the UE uses $L_{PT-RS} = 1$ (see TS 38.214 [19], clause 6.1).
<b><i>timeDensityTransformPrecoding</i></b> Time density (OFDM symbol level) of PT-RS for DFT-s-OFDM. If the field is absent, the UE applies value <code>d1</code> (see TS 38.214 [19], clause 6.1).
<b><i>transformPrecoderDisabled</i></b> Configuration of UL PTRS without transform precoder (with CP-OFDM).
<b><i>transformPrecoderEnabled</i></b> Configuration of UL PTRS with transform precoder (DFT-S-OFDM).

## – *PUCCH-Config*

The IE *PUCCH-Config* is used to configure UE specific PUCCH parameters (per BWP).

<b>PUCCH-Config field descriptions</b>
<p><b><i>dl-DataToUL-ACK, dl-DataToUL-ACK-DCI-1-2</i></b> List of timing for given PDSCH to the DL ACK (see TS 38.213 [13], clause 9.1.2). The field <i>dl-DataToUL-ACK</i> applies to DCI format 1_1 and the field <i>dl-DataToUL-ACK-DCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3). The <i>dl-DataToUL-ACK-v1700</i> is applicable for NTN and <i>dl-DataToUL-ACK-r17</i> is applicable for FR2-2. The <i>dl-DataToUL-ACK-r18</i> is applicable for ATG. If <i>dl-DataToUL-ACK-r16</i> or <i>dl-DataToUL-ACK-r17</i> or <i>dl-DataToUL-ACK-v1700</i> or <i>dl-DataToUL-ACK-r18</i> is signalled, UE shall ignore the <i>dl-DataToUL-ACK</i> (without suffix). The value -1 corresponds to "inapplicable value" for the case where the A/N feedback timing is not explicitly included at the time of scheduling PDSCH. The fields <i>dl-DataToUL-ACK-r17</i> and <i>dl-DataToUL-ACK-DCI-1-2-r17</i> are only applicable for SCS of 480 kHz or 960 kHz. The field <i>dl-DataToUL-ACK-r18</i> applies to DCI format 1_1 and the field <i>dl-DataToUL-ACK-DCI-1-2-r18</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3).</p>
<p><b><i>dl-DataToUL-ACK-MulticastDCI-Format4-1</i></b> List of timing for given group-common PDSCH to the DL ACK (see TS 38.213 [13], clause 9.1.2). The field <i>dl-DataToUL-ACK-MulticastDciFormat4-1</i> applies to DCI format 4_1 for MBS multicast (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3).</p>
<p><b><i>dmrs-BundlingPUCCH-Config</i></b> Configuration of the parameters for DMRS bundling for PUCCH (see TS 38.214 [19], clause 6.1.7). DMRS bundling for PUCCH is not supported for PUCCH format 0/2. In this release, this is not applicable to FR2-2.</p>
<p><b><i>dmrs-UplinkTransformPrecodingPUCCH</i></b> This field is used for PUCCH formats 3 and 4 according to TS 38.211, Clause 6.4.1.3.3.1.</p>
<p><b><i>format0</i></b> Parameters that are common for all PUCCH resources of format 0.</p>
<p><b><i>format1</i></b> Parameters that are common for all PUCCH resources of format 1.</p>
<p><b><i>format2</i></b> Parameters that are common for all PUCCH resources of format 2.</p>
<p><b><i>format3</i></b> Parameters that are common for all PUCCH resources of format 3.</p>
<p><b><i>format4</i></b> Parameters that are common for all PUCCH resources of format 4.</p>
<p><b><i>mappingPattern</i></b> Indicates whether the UE should follow Cyclical mapping pattern or Sequential mapping pattern for when a PUCCH resource used for repetitions of a PUCCH transmission includes first and second spatial settings for FR2, or first and second sets of power control parameters for FR1 (see TS 38.213 [13], clause 9.2.6).</p>
<p><b><i>numberOfBitsForPUCCH-ResourceIndicatorDCI-1-2</i></b> Configuration of the number of bits for "PUCCH resource indicator" in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3).</p>
<p><b><i>powerControlSetInfoToAddModList</i></b> Configures power control sets for repetition of a PUCCH transmission in FR1. This field is not configured if <i>ul-powerControl</i> is configured in the <i>BWP-UplinkDedicated</i> in which the <i>PUCCH-Config</i> is included.</p>
<p><b><i>pucch-PowerControl</i></b> Configures power control parameters PUCCH transmission.</p>
<p><b><i>resourceGroupToAddModList, resourceGroupToReleaseList</i></b> Lists for adding and releasing groups of PUCCH resources that can be updated simultaneously for spatial relations with a MAC CE.</p>
<p><b><i>resourceSetToAddModList, resourceSetToReleaseList</i></b> Lists for adding and releasing PUCCH resource sets (see TS 38.213 [13], clause 9.2).</p>
<p><b><i>resourceToAddModList, resourceToAddModListExt, resourceToReleaseList</i></b> Lists for adding and releasing PUCCH resources applicable for the UL BWP and serving cell in which the <i>PUCCH-Config</i> is defined. The resources defined herein are referred to from other parts of the configuration to determine which resource the UE shall use for which report. If the network includes of <i>resourceToAddModListExt</i>, it includes the same number of entries, and listed in the same order, as in <i>resourceToAddModList</i>.</p>

<p><b>secondTPCFieldDCI-1-1, secondTPCFieldDCI-1-2</b> A second TPC field can be configured via RRC for DCI-1-1 and DCI-1-2. Each TPC field is for each closed-loop index value respectively (i.e., 1st /2nd TPC fields correspond to "closedLoopIndex" value = 0 and 1.</p>
<p><b>spatialRelationInfoToAddModList, spatialRelationInfoToAddModListSizeExt, spatialRelationInfoToAddModListExt</b> Configuration of the spatial relation between a reference RS and PUCCH. Reference RS can be SSB/CSI-RS/SRS. If the list has more than one element, MAC-CE selects a single element (see TS 38.321 [3], clause 5.18.8 and TS 38.213 [13], clause 9.2.2). The UE shall consider entries in <i>spatialRelationInfoToAddModList</i> and in <i>spatialRelationInfoToAddModListSizeExt</i> as a single list, i.e. an entry created using <i>spatialRelationInfoToAddModList</i> can be modified using <i>spatialRelationInfoToAddModListSizeExt</i> (or deleted using <i>spatialRelationInfoToReleaseListSizeExt</i>) and vice-versa. If the network includes <i>spatialRelationInfoToAddModListExt</i>, it includes the same number of entries, and listed in the same order, as in the concatenation of <i>spatialRelationInfoToAddModList</i> and of <i>spatialRelationInfoToAddModListSizeExt</i>. If <i>unifiedTCI-StateType</i> is configured for the serving cell, no element in this list is configured.</p>
<p><b>spatialRelationInfoToReleaseList, spatialRelationInfoToReleaseListSizeExt, spatialRelationInfoToReleaseListExt</b> Lists of spatial relation configurations between a reference RS and PUCCH to be released by the UE.</p>
<p><b>sps-PUCCH-AN-List</b> Indicates a list of PUCCH resources for DL SPS HARQ ACK. The field <i>maxPayloadSize</i> is absent for the first and the last <i>SPS-PUCCH-AN</i> in the list. If configured, this overrides <i>n1PUCCH-AN</i> in <i>SPS-config</i>.</p>
<p><b>sps-PUCCH-AN-ListMulticast</b> The field is used to configure the list of PUCCH resources per HARQ ACK codebook for MBS multicast.</p>
<p><b>subslotLengthForPUCCH</b> Indicates the sub-slot length for sub-slot based PUCCH feedback in number of symbols (see TS 38.213 [13], clause 9). Value <i>n2</i> corresponds to 2 symbols, value <i>n6</i> corresponds to 6 symbols, value <i>n7</i> corresponds to 7 symbols. For normal CP, the value is either <i>n2</i> or <i>n7</i>. For extended CP, the value is either <i>n2</i> or <i>n6</i>.</p>
<p><b>ul-AccessConfigListDCI-1-1, ul-AccessConfigListDCI-1-2</b> List of the combinations of cyclic prefix extension and UL channel access type (see TS 38.212 [17], clause 7.3.1) applicable, respectively, to DCI format 1_1 and DCI format 1_2. The fields <i>ul-AccessConfigListDCI-1-1-r16</i> and <i>ul-AccessConfigListDCI-1-2-r17</i> are only applicable for FR1 (see TS 38.212 [17], Table 7.3.1.2.2-6). The field <i>ul-AccessConfigListDCI-1-1-r17</i> indicates a list which only contains UL channel access types and is only applicable for FR2-2 (see TS 38.212 [17], Table 7.3.1.2.2-6A).</p>

#### PUCCH-format3 field descriptions

<p><b>nrofPRBs</b> The supported values are 1,2,3,4,5,6,8,9,10,12,15 and 16. The UE shall ignore this field when <i>format-v1610</i> is configured.</p>
---

<b><i>PUCCH-FormatConfig, PUCCH-FormatConfigExt</i></b> field descriptions	
<b><i>additionalDMRS</i></b>	If the field is present, the UE enables 2 DMRS symbols per hop of a PUCCH Format 3 or 4 if both hops are more than X symbols when FH is enabled (X=4). And it enables 4 DMRS symbols for a PUCCH Format 3 or 4 with more than 2X+1 symbols when FH is disabled (X=4). The field is not applicable for format 0, 1 and 2. See TS 38.213 [13], clause 9.2.2.
<b><i>interslotFrequencyHopping</i></b>	If the field is present, the UE enables inter-slot frequency hopping when PUCCH Format 0, 1, 2, 3 or 4 is repeated over multiple slots. For a PUCCH over multiple slots, the intra and inter slot frequency hopping cannot be enabled at the same time for a UE. See TS 38.213 [13], clause 9.2.6.
<b><i>maxCodeRate</i></b>	Max coding rate to determine how to feedback UCI on PUCCH for format 2, 3 or 4. The field is not applicable for format 0 and 1. See TS 38.213 [13], clause 9.2.5.
<b><i>maxCodeRateLP</i></b>	Max coding rate to determine how to feedback UCI on PUCCH for format 2, 3 or 4. The field is not applicable for format 0 and 1. This field configures additional max code rate in the second entry of <i>PUCCH-ConfigurationList-r16</i> for multiplexing low-priority (LP) HARQ-ACK and high-priority (HP) UCI in a PUCCH as described Clause 9.2.5.3 of TS 38.213 [13]. The field is absent for the first entry of <i>PUCCH-ConfigurationList-r16</i> .
<b><i>nrofSlots</i></b>	Number of slots with the same PUCCH. When the field is absent the UE applies the value <i>n1</i> . See TS 38.213 [13], clause 9.2.6.
<b><i>pi2BPSK</i></b>	If the field is present, the UE uses $\pi/2$ BPSK for UCI symbols instead of QPSK for PUCCH. The field is not applicable for format 0, 1 and 2. See TS 38.213 [13], clause 9.2.5.
<b><i>rb-SetIndex</i></b>	Indicates the RB set where PUCCH resource is allocated.
<b><i>simultaneousHARQ-ACK-CSI</i></b>	If the field is present, the UE uses simultaneous transmission of CSI and HARQ-ACK feedback with or without SR with PUCCH Format 2, 3 or 4. See TS 38.213 [13], clause 9.2.5. When the field is absent the UE applies the value <i>off</i> . The field is not applicable for format 0 and 1.

<b>PUCCH-Resource, PUCCH-ResourceExt field descriptions</b>	
<b><i>applyIndicatedTCI-State</i></b>	This field indicates, for PUCCH transmission(s) corresponding to this PUCCH resource, if UE applies the first, the second or both "indicated" UL only TCI or joint TCI as specified in TS 38.213 9.2.2. For PUCCH resources belonging to a PUCCH group, network configures same value.
<b><i>format</i></b>	Selection of the PUCCH format (format 0 – 4) and format-specific parameters, see TS 38.213 [13], clause 9.2. <i>format0</i> and <i>format1</i> are only allowed for a resource in a first PUCCH resource set. <i>format2</i> , <i>format3</i> and <i>format4</i> are only allowed for a resource in non-first PUCCH resource set. The network can only configure <i>format-v1610</i> when format is set to <i>format2</i> or <i>format3</i> . The network only configures <i>format-v1700</i> when format is set to <i>format0</i> , <i>format1</i> or <i>format4</i> .
<b><i>interlace0</i></b>	This is the only interlace of interlaced PUCCH Format 0 and 1 and the first interlace for interlaced PUCCH Format 2 and 3.
<b><i>interlace1</i></b>	A second interlace, in addition to interlace 0, as specified in TS 38.213 [13], clause 9.2.1. For 15kHz SCS, values {0..9} are applicable; for 30kHz SCS, values {0..4} are applicable. For 15kHz SCS, the values of <i>interlace1</i> shall satisfy $interlace1 = \text{mod}(interlace0 + X, 10)$ where $X=1, -1, \text{ or } 5$ .
<b><i>intraSlotFrequencyHopping</i></b>	Enabling intra-slot frequency hopping, applicable for all types of PUCCH formats. For long PUCCH over multiple slots, the intra and inter slot frequency hopping cannot be enabled at the same time for a UE. See TS 38.213 [13], clause 9.2.1.
<b><i>nrofPRBs</i></b>	Indicates the number of PRBs used per PUCCH resource for the PUCCH format, see TS 38.213 [13], clause 9.2.1. This field is applicable for PUCCH <i>format0</i> , <i>format1</i> , and <i>format4</i> in FR2-2. The supported values for <i>format4</i> are 1,2,3,4,5,6,8,9,10,12,15 and 16.
<b><i>multipanelSFN-Scheme</i></b>	Parameter to configure multiple panel simultaneous uplink transmission SFN scheme for PUCCH resources, see TS 38.214 [19] clause 6.1.1.
<b><i>occ-Index</i></b>	Indicates the orthogonal cover code index (see TS 38.213 [13], clause 9.2.1). This field is applicable when <i>useInterlacePUCCH-PUSCH-16</i> is configured.
<b><i>occ-Length</i></b>	Indicates the orthogonal cover code length (see TS 38.213 [13], clause 9.2.1). This field is applicable when <i>useInterlacePUCCH-PUSCH-16</i> is configured.
<b><i>pucch-RepetitionNrofSlots</i></b>	Configuration of PUCCH repetition factor per PUCCH resource with associated scheduling DCI corresponding to Rel-17 dynamic PUCCH repetition. For a PUCCH resource, if both the field <i>pucch-RepetitionNrofSlots</i> and the field <i>nrofSlots</i> are present, the field <i>nrofSlots</i> is ignored and apply the value of <i>pucch-RepetitionNrofSlots</i> corresponding to Rel-17 dynamic PUCCH repetition. If this field is absent in a PUCCH resource with associated scheduling DCI, the UE applies the value of field <i>nrofSlots</i> .
<b><i>pucch-ResourceId</i></b>	Identifier of the PUCCH resource.
<b><i>secondHopPRB</i></b>	Index of first PRB after frequency hopping of PUCCH. This value is applicable for intra-slot frequency hopping (see TS 38.213 [13], clause 9.2.1) or inter-slot frequency hopping (see TS 38.213 [13], clause 9.2.6).

<b><i>PUCCH-ResourceSet</i> field descriptions</b>	
<b><i>maxPayloadSize</i></b>	Maximum number of UCI information bits that the UE may transmit using this PUCCH resource set (see TS 38.213 [13], clause 9.2.1). In a PUCCH occurrence, the UE chooses the first of its <i>PUCCH-ResourceSet</i> which supports the number of bits that the UE wants to transmit. The field is absent in the first set (Set0) and in the last configured set since the UE derives the maximum number of UCI information bits as specified in TS 38.213 [13], clause 9.2.1. This field can take integer values that are multiples of 4.
<b><i>resourceList</i></b>	PUCCH resources of <i>format0</i> and <i>format1</i> are only allowed in the first PUCCH resource set, i.e., in a PUCCH-ResourceSet with <i>pucch-ResourceSetId</i> = 0. This set may contain between 1 and 32 resources. PUCCH resources of <i>format2</i> , <i>format3</i> and <i>format4</i> are only allowed in a <i>PUCCH-ResourceSet</i> with <i>pucch-ResourceSetId</i> > 0. If present, these sets contain between 1 and 8 resources each. The UE chooses a <i>PUCCH-Resource</i> from this list as specified in TS 38.213 [13], clause 9.2.3. Note that this list contains only a list of resource IDs. The actual resources are configured in <i>PUCCH-Config</i> .

<b>Conditional Presence</b>	<b>Explanation</b>
<i>PI2-BPSK</i>	The field is optionally present, Need R, if <i>format3</i> and/or <i>format4</i> are configured and <i>pi2BPSK</i> is configured in each of them. It is absent, Need R otherwise.

## – *PUCCH-ConfigCommon*

The IE *PUCCH-ConfigCommon* is used to configure the cell specific PUCCH parameters.

### ***PUCCH-ConfigCommon* information element**

```

-- ASN1START
-- TAG-PUCCH-CONFIGCOMMON-START

PUCCH-ConfigCommon ::=
    SEQUENCE {
        pucch-ResourceCommon          INTEGER (0..15)                OPTIONAL, -- Cond InitialBWP-Only
        pucch-GroupHopping            ENUMERATED { neither, enable, disable },
        hoppingId                     INTEGER (0..1023)                OPTIONAL, -- Need R
        p0-nominal                     INTEGER (-202..24)              OPTIONAL, -- Need R
        ...
        [
            nrofPRBs                   INTEGER (1..16)                OPTIONAL, -- Need R
            intra-SlotFH-r17           ENUMERATED {fromLowerEdge, fromUpperEdge}
            OPTIONAL, -- Cond InitialBWP-RedCapOnly
            pucch-ResourceCommonRedCap-r17 INTEGER (0..15)            OPTIONAL, -- Cond InitialBWP-RedCap
            additionalPRBOffset-r17    ENUMERATED {n2, n3, n4, n6, n8, n9, n10, n12}
            OPTIONAL, -- Cond InitialBWP-RedCapOnly
        ]
    }

-- TAG-PUCCH-CONFIGCOMMON-STOP
-- ASN1STOP

```

<b><i>PUCCH-ConfigCommon</i> field descriptions</b>	
<b><i>additionalPRBOffset</i></b>	When intra-slot PUCCH frequency hopping within RedCap-specific initial UL BWP is disabled, each common PUCCH resource is mapped to a single PRB on one side of the UL BWP. This parameter determines an additional PRB offset in the PRB mapping for the PUCCH resource. If the field is not configured, the UE shall assume an additional PRB offset of zero.
<b><i>hoppingId</i></b>	Cell-specific scrambling ID for group hopping and sequence hopping if enabled, see TS 38.211 [16], clause 6.3.2.2.
<b><i>intra-SlotFH-r17</i></b>	In case a separate initial UL BWP is configured for (e)RedCap UEs, the presence of this parameter indicates whether intra-slot PUCCH frequency hopping within the separate initial UL BWP in the common PUCCH resource is enabled for (e)RedCap UEs. If this field is absent, intra-slot PUCCH frequency hopping within RedCap-specific initial UL BWP is enabled. If this field is present, intra-slot PUCCH frequency hopping within RedCap-specific initial UL BWP is disabled and each PUCCH resource is mapped to a single PRB on one side of the UL BWP and this parameter determines whether the PRB index in the PRB mapping is counted in increasing order from the lower edge or in decreasing order from the upper edge of the UL BWP.
<b><i>nrofPRBs</i></b>	Indicates the number of PRBs used per PUCCH resource for PUCCH format 0 and format 1 in FR2-2, see TS 38.213 [13], clause 9.2.1.
<b><i>p0-nominal</i></b>	Power control parameter P0 for PUCCH transmissions. Value in dBm. Only even values (step size 2) allowed (see TS 38.213 [13], clause 7.2).
<b><i>pucch-GroupHopping</i></b>	Configuration of group- and sequence hopping for all the PUCCH formats 0, 1, 3 and 4. Value <i>neither</i> implies neither group or sequence hopping is enabled. Value <i>enable</i> enables group hopping and disables sequence hopping. Value <i>disable</i> disables group hopping and enables sequence hopping (see TS 38.211 [16], clause 6.3.2.2).
<b><i>pucch-ResourceCommon</i></b>	An entry into a 16-row table where each row configures a set of cell-specific PUCCH resources/parameters. The UE uses those PUCCH resources until it is provided with a dedicated <i>PUCCH-Config</i> (e.g. during initial access) on the initial uplink BWP. Once the network provides a dedicated <i>PUCCH-Config</i> for that bandwidth part the UE applies that one instead of the one provided in this field (see TS 38.213 [13], clause 9.2).
<b><i>pucch-ResourceCommonRedCap</i></b>	An entry into a 16-row table where each row configures a set of cell-specific PUCCH resources/parameters for (e)RedCap UEs. The UE uses those PUCCH resources until it is provided with a dedicated <i>PUCCH-Config</i> (e.g. during initial access) on the initial uplink BWP. Once the network provides a dedicated <i>PUCCH-Config</i> for that bandwidth part the UE applies that one instead of the one provided in this field (see TS 38.213 [13], clause 9.2).

<b>Conditional Presence</b>	<b>Explanation</b>
<i>InitialBWP-Only</i>	The field is mandatory present in the <i>PUCCH-ConfigCommon</i> of the initial BWP (BWP#0) in SIB1. It is absent in other BWPs including the RedCap-specific initial uplink BWP, if configured.
<i>InitialBWP-RedCap</i>	The field is mandatory present in the <i>PUCCH-ConfigCommon</i> of the RedCap-specific initial BWP. It is optional present, Need R, in the <i>PUCCH-ConfigCommon</i> of the initial BWP configured by <i>initialUplinkBWP</i> . It is absent in other BWPs.
<i>InitialBWP-RedCapOnly</i>	The field is optional present, Need S, in the <i>PUCCH-ConfigCommon</i> of the RedCap-specific initial BWP. It is absent in other BWPs.

– ***PUCCH-ConfigurationList***

The IE *PUCCH-ConfigurationList* is used to configure UE specific PUCCH parameters (per BWP) for two simultaneously constructed HARQ-ACK codebooks. See TS 38.213 [13], clause 9.1.

**PUCCH-ConfigurationList information element**

```

-- ASN1START
-- TAG-PUCCH-CONFIGURATIONLIST-START

PUCCH-ConfigurationList-r16 ::= SEQUENCE (SIZE (1..2)) OF PUCCH-Config

-- TAG-PUCCH-CONFIGURATIONLIST-STOP
-- ASN1STOP

```

– ***PUCCH-CSI-Resource***

The IE *PUCCH-CSI-Resource* is used to indicate a PUCCH resource to use for reporting on PUCCH.

***PUCCH-CSI-Resource* information element**

```

-- ASN1START
-- TAG-PUCCH-CSI-RESOURCE-START

PUCCH-CSI-Resource ::= SEQUENCE {
    uplinkBandwidthPartId BWP-Id,
    pucch-Resource PUCCH-ResourceId
}

-- TAG-PUCCH-CSI-RESOURCE-STOP
-- ASN1STOP

```

***PUCCH-CSI-Resource* field descriptions*****pucch-Resource***

PUCCH resource for the associated uplink BWP. Only PUCCH-Resource of format 2, 3 and 4 is supported. The actual PUCCH-Resource is configured in *PUCCH-Config* and referred to by its ID. When two *PUCCH-Config* are configured within *PUCCH-ConfigurationList*, *PUCCH-ResourceId* in a *PUCCH-CSI-Resource* refers to a PUCCH-Resource in the *PUCCH-Config* used for HARQ-ACK with low priority.

– ***PUCCH-PathlossReferenceRS-Id***

The IE *PUCCH-PathlossReferenceRS-Id* is an ID for a reference signal (RS) configured as PUCCH pathloss reference (see TS 38.213 [13], clause 7.2).

***PUCCH-PathlossReferenceRS-Id* information element**

```

-- ASN1START
-- TAG-PUCCH-PATHLOSSREFERENCERS-ID-START

PUCCH-PathlossReferenceRS-Id ::= INTEGER (0..maxNrofPUCCH-PathlossReferenceRSs-1)

PUCCH-PathlossReferenceRS-Id-v1610 ::= INTEGER (maxNrofPUCCH-PathlossReferenceRSs..maxNrofPUCCH-PathlossReferenceRSs-1-r16)

```

```
PUCCH-PathlossReferenceRS-Id-r17 ::= INTEGER (0..maxNrofPUCCH-PathlossReferenceRSs-1-r17)
```

```
-- TAG-PUCCH-PATHLOSSREFERENCERS-ID-STOP
-- ASN1STOP
```

## – PUCCH-PowerControl

The IE *PUCCH-PowerControl* is used to configure UE-specific parameters for the power control of PUCCH.

### *PUCCH-PowerControl* information element

```
-- ASN1START
-- TAG-PUCCH-POWERCONTROL-START
PUCCH-PowerControl ::= SEQUENCE {
    deltaF-PUCCH-f0          INTEGER (-16..15)                OPTIONAL, -- Need R

    pucch-PathlossReferenceRS-Id-r17 PUCCH-PathlossReferenceRS-Id-r17
}

PUCCH-PowerControlSetInfoId-r17 ::= INTEGER (1.. maxNrofPowerControlSetInfos-r17)

-- TAG-PUCCH-POWERCONTROL-STOP
-- ASN1STOP
    
```

<b>P0-PUCCH field descriptions</b>
<p><b>p0-PUCCH-Value</b> P0 value for PUCCH with 1dB step size.</p>

<b>PUCCH-PowerControl field descriptions</b>
<p><b>deltaF-PUCCH-f0</b> deltaF for PUCCH format 0 with 1dB step size (see TS 38.213 [13], clause 7.2).</p>
<p><b>deltaF-PUCCH-f1</b> deltaF for PUCCH format 1 with 1dB step size (see TS 38.213 [13], clause 7.2).</p>
<p><b>deltaF-PUCCH-f2</b> deltaF for PUCCH format 2 with 1dB step size (see TS 38.213 [13], clause 7.2).</p>
<p><b>deltaF-PUCCH-f3</b> deltaF for PUCCH format 3 with 1dB step size (see TS 38.213 [13], clause 7.2).</p>
<p><b>deltaF-PUCCH-f4</b> deltaF for PUCCH format 4 with 1dB step size (see TS 38.213 [13], clause 7.2).</p>
<p><b>p0-Set</b> A set with dedicated P0 values for PUCCH, i.e., {P01, P02,...} (see TS 38.213 [13], clause 7.2). This field is not configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>pathlossReferenceRSs, pathlossReferenceRSs-v1610</b> A set of Reference Signals (e.g. a CSI-RS config or a SS block) to be used for PUCCH pathloss estimation. Up to <i>maxNrofPUCCH-PathlossReference-RSs</i> may be configured. If the field is not configured, the UE uses the SSB as reference signal (see TS 38.213 [13], clause 7.2). The set includes Reference Signals indicated in <i>pathlossReferenceRSs</i> (without suffix) and in <i>pathlossReferenceRSs-v1610</i>. The UE maintains <i>pathlossReferenceRSs</i> and <i>pathlossReferenceRSs-v1610</i> separately: Receiving <i>pathlossReferenceRSs-v1610</i> set to <i>release</i> releases only the entries that were configured by <i>pathlossReferenceRSs-v1610</i>, and receiving <i>pathlossReferenceRSs-v1610</i> set to <i>setup</i> replaces only the entries that were configured by <i>pathlossReferenceRSs-v1610</i> with the newly signalled entries. Neither the field <i>pathlossReferenceRSs</i> (without suffix) nor <i>pathlossReferenceRSs-v1610</i> are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>twoPUCCH-PC-AdjustmentStates</b> Number of PUCCH power control adjustment states maintained by the UE (i.e., <i>g(i)</i>). If the field is present (<i>n2</i>) the UE maintains two power control states (i.e., <i>g(i,0)</i> and <i>g(i,1)</i>). If the field is absent, it maintains one power control state (i.e., <i>g(i,0)</i>) (see TS 38.213 [13], clause 7.2).</p>

## – PUCCH-SpatialRelationInfo

The IE *PUCCH-SpatialRelationInfo* is used to configure the spatial setting for PUCCH transmission and the parameters for PUCCH power control, see TS 38.213, [13], clause 9.2.2.

### **PUCCH-SpatialRelationInfo** information element

```

-- ASN1START
-- TAG-PUCCH-SPATIALRELATIONINFO-START

PUCCH-SpatialRelationInfo ::=

```

#### **PUCCH-SpatialRelationInfo** field descriptions

##### **pucch-PathLossReferenceRS-Id**

When *pucch-PathLossReferenceRS-Id-v1610* is configured, the UE shall ignore *pucch-PathLossReferenceRS-Id* (without suffix).

##### **pucch-SpatialRelationInfoId**

When *pucch-SpatialRelationInfoId-v1610* is configured, the UE shall ignore *pucch-SpatialRelationInfoId* (without suffix). If *pucch-SpatialRelationInfoId-v1610* is absent, the UE shall use the *pucch-SpatialRelationInfoId* (without suffix).

##### **servingCellId**

If the field is absent, the UE applies the *ServCellId* of the serving cell in which this *PUCCH-SpatialRelationInfo* is configured

## – *PUCCH-SpatialRelationInfo-Id*

The IE *PUCCH-SpatialRelationInfo-Id* is used to identify a *PUCCH-SpatialRelationInfo*

### ***PUCCH-SpatialRelationInfo-Id* information element**

```
-- ASN1START
-- TAG-PUCCH-SPATIALRELATIONINFO-START

PUCCH-SpatialRelationInfoId ::=      INTEGER (1..maxNrofSpatialRelationInfos)

PUCCH-SpatialRelationInfoId-r16 ::=  INTEGER (1..maxNrofSpatialRelationInfos-r16)

PUCCH-SpatialRelationInfoId-v1610 ::= INTEGER (maxNrofSpatialRelationInfos-plus-1..maxNrofSpatialRelationInfos-r16)

-- TAG-PUCCH-SPATIALRELATIONINFO-STOP
-- ASN1STOP
```

## – *PUCCH-TPC-CommandConfig*

The IE *PUCCH-TPC-CommandConfig* is used to configure the UE for extracting TPC commands for PUCCH from a group-TPC messages on DCI.

### ***PUCCH-TPC-CommandConfig* information element**

```
-- ASN1START
-- TAG-PUCCH-TPC-COMMANDCONFIG-START

PUCCH-TPC-CommandConfig ::=          SEQUENCE {
    tpc-IndexPCell                      INTEGER (1..15)                OPTIONAL,  -- Cond PDCCH-OfSpCell
    tpc-IndexPUCCH-SCell                INTEGER (1..15)                OPTIONAL,  -- Cond PDCCH-ofSpCellOrPUCCH-SCell
    . . . ,
    [[

    ]]
}

-- TAG-PUCCH-TPC-COMMANDCONFIG-STOP
-- ASN1STOP
```

<b>PUCCH-TPC-CommandConfig field descriptions</b>	
<b><i>tpc-IndexPCell</i></b>	An index determining the position of the first bit of TPC command (applicable to the SpCell) inside the DCI format 2-2 payload.
<b><i>tpc-IndexPUCCH-SCell</i></b>	An index determining the position of the first bit of TPC command (applicable to the PUCCH SCell) inside the DCI format 2-2 payload.
<b><i>tpc-IndexPUCCH-sSCell, tpc-IndexPUCCH-sSCellSecondaryPUCCHgroup</i></b>	An index determining the position of the first bit of TPC command (applicable to the alternative PUCCH cell for PUCCH cell switching) inside the DCI format 2-2 payload, for the primary PUCCH group and the secondary PUCCH group respectively.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>PDCCH-OfSpCell</i>	The field is mandatory present if the <i>PUCCH-TPC-CommandConfig</i> is provided in the <i>PDCCH-Config</i> for the SpCell. Otherwise, the field is absent, Need R.
<i>PDCCH-ofSpCellOrPUCCH-SCell</i>	The field is mandatory present if the <i>PUCCH-TPC-CommandConfig</i> is provided in the <i>PDCCH-Config</i> for the PUCCH-SCell. The field is optionally present, need R, if the UE is configured with a PUCCH SCell in this cell group and if the <i>PUCCH-TPC-CommandConfig</i> is provided in the <i>PDCCH-Config</i> for the SpCell. Otherwise, the field is absent, Need R.
<i>twoPUCCHgroup</i>	This field is optionally present, Need R, if secondary PUCCH group is configured. It is absent otherwise.

## – *PUSCH-Config*

The IE *PUSCH-Config* is used to configure the UE specific PUSCH parameters applicable to a particular BWP.

<b>PUSCH-Config field descriptions</b>
<p><b>antennaPortsFieldPresenceDCI-0-2</b> Configure the presence of "Antenna ports" field in DCI format 0_2. When the field is configured, then the "Antenna ports" field is present in DCI format 0_2. Otherwise, the field size is set to 0 for DCI format 0_2 (See TS 38.212 [17], clause 7.3.1.1.3). If neither <i>dmrs-UplinkForPUSCH-MappingTypeA-DCI-0-2</i> nor <i>dmrs-UplinkForPUSCH-MappingTypeB-DCI-0-2</i> is configured, this field is absent.</p>
<p><b>applyIndicatedTCI-State</b> This field indicates, for a PUSCH transmission, if UE applies the first or the second "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 6.1.</p>
<p><b>availableSlotCounting</b> Indicate whether PUSCH repetitions counted on the basis of available slots is enabled. If the field is absent, PUSCH repetitions counted on the basis of available slots is disabled.</p>
<p><b>betaOffsetsCrossPrio0, betaOffsetsCrossPrio1, betaOffsetsCrossPrio0DCI-0-2, betaOffsetsCrossPrio1DCI-0-2</b> Selection between and configuration of dynamic and semi-static beta-offset for multiplexing HARQ-ACK on dynamically scheduled PUSCH with different priorities, see TS 38.213 [13], clause 9.3. The field <i>betaOffsetsCrossPrio0</i> indicates multiplexing low priority (LP) HARQ-ACK on dynamically scheduled high priority (HP) PUSCH. The field <i>betaOffsetsCrossPrio1</i> indicates multiplexing HP HARQ-ACK on dynamically scheduled LP PUSCH. The field <i>betaOffsetsCrossPrio0DCI-0-2</i> indicates multiplexing LP HARQ-ACK on dynamically scheduled HP PUSCH by DCI format 0_2. The field <i>betaOffsetsCrossPrio1DCI-0-2</i> indicates multiplexing HP HARQ-ACK on dynamically scheduled LP PUSCH by DCI format 0_2.</p>
<p><b>codebookSubset, codebookSubsetDCI-0-2</b> Subset of PMIs addressed by TPMI, where PMIs are those supported by UEs with maximum coherence capabilities (see TS 38.214 [19], clause 6.1.1.1). The field <i>codebookSubset</i> applies to DCI formats 0_1 and 0_3, and the field <i>codebookSubsetDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.1.1).</p>
<p><b>codebookTypeUL</b> Configures a codebook and the corresponding number of antenna port groups for codebook-based transmission of PUSCH with 8 antenna ports, see TS 38.211 [16], tables 6.3.1.5-9 to 6.3.1.5-47, and table 6.3.1.5-8 respectively). The values <i>ng1n4n1</i> and <i>ng1n2n2</i> correspond to codebooks with one antenna port group (<math>N_g=1</math>), while <i>ng2</i>, <i>ng4</i>, and <i>ng8</i> correspond to codebooks with <math>N_g=2</math>, 4, and 8 antenna port groups, respectively.</p>
<p><b>dataScramblingIdentityPUSCH</b> Identifier used to initialise data scrambling (<i>c_init</i>) for PUSCH. If the field is absent, the UE applies the physical cell ID. (see TS 38.211 [16], clause 6.3.1.1).</p>
<p><b>dmrs-BundlingPUSCH-Config</b> Configure the parameters for DMRS bundling for PUSCH (see TS 38.214 [19], clause 6.1.7). In this release, this is not applicable to FR2-2.</p>
<p><b>dmrs-SequenceInitializationDCI-0-2</b> Configure whether the field "DMRS Sequence Initialization" is present or not in DCI format 0_2. If the field is absent, then 0 bit for the field "DMRS Sequence Initialization" in DCI format 0_2. If the field is present, then the number of bits is determined in the same way as DCI format 0_1 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>dmrs-UplinkForPUSCH-MappingTypeA, dmrs-UplinkForPUSCH-MappingTypeA-DCI-0-2</b> DMRS configuration for PUSCH transmissions using PUSCH mapping type A (chosen dynamically via <i>PUSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i>, <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-UplinkForPUSCH-MappingTypeA</i> applies to DCI formats 0_1 and 0_3, and the field <i>dmrs-UplinkForPUSCH-MappingTypeA-DCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>dmrs-UplinkForPUSCH-MappingTypeB, dmrs-UplinkForPUSCH-MappingTypeB-DCI-0-2</b> DMRS configuration for PUSCH transmissions using PUSCH mapping type B (chosen dynamically via <i>PUSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i>, <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-UplinkForPUSCH-MappingTypeB</i> applies to DCI formats 0_1 and 0_3, and the field <i>dmrs-UplinkForPUSCH-MappingTypeB-DCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>dynamicTransformPrecoderFieldPresenceDCI-0-1</b> Configure the presence of "Dynamic Transform Precoder" field in DCI format 0_1. When the field is configured, then the "Dynamic Transform Precoder" field is present in DCI format 0_1. Otherwise, the field size is set to 0 for DCI format 0_1 (See TS 38.212 [17]). The network ensures <i>dynamicTransformPrecoderFieldPresenceDCI-0-1-r18</i> and <i>twoPHRMode-r17</i> cannot be configured at the same time for a UE.</p>
<p><b>dynamicTransformPrecoderFieldPresenceDCI-0-2</b> Configure the presence of "Dynamic Transform Precoder" field in DCI format 0_2. When the field is configured, then the "Dynamic Transform Precoder" field is present in DCI format 0_2. Otherwise, the field size is set to 0 for DCI format 0_2 (See TS 38.212 [17]). The network ensures <i>dynamicTransformPrecoderFieldPresenceDCI-0-2-r18</i> and <i>twoPHRMode-r17</i> cannot be configured at the same time for a UE.</p>

<p><b>frequencyHopping</b> The value <i>intraSlot</i> enables 'Intra-slot frequency hopping' and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. If the field is absent, frequency hopping is not configured for 'pusch-RepTypeA' (see TS 38.214 [19], clause 6.3). The field <i>frequencyHopping</i> applies to DCI formats 0_0, 0_1 and 0_3 for 'pusch-RepTypeA'.</p>
<p><b>frequencyHoppingDCI-0-1</b> Indicates the frequency hopping scheme for DCI format 0_1 when <i>pusch-RepTypeIndicatorDCI-0-1</i> is set to 'pusch-RepTypeB', The value <i>interRepetition</i> enables 'Inter-repetition frequency hopping', and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. If the field is absent, frequency hopping is not configured for DCI format 0_1 for 'pusch-RepTypeB' (see TS 38.214 [19], clause 6.1).</p>
<p><b>frequencyHoppingDCI-0-2</b> Indicate the frequency hopping scheme for DCI format 0_2. The value <i>intraSlot</i> enables 'intra-slot frequency hopping', and the value <i>interRepetition</i> enables 'Inter-repetition frequency hopping', and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. When <i>pusch-RepTypeIndicatorDCI-0-2</i> is not set to 'pusch-RepTypeB', the frequency hopping scheme can be chosen between 'intra-slot frequency hopping' and 'inter-slot frequency hopping' if enabled. When <i>pusch-RepTypeIndicatorDCI-0-2</i> is set to 'pusch-RepTypeB', the frequency hopping scheme can be chosen between 'inter-repetition frequency hopping' and 'inter-slot frequency hopping' if enabled. If the field is absent, frequency hopping is not configured for DCI format 0_2 (see TS 38.214 [19], clause 6.3).</p>
<p><b>frequencyHoppingOffsetLists, frequencyHoppingOffsetListsDCI-0-2</b> Set of frequency hopping offsets used when frequency hopping is enabled for granted transmission (not msg3) and type 2 configured grant activation (see TS 38.214 [19], clause 6.3). The field <i>frequencyHoppingOffsetLists</i> applies to DCI formats 0_0, 0_1 and 0_3, and the field <i>frequencyHoppingOffsetListsDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.3).</p>
<p><b>harq-ProcessNumberSizeDCI-0-2</b> Configure the number of bits for the field "HARQ process number" in DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>invalidSymbolPattern</b> Indicates one pattern for invalid symbols for PUSCH transmission repetition type B applicable to both DCI format 0_1 and 0_2. If <i>InvalidSymbolPattern</i> is not configured, semi-static flexible symbols are used for PUSCH. Segmentation occurs only around semi-static DL symbols (see TS 38.214 [19] clause 6.1).</p>
<p><b>invalidSymbolPatternIndicatorDCI-0-1, invalidSymbolPatternIndicatorDCI-0-2</b> Indicates the presence of an additional bit in the DCI format 0_1/0_2. If <i>invalidSymbolPattern</i> is absent, then both <i>invalidSymbolPatternIndicatorDCI-0-1</i> and <i>invalidSymbolPatternIndicatorDCI-0-2</i> are absent. The field <i>invalidSymbolPatternIndicatorDCI-0-1</i> applies to the DCI format 0_1 and the field <i>invalidSymbolPatternIndicatorDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19] clause 6.1). If the field is absent, the UE behaviour is specified in TS 38.214 [19], clause 6.1.2.1.</p>
<p><b>mappingPattern</b> Indicates whether the UE should follow Cyclical mapping pattern or Sequential mapping pattern for when two SRS resource sets are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook' for PUSCH transmission and the PUSCH transmission occasions are associated with both SRS resource sets.</p>
<p><b>maxRank, maxRankDCI-0-2</b> Subset of PMIs addressed by TRIs from 1 to ULmaxRank (see TS 38.214 [19], clause 6.1.1.1). The field <i>maxRank</i> applies to DCI formats 0_1 and 0_3, and the field <i>maxRankDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.1.1). If network configures <i>maxRank-v1810</i> UE ignores <i>maxRank</i> (without suffix).</p>
<p><b>mcs-Table, mcs-TableFormat0-2</b> Indicates which MCS table the UE shall use for PUSCH without transform precoder (see TS 38.214 [19], clause 6.1.4.1). If the field is absent the UE applies the value 64QAM. The field <i>mcs-Table</i> applies to DCI formats 0_0, 0_1 and 0_3, and the field <i>mcs-TableDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.4.1).</p>
<p><b>mcs-TableTransformPrecoder, mcs-TableTransformPrecoderDCI-0-2</b> Indicates which MCS table the UE shall use for PUSCH with transform precoding (see TS 38.214 [19], clause 6.1.4.1) If the field is absent the UE applies the value 64QAM. The field <i>mcs-TableTransformPrecoder</i> applies to DCI formats 0_0, 0_1 and 0_3, and the field <i>mcs-TableTransformPrecoderDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.4.1).</p>
<p><b>minimumSchedulingOffsetK2</b> List of minimum K2 values. Minimum K2 parameter denotes minimum applicable value(s) for the <i>Time domain resource assignment</i> table for PUSCH (see TS 38.214 [19], clause 6.1.2.1).</p>

<p><b>mpe-ResourcePoolToAddModList</b> List of SSB/CSI-RS resources for P-MPR reporting. Each resource is configured with serving cell index where the resource is configured for the UE. The <i>additionalPCI</i> is configured only if the resource is SSB. For each resource, if neither <i>cell</i> nor <i>additionalPCI</i> is present, the SSB/CSI-RS resource is from the serving cell where the <i>PUSCH-Config</i> is configured.</p>
<p><b>multipanelSchemeSDM</b> Configures UE with a multiple panel simultaneous uplink transmission SDM scheme for PUSCH, as specified in TS 38.214 [19], clause 6.1. Network does not configure <i>multipanelSchemeSDM</i> with <i>multipanelSchemeSFN</i>. When this parameter is configured, two SRS resource sets with <i>usage</i> for <i>codebook</i> or <i>noncodebook</i> are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i>.</p>
<p><b>multipanelSchemeSFN</b> Configures UE with a multiple panel simultaneous uplink transmission SFN scheme for PUSCH, as specified in TS 38.214 [19], clause 6.1. Network does not configure <i>multipanelSchemeSFN</i> with <i>multipanelSchemeSDM</i>. When this parameter is configured, two SRS resource sets with <i>usage</i> for <i>codebook</i> or <i>noncodebook</i> are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i>.</p>
<p><b>numberOfBitsForRV-DCI-0-2</b> Configures the number of bits for "Redundancy version" in the DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 6.1.2.1).</p>
<p><b>numberOfInvalidSymbolsForDL-UL-Switching</b> Indicates the number of symbols after the last semi-static DL symbol that are invalid symbols for PUSCH repetition Type B. If it is absent, no symbol is explicitly defined for DL-to-UL switching (see TS 38.214 [19], clause 6.1).</p>
<p><b>priorityIndicatorDCI-0-1, priorityIndicatorDCI-0-2</b> Configures the presence of "priority indicator" in DCI format 0_1/0_2. When the field is absent in the IE, then the UE shall apply 0 bit for "Priority indicator" in DCI format 0_1/0_2. The field <i>priorityIndicatorDCI-0-1</i> applies to DCI format 0_1 and the field <i>priorityIndicatorDCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17] clause 7.3.1 and TS 38.213 [13] clause 9).</p>
<p><b>pusch-AggregationFactor</b> Number of repetitions for data (see TS 38.214 [19], clause 6.1.2.1). If the field is absent the UE applies the value 1.</p>
<p><b>pusch-PowerControl</b> Configures power control parameters PUSCH transmission.</p>
<p><b>pusch-RepTypeIndicatorDCI-0-1, pusch-RepTypeIndicatorDCI-0-2</b> Indicates whether UE follows the behavior for "PUSCH repetition type A" or the behavior for "PUSCH repetition type B" for the PUSCH scheduled by DCI format 0_1/0_2 and for Type 2 CG associated with the activating DCI format 0_1/0_2. The value <i>pusch-RepTypeA</i> enables the 'PUSCH repetition type A' and the value <i>pusch-RepTypeB</i> enables the 'PUSCH repetition type B'. The field <i>pusch-RepTypeIndicatorDCI-0-1</i> applies to DCI format 0_1 and the field <i>pusch-RepTypeIndicatorDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.2.1).</p>
<p><b>pusch-TimeDomainAllocationList</b> List of time domain allocations for timing of UL assignment to UL data (see TS 38.214 [19], table 6.1.2.1.1-1). The field <i>pusch-TimeDomainAllocationList</i> applies to DCI format 0_0, or DCI formats 0_1 and 0_3 when the field <i>pusch-TimeDomainAllocationListDCI-0-1</i> is not configured (see TS 38.214 [19], table 6.1.2.1.1-1 and tables 6.1.2.1.1-1A and 6.1.2.1.1-1C). The network does not configure the <i>pusch-TimeDomainAllocationList</i> (without suffix) simultaneously with the <i>pusch-TimeDomainAllocationListDCI-0-2-r16</i> or <i>pusch-TimeDomainAllocationListDCI-0-1-r16</i> or <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i>.</p>
<p><b>pusch-TimeDomainAllocationListDCI-0-1</b> Configuration of the time domain resource allocation (TDRA) table for DCI formats 0_1 and 0_3 (see TS 38.214 [19], clause 6.1, tables 6.1.2.1.1-1A and 6.1.2.1.1-1C).</p>
<p><b>pusch-TimeDomainAllocationListDCI-0-2</b> Configuration of the time domain resource allocation (TDRA) table for DCI format 0_2 (see TS 38.214 [19], clause 6.1.2, table 6.1.2.1.1-1B).</p>
<p><b>pusch-TimeDomainAllocationListForMultiPUSCH</b> Configuration of the time domain resource allocation (TDRA) table for multiple PUSCH (see TS 38.214 [19], clause 6.1.2). The network configures at most 64 rows in this TDRA table in <i>PUSCH-TimeDomainResourceAllocationList-r16</i> configured by this field. This field is not configured simultaneously with <i>pusch-AggregationFactor</i>. The network does not configure the <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> simultaneously with the <i>pusch-TimeDomainAllocationListDCI-0-1-r16</i>. The network does not configure the <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> simultaneously with the <i>numberOfSlotsTBoMS-r17</i>.</p>
<p><b>rbg-Size</b> Selection between configuration 1 and configuration 2 for RBG size for PUSCH except PUSCH scheduled by DCI format 0_3. The UE does not apply this field if <i>resourceAllocation</i> is set to <i>resourceAllocationType1</i>. Otherwise, the UE applies the value <i>config1</i> when the field is absent (see TS 38.214 [19], clause 6.1.2.2.1).</p>

<p><b>resourceAllocation, resourceAllocationDCI-0-2</b> Configuration of resource allocation type 0 and resource allocation type 1 for non-fallback DCI (see TS 38.214 [19], clause 6.1.2). The field <i>resourceAllocation</i> applies to DCI format 0_1 and the field <i>resourceAllocationDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.2).</p>
<p><b>resourceAllocationType1GranularityDCI-0-2</b> Configures the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 0_2. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 6.1.2.2.2).</p>
<p><b>secondTPCFieldDCI-0-1, secondTPCFieldDCI-0-2</b> A second TPC field can be configured via RRC for DCI-0-1 and DCI-0-2. Each TPC field is for each closed-loop index value respectively (i.e., 1st /2nd TPC fields correspond to "closedLoopIndex" value = 0 and 1,</p>
<p><b>sequenceOffsetForRV</b> Configures the RV offset for the starting RV for the first repetition (first actual repetition in PUSCH repetition Type B) towards the second 'SRS resource set' for PUSCH configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.</p>
<p><b>sTx-2Panel</b> Parameter to enable PUSCH+PUSCH multiple panel simultaneous uplink transmission, as specified in TS 38.214 [19], clause 6.1.</p>
<p><b>tp-pi2BPSK</b> Enables pi/2-BPSK modulation with transform precoding if the field is present and disables it otherwise.</p>
<p><b>transformPrecoder</b> The UE specific selection of transformer precoder for PUSCH (see TS 38.214 [19], clause 6.1.3). When the field is absent the UE applies the value of the field <i>msg3-transformPrecoder</i> from <i>rach-ConfigCommon</i> included directly within BWP configuration (i.e., not included in <i>additionalRACH-ConfigList</i>).</p>
<p><b>txConfig</b> Whether UE uses codebook based or non-codebook based transmission (see TS 38.214 [19], clause 6.1.1). If the field is absent, the UE transmits PUSCH on one antenna port, see TS 38.214 [19], clause 6.1.1.</p>
<p><b>uci-OnPUSCH-ListDCI-0-1, uci-OnPUSCH-ListDCI-0-2</b> Configuration for up to 2 HARQ-ACK codebooks specific to DCI format 0_1/0_2. The field <i>uci-OnPUSCH-ListDCI-0-1</i> applies to DCI format 0_1 and the field <i>uci-OnPUSCH-ListDCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9.3).</p>
<p><b>ul-AccessConfigListDCI-0-1, ul-AccessConfigListDCI-0-2</b> List of the combinations of cyclic prefix extension, channel access priority class (CAPC), and UL channel access type (see TS 38.212 [17], clause 7.3.1) applicable for DCI format 0_1 and DCI format 0_2, respectively. The fields <i>ul-AccessConfigListDCI-0-1-r16</i> and <i>ul-AccessConfigListDCI-0-2-r17</i> are only applicable for FR1 (see TS 38.212 [17], Table 7.3.1.1.2-35). The field <i>ul-AccessConfigListDCI-0-1-r17</i> only contains a list of UL channel access types and is only applicable for FR2-2 (see TS 38.212 [17], Table 7.3.1.1.2-35A).</p>
<p><b>ul-FullPowerTransmission</b> Configures the UE with UL full power transmission mode as specified in TS 38.213 [13]. This field is not configured if <i>ul-powerControl</i> is configured in the <i>BWP-UplinkDedicated</i> in which the <i>PUCCH-Config</i> is included.</p>

<b>PUSCH-ConfigDCI-0-3 field descriptions</b>
<p><b>harq-ProcessNumberSizeDCI-0-3</b> Configure the number of bits for the field "HARQ process number" in DCI format 0_3 (see TS 38.212 [17], clause 7.3.1).</p>
<p><b>numberOfBitsForRV-DCI-0-3</b> Configures the number of bits for "Redundancy version" in the DCI format 0_3 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 6.1.2.1).</p>
<p><b>rbg-SizeDCI-0-3</b> Selection among configuration 1, configuration 2 and configuration 3 for RBG size for PUSCH scheduled by DCI format 0_3. The UE does not apply this field if <i>resourceAllocationDCI-0-3</i> is set to <i>resourceAllocationType1</i>. Otherwise, the UE applies the value <i>config1</i> when the field is absent (see TS 38.214 [19], clause 6.1.2.2.1).</p>
<p><b>resourceAllocationDCI-0-3</b> Configuration of resource allocation type 0 and resource allocation type 1 for DCI format 0_3 (see TS 38.214 [19], clause 6.1.2).</p>
<p><b>resourceAllocationType1GranularityDCI-0-3</b> Configures the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 0_3. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 6.1.2.2.2).</p>
<p><b>uci-OnPUSCH-ListDCI-0-3</b> Configuration for up to 2 HARQ-ACK codebooks specific to DCI format 0_3 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9.3).</p>

<b>SDM-Scheme field descriptions</b>
<p><b>maxRankSDM, maxRankSDM-DCI-0-2</b> configure maximal number of MIMO layers of each panel in SDM scheme for codebook based PUSCH or for DCI 0_2 for codebook based PUSCH.</p>

<b>SFN-Scheme field descriptions</b>
<p><b>maxRankSFN, maxRankSFN-DCI-0-2</b> configure maximal number of MIMO layers of each panel in SFN scheme for codebook based PUSCH or for DCI 0_2 for codebook based PUSCH.</p>

<b>UCI-OnPUSCH field descriptions</b>
<p><b>betaOffsets</b> Selection between and configuration of dynamic and semi-static beta-offset for DCI formats other than DCI format 0_2. If the field is not configured, the UE applies the value 'semiStatic' (see TS 38.213 [13], clause 9.3).</p>
<p><b>scaling</b> Indicates a scaling factor to limit the number of resource elements assigned to UCI on PUSCH for DCI formats other than DCI format 0_2. Value <i>f0p5</i> corresponds to 0.5, value <i>f0p65</i> corresponds to 0.65, and so on. The value configured herein is applicable for PUSCH with configured grant (see TS 38.212 [17], clause 6.3).</p>

<b>UCI-OnPUSCH-DCI-0-2 field descriptions</b>
<b>betaOffsetsDCI-0-2</b> Configuration of beta-offset for DCI format 0_2. If semiStaticDCI-0-2 is chosen, the UE shall apply the value of 0 bit for the field of beta offset indicator in DCI format 0_2. If dynamicDCI-0-2 is chosen, the UE shall apply the value of 1 bit or 2 bits for the field of beta offset indicator in DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9.3).
<b>dynamicDCI-0-2</b> Indicates the UE applies the value 'dynamic' for DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.3).
<b>semiStaticDCI-0-2</b> Indicates the UE applies the value 'semiStatic' for DCI format 0_2. (see TS 38.212 [17], clause 7.3.1 and see TS 38.213 [13], clause 9.3).
<b>scalingDCI-0-2</b> Indicates a scaling factor to limit the number of resource elements assigned to UCI on PUSCH for DCI format 0_2. Value <i>f0p5</i> corresponds to 0.5, value <i>f0p65</i> corresponds to 0.65, and so on (see TS 38.212 [17], clause 6.3).

<b>Conditional Presence</b>	<b>Explanation</b>
<i>codebookBased</i>	The field is mandatory present if <i>txConfig</i> is set to codebook and absent otherwise.
<i>RepTypeB</i>	The field is optionally present, Need S, if <i>pusch-RepTypeIndicatorDCI-0-1</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise.
<i>RepTypeB2</i>	The field is optionally present, Need S, if <i>pusch-RepTypeIndicatorDCI-0-1</i> or <i>pusch-RepTypeIndicatorDCI-0-2</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise.
<i>SRSsets</i>	This field is mandatory present when UE is configured with two SRS sets in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage codebook or non-codebook and none of <i>multipanelSchemeSDM</i> or <i>multipanelSchemeSFN</i> or <i>sTx-2Panel</i> is configured. It is absent otherwise.

## – PUSCH-ConfigCommon

The IE *PUSCH-ConfigCommon* is used to configure the cell specific PUSCH parameters.

### **PUSCH-ConfigCommon information element**

```

-- ASN1START
-- TAG-PUSCH-CONFIGCOMMON-START

PUSCH-ConfigCommon ::=
    SEQUENCE {
        groupHoppingEnabledTransformPrecoding    ENUMERATED {enabled}           OPTIONAL, -- Need R
        pusch-TimeDomainAllocationList            PUSCH-TimeDomainResourceAllocationList  OPTIONAL, -- Need R
        msg3-DeltaPreamble                       INTEGER (-1..6)                   OPTIONAL, -- Need R
        p0-NominalWithGrant                      INTEGER (-202..24)                 OPTIONAL, -- Need R
        ...
    }

-- TAG-PUSCH-CONFIGCOMMON-STOP
-- ASN1STOP

```

<i>PUSCH-ConfigCommon</i> field descriptions
<b>groupHoppingEnabledTransformPrecoding</b> For DMRS transmission with transform precoder, the NW may configure group hopping by this cell-specific parameter, see TS 38.211 [16], clause 6.4.1.1.1.2.
<b>msg3-DeltaPreamble</b> Power offset between msg3 and RACH preamble transmission. Actual value = field value * 2 [dB] (see TS 38.213 [13], clause 7.1)
<b>p0-NominalWithGrant</b> P0 value for PUSCH with grant (except msg3). Value in dBm. Only even values (step size 2) allowed (see TS 38.213 [13], clause 7.1) This field is cell specific
<b>pusch-TimeDomainAllocationList</b> List of time domain allocations for timing of UL assignment to UL data (see TS 38.214 [19], table 6.1.2.1.1-1).

## – *PUSCH-PowerControl*

The IE *PUSCH-PowerControl* is used to configure UE specific power control parameter for PUSCH.

```

#### ***P0-PUSCH-AlphaSet* field descriptions**

##### ***alpha***

alpha value for PUSCH with grant (except msg3) (see TS 38.213 [13], clause 7.1). When the field is absent the UE applies the value 1.

##### ***p0***

P0 value for PUSCH with grant (except msg3) in steps of 1dB (see TS 38.213 [13], clause 7.1). When the field is absent the UE applies the value 0.

#### ***P0-PUSCH-Set* field descriptions**

##### ***p0-List***

Configuration of {p0-PUSCH, p0-PUSCH} sets for PUSCH. If SRI is present in the DCI, then one p0-PUSCH can be configured in P0-PUSCH-Set. If SRI is not present in the DCI, and both *olpc-ParameterSetDCI-0-1* and *olpc-ParameterSetDCI-0-2* are configured to be 1 bit, then one p0-PUSCH can be configured in P0-PUSCH-Set. If SRI is not present in the DCI, and if any of *olpc-ParameterSetDCI-0-1* and *olpc-ParameterSetDCI-0-2* is configured to be 2 bits, then two p0-PUSCH values can be configured in P0-PUSCH-Set (see TS 38.213 [13] clause 7 and TS 38.212 [17] clause 7.3.1).

##### ***p0-PUSCH-SetId***

Configure the index of a p0-PUSCH-Set (see TS 38.213 [13] clause 7 and TS 38.212 [17] clause 7.3.1).

<b>PUSCH-PowerControl field descriptions</b>
<p><b>deltaMCS</b> Indicates whether to apply delta MCS. When the field is absent, the UE applies <math>K_s = 0</math> in delta_TFC formula for PUSCH (see TS 38.213 [13], clause 7.1).</p>
<p><b>dummy</b> This field is not used in the specification. If received it shall be ignored by the UE.</p>
<p><b>msg3-Alpha</b> Dedicated alpha value for msg3 PUSCH (see TS 38.213 [13], clause 7.1). When the field is absent the UE applies the value 1.</p>
<p><b>olpc-ParameterSetDCI-0-1, olpc-ParameterSetDCI-0-2</b> Configures the number of bits for Open-loop power control parameter set indication for DCI format 0_1/0_2 in case SRI is not configured in the DCI. 2 bits is applicable only if SRI is not present in the DCI format 0_1. The field <i>olpc-ParameterSetDCI-0-1</i> applies to DCI format 0_1 and the field <i>olpc-ParameterSetDCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 11).</p>
<p><b>p0-AlphaSets</b> Configuration {p0-pusch, alpha} sets for PUSCH (except msg3 and msgA PUSCH), i.e., { {p0,alpha,index1}, {p0,alpha,index2},...} (see TS 38.213 [13], clause 7.1). When no set is configured, the UE uses the P0-nominal for msg3/msgA PUSCH, P0-UE is set to 0 and alpha is set according to either msg3-Alpha or msgA-Alpha (see TS 38.213 [13], clause 7.1). This field is not configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>p0-NominalWithoutGrant</b> P0 value for UL grant-free/SPS based PUSCH. Value in dBm. Only even values (step size 2) allowed (see TS 38.213 [13], clause 7.1).</p>
<p><b>p0-PUSCH-SetList</b> Configure one additional <i>P0-PUSCH-Set</i> per SRI. If present, the one bit or 2 bits in the DCI is used to dynamically indicate among the P0 value from the existing <i>P0-PUSCH-AlphaSet</i> and the P0 value(s) from the <i>P0-PUSCH-Set</i> (See TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 17).</p>
<p><b>p0-PUSCH-SetList2</b> For indicating per-TRP OLPC set in DCI format 0_1/0_2 with the open-loop power control parameter set indication field, a second <i>p0-PUSCH-SetList-r16</i> is used. When this field is present the <i>p0-PUSCH-SetList-r16</i> corresponds to the first SRS resource set (see TS 38.213 [13]).</p>
<p><b>pathlossReferenceRSToAddModList, pathlossReferenceRSToAddModListSizeExt</b> A set of Reference Signals (e.g. a CSI-RS config or a SS block) to be used for PUSCH path loss estimation. The set consists of Reference Signals configured using <i>pathLossReferenceRSToAddModList</i> and Reference Signals configured using <i>pathlossReferenceRSToAddModListSizeExt</i>. Up to <i>maxNrofPUSCH-PathlossReferenceRSs</i> may be configured (see TS 38.213 [13], clause 7.1). No elements in the list <i>pathLossReferenceRSToAddModList</i> nor <i>pathlossReferenceRSToAddModListSizeExt</i> are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>pathlossReferenceRSToReleaseList, pathlossReferenceRSToReleaseListSizeExt</b> Lists of reference signals for PUSCH path loss estimation to be released by the UE.</p>
<p><b>sri-PUSCH-MappingToAddModList</b> A list of <i>SRI-PUSCH-PowerControl</i> elements among which one is selected by the SRI field in DCI (see TS 38.213 [13], clause 7.1). No elements in this list are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>sri-PUSCH-MappingToAddModList2</b> A list of <i>SRI-PUSCH-PowerControl</i> elements for second SRS-resource set, among which one is selected by the SRI field in DCI (see TS 38.213 [13], clause 7.1). When this field is present the <i>sri-PUSCH-MappingToAddModList</i> corresponds to the first SRS resource set for PUSCH. No elements in this list are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>tpc-Accumulation</b> If enabled, UE applies TPC commands via accumulation. If not applied, UE applies the TPC command without accumulation. If the field is absent, TPC accumulation is enabled (see TS 38.213 [13], clause 7.1).</p>
<p><b>twoPUSCH-PC-AdjustmentStates</b> Number of PUSCH power control adjustment states maintained by the UE (i.e., <math>fc(i)</math>). If the field is present (<math>n_2</math>) the UE maintains two power control states (i.e., <math>fc(i,0)</math> and <math>fc(i,1)</math>). If the field is absent, it maintains one power control state (i.e., <math>fc(i,0)</math>) (see TS 38.213 [13], clause 7.1).</p>

<b>SRI-PUSCH-PowerControl</b> field descriptions
<b>sri-P0-PUSCH-AlphaSetId</b> The ID of a <i>P0-PUSCH-AlphaSet</i> as configured in <i>p0-AlphaSets</i> in <i>PUSCH-PowerControl</i> .
<b>sri-PUSCH-ClosedLoopIndex</b> The index of the closed power control loop associated with this <i>SRI-PUSCH-PowerControl</i> .
<b>sri-PUSCH-PathlossReferenceRS-Id</b> The ID of <i>PUSCH-PathlossReferenceRS</i> as configured in the <i>pathlossReferenceRSToAddModList</i> in <i>PUSCH-PowerControl</i> .
<b>sri-PUSCH-PowerControlId</b> The ID of this <i>SRI-PUSCH-PowerControl</i> configuration. It is used as the codepoint (payload) in the SRI DCI field.

## – *PUSCH-ServingCellConfig*

The IE *PUSCH-ServingCellConfig* is used to configure UE specific PUSCH parameters that are common across the UE's BWPs of one serving cell.

### *PUSCH-ServingCellConfig* information element

```
-- ASN1START
-- TAG-PUSCH-SERVINGCELLCONFIG-START

```

MaxMIMO-LayersDCI-0-2-r16 ::=          INTEGER (1..4)

UplinkHARQ-mode-r17 ::=              BIT STRING (SIZE (32))

-- TAG-PUSCH-SERVINGCELLCONFIG-STOP
-- ASN1STOP

```

<b>PUSCH-CodeBlockGroupTransmission field descriptions</b>
--

<b>maxCodeBlockGroupsPerTransportBlock</b>
--

Maximum number of code-block-groups (CBGs) per TB (see TS 38.213 [13], clause 9.1).
---

<b>PUSCH-ServingCellConfig field descriptions</b>
---

<b>codeBlockGroupTransmission</b>
-----------------------------------

Enables and configures code-block-group (CBG) based transmission (see TS 38.214 [19], clause 6.1.5). The network does not configure this field if the SCS of at least one UL BWP configured in the cell is 480 or 960 kHz.
---

<b>maxMIMO-Layers</b>
-----------------------

Indicates the maximum MIMO layer to be used for PUSCH in all BWPs of the corresponding UL of this serving cell (see TS 38.212 [17], clause 5.4.2.1). If present, the network sets <i>maxRank</i> to the same value. The field <i>maxMIMO-Layers</i> refers to DCI format 0_1. If network configures <i>maxMIMO-Layers-v1810</i> the UE ignores <i>maxMIMO-Layers</i> (without suffix).
--

<b>maxMIMO-LayersforSDM</b>
-----------------------------

Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SDM scheme for NCB PUSCH
---

<b>maxMIMO-LayersforSDM-DCI-0-2</b>
-------------------------------------

Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SDM scheme for DCI format 0_2 for NCB PUSCH
--

<b>maxMIMO-LayersforSFN</b>
-----------------------------

Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SFN scheme for NCB PUSCH
---

<b>maxMIMO-LayersforSFN-DCI-0-2</b>
-------------------------------------

Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SFN scheme for DCI format 0_2 for NCB PUSCH
--

<b>nrofHARQ-ProcessesForPUSCH</b>
-----------------------------------

The number of HARQ processes to be used on the PUSCH of a serving cell. Value <i>n32</i> corresponds to 32 HARQ processes. If the field is absent, the UE uses 16 HARQ processes (see TS 38.214 [19], clause 6.1).
--

<b>processingType2Enabled</b>
-------------------------------

Enables configuration of advanced processing time capability 2 for PUSCH (see 38.214 [19], clause 6.4).
---

<b>rateMatching</b>
---------------------

Enables LBRM (Limited buffer rate-matching). When the field is absent the UE applies FBRM (Full buffer rate-matchingLBRM) (see TS 38.212 [17], clause 5.4.2).
---

<b>xOverhead</b>
------------------

If the field is absent, the UE applies the value 0 (see TS 38.214 [19], clause 6.1.4.2).
--

<b>maxMIMO-LayersDCI-0-2</b>
------------------------------

Indicates the maximum MIMO layer to be used for PUSCH for DCI format 0_2 in all BWPs of the corresponding UL of this serving cell (see TS 38.212 [17], clause 5.4.2.1). If present, the network sets <i>maxRankDCI-0-2</i> to the same value.
---

<b>uplinkHARQ-mode</b>
------------------------

Used to set the HARQ mode per HARQ process ID, see TS 38.321 [3]. The first/leftmost bit corresponds to HARQ process ID 0, the next bit to HARQ process ID 1 and so on. Bits corresponding to HARQ process IDs that are not configured shall be ignored. A bit set to one identifies a HARQ process with <i>HARQmodeA</i> and a bit set to zero identifies a HARQ process with <i>HARQmodeB</i> . This field applies for SRBs and DRBs.
---

– *PUSCH-TimeDomainResourceAllocationList*

The IE *PUSCH-TimeDomainResourceAllocation* is used to configure a time domain relation between PDCCH and PUSCH. *PUSCH-TimeDomainResourceAllocationList* contains one or more of such *PUSCH-TimeDomainResourceAllocations*. The network indicates in the UL grant which of the configured time domain allocations the UE shall apply for that UL grant. The UE determines the bit width of the DCI field based on the number of entries in the *PUSCH-TimeDomainResourceAllocationList*. Value 0 in the DCI field refers to the first element in this list, value 1 in the DCI field refers to the second element in this list, and so on.

***PUSCH-TimeDomainResourceAllocation* information element**

```
-- ASN1START
-- TAG-PUSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-START

PUSCH-TimeDomainResourceAllocationList ::= SEQUENCE (SIZE(1..maxNrofUL-Allocations)) OF PUSCH-TimeDomainResourceAllocation

PUSCH-TimeDomainResourceAllocation ::= SEQUENCE {
    k2                INTEGER(0..32)                OPTIONAL,    -- Need S

    ]]
}

-- TAG-PUSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-STOP
-- ASN1STOP
```

<b>PUSCH-TimeDomainResourceAllocationList field descriptions</b>	
<b>extendedK2</b>	Corresponds to L1 parameter 'K2' (see TS 38.214 [19], clause 6.1.2.1) configurable per PUSCH allocation. Only values {0..32} are applicable for PUSCH SCS of 120 kHz and for FR1. When the field is absent for the first PUSCH if multiple PUSCH are configured per PDCCH and <i>k2-r16</i> is absent, or when the field is absent and only one PUSCH is configured per PDCCH and <i>k2-r16</i> is absent, the UE applies the value 1 when PUSCH SCS is 15/30 kHz; the value 2 when PUSCH SCS is 60 kHz, the value 3 when PUSCH SCS is 120 kHz, the value 11 when PUSCH SCS is 480 kHz, and the value 21 when PUSCH SCS is 960 kHz. If multiple contiguous PUSCHs are configured per PDCCH, when the field <i>extendedK2(n)</i> corresponding to <i>k2</i> of the PUSCH(s) in the <i>n</i> -th slot ( <i>n</i> >1), or of the PUSCH(s) except the first PUSCH in the first slot ( <i>n</i> =1), is absent, the UE applies <i>k2</i> of the first PUSCH plus <i>n</i> -1.
<b>k2</b>	Corresponds to L1 parameter 'K2' (see TS 38.214 [19], clause 6.1.2.1). When the field is absent the UE applies the value 1 when PUSCH SCS is 15/30 kHz; the value 2 when PUSCH SCS is 60 kHz, and the value 3 when PUSCH SCS is 120 kHz. <i>k2</i> is absent/ignored if <i>extendedK2</i> is present.
<b>length</b>	Indicates the length allocated for PUSCH for DCI format 0_1/0_2 (see TS 38.214 [19], clause 6.1.2.1).
<b>mappingType</b>	Mapping type (see TS 38.214 [19], clause 6.1.2.1).
<b>numberOfRepetitions</b>	Number of repetitions for DCI format 0_1/0_2 (see TS 38.214 [19], clause 6.1.2.1). When <i>numberOfSlotsTBoMS-r17</i> is set to 2, 4 or 8 (i.e. TB processing over multi-slot (TBoMS) PUSCH is enabled), it indicates the number of repetitions of a single TBoMS.
<b>numberOfRepetitionsExt</b>	Number of repetitions for DCI format 0_1/0_2 if <i>pusch-RepTypeIndicatorDCI-0-1/pusch-RepTypeIndicatorDCI-0-2</i> is not set to <i>pusch-RepTypeB</i> (see TS 38.214 [19], clause 6.1.2.1). If this field is present, the field <i>numberOfRepetitions-r16</i> is ignored for PUSCH repetition Type A.
<b>numberOfSlotsTBoMS</b>	Number of slots allocated for TB processing over multi-slot PUSCH for DCI format 0_1/0_2. If a number of repetitions <i>K</i> is configured by <i>numberOfRepetitions</i> or <i>numberOfRepetitionsExt</i> , the network configures <i>numberOfSlotsTBoMS</i> ( <i>N</i> ) and <i>K</i> such that $N \cdot K \leq 32$ (see TS 38.214 [19], clause 6.1.2.1). The network does not configure the <i>numberOfSlotsTBoMS-r17</i> simultaneously with the <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> . The network does not configure <i>numberOfSlotsTBoMS-r17</i> together with <i>enhancedSkipUplinkTxDynamic</i> or <i>enhancedSkipUplinkTxConfigured</i> with value <i>true</i> .
<b>puschAllocationList</b>	The field <i>puschAllocationList-r16</i> indicates one or multiple PUSCH continuous in time domain which share a common <i>k2</i> (see TS 38.214 [19], clause 6.1.2.1). In this release, this field configures one or multiple PUSCH that may be in consecutive or non-consecutive slots (see TS 38.214 [19], clause 6.1.2.1). The <i>puschAllocationList-r16</i> only has one element in <i>pusch-TimeDomainAllocationListDCI-0-1-r16</i> and in <i>pusch-TimeDomainAllocationListDCI-0-2-r16</i> .
<b>startSymbol</b>	Indicates the index of start symbol for PUSCH for DCI format 0_1/0_2 (see TS 38.214 [19], clause 6.1.2.1).
<b>startSymbolAndLength</b>	An index giving valid combinations of start symbol and length (jointly encoded) as start and length indicator (SLIV). The network configures the field so that the allocation does not cross the slot boundary. (see TS 38.214 [19], clause 6.1.2.1).

Conditional Presence	Explanation
<i>Format01-02</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is absent. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> and in <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is mandatory present.
<i>Format01-02-For-TypeA</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is absent. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> , the field is optionally present if <i>pusch-RepTypeIndicatorDCI-0-1</i> is not set to <i>pusch-RepTypeB</i> , Need R. It is absent otherwise, Need R. In <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is optionally present if <i>pusch-RepTypeIndicatorDCI-0-2</i> is not set to <i>pusch-RepTypeB</i> , Need R. It is absent otherwise, Need R.
<i>NotFormat01-02-Or-TypeA</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is mandatory present. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-1</i> is not set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R. In <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-2</i> is not set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R.
<i>RepTypeB</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is absent. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-1</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R. In <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-2</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R.
<i>MultiPUSCH</i>	In case size of <i>puschAllocationList</i> is higher than 1, the field <i>extendedK2(n)</i> corresponding to <i>k2</i> of the <i>n</i> -th PUSCH, <i>n</i> >1, is mandatory present for all <i>n</i> , if any two consecutive PUSCHs are non-contiguous. Otherwise, it is optionally present, Need S.

## – PUSCH-TPC-CommandConfig

The IE *PUSCH-TPC-CommandConfig* is used to configure the UE for extracting TPC commands for PUSCH from a group-TPC messages on DCI.

### **PUSCH-TPC-CommandConfig** information element

```

-- ASN1START
-- TAG-PUSCH-TPC-COMMANDCONFIG-START

PUSCH-TPC-CommandConfig ::= SEQUENCE {
    tpc-Index          INTEGER (1..15)          OPTIONAL,  -- Cond SUL
    tpc-IndexSUL      INTEGER (1..15)          OPTIONAL,  -- Cond SUL-Only
    targetCell        ServCellIndex           OPTIONAL,  -- Need S
    ...
}

-- TAG-PUSCH-TPC-COMMANDCONFIG-STOP
-- ASN1STOP

```

<b>PUSCH-TPC-CommandConfig field descriptions</b>	
<b>targetCell</b>	The serving cell to which the acquired power control commands are applicable. If the value is absent, the UE applies the TPC commands to the serving cell on which the command has been received.
<b>tpc-Index</b>	An index determining the position of the first bit of TPC command inside the DCI format 2-2 payload.
<b>tpc-IndexSUL</b>	An index determining the position of the first bit of TPC command inside the DCI format 2-2 payload.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SUL-Only</i>	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured within <i>ServingCellConfig</i> . It is absent otherwise.
<i>SUL</i>	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured within <i>ServingCellConfig</i> . It is mandatory present otherwise.

## – QFI

The IE *QFI* is used to indicate the QoS Flow Identifier.

### **QFI information element**

```
-- ASN1START
-- TAG-QFI-START

QFI ::= INTEGER (0..maxQFI)

-- TAG-QFI-STOP
-- ASN1STOP
```

## – Q-OffsetRange

The IE *Q-OffsetRange* is used to indicate a cell, beam or measurement object specific offset to be applied when evaluating candidates for cell re-selection or when evaluating triggering conditions for measurement reporting. The value is in dB. Value *dB-24* corresponds to -24 dB, *dB-22* corresponds to -22 dB and so on.

### **Q-OffsetRange information element**

```
-- ASN1START
-- TAG-Q-OFFSETRANGE-START

Q-OffsetRange ::= ENUMERATED {
    dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
    dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
    dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
    dB6, dB8, dB10, dB12, dB14, dB16, dB18,
    dB20, dB22, dB24}

-- TAG-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

```
-- TAG-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

## – *Q-QualMin*

The IE *Q-QualMin* is used to indicate for cell selection/ re-selection the required minimum received RSRQ level in the (NR) cell. Corresponds to parameter  $Q_{\text{qualmin}}$  in TS 38.304 [20]. Actual value  $Q_{\text{qualmin}} = \text{field value [dB]}$ .

### **Q-QualMin information element**

```
-- ASN1START
-- TAG-Q-QUALMIN-START
```

```
Q-QualMin ::= INTEGER (-43..-12)
```

```
-- TAG-Q-QUALMIN-STOP
-- ASN1STOP
```

## – *Q-RxLevMin*

The IE *Q-RxLevMin* is used to indicate for cell selection/ re-selection the required minimum received RSRP level in the (NR) cell. Corresponds to parameter  $Q_{\text{rxlevmin}}$  in TS 38.304 [20]. Actual value  $Q_{\text{rxlevmin}} = \text{field value} * 2 \text{ [dBm]}$ .

### **Q-RxLevMin information element**

```
-- ASN1START
-- TAG-Q-RXLEVMIN-START
```

```
Q-RxLevMin ::= INTEGER (-70..-22)
```

```
-- TAG-Q-RXLEVMIN-STOP
-- ASN1STOP
```

## – *QuantityConfig*

The IE *QuantityConfig* specifies the measurement quantities and layer 3 filtering coefficients for NR and inter-RAT measurements.

### **QuantityConfig information element**

```
-- ASN1START
-- TAG-QUANTITYCONFIG-START
```

```

QuantityConfig ::=
  quantityConfigNR-List          SEQUENCE {
    ...
    [[
      quantityConfigEUTRA        FilterConfig          OPTIONAL -- Need M
    ]],
    [[
      quantityConfigUTRA-FDD-r16 QuantityConfigUTRA-FDD-r16 OPTIONAL -- Need M
      quantityConfigCLI-r16      FilterConfigCLI-r16   OPTIONAL -- Need M
    ]]
  }

QuantityConfigNR ::=
  quantityConfigCell            SEQUENCE {
    quantityConfigRS-Index      QuantityConfigRS,
                                QuantityConfigRS          OPTIONAL -- Need M
  }

QuantityConfigRS ::=
  ssb-FilterConfig             SEQUENCE {
    csi-RS-FilterConfig         FilterConfig,
                                FilterConfig
  }

FilterConfig ::=
  filterCoefficientRSRP        SEQUENCE {
    filterCoefficientRSRQ      FilterCoefficient          DEFAULT fc4,
    filterCoefficientRS-SINR   FilterCoefficient          DEFAULT fc4,
  }

FilterConfigCLI-r16 ::=
  filterCoefficientSRS-RSRP-r16 FilterCoefficient          DEFAULT fc4,
  filterCoefficientCLI-RSSI-r16 FilterCoefficient          DEFAULT fc4
  }

QuantityConfigUTRA-FDD-r16 ::=
  filterCoefficientRSCP-r16    SEQUENCE {
    filterCoefficientEcNO-r16  FilterCoefficient          DEFAULT fc4,
                                FilterCoefficient          DEFAULT fc4
  }

-- TAG-QUANTITYCONFIG-STOP
-- ASN1STOP

```

<b>QuantityConfigNR field descriptions</b>
<p><b>quantityConfigCell</b> Specifies L3 filter configurations for cell measurement results for the configurable RS Types (e.g. SS/PBCH block and CSI-RS) and the configurable measurement quantities (e.g. RSRP, RSRQ and SINR).</p>
<p><b>quantityConfigRS-Index</b> Specifies L3 filter configurations for measurement results per RS index for the configurable RS Types (e.g. SS/PBCH block and CSI-RS) and the configurable measurement quantities (e.g. RSRP, RSRQ and SINR).</p>

<b>QuantityConfigRS field descriptions</b>
<b>csi-RS-FilterConfig</b> CSI-RS based L3 filter configurations: Specifies L3 filter configurations for CSI-RSRP, CSI-RSRQ and CSI-SINR measurement results from the L1 filter(s), as defined in TS 38.215 [9].
<b>ssb-FilterConfig</b> SS Block based L3 filter configurations: Specifies L3 filter configurations for SS-RSRP, SS-RSRQ and SS-SINR measurement results from the L1 filter(s), as defined in TS 38.215 [9].

<b>QuantityConfigUTRA-FDD field descriptions</b>
<b>filterCoefficientRSCP</b> Specifies L3 filter coefficient for FDD UTRAN CPICH_RSCP measurement results from L1 filter.
<b>filterCoefficientEcN0</b> Specifies L3 filter coefficient for FDD UTRAN CPICH_EcN0 measurement results from L1 filter.

## – RACH-ConfigCommon

The IE *RACH-ConfigCommon* is used to specify the cell specific random-access parameters.

### **RACH-ConfigCommon information element**

```
-- ASN1START
-- TAG-RACH-CONFIGCOMMON-START

RACH-ConfigCommon ::=
    SEQUENCE {
        rach-ConfigGeneric          RACH-ConfigGeneric,

  ]]
}

-- TAG-RACH-CONFIGCOMMON-STOP
-- ASN1STOP

```

<b>RACH-ConfigCommon field descriptions</b>
<p><b>featureCombinationPreamblesList</b> Specifies a series of preamble partitions each associated to a combination of features and 4-step RA. The network does not configure this list to have more than 16 entries.</p>
<p><b>messagePowerOffsetGroupB</b> Threshold for preamble selection. Value is in dB. Value <i>minusinfinity</i> corresponds to <math>-\infty</math>. Value <i>dB0</i> corresponds to 0 dB, <i>dB5</i> corresponds to 5 dB and so on (see TS 38.321 [3], clause 5.1.2). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i>.</p>
<p><b>msg1-SubcarrierSpacing</b> Subcarrier spacing of PRACH (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz If absent, the UE applies the SCS as derived from the <i>prach-ConfigurationIndex</i> in <i>RACH-ConfigGeneric</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]). The value also applies to contention free random access (<i>RACH-ConfigDedicated</i>), to SI-request and to contention-based beam failure recovery (CB-BFR). But it does not apply for contention free beam failure recovery (CF-BFR) (see <i>BeamFailureRecoveryConfig</i>).</p>
<p><b>msg3-transformPrecoder</b> Enables the transform precoder for Msg3 transmission according to clause 6.1.3 of TS 38.214 [19]. If the field is absent, the UE disables the transformer precoder (see TS 38.213 [13], clause 8.3).</p>
<p><b>numberOfRA-PreamblesGroupA</b> The number of CB preambles per SSB in group A. This determines implicitly the number of CB preambles per SSB available in group B. (see TS 38.321 [3], clause 5.1.1). The setting should be consistent with the setting of <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i>.</p>
<p><b>prach-RootSequenceIndex</b> PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1). The value range depends on whether <math>L=839</math> or <math>L=139</math> or <math>L=571</math> or <math>L=1151</math>. The length of the root sequence corresponding with the index indicated in this IE should be consistent with the one indicated in <i>prach-ConfigurationIndex</i> in the <i>RACH-ConfigDedicated</i> (if configured). If <i>prach-RootSequenceIndex-r16</i> is signalled, UE shall ignore the <i>prach-RootSequenceIndex</i> (without suffix). For FR2-2, only the following values are applicable depending on the used subcarrier spacing: 120 kHz: <math>L=139</math>, <math>L=571</math>, and <math>L=1151</math> 480 kHz: <math>L=139</math>, and <math>L=571</math> 960 kHz: <math>L=139</math></p>
<p><b>ra-ContentionResolutionTimer</b> The initial value for the contention resolution timer (see TS 38.321 [3], clause 5.1.5). Value <i>sf8</i> corresponds to 8 subframes, value <i>sf16</i> corresponds to 16 subframes, and so on.</p>
<p><b>ra-Msg3SizeGroupA</b> Transport Blocks size threshold in bits below which the UE shall use a contention-based RA preamble of group A (see TS 38.321 [3], clause 5.1.2). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i>.</p>
<p><b>ra-Prioritization</b> Parameters which apply for prioritized random access procedure on any UL BWP of SpCell for specific Access Identities (see TS 38.321 [3], clause 5.1.1a).</p>
<p><b>ra-PrioritizationForAI</b> Indicates whether the field <i>ra-Prioritization-r16</i> applies for Access Identities. The first/leftmost bit corresponds to Access Identity 1, the next bit corresponds to Access Identity 2. Value 1 indicates that the field <i>ra-Prioritization-r16</i> applies otherwise the field does not apply (see TS 23.501 [32]).</p>
<p><b>ra-PrioritizationForSlicing</b> Parameters which apply to configure prioritized CBRA 4-step random access type for slicing.</p>
<p><b>rach-ConfigGeneric</b> RACH parameters for both regular random access and beam failure recovery.</p>
<p><b>restrictedSetConfig</b> Configuration of an unrestricted set or one of two types of restricted sets, see TS 38.211 [16], clause 6.3.3.1.</p>

<b><i>rsrp-ThresholdSSB</i></b> UE may select the SS block and corresponding PRACH resource for path-loss estimation and (re)transmission based on SS blocks that satisfy the threshold (see TS 38.213 [13]).
<b><i>rsrp-ThresholdSSB-SUL</i></b> The UE selects SUL carrier to perform random access based on this threshold (see TS 38.321 [3], clause 5.1.1). The value applies to all the BWPs and all RACH configurations.
<b><i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i></b> The meaning of this field is twofold: the CHOICE conveys the information about the number of SSBs per RACH occasion. Value <i>oneEighth</i> corresponds to one SSB associated with 8 RACH occasions, value <i>oneFourth</i> corresponds to one SSB associated with 4 RACH occasions, and so on. The ENUMERATED part indicates the number of Contention Based preambles per SSB. Value <i>n4</i> corresponds to 4 Contention Based preambles per SSB, value <i>n8</i> corresponds to 8 Contention Based preambles per SSB, and so on. The total number of CB preambles in a RACH occasion is given by <i>CB-preambles-per-SSB * max(1, SSB-per-rach-occasion)</i> . See TS 38.213 [13].
<b><i>totalNumberOfRA-Preambles</i></b> Total number of preambles used for contention based and contention free 4-step or 2-step random access in the RACH resources defined in <i>RACH-ConfigCommon</i> , excluding preambles used for other purposes (e.g. for SI request). If the field is absent, all 64 preambles are available for RA. The setting should be consistent with the setting of <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> , i.e. it should be a multiple of the number of SSBs per RACH occasion.

Conditional Presence	Explanation
<i>AdditionalRACH</i>	The field is mandatory present if the <i>RACH-ConfigCommon</i> is included in an <i>AdditionalRACH-Config</i> . When included in <i>initialUplinkBWP-RedCap</i> to indicate other feature(s) than <i>redcap</i> and <i>eRedCap</i> , this field is mandatory present with at least <i>FeatureCombinationPreambles</i> list entries: the list entry/entries indicating only <i>redcap</i> or <i>eRedCap</i> and the other(s) indicating both <i>redcap</i> or <i>eRedCap</i> and one or multiple other feature(s) (e.g., <i>smallData</i> , <i>nsag</i> or <i>msg3-Repetitions</i> ). When included in <i>initialUplinkBWP-RedCap</i> to indicate <i>eRedCap</i> and <i>RedCap</i> separately, this field is mandatory present with at least two <i>FeatureCombinationPreambles</i> list entries: one list entry indicating only <i>redcap</i> and the other list entry indicating only <i>eRedCap</i> . Otherwise, it is optional, Need R.
<i>InitialBWP-Only</i>	This field is optionally present, Need R, if this BWP is the initial BWP of SpCell. Otherwise, the field is absent.
<i>L139</i>	The field is mandatory present if <i>prach-RootSequenceIndex</i> L=139, or if L=571 for FR2-2, otherwise the field is absent, Need S.
<i>SUL</i>	The field is mandatory present in <i>rach-ConfigCommon</i> in <i>initialUplinkBWP</i> if <i>supplementaryUplink</i> is configured in <i>ServingCellConfigCommonSIB</i> or if <i>supplementaryUplinkConfig</i> is configured in <i>ServingCellConfigCommon</i> ; otherwise, the field is absent. This field is not configured in <i>additionalRACH-Config</i> .

## – RACH-ConfigCommonTwoStepRA

The IE *RACH-ConfigCommonTwoStepRA* is used to specify cell specific 2-step random-access type parameters.

### RACH-ConfigCommonTwoStepRA information element

```

<b><i>RACH-ConfigCommonTwoStepRA</i> field descriptions</b>
<p><b><i>featureCombinationPreamblesList</i></b> Specifies a series of preamble partitions each associated to a combination of features and 2-step RA. The network does not configure this list to have more than 16 entries.</p>
<p><b><i>groupB-ConfiguredTwoStepRA</i></b> Preamble grouping for 2-step random access type. If the field is absent then there is only one preamble group configured and only one msgA PUSCH configuration.</p>
<p><b><i>msgA-CB-PreamblesPerSSB-PerSharedRO</i></b> Number of contention-based preambles used for 2-step RA type from the non-CBRA 4-step type preambles associated with each SSB for RO shared with 4-step type RA. The number of preambles for 2-step RA type shall not exceed the number of preambles per SSB minus the number of contention-based preambles per SSB for 4-step type RA. The possible value range for this parameter needs to be aligned with value range for the configured SSBs per RACH occasion in <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> in <i>RACH-ConfigCommon</i>. The field is only applicable for the case of shared ROs with 4-step type random access.</p>
<p><b><i>msgA-PRACH-RootSequenceIndex</i></b> PRACH root sequence index. If the field is not configured in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e., not within <i>AdditionalRACH-Config</i>), the UE applies the value in field <i>prach-RootSequenceIndex</i> in <i>RACH-ConfigCommon</i> in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE applies the corresponding value of <i>prach-RootSequenceIndex</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. When both 2-step and 4-step type random access is configured, this field is only configured for the case of separate ROs between 2-step and 4-step type random access. For FR2-2, only the following values are applicable depending on the used subcarrier spacing: 120 kHz: L=139, L=571, and L=1151 480 kHz: L=139, and L=571 960 kHz: L=139</p>
<p><b><i>msgA-RestrictedSetConfig</i></b> Configuration of an unrestricted set or one of two types of restricted sets for 2-step random access type preamble. If the field is not configured in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>), the UE applies the value in field <i>restrictedSetConfig</i> in <i>RACH-ConfigCommon</i> in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE applies the value of <i>restrictedSetConfig</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. When both 2-step and 4-step type random access is configured, this field is only configured for the case of separate ROs between 2-step and 4-step type random access.</p>
<p><b><i>msgA-RSRP-Threshold</i></b> The UE selects 2-step random access type to perform random access based on this threshold (see TS 38.321 [3], clause 5.1.1). This field is only present if both 2-step and 4-step RA type are configured for the BWP.</p>
<p><b><i>msgA-RSRP-ThresholdSSB</i></b> UE may select the SS block and corresponding PRACH resource for path-loss estimation and (re)transmission based on SS blocks that satisfy the threshold (see TS 38.213 [13]).</p>
<p><b><i>msgA-SSB-PerRACH-OccasionAndCB-PreamblesPerSSB</i></b> The meaning of this field is twofold: the CHOICE conveys the information about the number of SSBs per RACH occasion. Value <i>oneEight</i> corresponds to one SSB associated with 8 RACH occasions, value <i>oneFourth</i> corresponds to one SSB associated with 4 RACH occasions, and so on. The ENUMERATED part indicates the number of Contention Based preambles per SSB. Value <i>n4</i> corresponds to 4 Contention Based preambles per SSB, value <i>n8</i> corresponds to 8 Contention Based preambles per SSB, and so on. The total number of CB preambles in a RACH occasion is given by <i>CB-preambles-per-SSB * max(1, SSB-per-rach-occasion)</i>. If the field is not configured in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>) and both 2-step and 4-step are configured for the BWP, the UE applies the value in the field <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> in <i>RACH-ConfigCommon</i>. If the field is not configured in <i>AdditionalRACH-Config</i> and both 2-step and 4-step are configured in <i>AdditionalRACH-Config</i>, the UE applies the value in the field <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. The field is not present when RACH occasions are shared between 2-step and 4-step type random access in the BWP.</p>
<p><b><i>msgA-SSB-SharedRO-MaskIndex</i></b> Indicates the subset of 4-step type ROs shared with 2-step random access type for each SSB. This field is configured when there is more than one RO per SSB. If the field is absent, and 4-step and 2-step has shared ROs, then all ROs are shared.</p>

<p><b><i>msgA-SubcarrierSpacing</i></b> Subcarrier spacing of PRACH (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz. If the field is absent, the UE applies the SCS as derived from the <i>msgA-PRACH-ConfigurationIndex</i> in <i>RACH-ConfigGenericTwoStepRA</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]) in case of 2-step only BWP, otherwise the UE applies the same SCS as <i>Msg1</i> derived from <i>RACH-ConfigCommon</i>. The value also applies to contention free 2-step random access type (<i>RACH-ConfigDedicated</i>).</p>
<p><b><i>msgA-TotalNumberOfRA-Preambles</i></b> Indicates the total number of preambles used for contention-based and contention-free 2-step random access type when ROs for 2-step are not shared with 4-step. If the field is absent, and 2-step and 4-step does not have shared ROs, all 64 preambles are available for 2-step random access type.</p>
<p><b><i>msgA-TransMax</i></b> Max number of <i>MsgA</i> preamble transmissions performed before switching to 4-step random access (see TS 38.321 [3], clauses 5.1.1). This field is only applicable when 2-step and 4-step RA type are configured and switching to 4-step type RA is supported. If the field is absent, switching from 2-step RA type to 4-step RA type is not allowed.</p>
<p><b><i>ra-ContentionResolutionTimer</i></b> The initial value for the contention resolution timer for fallback RAR in case no 4-step random access type is configured (see TS 38.321 [3], clause 5.1.5). Value <i>sf8</i> corresponds to 8 subframes, value <i>sf16</i> corresponds to 16 subframes, and so on. If both 2-step and 4-step random access type resources are configured on the BWP, then this field is absent. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the corresponding value in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>.</p>
<p><b><i>ra-Prioritization</i></b> Parameters which apply for prioritized random access procedure on any UL BWP of SpCell for specific Access Identities (see TS 38.321 [3], clause 5.1.1a).</p>
<p><b><i>ra-PrioritizationForAI</i></b> Indicates whether the field <i>ra-Prioritization-r16</i> applies for Access Identities. The first/leftmost bit corresponds to Access Identity 1, the next bit corresponds to Access Identity 2. Value 1 for an Access Identity indicates that the field <i>ra-Prioritization-r16</i> applies, otherwise the field does not apply.</p>
<p><b><i>ra-PrioritizationForSlicingTwoStep</i></b> Parameters which apply to configure prioritized CBRA 2-step random access type for slicing.</p>
<p><b><i>rach-ConfigGenericTwoStepRA</i></b> 2-step random access type parameters for both regular random access and beam failure recovery.</p>

<b><i>GroupB-ConfiguredTwoStepRA</i> field descriptions</b>
<p><b><i>messagePowerOffsetGroupB</i></b> Threshold for preamble selection. Value is in dB. Value <i>minusinfinity</i> corresponds to <math>-\infty</math>. Value <i>dB0</i> corresponds to 0 dB, <i>dB5</i> corresponds to 5 dB and so on. (see TS 38.321 [3], clause 5.1.1).</p>
<p><b><i>numberOfRA-PreamblesGroupA</i></b> The number of CB preambles per SSB in group A for idle/inactive or connected mode. The setting of the number of preambles for each group should be consistent with <i>msgA-SSB-PerRACH-OccasionAndCB-PreamblesPerSSB</i> or <i>msgA-CB-PreamblesPerSSB-PerSharedRO</i> if configured.</p>
<p><b><i>ra-MsgA-SizeGroupA</i></b> Transport block size threshold in bits below which the UE shall use a contention-based RA preamble of group A. (see TS 38.321 [3], clause 5.1.1).</p>

Conditional Presence	Explanation
<i>2Step4Step</i>	The field is mandatory present if both 2-step random access type and 4-step random access type are configured in the BWP, otherwise the field is not present. The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> if both 2-step random access type and 4-step random access type are configured for the same feature combination in the BWP.
<i>2StepOnlyL139</i>	The field is mandatory present if <i>msgA-PRACH-RootSequenceIndex</i> L=139 and no 4-step random access type is configured, or if L=571 for FR2-2 and no 4-step random access type is configured, otherwise the field is absent, Need S.
<i>2StepOnly</i>	The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> if <i>rach-ConfigCommon</i> field is absent in this <i>BWP-UplinkCommon</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> , Need S. The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> if <i>rach-ConfigCommon</i> field is absent in this <i>AdditionalRACH-Config</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> , Need S.
<i>AdditionalRACH</i>	The field is mandatory present if the <i>msgA-ConfigCommon</i> is included in an <i>AdditionalRACH-Config</i> . When included in <i>initialUplinkBWP-RedCap</i> to indicate other feature(s) than <i>redcap</i> , this field is mandatory present with at least two <i>FeatureCombinationPreambles</i> list entries: one list entry indicating only <i>redcap</i> and the other(s) indicating both <i>redcap</i> and one or multiple other feature(s) (e.g. <i>smallData</i> , <i>nsag</i> or <i>msg3-Repetitions</i> ). Otherwise, it is optional, Need R.
<i>InitialBWP-Only</i>	This field is optionally present, Need R, if this BWP is the initial BWP of SpCell. Otherwise, the field is absent.
<i>SharedRO</i>	The field is mandatory present if the 2-step random access type occasions are shared with 4-step random access type, otherwise the field is not present.

## – *RACH-ConfigDedicated*

```

<b>CFRA-CSIRS-Resource field descriptions</b>
<p><b>csi-RS</b> The ID of a CSI-RS resource defined in the measurement object associated with this serving cell.</p>
<p><b>ra-OccasionList</b> RA occasions that the UE shall use when performing CF-RA upon selecting the candidate beam identified by this CSI-RS. The network ensures that the RA occasion indexes provided herein are also configured by prach-ConfigurationIndex and msg1-FDM. Each RACH occasion is sequentially numbered, first, in increasing order of frequency resource indexes for frequency multiplexed PRACH occasions; second, in increasing order of time resource indexes for time multiplexed PRACH occasions within a PRACH slot and Third, in increasing order of indexes for PRACH slots.</p>
<p><b>ra-PreambleIndex</b> The RA preamble index to use in the RA occasions associated with this CSI-RS.</p>

<b>CFRA field descriptions</b>
<p><b>msg1-RepetitionNum</b> Indicates the MSG1 repetition number used for contention free 4-step random access type in TS 38.321 [3]. If this field is absent, the UE performs contention free 4-step random access without MSG1-Repetitions.</p>
<p><b>occasions</b> RA occasions for contention free random access. If the field is absent, the UE uses the RA occasions configured in <i>RACH-ConfigCommon</i> in the first active UL BWP.</p>
<p><b>ra-ssb-OccasionMaskIndex</b> Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3]. The mask is valid for all SSB resources signalled in <i>ssb-ResourceList</i>. The UE shall ignore this field if the field <i>msg1-RepetitionNum</i> included in <i>CFRA</i> is configured.</p>
<p><b>rach-ConfigGeneric</b> Configuration of contention free random access occasions for CFRA. The UE shall ignore <i>preambleReceivedTargetPower</i>, <i>preambleTransMax</i>, <i>powerRampingStep</i>, <i>ra-ResponseWindow</i> signaled within this field and use the corresponding values provided in <i>RACH-ConfigCommon</i>.</p>
<p><b>ssb-perRACH-Occasion</b> Number of SSBs per RACH occasion.</p>
<p><b>totalNumberOfRA-Preambles</b> Total number of preambles used for contention free random access in the RACH resources defined in CFRA, excluding preambles used for other purposes (e.g. for SI request). If the field is absent but the field <i>occasions</i> is present, the UE may assume all the 64 preambles are for RA. The setting should be consistent with the setting of <i>ssb-perRACH-Occasion</i>, if present, i.e. it should be a multiple of the number of SSBs per RACH occasion.</p>

<b>CFRA-SSB-Resource field descriptions</b>
<p><b>msgA-PUSCH-Resource-Index</b> Identifies the index of the PUSCH resource used for MSGA CFRA. The PUSCH resource index indicates a valid PUSCH occasion (as specified in TS 38.213 [13], clause 8.1A) and the associated DMRS resources corresponding to a PRACH slot. The PUSCH resource indexes are sequentially numbered and are mapped to valid PUSCH occasions corresponding to a PRACH slot which are ordered, first, in increasing order of frequency resource indexes for frequency multiplexed PUSCH occasions; second, in increasing order of DMRS resource indexes within a PUSCH occasion, where a <math>DMRS_{id}</math> resource index is determined first in an ascending order of a DMRS port index and then in an ascending order of a DMRS sequence index, third in increasing order of time resource indexes for time multiplexed PUSCH occasions within a PUSCH slot and fourth, in increasing order of indexes for PUSCH slots. For the case of contention free 2-step random access type, if this field is absent, the UE shall use the value 0.</p>
<p><b>ra-PreambleIndex</b> The preamble index that the UE shall use when performing CF-RA upon selecting the candidate beams identified by this SSB.</p>
<p><b>ssb</b> The ID of an SSB transmitted by this serving cell.</p>

<b>CFRA-TwoStep field descriptions</b>
<p><b>msgA-CFRA-PUSCH</b> PUSCH resource configuration(s) for msgA CFRA.</p>
<p><b>msgA-TransMax</b> Max number of MsgA preamble transmissions performed before switching to 4-step type random access (see TS 38.321 [3], clauses 5.1.1). This field is only applicable when 2-step and 4-step RA type are configured and switching to 4-step type RA is supported. If the field is absent in <i>cfra-TwoStep</i>, switching from 2-step RA type to 4-step RA type is not allowed.</p>
<p><b>occasionsTwoStepRA</b> RA occasions for contention free random access. If the field is absent, the UE uses the RA occasions configured in <i>RACH-ConfigCommonTwoStepRA</i> in the first active UL BWP.</p>
<p><b>ra-SSB-OccasionMaskIndex</b> Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3]. The mask is valid for all SSB resources signalled in <i>ssb-ResourceList</i>.</p>
<p><b>rach-ConfigGenericTwoStepRA</b> Configuration of contention free random access occasions for CFRA 2-step random access type.</p>
<p><b>ssb-PerRACH-OccasionTwoStep</b> Number of SSBs per RACH occasion for 2-step random access type.</p>

<b>RACH-ConfigDedicated field descriptions</b>
<p><b>cfra</b> Parameters for contention free random access to a given target cell. If this field and <i>cfra-TwoStep</i> are absent, the UE performs contention based random access.</p>
<p><b>cfra-TwoStep</b> Parameters for contention free 2-step random access type to a given target cell. Network ensures that <i>cfra</i> and <i>cfra-TwoStep</i> are not configured at the same time. If this field and <i>cfra</i> are absent, the UE performs contention based random access.</p>
<p><b>ra-prioritization</b> Parameters which apply for prioritized random access procedure to a given target cell (see TS 38.321 [3], clause 5.1.1).</p>
<p><b>ra-PrioritizationTwoStep</b> Parameters which apply for prioritized 2-step random access type procedure to a given target cell (see TS 38.321 [3], clause 5.1.1).</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>Mandatory</i>	The field is mandatory present.
<i>Occasions</i>	The field is optionally present, Need S, if the field <i>occasions</i> is present, otherwise it is absent.
<i>2StepCFRA</i>	The field is optionally present for the case of 2-step RA type contention free random access, Need S, otherwise it is absent.
<i>4StepCFRArep</i>	<p>For non-(e)RedCap UEs, the field is optionally present, Need S, if <i>resources</i> is set to <i>ssb</i> and there is one <i>FeatureCombinationPreambles</i> entry indicating only <i>msg1-Repetitions</i> which is associated with the same Msg1 repetition number.</p> <p>For RedCap UEs or if RedCap is considered to be applicable for this Random Access procedure for eRedCap UEs, the field is optionally present, Need S, if <i>resources</i> is set to <i>ssb</i> and there is one <i>FeatureCombinationPreambles</i> entry indicating only <i>redCap</i> and <i>msg1-Repetitions</i> which is associated with the same Msg1 repetition number.</p> <p>For eRedCap UEs, if eRedCap is considered to be applicable for this Random Access procedure, the field is optional present, Need S, if <i>resource</i> is set to <i>ssb</i> and there is one <i>FeatureCombinationPreambles</i> entry indicating only <i>eRedCap</i> and <i>msg1-Repetitions</i> which is associated with the same Msg1 repetition number.</p> <p>Otherwise, it is absent.</p>

– *RACH-ConfigGeneric*

The IE *RACH-ConfigGeneric* is used to specify the random-access parameters both for regular random access as well as for beam failure recovery.

***RACH-ConfigGeneric* information element**

```
-- ASN1START
-- TAG-RACH-CONFIGGENERIC-START

RACH-ConfigGeneric ::=

  ]],
  ]
}

-- TAG-RACH-CONFIGGENERIC-STOP
-- ASN1STOP
```

<b>RACH-ConfigGeneric field descriptions</b>	
<b>msg1-FDM</b>	The number of PRACH transmission occasions FDMed in one time instance. (see TS 38.211 [16], clause 6.3.3.2).
<b>msg1-FrequencyStart</b>	Offset of lowest PRACH transmission occasion in frequency domain with respect to PRB 0. The value is configured so that the corresponding RACH resource is entirely within the bandwidth of the UL BWP. (see TS 38.211 [16], clause 6.3.3.2).
<b>powerRampingStep</b>	Power ramping steps for PRACH (see TS 38.321 [3], 5.1.3). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i> .
<b>prach-ConfigurationFrameOffset-IAB</b>	Frame offset for ROs defined in the baseline configuration indicated by <i>prach-ConfigurationIndex</i> and is used only by the IAB-MT. (see TS 38.211 [16], clause 6.3.3.2).
<b>prach-ConfigurationIndex</b>	PRACH configuration index. For <i>prach-ConfigurationIndex</i> configured under <i>beamFailureRecoveryConfig</i> , the <i>prach-ConfigurationIndex</i> can only correspond to the short preamble format, (see TS 38.211 [16], clause 6.3.3.2). If the field <i>prach-ConfigurationIndex-v1610</i> is present, the UE shall ignore the value provided in <i>prach-ConfigurationIndex</i> (without suffix).
<b>prach-ConfigurationPeriodScaling-IAB</b>	Scaling factor to extend the periodicity of the baseline configuration indicated by <i>prach-ConfigurationIndex</i> and is used only by the IAB-MT. Value scf1 corresponds to scaling factor of 1 and so on. (see TS 38.211 [16], clause 6.3.3.2).
<b>prach-ConfigurationSOffset-IAB</b>	Subframe/Slot offset for ROs defined in the baseline configuration indicated by <i>prach-ConfigurationIndex</i> and is used only by the IAB-MT. (see TS 38.211 [16], clause 6.3.3.2).
<b>preambleReceivedTargetPower</b>	The target power level at the network receiver side (see TS 38.213 [13], clause 7.4, TS 38.321 [3], clauses 5.1.2, 5.1.3). Only multiples of 2 dBm may be chosen (e.g. -202, -200, -198, ...). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i> .
<b>preambleTransMax</b>	Max number of RA preamble transmission performed before declaring a failure (see TS 38.321 [3], clauses 5.1.4, 5.1.5). The UE shall ignore this field in case <i>rach-ConfigGeneric</i> is included within an <i>EarlyUL-SyncConfig</i> IE.
<b>ra-ResponseWindow</b>	Msg2 (RAR) window length in number of slots. The network configures a value lower than or equal to 10 ms when Msg2 is transmitted in licensed spectrum and a value lower than or equal to 40 ms when Msg2 is transmitted with shared spectrum channel access (see TS 38.321 [3], clause 5.1.4). UE ignores the field if included in <i>SCellConfig</i> . If <i>ra-ResponseWindow-v1610</i> or <i>ra-ResponseWindow-v1700</i> is signalled, UE shall ignore the <i>ra-ResponseWindow</i> (without suffix). The field <i>ra-ResponseWindow-v1700</i> is applicable to SCS 480 kHz and SCS 960 kHz. The UE shall ignore this field in case <i>rach-ConfigGeneric</i> is included within an <i>EarlyUL-SyncConfig</i> IE.
<b>zeroCorrelationZoneConfig</b>	N-CS configuration, see Table 6.3.3.1-5 in TS 38.211 [16].

## – RACH-ConfigGenericTwoStepRA

The IE *RACH-ConfigGenericTwoStepRA* is used to specify the 2-step random access type parameters.

```

<b><i>RACH-ConfigGenericTwoStepRA</i> field descriptions</b>
<p><b><i>msgA-PreamblePowerRampingStep</i></b>  Power ramping steps for msgA PRACH. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the corresponding value in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. If the field is absent in other cases, UE shall use the value of <i>powerRampingStep</i> in <i>RACH-ConfigGeneric</i> in the configured BWP (see TS 38.321 [3], 5.1.3). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA. The field is absent if <i>RACH-ConfigGenericTwoStepRA</i> is included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> and then the UE uses the value of <i>msgA-PreamblePowerRampingStep</i> in <i>RACH-ConfigGenericTwoStepRA</i> configured for CBRA.</p>
<p><b><i>msgA-PreambleReceivedTargetPower</i></b>  The target power level at the network receiver side (see TS 38.213 [13], clause 7.1.1 and TS 38.321 [3], clause 5.1.1). Only multiples of 2 dBm may be chosen (e.g -202, -200, -198, ...). If the field is absent, UE shall use the value of <i>preambleReceivedTargetPower</i> in <i>RACH-ConfigGeneric</i> in the configured BWP. This field may only be present if no 4-step type RA is configured in the BWP. The field is absent if <i>RACH-ConfigGenericTwoStepRA</i> is included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> and then the UE uses the value of <i>msgA-PreambleReceivedTargetPower</i> in <i>RACH-ConfigGenericTwoStepRA</i> configured for CBRA.</p>
<p><b><i>msgA-PRACH-ConfigurationIndex</i></b>  Cell-specific PRACH configuration index for 2-step RA type. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>), the UE shall use the value of corresponding 4-step random access parameter in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the corresponding value in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. If the value is in the range of 256 to 262, the field <i>prach-ConfigurationIndex-v1610</i> should be considered configured (see TS 38.211 [16], clause 6.3.3.2). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.</p>
<p><b><i>msgA-RO-FDM</i></b>  The number of msgA PRACH transmission occasions Frequency-Division Multiplexed in one time instance. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>), UE shall use value of <i>msg1-FDM</i> in <i>RACH-ConfigGeneric</i> in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the value of <i>msg1-FDM</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i> (see TS 38.211 [16], clause 6.3.3.2). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.</p>
<p><b><i>msgA-RO-FrequencyStart</i></b>  Offset of lowest PRACH transmissions occasion in frequency domain with respect to PRB 0. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>), UE shall use value of <i>msg1-FrequencyStart</i> in <i>RACH-ConfigGeneric</i> in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the value of <i>msg1-FrequencyStart</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i> (see TS 38.211 [16], clauses 5.3.2 and 6.3.3.2). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.</p>
<p><b><i>msgA-ZeroCorrelationZoneConfig</i></b>  N-CS configuration for msgA preamble, see Table 6.3.3.1-5 in TS 38.211 [16]. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the corresponding value in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. If the field is absent in other cases, UE shall use value <i>zeroCorrelationZoneConfig</i> in <i>RACH-ConfigGeneric</i> in the configured BWP. This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.</p>
<p><b><i>msgB-ResponseWindow</i></b>  MsgB monitoring window length in number of slots. The network configures a value lower than or equal to 40ms (see TS 38.321 [3], clause 5.1.1). The network does not configure <i>msgB-ResponseWindow-r16</i> simultaneously with <i>msgB-ResponseWindow-v1700</i>, and if both fields are absent, the UE uses the value of <i>msgB-ResponseWindow</i> in <i>RACH-ConfigGenericTwoStepRA</i> configured for CBRA.</p>
<p><b><i>preambleTransMax</i></b>  Max number of RA preamble transmission performed before declaring a failure (see TS 38.321 [3], clauses 5.1.4, 5.1.5). If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i>, the UE shall apply the corresponding value in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i>. If the field is absent in other cases, UE shall use the value of <i>preambleTransMax</i> in <i>RACH-ConfigGeneric</i> in the configured BWP. The field is absent if <i>RACH-ConfigGenericTwoStepRA</i> is included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> and then the UE uses the value of <i>preambleTransMax</i> in <i>RACH-ConfigGenericTwoStepRA</i> configured for CBRA.</p>

Conditional Presence	Explanation
2StepOnly	The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> if <i>rach-ConfigCommon</i> field is absent in this <i>BWP-UplinkCommon</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> , Need S. The field is mandatory present in <i>msgA-ConfigCommon</i> in <i>AdditionalRACH-Config</i> if <i>rach-ConfigCommon</i> field is absent in this <i>AdditionalRACH-Config</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> , Need S.
2StepOnlyNoCFRA	The field is mandatory present if <i>RACH-ConfigGenericTwoStepRA</i> is included in the <i>RACH-ConfigCommonTwoStepRA</i> and there are no 4-step random access configurations configured in the BWP (i.e only 2-step random access type configured in the BWP), otherwise (i.e. 4-step random access configuration also exists in the BWP) the field is optionally present, Need S. When <i>RACH-ConfigGenericTwoStepRA</i> is included in the <i>RACH-ConfigDedicated</i> , this field is absent.
NoCFRA	The field is mandatory present if <i>msgB-ResponseWindow-r17</i> is absent and <i>RACH-ConfigGenericTwoStepRA</i> is not included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> , otherwise the field is absent, Need S.
NoCFRA2	The field is mandatory present if <i>msgB-ResponseWindow-r16</i> is absent and <i>RACH-ConfigGenericTwoStepRA</i> is not included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> , otherwise the field is absent, Need S.

## – RACH-ConfigTwoTA

The IE *RACH-ConfigTwoTA* is used to specify random access parameters for each additional PCI configured for the serving cell.

### RACH-ConfigTwoTA information element

```
-- ASN1START
-- TAG-RACH-CONFIGTWOTA-START

RACH-ConfigTwoTA-r18 ::= SEQUENCE {
    additionalPCI-andRACH-Index-r18 AdditionalPCIIndex-r17,
    rach-ConfigGeneric-r18 RACH-ConfigGeneric,
    ssb-perRACH-Occasion-r18 ENUMERATED {oneEighth, oneFourth, oneHalf, one, two, four, eight, sixteen} OPTIONAL, -- Need M
    prach-RootSequenceIndex-r18 CHOICE {
        1839 INTEGER (0..837),
        1139 INTEGER (0..137),
        1571 INTEGER (0..569),
        11151 INTEGER (0..1149)
    },
    msg1-SubcarrierSpacing-r18 SubcarrierSpacing OPTIONAL, -- Cond L139
    ...
}

-- TAG-RACH-CONFIGTWOTA-STOP
-- ASN1STOP
```

<b>RACH-ConfigTwoTA field descriptions</b>
<p><b>additionalPCI-andRACH-Index</b> Indicates the associated PCI to this random access configuration.</p>
<p><b>msg1-SubcarrierSpacing</b> Subcarrier spacing of PRACH when prach-RootSequenceIndex has value set to l139 (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz. If absent, the UE applies the SCS as derived from the <i>prach-ConfigurationIndex</i> in <i>RACH-ConfigGeneric</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]).</p>
<p><b>prach-RootSequenceIndex</b> PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1). The value range depends on whether L=839, L=139, L=571 or L=1151. For FR2-2, only the following values are applicable depending on the used subcarrier spacing: 120 kHz: L=139, L=571, and L=1151 480 kHz: L=139, and L=571 960 kHz: L=139</p>
<p><b>rach-ConfigGeneric</b> RACH parameters for contention free random access occasions for CFRA.</p>
<p><b>ssb-perRACH-Occasion</b> Number of SSBs per RACH occasion.</p>

Conditional Presence	Explanation
L139	The field is mandatory present if <i>prach-RootSequenceIndex</i> L=139, or if L=571 for FR2-2, otherwise the field is absent, Need S.

## – RA-Prioritization

The IE *RA-Prioritization* is used to configure prioritized random access.

### **RA-Prioritization information element**

```

-- ASN1START
-- TAG-RA-PRIORITIZATION-START

RA-Prioritization ::=
    SEQUENCE {
        powerRampingStepHighPriority    ENUMERATED {dB0, dB2, dB4, dB6},
        scalingFactorBI                 ENUMERATED {zero, dot25, dot5, dot75}
        ...
    }

-- TAG-RA-PRIORITIZATION-STOP
-- ASN1STOP

```

OPTIONAL, -- Need R

<i>RA-Prioritization</i> field descriptions
<b><i>powerRampingStepHighPriority</i></b> Power ramping step applied for prioritized random access procedure.
<b><i>scalingFactorBI</i></b> Scaling factor for the backoff indicator (BI) for the prioritized random access procedure. (see TS 38.321 [3], clause 5.1.4). Value <i>zero</i> corresponds to 0, value <i>dot25</i> corresponds to 0.25 and so on.

## – *RA-PrioritizationForSlicing*

The IE *RA-PrioritizationForSlicing* is used to configure prioritized random access for slicing.

### ***RA-PrioritizationForSlicing* information element**

```
-- ASN1START
-- TAG-RA-PRIORITIZATIONFORSLICING-START

RA-PrioritizationForSlicing-r17 ::= SEQUENCE {
    ra-PrioritizationSliceInfoList-r17 RA-PrioritizationSliceInfoList-r17,
    ...
}

RA-PrioritizationSliceInfoList-r17 ::= SEQUENCE (SIZE (1..maxSliceInfo-r17)) OF RA-PrioritizationSliceInfo-r17

RA-PrioritizationSliceInfo-r17 ::= SEQUENCE {
    nsag-ID-List-r17 SEQUENCE (SIZE (1..maxSliceInfo-r17)) OF NSAG-ID-r17,
    ra-Prioritization-r17 RA-Prioritization,
    ...
}

-- TAG-RA-PRIORITIZATIONFORSLICING-STOP
-- ASN1STOP
```

## – *RadioBearerConfig*

The IE *RadioBearerConfig* is used to add, modify and release signalling, multicast MRBs and/or data radio bearers. Specifically, this IE carries the parameters for PDCP and, if applicable, SDAP entities for the radio bearers.

### ***RadioBearerConfig* information element**

```
-- ASN1START
-- TAG-RADIOBEARERCONFIG-START

RadioBearerConfig ::= SEQUENCE {
    srb-ToAddModList SRB-ToAddModList OPTIONAL, -- Cond HO-Conn
    srb3-ToRelease ENUMERATED{true} OPTIONAL, -- Need N

<b>DRB-ToAddMod and MRB-ToAddMod field descriptions</b>
<p><b>cnAssociation</b> Indicates if the bearer is associated with the <i>eps-bearerIdentity</i> (when connected to EPC) or <i>sdap-Config</i> (when connected to 5GC).</p>
<p><b>daps-Config</b> Indicates that the bearer is configured as DAPS bearer. The network does not include this field in an <i>RRCReconfiguration</i> message contained within a <i>LTM-Config</i> IE.</p>
<p><b>drb-Identity</b> In case of DC, the DRB identity is unique within the scope of the UE, i.e. an MCG DRB cannot use the same value as a split DRB. For a split DRB the same identity is used for the MCG and SCG parts/indirect path of the configuration.</p>
<p><b>eps-BearerIdentity</b> The EPS bearer ID determines the EPS bearer.</p>
<p><b>mbs-SessionId</b> Indicates which multicast MBS session the bearer is associated with.</p>
<p><b>mrB-Identity</b> Identification of the multicast MRB.</p>
<p><b>mrB-IdentityNew</b> New identity of the multicast MRB when <i>mrB-Identity</i> needs to be changed, e.g. as a result of a handover.</p>
<p><b>n3c-BearerAssociated</b> Indicates that the radio bearer is associated with the N3C indirect path.</p>
<p><b>reestablishPDCP</b> Indicates that PDCP should be re-established. Network sets this to <i>true</i> whenever the security key used for this radio bearer changes. Key change could for example be due to termination point change for the bearer, reconfiguration with sync, resuming an RRC connection, or the first reconfiguration after reestablishment. It is also applicable for LTE procedures when NR PDCP is configured. Network doesn't include this field for DRB if the bearer is configured as DAPS bearer, if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE, or if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE</p>
<p><b>recoverPDCP</b> Indicates that PDCP should perform recovery according to TS 38.323 [5]. Network doesn't include this field if the bearer is configured as DAPS bearer, if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE, or if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE.</p>
<p><b>sdap-Config</b> The SDAP configuration determines how to map QoS flows to DRBs when NR or E-UTRA connects to the 5GC and presence/absence of UL/DL SDAP headers.</p>

<b>RadioBearerConfig field descriptions</b>
<p><b>securityConfig</b> Indicates the security algorithm and key to use for the signalling and data radio bearers configured with the list in this IE <i>RadioBearerConfig</i>. When the field is not included after AS security has been activated, the UE shall continue to use the currently configured <i>keyToUse</i> and security algorithm for the radio bearers reconfigured with the lists in this IE <i>RadioBearerConfig</i>. The field is not included when configuring SRB1 before AS security is activated.</p>
<p><b>srb3-ToRelease</b> Release SRB3. SRB3 release can only be done over SRB1 and only at SCG release and reconfiguration with sync.</p>

<b>SecurityConfig field descriptions</b>
<p><b>keyToUse</b> Indicates if the bearers configured with the list in this IE <i>RadioBearerConfig</i> are using the master key or the secondary key for deriving ciphering and/or integrity protection keys. For MR-DC, network should not configure SRB1 and SRB2 with secondary key and SRB3 with the master key. When the field is not included, the UE shall continue to use the currently configured <i>keyToUse</i> for the radio bearers reconfigured with the lists in this IE <i>RadioBearerConfig</i>.</p>
<p><b>securityAlgorithmConfig</b> Indicates the security algorithm for the signalling and data radio bearers configured with the list in this IE <i>RadioBearerConfig</i>. When the field is not included, the UE shall continue to use the currently configured security algorithm for the radio bearers reconfigured with the lists in this IE <i>RadioBearerConfig</i>.</p>

<b>SRB-ToAddMod field descriptions</b>
<p><b>discardOnPDCP</b> Indicates that PDCP should discard stored SDU and PDU according to TS 38.323 [5]. Network doesn't include this field if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE which is received within a MCG <i>RRCReconfiguration</i> message via SRB1.</p>
<p><b>reestablishPDCP</b> Indicates that PDCP should be re-established. Network sets this to <i>true</i> whenever the security key used for this radio bearer changes. Key change could for example be due to reconfiguration with sync, for SRB2 when resuming an RRC connection, or at the first reconfiguration after RRC connection reestablishment in NR. For SRB1, when resuming an RRC connection, or at the first reconfiguration after RRC connection reestablishment in NR, the network does not set this field to <i>true</i>. For LTE SRBs using NR PDCP, it could be for handover, RRC connection reestablishment or resume. Network doesn't include this field if any DAPS bearer is configured or if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE. For SRB3, network doesn't include this field if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE.</p>
<p><b>srb-Identity, srb-Identity-v1700, srb-Identity-v1800</b> Value 1 is applicable for SRB1 only. Value 2 is applicable for SRB2 only. Value 3 is applicable for SRB3 only. Value 4 is applicable for SRB4 only. Value 5 is applicable for SRB5 only. If <i>srb-Identity-v1700</i> or <i>srb-Identity-v1800</i> is received for an SRB, the UE shall ignore <i>srb-Identity</i> (i.e. without suffix) for this SRB.</p>

Conditional Presence	Explanation
<i>RBTermChange</i>	The field is mandatory present in case of: <ul style="list-style-type: none"> <li>- set up of signalling and data radio bearer,</li> <li>- change of termination point for the radio bearer between MN and SN.</li> </ul> It is optionally present otherwise, Need S.
<i>RBTermChange1</i>	The field is mandatory present in case of: <ul style="list-style-type: none"> <li>- set up of signalling and data radio bearer,</li> <li>- change of termination point for the radio bearer between MN and SN,</li> <li>- handover from E-UTRA/EPC or E-UTRA/5GC to NR,</li> <li>- handover from NR or E-UTRA/EPC to E-UTRA/5GC if the UE supports NGEN-DC.</li> </ul> It is optionally present otherwise, Need S.
<i>PDCP</i>	The field is mandatory present if the corresponding DRB/multicast MRB is being setup or corresponding DRB/multicast MRB is reconfigured with NR PDCP or corresponding SRB associated with two RLC entities is being setup or if the number of RLC bearers associated with the DRB/multicast MRB or SRB is changed. The field is optionally present, Need S, if the corresponding SRB associated with one RLC entity is being setup or corresponding SRB is reconfigured with NR PDCP; otherwise the field is optionally present, need M.
<i>DRBSetup</i>	The field is mandatory present if the corresponding DRB is being setup; otherwise the field is optionally present, need M.
<i>HO-Conn</i>	The field is mandatory present <ul style="list-style-type: none"> <li>- in case of inter-system handover from E-UTRA/EPC to E-UTRA/5GC or NR,</li> <li>- or when the <i>fullConfig</i> is included in the <i>RRCReconfiguration</i> message and NE-DC/NR-DC is not configured,</li> <li>- or in case of <i>RRCSetup</i>.</li> </ul> Otherwise the field is optionally present, need N. Upon <i>RRCSetup</i> , only SRB1 can be present.
<i>HO-toNR</i>	If <i>mrbs-ToAddModList</i> is not included, the field is mandatory present for UEs other than NCR-MT <ul style="list-style-type: none"> <li>- in case of inter-system handover from E-UTRA/EPC to E-UTRA/5GC or NR,</li> <li>- or when the <i>fullConfig</i> is included in the <i>RRCReconfiguration</i> message and NE-DC/NR-DC is not configured.</li> </ul> In case of <i>RRCSetup</i> , the field is absent; otherwise the field is optionally present, need N.
<i>DAPS</i>	The field is optionally present, need N, in case masterCellGroup includes ReconfigurationWithSync, SCell(s) and SCG are not configured, multi-DCI/single-DCI based multi-TRP are not configured in any DL BWP, <i>supplementaryUplink</i> is not configured, ethernetHeaderCompression is not configured for the DRB, <i>conditionalReconfiguration</i> is not configured, and NR sidelink and V2X sidelink are not configured. Otherwise the field is absent.
<i>MRBSetup</i>	The field is mandatory present if the corresponding multicast MRB is being setup; otherwise the field is optionally present, need M.
<i>N3C MP</i>	The field is optionally present if the corresponding radio bearer is being setup for MP with N3C indirect path, need R. It is absent otherwise.

– *RadioLinkMonitoringConfig*

The IE *RadioLinkMonitoringConfig* is used to configure radio link monitoring for detection of beam- and/or cell radio link failure. See also TS 38.321 [3], clause 5.1.1.

    csi-RS-Index                        NZP-CSI-RS-ResourceId
  },
  ...
}

BeamLinkMonitoringRS-Id-r17 ::= INTEGER (0..maxNrofFailureDetectionResources-1-r17)

-- TAG-RADIOLINKMONITORINGCONFIG-STOP
-- ASN1STOP

```

<b>RadioLinkMonitoringConfig field descriptions</b>
<p><b>additionalPCI</b> Indicates the physical cell IDs (PCI) of the SSBs in the <i>failureDetectionSet2</i>. If <i>candidateBeamRS-List2</i> is configured in IE <i>BeamFailureRecoveryRSConfig</i> the field indicates the physical cell IDs (PCI) of the SSBs in the <i>candidateBeamRS-List2</i>.</p>
<p><b>beamFailureDetectionTimer</b> Timer for beam failure detection (see TS 38.321 [3], clause 5.17). See also the <i>BeamFailureRecoveryConfig</i> IE. Value in number of "Q<sub>out,LR</sub> reporting periods of Beam Failure Detection" Reference Signal (see TS 38.213 [13], clause 6). Value <i>pbfd1</i> corresponds to 1 Q<sub>out,LR</sub> reporting period of Beam Failure Detection Reference Signal, value <i>pbfd2</i> corresponds to 2 Q<sub>out,LR</sub> reporting periods of Beam Failure Detection Reference Signal and so on.</p>
<p><b>beamFailureInstanceMaxCount</b> This field determines after how many beam failure events the UE triggers beam failure recovery (see TS 38.321 [3], clause 5.17). Value n1 corresponds to 1 beam failure instance, value n2 corresponds to 2 beam failure instances and so on.</p>
<p><b>failureDetectionResourcesToAddModList</b> A list of reference signals for detecting beam failure and/or cell level radio link failure (RLF). The limits of the reference signals that the network can configure are specified in TS 38.213 [13], table 5-1. The network configures at most two detectionResources per BWP for the purpose <i>beamFailure</i> or <i>both</i>. If no RSs are provided for the purpose of beam failure detection, the UE performs beam monitoring based on the activated <i>TCI-State</i> for PDCCH as described in TS 38.213 [13], clause 6. If no RSs are provided in this list for the purpose of RLF detection, the UE performs Cell-RLM based on the activated <i>TCI-State</i> of PDCCH as described in TS 38.213 [13], clause 5. The network ensures that the UE has a suitable set of reference signals for performing cell-RLM. If <i>failureDetectionSet1-r17</i> and <i>failureDetectionSet2-r17</i> are present, the <i>purpose</i> of <i>RadioLinkMonitoringRS</i> in <i>failureDetectionResourcesToAddModList</i> only can be set to <i>rfl</i>.</p>
<p><b>failureDetectionSet1, failureDetectionSet2</b> Configures parameters for beamfailure detection towards beam failure detection resources configured in the set. If additional PCIs are configured using <i>additionalPCI-ToAddModList</i> for the serving cell, each RS in one set can be associated only with one PCI. Network always configures the <i>failureDetectionSet1</i> and <i>failureDetectionSet2</i> together. <i>failureDetectionSetN</i> is present if and only if <i>candidateBeamRS-List2-r17</i> is configured. When a <i>failureDetectionSetN</i> is present, after the reconfiguration, the UE shall consider all the reference signals for this failure detection set as activated if at most <i>maxBFD-RS-resourcesPerSetPerBWP-r17</i> reference signals are configured for each failure detection set, otherwise the UE shall consider all the reference signals in this failure detection set as deactivated. If <i>bfdResourcesToAddModList-r17</i> in <i>failureDetectionSetN</i> is not present, the UE determines the RS(es) in each <i>failureDetectionSetN</i> as described in TS 38.213 [13], clause 6.</p>

<b>RadioLinkMonitoringRS field descriptions</b>
<p><b>detectionResource</b> A reference signal that the UE shall use for radio link monitoring or beam failure detection (depending on the indicated <i>purpose</i>). Only periodic 1-port CSI-RS can be configured on SCell for beam failure detection purpose.</p>
<p><b>purpose</b> Determines whether the UE shall monitor the associated reference signal for the purpose of cell- and/or beam failure detection. For SCell, network only configures the value to <i>beamFailure</i>.</p>

– **RadioLinkMonitoringRS-Id**

The IE *RadioLinkMonitoringRS-Id* is used to identify one *RadioLinkMonitoringRS*.

**RadioLinkMonitoringRS-Id information element**

```
-- ASN1START
-- TAG-RADIOLINKMONITORINGRS-ID-START
```

```
RadioLinkMonitoringRS-Id ::= INTEGER (0..maxNrofFailureDetectionResources-1)
```

```
-- TAG-RADIOLINKMONITORINGRS-ID-STOP
-- ASN1STOP
```

## – *RAN-AreaCode*

The IE *RAN-AreaCode* is used to identify a RAN area within the scope of a tracking area.

### ***RAN-AreaCode* information element**

```
-- ASN1START
-- TAG-RAN-AREACODE-START

RAN-AreaCode ::=                INTEGER (0..255)

-- TAG-RAN-AREACODE-STOP
-- ASN1STOP
```

## – *RateMatchPattern*

The IE *RateMatchPattern* is used to configure one rate matching pattern for PDSCH, see TS 38.214 [19], clause 5.1.4.1.

### ***RateMatchPattern* information element**

```
-- ASN1START

    ]]
}

-- TAG-RATEMATCHPATTERN-STOP
-- ASN1STOP

```

### RateMatchPattern field descriptions

#### bitmaps

Indicates rate matching pattern by a pair of bitmaps *resourceBlocks* and *symbolsInResourceBlock* to define the rate match pattern within one or two slots, and a third bitmap *periodicityAndPattern* to define the repetition pattern with which the pattern defined by the above bitmap pair occurs.

#### controlResourceSet

This ControlResourceSet is used as a PDSCH rate matching pattern, i.e., PDSCH reception rate matches around it. In frequency domain, the resource is determined by the frequency domain resource of the CORESET with the corresponding CORESET ID. Time domain resource is determined by the parameters of the associated search space of the CORESET.

If the field *controlResourceSetId-r16* is present, UE shall ignore the *controlResourceSetId* (without suffix).

#### periodicityAndPattern

A time domain repetition pattern at which the pattern defined by *symbolsInResourceBlock* and *resourceBlocks* recurs. This slot pattern repeats itself continuously. Absence of this field indicates the value *n1* (see TS 38.214 [19], clause 5.1.4.1).

#### resourceBlocks

A resource block level bitmap in the frequency domain. A bit in the bitmap set to 1 indicates that the UE shall apply rate matching in the corresponding resource block in accordance with the *symbolsInResourceBlock* bitmap. If used as cell-level rate matching pattern, the bitmap identifies "common resource blocks (CRB)". If used for MBS broadcast CFR, the bitmap identifies "physical resource blocks" inside the MBS broadcast CFR. If used as BWP-level rate matching pattern, the bitmap identifies "physical resource blocks" inside the BWP or MBS multicast CFR. The first/ leftmost bit corresponds to resource block 0, and so on (see TS 38.214 [19], clause 5.1.4.1).

#### subcarrierSpacing

The SubcarrierSpacing for this resource pattern. If the field is absent, the UE applies the SCS of the associated BWP. The value *kHz15* corresponds to  $\mu=0$ , the value *kHz30* corresponds to  $\mu=1$ , and so on.

Only the following values are applicable depending on the used frequency (see TS 38.214 [19], clause 5.1.4.1):

FR1: 15, 30 or 60 kHz

FR2-1/FR2-NTN: 60 or 120 kHz

FR2-2: 120, 480, or 960 kHz

#### symbolsInResourceBlock

A symbol level bitmap in time domain. It indicates with a bit set to true that the UE shall rate match around the corresponding symbol. This pattern recurs (in time domain) with the configured *periodicityAndPattern* (see TS 38.214 [19], clause 5.1.4.1).

For *oneSlot*, if ECP is configured, the first 12 bits represent the symbols within the slot and the last two bits within the bitstring are ignored by the UE; Otherwise, the 14 bits represent the symbols within the slot.

For *twoSlots*, if ECP is configured, the first 12 bits represent the symbols within the first slot and the next 12 bits represent the symbols in the second slot and the last four bits within the bit string are ignored by the UE; Otherwise, the first 14 bits represent the symbols within the first slot and the next 14 bits represent the symbols in the second slot.

For the bits representing symbols in a slot, the most significant bit of the bit string represents the first symbol in the slot and the second most significant bit represents the second symbol in the slot and so on.

Conditional Presence	Explanation
<i>CellLevel</i>	The field is mandatory present if the <i>RateMatchPattern</i> is defined on cell level. The field is absent when the <i>RateMatchPattern</i> is defined on BWP level or defined for MBS broadcast CFR. If the <i>RateMatchPattern</i> is defined on BWP level, the UE applies the SCS of the BWP and if <i>RateMatchPattern</i> is defined for MBS broadcast CFR, the UE applies the SCS of the initial BWP or RedCap-specific initial BWP (if configured) for (e)RedCap UEs.

## – *RateMatchPatternId*

The IE *RateMatchPatternId* identifies one *RateMatchPattern* (see TS 38.214 [19], clause 5.1.4.1).

### ***RateMatchPatternId* information element**

```
-- ASN1START
-- TAG-RATEMATCHPATTERNID-START

RateMatchPatternId ::=                INTEGER (0..maxNrofRateMatchPatterns-1)

-- TAG-RATEMATCHPATTERNID-STOP
-- ASN1STOP
```

## – *RateMatchPatternLTE-CRS*

The IE *RateMatchPatternLTE-CRS* is used to configure a pattern to rate match around LTE CRS. See TS 38.214 [19], clause 5.1.4.2.

### ***RateMatchPatternLTE-CRS* information element**

```
-- ASN1START
-- TAG-RATEMATCHPATTERNLTE-CRS-START

RateMatchPatternLTE-CRS ::=          SEQUENCE {
    carrierFreqDL                      INTEGER (0..16383),
    carrierBandwidthDL                 ENUMERATED {n6, n15, n25, n50, n75, n100, spare2, spare1},
    mbsfn-SubframeConfigList           EUTRA-MBSFN-SubframeConfigList                                OPTIONAL, -- Need M
    nrofCRS-Ports                      ENUMERATED {n1, n2, n4},
    v-Shift                            ENUMERATED {n0, n1, n2, n3, n4, n5}
}

LTE-CRS-PatternList-r16 ::=          SEQUENCE (SIZE (1..maxLTE-CRS-Patterns-r16)) OF RateMatchPatternLTE-CRS

-- TAG-RATEMATCHPATTERNLTE-CRS-STOP
-- ASN1STOP
```

<i>RateMatchPattern</i> LTE-CRS field descriptions
<b>carrierBandwidthDL</b> BW of the LTE carrier in number of PRBs (see TS 38.214 [19], clause 5.1.4.2).
<b>carrierFreqDL</b> Center of the LTE carrier (see TS 38.214 [19], clause 5.1.4.2).
<b>mbsfn-SubframeConfigList</b> LTE MBSFN subframe configuration (see TS 38.214 [19], clause 5.1.4.2).
<b>nrofCRS-Ports</b> Number of LTE CRS antenna port to rate-match around (see TS 38.214 [19], clause 5.1.4.2).
<b>v-Shift</b> Shifting value v-shift in LTE to rate match around LTE CRS (see TS 38.214 [19], clause 5.1.4.2).

### – *ReferenceConfiguration*

The IE *ReferenceConfiguration* is used provide a configuration that is common, within the same cell group, to all configured non-complete candidate configurations.

#### ***ReferenceConfiguration* information element**

```
-- ASN1START
-- TAG-REFERENCECONFIGURATION-START

ReferenceConfiguration-r18 ::= OCTET STRING (CONTAINING RRCReconfiguration)

-- TAG-REFERENCECONFIGURATION-STOP
-- ASN1STOP
```

### – *ReferenceLocation*

The IE *ReferenceLocation* contains location information used as a reference location. The value of the field is same as *Ellipsoid-Point* defined in TS37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

#### ***ReferenceLocation* information element**

```
-- ASN1START
-- TAG-REFERENCELOCATION-START

ReferenceLocation-r17 ::= OCTET STRING

-- TAG-REFERENCELOCATION-STOP
-- ASN1STOP
```

– *ReferenceTimeInfo*

The IE *ReferenceTimeInfo* contains timing information for 5G internal system clock used for, e.g., time stamping, see TS 23.501 [32], clause 5.27.1.2.

**ReferenceTimeInfo information element**

```
-- ASN1START
-- TAG-REFERENCETIMEINFO-START

ReferenceTimeInfo-r16 ::= SEQUENCE {
    time-r16                ReferenceTime-r16,
    uncertainty-r16         INTEGER (0..32767)           OPTIONAL, -- Need S
    timeInfoType-r16       ENUMERATED {localClock}    OPTIONAL, -- Need S
    referenceSFN-r16       INTEGER (0..1023)          OPTIONAL, -- Cond RefTime
}

ReferenceTime-r16 ::= SEQUENCE {
    refDays-r16             INTEGER (0..72999),
    refSeconds-r16         INTEGER (0..86399),
    refMilliSeconds-r16   INTEGER (0..999),
    refTenNanoSeconds-r16 INTEGER (0..99999)
}

-- TAG-REFERENCETIMEINFO-STOP
-- ASN1STOP
```

<b>ReferenceTimeInfo field descriptions</b>
<p><b>referenceSFN</b> This field indicates the reference SFN corresponding to the reference time information. If <i>referenceTimeInfo</i> field is received in <i>DLInformationTransfer</i> message, this field indicates the SFN of PCell.</p>
<p><b>time</b> This field indicates time reference with 10ns granularity. If included in <i>DLInformationTransfer</i> and if UE-side TA PDC is de-activated, the indicated time may not be referenced at the network, i.e., gNB may pre-compensate for RF propagation delay. If included in <i>DLInformationTransfer</i> and if UE is requested to transmit UE Rx-Tx time difference measurement, the indicated time may not be referenced at the network, i.e., gNB may pre-compensate for RF propagation delay. Otherwise, the indicated time is referenced at the network, i.e., without compensating for RF propagation delay. In an NTN cell, the indicated time is referenced at the uplink time synchronization reference point (RP), i.e., UE should take into account the propagation delay between UE and RP when determining the UTC time at the UE. The indicated time in 10ns unit from the origin is <math>refDays*86400*1000*100000 + refSeconds*1000*100000 + refMilliseconds*100000 + refTenNanoSeconds</math>. The <i>refDays</i> field specifies the sequential number of days (with day count starting at 0) from the origin of the <i>time</i> field. If the <i>referenceTimeInfo</i> field is received in <i>DLInformationTransfer</i> message, the time field indicates the <i>time</i> at the ending boundary of the system frame indicated by <i>referenceSFN</i>. The UE considers this frame (indicated by <i>referenceSFN</i>) to be the frame which is nearest to the frame where the message is received (which can be either in the past or in the future). If the <i>referenceTimeInfo</i> field is received in <i>SIB9</i>, the <i>time</i> field indicates the time at the SFN boundary at or immediately after the ending boundary of the SI-window in which <i>SIB9</i> is transmitted. If <i>referenceTimeInfo</i> field is received in <i>SIB9</i>, this field is excluded when determining changes in system information, i.e. changes of time should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>.</p> <p>NOTE: The estimated time in an NTN-cell may be less accurate than the estimated time in a TN-cell.</p>
<p><b>timeInfoType</b> If <i>timeInfoType</i> is not included, the <i>time</i> indicates the GPS time and the origin of the <i>time</i> field is 00:00:00 on Gregorian calendar date 6 January, 1980 (start of GPS time). If <i>timeInfoType</i> is set to <i>localClock</i>, the origin of the <i>time</i> is unspecified.</p>
<p><b>uncertainty</b> This field indicates the uncertainty of the reference time information provided by the time field. The uncertainty is 25ns multiplied by this field. If this field is absent, the uncertainty is unspecified.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>RefTime</i>	The field is mandatory present if <i>referenceTimeInfo</i> is included in <i>DLInformationTransfer</i> message; otherwise the field is absent.

## – *RejectWaitTime*

The IE *RejectWaitTime* is used to provide the value in seconds for timer T302.

### ***RejectWaitTime* information element**

```
-- ASN1START
-- TAG-REJECTWAITTIME-START

RejectWaitTime ::=
    INTEGER (1..16)

-- TAG-REJECTWAITTIME-STOP
-- ASN1STOP
```

– *RepetitionSchemeConfig*

The IE *RepetitionSchemeConfig* is used to configure the UE with repetition schemes as specified in TS 38.214 [19] clause 5.1.

***RepetitionSchemeConfig* information element**

```
-- ASN1START
-- TAG-REPETITIONSchemeCONFIG-START

RepetitionSchemeConfig-r16 ::= CHOICE {
    fdm-TDM-r16                SetupRelease { FDM-TDM-r16 },
    slotBased-r16              SetupRelease { SlotBased-r16 }
}

RepetitionSchemeConfig-v1630 ::= SEQUENCE {
    slotBased-v1630            SetupRelease { SlotBased-v1630 }
}

FDM-TDM-r16 ::=
    SEQUENCE {
        repetitionScheme-r16   ENUMERATED {fdmSchemeA, fdmSchemeB,tdmSchemeA },
        startingSymbolOffsetK-r16 INTEGER (0..7)
    }
    OPTIONAL -- Need R

SlotBased-r16 ::=
    SEQUENCE {
        tciMapping-r16          ENUMERATED {cyclicMapping, sequentialMapping},
        sequenceOffsetForRV-r16 INTEGER (1..3)
    }

SlotBased-v1630 ::=
    SEQUENCE {
        tciMapping-r16          ENUMERATED {cyclicMapping, sequentialMapping},
        sequenceOffsetForRV-r16 INTEGER (0)
    }

-- TAG-REPETITIONSchemeCONFIG-STOP
-- ASN1STOP
```

<b>RepetitionSchemeConfig field descriptions</b>
<p><b>fdm-TDM</b> Configures UE with a repetition scheme among fdmSchemeA, fdmSchemeB and tdmSchemeA as specified in clause 5.1 of TS 38.214 [19]. The network does not set this field to <i>release</i>. Upon reception of this field in <i>RepetitionSchemeConfig-r16</i>, the UE shall release <i>slotBased</i> if previously configured in the same instance of <i>RepetitionSchemeConfig-r16</i>.</p>
<p><b>sequenceOffsetForRV</b> For slot-based repetition scheme, selected RV sequence is applied to transmission occasions associated to the first TCI state. The RV sequence associated to the second TCI state is determined by a RV offset from that selected RV sequence.</p>
<p><b>slotBased</b> Configures UE with slot-based repetition scheme. Network always configures this field when the parameter <i>repetitionNumber</i> is present in IE <i>PDSCH-TimeDomainResourceAllocationList</i>. The network does not set this field to <i>release</i>. Upon reception of this field in <i>RepetitionSchemeConfig-r16</i>, the UE shall release <i>fdm-TDM</i> if previously configured in the same instance of <i>RepetitionSchemeConfig-r16</i>.</p>
<p><b>startingSymbolOffsetK</b> The starting symbol of the second transmission occasion has K symbol offset relative to the last symbol of the first transmission occasion. When UE is configured with <i>tdmSchemeA</i>, the parameter <i>startingSymbolOffsetK</i> is present, otherwise absent.</p>
<p><b>tcMapping</b> Enables TCI state mapping method to PDSCH transmission occasions.</p>

## – *ReportConfigId*

The IE *ReportConfigId* is used to identify a measurement reporting configuration.

### **ReportConfigId information element**

```
-- ASN1START
-- TAG-REPORTCONFIGID-START

ReportConfigId ::=
    INTEGER (1..maxReportConfigId)

-- TAG-REPORTCONFIGID-STOP
-- ASN1STOP
```

## – *ReportConfigInterRAT*

The IE *ReportConfigInterRAT* specifies criteria for triggering of an inter-RAT measurement reporting event, or an L2 U2N relay measurement reporting event. The inter-RAT measurement reporting events for E-UTRA and UTRA-FDD are labelled *BN* with *N* equal to 1, 2 and so on. The measurement reporting events for L2 U2N relay UE are labelled *YN* with *N* equal to 1, 2 and so on, and *Z1*.

Event B1: Neighbour becomes better than absolute threshold;

Event B2: PCell becomes worse than absolute threshold1 AND Neighbour becomes better than another absolute threshold2;

Event Y1: PCell becomes worse than absolute threshold1 AND candidate L2 U2N Relay UE becomes better than another absolute threshold2;

Event Y2: Candidate L2 U2N Relay UE becomes better than absolute threshold;

Event Z1: Serving L2 U2N Relay UE becomes worse than absolute threshold1 AND candidate L2 U2N Relay UE becomes better than another absolute threshold2;

-- ASN1STOP

**ReportConfigInterRAT field descriptions****reportType**

Type of the configured measurement report. In (NG)EN-DC, and NR-DC, network does not configure report of type *ReportCGI-EUTRA* for SCG.

**ReportCGI-EUTRA field descriptions****useAutonomousGaps**

Indicates whether or not the UE is allowed to use autonomous gaps in acquiring system information from the E-UTRAN neighbour cell. When the field is included, the UE applies the corresponding value for T321.

<b>EventTriggerConfigInterRAT field descriptions</b>
<p><b>b2-Threshold1</b> NR threshold to be used in inter RAT measurement report triggering condition for event B2.</p>
<p><b>bN-ThresholdEUTRA</b> E-UTRA threshold value associated with the selected trigger quantity (RSRP, RSRQ, SINR) to be used in inter RAT measurement report triggering condition for event number bN. In the same <i>eventB2</i>, the network configures the same CHOICE name (<i>rsrp</i>, <i>rsrq</i> or <i>sinr</i>) for the <i>MeasTriggerQuantity</i> of the <i>b2-Threshold1</i> and for the <i>MeasTriggerQuantityEUTRA</i> of the <i>b2-Threshold2EUTRA</i>.</p>
<p><b>eventId</b> Choice of inter RAT event triggered reporting criteria.</p>
<p><b>maxReportCells</b> Max number of non-serving cells/candidate L2 U2N Relay UEs to include in the measurement report.</p>
<p><b>reportAmount</b> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types</p>
<p><b>reportOnLeave</b> Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met for a cell in <i>cellsTriggeredList</i> or for a L2 U2N Relay UE in <i>relaysTriggeredList</i>, as specified in 5.5.4.1.</p>
<p><b>reportQuantity, reportQuantityUTRA-FDD</b> The cell measurement quantities to be included in the measurement report. If the field <i>eventB1-UTRA-FDD</i> or <i>eventB2-UTRA-FDD</i> is present, the UE shall ignore the value(s) provided in <i>reportQuantity</i>.</p>
<p><b>reportQuantityRelay</b> The L2 U2N Relay UE measurement quantity to be included in measurement report.</p>
<p><b>timeToTrigger</b> Time during which specific criteria for the event needs to be met in order to trigger a measurement report.</p>
<p><b>bN-ThresholdUTRA-FDD</b> UTRA-FDD threshold value associated with the selected trigger quantity (RSCP, EcN0) to be used in inter RAT measurement report triggering condition for event number bN. <i>utra-FDD-RSCP</i> corresponds to CPICH_RSCP in TS 25.133 [46] for FDD. <i>utra-FDD-EcN0</i> corresponds to CPICH_Ec/No in TS 25.133 [46] for FDD. For <i>utra-FDD-RSCP</i>: The actual value is field value – 115 dBm. For <i>utra-FDD-EcN0</i>: The actual value is (field value – 49)/2 dB.</p>
<p><b>y1-Threshold1</b> NR threshold to be used in measurement report triggering condition for event Y1.</p>
<p><b>y1-Threshold2-Relay</b> L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. RSRP) to be used in measurement report triggering condition for event Y1.</p>
<p><b>y2-Threshold-Relay</b> L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. RSRP) to be used in measurement report triggering condition for event Y2.</p>
<p><b>z1-Threshold1-Relay</b> L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. SL-RSRP and/or SD-RSRP) to be used in measurement report triggering condition for serving Relay UE in event Z1. If the field sd-RSRP is not included, the UE considers it to be equal to sl-RSRP.</p>
<p><b>z1-Threshold2-Relay</b> L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. SD-RSRP) to be used in measurement report triggering condition for candidate Relay UE in event Z1.</p>

<b>PeriodicalReportConfigInterRAT field descriptions</b>
<p><b>maxReportCells</b> Max number of non-serving cells/candidate L2 U2N Relay UEs to include in the measurement report.</p>
<p><b>reportAmount</b> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types</p>
<p><b>reportQuantity, reportQuantityUTRA-FDD</b> The cell measurement quantities to be included in the measurement report. If the field <i>reportQuantityUTRA-FDD</i> is present, the UE shall ignore the value(s) provided in <i>reportQuantity</i>.</p>

<b>CellIndividualOffsetList-EUTRA field descriptions</b>
<p><b>carrierFreq</b> Indicates the EUTRA frequency for which <i>cellIndividualOffset</i> is applicable. If the field is not configured, the EUTRA frequency indicated by <i>carrierFreq</i> within the <i>MeasObjectEUTRA</i> of the <i>measID</i> associated with this <i>ReportConfigInterRAT</i> applies.</p>
<p><b>cellIndividualOffset</b> Cell individual offsets applicable to a specific measurement event. If this field is present, the UE, for the same cell, shall ignore the cell individual offset configured within the <i>MeasObjectEUTRA</i> of the <i>measID</i> associated with this <i>ReportConfigInterRAT</i>.</p>
<p><b>physCellId</b> Physical cell identity of a E-UTRAN cell in the cell list.</p>

## – *ReportConfigNR*

The IE *ReportConfigNR* specifies criteria for triggering of an NR measurement reporting event or of a CHO, CPA or CPC event or of an L2 U2N relay measurement reporting event. For events labelled AN with N equal to 1, 2 and so on, measurement reporting events and CHO, CPA or CPC events are based on cell measurement results, which can either be derived based on SS/PBCH block or CSI-RS.

Event A1: Serving becomes better than absolute threshold;

Event A2: Serving becomes worse than absolute threshold;

Event A3: Neighbour becomes amount of offset better than PCell/PSCell;

Event A4: Neighbour becomes better than absolute threshold;

Event A5: PCell/PSCell becomes worse than absolute threshold1 AND Neighbour/SCell becomes better than another absolute threshold2;

Event A6: Neighbour becomes amount of offset better than SCell;

Event D1: Distance between UE and a reference location *referenceLocation1* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a reference location *referenceLocation2* becomes shorter than configured threshold *distanceThreshFromReference2*;

Event D2: Distance between UE and the serving cell moving reference location determined based on *movingReferenceLocation* and its corresponding satellite ephemeris and epoch time broadcast in *SIB19* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a moving reference location determined based on *referenceLocation* and its corresponding satellite ephemeris and epoch time for the neighbor cell provided in the associated *MeasObjectNR* becomes shorter than configured threshold *distanceThreshFromReference2*;

CondEvent A3: Conditional reconfiguration candidate becomes amount of offset better than PCell/PSCell;

CondEvent A4: Conditional reconfiguration candidate becomes better than absolute threshold where *condEventA4* can also be used for current PSCell (i.e., in case it is configured as candidate PSCell for CondEvent A4 evaluation) for CHO with candidate SCG(s) case ;

CondEvent A5: PCell/PSCell becomes worse than absolute threshold1 AND Conditional reconfiguration candidate becomes better than another absolute threshold2;

CondEvent D1: Distance between UE and a reference location *referenceLocation1* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a reference location *referenceLocation2* of conditional reconfiguration candidate becomes shorter than configured threshold *distanceThreshFromReference2*;

CondEvent D2: Distance between UE and the serving cell moving reference location determined based on *movingReferenceLocation* and its corresponding satellite ephemeris and epoch time broadcast in *SIB19* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a moving reference location determined based on *referenceLocation* and its corresponding satellite ephemeris and epoch time for the conditional reconfiguration candidate provided in the associated *MeasObjectNR* becomes shorter than configured threshold *distanceThreshFromReference2*;

CondEvent T1: Time measured at UE becomes more than configured threshold *t1-Threshold* but is less than *t1-Threshold + duration*;

Event X1: Serving L2 U2N Relay UE becomes worse than absolute threshold1 AND NR Cell becomes better than another absolute threshold2;

Event X2: Serving L2 U2N Relay UE becomes worse than absolute threshold;

For event I1, measurement reporting event is based on CLI measurement results, which can either be derived based on SRS-RSRP or CLI-RSSI.

Event I1: Interference becomes higher than absolute threshold;

The reporting events concerning Aerial UE altitude are labelled *HN* with *N* equal to 1 and 2. Additionally, the reporting events concerning Aerial UE altitude and the neighboring cell measurements simultaneously are labelled *AMHN* with *M* equal to 3, 4, 5 and *N* equal to 1, 2.

Event H1: Aerial UE altitude becomes higher than a threshold;

Event H2: Aerial UE altitude becomes lower than a threshold;

Event A3H1: Neighbour becomes offset better than SpCell and the Aerial UE altitude becomes higher than a threshold;

Event A3H2: Neighbour becomes offset better than SpCell and the Aerial UE altitude becomes lower than a threshold;

Event A4H1: Neighbour becomes better than threshold1 and the Aerial UE altitude becomes higher than a threshold2;

Event A4H2: Neighbour becomes better than threshold1 and the Aerial UE altitude becomes lower than a threshold2;

Event A5H1: SpCell becomes worse than threshold1 and neighbour becomes better than threshold2 and the Aerial UE altitude becomes higher than a threshold3;

Event A5H2: SpCell becomes worse than threshold1 and neighbour becomes better than threshold2 and the Aerial UE altitude becomes lower than a threshold3.

#### **CondTriggerConfig field descriptions**

**a3-Offset**

Offset value(s) to be used in NR conditional reconfiguration triggering condition for cond event a3. The actual value is field value \* 0.5 dB.

**a4-Threshold**

Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR conditional reconfiguration triggering condition for cond event a4.

**a5-Threshold1/ a5-Threshold2**

Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR conditional reconfiguration triggering condition for cond event a5. In the same *condeventA5*, the network configures the same quantity for the *MeasTriggerQuantity* of the *a5-Threshold1* and for the *MeasTriggerQuantity* of the *a5-Threshold2*.

**condEventId**

Choice of NR conditional reconfiguration event triggered criteria.

**distanceThreshFromReference1, distanceThreshFromReference2**

Distance from a fixed reference location configured with *referenceLocation1* or *referenceLocation2* for *condEventD1*. Distance from a moving reference location determined by the UE based on the serving cell *movingReferenceLocation* broadcast in *SIB19* or *referenceLocation* and the corresponding epoch time and satellite ephemeris configured within the *MeasObjectNR* associated to the event for *condEventD2*. Each step represents 50m.

**duration**

This field is used for defining the leaving condition T1-2 for conditional HO event *condEventT1*. Each step represents 100ms.

**nesEvent**

Indicates the event is a NES-specific CHO event and the event is only considered to be satisfied if indication from lower layers is received indicating the applicability of NES-specific CHO event and the related entry condition(s) is fulfilled. This field can only be configured for *condEventA3*, *condEventA4* or *condEventA5*. This field cannot be configured for CPAC.

**referenceLocation1, referenceLocation2**

The *referenceLocation1* is associated to serving cell and *referenceLocation2* is associated to candidate target cell.

**t1-Threshold**

The field counts the number of UTC seconds in 10 ms units since 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900).

**timeToTrigger**

Time during which specific criteria for the event needs to be met in order to execute the conditional reconfiguration evaluation.

#### **ReportConfigNR field descriptions**

**reportType**

Type of the configured measurement report. In MR-DC, network does not configure report of type *reportCGI* using SRB3. The *condTriggerConfig* is used for CHO, CPA or CPC configuration.

**ReportCGI field descriptions*****useAutonomousGaps***

Indicates whether or not the UE is allowed to use autonomous gaps in acquiring system information from the NR neighbour cell. When the field is included, the UE applies the corresponding value for T321.

<b>EventTriggerConfig field descriptions</b>
<p><b>a3-Offset/a6-Offset</b> Offset value(s) to be used in NR measurement report triggering condition for event a3/a6. The actual value is field value * 0.5 dB.</p>
<p><b>aN-ThresholdM</b> Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR measurement report triggering condition for event number aN. If multiple thresholds are defined for event number aN, the thresholds are differentiated by M. In the same <i>eventA5</i>, <i>eventA5H1</i>, <i>eventA5H2</i>, the network configures the same quantity for the <i>MeasTriggerQuantity</i> of the <i>a5-Threshold1</i> and for the <i>MeasTriggerQuantity</i> of the <i>a5-Threshold2</i>.</p>
<p><b>channelOccupancyThreshold</b> RSSI threshold which is used for channel occupancy evaluation.</p>
<p><b>coarseLocationRequest</b> This field is used to request UE to report coarse location information.</p>
<p><b>distanceThreshFromReference1, distanceThreshFromReference2</b> Distance from a fixed reference location configured with <i>referenceLocation1</i> or <i>referenceLocation2</i> for <i>eventD1</i>. Distance from a moving reference location determined by the UE based on the serving cell <i>movingReferenceLocation</i> broadcast in <i>SIB19</i> or <i>referenceLocation</i> and the corresponding epoch time and satellite ephemeris configured within the <i>MeasObjectNR</i> associated to the event for <i>eventD2</i>. Each step represents 50m.</p>
<p><b>eventId</b> Choice of NR event triggered reporting criteria.</p>
<p><b>eventXN-SD-Threshold</b> Indicates the SD-RSRP threshold value for the serving L2 U2N Relay UE in event <i>XN</i> (<i>N</i> equals 1 or 2). If this field is not included, the UE considers the SD-RSRP threshold value equals to the one indicated by <i>x1-Threshold1-Relay</i> <i>x2-Threshold-Relay</i>.</p>
<p><b>includeAltitudeUE</b> This field is used to request UE to report altitude information.</p>
<p><b>maxNrofRS-IndexesToReport</b> Max number of RS indexes to include in the measurement report for A1-A6 events.</p>
<p><b>maxReportCells</b> Max number of non-serving cells to include in the measurement report.</p>
<p><b>numberOfTriggeringCells</b> Indicates the number of cells detected that are required to fulfill an event for a measurement report to be triggered. This field is applicable only for the events concerning neighbor cells, i.e. <i>eventA3</i>, <i>eventA4</i>, <i>eventA5</i>, <i>eventA3H1</i>, <i>eventA3H2</i>, <i>eventA4H1</i>, <i>eventA4H2</i>, <i>eventA5H1</i>, <i>eventA5H2</i>.</p>
<p><b>referenceLocation1, referenceLocation2</b> The <i>referenceLocation1</i> is associated to serving cell and <i>referenceLocation2</i> is associated to neighbour cell.</p>
<p><b>reportAddNeighMeas</b> Indicates that the UE shall include the best neighbour cells per serving frequency.</p>
<p><b>reportAmount</b> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types.</p>
<p><b>reportOnBestCellChange</b> Indicates whether the UE shall only send measurement report if the measured best cell (when configured to <i>n1</i>) or two best cells (when configured to <i>n2</i>) have changed. In this release of the specification, this field is applicable only for the events concerning neighbor cells. This field can only be configured when the value of the field <i>reportAmount</i> is set to any other value than <i>r1</i>.</p>
<p><b>reportOnLeave</b> Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met for a cell in <i>cellsTriggeredList</i> or for a L2 U2N Relay UE in <i>relaysTriggeredList</i>, as specified in 5.5.4.1. Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met if configured in <i>eventD1</i>, <i>eventD2</i>, <i>eventH1</i>, <i>eventH2</i> as specified in 5.5.4.1.</p>
<p><b>reportQuantityCell</b> The cell measurement quantities to be included in the measurement report.</p>

<b>reportQuantityRS-Indexes</b>
Indicates which measurement information per RS index the UE shall include in the measurement report.
<b>simulMultiTriggerSingleMeasReport</b>
Indicates when multiple events with the same <i>eventID</i> satisfy the measurement report triggering condition(s), whether to consider only the event with the smallest value between the altitude of the UE and the configured altitude threshold.
<b>timeToTrigger</b>
Time during which specific criteria for the event needs to be met in order to trigger a measurement report.
<b>useAllowedCellList</b>
Indicates whether only the cells included in the allow-list of the associated measObject are applicable as specified in 5.5.4.1.
<b>useT312</b>
If value <i>TRUE</i> is configured, the UE shall use the timer T312 with the value <i>t312</i> as specified in the corresponding <i>measObjectNR</i> . If value <i>FALSE</i> is configured, the timer T312 is considered as disabled. Network configures value <i>TRUE</i> only if <i>reportType</i> is set to <i>eventTriggered</i> .
<b>xN-ThresholdM</b>
Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR measurement report triggering condition for event xN. If multiple thresholds are defined for event number xN, the thresholds are differentiated by M. <i>x1-Threshold1</i> and <i>x2-Threshold</i> indicates the threshold value for the serving L2 U2N Relay UE, <i>x1-Threshold2</i> indicates the threshold value for the NR Cells.

<b>CLI-EventTriggerConfig field descriptions</b>
<b>i1-Threshold</b>
Threshold value associated to the selected trigger quantity (e.g. SRS-RSRP, CLI-RSSI) to be used in CLI measurement report triggering condition for event i1.
<b>eventId</b>
Choice of CLI event triggered reporting criteria.
<b>maxReportCLI</b>
Max number of CLI measurement resource to include in the measurement report.
<b>reportAmount</b>
Number of measurement reports.
<b>reportOnLeave</b>
Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met for a CLI measurement resource in <i>srsTriggeredList</i> or <i>rssiTriggeredList</i> , as specified in 5.5.4.1.
<b>timeToTrigger</b>
Time during which specific criteria for the event needs to be met in order to trigger a measurement report.

<b>CLI-PeriodicalReportConfig field descriptions</b>
<b>maxReportCLI</b>
Max number of CLI measurement resource to include in the measurement report.
<b>reportAmount</b>
Number of measurement reports.
<b>reportQuantityCLI</b>
The CLI measurement quantities to be included in the measurement report.

<b>PeriodicalReportConfig field descriptions</b>
<p><b>coarseLocationRequest</b> This field is used to request UE to report coarse location information.</p>
<p><b>maxNrofRS-IndexesToReport</b> Max number of RS indexes to include in the measurement report.</p>
<p><b>maxReportCells</b> Max number of non-serving cells to include in the measurement report.</p>
<p><b>reportAddNeighMeas</b> Indicates that the UE shall include the best neighbour cells per serving frequency.</p>
<p><b>reportAmount</b> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types</p>
<p><b>reportQuantityCell</b> The cell measurement quantities to be included in the measurement report.</p>
<p><b>reportQuantityRS-Indexes</b> Indicates which measurement information per RS index the UE shall include in the measurement report.</p>
<p><b>ul-DelayValueConfig</b> Indicates that the UE shall perform the actual UL PDCP Packet Average Delay measurement per DRB as specified in TS 38.314 [53] and the UE shall ignore the fields <i>reportQuantityCell</i> and <i>maxReportCells</i>. The applicable values for the corresponding <i>reportInterval</i> are (one of the) {ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, ms20480, ms40960, min1, min6, min12, min30}. The <i>reportInterval</i> indicates the periodicity for performing and reporting of UL PDCP Packet Average Delay per DRB measurement as specified in TS 38.314 [53].</p>
<p><b>ul-ExcessDelayConfig</b> Indicates that the UE shall perform the actual UL PDCP Excess Packet Delay per DRB measurement as specified in TS 38.314 [53] and the UE shall ignore the fields <i>reportQuantityCell</i> and <i>maxReportCells</i>. The applicable values for the corresponding <i>reportInterval</i> are (one of the) {ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, ms20480, ms40960, min1, min6, min12, min30}. The <i>reportInterval</i> indicates the periodicity for performing and reporting of UL PDCP Excess Packet Delay per DRB measurement as specified in TS 38.314 [53].</p>
<p><b>useAllowedCellList</b> Indicates whether only the cells included in the allow-list of the associated measObject are applicable as specified in 5.5.4.1.</p>

<b>ReportSFTD-NR field descriptions</b>
<p><b>cellForWhichToReportSFTD</b> Indicates the target NR neighbour cells for SFTD measurement between PCell and NR neighbour cells.</p>
<p><b>drx-SFTD-NeighMeas</b> Indicates that the UE shall use available idle periods (i.e. DRX off periods) for the SFTD measurement in NR standalone. The network only includes <i>drx-SFTD-NeighMeas</i> field when <i>reprtSFTD-NeighMeas</i> is set to true.</p>
<p><b>reportSFTD-Meas</b> Indicates whether UE is required to perform SFTD measurement between PCell and NR PSCell in NR-DC.</p>
<p><b>reportSFTD-NeighMeas</b> Indicates whether UE is required to perform SFTD measurement between PCell and NR neighbour cells in NR standalone. The network does not include this field if <i>reportSFTD-Meas</i> is set to true.</p>
<p><b>reportRSRP</b> Indicates whether UE is required to include RSRP result of NR PSCell or NR neighbour cells in SFTD measurement result, derived based on SSB. If it is set to true, the network should ensure that <i>ssb-ConfigMobility</i> is included in the measurement object for NR PSCell or NR neighbour cells.</p>

<b>RxTxPeriodical field descriptions</b>
<p><b>reportAmount</b> This field indicates the number of UE Rx-Tx time difference measurement reports. If configured to <i>r1</i>, the network does not configure <i>rxTxReportInterval</i> and only one measurement is reported. If configured to <i>infinity</i>, UE periodically reports measurements according to the periodicity configured by <i>rxTxReportInterval</i>.</p>
<p><b>rxTxReportInterval</b> This field indicates the measurement reporting periodicity of UE Rx-Tx time difference.</p>

<b>other field descriptions</b>
<p><b>MeasTriggerQuantity</b> SINR is applicable only for CONNECTED mode events.</p>

<b>ReportOnScellActivation field descriptions</b>
<p><b>rsType</b> Indicates which RS is used to provide the measurement result. Only value <i>ssb</i> can be set in this release.</p>
<p><b>reportQuantityRS-Indexes</b> Indicates which measurement information per RS index is used to sort the reported measurement results and is included in the measurement report.</p>
<p><b>maxNrofRS-IndexesToReport</b> Max number of RS indexes to include in the measurement report.</p>
<p><b>includeBeamMeasurements</b> Indicates whether to include the measurement result per RS index in the measurement report.</p>

<b>CellIndividualOffsetList field descriptions</b>
<p><b>cellIndividualOffset</b> Cell individual offsets applicable to a specific measurement event. If this field is present, the UE, for the same cell, shall ignore the cell individual offset configured within the <i>MeasObjectNR</i> of the <i>measID</i> associated with this <i>ReportConfigNR</i>.</p>
<p><b>physCellId</b> Physical cell identity of a cell in the cell list.</p>
<p><b>ssbFrequency</b> Indicates the NR frequency of SS for which <i>cellIndividualOffset</i> is applicable. If the field is not configured, the NR frequency of SS indicated by <i>ssbFrequency</i> indicated within the <i>MeasObjectNR</i> of the <i>measID</i> associated with this <i>ReportConfigNR</i> applies.</p>

## – *ReportConfigNR-SL*

The IE *ReportConfigNR-SL* specifies criteria for triggering of a CBR measurement reporting event for NR sidelink communication/discovery. Measurement reporting events are based on CBR measurement results on the corresponding transmission resource pools. These events are labelled CN with N equal to 1 and 2.

Event C1: CBR of NR sidelink communication/discovery is above a threshold;

Event C2: CBR of NR sidelink communication/discovery is below a threshold;

**ReportConfigNR-SL information element**

```

-- ASN1START
-- TAG-REPORTCONFIGNR-SL-START

ReportConfigNR-SL-r16 ::=          SEQUENCE {
    reportType-r16                  CHOICE {
        periodical-r16              PeriodicalReportConfigNR-SL-r16,
        eventTriggered-r16          EventTriggerConfigNR-SL-r16
    }
}

EventTriggerConfigNR-SL-r16 ::= SEQUENCE {
    eventId-r16                     CHOICE {
        eventC1                     SEQUENCE {
            c1-Threshold-r16        SL-CBR-r16,
            hysteresis-r16           Hysteresis,
            timeToTrigger-r16       TimeToTrigger
        },
        eventC2-r16                 SEQUENCE {
            c2-Threshold-r16        SL-CBR-r16,
            hysteresis-r16           Hysteresis,
            timeToTrigger-r16       TimeToTrigger
        },
        ...
    },
    reportInterval-r16              ReportInterval,
    reportAmount-r16                ENUMERATED {r1, r2, r4, r8, r16, r32, r64, infinity},
    reportQuantity-r16              MeasReportQuantity-r16,
    ...
}

PeriodicalReportConfigNR-SL-r16 ::= SEQUENCE {
    reportInterval-r16              ReportInterval,

    ...
}

-- TAG-REPORTCONFIGNR-SL-STOP
-- ASN1STOP

```

**ReportConfigNR-SL field descriptions****reportType**

Type of the configured CBR measurement report for NR sidelink communication/discovery.

<i>EventTriggerConfigNR-SL</i> field descriptions
<b><i>cN-Threshold</i></b> Threshold used for events C1 and C2 specified in clauses 5.5.4.11 and 5.5.4.12, respectively.
<b><i>eventId</i></b> Choice of NR event triggered reporting criteria.
<b><i>reportAmount</i></b> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types.
<b><i>reportQuantity</i></b> The sidelink measurement quantities to be included in the measurement report. In this release, this is set as the CBR measurement result.
<b><i>timeToTrigger</i></b> Time during which specific criteria for the event needs to be met in order to trigger a measurement report.

<i>PeriodicalReportConfigNR-SL</i> field descriptions
<b><i>reportAmount</i></b> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types.
<b><i>reportQuantity</i></b> The sidelink measurement quantities to be included in the measurement report. In this release, this is set as the CBR measurement result.

## – *ReportConfigToAddModList*

The IE *ReportConfigToAddModList* concerns a list of reporting configurations to add or modify.

### ReportConfigToAddModList information element

```
-- ASN1START
-- TAG-REPORTCONFIGTOADDMODLIST-START

ReportConfigToAddModList ::=          SEQUENCE (SIZE (1..maxReportConfigId)) OF ReportConfigToAddMod

ReportConfigToAddMod ::=              SEQUENCE {
    reportConfigId                    ReportConfigId,
    reportConfig                       CHOICE {
        reportConfigNR                ReportConfigNR,
        . . . ,
        reportConfigInterRAT          ReportConfigInterRAT,
        reportConfigNR-SL-r16        ReportConfigNR-SL-r16
    }
}

-- TAG-REPORTCONFIGTOADDMODLIST-STOP
-- ASN1STOP
```

## – *ReportInterval*

The IE *ReportInterval* indicates the interval between periodical reports. The *ReportInterval* is applicable if the UE performs periodical reporting (i.e. when *reportAmount* exceeds 1) when *reportType* is set to either *eventTriggered*, *periodical*, *cli-EventTriggered* or *cli-Periodical*. Value *ms120* corresponds to 120 ms, value *ms240* corresponds to 240 ms and so on, while value *min1* corresponds to 1 min, *min6* corresponds to 6 min and so on.

### ***ReportInterval* information element**

```
-- ASN1START
-- TAG-REPORTINTERVAL-START

ReportInterval ::=
    ENUMERATED {ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, ms20480, ms40960,
                min1,min6, min12, min30 }

-- TAG-REPORTINTERVAL-STOP
-- ASN1STOP
```

## – *ReselectionThreshold*

The IE *ReselectionThreshold* is used to indicate an Rx level threshold for cell reselection. Actual value of threshold = field value \* 2 [dB].

### ***ReselectionThreshold* information element**

```
-- ASN1START
-- TAG-RESELECTIONTHRESHOLD-START

ReselectionThreshold ::=
    INTEGER (0..31)

-- TAG-RESELECTIONTHRESHOLD-STOP
-- ASN1STOP
```

## – *ReselectionThresholdQ*

The IE *ReselectionThresholdQ* is used to indicate a quality level threshold for cell reselection. Actual value of threshold = field value [dB].

### ***ReselectionThresholdQ* information element**

```
-- ASN1START
-- TAG-RESELECTIONTHRESHOLDQ-START

ReselectionThresholdQ ::=
    INTEGER (0..31)

-- TAG-RESELECTIONTHRESHOLDQ-STOP
-- ASN1STOP
```

## – ResumeCause

The IE *ResumeCause* is used to indicate the resume cause in *RRCResumeRequest*, *RRCResumeRequest1* and *UEAssistanceInformation*.

### ResumeCause information element

```
-- ASN1START
-- TAG-RESUMECAUSE-START

ResumeCause ::=          ENUMERATED {emergency, highPriorityAccess, mt-Access, mo-Signalling,
                             mo-Data, mo-VoiceCall, mo-VideoCall, mo-SMS, rna-Update, mps-PriorityAccess,
                             mcs-PriorityAccess, mt-SDT-v1810, srs-PosConfigOrActivationReq-v1800, spare3, spare2, spare1 }

-- TAG-RESUMECAUSE-STOP
-- ASN1STOP
```

## – RLC-BearerConfig

The IE *RLC-BearerConfig* is used to configure an RLC entity, a corresponding logical channel in MAC and the linking to a PDCP entity (served radio bearer).

### RLC-BearerConfig information element

```
-- ASN1START
-- TAG-RLC-BEARERCONFIG-START

RLC-BearerConfig ::=
  logicalChannelIdentity      SEQUENCE {
    LogicalChannelIdentity,
    servedRadioBearer        CHOICE {
      srb-Identity            SRB-Identity,
      drb-Identity            DRB-Identity
    }
  }
  reestablishRLC              ENUMERATED {true}
  rlc-Config                  RLC-Config
  mac-LogicalChannelConfig    LogicalChannelConfig
  ...,
  [[
    rlc-Config-v1610          RLC-Config-v1610
  ]],
  [[
    rlc-Config-v1700          RLC-Config-v1700
    logicalChannelIdentityExt-r17 LogicalChannelIdentityExt-r17
    multicastRLC-BearerConfig-r17 MulticastRLC-BearerConfig-r17
    servedRadioBearerSRB4-r17   SRB-Identity-v1700
  ]]
}

MulticastRLC-BearerConfig-r17 ::=
  servedMBS-RadioBearer-r17    MRB-Identity-r17,
  isPTM-Entity-r17            ENUMERATED {true}
}

OPTIONAL, -- Cond LCH-SetupOnly
OPTIONAL, -- Need N
OPTIONAL, -- Cond LCH-Setup
OPTIONAL, -- Cond LCH-Setup
OPTIONAL, -- Need R
OPTIONAL, -- Need R
OPTIONAL, -- Cond LCH-SetupModMRB
OPTIONAL, -- Cond LCH-SetupOnlyMRB
OPTIONAL, -- Need N
OPTIONAL, -- Need S
```

LogicalChannelIdentityExt-r17 ::= INTEGER (320..65855)

-- TAG-RLC-BEARERCONFIG-STOP

-- ASN1STOP

<b>RLC-BearerConfig field descriptions</b>	
<b>isPTM-Entity</b>	If configured, indicates that the RLC entity is used for PTM reception. When the field is absent the RLC entity is used for PTP transmission/reception.
<b>logicalChannelIdentity</b>	ID used commonly for the MAC logical channel and for the RLC bearer. Value 4 is not configured for DRBs if SRB4 is configured.
<b>logicalChannelIdentityExt</b>	Extended logical channel ID used commonly for the MAC logical channel and for the RLC bearer for PTM reception. If this field is configured, the UE shall ignore <i>logicalChannelIdentity</i> .
<b>reestablishRLC</b>	Indicates that RLC should be re-established. Network sets this to <i>true</i> at least whenever the security key used for the radio bearer associated with this RLC entity changes. For SRB2, multicast MRBs and DRBs, unless full configuration is used, it is also set to <i>true</i> during the resumption of the RRC connection or the first reconfiguration after reestablishment. For SRB1, when resuming an RRC connection, or at the first reconfiguration after RRC connection reestablishment, the network does not set this field to <i>true</i> . The network does not include this field if <i>servedRadioBearer</i> is set to <i>drb-Identity</i> and the <i>RLC-BearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE. For DRBs, network doesn't include this field if the <i>RLC-BearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE. Network doesn't include this field if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE which is received within a MCG <i>RRCReconfiguration</i> message via SRB1.
<b>rlc-Config</b>	Determines the RLC mode (UM, AM) and provides corresponding parameters. RLC mode reconfiguration can only be performed by DRB/multicast MRB release/addition or full configuration. The network may configure <i>rlc-Config-v1610</i> only when <i>rlc-Config</i> (without suffix) is set to <i>am</i> .
<b>servedMBS-RadioBearer</b>	Associates the RLC Bearer with a multicast MRB. The UE shall deliver DL RLC SDUs received via the RLC entity of this RLC bearer to the PDCP entity of the <i>servedMBS-RadioBearer</i> .
<b>servedRadioBearer, servedRadioBearerSRB4</b>	Associates the RLC Bearer with an SRB or a DRB. The UE shall deliver DL RLC SDUs received via the RLC entity of this RLC bearer to the PDCP entity of the <i>servedRadioBearer</i> . Furthermore, the UE shall advertise and deliver uplink PDCP PDUs of the uplink PDCP entity of the <i>servedRadioBearer</i> to the uplink RLC entity of this RLC bearer unless the uplink scheduling restrictions ( <i>moreThanOneRLC</i> in <i>PDCP-Config</i> and the restrictions in <i>LogicalChannelConfig</i> ) forbid it to do so.

Conditional Presence	Explanation
<i>LCH-Setup</i>	This field is mandatory present upon creation of a new logical channel for a DRB or a multicast MRB or SRB4. This field is optionally present, Need S, upon creation of a new logical channel for an SRB except SRB4. It is optionally present, Need M, otherwise.
<i>LCH-SetupModMRB</i>	This field is optionally present upon creation of a new logical channel for PTM reception for a multicast MRB. If this field is included upon creation of a new logical channel for PTM reception for a multicast MRB, it shall be present when modifying this logical channel. The field is absent for logical channels configured for an SRB and a DRB.
<i>LCH-SetupOnly</i>	This field is mandatory present upon creation of a new logical channel for a DRB or an SRB ( <i>servedRadioBearer</i> ). It is absent, Need M otherwise.
<i>LCH-SetupOnlyMRB</i>	This field is mandatory present upon creation of a new logical channel for a multicast MRB and upon modification of <i>MRB-Identity</i> of the served MRB. It is absent, Need M otherwise.

– *RLC-Config*

The IE *RLC-Config* is used to specify the RLC configuration of SRBs, multicast MRBs and DRBs.

***RLC-Config* information element**

```

-- ASN1START
-- TAG-RLC-CONFIG-START

#### RLC-Config field descriptions

##### **maxRetxThreshold**

Parameter for RLC AM in TS 38.322 [4]. Value *t1* corresponds to 1 retransmission, value *t2* corresponds to 2 retransmissions and so on.

##### **pollByte**

Parameter for RLC AM in TS 38.322 [4]. Value *kB25* corresponds to 25 kBytes, value *kB50* corresponds to 50 kBytes and so on. *infinity* corresponds to an infinite amount of kBytes.

##### **pollPDU**

Parameter for RLC AM in TS 38.322 [4]. Value *p4* corresponds to 4 PDUs, value *p8* corresponds to 8 PDUs and so on. *infinity* corresponds to an infinite number of PDUs.

##### **sn-FieldLength**

Indicates the RLC SN field size, see TS 38.322 [4], in bits. Value *size6* means 6 bits, value *size12* means 12 bits, value *size18* means 18 bits. The value of *sn-FieldLength* of an RLC entity for the DRB/multicast MRB shall be changed only using reconfiguration with sync. The network configures only value *size12* in *SN-FieldLengthAM* for SRB.

##### **t-PollRetransmit**

Timer for RLC AM in TS 38.322 [4], in milliseconds. Value *ms5* means 5 ms, value *ms10* means 10 ms and so on.

##### **t-Reassembly, t-ReassemblyExt**

Timer for reassembly in TS 38.322 [4], in milliseconds. Value *ms0* means 0 ms, value *ms5* means 5 ms and so on. If *t-ReassemblyExt-r17* is configured, the UE shall ignore *t-Reassembly* (without suffix).

##### **t-StatusProhibit**

Timer for status reporting in TS 38.322 [4], in milliseconds. Value *ms0* means 0 ms, value *ms5* means 5 ms and so on. If *t-StatusProhibit-v1610* is present, the UE shall ignore *t-StatusProhibit* (without suffix).

Conditional Presence	Explanation
<i>Reestab</i>	The field is mandatory present at RLC bearer setup. It is optionally present, need M, at RLC re-establishment. Otherwise it is absent. Need M.

## – *RLF-TimersAndConstants*

The IE *RLF-TimersAndConstants* is used to configure UE specific timers and constants.

### *RLF-TimersAndConstants* information element

```
-- ASN1START
-- TAG-RLF-TIMERSANDCONSTANTS-START

RLF-TimersAndConstants ::=          SEQUENCE {
    t310                             ENUMERATED {ms0, ms50, ms100, ms200, ms500, ms1000, ms2000, ms4000, ms6000},
    n310                             ENUMERATED {n1, n2, n3, n4, n6, n8, n10, n20},
    n311                             ENUMERATED {n1, n2, n3, n4, n5, n6, n8, n10},
    . . . ,
    [[
    t311                             ENUMERATED {ms1000, ms3000, ms5000, ms10000, ms15000, ms20000, ms30000}
    ]]
}

-- TAG-RLF-TIMERSANDCONSTANTS-STOP
-- ASN1STOP
```

### *RLF-TimersAndConstants* field descriptions

#### ***n3xy***

Constants are described in clause 7.3. Value *n1* corresponds to 1, value *n2* corresponds to 2 and so on.

#### ***t3xy***

Timers are described in clause 7.1. Value *ms0* corresponds to 0 ms, value *ms50* corresponds to 50 ms and so on.

## – *RNTI-Value*

The IE *RNTI-Value* represents a Radio Network Temporary Identity.

### *RNTI-Value* information element

```
-- ASN1START
-- TAG-RNTI-VALUE-START

RNTI-Value ::=                      INTEGER (0..65535)

-- TAG-RNTI-VALUE-STOP
-- ASN1STOP
```

### – *RSRP-Range*

The IE *RSRP-Range* specifies the value range used in RSRP measurements and thresholds. For measurements, integer value for RSRP measurements is according to Table 10.1.6.1-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value – 156) dBm, except for the IE value 127, in which case the actual value is infinity.

#### ***RSRP-Range* information element**

```
-- ASN1START
-- TAG-RSRP-RANGE-START

RSRP-Range ::=
    INTEGER(0..127)

-- TAG-RSRP-RANGE-STOP
-- ASN1STOP
```

### – *RSRQ-Range*

The IE *RSRQ-Range* specifies the value range used in RSRQ measurements and thresholds. For measurements, integer value for RSRQ measurements is according to Table 10.1.11.1-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value – 87) / 2 dB.

#### ***RSRQ-Range* information element**

```
-- ASN1START
-- TAG-RSRQ-RANGE-START

RSRQ-Range ::=
    INTEGER(0..127)

-- TAG-RSRQ-RANGE-STOP
-- ASN1STOP
```

### – *RSSI-Range*

The IE *RSSI-Range* specifies the value range used in RSSI measurements and thresholds for NR operation with shared spectrum channel access. The integer value for RSSI measurements is according to Table 10.1.34.3-1 in TS 38.133 [14].

#### ***RSSI-Range* information element**

```
-- ASN1START
-- TAG-RSSI-RANGE-START

RSSI-Range-r16 ::=
    INTEGER(0..76)

-- TAG-RSSI-RANGE-STOP
```

```
-- ASN1STOP
```

## – *RxTxTimeDiff*

The IE *RxTxTimeDiff* contains the Rx-Tx time difference measurement at either the UE or the gNB.

### *RxTxTimeDiff* information element

```
-- ASN1START
-- TAG-RXTXTIMEDIFF-START

RxTxTimeDiff-r17 ::= SEQUENCE {
    result-k5-r17          INTEGER (0..61565)          OPTIONAL, -- Need N
    ...
}

-- TAG-RXTXTIMEDIFF-STOP
-- ASN1STOP
```

<i>RxTxTimeDiff</i> field descriptions
<p><b>result-k5</b> This field indicates the Rx-Tx time difference measurement, see TS 38.215 [9], clause 10.1.25.3.1 of TS 38.133 [14] for UE Rx-Tx time difference and clause 13.2.1 of TS 38.133 [14] for gNB Rx-Tx time difference.</p>

## – *SCellActivationRS-Config*

The IE *SCellActivationRS-Config* is used to configure a Reference Signal for fast activation of the SCell where the IE is included (see TS 38.214 [19], clause 5.2.1.5.3. Usage of an *SCellActivationRS-Config* is indicated by including its *scellActivationRS-Id* in the Enhanced SCell activation MAC CE (see TS 38.321 [3] clause 6.1.3.55).

### *SCellActivationRS-Config* information element

```
-- ASN1START
-- TAG-SCELLACTIVATIONRS-CONFIG-START

SCellActivationRS-Config-r17 ::= SEQUENCE {
    scellActivationRS-Id-r17          SCellActivationRS-ConfigId-r17,
    resourceSet-r17                  NZP-CSI-RS-ResourceSetId,
    gapBetweenBursts-r17              INTEGER (2..31)          OPTIONAL, -- Need R
    qcl-Info-r17                      TCI-StateId,
    ...
}

-- TAG-SCELLACTIVATIONRS-CONFIG-STOP
-- ASN1STOP
```

<b><i>SCellActivationRS-Config</i> field descriptions</b>
<p><b>gapBetweenBursts</b> When this field is present, there are two bursts and it indicates the gap between the two bursts in number of slots. When this field is absent, there is a single burst.</p>
<p><b>qcl-Info</b> Reference to TCI-State for providing the QCL source and QCL type for each <i>NZP-CSI-RS-Resource</i> listed in <i>nzp-CSI-RS-Resources</i> of the <i>NZP-CSI-RS-ResourceSet</i> indicated by <i>resourceSet</i> (see TS 38.214 [19], clause 5.1.6.1.1.1). <i>TCI-StateId</i> refers to the <i>TCI-State</i> which has this value for <i>tcI-StateId</i> and is defined in <i>tcI-StatesToAddModList</i> or <i>dl-Or-JointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> of this serving cell indicated by <i>firstActiveDownlinkBWP-Id</i> in the <i>ServingCellConfig</i> in which this IE is included.</p>
<p><b>resourceSet</b> <i>nzp-CSI-ResourceSetId</i> of the <i>NZP-CSI-RS-ResourceSet</i> of this serving cell used as resource configuration for one or two bursts for SCell activation. This <i>NZP-CSI-RS-ResourceSet</i> consists of four <i>NZP-CSI-RS-Resources</i> in two consecutive slots with two <i>NZP-CSI-RS-Resources</i> in each slot (see TS 38.214 [19], clause 5.1.6.1.1.1). The <i>CSI-RS</i> associated with this <i>NZP-CSI-RS-ResourceSet</i> are located in the <i>BWP</i> addressed by <i>firstActiveDownlinkBWP-Id</i>.</p>

## – *SCellActivationRS-ConfigId*

The IE *SCellActivationRS-ConfigId* is used to identify one *SCellActivationRS-Config*.

### ***SCellActivationRS-ConfigId* information element**

```
-- ASN1START
-- TAG-SCCELLACTIVATIONRS-CONFIGID-START

SCellActivationRS-ConfigId-r17 ::=          INTEGER (1.. maxNrofSCellActRS-r17)

-- TAG-SCCELLACTIVATIONRS-CONFIGID-STOP
-- ASN1STOP
```

## – *SCellIndex*

The IE *SCellIndex* concerns a short identity, used to identify an SCell. The value range is shared across the Cell Groups.

### ***SCellIndex* information element**

```
-- ASN1START
-- TAG-SCCELLINDEX-START

SCellIndex ::=          INTEGER (1..31)

-- TAG-SCCELLINDEX-STOP
-- ASN1STOP
```

## – SchedulingRequestConfig

The IE *SchedulingRequestConfig* is used to configure the parameters, for the dedicated scheduling request (SR) resources.

### SchedulingRequestConfig information element

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTCONFIG-START

SchedulingRequestConfig ::=          SEQUENCE {
    schedulingRequestToAddModList     SEQUENCE (SIZE (1..maxNrofSR-ConfigPerCellGroup)) OF SchedulingRequestToAddMod
                                     OPTIONAL, -- Need N
    schedulingRequestToReleaseList    SEQUENCE (SIZE (1..maxNrofSR-ConfigPerCellGroup)) OF SchedulingRequestId
                                     OPTIONAL  -- Need N
}

SchedulingRequestToAddMod ::=        SEQUENCE {
    schedulingRequestId               SchedulingRequestId,
    sr-ProhibitTimer                  ENUMERATED {ms1, ms2, ms4, ms8, ms16, ms32, ms64, ms128}          OPTIONAL, -- Need S
    sr-TransMax                       ENUMERATED { n4, n8, n16, n32, n64, spare3, spare2, spare1}
}

SchedulingRequestConfig-v1700 ::=    SEQUENCE {
    schedulingRequestToAddModListExt-v1700 SEQUENCE (SIZE (1..maxNrofSR-ConfigPerCellGroup)) OF SchedulingRequestToAddModExt-v1700
                                     OPTIONAL  -- Need N
}

SchedulingRequestToAddModExt-v1700 ::= SEQUENCE {
    sr-ProhibitTimer-v1700            ENUMERATED { ms192, ms256, ms320, ms384, ms448, ms512, ms576, ms640, ms1082, spare7, spare6, spare5,
    spare4, spare3, spare2, spare1}
                                     OPTIONAL  -- Need R
}

-- TAG-SCHEDULINGREQUESTCONFIG-STOP
-- ASN1STOP
```

#### SchedulingRequestConfig field descriptions

##### **schedulingRequestToAddModList, schedulingRequestToAddModListExt**

List of Scheduling Request configurations to add or modify. If *schedulingRequestToAddModListExt* is configured, it contains the same number of entries, and in the same order, as *schedulingRequestToAddModList*.

##### **schedulingRequestToReleaseList**

List of Scheduling Request configurations to release.

<b>SchedulingRequestToAddMod field descriptions</b>
<b>schedulingRequestId</b> Used to modify a SR configuration and to indicate, in <i>LogicalChannelConfig</i> , the SR configuration to which a logical channel is mapped and to indicate, in <i>SchedulingRequestResourceConfig</i> , the SR configuration for which a scheduling request resource is used.
<b>sr-ProhibitTimer</b> Timer for SR transmission on PUCCH in TS 38.321 [3]. Value is in ms. Value <i>ms1</i> corresponds to 1ms, value <i>ms2</i> corresponds to 2ms, and so on. If <i>sr-ProhibitTimer-v1700</i> is configured, UE shall ignore <i>sr-ProhibitTimer</i> (without suffix). If both <i>sr-ProhibitTimer</i> (without suffix) and <i>sr-ProhibitTimer-v1700</i> are absent, the UE applies the value 0.
<b>sr-TransMax</b> Maximum number of SR transmissions as described in TS 38.321 [3]. Value <i>n4</i> corresponds to 4, value <i>n8</i> corresponds to 8, and so on.

## – SchedulingRequestId

The IE *SchedulingRequestId* is used to identify a Scheduling Request instance in the MAC layer.

### **SchedulingRequestId information element**

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTID-START

SchedulingRequestId ::=          INTEGER (0..7)

-- TAG-SCHEDULINGREQUESTID-STOP
-- ASN1STOP
```

## – SchedulingRequestResourceConfig

The IE *SchedulingRequestResourceConfig* determines physical layer resources on PUCCH where the UE may send the dedicated scheduling request (D-SR) (see TS 38.213 [13], clause 9.2.4).

### **SchedulingRequestResourceConfig information element**

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTRESOURCECONFIG-START

SchedulingRequestResourceConfig ::= SEQUENCE {
    schedulingRequestResourceId    SchedulingRequestResourceId,
    schedulingRequestID            SchedulingRequestID,
    periodicityAndOffset          CHOICE {
        sym2                      NULL,
        sym6or7                   NULL,
        s11                        NULL, -- Recurs in every slot
        s12                        INTEGER (0..1),
        s14                        INTEGER (0..3),
        s15                        INTEGER (0..4),
        s18                        INTEGER (0..7),
        s110                       INTEGER (0..9),
    }
}
```

```

        s116                INTEGER (0..15),

        s15120               INTEGER (0..5119)
    }
}
-- TAG-SCHEDULINGREQUESTRESOURCECONFIG-STOP
-- ASN1STOP

```

OPTIONAL, -- Need M  
OPTIONAL -- Need M

OPTIONAL, -- Need M

OPTIONAL -- Need M

<b>SchedulingRequestResourceConfig field descriptions</b>
<p><b>periodicityAndOffset</b> SR periodicity and offset in number of symbols or slots (see TS 38.213 [13], clause 9.2.4) The following periodicities may be configured depending on the chosen subcarrier spacing:</p> <p>SCS = 15 kHz: 2sym, 7sym, 1sl, 2sl, 4sl, 5sl, 8sl, 10sl, 16sl, 20sl, 40sl, 80sl  SCS = 30 kHz: 2sym, 7sym, 1sl, 2sl, 4sl, 5sl, 8sl, 10sl, 16sl, 20sl, 40sl, 80sl, 160sl  SCS = 60 kHz: 2sym, 7sym/6sym, 1sl, 2sl, 4sl, 8sl, 16sl, 20sl, 40sl, 80sl, 160sl, 320sl  SCS = 120 kHz: 2sym, 7sym, 1sl, 2sl, 4sl, 5sl, 8sl, 10sl, 16sl, 40sl, 80sl, 160sl, 320sl, 640sl  SCS = 480 kHz: 1sl, 2sl, 4sl, 8sl, 16sl, 40sl, 80sl, 160sl, 320sl, 640sl, 1280sl, 2560sl  SCS = 960 kHz: 1sl, 2sl, 4sl, 8sl, 16sl, 40sl, 80sl, 160sl, 320sl, 640sl, 1280sl, 2560sl, 5120sl</p> <p>sym6or7 corresponds to 6 symbols if extended cyclic prefix and a SCS of 60 kHz are configured, otherwise it corresponds to 7 symbols.  For periodicities 2sym, 7sym and sl1 the UE assumes an offset of 0 slots.  If <i>periodicityAndOffset-r17</i> is present, any previously configured <i>periodicityAndOffset</i> (without suffix) is released, and vice versa.  UE indicates support of the following SR periodicities in <i>additionalSR-Periodicities</i> (see TS 38.306, clause 4.2.6):  SCS = 30 kHz: 5sl  SCS = 120 kHz: 5sl, 10sl</p>
<p><b>phy-PriorityIndex</b> Indicates whether this scheduling request resource is <i>high</i> or <i>low</i> priority in PHY prioritization/multiplexing handling (see TS 38.213 [13], clause 9.2.4). Value <i>p0</i> indicates low priority and value <i>p1</i> indicates high priority.</p>
<p><b>resource</b> ID of the PUCCH resource in which the UE shall send the scheduling request. The actual <i>PUCCH-Resource</i> is configured in <i>PUCCH-Config</i> of the same UL BWP and serving cell as this <i>SchedulingRequestResourceConfig</i>. The network configures a <i>PUCCH-Resource</i> of <i>PUCCH-format0</i> or <i>PUCCH-format1</i> (other formats not supported) (see TS 38.213 [13], clause 9.2.4)</p>
<p><b>schedulingRequestID</b> The ID of the <i>SchedulingRequestConfig</i> that uses this scheduling request resource.</p>

## – SchedulingRequestResourceId

The IE *SchedulingRequestResourceId* is used to identify scheduling request resources on PUCCH.

### **SchedulingRequestResourceId information element**

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTRESOURCEID-START

SchedulingRequestResourceId ::=      INTEGER (1..maxNrofSR-Resources)

-- TAG-SCHEDULINGREQUESTRESOURCEID-STOP
-- ASN1STOP
```

## – ScramblingID

The IE *ScramblingID* is used for scrambling channels and reference signals.

***ScramblingId*** information element

```

-- ASN1START
-- TAG-SCRAMBLINGID-START

ScramblingId ::=                INTEGER (0..1023)

-- TAG-SCRAMBLINGID-STOP
-- ASN1STOP

```

– ***SCS-SpecificCarrier***

The IE *SCS-SpecificCarrier* provides parameters determining the location and width of the actual carrier or the carrier bandwidth. It is defined specifically for a numerology (subcarrier spacing (SCS)) and in relation (frequency offset) to Point A.

***SCS-SpecificCarrier*** information element

```

-- ASN1START
-- TAG-SCS-SPECIFICCARRIER-START

SCS-SpecificCarrier ::=        SEQUENCE {
    offsetToCarrier              INTEGER (0..2199),
    subcarrierSpacing            SubcarrierSpacing,
    carrierBandwidth             INTEGER (1..maxNrofPhysicalResourceBlocks),
    ...,
    [[
    txDirectCurrentLocation      INTEGER (0..4095)                OPTIONAL          -- Need S
    ]]
}

-- TAG-SCS-SPECIFICCARRIER-STOP
-- ASN1STOP

```

<b>SCS-SpecificCarrier field descriptions</b>
<p><b>carrierBandwidth</b> Width of this carrier in number of PRBs (using the <i>subcarrierSpacing</i> defined for this carrier) (see TS 38.211 [16], clause 4.4.2).</p>
<p><b>offsetToCarrier</b> Offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the <i>subcarrierSpacing</i> defined for this carrier). The maximum value corresponds to 275*8-1. See TS 38.211 [16], clause 4.4.2.</p>
<p><b>txDirectCurrentLocation</b> Indicates the downlink Tx Direct Current location for the carrier. A value in the range 0..3299 indicates the subcarrier index within the carrier. The values in the value range 3301..4095 are reserved and ignored by the UE. If this field is absent for downlink within <i>ServingCellConfigCommon</i> and <i>ServingCellConfigCommonSIB</i>, the UE assumes the default value of 3300 (i.e. "Outside the carrier"). (see TS 38.211 [16], clause 4.4.2). Network does not configure this field via <i>ServingCellConfig</i> or for uplink carriers.</p>
<p><b>subcarrierSpacing</b> Subcarrier spacing of this carrier. It is used to convert the <i>offsetToCarrier</i> into an actual frequency. Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz</p>

## – SDAP-Config

The IE *SDAP-Config* is used to set the configurable SDAP parameters for a data radio bearer. All configured instances of *SDAP-Config* with the same value of *pdu-Session* correspond to the same SDAP entity as specified in TS 37.324 [24].

### **SDAP-Config information element**

```

-- ASN1START
-- TAG-SDAP-CONFIG-START

SDAP-Config ::=
    pdu-Session
    sdap-HeaderDL
    sdap-HeaderUL
    defaultDRB
    mappedQoS-FlowsToAdd
    mappedQoS-FlowsToRelease
    ...
}

SEQUENCE {
    PDU-SessionID,
    ENUMERATED {present, absent},
    ENUMERATED {present, absent},
    BOOLEAN,
    SEQUENCE (SIZE (1..maxNrofQFIs)) OF QFI OPTIONAL, -- Need N
    SEQUENCE (SIZE (1..maxNrofQFIs)) OF QFI OPTIONAL, -- Need N
    ...
}

-- TAG-SDAP-CONFIG-STOP
-- ASN1STOP

```

<b>SDAP-Config field descriptions</b>
<p><b>defaultDRB</b> Indicates whether or not this is the default DRB for this PDU session. Among all configured instances of <i>SDAP-Config</i> with the same value of <i>pdu-Session</i>, this field shall be set to <i>true</i> in at most one instance of <i>SDAP-Config</i> and to <i>false</i> in all other instances.</p>
<p><b>mappedQoS-FlowsToAdd</b> Indicates the list of QFIs of UL QoS flows of the PDU session to be additionally mapped to this DRB. A QFI value can be included at most once in all configured instances of <i>SDAP-Config</i> with the same value of <i>pdu-Session</i>. For QoS flow remapping, the QFI value of the remapped QoS flow is only included in <i>mappedQoS-FlowsToAdd</i> in <i>sdap-Config</i> corresponding to the new DRB and not included in <i>mappedQoS-FlowsToRelease</i> in <i>sdap-Config</i> corresponding to the old DRB.</p>
<p><b>mappedQoS-FlowsToRelease</b> Indicates the list of QFIs of QoS flows of the PDU session to be released from existing QoS flow to DRB mapping of this DRB.</p>
<p><b>pdu-Session</b> Identity of the PDU session whose QoS flows are mapped to the DRB.</p>
<p><b>sdap-HeaderUL</b> Indicates whether or not a SDAP header is present for UL data on this DRB. The field cannot be changed after a DRB is established. The network sets this field to <i>present</i> if the field <i>defaultDRB</i> is set to <i>true</i>.</p>
<p><b>sdap-HeaderDL</b> Indicates whether or not a SDAP header is present for DL data on this DRB. The field cannot be changed after a DRB is established.</p>

## – SearchSpace

The IE *SearchSpace* defines how/where to search for PDCCH candidates. Each search space is associated with one *ControlResourceSet*. For a scheduled SCell in the case of cross carrier scheduling, except for *nrofCandidates*, all the optional fields are absent (regardless of their presence conditions). For a scheduled SpCell in the case of the cross carrier scheduling, if the search space is linked to another search space in the scheduling SCell, all the optional fields of this search space in the scheduled SpCell are absent (regardless of their presence conditions) except for *nrofCandidates*.

### SearchSpace information element

```
-- ASN1START
-- TAG-SEARCHSPACE-START

SearchSpace ::=
    searchSpaceId
    controlResourceSetId

<b>SearchSpace field descriptions</b>
<p><b>common</b> Configures this search space as common search space (CSS) and DCI formats to monitor.</p>
<p><b>controlResourceSetId</b> The CORESET applicable for this SearchSpace. Value 0 identifies the common CORESET#0 configured in MIB and in <i>ServingCellConfigCommon</i>. Values 1..<i>maxNrofControlResourceSets</i>-1 identify CORESETs configured in System Information or by dedicated signalling. The CORESETs with <i>non-zero controlResourceSetId</i> are configured in the same BWP as this <i>SearchSpace</i> except <i>commonControlResourceSetExt</i> which is configured by SIB20. If the field <i>controlResourceSetId-r16</i> is present, UE shall ignore the <i>controlResourceSetId</i> (without suffix).</p>
<p><b>dummy1, dummy2</b> This field is not used in the specification. If received it shall be ignored by the UE.</p>
<p><b>dci-Format0-0-AndFormat1-0</b> If configured, the UE monitors the DCI formats 0_0 and 1_0 according to TS 38.213 [13], clause 10.1.</p>
<p><b>dci-Format2-0</b> If configured, UE monitors the DCI format 2_0 according to TS 38.213 [13], clause 10.1, 11.1.1.</p>
<p><b>dci-Format2-1</b> If configured, UE monitors the DCI format 2_1 according to TS 38.213 [13], clause 10.1, 11.2.</p>
<p><b>dci-Format2-2</b> If configured, UE monitors the DCI format 2_2 according to TS 38.213 [13], clause 10.1, 11.3.</p>
<p><b>dci-Format2-3</b> If configured, UE monitors the DCI format 2_3 according to TS 38.213 [13], clause 10.1, 11.4</p>
<p><b>dci-Format2-4</b> If configured, UE monitors the DCI format 2_4 according to TS 38.213 [13], clause 11.2A.</p>
<p><b>dci-Format2-5</b> If configured, IAB-MT monitors the DCI format 2_5 according to TS 38.213 [13], clause 14.</p>
<p><b>dci-Format2-6</b> If configured, UE monitors the DCI format 2_6 according to TS 38.213 [13], clause 10.1, 10.3. DCI format 2_6 can only be configured on the SpCell.</p>
<p><b>dci-Format2-7</b> If configured, UE monitors the DCI format 2_7 according to TS 38.213 [13], clause 10.1, 10.4A.</p>
<p><b>dci-Format2-9</b> If configured, UE monitors the DCI format 2_9 according to TS 38.213 [13], clause 10.1, 11.5. DCI format 2_9 can be configured on only one cell in the cell group.</p>
<p><b>dci-Format4-0</b> If configured, the UE monitors the DCI format 4_0 with CRC scrambled by MCCH-RNTI/G-RNTI according to TS 38.213 [13], clause [10.1].</p>
<p><b>dci-Format4-1-AndFormat4-2</b> If configured, the UE monitors the DCI format 4_1 and 4_2 with CRC scrambled by G-RNTI/G-CS-RNTI according to TS 38.213 [13], clause [11.1].</p>
<p><b>dci-Format4-1</b> If configured, the UE monitors the DCI format 4_1 with CRC scrambled by G-RNTI/G-CS-RNTI according to TS 38.213 [13], clause [10.1].</p>
<p><b>dci-Format4-2</b> If configured, the UE monitors the DCI format 4_2 with CRC scrambled by G-RNTI/G-CS-RNTI according to TS 38.213 [13], clause [10.1].</p>
<p><b>dci-Formats</b> Indicates whether the UE monitors in this USS for DCI formats 0-0 and 1-0 or for formats 0-1 and 1-1.</p>
<p><b>dci-FormatsExt</b> If this field is present, the field <i>dci-Formats</i> is ignored and <i>dci-FormatsExt</i> is used instead to indicate whether the UE monitors in this USS for DCI format 0_2 and 1_2 or formats 0_1 and 1_1 and 0_2 and 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 10.1). This field is not configured for operation with shared spectrum channel access in this release.</p>

<p><b><i>dci-FormatsMC</i></b> Indicates whether the UE monitors in this USS for DCI format 0_3 or for format 1_3 or for formats 0_3 and 1_3. Separate search space sets for DCI formats in this field and the DCI formats in <i>ue-Specific</i> (without suffix) are independently configured. NOTE: This parameter is used only for <i>SearchSpace</i> configured to the scheduling cell, while another <i>SearchSpace</i> configured to the reference scheduled cell (if any) configures only <i>nrofCandidates</i> (i.e., all other optional fields are absent) with same <i>searchSpaceId</i> with that for scheduling cell.</p>
<p><b><i>dci-Formats-MT</i></b> Indicates whether the IAB-MT monitors the DCI formats 2-5 according to TS 38.213 [13], clause 14.</p>
<p><b><i>dci-FormatsNCR</i></b> Indicates whether the NCR-MT monitors the DCI formats 2-8 according to TS 38.213 [13], clause 20.</p>
<p><b><i>dci-FormatsSL</i></b> Indicates whether the UE monitors in this USS for DCI formats 0-0 and 1-0 or for formats 0-1 and 1-1 or for format 3-0 or for format 3-1 or for formats 3-0 and 3-1. If this field is present, the field <i>dci-Formats</i> is ignored and <i>dci-FormatsSL</i> is used.</p>
<p><b><i>dci-FormatsSL-PRS</i></b> Indicates whether the UE monitors in this USS for DCI formats 3-2 or for formats 3-0 and 3-2 or for formats 3-0 and 3-1 and 3-2 or for formats 3-1 and 3-2. If this field is present, the field <i>dci-Formats</i> is ignored and <i>dci-FormatsSL-PRS</i> is used.</p>
<p><b><i>duration</i></b> Number of consecutive slots that a SearchSpace lasts in every occasion, i.e., upon every period as given in the <i>periodicityAndOffset</i>. If the field is absent, the UE applies the value 1 slot, except for DCI format 2_0. The UE ignores this field for DCI format 2_0. The maximum valid duration is <i>periodicity-1</i> (<i>periodicity</i> as given in the <i>monitoringSlotPeriodicityAndOffset</i>). For SCS 480 kHz and SCS 960 kHz, <i>duration-r17</i> is used, and the configured duration is restricted to be an integer multiple of L slots and smaller than <i>periodicity</i>, where L is the configured length of the bitmap <i>monitoringSlotsWithinSlotGroup-r17</i>. If <i>duration-r17</i> is absent, the UE assumes the duration in slots is equal to L. The maximum valid duration is <i>periodicity-L</i>.  For IAB-MT, <i>duration</i> indicates number of consecutive slots that a SearchSpace lasts in every occasion, i.e., upon every period as given in the <i>periodicityAndOffset</i>. If the field is absent, the IAB-MT applies the value 1 slot, except for DCI format 2_0 and DCI format 2_5. The IAB-MT ignores this field for DCI format 2_0 and DCI format 2_5. The maximum valid duration is <i>periodicity-1</i> (<i>periodicity</i> as given in the <i>monitoringSlotPeriodicityAndOffset</i>).</p>
<p><b><i>freqMonitorLocations</i></b> Defines an association of the search space to multiple monitoring locations in the frequency domain and indicates whether the pattern configured in the associated CORESET is replicated to a specific RB set, see TS 38.213, clause 10.1. Each bit in the bitmap corresponds to one RB set, and the leftmost (most significant) bit corresponds to RB set 0 in the BWP. A bit set to 1 indicates that a frequency domain resource allocation replicated from the pattern configured in the associated CORESET is mapped to the RB set.</p>

**monitoringSlotPeriodicityAndOffset**

Slots for PDCCH Monitoring configured as periodicity and offset.

For SCS 15, 30, 60, and 120 kHz and if the UE is configured to monitor:

- DCI format 2\_1, only the values 'sl1', 'sl2' or 'sl4' are applicable.
- DCI format 2\_0, only the values 'sl1', 'sl2', 'sl4', 'sl5', 'sl8', 'sl10', 'sl16', and 'sl20' are applicable (see TS 38.213 [13], clause 10).
- DCI format 2\_4, only the values 'sl1', 'sl2', 'sl4', 'sl5', 'sl8' and 'sl10' are applicable.

For SCS 480 kHz and if the UE is configured to monitor:

- DCI format 2\_0, only the values 'sl4', 'sl8', 'sl16', 'sl20', 'sl32', 'sl40', 'sl64', and 'sl80' are applicable.
- DCI format 2\_1, only the values 'sl4', 'sl8', and 'sl16' are applicable.
- DCI format 2\_4, only the values 'sl4', 'sl8', 'sl16', 'sl20', 'sl32', 'sl40' are applicable.

For SCS 960 kHz and if the UE is configured to monitor:

- DCI format 2\_0, only the values 'sl8', 'sl16', 'sl32', 'sl40', 'sl64', 'sl80', 'sl128', and 'sl160' are applicable.
- DCI format 2\_1, only the values 'sl8', 'sl16', and 'sl32' are applicable.
- DCI format 2\_4, only the values 'sl8', 'sl16', 'sl32', 'sl40', 'sl64', 'sl80' are applicable.

For SCS 480 kHz and SCS 960 kHz, and the configured periodicity and offset are restricted to be an integer multiple of L slots, where L is the configured length of the bitmap provided by *monitoringSlotsWithinSlotGroup-r17*, i.e. for a given periodicity, the offset has a range of {0, L, 2\*L, ..., L\*FLOOR(1/L\*(periodicity-1))}.

For IAB-MT, If the IAB-MT is configured to monitor DCI format 2\_1, only the values 'sl1', 'sl2' or 'sl4' are applicable. If the IAB-MT is configured to monitor DCI format 2\_0 or DCI format 2\_5, only the values 'sl1', 'sl2', 'sl4', 'sl5', 'sl8', 'sl10', 'sl16', and 'sl20' are applicable (see TS 38.213, clause 10).

If *monitoringSlotPeriodicityAndOffset-v1710* is present, any previously configured *monitoringSlotPeriodicityAndOffset* is released, and if *monitoringSlotPeriodicityAndOffset* is present, any previously configured *monitoringSlotPeriodicityAndOffset-v1710* is released.

**monitoringSlotsWithinSlotGroup**

Indicates which slot(s) within a slot group are configured for multi-slot PDCCH monitoring. The first (leftmost, most significant) bit represents the first slot in the slot group, the second bit represents the second slot in the slot group, and so on. A bit set to '1' indicates that the corresponding slot is configured for multi-slot PDCCH monitoring (see TS 38.213 [13], clause 10). The number of slots for multi-slot PDCCH monitoring is configured according to clause 10 in TS 38.213 [13].

**monitoringSymbolsWithinSlot**

The first symbol(s) for PDCCH monitoring in the slots configured for (multi-slot) PDCCH monitoring (see *monitoringSlotPeriodicityAndOffset* and *duration*). The most significant (left) bit represents the first OFDM in a slot, and the second most significant (left) bit represents the second OFDM symbol in a slot and so on. The bit(s) set to one identify the first OFDM symbol(s) of the control resource set within a slot. If the cyclic prefix of the BWP is set to extended CP, the last two bits within the bit string shall be ignored by the UE or IAB-MT.

For DCI format 2\_0, the first one symbol applies if the *duration* of CORESET (in the IE *ControlResourceSet*) identified by *controlResourceSetId* indicates 3 symbols, the first two symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 2 symbols, and the first three symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 1 symbol.

See TS 38.213 [13], clause 10.

For IAB-MT: For DCI format 2\_0 or DCI format 2\_5, the first one symbol applies if the *duration* of CORESET (in the IE *ControlResourceSet*) identified by *controlResourceSetId* indicates 3 symbols, the first two symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 2 symbols, and the first three symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 1 symbol.

See TS 38.213 [13], clause 10.

**nrofCandidates-CI**

The number of PDCCH candidates specifically for format 2-4 for the configured aggregation level. If an aggregation level is absent, the UE does not search for any candidates with that aggregation level. The network configures only one aggregationLevel and the corresponding number of candidates (see TS 38.213 [13], clause 10.1).

**nrofCandidates-PEI**

The number of PDCCH candidates specifically for format 2-7 for the configured aggregation level.

<p><b><i>nrofCandidates-SFI</i></b> The number of PDCCH candidates specifically for format 2-0 for the configured aggregation level. If an aggregation level is absent, the UE does not search for any candidates with that aggregation level. The network configures only one aggregationLevel and the corresponding number of candidates (see TS 38.213 [13], clause 11.1.1). For a search space configured with <i>freqMonitorLocations-r16</i>, only value 'n1' is valid.</p>
<p><b><i>nrofCandidates</i></b> Number of PDCCH candidates per aggregation level. The number of candidates and aggregation levels configured here applies to all formats unless a particular value is specified or a format-specific value is provided (see inside <i>searchSpaceType</i>). If configured in the <i>SearchSpace</i> of a cross carrier scheduled cell, this field determines the number of candidates and aggregation levels to be used on the linked scheduling cell (see TS 38.213 [13], clause 10).</p>
<p><b><i>searchSpaceGroupIDList-r16, searchSpaceGroupIDList-r17</i></b> List of search space group IDs which the search space is associated with. The network configures at most 2 search space groups per BWP where the group ID is either 0 or 1 if <i>searchSpaceGroupIDList-r16</i> is included. The network configures at most 3 search space groups per BWP where the group ID is either 0, 1 or 2 if <i>searchSpaceGroupIDList-r17</i> is included. And if <i>searchSpaceGroupIDList-r17</i> is included, <i>searchSpaceGroupIDList-r16</i> is ignored.</p>
<p><b><i>searchSpaceId</i></b> Identity of the search space. <i>SearchSpaceId</i> = 0 identifies the <i>searchSpaceZero</i> configured via PBCH (MIB) or <i>ServingCellConfigCommon</i> and may hence not be used in the <i>SearchSpace</i> IE. The <i>searchSpaceId</i> is unique among the BWPs of a Serving Cell. In case of cross carrier scheduling, search spaces with the same <i>searchSpaceId</i> in scheduled cell and scheduling cell are linked to each other. The UE applies the search space for the scheduled cell only if the DL BWPs in which the linked search spaces are configured in scheduling cell and scheduled cell are both active. For an IAB-MT, the search space defines how/where to search for PDCCH candidates for an IAB-MT where each search space is associated with one <i>ControlResourceSet</i> and for a scheduled cell in the case of cross carrier scheduling, except for <i>nrofCandidates</i>, all the optional fields are absent.</p>
<p><b><i>SearchSpaceLinkingId</i></b> This parameter is used to link two search spaces of same type in the same BWP. If two search spaces have the same <i>SearchSpaceLinkingId</i> UE assumes these search spaces are linked to PDCCH repetition REF. When PDCCH repetition is monitored in two linked search space (SS) sets, the UE does not expect a third monitored SS set to be linked with any of the two linked SS sets. The two linked SS sets have the same SS set type (USS/CSS). The two linked SS sets have the same DCI formats to monitor. For intra-slot PDCCH repetition: The two SS sets should have the same periodicity and offset (<i>monitoringSlotPeriodicityAndOffset</i>), and the same duration. For linking monitoring occasions across the two SS sets that exist in the same slot: The two SS sets have the same number of monitoring occasions within a slot and n-th monitoring occasion of one SS set is linked to n-th monitoring occasion of the other SS set. The following SS sets cannot be linked with another SS set for PDCCH repetition: SS set 0, <i>searchSpaceSIB1</i>, <i>searchSpaceOtherSystemInformation</i>, <i>pagingSearchSpace</i>, <i>ra-SearchSpace</i>, <i>searchSpaceMCCH</i>, <i>searchSpaceMTCH</i>, <i>peiSearchSpace</i>, and <i>sdt-SearchSpace</i>. SS set configured by <i>recoverySearchSpaceId</i> cannot be linked to another SS set for PDCCH repetition. When a scheduled serving cell is configured to be cross-carrier scheduled by a scheduling serving cell, two PDCCH candidates (with the same AL and candidate index associated with the scheduled serving cell) are linked only if the corresponding two SS sets in the scheduling serving cell are linked and two SS sets in the scheduled serving cell with the same SS set IDs are also linked. This parameter is not applicable to search space configured with <i>dci-FormatsSL</i> for monitoring format 3-0 or format 3-1 or for monitoring formats 3-0 and format 3-1.</p>
<p><b><i>searchSpaceType</i></b> Indicates whether this is a common search space (present) or a UE specific search space as well as DCI formats to monitor for.</p>
<p><b><i>ue-Specific</i></b> Configures this search space as UE specific search space (USS). The UE monitors the DCI format with CRC scrambled by C-RNTI, CS-RNTI (if configured), and SP-CSI-RNTI (if configured)</p>

Conditional Presence	Explanation
<i>DedicatedOnly</i>	In PDCCH-Config, the field is optionally present, Need R. Otherwise it is absent, Need R.
<i>Setup</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> . It is optionally present, Need M, otherwise.
<i>Setup2</i>	This field is mandatory present when a new <i>SearchSpace</i> is set up, if the same <i>SearchSpace</i> ID is not included in <i>searchSpacesToAddModListExt-r16/searchSpacesToAddModListExt-v1700/searchSpacesToAddModListExt-v1800</i> of the parent IE with the field <i>searchSpaceType-r16</i> or <i>searchSpaceType-r17</i> or <i>searchSpaceType-r18</i> included. This field is absent if the same <i>SearchSpace</i> ID is included in <i>searchSpacesToAddModListExt-v1800</i> of the parent IE with the field <i>searchSpaceType-r18</i> included and set to <i>dci-FormatsMC-r18</i> . Otherwise it is optionally present, Need M.
<i>Setup3</i>	This field is mandatory present when a new <i>SearchSpace</i> is set up, if the same <i>SearchSpace</i> ID is not included in <i>searchSpacesToAddModListExt</i> (without suffix) of the parent IE with the field <i>searchSpaceType</i> (without suffix) included. Otherwise it is optionally present, Need M.
<i>Setup4</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> if <i>monitoringSlotPeriodicityAndOffset-v1710</i> is not included. It is optionally present, Need M, otherwise.
<i>Setup5</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> if <i>monitoringSlotPeriodicityAndOffset</i> (without suffix) is not included. It is optionally present, Need M, otherwise.
<i>SetupOnly</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> . It is absent, Need M, otherwise.
<i>SetupOnly2</i>	In PDCCH-Config, the field is optionally present upon creation of a new <i>SearchSpace</i> and absent, Need M upon reconfiguration of an existing <i>SearchSpace</i> . In PDCCH-ConfigCommon, the field is absent.

## – *SearchSpaceId*

The IE *SearchSpaceId* is used to identify Search Spaces. The ID space is used across the BWPs of a Serving Cell. The search space with the *SearchSpaceId* = 0 identifies the search space configured via PBCH (MIB) and in *ServingCellConfigCommon* (*searchSpaceZero*). The number of Search Spaces per BWP is limited to 10 including the common and UE specific Search Spaces.

### ***SearchSpaceId* information element**

```
-- ASN1START
-- TAG-SEARCHSPACEID-START

SearchSpaceId ::=
    INTEGER (0..maxNrofSearchSpaces-1)

-- TAG-SEARCHSPACEID-STOP
-- ASN1STOP
```

## – *SearchSpaceZero*

The IE *SearchSpaceZero* is used to configure *SearchSpace#0* of the initial BWP (see TS 38.213 [13], clause 13).

### ***SearchSpaceZero* information element**

```
-- ASN1START
-- TAG-SEARCHSPACEZERO-START
```

```
SearchSpaceZero ::=                INTEGER (0..15)
```

```
-- TAG-SEARCHSPACEZERO-STOP
-- ASN1STOP
```

## – SecurityAlgorithmConfig

The IE *SecurityAlgorithmConfig* is used to configure AS integrity protection algorithm and AS ciphering algorithm for SRBs and DRBs.

### SecurityAlgorithmConfig information element

```
-- ASN1START
-- TAG-SECURITYALGORITHMCONFIG-START
```

```
SecurityAlgorithmConfig ::=        SEQUENCE {
  cipheringAlgorithm                CipheringAlgorithm,
  integrityProtAlgorithm            IntegrityProtAlgorithm    OPTIONAL, -- Need R
  ...
}
```

```
IntegrityProtAlgorithm ::=        ENUMERATED {
  nia0, nia1, nia2, nia3, spare4, spare3,
  spare2, spare1, ...}
```

```
CipheringAlgorithm ::=           ENUMERATED {
  nea0, nea1, nea2, nea3, spare4, spare3,
  spare2, spare1, ...}
```

```
-- TAG-SECURITYALGORITHMCONFIG-STOP
-- ASN1STOP
```

#### SecurityAlgorithmConfig field descriptions

##### ***cipheringAlgorithm***

Indicates the ciphering algorithm to be used for SRBs and DRBs, as specified in TS 33.501 [11]. The algorithms *nea0-nea3* are identical to the LTE algorithms *eea0-3*. The algorithms configured for all bearers using master key shall be the same, and the algorithms configured for all bearers using secondary key, if any, shall be the same. If UE is connected to E-UTRA/EPC, this field indicates the ciphering algorithm to be used for RBs configured with NR PDCP, as specified in TS 33.501 [11].

##### ***integrityProtAlgorithm***

Indicates the integrity protection algorithm to be used for SRBs and DRBs, as specified in TS 33.501 [11]. The algorithms *nia0-nia3* are identical to the E-UTRA algorithms *eia0-3*. The algorithms configured for all bearers using master key shall be the same and the algorithms configured for all bearers using secondary key, if any, shall be the same. The network does not configure *nia0* except for unauthenticated emergency sessions for unauthenticated UEs in LSM (limited service mode). If UE is connected to E-UTRA/EPC, this field indicates the integrity protection algorithm to be used for SRBs configured with NR PDCP as specified in TS 33.501 [11], and DRBs configured with integrity protection as specified in TS 33.401 [30]. The network does not configure *nia0* for SRB3.

– *SelectedPSCellForCHO-WithSCG*

The IE *SelectedPSCellForCHO-WithSCG* is used to indicate the information of the selected target PSCell to target MN at execution of a conditional reconfiguration for CHO with candidate SCG(s).

***SelectedPSCellForCHO-WithSCG* information element**

```
-- ASN1START
-- TAG-SELECTEDPSCCELLFORCHO-WITHSCG-START

SelectedPSCellForCHO-WithSCG-r18 ::= SEQUENCE {
    ssbFrequency-r18          ARFCN-ValueNR,
    physCellId-r18           PhysCellId
}

-- TAG-SELECTEDPSCCELLFORCHO-WITHSCG-STOP
-- ASN1STOP
```

– *SemiStaticChannelAccessConfig*

The IE *SemiStaticChannelAccessConfig* is used to configure channel access parameters when the network is operating in semi-static channel access mode (see clause 4.3 in TS 37.213 [48]).

***SemiStaticChannelAccessConfig* information element**

```
-- ASN1START
-- TAG-SEMISTATICCHANNELACCESSCONFIG-START

SemiStaticChannelAccessConfig-r16 ::= SEQUENCE {
    period-r16          ENUMERATED {ms1, ms2, ms2dot5, ms4, ms5, ms10}
}

-- TAG-SEMISTATICCHANNELACCESSCONFIG-STOP
-- ASN1STOP
```

***SemiStaticChannelAccessConfig* field descriptions**

***period***

Indicates the periodicity of the semi-static channel access mode (see TS 37.213 [48], clause 4.3). Value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, value ms2dot5 corresponds to 2.5 ms, and so on.

– *SemiStaticChannelAccessConfigUE*

The IE *SemiStaticChannelAccessConfigUE* is used to configure channel access parameters for UE initiated semi-static channel access.

**SemiStaticChannelAccessConfigUE** information element

```

-- ASN1START
-- TAG-SEMISTATICCHANNELACCESSCONFIGUE-START

SemiStaticChannelAccessConfigUE-r17 ::= SEQUENCE {
    periodUE-r17          ENUMERATED {ms1, ms2, ms2dot5, ms4, ms5, ms10, spare2, spare1},
    offsetUE-r17         INTEGER (0..559)
}

-- TAG-SEMISTATICCHANNELACCESSCONFIGUE-STOP
-- ASN1STOP

```

**SemiStaticChannelAccessConfigUE** field descriptions**periodUE**

Indicates the period of a channel occupancy that the UE can initiate as described in TS 37.213 [48], clause 4.3. Value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, value ms2dot5 corresponds to 2.5 ms, and so on.

**offsetUE**

Indicates the number of symbols from the beginning of the even indexed radio frame to the start of the first period within that radio frame that the UE can initiate a channel occupancy (see TS 37.213 [48], clause 4.3), based on the smallest SCS among the configured SCSs in the serving cell. The offset duration indicated by this field is less than the period duration indicated by *periodUE*. The maximum value is 139, 279 and 559 for 15, 30 and 60 kHz subcarrier spacing, respectively.

– **Sensor-LocationInfo**

The IE *Sensor-LocationInfo* is used by the UE to provide sensor information.

**Sensor-LocationInfo** information element

```

-- ASN1START
-- TAG-SENSORLOCATIONINFO-START

Sensor-LocationInfo-r16 ::= SEQUENCE {
    sensor-MeasurementInformation-r16  OCTET STRING  OPTIONAL,
    sensor-MotionInformation-r16      OCTET STRING  OPTIONAL,
    ...
}

-- TAG-SENSORLOCATIONINFO-STOP
-- ASN1STOP

```

**Sensor-LocationInfo field descriptions****sensor-MeasurementInformation**

This field provides barometric pressure measurements as *Sensor-MeasurementInformation* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

**sensor-MotionInformation**

This field provides motion sensor measurements as *Sensor-MotionInformation* defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

– **ServingCellAndBWP-Id**

The IE *ServingCellAndBWP-Id* is used to indicate a serving cell and an uplink or a downlink BWP.

**ServingCellAndBWP-Id information element**

```
-- ASN1START
-- TAG-SERVINGCELLANDBWP-ID-START

ServingCellAndBWP-Id-r17 ::= SEQUENCE {
    servingcell-r17      ServCellIndex,
    bwp-r17              BWP-Id
}

-- TAG-SERVINGCELLANDBWP-ID-STOP
-- ASN1STOP
```

– **ServCellIndex**

The IE *ServCellIndex* concerns a short identity, used to uniquely identify a serving cell (i.e. the PCell, the PSCell or an SCell) across the cell groups. Value 0 applies for the PCell, while the *SCellIndex* that has previously been assigned applies for SCells.

**ServCellIndex information element**

```
-- ASN1START
-- TAG-SERVCELLINDEX-START

ServCellIndex ::=
    INTEGER (0..maxNrofServingCells-1)

-- TAG-SERVCELLINDEX-STOP
-- ASN1STOP
```

## – *ServingCellConfig*

The IE *ServingCellConfig* is used to configure (add or modify) the UE with a serving cell, which may be the SpCell or an SCell of an MCG or SCG. The parameters herein are mostly UE specific but partly also cell specific (e.g. in additionally configured bandwidth parts). Reconfiguration between a PUCCH and PUCCHless SCell is only supported using an SCell release and add.

### ***ServingCellConfig* information element**

```

<b>ChannelAccessConfig field descriptions</b>
<b>absenceOfAnyOtherTechnology</b> Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.2.1 and 4.2.3.
<b>energyDetectionConfig</b> Indicates whether to use the <i>maxEnergyDetectionThreshold</i> or the <i>energyDetectionThresholdOffset</i> (see TS 37.213 [48], clause 4.2.3).
<b>energyDetectionThresholdOffset</b> Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.2.3.
<b>maxEnergyDetectionThreshold</b> Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.2.3.
<b>ul-toDL-COT-SharingED-Threshold</b> Maximum energy detection threshold that the UE should use to share channel occupancy with gNB for DL transmission as specified in TS 37.213 [48], clause 4.1.3 for downlink channel access and clause 4.2.3 for uplink channel access. This field is not applicable in semi-static channel access mode.

<b>ServingCellConfig field descriptions</b>
<p><b>additionalPCI-ToAddModList</b> List of information for the additional SSB with different PCI than the serving cell PCI. The additional SSBs with different PCIs are not used for serving cell quality derivation.</p>
<p><b>bwp-InactivityTimer</b> The duration in ms after which the UE falls back to the default Bandwidth Part (see TS 38.321 [3], clause 5.15). When the network releases the timer configuration, the UE stops the timer without switching to the default BWP.</p>
<p><b>ca-SlotOffset</b> Slot offset between the primary cell (PCell/PSCell) and the SCell in unaligned frame boundary with slot alignment and partial SFN alignment inter-band CA. Based on this field, the UE determines the time offset of the SCell as specified in clause 4.5 of TS 38.211 [16]. The granularity of this field is determined by the reference SCS for the slot offset (i.e. the maximum of PCell/PSCell lowest SCS among all the configured SCSs in DL/UL <i>SCS-SpecificCarrierList</i> in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i> and this serving cell's lowest SCS among all the configured SCSs in DL/UL <i>SCS-SpecificCarrierList</i> in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i>). The Network configures at most single non-zero offset duration in ms (independent on SCS) among CCs in the unaligned CA configuration. If the field is absent, the UE applies the value of 0. The slot offset value can only be changed with SCell release and add.</p>
<p><b>cbg-TxDiffTBsProcessingType1, cbg-TxDiffTBsProcessingType2</b> Indicates whether processing types 1 and 2 based CBG based operation is enabled according to Rel-16 UE capabilities.</p>
<p><b>cellDTX-DRX-Config</b> Used to configure cell DTX/DRX for the serving cell, as specified in TS 38.321 [3]. A maximum of two cell DTX/DRX patterns can be configured per MAC entity for different serving cells. The two configured patterns are aligned, that the start and slot offset are common and the periodicity of one pattern is an integer multiple of the other. Cell DTX is configured only when connected mode DRX is configured.</p>
<p><b>cellDTX-DRX-L1activation</b> Indicates whether this serving cell has enabled L1 signaling based on DCI 2_9 for dynamic activation/deactivation of cell DTX/DRX configuration.</p>
<p><b>cjt-Scheme-PDSCH</b> This field is used to configure CJT Tx scheme <i>cjtSchemeA</i> or <i>cjtSchemeB</i> for PDSCH reception, see TS 38.214 [19] clause 5.1.5.</p>
<p><b>channelAccessConfig</b> List of parameters used for access procedures of operation with shared spectrum channel access (see TS 37.213 [48]).</p>
<p><b>channelAccessMode2</b> If present, this field indicates that the UE shall apply channel access procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the UE does not apply these channel access procedures. The network always configures this field if channel access procedures are required for the serving cell within this region by regulations. Overwrites the corresponding field in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i> for this serving cell.</p>
<p><b>crossCarrierSchedulingConfig</b> Indicates whether this serving cell is cross-carrier scheduled by another serving cell or whether it cross-carrier schedules another serving cell. If the field <i>other</i> is configured for an SpCell (i.e., the SpCell is cross-carrier scheduled by another serving cell), the SpCell can be additionally scheduled by the PDCCH on the SpCell.</p>
<p><b>crossCarrierSchedulingConfigRelease</b> If this field is included, the UE shall release the cross carrier scheduling configuration configured by <i>crossCarrierSchedulingConfig</i>. The network may only include either <i>crossCarrierSchedulingConfigRelease</i> or <i>crossCarrierSchedulingConfig</i> at a time.</p>
<p><b>crs-RateMatch-PerCORESETPoolIndex</b> Indicates how UE performs rate matching when both <i>lte-CRS-PatternList1-r16</i> and <i>lte-CRS-PatternList2-r16</i> are configured or when both <i>lte-CRS-PatternList3-r18</i> and <i>lte-CRS-PatternList4-r18</i> are configured as specified in TS 38.214 [19], clause 5.1.4.2.</p>
<p><b>csi-RS-ValidationWithDCI</b> Indicates how the UE performs periodic and semi-persistent CSI-RS reception in a slot. The presence of this field indicates that the UE uses DCI detection to validate whether to receive CSI-RS (see TS 38.213 [13], clause 11.1).</p>
<p><b>defaultDownlinkBWP-Id</b> The initial bandwidth part is referred to by BWP-Id = 0. ID of the downlink bandwidth part to be used upon expiry of the BWP inactivity timer. This field is UE specific. When the field is absent the UE uses the initial BWP as default BWP. (see TS 38.213 [13], clause 12 and TS 38.321 [3], clause 5.15).</p>

<p><b><i>directionalCollisionHandling</i></b> Indicates that this serving cell is using directional collision handling between a reference and other cell(s) for half-duplex operation in TDD CA with same SCS as specified in TS 38.213 [13], clause 11.1. The half-duplex operation only applies within the same frequency range and cell group.</p> <p>The network only configures this field for TDD serving cells that are using the same SCS.</p>
<p><b><i>directionalCollisionHandling-DC</i></b> For the IAB-MT, it indicates that this serving cell is using directional collision handling between a reference and other cell(s) for half-duplex operation in TDD NR-DC with same SCS within same cell group or cross different cell groups.</p>
<p><b><i>dormantBWP-Config</i></b> The dormant BWP configuration for an SCell. This field can be configured only for a (non-PUCCH) SCell.</p>
<p><b><i>downlinkBWP-ToAddModList</i></b> List of additional downlink bandwidth parts to be added or modified. (see TS 38.213 [13], clause 12).</p>
<p><b><i>downlinkBWP-ToReleaseList</i></b> List of additional downlink bandwidth parts to be released. (see TS 38.213 [13], clause 12).</p>
<p><b><i>downlinkChannelBW-PerSCS-List</i></b> A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. If absent, UE uses the configuration indicated in <i>scs-SpecificCarrierList</i> in <i>DownlinkConfigCommon / DownlinkConfigCommonSIB</i>. Network only configures channel bandwidth that corresponds to the channel bandwidth values defined in TS 38.101-1 [15], TS 38.101-2 [39], and TS 38.101-5 [75]. If the UE is an (e)RedCap UE and needs to autonomously switch to its initial downlink bandwidth part to perform a random access procedure but its current UE specific channel bandwidth does not cover the initial downlink bandwidth part, the UE autonomously changes its UE specific channel bandwidth to cover the initial downlink bandwidth part. In that case, after completion of the random access procedure, the network ensures that the UE specific channel bandwidth fully covers the UE's active downlink bandwidth part in subsequent bandwidth part switch operations.</p>
<p><b><i>dummy1, dummy 2</i></b> This field is not used in the specification. If received it shall be ignored by the UE.</p>
<p><b><i>enableBeamSwitchTiming</i></b> Indicates the aperiodic CSI-RS triggering with beam switching triggering behaviour as defined in clause 5.2.1.5.1 of TS 38.214 [19].</p>
<p><b><i>enableDefaultTCI-StatePerCoresetPoolIndex</i></b> Presence of this field indicates the UE shall follow the release 16 behavior of default TCI state per CORESETPoolindex when the UE is configured by higher layer parameter PDCCH-Config that contains two different values of CORESETPoolIndex in ControlResourceSet is enabled.</p>
<p><b><i>enableTwoDefaultTCI-States</i></b> Presence of this field indicates the UE shall follow the release 16 behavior of two default TCI states for PDSCH when at least one TCI codepoint is mapped to two TCI states is enabled</p>
<p><b><i>fdmed-ReceptionMulticast</i></b> Indicates the Type-1 HARQ codebook generation as specified in TS 38.213 [13], clause 9.1.2.1.</p>
<p><b><i>firstActiveDownlinkBWP-Id</i></b> If configured for an SpCell, this field contains the ID of the DL BWP to be activated or to be used for RLM, BFD and measurements if included in an <i>RRCReconfiguration</i> message contained in an NR or E-UTRA RRC message indicating that the SCG is deactivated, upon performing the RRC (re-)configuration. If the field is absent, the RRC (re-)configuration does not impose a BWP switch. If the field is absent for the PSCell at SCG deactivation, the UE considers the previously activated DL BWP as the BWP to be used for RLM, BFD and measurements. If the field is absent for the PSCell at SCG activation, the DL BWP to be activated is the DL BWP previously to be used for RLM, BFD and measurements. If configured for an SCell, this field contains the ID of the downlink bandwidth part to be used upon activation of an SCell. The initial bandwidth part is referred to by BWP-Id = 0. Upon reconfiguration with <i>reconfigurationWithSync</i>, the network sets the <i>firstActiveDownlinkBWP-Id</i> and <i>firstActiveUplinkBWP-Id</i> to the same value.</p>
<p><b><i>initialDownlinkBWP</i></b> The dedicated (UE-specific) configuration for the initial downlink bandwidth-part (i.e., DL BWP#0). If any of the optional IEs are configured within this IE, the UE considers the BWP#0 to be an RRC configured BWP (from UE capability viewpoint). Otherwise, the UE does not consider the BWP#0 as an RRC configured BWP (from UE capability viewpoint). Network always configures the UE with a value for this field if no other BWPs are configured. NOTE1</p>

<p><b><i>intraCellGuardBandsDL-List, intraCellGuardBandsUL-List</i></b> List of intra-cell guard bands in a serving cell for operation with shared spectrum channel access in FR1. If not configured, the guard bands are defined according to 38.101-1 [15], see TS 38.214 [19], clause 7. For operation in licensed spectrum, this field is absent, and no UE action is required.</p>
<p><b><i>lte-CRS-PatternList1</i></b> A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH. The LTE CRS patterns in this list shall be non-overlapping in frequency. The network does not configure this field and <i>lte-CRS-ToMatchAround</i> simultaneously.</p>
<p><b><i>lte-CRS-PatternList2</i></b> A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH scheduled with a DCI detected on a CORESET with CORESETPoolIndex configured with 1. This list is configured only if CORESETPoolIndex configured with 1. The first LTE CRS pattern in this list shall be fully overlapping in frequency with the first LTE CRS pattern in <i>lte-CRS-PatternList1</i>, The second LTE CRS pattern in this list shall be fully overlapping in frequency with the second LTE CRS pattern in <i>lte-CRS-PatternList1</i>, and so on. Network configures this field only if the field <i>lte-CRS-ToMatchAround</i> is not configured and there is at least one ControlResourceSet in one DL BWP of this serving cell with <i>coresetPoolIndex</i> set to 1.</p>
<p><b><i>lte-CRS-PatternList3</i></b> A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH. The LTE CRS patterns in this list shall be non-overlapping in frequency. The network does not configure this field and <i>lte-CRS-ToMatchAround</i>, or this field and <i>lte-CRS-PatternList1</i>, or this field and <i>lte-CRS-PatternList2</i> simultaneously.</p>
<p><b><i>lte-CRS-PatternList4</i></b> A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH. The LTE CRS patterns in this list shall be non-overlapping in frequency. The first LTE CRS pattern in this list shall be fully overlapping in frequency with the first LTE CRS pattern in <i>lte-CRS-PatternList3</i>. The second LTE CRS pattern in this list shall be fully overlapping in frequency with the second LTE CRS pattern in <i>lte-CRS-PatternList3</i>, and so on. Network configures this field only if the field <i>lte-CRS-ToMatchAround</i> is not configured and the field <i>lte-CRS-PatternList3</i> is configured.</p>
<p><b><i>lte-CRS-ToMatchAround</i></b> Parameters to determine an LTE CRS pattern that the UE shall rate match around.</p>
<p><b><i>lte-NeighCellsCRS-AssistInfoList</i></b> A list of LTE neighbour cells configuration information which is used to assist the UE to perform CRS interference mitigation (CRS-IM) in scenarios with overlapping spectrum for LTE and NR (see TS 38.101-4 [59]). If the field is included, it replaces any previous list, i.e. all the entries of the list are replaced and each of the <i>LTE-NeighCellsCRS-AssistInfo</i> entries is considered to be newly created and the conditions and Need codes for setup of the entry apply.</p>
<p><b><i>lte-NeighCellsCRS-Assumptions</i></b> If the field is not configured, the following default network configuration assumptions are valid for all LTE neighbour cells for the purpose of CRS interference mitigation (CRS-IM) in scenarios with overlapping spectrum for LTE and NR (see TS 38.101-4 [59]).</p> <ul style="list-style-type: none"> <li>- The CRS port number is the same as the one indicated in <i>RateMatchPatternLTE-CRS</i> if configured for the serving cell.</li> <li>- The CRS port number is 4 if <i>RateMatchPatternLTE-CRS</i> is not configured for the serving cell.</li> <li>- The channel bandwidth and centre frequency are the same as the ones indicated in <i>RateMatchPatternLTE-CRS</i> if configured for the serving cell.</li> <li>- The MBSFN configuration is the same as the one indicated in <i>RateMatchPatternLTE-CRS</i> if configured for the serving cell. If <i>RateMatchPatternLTE-CRS</i> is not configured for the serving cell, MBSFN subframe is not configured.</li> <li>- Network-based CRS interference mitigation (i.e., CRS muting), as in <i>crs-IntfMitigConfig</i> specified in TS 36.331 [10], is not enabled.</li> </ul> <p>If the field is configured (i.e. false) and <i>LTE-NeighCellsCRS-AssistInfoList</i> is configured, the configuration provided in <i>LTE-NeighCellsCRS-AssistInfoList</i> overrides the default network configuration assumptions. If the field is configured (i.e. false) and <i>LTE-NeighCellsCRS-AssistInfoList</i> is not configured, it is up to the UE implementation whether to apply CRS-IM operation.</p>
<p><b><i>mc-DCI-SetOfCellsToAddModList</i></b> List of up to N (N&lt;=4) configurations of set(s) of cells for multi-cell PDSCH/PUSCH scheduling from the serving cell, where N is reported as UE capability and up to 4 sets of cells can be configured per PUCCH group. When this field is configured to a SCell, PCell cannot be included in either <i>ScheduledCellListDCI-1-3</i> or <i>ScheduledCellListDCI-0-3</i>.</p>
<p><b><i>mc-DCI-SetOfCellsToReleaseList</i></b> List of cell set configurations to release.</p>

<b>multiPDSCH-PerSlotType1-CB</b>
Configures the UE behaviour for Type1 codebook HARQ ACK generation regarding the number of PDSCHs per slot on a serving cell as specified in TS 38.213 [13], clause 9.1.2.1. When this parameter is configured and set to <i>disabled</i> for a serving cell, the network does not schedule UE with more than one PDSCH in a slot on the serving cell if HARQ-ACKs of any two PDSCHs in the slot on the serving cell are supposed to be reported on one PUCCH resource in the same PUCCH slot. If two <i>coresetPoolIndex</i> values are configured, the number of received PDSCHs is per <i>coresetPoolIndex</i> value per slot for a serving cell. If the UE generates two HARQ-ACK codebooks for two priorities, the number of received PDSCHs is per priority per slot for a serving cell. If <i>fdmed-ReceptionMulticast</i> is configured, the number of received PDSCHs is per traffic type (unicast / multicast) per slot for a serving cell.
<b>nr-dl-PRS-PDC-Info</b>
Configures the DL PRS for propagation delay compensation. When configured, the UE measures the UE Rx-Tx time difference based on the reference signals configured in this field.
<b>nrofHARQ-BundlingGroups</b>
Indicates the number of HARQ bundling groups for type2 HARQ-ACK codebook.
<b>pathlossReferenceLinking</b>
Indicates whether UE shall apply as pathloss reference either the downlink of SpCell (PCell for MCG or PSCell for SCG) or of SCell that corresponds with this uplink (see TS 38.213 [13], clause 7).
<b>pdccch-CandidateReceptionWithCRS-Overlap</b>
Presence of this field indicates the UE shall monitor PDCCH candidates that overlap with LTE CRS RE(s).
<b>pdsch-ServingCellConfig</b>
PDSCH related parameters that are not BWP-specific.
<b>positionInDCI-cellIDTRX</b>
The starting bit position of an information block of DCI format 2_9 for this serving cell (see TS 38.212 [17], clause 7.3.1.3.10).
<b>rateMatchPatternToAddModList</b>
Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns. Rate match patterns defined here on cell level apply only to PDSCH of the same numerology. See TS 38.214 [19], clause 5.1.4.1. If a <i>RateMatchPattern</i> with the same <i>RateMatchPatternId</i> is configured in both <i>ServingCellConfig/ServingCellConfigCommon</i> and in SIB20/MCCH, the entire <i>RateMatchPattern</i> configuration shall be the same, including the set of RBs/REs indicated by the patterns for the rate matching around, and they are counted as a single rate match pattern in the total configured rate match patterns as defined in TS 38.214 [19].
<b>sCellDeactivationTimer</b>
SCell deactivation timer in TS 38.321 [3]. If the field is absent, the UE applies the value infinity.
<b>sfnSchemePDCCH</b>
This parameter is used to configure single frequency network scheme for PDCCH: <i>sfnSchemeA</i> or <i>sfnSchemeB</i> as specified (see TS 38.214 [19], clause 5.1). If network includes both <i>sfnSchemePDCCH</i> and <i>sfnSchemePDSCH</i> , same value shall be configured.
<b>sfnSchemePDSCH</b>
This parameter is used to configure single frequency network scheme for PDSCH: <i>sfnSchemeA</i> or <i>sfnSchemeB</i> as specified (see TS 38.214 [19], clause 5.1). If network includes both <i>sfnSchemePDCCH</i> and <i>sfnSchemePDSCH</i> , same value shall be configured. The network does not configure this parameter and <i>repetitionSchemeConfig</i> in <i>PDSCH-Config</i> simultaneously in the same serving cell.
<b>semiStaticChannelAccessConfigUE</b>
When this field is configured and when <i>channelAccessMode-r16</i> (see IE <i>ServingCellConfigCommon</i> and IE <i>ServingCellConfigCommonSIB</i> ) is configured to <i>semiStatic</i> , the UE operates in semi-static channel access mode and can initiate a channel occupancy periodically (see TS 37.213 [48], Clause 4.3). The period can be configured independently from period configured in <i>SemiStaticChannelAccessConfig-r16</i> if the UE indicates the corresponding capability. Otherwise, the periodicity configured by <i>periodUE-r17</i> is an integer multiple of or an integer factor of the periodicity indicated by <i>period</i> in <i>SemiStaticChannelAccessConfig-r16</i> .

<p><b>servicingCellMO</b>  <i>measObjectId</i> of the <i>MeasObjectNR</i> in <i>MeasConfig</i> which is associated to the serving cell. For this <i>MeasObjectNR</i>, the following relationship applies between this <i>MeasObjectNR</i> and <i>frequencyInfoDL</i> in <i>ServingCellConfigCommon/ServingCellConfigCommonSIB</i> of the serving cell: if <i>ssbFrequency</i> is configured, its value is the same as the <i>absoluteFrequencySSB</i> and if <i>csi-rs-ResourceConfigMobility</i> is configured, the value of its <i>subcarrierSpacing</i> is present in one entry of the <i>scs-SpecificCarrierList</i>, <i>csi-RS-CellListMobility</i> includes an entry corresponding to the serving cell (with <i>cellId</i> equal to <i>physCellId</i> in <i>ServingCellConfigCommon</i>) and the frequency range indicated by the <i>csi-rs-MeasurementBW</i> of the entry in <i>csi-RS-CellListMobility</i> is included in the frequency range indicated by in the entry of the <i>scs-SpecificCarrierList</i>.</p>
<p><b>supplementaryUplink</b>  Network may configure this field only when <i>supplementaryUplinkConfig</i> is configured in <i>ServingCellConfigCommon</i> or <i>supplementaryUplink</i> is configured in <i>ServingCellConfigCommonSIB</i>.</p>
<p><b>supplementaryUplinkRelease</b>  If this field is included, the UE shall release the uplink configuration configured by <i>supplementaryUplink</i>. The network only includes either <i>supplementaryUplinkRelease</i> or <i>supplementaryUplink</i> at a time.</p>
<p><b>tag-Id</b>  Timing Advance Group ID, as specified in TS 38.321 [3], which this cell or set of TCI-States of this cell are associated with.</p>
<p><b>tag2</b>  This field to indicate the second TAG information for the serving cell, it is optionally configured in a serving cell if and only if the serving cell is configured with more than one value for the <i>coresetPoolIndex</i>.</p>
<p><b>tcj-ActivatedConfig</b>  If configured for an SCell, or if configured for the PSCell when the SCG is being activated upon the reception of the containing message, the UE shall consider the TCI states provided in this field as the activated TCI states for PDCCH/PDSCH reception on this serving cell.  If configured for the PSCell when the SCG is indicated as deactivated in the containing message:  - the UE shall consider the TCI states provided in this field as the TCI states to be activated for PDCCH/PDSCH reception upon a later SCG activation in which <i>tcj-ActivatedConfig</i> is absent  - if <i>bfd-and-RLM</i> is configured and no RS is configured in <i>RadioLinkMonitoringConfig</i> for RLM, respectively for BFD, the UE shall use the TCI states provided in this field for PDCCH as RS for RLM, respectively for BFD.  When this field is absent for the PSCell and the SCG is being deactivated:  - the UE shall consider the previously activated TCI states as the TCI states to be activated for PDCCH/PDSCH reception upon a later SCG activation in which <i>tcj-ActivatedConfig</i> is absent  - if <i>bfd-and-RLM</i> is configured and no RS is configured in <i>RadioLinkMonitoringConfig</i> for RLM, respectively for BFD, the UE shall use the previously activated TCI states for PDCCH as RS for RLM, respectively for BFD.</p>
<p><b>tdd-UL-DL-ConfigurationDedicated-IAB-MT</b>  Resource configuration per IAB-MT D/U/F overrides all symbols (with a limitation that effectively only flexible symbols can be overwritten in Rel-16) per slot over the number of slots as provided by <i>TDD-UL-DL ConfigurationCommon</i>.</p>
<p><b>unifiedTCI-StateType</b>  Indicates the unified TCI state type the UE is configured for this serving cell. The value <i>separate</i> means this serving cell is configured with <i>dl-OrJointTCI-StateList</i> for DL TCI state and <i>ul-TCI-StateList</i> for UL TCI state. The value <i>joint</i> means this serving cell is configured with <i>dl-OrJointTCI-StateList</i> for joint TCI state for UL and DL operation.</p>
<p><b>uplinkConfig</b>  Network may configure this field only when <i>uplinkConfigCommon</i> is configured in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i>. Addition or release of this field can only be done upon SCell addition or release (respectively).</p>
<p><b>uplink-PowerControlToAddModList</b>  Configures UL power control parameters for PUSCH, PUCCH and SRS when field <i>unifiedTCI-StateType</i> is configured for this serving cell.</p>

**Tag2 field descriptions*****n-TimingAdvanceOffset2***

The *N\_TA-Offset2* to be applied for PDCCH order CFRA towards the active *additionalPCI* as specified in TS 38.133 [14] clause 7.1.1 and for all uplink transmissions on this serving cell associated to *tag2* as specified in TS 38.213 [13] clause 4.2. This field is always present if *SSB-MTC-AdditionalPCI* is configured. It is absent otherwise. If absent, the *N\_TA-Offset* is applied for all uplink transmissions on this serving cell associated to *tag2*.

***tag2-flag***

If this field is set to true, the *tag2-Id* is associated to value 0 and *tag-Id* is associated to value 1 of field TI bit in RAR, fallbackRAR and in the absolute TAC MAC CE, see TS 38.321 [3]. Otherwise, the *tag2-Id* is associated to value 1 and *tag-Id* is associated to value 0 of field TI bit in RAR, fallbackRAR and in the absolute TAC MAC CE, see TS 38.321 [3].

***tag2-Id***

Timing Advance Group ID, as specified in TS 38.321 [3], which this cell or set of TCI-States of this cell are associated with.

<b>UplinkConfig field descriptions</b>
<p><b>carrierSwitching</b> Includes parameters for configuration of carrier based SRS switching (see TS 38.214 [19], clause 6.2.1.3.</p>
<p><b>enableDefaultBeamPL-ForPUSCH0-0, enableDefaultBeamPL-ForPUCCH, enableDefaultBeamPL-ForSRS</b> When the parameter is present, UE derives the spatial relation and the corresponding pathloss reference Rs as specified in 38.213, clauses 7.1.1, 7.2.1, 7.3.1 and 9.2.2. The network only configures these parameters for FR2.</p>
<p><b>enablePL-RS-UpdateForPUSCH-SRS</b> When this parameter is present, the Rel-16 feature of MAC CE based pathloss RS updates for PUSCH/SRS is enabled. Network only configures this parameter when the UE is configured with <i>sri-PUSCH-PowerControl</i>. If this field is not configured, network configures at most 4 pathloss RS resources for PUSCH/PUCCH/SRS transmissions per BWP, not including pathloss RS resources for SRS transmissions for positioning. (See TS 38.213 [13], clause 7).</p>
<p><b>enablePL-RS-UpdateForType1CG-PUSCH</b> When this parameter is present, the Rel-18 feature of MAC CE based pathloss RS updates for Type 1 CG-PUSCH is enabled. The network only configures this parameter, when the parameter <i>enablePL-RS-UpdateForPUSCH-SRS</i> is configured. (See TS 38.213 [13], clause 7).</p>
<p><b>firstActiveUplinkBWP-Id</b> If configured for an SpCell, this field contains the ID of the UL BWP to be activated upon performing the RRC (re-)configuration. If the field is absent, the RRC (re-)configuration does not impose a BWP switch. If configured for an SCell, this field contains the ID of the uplink bandwidth part to be used upon activation of an SCell. The initial bandwidth part is referred to by <i>BandwidthPartId</i> = 0.</p>
<p><b>initialUplinkBWP</b> The dedicated (UE-specific) configuration for the initial uplink bandwidth-part (i.e. UL BWP#0). If any of the optional IEs are configured within this IE as part of the IE <i>uplinkConfig</i>, the UE considers the BWP#0 to be an RRC configured BWP (from UE capability viewpoint). Otherwise, the UE does not consider the BWP#0 as an RRC configured BWP (from UE capability viewpoint). Network always configures the UE with a value for this field if no other BWPs are configured. NOTE1</p>
<p><b>moreThanOneNackOnlyMode</b> Indicates the mode of NACK-only feedback in the PUCCH transmission, as specified in TS 38.213 [13], clause 18. If multicast CFR is not configured, this field is not included. Otherwise, if the field is absent, UE uses mode 1 for multicast CFR.</p>
<p><b>mpr-PowerBoost-FR2</b> Indicates whether UE is allowed to boost uplink transmission power by suspending in-band emission (IBE) requirements as specified in TS 38.101-2 [39]. Network only configures this field for FR2 serving cells.</p>
<p><b>powerBoostPi2BPSK</b> If this field is set to <i>true</i>, the UE determines the maximum output power for PUCCH/PUSCH transmissions that use pi/2 BPSK modulation according to TS 38.101-1 [15] /TS 38.101-5 [75], clause 6.2.4. The network ensures that <i>powerBoostPi2BPSK</i> and <i>powerBoostPi2BPSK-r18</i> are not configured at the same time for a UE.</p>
<p><b>powerBoostQPSK</b> If this field is set to <i>true</i>, the UE determines the maximum output power for PUSCH transmissions that use QPSK modulation according to TS 38.101-1 [15], clause 6.2.4.</p>
<p><b>pusch-ServingCellConfig</b> PUSCH related parameters that are not BWP-specific.</p>
<p><b>srs-PosTx-Hopping</b> Contains configuration related to the SRS for Positioning with frequency hopping for RRC_CONNECTED state.</p>
<p><b>uplinkBWP-ToAddModList</b> The additional bandwidth parts for uplink to be added or modified. In case of TDD uplink- and downlink BWP with the same <i>bandwidthPartId</i> are considered as a BWP pair and must have the same center frequency.</p>
<p><b>uplinkBWP-ToReleaseList</b> The additional bandwidth parts for uplink to be released.</p>

<p><b><i>uplinkChannelBW-PerSCS-List</i></b> A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. If absent, UE uses the configuration indicated in <i>scs-SpecificCarrierList</i> in <i>UplinkConfigCommon / UplinkConfigCommonSIB</i>. Network only configures channel bandwidth that corresponds to the channel bandwidth values defined in TS 38.101-1 [15], TS 38.101-2 [39], and TS 38.101-5 [75]. If the UE is an (e)RedCap UE and needs to autonomously switch to its initial uplink bandwidth part to perform a random access procedure but its current UE specific channel bandwidth does not cover the initial uplink bandwidth part, the UE autonomously changes its UE specific channel bandwidth to cover the initial uplink bandwidth part. In that case, after completion of the random access procedure, the network ensures that the UE specific channel bandwidth fully covers the UE's active uplink bandwidth part in subsequent bandwidth part switch operations.</p>
<p><b><i>uplinkTxSwitchingPeriodLocation</i></b> Indicates whether the location of UL Tx switching period is configured in this uplink carrier in case of inter-band UL CA, SUL, or (NG)EN-DC, as specified in TS 38.101-1 [15] and TS 38.101-3 [34]. In case of (NG)EN-DC, network always configures this field to TRUE for NR carrier (i.e. with (NG)EN-DC, the UL switching period always occurs on the NR carrier). In case of inter-band UL CA or SUL, for dynamic uplink Tx switching between 2 bands with 2 uplink carriers or 3 uplink carriers as defined in TS 38.101-1 [15], network configures this field to TRUE for the uplink carrier(s) on one band and configures this field to FALSE for the uplink carrier(s) on the other band. This field is set to the same value for the carriers on the same band.</p>
<p><b><i>uplinkTxSwitchingCarrier</i></b> Indicates that the configured carrier is carrier1 or carrier2 for dynamic uplink Tx switching, as defined in TS 38.101-1 [15] and TS 38.101-3 [34]. In case of (NG)EN-DC, network always configures the NR carrier as carrier 2. In case of inter-band UL CA or SUL, for dynamic uplink Tx switching between 2 bands with 2 uplink carriers or 3 uplink carriers as defined in TS 38.101-1 [15], network configures the uplink carrier(s) on one band as carrier1 and the uplink carrier(s) on the other band as carrier2. This field is set to the same value for the carriers on the same band.</p>

<b><i>DormantBWP-Config</i></b> field descriptions
<p><b><i>dormancyGroupWithinActiveTime</i></b> This field contains the ID of an SCell group for Dormancy within active time, to which this SCell belongs. The use of the Dormancy within active time for SCell groups is specified in TS 38.213 [13].</p>
<p><b><i>dormancyGroupOutsideActiveTime</i></b> This field contains the ID of an SCell group for Dormancy outside active time, to which this SCell belongs. The use of the Dormancy outside active time for SCell groups is specified in TS 38.213 [13].</p>
<p><b><i>dormantBWP-Id</i></b> This field contains the ID of the downlink bandwidth part to be used as dormant BWP. If this field is configured, its value is different from <i>defaultDownlinkBWP-Id</i>, and at least one of the <i>withinActiveTimeConfig</i> and <i>outsideActiveTimeConfig</i> should be configured.</p>
<p><b><i>firstOutsideActiveTimeBWP-Id</i></b> This field contains the ID of the downlink bandwidth part to be activated when receiving a DCI indication for SCell dormancy outside active time.</p>
<p><b><i>firstWithinActiveTimeBWP-Id</i></b> This field contains the ID of the downlink bandwidth part to be activated when receiving a DCI indication for SCell dormancy within active time.</p>
<p><b><i>outsideActiveTimeConfig</i></b> This field contains the configuration to be used for SCell dormancy outside active time, as specified in TS 38.213 [13]. The field can only be configured when the cell group the SCell belongs to is configured with <i>dcp-Config</i>.</p>
<p><b><i>withinActiveTimeConfig</i></b> This field contains the configuration to be used for SCell dormancy within active time, as specified in TS 38.213 [13].</p>

<i>GuardBand</i> field descriptions	
<b><i>startCRB</i></b>	Indicates the starting RB of the guard band.
<b><i>nrofCRB</i></b>	Indicates the length of the guard band in RBs. When set to 0, zero-size guard band is used.

<b>MC-DCI-SetOfCells field descriptions</b>
<p><b>antennaPortsDCI1-3, antennaPortsDCI0-3</b> Configure the indication type for antenna port(s) field in DCI format 1_3 and DCI format 0_3, respectively (see TS 38.212, clauses 7.3.1.2.4 and 7.3.1.1.4).</p>
<p><b>dormancyDCI-1-3, dormancyDCI-0-3</b> Configure the presence of Scell dormancy indication field in DCI format 1_3 and DCI format 0_3, respectively.</p>
<p><b>minimumSchedulingOffsetK0DCI-1-3, minimumSchedulingOffsetK0DCI-0-3</b> Configure the presence of minimum applicable scheduling offset indicator field in DCI format 1_3 and DCI format 0_3, respectively.</p>
<p><b>nCI-Value</b> Configure n_CI value used for the set of cells, where unique n_CI value is configured for each set of cells.</p>
<p><b>pdccchMonAdaptDCI-1-3, pdccchMonAdaptDCI-0-3</b> Configure the presence of PDCCH monitoring adaptation indication field in DCI format 1_3 and DCI format 0_3, respectively.</p>
<p><b>pdsch-HARQ-ACK-enhType3DCI-1-3</b> Enable the enhanced Type 3 HARQ-ACK codebook triggering using DCI format 1_3.</p>
<p><b>pdsch-HARQ-ACK-enhType3DCIfieldDCI-1-3</b> Enables the enhanced Type 3 CB through a new DCI field to indicate the enhanced Type 3 HARQ-ACK codebook in DCI format 1_3 if the more than one enhanced Type HARQ-ACK codebook is configured for the primary PUCCH cell group.</p>
<p><b>pdsch-HARQ-ACK-OneShotFeedbackDCI-1-3</b> When configured, the DCI format 1_3 can request the UE to report A/N for all HARQ processes and all CCs configured in the PUCCH group.</p>
<p><b>pdsch-HARQ-ACK-retxDCI-1-3</b> When configured, the DCI format 1_3 can request the UE to perform a HARQ-ACK re-transmission on a PUCCH resource (see TS 38.213 [13], clause 9.1.5).</p>
<p><b>priorityIndicatorDCI-1-3, priorityIndicatorDCI-0-3</b> Configure the presence of priority indicator field in DCI format 1_3 and DCI format 0_3, respectively (see TS 38.212 [17], clauses 7.3.1.2.4 and 7.3.1.1.4 and TS 38.213 [13] clause 9).</p>
<p><b>pucch-sSCellDynDCI-1-3</b> Configure the UE with PUCCH cell switching based on dynamic indication in DCI format 1_3 (see TS 38.213 [13], clause 9.A).</p>
<p><b>RateMatchDCI-1-3</b> Configure each row of the joint rate matching indication table for DL scheduling via DCI format 1_3, where bitmap for a cell points to a corresponding rate matching indication applicable for DCI format 1_1 (i.e., MSB and LSB of bitmap refer <i>rateMatchPatternGroup1</i> and <i>rateMatchPatternGroup2</i> for a cell, respectively), the order of rate matching indication bitmap in each row refers the order of cells in <i>ScheduledCellListDCI-1-3</i>, that are configured with <i>rateMatchPatternGroup1</i> or <i>rateMatchPatternGroup2</i> on at least one DL BWP (i.e., first bitmap is for the first cell in <i>ScheduledCellListDCI-1-X</i>, that are configured with <i>rateMatchPatternGroup1</i> or <i>rateMatchPatternGroup2</i> on at least one DL BWP and so on), the number of entries in a row of <i>rateMatchDCI-1-3</i> should be the same as the number of cells, that are configured with <i>rateMatchPatternGroup1</i> or <i>rateMatchPatternGroup2</i> on at least one DL BWP, included in <i>ScheduledCellListDCI-1-3</i>, and entries for co-scheduled cells in a row of <i>rateMatchDCI-1-3</i> are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 (see TS 38.212 [17], clause 7.3.1.2.4 and TS 38.213 [13], clause 12).</p>
<p><b>rateMatchListDCI-1-3</b> Configure joint rate matching indication table for DL scheduling via DCI format 1_3.</p>
<p><b>ScheduledCellCombo</b> Configure each row of the table for combinations of co-scheduled cells for DL scheduling via DCI format 1_3 and for UL scheduling via DCI format 0_3, where index with value INTEGER (0...3) of co-scheduled cell refers to <i>scheduledCellListDCI-1-3</i> for DL and <i>scheduledCellListDCI-0-3</i> for UL.</p>
<p><b>scheduledCellComboListDCI-1-3, scheduledCellComboListDCI-0-3</b> Configure the table for combinations of co-scheduled cells for DL scheduling via DCI format 1_3 and DCI format 0_3, respectively.</p>
<p><b>scheduledCellListDCI-1-3, scheduledCellListDCI-0-3</b> Configure the list of possible co-scheduled cells in the set for DL scheduling via DCI format 1_3 and DCI format 0_3 respectively, where the serving cells in the list are in ascending order of serving cell indices and are mapped to index {0, 1, 2, 3} in the set. Total number of cells within the same set of cells i.e., in <i>scheduledCellListDCI-1-3</i> and <i>scheduledCellListDCI-0-3</i>, is up to 4. When a cell is included in either or both of <i>scheduledCellListDCI-1-3</i> or <i>scheduledCellListDCI-0-3</i> for one set of cells <i>MC-DCI-SetofCells</i>, the cell cannot be included in any of <i>scheduledCellListDCI-1-3</i> or <i>scheduledCellListDCI-0-3</i> for any other set of cells.</p>

<p><b>setOfCellsId</b> Configure index of the set of cells to be indicated in DCI format 0_3/1_3.</p>
<p><b>sri-DCI0-3</b> Configure the indication type for SRS resource indicator field in DCI format 0_3 (See TS 38.212, clause 7.3.1.1.4).</p>
<p><b>SRS-OffsetCombo</b> Configure each row of the joint SRS offset indicator table for DL scheduling via DCI format 1_3 and for UL scheduling via DCI format 0_3, where index for a cell points to a corresponding SRS offset indicator applicable for DCI formats 1_1 and 0_1, and the order of SRS offset indicator index in each row refers the order of cells in <i>scheduledCellListDCI-1-3</i> (i.e., first index is for the first cell in <i>scheduledCellListDCI-1-3</i>, that are configured with more than one entry in <i>availableSlotOffsetList</i> for at least one aperiodic SRS resource set on at least one UL BWP and so on) for DL and <i>scheduledCellListDCI-0-3</i> for UL, included in <i>scheduledCellListDCI-1-3</i> for <i>srs-OffsetListDCI-1-3</i> and <i>scheduledCellListDCI-0-3</i> for <i>srs-OffsetListDCI-0-3</i>, and entries for co-scheduled cells in a row of <i>SRS-OffsetCombo</i> are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 and 0_3 (see TS 38.212 [17], clause 7.3.1.2.4 and clause 7.3.1.1.4, and TS 38.213 [13], clause 12).</p>
<p><b>srs-OffsetListDCI-1-3, srs-OffsetListDCI-0-3</b> Configure joint SRS offset indicator table for DL scheduling via DCI format 1_3 and DCI format 0_3, respectively.</p>
<p><b>SRS-RequestCombo</b> Configure each row of the joint SRS request table for DL scheduling via DCI format 1_3 and for UL scheduling via DCI format 0_3, where index for a cell points to a corresponding SRS request applicable for DCI formats 1_1 and 0_1, and the order of SRS request index in each row refers the order of cells in <i>scheduledCellListDCI-1-3</i> (i.e., first index is for the first cell in <i>scheduledCellListDCI-1-3</i> and so on) for DL and <i>scheduledCellListDCI-0-3</i> for UL. The number of entries in a row of <i>SRS-RequestCombo</i> should be the same as the number of cells included in <i>scheduledCellListDCI-1-3</i> for <i>srs-RequestListDCI-1-3</i> and <i>scheduledCellListDCI-0-3</i> for <i>srs-RequestListDCI-0-3</i>, and entries for co-scheduled cells in a row of <i>SRS-RequestCombo</i> are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 and 0_3 (see TS 38.212 [17], clause 7.3.1.2.4 and clause 7.3.1.1.4, and TS 38.213 [13], clause 12).</p>
<p><b>srs-RequestListDCI-1-3, srs-RequestListDCI-0-3</b> Configure joint SRS request table for DL scheduling via DCI format 1_3 and DCI format 0_3, respectively.</p>
<p><b>TCI-DCI-1-3</b> Configure each row of the joint TCI table for DL scheduling via DCI format 1_3, where index for a cell points to a corresponding TCI applicable for DCI format 1_1, and the order of TCI index in each row refers the order of cells in <i>scheduledCellListDCI-1-3</i> (i.e., first index is for the first cell in <i>scheduledCellListDCI-1-3</i> that configured with <i>tcI-StatesToAddModList</i> and so on), the number of entries in a row of <i>TCI-DCI-1-3</i> should be the same as the number of cells that configured with <i>tcI-StatesToAddModList</i> on at least one DL BWP, included in <i>scheduledCellListDCI-1-3</i>, and entries for cells in a row of <i>TCI-DCI-1-3</i> are interpreted based on the BWPs of cells in <i>scheduledCellListDCI-1-3</i> on which the UE operates based on the BWP indicator field of DCI format 1_3 (see TS 38.212 [17], clause 7.3.1.2.4, and TS 38.213 [13], clause 12).</p>
<p><b>tcI-ListDCI-1-3</b> Configure joint TCI table for DL scheduling via DCI format 1_3</p>
<p><b>TDRA-FieldIndexDCI-0-3</b> Configure each row of the joint TDRA field table for UL scheduling via DCI format 0_3 containing the applicable TDRA field indexes for multiple BWPs/cells, where the TDRA index for a BWP of a cell points to a corresponding TDRA in the TDRA table applicable for DCI format 0_1, the order of TDRA index in each row refers the <i>BWP-Id</i> for a cell and the order of cells in <i>scheduledCellListDCI-0-3</i> (i.e., first TDRA index in a row is for the smallest BWP-Id that can be scheduled by the DCI format 0_3, as specified in TS 38.212 [17], of the first cell in <i>scheduledCellListDCI-0-3</i>, second TDRA index in a row is for the second smallest BWP-Id 1 that can be scheduled by the DCI format 0_3, as specified in TS 38.212 [17], of the first cell and so on), and the number of TDRA indices in a row of <i>TDRA-FieldIndexDCI-0-3</i> should be the same as the total number of BWPs that can be scheduled by the DCI format 0_3, as specified in TS 38.212 [17], across cells included in <i>scheduledCellListDCI-0-3</i>.</p>
<p><b>TDRA-FieldIndexDCI-1-3</b> Configure each row of the joint TDRA field table for DL scheduling via DCI format 1_3 containing the applicable TDRA field indexes for multiple BWPs/cells, where the TDRA index for a BWP of a cell points to a corresponding TDRA in the TDRA table applicable for DCI format 1-1, the order of TDRA index in each row refers the <i>BWP-Id</i> for a cell and the order of cells in <i>scheduledCellListDCI-1-3</i> (i.e., first TDRA index in a row is for the smallest BWP-Id that can be scheduled by the DCI format 1-3, as specified in TS 38.212 [17], of the first cell in <i>scheduledCellListDCI-1-3</i>, second TDRA index in a row is for the second smallest BWP-Id that can be scheduled by the DCI format 1-3, as specified in TS 38.212 [17], of the first cell and so on), and the number of TDRA indices in a row of <i>TDRA-FieldIndexDCI-1-3</i> should be the same as the total number of BWPs that can be scheduled by the DCI format 1-3, as specified in TS 38.212 [17], across cells included in <i>scheduledCellListDCI-1-3</i>.</p>
<p><b>tdra-FieldIndexListDCI-1-3, tdra-FieldIndexListDCI-0-3</b> Configure joint TDRA table for UL scheduling via DCI format 1_3 and DCI format 0_3, respectively.</p>

<b><i>tpmi-DCI0-3</i></b> Configure the indication type for precoding information and number of layers field in DCI format 0_3 (See TS 38.212 [17], clause 7.3.1.1.4).
<b><i>ZP-CSI-DCI-1-3</i></b> Configure each row of the joint ZP-CSI-RS trigger table for DL scheduling via DCI format 1_3, where index for a cell points to a corresponding ZP-CSI-RS trigger applicable for DCI format 1_1, and the order of ZP-CSI-RS trigger index in each row refers the order of cells in <i>scheduledCellListDCI-1-3</i> (i.e., first index is for the first cell in <i>scheduledCellListDCI-1-3</i> , that are configured with <i>aperiodic-ZP-CSI-RS-ResourceSetsToAddModList</i> on at least one DL BWP and so on), the number of entries in a row of <i>ZP-CSI-DCI-1-3</i> should be the same as the number of cells, that are configured with <i>aperiodic-ZP-CSI-RS-ResourceSetsToAddModList</i> on at least one DL BWP, included in <i>scheduledCellListDCI-1-3</i> , and entries for co-scheduled cells in a row of <i>ZP-CSI-DCI-1-3</i> are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 (see TS 38.212 [17], clause 7.3.1.2.4 and TS 38.213 [13], clause 12).
<b><i>zp-CSI-RSListDCI-1-3</i></b> Configure joint ZP-CSI-RS trigger table for DL scheduling via DCI format 1_3.

NOTE 1: If the dedicated part of initial UL/DL BWP configuration is absent, the initial BWP can be used but with some limitations. For example, changing to another BWP requires *RRCReconfiguration* since DCI format 1\_0 doesn't support DCI-based switching.

Conditional Presence	Explanation
<i>AsyncCA</i>	This field is mandatory present for SCells whose slot offset between the SpCell is not 0. Otherwise it is absent, Need S.
<i>MeasObject</i>	This field is mandatory present for the SpCell if the UE has a <i>measConfig</i> , and it is optionally present, Need M, for SCells. For (e)RedCap UEs, this field is optionally present, Need M.
<i>SCellOnly</i>	This field is optionally present, Need R, for SCells. It is absent otherwise.
<i>ServingCellWithoutPUCCH</i>	This field is optionally present, Need S, for SCells except PUCCH SCells. It is absent otherwise.
<i>SyncAndCellAdd</i>	This field is mandatory present for a SpCell upon reconfiguration with <i>reconfigurationWithSync</i> and upon <i>RRCSetup/RRCResume</i> . The field is optionally present for an SpCell, Need N, upon reconfiguration without <i>reconfigurationWithSync</i> . The field is mandatory present for an SCell upon addition, and absent for SCell in other cases, Need M.
<i>TCI_ActivatedConfig</i>	This field is optional Need N for SCells if <i>sCellState</i> is configured, otherwise it is absent. This field is optional Need S for the PSCell when the SCG is indicated as deactivated or is being activated, otherwise it is absent. This field is absent for the PCell.
<i>TDD</i>	This field is optionally present, Need R, for TDD cells. It is absent otherwise.
<i>TDD_IAB</i>	For IAB-MT, this field is optionally present, Need R, for TDD cells. It is absent otherwise.
<i>TypeDCI0-3</i>	This field is mandatory present if <i>ScheduledCellListDCI-0-3</i> is configured, otherwise it is absent, Need R.
<i>TypeDCI1-3</i>	This field is mandatory present if <i>ScheduledCellListDCI-1-3</i> is configured, otherwise it is absent, Need R.

## – *ServingCellConfigCommon*

The IE *ServingCellConfigCommon* is used to configure cell specific parameters of a UE's serving cell. The IE contains parameters which a UE would typically acquire from SSB, MIB or SIBs when accessing the cell from IDLE. With this IE, the network provides this information in dedicated signalling when configuring a UE with a SCells or with an additional cell group (SCG). It also provides it for SpCells (MCG and SCG) upon reconfiguration with sync.

<b>ServingCellConfigCommon field descriptions</b>
<p><b>channelAccessMode</b> If present, this field indicates which channel access procedures to apply for operation with shared spectrum channel access as defined in TS 37.213 [48]. If the field is configured as "semiStatic", the UE shall apply the channel access procedures for semi-static channel occupancy as described in clause 4.3 in TS 37.213. If the field is configured as "dynamic", the UE shall apply the channel access procedures as defined in TS 37.213, clause 4.1 and 4.2.</p>
<p><b>channelAccessMode2</b> If present, the UE shall apply channel access procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the UE shall not apply any channel access procedure. The network always configures this field if channel access procedures are required for the serving cell within this region by regulations.</p>
<p><b>dmrs-TypeA-Position</b> Position of (first) DM-RS for downlink (see TS 38.211 [16], clause 7.4.1.1.1) and uplink (TS 38.211 [16], clause 6.4.1.1.3).</p>
<p><b>downlinkConfigCommon</b> The common downlink configuration of the serving cell, including the frequency information configuration and the initial downlink BWP common configuration. The parameters provided herein should match the parameters configured by MIB and SIB1 (if provided) of the serving cell, with the exception of <i>controlResourceSetZero</i> and <i>searchSpaceZero</i> which can be configured in <i>ServingCellConfigCommon</i> even if MIB indicates that they are absent.</p>
<p><b>discoveryBurstWindowLength</b> Indicates the window length of the discovery burst in ms (see TS 37.213 [48]). The field <i>discoveryBurstWindowLength-r17</i> is applicable to SCS 480 kHz and SCS 960 kHz.</p>
<p><b>featurePriorities</b> Indicates priorities for features, such as (e)RedCap, Slicing, SDT, MSG1-Repetitions, and MSG3-Repetitions for Coverage Enhancements. These priorities are used to determine which <i>FeatureCombinationPreambles</i> the UE shall use when a feature maps to more than one <i>FeatureCombinationPreambles</i>, as specified in TS 38.321 [3]. A lower value means a higher priority. The network does not signal the same priority for more than one feature. The network signals a priority for all feature that map to at least one <i>FeatureCombinationPreambles</i>.</p>
<p><b>longBitmap</b> Bitmap when maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1.</p>
<p><b>lte-CRS-ToMatchAround</b> Parameters to determine an LTE CRS pattern that the UE shall rate match around.</p>
<p><b>mediumBitmap</b> Bitmap when maximum number of SS/PBCH blocks per half frame equals to 8 as defined in TS 38.213 [13], clause 4.1.</p>
<p><b>n-TimingAdvanceOffset</b> The N_TA-Offset to be applied for all uplink transmissions on this serving cell if <i>n-TimingAdvanceOffset2</i> is not configured. If <i>tag2</i> is configured for this serving cell, this field is to be applied to all uplink transmissions associated to <i>tag-id</i> configured for this serving cell. If the field is absent, the UE applies the value defined for the duplex mode and frequency range of this serving cell. See TS 38.133 [14], table 7.1.2-2/table 7.1C.2-4.</p>
<p><b>ra-ChannelAccess</b> If present, this field indicates that the UE shall apply channel access procedures before msg1/msgA transmission for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4.5 for FR2-2.</p>
<p><b>rateMatchPatternToAddModList</b> Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns. Rate match patterns defined here on cell level apply only to PDSCH of the same numerology (see TS 38.214 [19], clause 5.1.4.1). If a <i>RateMatchPattern</i> with the same <i>RateMatchPatternId</i> is configured in both <i>ServingCellConfig/ServingCellConfigCommon</i> and in SIB20/MCCH, the entire <i>RateMatchPattern</i> configuration, including the set of RBs/REs indicated by the patterns for the rate matching around, shall be the same and they are counted as a single rate match pattern in the total configured rate match patterns as defined in TS 38.214 [19].</p>
<p><b>shortBitmap</b> Bitmap when maximum number of SS/PBCH blocks per half frame equals to 4 as defined in TS 38.213 [13], clause 4.1.</p>
<p><b>ss-PBCH-BlockPower</b> Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.</p>
<p><b>ssb-periodicityServingCell</b> The SSB periodicity in ms for the rate matching purpose. If the field is absent, the UE applies the value ms5. (see TS 38.213 [13], clause 4.1)</p>

<p><b>ssb-PositionQCL</b> Indicates the QCL relation between SSB positions for this serving cell as specified in TS 38.213 [13], clause 4.1.</p>
<p><b>ssb-PositionsInBurst</b> For operation in licensed spectrum, indicates the time domain positions of the transmitted SS-blocks in a half frame with SS/PBCH blocks as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted. The network configures the same pattern in this field as in the corresponding field in <i>ServingCellConfigCommonSIB</i>. For operation with shared spectrum channel access, the UE assumes that one or more SS/PBCH blocks indicated by <i>ssb-PositionsInBurst</i> may be transmitted within the discovery burst transmission window and have candidate SS/PBCH blocks indexes corresponding to SS/PBCH block indexes provided by <i>ssb-PositionsInBurst</i> (see TS 38.213 [13], clause 4.1). If the k-th bit of <i>ssb-PositionsInBurst</i> is set to 1, the UE assumes that one or more SS/PBCH blocks within the discovery burst transmission window with candidate SS/PBCH block indexes corresponding to SS/PBCH block index equal to k – 1 may be transmitted; if the kt-th bit is set to 0, the UE assumes that the corresponding SS/PBCH block(s) are not transmitted. The k-th bit is set to 0, where k &gt; <i>ssb-PositionQCL</i> and the number of actually transmitted SS/PBCH blocks is not larger than the number of 1's in the bitmap. The network configures the same pattern in this field as in the corresponding field in <i>ServingCellConfigCommonSIB</i>. For operation with shared spectrum channel access in FR1, only <i>mediumBitmap</i> is used, and for FR2-2, <i>longBitmap</i> is used.</p>
<p><b>ssbSubcarrierSpacing</b> Subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1/FR2-NTN: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz</p>
<p><b>supplementaryUplinkConfig</b> The network configures this field only if <i>uplinkConfigCommon</i> is configured. If this field is absent, the UE shall release the <i>supplementaryUplinkConfig</i> and the <i>supplementaryUplink</i> configured in <i>ServingCellConfig</i> of this serving cell, if configured.</p>
<p><b>tdd-UL-DL-ConfigurationCommon</b> A cell-specific TDD UL/DL configuration, see TS 38.213 [13], clause 11.1.</p>

Conditional Presence	Explanation
<i>AbsFreqSSB</i>	The field is absent when <i>absoluteFrequencySSB</i> in <i>frequencyInfoDL</i> is absent, otherwise the field is mandatory present.
<i>HOAndServCellAdd</i>	This field is mandatory present upon SpCell change (including path switch between a serving cell and a L2 U2N Relay UE) and upon serving cell (PSCell/SCell) addition. Otherwise, the field is absent.
<i>HOAndServCellWithSSB</i>	This field is mandatory present upon SpCell change and upon serving cell (SCell with SSB or PSCell) addition. Otherwise, the field is absent.
<i>SharedSpectrum</i>	This field is mandatory present if this cell operates with shared spectrum channel access in FR1. Otherwise, it is absent, Need R.
<i>SharedSpectrum2</i>	This field is optionally present if this cell operates with shared spectrum channel access in FR2-2, Need R. Otherwise, it is absent, Need R.
<i>TDD</i>	The field is optionally present, Need R, for TDD cells; otherwise it is absent.

– ***ServingCellConfigCommonSIB***

<b>ServingCellConfigCommonSIB field descriptions</b>	
<b>channelAccessMode</b>	If present, this field indicates which channel access procedures to apply for operation with shared spectrum channel access as defined in TS 37.213 [48]. If the field is configured as "semiStatic", the UE shall apply the channel access procedures for semi-static channel occupancy as described in clause 4.3 in TS 37.213. If the field is configured as "dynamic", the UE shall apply the channel access procedures as defined in TS 37.213, clause 4.1 and 4.2.
<b>channelAccessMode2</b>	If present, this field indicates that the UE shall apply channel access procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the UE shall not apply any channel access procedure. The network always configures this field if channel access procedures are required for the serving cell within this region by regulations.
<b>discoveryBurstWindowLength</b>	Indicates the window length of the discovery burst in ms (see TS 37.213 [48]). The field <i>discoveryBurstWindowLength-v1700</i> is applicable to SCS 480 kHz and SCS 960 kHz.
<b>enhancedMeasurementNGSO</b>	If the field is present and UE supports the enhanced cell reselection requirements for NTN NGSO in RRC_IDLE/RRC_INACTIVE, the UE shall apply the enhanced cell reselection requirements for NTN NGSO as specified in TS 38.133 [14], clauses 4.2C.2.3 and 4.2C.2.4.
<b>groupPresence</b>	This field is present when maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to the SS/PBCH index 0-7, the second bit corresponds to SS/PBCH block 8-15, and so on. Value 0 in the bitmap indicates that the SSBs according to <i>inOneGroup</i> are absent. Value 1 indicates that the SS/PBCH blocks are transmitted in accordance with <i>inOneGroup</i> .
<b>inOneGroup</b>	When maximum number of SS/PBCH blocks per half frame equals to 4 as defined in TS 38.213 [13], clause 4.1, only the 4 leftmost bits are valid; the UE ignores the 4 rightmost bits. When maximum number of SS/PBCH blocks per half frame equals to 8 as defined in TS 38.213 [13], clause 4.1, all 8 bits are valid. The first/ leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. When maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1, all 8 bit are valid; The first/ leftmost bit corresponds to the first SS/PBCH block index in the group (i.e., to SSB index 0, 8, and so on); the second bit corresponds to the second SS/PBCH block index in the group (i.e., to SSB index 1, 9, and so on), and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted.
<b>n-TimingAdvanceOffset</b>	The N_TA-Offset to be applied for random access on this serving cell. If the field is absent, the UE applies the value defined for the duplex mode and frequency range of this serving cell. See TS 38.133 [14], table 7.1.2-2/table 7.1C.2-4.
<b>ra-ChannelAccess</b>	If present, this field indicates that the UE shall apply channel access procedures before msg1/msgA transmission for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4.5 for FR2-2.
<b>ssb-PositionsInBurst</b>	Time domain positions of the transmitted SS-blocks in an SS-burst as defined in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access in FR1, only <i>inOneGroup</i> is used and the UE interprets this field same as <i>mediumBitmap</i> in <i>ServingCellConfigCommon</i> . The UE assumes that a bit in <i>inOneGroup</i> at position $k > N_{SSB}^{QCL}$ is 0, where $N_{SSB}^{QCL}$ is obtained from <i>MIB</i> as specified in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access in FR2-2, the m-th bit in <i>groupPresence</i> is set to 0 for $m > N_{SSB}^{QCL}/8$ , where $N_{SSB}^{QCL}$ is obtained from <i>MIB</i> as specified in TS 38.213 [13], clause 4.1.
<b>ss-PBCH-BlockPower</b>	Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.

Conditional Presence	Explanation
FR2-Only	This field is mandatory present for an FR2 carrier frequency. It is absent otherwise and UE releases any configured value.
SharedSpectrum	This field is mandatory present if this cell operates with shared spectrum channel access in FR1. Otherwise, it is absent, Need R.
SharedSpectrum2	This field is optionally present if this cell operates with shared spectrum channel access in FR2-2, Need R. Otherwise, it is absent, Need R.
TDD	The field is optionally present, Need R, for TDD cells; otherwise it is absent.

## – *ShortI-RNTI-Value*

The IE *ShortI-RNTI-Value* is used to identify the suspended UE context of a UE in RRC\_INACTIVE using fewer bits compared to I-RNTI-Value.

### ***ShortI-RNTI-Value* information element**

```
-- ASN1START
-- TAG-SHORTI-RNTI-VALUE-START

ShortI-RNTI-Value ::= BIT STRING (SIZE(24))

-- TAG-SHORTI-RNTI-VALUE-STOP
-- ASN1STOP
```

## – *ShortMAC-I*

The IE *ShortMAC-I* is used to identify and verify the UE at RRC connection re-establishment. The 16 least significant bits of the MAC-I calculated using the AS security configuration of the source PCell, as specified in 5.3.7.4.

### ***ShortMAC-I* information element**

```
-- ASN1START
-- TAG-SHORTMAC-I-START

ShortMAC-I ::= BIT STRING (SIZE (16))

-- TAG-SHORTMAC-I-STOP
-- ASN1STOP
```

## – *SINR-Range*

The IE *SINR-Range* specifies the value range used in SINR measurements and thresholds. For measurements, integer value for SINR measurements is according to Table 10.1.16.1-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value – 46) / 2 dB.

### ***SINR-Range* information element**

```
-- ASN1START
-- TAG-SINR-RANGE-START

SINR-Range ::= INTEGER(0..127)

-- TAG-SINR-RANGE-STOP
-- ASN1STOP
```

– *SI-RequestConfig*

The IE *SI-RequestConfig* contains configuration for Msg1 based SI request without Msg1 repetition. For the random access parameters (e.g. *prach-RootSequenceIndex*, *msg1-SubcarrierSpacing*, etc.) not configured in *SI-RequestConfig*, the UE applies the parameters configured in *rach-ConfigCommon* corresponding to the RACH resource set selected upon RACH initialization (as specified in TS 38.321 [3]), of the initial uplink BWP unless otherwise specified.

***SI-RequestConfig* information element**

```

-- ASN1START

### SI-RequestConfigRepetition field descriptions

#### ***rach-OccasionsSI***

Configuration of dedicated RACH Occasions for SI. If the field is absent, the UE uses the corresponding parameters configured in *rach-ConfigCommon* corresponding to the RACH resource set selected upon RACH initialization (as specified in TS 38.321 [3]), of the initial uplink BWP.

#### ***si-RequestResourcesRepetitionNum2, si-RequestResourcesRepetitionNum4, si-RequestResourcesRepetitionNum8***

Indicates the configurations for Msg1-based SI request with Msg1 repetition for repetition number 2, 4 and 8, respectively.

If there is only one entry in the list, the configuration is used for all SI messages for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting*. Otherwise:

- If *si-SchedulingInfo-v1700* is not present and the *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* is used for on-demand SI request in *SI-SchedulingInfo* or *PosSI-SchedulingInfo*, the 1<sup>st</sup> entry in the list corresponds to the first SI message in *schedulingInfoList* or *posSchedulingInfoList* for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting*, 2<sup>nd</sup> entry in the list corresponds to the second SI message in *schedulingInfoList* or *posSchedulingInfoList* for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting* and so on.
- If *si-SchedulingInfo-v1700* is present and *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* is configured in *SI-SchedulingInfo* for on-demand SI request, the UE generates a list of concatenated SI messages by appending the SI messages containing type1 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700* to the SI messages configured by *schedulingInfoList* in *si-SchedulingInfo*. The 1<sup>st</sup> entry in the list corresponds to the first SI message for which *si-BroadcastStatus* is set to *notBroadcasting*, 2<sup>nd</sup> entry in the list corresponds to the second SI message for which *si-BroadcastStatus* is set to *notBroadcasting* and so on.
- If *si-SchedulingInfo-v1700* is present and *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* is configured in *PosSI-SchedulingInfo* for on-demand SI request, the UE generates a list of concatenated SI messages by appending the SI messages containing type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700* to the SI messages configured by *posSchedulingInfoList* in *posSI-SchedulingInfo*. The 1<sup>st</sup> entry in the list corresponds to the first SI message for which *posSI-BroadcastStatus* or *si-BroadcastStatus* is set to *notBroadcasting*, 2<sup>nd</sup> entry in the list corresponds to the second SI message for which *posSI-BroadcastStatus* or *si-BroadcastStatus* is set to *notBroadcasting* and so on.

Change of *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* should not result in system information change notification.

**SI-RequestResourcesRepetition field descriptions*****ra-PreambleStartIndex***

If N SSBs are associated with a RACH occasion, where  $N \geq 1$ , for the  $i$ -th SSB ( $i=0, \dots, N-1$ ) the preamble with preamble index = *ra-PreambleStartIndex* +  $i$  is used for SI request with Msg1 repetition; For  $N < 1$ , the preamble with preamble index = *ra-PreambleStartIndex* is used for SI request with Msg1 repetition.

– ***SI-SchedulingInfo***

The IE *SI-SchedulingInfo* contains information needed for acquisition of SI messages.

***SI-SchedulingInfo* information element**

#### SchedulingInfo field descriptions

##### **areaScope**

Indicates that a SIB is area specific. If the field is absent, the SIB is cell specific.

##### **si-BroadcastStatus**

Indicates if the SI message is being broadcasted or not. Change of *si-BroadcastStatus* should not result in system information change notifications in Short Message transmitted with P-RNTI over DCI (see clause 6.5). The value of the indication is valid until the end of the BCCH modification period when set to *broadcasting*. When *SIB19* is scheduled in an NTN cell, the *si-BroadcastStatus* for the mapped *SIB19* is set to *broadcasting*.

##### **si-Periodicity**

Periodicity of the SI-message in radio frames. Value *rf8* corresponds to 8 radio frames, value *rf16* corresponds to 16 radio frames, and so on.

<b><i>SI-SchedulingInfo</i> field descriptions</b>
<p><b><i>dummy</i></b> This field is not used in this specification. If received, it is ignored by the UE.</p>
<p><b><i>schedulingInfoList, schedulingInfoList2</i></b> List of scheduling information for SI messages. If <i>si-SchedulingInfo-v1700</i> is present, the network ensures that the total number of SI messages in the list of concatenated SI messages configured by <i>schedulingInfoList</i> in <i>si-SchedulingInfo</i> and SI messages containing type1 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> does not exceed the limit of <i>maxSI-Message</i>.</p>
<p><b><i>si-RequestConfig</i></b> Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i>.</p>
<p><b><i>si-RequestConfigMSG1-Repetition</i></b> Configuration of Msg1 repetition resources on NUL that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i>. This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.</p>
<p><b><i>si-RequestConfigRedCap</i></b> Configuration of Msg1 resources for <i>initialUplinkBWP-RedCap</i> that the (e)RedCap UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i>.</p>
<p><b><i>si-RequestConfigRedCap-MSG1-Repetition</i></b> Configuration of Msg1 repetition resources for <i>initialUplinkBWP-RedCap</i> that the (e)RedCap UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i>. This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.</p>
<p><b><i>si-RequestConfigSUL</i></b> Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i>.</p>
<p><b><i>si-RequestConfigSUL-MSG1-Repetition</i></b> Configuration of Msg1 repetition resources on SUL that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i>. This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.</p>
<p><b><i>si-WindowLength</i></b> The length of the SI scheduling window. Value <i>s5</i> corresponds to 5 slots, value <i>s10</i> corresponds to 10 slots and so on. The network always configures <i>si-WindowLength</i> to be shorter than or equal to the <i>si-Periodicity</i>. The values <i>s2560-v1710</i> and <i>s5120-v1710</i> are only applicable for SCS 480 kHz.</p>
<p><b><i>systemInformationAreaID</i></b> Indicates the system information area that the cell belongs to, if any. Any SIB with <i>areaScope</i> within the SI is considered to belong to this <i>systemInformationAreaID</i>. The <i>systemInformationAreaID</i> is unique within a PLMN/SNPN.</p>

<b>SchedulingInfo2 field descriptions</b>	
<b>encrypted</b>	The presence of this field indicates that the pos-sib-type is encrypted as specified in TS 37.355 [49].
<b>gnss-id</b>	The presence of this field indicates that the positioning SIB type is for a specific GNSS. Indicates a specific GNSS (see also TS 37.355 [49]).
<b>posSibType</b>	The posSIBs as defined in TS 37.355 [49] mapped to SI for scheduling using <i>schedulingInfoList2</i> .
<b>sbas-id</b>	The presence of this field indicates that the positioning SIB type is for a specific SBAS. Indicates a specific SBAS (see also TS 37.355 [49]).
<b>si-WindowPosition</b>	This field indicates the SI window position of the associated SI-message. The network provides <i>si-WindowPosition</i> in an ascending order, i.e. <i>si-WindowPosition</i> in the subsequent entry in <i>schedulingInfoList2</i> has always value higher than in the previous entry of <i>schedulingInfoList2</i> . The network configures this field in a way that ensures that SI messages scheduled by <i>schedulingInfoList</i> and/or <i>posSchedulingInfoList</i> do not overlap with SI messages scheduled by <i>schedulingInfoList2</i> .
<b>sib-MappingInfo</b>	Indicates which SIBs or posSIBs are contained in the SI message.
<b>sibType</b>	The type of SIB(s) mapped to SI for scheduling using <i>schedulingInfoList2</i> . Value <i>type1</i> indicates SIBs and value <i>type2</i> indicates posSIBs.

Conditional presence	Explanation
GNSS-ID-SBAS	The field is mandatory present if <i>gnss-id</i> is set to <i>sbas</i> . It is absent otherwise.
MSG-1	The field is optionally present, Need R, if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>schedulingInfoList</i> or any SI-message containing type1 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.
SIB-TYPE	The field is mandatory present if the SIB type is different from <i>SIB6</i> , <i>SIB7</i> or <i>SIB8</i> . For <i>SIB6</i> , <i>SIB7</i> and <i>SIB8</i> it is absent.
NonPosSIB	The field is mandatory present if the SIB type is <i>type1</i> . For <i>type2</i> it is absent.
SUL-MSG-1	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured in <i>ServingCellConfigCommonSIB</i> and if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>schedulingInfoList</i> or any SI-message containing type1 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.
REDCAP-MSG-1	The field is optionally present, Need R, if <i>initialUplinkBWP-RedCap</i> is configured in <i>UplinkConfigCommonSIB</i> and if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>schedulingInfoList</i> or any SI-message containing type1 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.

## – SK-Counter

The IE *SK-Counter* is a counter used upon initial configuration of SN security for NR-DC and NE-DC, as well as upon refresh of  $S-K_{gNB}$  or  $S-K_{eNB}$  based on the current or newly derived  $K_{gNB}$  during RRC Resume or RRC Reconfiguration, as defined in TS 33.501 [11].

```
-- ASN1START
-- TAG-SKCOUNTER-START
```

```
SK-Counter ::= INTEGER (0..65535)
```

```
-- TAG-SKCOUNTER-STOP
-- ASN1STOP
```

– *SlotFormatCombinationsPerCell*

The IE *SlotFormatCombinationsPerCell* is used to configure the *SlotFormatCombinations* applicable for one serving cell (see TS 38.213 [13], clause 11.1.1).

***SlotFormatCombinationsPerCell* information element**

```
-- ASN1START

    slotFormats              SEQUENCE (SIZE (1..maxNrofSlotFormatsPerCombination)) OF INTEGER (0..255)
}

SlotFormatCombinationId ::= INTEGER (0..maxNrofSlotFormatCombinationsPerSet-1)

-- TAG-SLOTFORMATCOMBINATIONSPERCELL-STOP
-- ASN1STOP
```

***SlotFormatCombination* field descriptions**

***slotFormatCombinationId***

This ID is used in the DCI payload to dynamically select this *SlotFormatCombination* (see TS 38.213 [13], clause 11.1.1).

***slotFormats***

Slot formats that occur in consecutive slots in time domain order as listed here (see TS 38.213 [13], clause 11.1.1 and TS 38.213 [13], clause 14 for IAB-MT).

<b>SlotFormatCombinationsPerCell field descriptions</b>
<p><b>enableConfiguredUL</b> If configured, the UE is allowed to transmit uplink signals/channels (SRS, PUCCH, CG-PUSCH) in the set of symbols of the slot when the UE does not detect a DCI format 2_0 providing a slot format for the set of symbols (see TS 38.213 [13], 11.1.1). This field is applicable only if <i>cg-RetransmissionTimer-r16</i> is configured.</p>
<p><b>positionInDCI</b> The (starting) position (bit) of the slotFormatCombinationId (SFI-Index) for this serving cell (servingCellId) within the DCI payload (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>servingCellId</b> The ID of the serving cell for which the slotFormatCombinations are applicable.</p>
<p><b>slotFormatCombinations</b> A list with <i>SlotFormatCombinations</i>. Each <i>SlotFormatCombination</i> comprises of one or more <i>SlotFormats</i> (see TS 38.211 [16], clause 4.3.2). The total number of <i>slotFormats</i> in the <i>slotFormatCombinations</i> list does not exceed 512.</p>
<p><b>subcarrierSpacing2</b> Reference subcarrier spacing for a Slot Format Combination on an FDD or SUL cell (see TS 38.213 [13], clause 11.1.1). For FDD, subcarrierSpacing (SFI-scs) is the reference SCS for DL BWP and subcarrierSpacing2 (SFI-scs2) is the reference SCS for UL BWP. For SUL, <i>subcarrierSpacing</i> (SFI-scs) is the reference SCS for non-SUL carrier and <i>subcarrierSpacing2</i> (SFI-scs2) is the reference SCS for SUL carrier. The network configures a value that is smaller than or equal to any SCS of configured BWPs of the serving cell that the command applies to. And the network configures a value that is smaller than or equal to the SCS of the serving cell which the UE monitors for SFI indications.</p>
<p><b>subcarrierSpacing</b> Reference subcarrier spacing for this Slot Format Combination. The network configures a value that is smaller than or equal to any SCS of configured BWPs of the serving cell that the command applies to. And the network configures a value that is smaller than or equal to the SCS of the serving cell which the UE monitors for SFI indications (see TS 38.213 [13], clause 11.1.1).</p>

## – SlotFormatIndicator

The IE *SlotFormatIndicator* is used to configure monitoring a Group-Common-PDCCH for Slot-Format-Indicators (SFI).

### SlotFormatIndicator information element

```

  positionInDCI-r16 INTEGER(0..maxSFI-DCI-PayloadSize-1)
}

-- TAG-SLOTFORMATINDICATOR-STOP
-- ASN1STOP
```

<b>SlotFormatIndicator field descriptions</b>
<p><b>availableRB-SetsToAddModList</b> A list of <i>AvailableRB-SetsPerCell</i> objects (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>co-DurationsPerCellToAddModList</b> A list of <i>CO-DurationsPerCell</i> objects. If not configured, the UE uses the slot format indicator (SFI), if available, to determine the channel occupancy duration (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>co-DurationsPerCellToReleaseList</b> A list of <i>CO-DurationsPerCell</i> objects to be released. An entry created using <i>co-DurationsPerCellToAddModList-r16</i> or <i>co-DurationsPerCellToAddModList-r17</i> can be deleted using <i>co-DurationsPerCellToReleaseList</i>.</p>
<p><b>dci-PayloadSize</b> Total length of the DCI payload scrambled with SFI-RNTI (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>sfi-RNTI</b> RNTI used for SFI on the given cell (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>slotFormatCombToAddModList</b> A list of <i>SlotFormatCombinations</i> for the UE's serving cells (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>switchTriggerToAddModList, switchTriggerToAddModListSizeExt</b> A list of <i>SearchSpaceSwitchTrigger</i> objects. Each <i>SearchSpaceSwitchTrigger</i> object provides position in DCI of the bit field indicating search space switching flag for a serving cell or, if <i>cellGroupsForSwitchList</i> is configured, group of serving cells (see TS 38.213 [13], clause 10.4). If <i>cellGroupsForSwitchList</i> is configured, only one of the cells belonging to the same cell group is added/modified, and the configuration applies to all cells belonging to the <i>cellGroupsForSwitchList</i> (see TS 38.213 [13], clause 10.4). The network configures more than 4 <i>SearchSpaceSwitchTrigger</i> objects only if <i>cellGroupsForSwitchList</i> is not configured. The UE shall consider entries in <i>switchTriggerToAddModList</i> and in <i>switchTriggerToAddModListSizeExt</i> as a single list, i.e. an entry created using <i>switchTriggerToAddModList</i> can be modified using <i>switchTriggerToAddModListSizeExt</i> and vice-versa.</p>
<p><b>switchTriggerToReleaseModList, switchTriggerToReleaseListSizeExt</b> A list of <i>SearchSpaceSwitchTriggers</i> to be released. If <i>cellGroupsForSwitchList</i> is configured, the <i>SearchSpaceSwitchTrigger</i> is released for all serving cells belonging to the same <i>CellGroupForSwitch</i>. The UE shall consider entries in <i>switchTriggerToReleaseList</i> and in <i>switchTriggerToReleaseListSizeExt</i> as a single list, i.e. an entry created using <i>switchTriggerToAddModList</i> or <i>switchTriggerToAddModListSizeExt</i> can be deleted using <i>switchTriggerToReleaseList</i> or <i>switchTriggerToReleaseListSizeExt</i>.</p>

<b>AvailableRB-SetsPerCell field descriptions</b>
<p><b>positionInDCI</b> The (starting) position of the bits within DCI payload indicating the availability of the RB sets of a serving cell (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>servingCellId</b> The ID of the serving cell for which the configuration is applicable.</p>

<b>CO-DurationsPerCell field descriptions</b>
<p><b>co-DurationList</b> A list of Channel Occupancy duration in symbols. The maximum duration that can be configured for the following SCS:</p> <ul style="list-style-type: none"> <li>- 15 kHz: 280.</li> <li>- 30 kHz: 560.</li> <li>- 60 kHz: 1120.</li> <li>- 120 kHz: 560.</li> <li>- 480 kHz: 2240.</li> <li>- 960 kHz: 4480.</li> </ul>
<p><b>positionInDCI</b> Position in DCI of the bit field indicating Channel Occupancy duration for UE's serving cells (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>servCellId</b> The ID of the serving cell for which the configuration is applicable.</p>
<p><b>subcarrierSpacing</b> Reference subcarrier spacing for the list of Channel Occupancy durations (see TS 38.213 [13], clause 11.1.1). Only the following values are applicable depending on the used frequency range: FR1: 15, 30, or 60 kHz FR2-2: 120, 480, or 960 kHz</p>

<b>SearchSpaceSwitchTrigger field descriptions</b>
<p><b>positionInDCI</b> The position of the bit within DCI payload containing a search space switching flag (see TS 38.213 [13], clause 11.1.1).</p>
<p><b>servCellId</b> The ID of the serving cell for which the configuration is applicable or the group of serving cells as indicated by <i>CellGroupsForSwitch-r16</i> containing this <i>servCellId</i>.</p>

## – S-NSSAI

The IE *S-NSSAI* (*Single Network Slice Selection Assistance Information*) identifies a Network Slice end to end and comprises a slice/service type and a slice differentiator, see TS 23.003 [21].

### S-NSSAI information element

```

-- ASN1START
-- TAG-S-NSSAI-START

S-NSSAI ::=
    CHOICE {
        sst          BIT STRING (SIZE (8)),
        sst-SD      BIT STRING (SIZE (32))
    }

-- TAG-S-NSSAI-STOP
-- ASN1STOP

```

<b>S-NSSAI field descriptions</b>
<b>ssf</b> Indicates the S-NSSAI consisting of Slice/Service Type, see TS 23.003 [21].
<b>ssf-SD</b> Indicates the S-NSSAI consisting of Slice/Service Type and Slice Differentiator, see TS 23.003 [21].

## – *SpeedStateScaleFactors*

The IE *SpeedStateScaleFactors* concerns factors, to be applied when the UE is in medium or high speed state, used for scaling a mobility control related parameter.

### ***SpeedStateScaleFactors* information element**

```
-- ASN1START
-- TAG-SPEEDSTATESCALEFACTORS-START

SpeedStateScaleFactors ::=          SEQUENCE {
    sf-Medium          ENUMERATED {oDot25, oDot5, oDot75, lDot0},
    sf-High            ENUMERATED {oDot25, oDot5, oDot75, lDot0}
}
-- TAG-SPEEDSTATESCALEFACTORS-STOP
-- ASN1STOP
```

<b><i>SpeedStateScaleFactors</i> field descriptions</b>
<b><i>sf-High</i></b> The concerned mobility control related parameter is multiplied with this factor if the UE is in High Mobility state as defined in TS 38.304 [20]. Value <i>oDot25</i> corresponds to 0.25, value <i>oDot5</i> corresponds to 0.5, <i>oDot75</i> corresponds to 0.75 and so on.
<b><i>sf-Medium</i></b> The concerned mobility control related parameter is multiplied with this factor if the UE is in Medium Mobility state as defined in TS 38.304 [20]. Value <i>oDot25</i> corresponds to 0.25, value <i>oDot5</i> corresponds to 0.5, value <i>oDot75</i> corresponds to 0.75, and so on.

## – *SPS-Config*

The IE *SPS-Config* is used to configure downlink semi-persistent transmission. Multiple Downlink SPS configurations may be configured in one BWP of a serving cell.

### ***SPS-Config* information element**

```
-- ASN1START
-- TAG-SPS-CONFIG-START

SPS-Config ::=          SEQUENCE {
    periodicity          ENUMERATED {ms10, ms20, ms32, ms40, ms64, ms80, ms128, ms160, ms320, ms640,
                                     spare6, spare5, spare4, spare3, spare2, spare1},
    nrofHARQ-Processes  INTEGER (1..8),
    n1PUCCH-AN          PUCCH-ResourceId                                     OPTIONAL, -- Need M

harq-ProcID-Offset-v1700 INTEGER (16..31)                                       OPTIONAL, -- Need R
]]
}

-- TAG-SPS-CONFIG-STOP
-- ASN1STOP

```

<b>SPS-Config field descriptions</b>	
<b>harq-CodebookID</b>	Indicates the HARQ-ACK codebook index for the corresponding HARQ-ACK codebook for SPS PDSCH and ACK for SPS PDSCH release.
<b>harq-ProclD-Offset</b>	Indicates the offset used in deriving the HARQ process IDs, see TS 38.321 [3], clause 5.3.1.
<b>mcs-Table</b>	Indicates the MCS table the UE shall use for DL SPS (see TS 38.214 [19], clause 5.1.3.1. If present, the UE shall use the MCS table of low-SE 64QAM table indicated in Table 5.1.3.1-3 of TS 38.214 [19]. If this field is absent and field <i>mcs-table</i> in <i>PDSCH-Config</i> is set to 'qam256' and the activating DCI is of format 1_1, the UE applies the 256QAM table indicated in Table 5.1.3.1-2 of TS 38.214 [19]. If this field is absent and the field <i>mcs-Table-r17</i> in <i>PDSCH-Config</i> is set to 'qam1024' and the activating DCI is format 1_1, the UE applies the 1024QAM table indicated in Table 5.1.3.1-4 of TS 38.214 [19]. Otherwise, the UE applies the non-low-SE 64QAM table indicated in Table 5.1.3.1-1 of TS 38.214 [19].
<b>n1PUCCH-AN</b>	HARQ resource for PUCCH for DL SPS. The network configures the resource either as format0 or format1. The actual <i>PUCCH-Resource</i> is configured in <i>PUCCH-Config</i> and referred to by its ID. See TS 38.213 [13], clause 9.2.3.
<b>n1PUCCH-AN-PUCCHsSCell</b>	HARQ resource for PUCCH on PUCCH switching SCell (sSCell) for DL SPS. The network configures the resource either as format 0 or format 1. The actual <i>PUCCH-Resource</i> is configured in <i>PUCCH-Config</i> of the <i>PUCCH sSCell</i> and referred to by its ID. See TS 38.213 [13], clause 9.2.3.
<b>nrofHARQ-Processes</b>	Number of configured HARQ processes for SPS DL (see TS 38.321 [3], clause 5.8.1). If UE is configured with <i>nrofHARQ-Processes-v1710</i> UE shall ignore <i>nrofHARQ-Processes</i> (without suffix).
<b>pdsch-AggregationFactor</b>	Number of repetitions for SPS PDSCH (see TS 38.214 [19], clause 5.1.2.1). When the field is absent, the UE applies the value 1 for MBS multicast data and the <i>pdsch-AggregationFactor</i> in <i>pdsch-Config</i> for other data.
<b>periodicity</b>	Periodicity for DL SPS (see TS 38.214 [19] and TS 38.321 [3], clause 5.8.1).
<b>periodicityExt</b>	This field is used to calculate the periodicity for DL SPS (see TS 38.214 [19] and see TS 38.321 [3], clause 5.8.1). If this field is present, the field <i>periodicity</i> is ignored. The following periodicities are supported depending on the configured subcarrier spacing [ms]: 15 kHz: $periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 640. 30 kHz: $0.5 \times periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 1280. 60 kHz with normal CP: $0.25 \times periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 2560. 60 kHz with ECP: $0.25 \times periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 2560. 120 kHz: $0.125 \times periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 5120. 480 kHz: $0.03125 \times periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 20480. 960 kHz: $0.015625 \times periodicityExt$ , where <i>periodicityExt</i> has a value between 1 and 40960. <i>periodicityExt-r17</i> is only applicable for SCS 480 kHz and 960 kHz.
<b>sps-ConfigIndex</b>	Indicates the index of one of multiple SPS configurations.
<b>sps-HARQ-Deferral</b>	Indicates the maximum number of slots or subslots the transmission of DL SPS HARQ-ACK in a slot or subslot can be deferred (see TS 38.213 [13], clause 9.2.5.4).
Conditional Presence	Explanation
<i>SPS-List</i>	The field is mandatory present when included in <i>sps-ConfigToAddModList-r16</i> or <i>sps-ConfigMulticastToAddModList-r17</i> , otherwise the field is absent.

## – *SPS-ConfigIndex*

The IE *SPS-ConfigIndex* is used to indicate the index of one of multiple DL SPS configurations in one BWP.

### ***SPS-ConfigIndex* information element**

```
-- ASN1START
-- TAG-SPS-CONFIGINDEX-START

SPS-ConfigIndex-r16 ::= INTEGER (0.. maxNrofSPS-Config-1-r16)

-- TAG-SPS-CONFIGINDEX-STOP
-- ASN1STOP
```

## – *SPS-PUCCH-AN*

The IE *SPS-PUCCH-AN* is used to indicate a PUCCH resource for HARQ ACK and configure the corresponding maximum payload size for the PUCCH resource.

### ***SPS-PUCCH-AN* information element**

```
-- ASN1START
-- TAG-SPS-PUCCH-AN-START

SPS-PUCCH-AN-r16 ::= SEQUENCE {
    sps-PUCCH-AN-ResourceID-r16 PUCCH-ResourceId,
    maxPayloadSize-r16          INTEGER (4..256) OPTIONAL -- Need R
}

-- TAG-SPS-PUCCH-AN-STOP
-- ASN1STOP
```

<b><i>SPS-PUCCH-AN</i> field descriptions</b>
<b><i>maxPayloadSize</i></b> Indicates the maximum payload size for the corresponding PUCCH resource ID.
<b><i>sps-PUCCH-AN-ResourceID</i></b> Indicates the PUCCH resource ID

## – *SPS-PUCCH-AN-List*

The IE *SPS-PUCCH-AN-List* is used to configure the list of PUCCH resources per HARQ ACK codebook

### ***SPS-PUCCH-AN-List* information element**

```
-- ASN1START
```

```
-- TAG-SPS-PUCCH-AN-LIST-START
SPS-PUCCH-AN-List-r16 ::= SEQUENCE (SIZE(1..4)) OF SPS-PUCCH-AN-r16
-- TAG-SPS-PUCCH-AN-LIST-STOP
-- ASN1STOP
```

## – SRB-Identity

The IE SRB-Identity is used to identify a Signalling Radio Bearer (SRB) used by a UE.

### SRB-Identity information element

```
-- ASN1START
-- TAG-SRB-IDENTITY-START
SRB-Identity ::= INTEGER (1..3)
SRB-Identity-v1700 ::= INTEGER (4)
SRB-Identity-v1800 ::= INTEGER (5)
-- TAG-SRB-IDENTITY-STOP
-- ASN1STOP
```

## – SRS-CarrierSwitching

The IE *SRS-CarrierSwitching* is used to configure SRS carrier switching when PUSCH is not configured or to configure independent SRS power control from that of PUSCH.

### SRS-CarrierSwitching information element

```
-- ASN1START
-- TAG-SRS-CARRIERSWITCHING-START
SRS-CarrierSwitching ::= SEQUENCE {
  srs-SwitchFromServCellIndex INTEGER (0..31) OPTIONAL, -- Need M
  srs-SwitchFromCarrier ENUMERATED {sUL, nUL},
  srs-TPC-PDCCH-Group CHOICE {
    typeA SEQUENCE (SIZE (1..32)) OF SRS-TPC-PDCCH-Config,
    typeB SRS-TPC-PDCCH-Config
  } OPTIONAL, -- Need M
  monitoringCells SEQUENCE (SIZE (1..maxNrofServingCells)) OF ServCellIndex OPTIONAL, -- Need M
  ...
}
SRS-TPC-PDCCH-Config ::= SEQUENCE {
  srs-CC-SetIndexlist SEQUENCE (SIZE(1..4)) OF SRS-CC-SetIndex OPTIONAL -- Need M
```

```

}
SRS-CC-SetIndex ::=
    cc-SetIndex          SEQUENCE {
                        cc-IndexInOneCC-Set  INTEGER (0..3)          OPTIONAL, -- Need M
                        INTEGER (0..7)          OPTIONAL          -- Need M
    }
-- TAG-SRS-CARRIERSWITCHING-STOP
-- ASN1STOP

```

#### SRS-CC-SetIndex field descriptions

##### **cc-IndexInOneCC-Set**

Indicates the CC index in one CC set for Type A (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4). The network always includes this field when the *srs-TPC-PDCCH-Group* is set to *typeA*.

##### **cc-SetIndex**

Indicates the CC set index for Type A associated (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4). The network always includes this field when the *srs-TPC-PDCCH-Group* is set to *typeA*. The network does not configure this field to 3 in this release of specification.

#### SRS-CarrierSwitching field descriptions

##### **monitoringCells**

A set of serving cells for monitoring PDCCH conveying SRS DCI format with CRC scrambled by TPC-SRS-RNTI (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4).

##### **srs-SwitchFromCarrier**

The UE ignores this field in case of independent SRS power control from that of PUSCH.

##### **srs-SwitchFromServCellIndex**

Indicates the serving cell whose UL transmission may be interrupted during SRS transmission on a PUSCH-less SCell. During SRS transmission on a PUSCH-less SCell, the UE may temporarily suspend the UL transmission on a serving cell with PUSCH in the same CG to allow the PUSCH-less SCell to transmit SRS. (see TS 38.214 [19], clause 6.2.1.3).

##### **srs-TPC-PDCCH-Group**

Network configures the UE with either *typeA-SRS-TPC-PDCCH-Group* or *typeB-SRS-TPC-PDCCH-Group*, if any.

##### **typeA**

Type A trigger configuration for SRS transmission on a PUSCH-less SCell, or for SRS transmission on a serving cell with independent SRS power control from that of PUSCH (see TS 38.213 [13], clause 11.4). In this release, the network configures at most one entry (the first entry) of *typeA*, and the first entry corresponds to the serving cell in which the *SRS-CarrierSwitching* field is configured. SRS carrier switching to SUL carrier is not supported in this version of the specification.

##### **typeB**

Type B trigger configuration for SRS transmission on a PUSCH-less SCell, or for SRS transmission on a serving cell with independent SRS power control from that of PUSCH (see TS 38.213 [13], clause 11.4).

#### SRS-TPC-PDCCH-Config field descriptions

##### **srs-CC-SetIndexlist**

A list of pairs of [*cc-SetIndex*; *cc-IndexInOneCC-Set*] (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4). The network does not configure this field for *typeB*.

## – SRS-Config

The IE *SRS-Config* is used to configure sounding reference signal transmissions. The configuration defines a list of SRS-Resources, a list of SRS-PosResources, a list of SRS-PosResourceSets and a list of SRS-ResourceSets. Each resource set defines a set of SRS-Resources or SRS-PosResources. The network triggers the transmission of the set of SRS-Resources or SRS-PosResources using a configured aperiodicSRS-ResourceTrigger (L1 DCI). The network does not configure SRS specific power control parameters *alpha* (without suffix) or *pathlossReferenceRS* if *unifiedTCI-StateType* is configured for the serving cell.

### SRS-Config information element

```

<b>SRS-Config field descriptions</b>
<p><b><i>dci-TriggeringPosResourceSetLink</i></b> Indicates whether the single DCI-triggering SRS positioning resource sets across the linked carriers is enabled or not for bandwidth aggregation.</p> <p><b><i>tpc-Accumulation</i></b> If the field is absent, UE applies TPC commands via accumulation. If disabled, UE applies the TPC command without accumulation (this applies to SRS when a separate closed loop is configured for SRS) (see TS 38.213 [13], clause 7.3).</p>

<b>SRS-Resource, SRS-PosResource field descriptions</b>
<p><b>cyclicShift-n2</b> Cyclic shift configuration (see TS 38.214 [19], clause 6.2.1).</p>
<p><b>cyclicShift-n4</b> Cyclic shift configuration (see TS 38.214 [19], clause 6.2.1).</p>
<p><b>cyclicShift-n8</b> Cyclic shift configuration (see TS 38.214 [19], clause 6.2.1).</p>
<p><b>combOffsetHopping</b> Configures UE with comb offset hopping. The <i>hoppingId</i> is used to initialize pseudo random comb offset hopping. If UE is configured with both comb offset and cyclic shift hopping, only one <i>hoppingId</i> is configured. The <i>hoppingWithRepetition</i> configures time-domain hopping behavior for repetition factor <math>R &gt; 1</math>. The <i>hoppingSubset</i> indicates a set of comb offset by a bit string (see clause 6.4.1.4.3 of TS 38.211 [16]). The <math>i</math>-th bit in the bit string is set to 1 to indicate the <math>s_{coh}^{SRS}(t) = i - 1</math>, where <math>t</math> is determined by its ordinary position among the positive bits in bit string, i.e., if the <math>i</math>-th bit is a first positive bit, <math>t=0</math>; if the <math>i</math>-th bit is a second positive bit, <math>t=1</math>, and so on.</p>
<p><b>cyclicShiftHopping</b> Configures UE with cyclic shift hopping. The <i>hoppingId</i> is used to initialize pseudo random cyclic shift hopping. If UE is configured with both comb offset and cyclic shift hopping, only one <i>hoppingId</i> is configured. The <i>hoppingFinerGranularity</i> enables finer granular hopping, see TS 38.211 [16], clause 6.4.1.4.2. If <i>hoppingSubset</i> is configured, <i>hoppingFinerGranularity</i> is not configured. The <i>hoppingSubset</i> indicates a set of cyclic shift by a bit string (see clause 6.4.1.4.2 of TS 38.211 [16]). The <math>i</math>-th bit in the bit string is set to 1 to indicate the <math>s_{ch}^{SRS}(t) = i - 1</math>, where <math>t</math> is determined by its ordinary position among the positive bits in bit string, i.e., if the <math>i</math>-th bit is a first positive bit, <math>t=0</math>; if the <math>i</math>-th bit is a second positive bit, <math>t=1</math>, and so on.</p>
<p><b>enableStartRBHopping</b> When this RRC parameter is configured, start RB location hopping is enabled for partial frequency sounding in different SRS frequency hopping periods for periodic/semi-persistent/asynchronous SRS as described in clause 6.4.1.4 in TS 38.211.</p>
<p><b>freqHopping</b> Includes parameters capturing SRS frequency hopping (see TS 38.214 [19], clause 6.2.1). For CLI SRS-RSRP measurement, the network always configures this field such that <math>b-hop &gt; b-SRS</math>. For SRS for positioning configuration in multiple cells, the value of this field applies to all cells in the validity area. <i>c-SRS</i> Indicates the maximum bandwidth per hop. When <i>TxHoppingConfig</i> is configured the valid values for <i>c-SRS</i> are such that the maximum bandwidth is: 104 PRBs, 48 PRBs, 132 PRBs, 64 PRBs, for 15,30,60,120 KHz respectively. The same value for <i>c-SRS</i> is configured for all the hops when <i>TxHoppingConfig</i> is configured.</p>
<p><b>groupOrSequenceHopping</b> Parameter(s) for configuring group or sequence hopping (see TS 38.211 [16], clause 6.4.1.4.2). For CLI SRS-RSRP measurement, the network always configures this parameter to 'neither'. For SRS for positioning configuration in multiple cells, the value of this field applies to all cells in the validity area.</p>
<p><b>nrofSRS-Ports</b> Number of ports. For CLI SRS-RSRP measurement, the network always configures this parameter to 'port1'.</p>
<p><b>nrofSRS-Ports-n8</b> Number of ports if the number of antenna ports is 8. The value 'ports8' configures UE with 8 antenna ports and the value 'ports8tdm' configures the UE with 8 antenna ports which are partitioned into 2 subsets with each subset having 4 different ports, and the subsets are mapped to different OFDM symbols, see TS 38.211 [16], clause 6.4.1.4.2. If <i>combOffsetHopping-r18</i> or <i>cyclicShiftHopping-r18</i> is configured, this field is not set to <i>ports8tdm</i>. If this field is present UE ignores the field <i>nrofSRS-Ports</i>.</p>
<p><b>periodicityAndOffset-p, periodicityAndOffset-p-Ext</b> Periodicity and slot offset for this SRS resource. All values are in "number of slots". Value <i>s1</i> corresponds to a periodicity of 1 slot, value <i>s2</i> corresponds to a periodicity of 2 slots, and so on. For each periodicity the corresponding offset is given in number of slots. For periodicity <i>s1</i> the offset is 0 slots (see TS 38.214 [19], clause 6.2.1). For CLI SRS-RSRP measurement, <i>s1280</i> and <i>s12560</i> cannot be configured. For <i>SRS-PosResource</i>, values <i>s120480</i>, <i>s140960</i> and <i>s181920</i> cannot be configured for SCS=15kHz, values <i>s140960</i> and <i>s181920</i> cannot be configured for SCS=30kHz, and value <i>s181920</i> cannot be configured for SCS=60kHz except when periodicity of 20480ms is configured. When <i>periodicityAndOffset-p-Ext</i> is present, <i>periodicityAndOffset-p</i> shall be ignored by the UE.</p>
<p><b>periodicityAndOffset-sp, periodicityAndOffset-sp-Ext</b> Periodicity and slot offset for this SRS resource. All values are in "number of slots". Value <i>s1</i> corresponds to a periodicity of 1 slot, value <i>s2</i> corresponds to a periodicity of 2 slots, and so on. For each periodicity the corresponding offset is given in number of slots. For periodicity <i>s1</i> the offset is 0 slots (see TS 38.214 [19], clause 6.2.1). For <i>SRS-PosResource</i>, values <i>s120480</i>, <i>s140960</i> and <i>s181920</i> cannot be configured for SCS=15kHz, values <i>s140960</i> and <i>s181920</i> cannot be configured for SCS=30kHz, and value <i>s181920</i> cannot be configured for SCS=60kHz. When <i>periodicityAndOffset-sp-Ext</i> is present, <i>periodicityAndOffset-sp</i> shall be ignored by the UE.</p>

<p><b>ptrs-PortIndex</b> The PTRS port index for this SRS resource for non-codebook based UL MIMO. This is only applicable when the corresponding <i>PTRS-UplinkConfig</i> is set to CP-OFDM. The <i>ptrs-PortIndex</i> configured here must be smaller than the <i>maxNrofPorts</i> configured in the <i>PTRS-UplinkConfig</i> (see TS 38.214 [19], clause 6.2.3.1). This parameter is not applicable to CLI SRS-RSRP measurement.</p>
<p><b>resourceMapping</b> OFDM symbol location of the SRS resource within a slot including <i>nrofSymbols</i> (number of OFDM symbols), <i>startPosition</i> (value 0 refers to the last symbol, value 1 refers to the second last symbol, and so on) and <i>repetitionFactor</i> (see TS 38.214 [19], clause 6.2.1 and TS 38.211 [16], clause 6.4.1.4). The configured SRS resource does not exceed the slot boundary. If <i>resourceMapping-r16</i> is signalled, UE shall ignore the <i>resourceMapping</i> (without suffix). If <i>resourceMapping-r17</i> is signalled, <i>resourceMapping-r16</i> is not signalled and the UE shall ignore the <i>resourceMapping</i> (without suffix) and only the values of <i>nrofSymbols</i> which are integer multiples of the configured <i>repetitionFactor</i> can be configured. The network can only signal <i>repetitionFactor-v1730</i> if <i>resourceMapping-r17</i> is signalled. When <i>repetitionFactor-v1730</i> is signalled, the UE shall ignore <i>repetitionFactor-r17</i>. For CLI SRS-RSRP measurement, the network always configures <i>nrofSymbols</i> and <i>repetitionFactor</i> to 'n1'. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area. <i>nrofSymbols</i> is same for all the hops when <i>TxHoppingConfig</i> is configured.</p>
<p><b>resourceType</b> Periodicity and offset for semi-persistent and periodic SRS resource, or slot offset for aperiodic SRS resource for positioning (see TS 38.214 [19], clause 6.2.1). For CLI SRS-RSRP measurement, only 'periodic' is applicable for <i>resourceType</i>. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.</p>
<p><b>sequenceId</b> Sequence ID used to initialize pseudo random group and sequence hopping (see TS 38.214 [19], clause 6.2.1). If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.</p>
<p><b>slotOffset</b> An offset in number of slots between the triggering DCI and the actual transmission of this <i>SRS-PosResource</i>. If the field is absent the UE applies no offset (value 0).</p>
<p><b>spatialRelationInfo</b> Configuration of the spatial relation between a reference RS and the target SRS. Reference RS can be SSB/CSI-RS/SRS (see TS 38.214 [19], clause 6.2.1). This parameter is not applicable to CLI SRS-RSRP measurement. This field is not configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.</p>
<p><b>spatialRelationInfo-PDC</b> Configuration of the spatial relation between a reference RS and the target SRS. Reference RS can be SSB/CSI-RS/SRS/DL-PRS-PDC (see TS 38.214 [19], clause 6.2.1). The field is present in case of <i>resourceType=periodic</i> and <i>usagePDC-r17=true</i> in the <i>SRS-ResourceSet</i>, otherwise the field is absent.</p>
<p><b>spatialRelationInfoPos</b> Configuration of the spatial relation between a reference RS and the target SRS. Reference RS can be SSB/CSI-RS/SRS/DL-PRS (see TS 38.214 [19], clause 6.2.1). If the IE <i>srs-ResourceId-Ext</i> is present, the IE <i>srs-ResourceId</i> in <i>spatialRelationInfoPos</i> represents the index from 0 to 63. Otherwise the IE <i>srs-ResourceId</i> in <i>spatialRelationInfoPos</i> represents the index from 0 to 31. If the SRS for positioning is configured for RRC_INACTIVE state, the <i>srs-ResourceId</i> and <i>csi-RS-IndexServing</i> are not included in this field.</p>
<p><b>srs-PosPeriodicConfigHyperSFN-Index</b> Indicates even or odd hyper SFN in which the SRS for positioning is transmitted for the periodicity value of 20480m. If this field is not configured, the UE assumes that SRS for positioning periodicity longer than one Hyper SFN is not configured.</p>
<p><b>srs-RequestDCI-0-2</b> Indicate the number of bits for "SRS request" in DCI format 0_2. When the field is absent, then the value of 0 bit for "SRS request" in DCI format 0_2 is applied. If the parameter <i>srs-RequestDCI-0-2</i> is configured to value 1, 1 bit is used to indicate one of the first two rows of Table 7.3.1.1.2-24 in TS 38.212 [17] for triggered aperiodic SRS resource set. If the value 2 is configured, 2 bits are used to indicate one of the rows of Table 7.3.1.1.2-24 in TS 38.212 [17]. When UE is configured with <i>supplementaryUplink</i>, an extra bit (the first bit of the SRS request field) is used for the non-SUL/SUL indication.</p>
<p><b>srs-RequestDCI-1-2</b> Indicate the number of bits for "SRS request" in DCI format 1_2. When the field is absent, then the value of 0 bit for "SRS request" in DCI format 1_2 is applied. When the UE is configured with <i>supplementaryUplink</i>, an extra bit (the first bit of the SRS request field) is used for the non-SUL/SUL indication (see TS 38.214 [19], clause 6.1.1.2).</p>
<p><b>srs-ResourceSetToAddModListDCI-0-2</b> List of SRS resource set to be added or modified for DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).</p>

<b><i>srs-ResourceSetToReleaseListDCI-0-2</i></b> List of SRS resource set to be released for DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).
<b><i>srs-TCI-State</i></b> Configuration of either a UL TCI state or a joint TCI state for the SRS resource. In case of <i>UL TCI-State</i> , refers to the TCI state defined in <i>ul-TCI-StateList</i> in the <i>BWP-UplinkDedicated</i> where the <i>SRS-Config</i> is configured. In case of joint TCI state, refers to a TCI state defined in <i>dl-OrJointTCI-StateList</i> in <i>pdsch-Config</i> of the <i>BWP-DownlinkDedicated</i> and serving cell indicated by <i>cellAndBWP</i> . This field is absent when the SRS resource is in an <i>SRS-ResourceSet</i> configured with <i>followUnifiedTCI-StateSRS-r17</i> or <i>applyIndicatedTCI-State</i> , or when the field <i>unifiedTCI-StateType</i> is not configured to the serving cell which the SRS resource is located in.
<b><i>startRBIndexAndFreqScalingFactor</i></b> Configures the UE with the <i>startRBIndex</i> and <i>freqScalingFactor</i> for partial frequency sounding as described in Clause 6.4.1.4 in TS 38.211. The <i>startRBIndexForFScaling2</i> gives the <i>startRBIndex</i> when <i>freqScalingFactor</i> is 2 and the <i>startRBIndexForFScaling4</i> gives the <i>startRBIndex</i> when <i>FreqScalingFactor</i> is 4
<b><i>transmissionComb, transmissionComb-n2, transmissionComb-n4, transmissionComb-n8</i></b> Comb value (2 or 4 or 8) and comb offset (0..combValue-1) (see TS 38.214 [19], clause 6.2.1). If network configures field <i>transmissionComb-n8</i> , the UE ignores <i>transmissionComb</i> . If <i>srs-PosRRC-InactiveValidityAreaPreConfig</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.

<b>SRS-ResourceSet, SRS-PosResourceSet field descriptions</b>
<p><b>alpha</b> alpha value for SRS power control (see TS 38.213 [13], clause 7.3). When the field is absent the UE applies the value 1. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.</p>
<p><b>aperiodicSRS-ResourceTriggerList</b> An additional list of DCI "code points" upon which the UE shall transmit SRS according to this SRS resource set configuration (see TS 38.214 [19], clause 6). When the field is not included during a reconfiguration of <i>SRS-ResourceSet</i> of <i>resourceType</i> set to <i>aperiodic</i>, UE maintains this value based on the Need M; that is, this list is not considered as an extension of <i>aperiodicSRS-ResourceTrigger</i> for purpose of applying the general rule for extended list in clause 6.1.3.</p>
<p><b>aperiodicSRS-ResourceTrigger</b> The DCI "code point" upon which the UE shall transmit SRS according to this SRS resource set configuration (see TS 38.214 [19], clause 6).</p>
<p><b>applyIndicatedTCI-State</b> This field indicates, for an SRS-ResourceSet, if UE applies the first or the second "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 6.2.1.</p>
<p><b>associatedCSI-RS</b> ID of CSI-RS resource associated with this SRS resource set in non-codebook based operation (see TS 38.214 [19], clause 6.1.1.2).</p>
<p><b>availableSlotOffsetList</b> Indicates a list of up to four different available slot offset values from slot <math>n+k</math> to the slot where the aperiodic SRS resource set is transmitted, where slot <math>n</math> is the slot with the triggering DCI, and <math>k</math> is the <i>slotOffset</i> (without suffix) as described in clause 6.2.1 of TS 38.214 [19].</p>
<p><b>csi-RS</b> ID of CSI-RS resource associated with this SRS resource set (see TS 38.214 [19], clause 6.1.1.2).</p>
<p><b>dl-PRS</b> This field indicates a PRS configuration.</p>
<p><b>followUnifiedTCI-StateSRS</b> When set to enabled, for SRS resource Set, the UE applies the "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5. This parameter may be configured for aperiodic SRS for BM or SRS of any time-domain behavior for codebook, non-codebook, and antenna switching.</p>
<p><b>p0</b> P0 value for SRS power control. The value is in dBm. Only even values (step size 2) are allowed (see TS 38.213 [13], clause 7.3). If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.</p>
<p><b>pathlossReferenceRS</b> A reference signal (e.g. a CSI-RS config or a SS block) to be used for SRS path loss estimation (see TS 38.213 [13], clause 7.3).</p>
<p><b>pathlossReferenceRS-Pos</b> A reference signal (e.g. a SS block or a DL-PRS config) to be used for SRS path loss estimation (see TS 38.213 [13], clause 7.3).</p>
<p><b>pathlossReferenceRSList</b> Multiple candidate pathloss reference RS(s) for SRS power control, where one candidate RS can be mapped to SRS Resource Set via MAC CE (clause 6.1.3.27 in TS 38.321 [3]). The network can only configure this field if <i>pathlossReferenceRS</i> is not configured in the same <i>SRS-ResourceSet</i>.</p>
<p><b>resourceType</b> Time domain behavior of SRS resource configuration, see TS 38.214 [19], clause 6.2.1. The network configures SRS resources in the same resource set with the same time domain behavior on periodic, aperiodic and semi-persistent SRS. The aperiodic SRS is not applicable for the UE in RRC_INACTIVE. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.</p>
<p><b>slotOffset</b> An offset in number of slots between the triggering DCI and the actual transmission of this <i>SRS-ResourceSet</i>. If the field is absent the UE applies no offset (value 0).</p>
<p><b>srs-PowerControlAdjustmentStates</b> Indicates whether <math>hsrs,c(i) = fc(i,1)</math> or <math>hsrs,c(i) = fc(i,2)</math> (if twoPUSCH-PC-AdjustmentStates are configured) or separate close loop is configured for SRS. This parameter is applicable only for Uls on which UE also transmits PUSCH. If absent or release, the UE applies the value sameAs-Fci1 (see TS 38.213 [13], clause 7.3).</p>

<b><i>srs-ResourceIdList, srs-PosResourceIdList</i></b> The IDs of the SRS-Resources/SRS-PosResource used in this <i>SRS-ResourceSet/SRS-PosResourceSet</i> . If this <i>SRS-ResourceSet</i> is configured with usage set to codebook, the <i>srs-ResourceIdList</i> contains at most 2 entries. If this <i>SRS-ResourceSet</i> is configured with usage set to <i>nonCodebook</i> , the <i>srs-ResourceIdList</i> contains at most 4 entries. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, <i>srs-PosResourceIdList</i> is commonly configured across cells within the validity area.
<b><i>srs-ResourceSetId, srs-PosResourceSetId</i></b> The ID of this resource set. It is unique in the context of the BWP in which the parent <i>SRS-Config</i> is defined. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, <i>srs-PosResourceSetId</i> is commonly configured across cells within the validity area.
<b><i>ssb-IndexServing</i></b> Indicates SSB index belonging to a serving cell where the SRS is configured.
<b><i>ssb-Ncell</i></b> This field indicates a SSB configuration from neighboring cell.
<b><i>usage</i></b> Indicates if the SRS resource set is used for beam management, codebook based or non-codebook based transmission or antenna switching. See TS 38.214 [19], clause 6.2.1. Reconfiguration between codebook based and non-codebook based transmission is not supported.
<b><i>usagePDC</i></b> If configured, it indicates that this SRS resource set is used for propagation delay compensation. The field can be present in only one <i>SRS-ResourceSet</i> .

#### **SRS-SpatialRelationInfoPos field descriptions**

<b><i>csi-RS-IndexServing</i></b> Indicates CSI-RS index belonging to a serving cell.
<b><i>dl-PRS</i></b> This field indicates a PRS configuration.
<b><i>resourceSelection</i></b> Indicates whether the configured SRS spatial relation resource is a <i>SRS-Resource</i> or <i>SRS-PosResource</i> .
<b><i>servingCellId</i></b> The serving Cell ID of the source SSB, CSI-RS, or SRS for the spatial relation of the target SRS resource. If this field is absent the SSB, the CSI-RS, or the SRS is from the same serving cell where the SRS is configured.
<b><i>ssb-IndexServing</i></b> Indicates SSB index belonging to a serving cell.
<b><i>ssb-Ncell</i></b> This field indicates a SSB configuration from neighboring cell.

#### **SSB-InfoNCell field descriptions**

<b><i>physicalCellId</i></b> This field specifies the physical cell ID of the neighbour cell or NCD-SSB of the serving cell for which SSB configuration is provided.
<b><i>ssb-IndexNcell</i></b> This field specifies the index of the SSB for a neighbour cell or NCD-SSB of the serving cell. See TS 38.213 [13]. If this field is absent, the UE determines the <i>ssb-IndexNcell</i> of the <i>physicalCellId</i> based on its SSB measurement from the cell.
<b><i>ssb-Configuration</i></b> This field specifies the full configuration of the SSB. If this field is absent, the UE obtains the configuration for the SSB from <i>nr-SSB-Config</i> received as part of DL-PRS assistance data in LPP, see TS 37.355 [49], by looking up the corresponding SSB configuration using the field <i>physicalCellId</i> .

<b>DL-PRS-Info field descriptions</b>
<p><b>dl-PRS-ID</b> This field specifies the UE specific TRP ID (see TS 37.355 [49]) for which PRS configuration is provided.</p>
<p><b>dl-PRS-ResourceSetId</b> This field specifies the PRS-ResourceSet ID of a PRS resourceSet.</p>
<p><b>dl-PRS-ResourceId</b> This field specifies the PRS-Resource ID of a PRS resource. If this field is absent, the UE determines the <i>dl-PRS-ResourceID</i> based on its PRS measurement from the TRP (see TS 37.355 [49]) and DL-PRS Resource Set.</p>

<b>SSB-Configuration field descriptions</b>
<p><b>halfFrameIndex</b> Indicates whether SSB is in the first half or the second half of the frame. Value zero indicates the first half and value 1 indicates the second half.</p>
<p><b>integerSubframeOffset</b> Indicates the subframe boundary offset of the cell in which SSB is transmitted.</p>
<p><b>sfn0-Offset</b> Indicates the time offset of the SFN0 slot 0 for the cell with respect to SFN0 slot 0 of serving cell.</p>
<p><b>sfn-Offset</b> Specifies the SFN offset between the cell in which SSB is transmitted and serving cell. The offset corresponds to the number of full radio frames counted from the beginning of a radio frame #0 of serving cell to the beginning of the closest subsequent radio frame #0 of the cell in which SSB is transmitted.</p>
<p><b>sfn-SSB-Offset</b> Indicates the SFN offset of the transmitted SSB relative to the start of the SSB period. Value 0 indicates that the SSB is transmitted in the first system frame, value 1 indicates that SSB is transmitted in the second system frame and so on. The network configures this field according to the field <i>ssb-Periodicity</i> such that the indicated system frame does not exceed the configured SSB periodicity.</p>
<p><b>ssb-Freq</b> Indicates the frequency of the SSB.</p>
<p><b>ss-PBCH-BlockPower</b> Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.</p>
<p><b>ssb-Periodicity</b> Indicates the periodicity of the SSB. If the field is absent, the UE applies the value ms5. (see TS 38.213 [13], clause 4.1)</p>
<p><b>ssbSubcarrierSpacing</b> Subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1/FR2-NTN: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz</p>

<i>TxHoppingConfig</i> field descriptions
<p><b>numberOfHops</b> This field specifies the number of hops. Value 1 indicates one hop, value 2 indicates two hops and so on.</p>
<p><b>overlapValue</b> This field specifies the overlap during SRS transmission in terms of number of <i>resource blocks</i>. Value <i>zeroRB</i> implies 0 RB, value <i>oneRB</i> corresponds to 1 RB, value <i>twoRB</i> corresponds to 2 RBs and so on. The same value for the <i>overlapValue</i> is configured to all the hops.</p>
<p><b>slotOffsetForRemainingHopsList</b> This field specifies the starting slot offset and starting symbol for the SRS resource with tx hopping for different resource types (aperiodic, semi-persistent or periodic SRS transmission). Each hop is configured with the same periodicity.</p>

Conditional Presence	Explanation
<i>DLorJointTCI-SRS</i>	The field is mandatory present if <i>srs-DLorJointTCI-State</i> is configured, otherwise it is absent Need R.
<i>FollowUTCi</i>	The field is optionally present, Need R, if the field <i>followUnifiedTCI-StateSRS</i> is present. Otherwise, it is absent.
<i>NonCodebook</i>	This field is optionally present, Need M, in case of non-codebook based transmission, otherwise the field is absent.
<i>Pathloss</i>	The field is mandatory present if the IE <i>SSB-InfoNcell</i> is included in <i>pathlossReferenceRS-Pos</i> ; otherwise it is optionally present, Need R
<i>Setup</i>	This field is mandatory present upon configuration of SRS-ResourceSet or SRS-Resource and optionally present, Need M, otherwise.

## – SRS-PosTx-Hopping

The IE *SRS-PosTx-Hopping* specifies the frequency hopping configuration for SRS for Positioning transmission.

### SRS-PosTx-Hopping information element

```

-- ASN1START
-- TAG-SRS-PosTx-Hopping-START

SRS-PosTx-Hopping-r18 ::=
    srs-PosConfig-r18
    bwp-r18
    inactivePosSRS-TimeAlignmentTimer-r18
    inactivePosSRS-RSRP-ChangeThreshold-r18
    srs-PosUplinkTransmissionWindowConfig-r18
    ...
}

SRS-PosUplinkTransmissionWindowConfig-r18 ::=
    startSFN-r18
    windowPeriodicityAndOffset-r18
        periodicityAndOffset-r18
        periodicityAndOffset-Ext-r18
    },
    duration-r18
    ...
}

```

```

SEQUENCE {
    SRS-PosConfig-r17,
    BWP
    TimeAlignmentTimer
    RSRP-ChangeThreshold-r17
    SetupRelease { SRS-PosUplinkTransmissionWindowConfig-r18 }
}
OPTIONAL, -- Need R
OPTIONAL, -- Need M
OPTIONAL, -- Need M
OPTIONAL, -- Need M

```

```

SEQUENCE {
    INTEGER(0..1023),
    CHOICE {
        SRS-PeriodicityAndOffset-r16,
        SRS-PeriodicityAndOffsetExt-r16
    },
    ENUMERATED {s1,s2,s4,s6},
}

```

```
-- TAG-SRS-PosTx-Hopping-STOP
-- ASN1STOP
```

<b>SRS-PosTx-Hopping field descriptions</b>
<p><b>bwp</b> For RRC_CONNECTED state, indicates the frequency region outside of active BWP for SRS for positioning frequency hopping. For RRC_INACTIVE state indicates the BWP configuration for SRS for Positioning during the RRC_INACTIVE.</p>
<p><b>inactivePosSRS-RSRP-ChangeThreshold</b> RSRP threshold for the increase/decrease of RSRP for time alignment validation as specified in TS 38.321 [3].</p>
<p><b>inactivePosSRS-TimeAlignmentTimer</b> TAT value for SRS for positioning transmission during RRC_INACTIVE state as specified in TS 38.321 [3]. The network always configures this field when <i>srs-PosRRC-Inactive</i> is configured.</p>
<p><b>srs-PosConfig</b> Provides the SRS Configuration to be used for frequency hopping.</p>
<p><b>srs-PosUplinkTransmissionWindowConfig</b> UL time window for UL SRS for positioning with Tx hopping configured to be periodic with configurable starting SFN, slot and symbol number, periodicity, duration.</p>

<b>SRS-PosUplinkTransmissionWindowConfig field descriptions</b>
<p><b>duration</b> Indicates the duration of the uplink SRS for positioning transmission window with frequency hopping. Value <i>s1</i> indicates 1 slot, <i>s2</i> indicates 2 slot and so on.</p>
<p><b>periodicityAndOffset</b> Indicates the Periodicity and slot offset for uplink SRS for positioning transmission window occurrence with frequency hopping.</p>
<p><b>startSFN</b> Indicates the starting SFN of the uplink SRS for positioning transmission window with frequency hopping.</p>

## – SRS-PosResourceSetLinkedForAggBW

The IE *SRS-PosResourceSetLinkedForAggBW* provides the SRS Positioning Resource Sets that are linked for bandwidth aggregation across two or three component carriers.

### **SRS-PosResourceSetLinkedForAggBW information element**

```
-- ASN1START
-- TAG-SRS-POSRESOURCESETLINKEDFORAGGBW-START
```

```
SRS-PosResourceSetLinkedForAggBW-r18 ::= SEQUENCE {
  srs-PosResourceSetLinked-r18
  srs-LinkedConfig-r18
    rrc-connectedState-r18
      servingCellAndBWP-Id-r18
      ...
    },
  rrc-inactiveState-r18
    scs-SpecificCarrier-r18
    freqInfo-r18
    ...
}
```

```

    }
  },
  ...
}

```

```

-- TAG-SRS-POSRESOURCESETLINKEDFORAGGBW-STOP
-- ASN1STOP

```

#### ***SRS-PosResourceSetLinkedForAggBW* field descriptions**

<b><i>freqInfo</i></b>
Indicates the SRS Positioning Resource set carrier frequency that is linked for bandwidth aggregation.
<b><i>scs-SpecificCarrier</i></b>
A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A and to be used for SRS for positioning bandwidth aggregation.
<b><i>servingCellAndBWP-Id</i></b>
Provides the serving cell and BWP config for SRS for positioning transmission using aggregated bandwidth in RRC_CONNECTED state.
<b><i>srs-LinkedConfig</i></b>
Provides the linked bandwidth aggregation configuration for RRC_CONNECTED or RRC_INACTIVE state for the SRS for positioning transmission.
<b><i>srs-PosResourceSetLinked</i></b>
Indicates the SRS Positioning Resource set that is linked for bandwidth aggregation.

#### – ***SRS-RSRP-Range***

The IE *SRS-RSRP-Range* specifies the value range used in SRS-RSRP measurements and thresholds. The integer value for SRS-RSRP measurements is according to Table 10.1.22.1.2-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value –140) dBm, except for the IE value 98, in which case the actual value is infinity.

#### ***SRS-RSRP-Range* information element**

```

-- ASN1START
-- TAG-SRS-RSRP-RANGE-START

```

```
SRS-RSRP-Range-r16 ::= INTEGER(0..98)
```

```

-- TAG-SRS-RSRP-RANGE-STOP
-- ASN1STOP

```

#### – ***SRS-TPC-CommandConfig***

The IE *SRS-TPC-CommandConfig* is used to configure the UE for extracting TPC commands for SRS from a group-TPC messages on DCI.

#### ***SRS-TPC-CommandConfig* information element**

```

-- ASN1START
-- TAG-SRS-TPC-COMMANDCONFIG-START

```

```

SRS-TPC-CommandConfig ::=
  startingBitOfFormat2-3          SEQUENCE {
    startingBitOfFormat2-3      INTEGER (1..31)          OPTIONAL, -- Need R
    fieldTypeFormat2-3         INTEGER (0..1)          OPTIONAL, -- Need R
    ...
  [
    startingBitOfFormat2-3SUL    INTEGER (1..31)          OPTIONAL -- Need R
  ]
}

-- TAG-SRS-TPC-COMMANDCONFIG-STOP
-- ASN1STOP

```

#### **SRS-TPC-CommandConfig field descriptions**

##### **fieldTypeFormat2-3**

The type of a field within the group DCI with SRS request fields (optional), which indicates how many bits in the field are for SRS request (0 or 2). Note that for Type A, there is a common SRS request field for all SCells in the set, but each SCell has its own TPC command bits. See TS 38.212 [17] clause 7.3.1 and , TS 38.213 [13], clause 11.4.

##### **startingBitOfFormat2-3**

The starting bit position of a block within the group DCI with SRS request fields (optional) and TPC commands. The value 1 of the field corresponds to the first/left most bit of format2-3. The value 2 of the field corresponds to the second bit format2-3, and so on (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 11.4).

##### **startingBitOfFormat2-3SUL**

The starting bit position of a block within the group DCI with SRS request fields (optional) and TPC commands for SUL carrier (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 11.4).

## – SSB-Index

The IE *SSB-Index* identifies an SS-Block within an SS-Burst. See TS 38.213 [13], clause 4.1.

#### **SSB-Index information element**

```

-- ASN1START
-- TAG-SSB-INDEX-START

SSB-Index ::=
  INTEGER (0..maxNrOfSSBs-1)

-- TAG-SSB-INDEX-STOP
-- ASN1STOP

```

## – SSB-MTC

The IE *SSB-MTC* is used to configure measurement timing configurations, i.e., timing occasions at which the UE measures SSBs.

**SSB-MTC information element**

```

-- ASN1START
-- TAG-SSB-MTC-START

SSB-MTC ::=
    periodicityAndOffset
        sf5
        sf10
        sf20
        sf40
        sf80
        sf160
    },
    duration
}

SSB-MTC2 ::=

        longBitmap           BIT STRING (SIZE (64))
    },
    ss-PBCH-BlockPower-r17    INTEGER (-60..50)
}

-- TAG-SSB-MTC-STOP
-- ASN1STOP

```

**SSB-MTC field descriptions****duration**

Duration of the measurement window in which to receive SS/PBCH blocks. It is given in number of subframes (see TS 38.213 [13], clause 4.1).

**periodicityAndOffset**

Periodicity and offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Periodicity and offset are given in number of subframes.

**SSB-MTC2 field descriptions****pci-List**

PCIs that follow this SMTC.

**SSB-MTC3 field descriptions****duration**

Duration of the measurement window in which to receive SS/PBCH blocks. It is given in number of subframes (see TS 38.213 [13], clause 4.1).

**pci-List**

PCIs that follow this SMTC, used for IAB-node discovery.

**periodicityAndOffset**

Periodicity and offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Periodicity and offset are given in number of subframes.

**ssb-ToMeasure**

The set of SS blocks to be measured within the SMTC measurement duration. The first/leftmost bit corresponds to SS block index 0, the second bit corresponds to SS block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS block is not to be measured while value 1 indicates that the corresponding SS block is to be measured (see TS 38.215 [9]). When the field is not configured the IAB-MT measures on all SS blocks. Regardless of the value of this field, SS blocks outside of the applicable *smtc* are not to be measured. See TS 38.215 [9] clause 5.1.1.

**SSB-MTC4 field descriptions****pci-List**

PCIs that follow this SMTC.

**offset**

Offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Offset is given in number of subframes.

<b>SSB-MTC-AdditionalPCI field descriptions</b>
<b>additionalPCI</b> PCI of the additional SSB different from serving cell PCI.
<b>periodicity</b> Periodicity of the SS/PBCH blocks, see 5.5.2.10. Periodicity is given in number of subframes.
<b>ssb-PositionsInBurst</b> Indicates the time domain positions of the transmitted SS-blocks in a half frame with SS/PBCH blocks as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted.
<b>ss-PBCH-BlockPower</b> Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.

### – *SSB-PositionQCL-Relation*

The IE *SSB-PositionQCL-Relation* is used to indicate the QCL relationship between SSB positions on the frequency indicated by *ssbFrequency* (see TS 38.213 [13], clause 4.1) for operation with shared spectrum channel access. Value n1 corresponds to 1, value n2 corresponds to 2 and so on.

#### **SSB-PositionQCL-Relation information element**

```
-- ASN1START
-- TAG-SSB-POSITIONQCL-RELATION-START

SSB-PositionQCL-Relation-r16 ::= ENUMERATED {n1,n2,n4,n8}

SSB-PositionQCL-Relation-r17 ::= ENUMERATED {n32, n64}

-- TAG-SSB-POSITIONQCL-RELATION-STOP
-- ASN1STOP
```

### – *SSB-ToMeasure*

The IE *SSB-ToMeasure* is used to configure a pattern of SSBs. For operation with shared spectrum channel access in FR1, only *mediumBitmap* is used, and for FR2-2, *longBitmap* is used.

#### **SSB-ToMeasure information element**

```
-- ASN1START
-- TAG-SSB-TOMEASURE-START

SSB-ToMeasure ::=
    CHOICE {
        shortBitmap          BIT STRING (SIZE (4)),
        mediumBitmap         BIT STRING (SIZE (8)),
        longBitmap           BIT STRING (SIZE (64))
    }
```

```
-- TAG-SSB-TOMEASURE-STOP
-- ASN1STOP
```

<b>SSB-ToMeasure field descriptions</b>
<p><b>longBitmap</b>            Bitmap when maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access in FR2-2, if the k-th bit is set to 1, the UE assumes that one or more SS/PBCH blocks within the SMTC measurement duration with candidate SS/PBCH block indexes corresponding to SS/PBCH block index equal to (k- 1) may be transmitted; if the k-th bit is set to 0, the UE assumes that the corresponding SS/PBCH block(s) are not transmitted.</p>
<p><b>mediumBitmap</b>            Bitmap when maximum number of SS/PBCH blocks per half frame equals to 8 as defined in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access, if the k-th bit is set to 1, the UE assumes that one or more SS/PBCH blocks within the SMTC measurement duration with candidate SS/PBCH block indexes corresponding to SS/PBCH block index equal to k - 1 may be transmitted; if the kt-th bit is set to 0, the UE assumes that the corresponding SS/PBCH block(s) are not transmitted. The k-th bit is set to 0, where <math>k &gt; ssb-PositionQCL-Common</math> and the number of actually transmitted SS/PBCH blocks is not larger than the number of 1's in the bitmap. If <i>ssb-PositionQCL</i> is configured with a value smaller than <i>ssb-PositionQCL-Common</i>, only the leftmost K bits (<math>K = ssb-PositionQCL</math>) are applicable for the corresponding cell.</p>
<p><b>shortBitmap</b>            Bitmap when maximum number of SS/PBCH blocks per half frame equals to 4 as defined in TS 38.213 [13], clause 4.1.</p>

## – SS-RSSI-Measurement

The IE *SS-RSSI-Measurement* is used to configure RSSI measurements based on synchronization reference signals.

### **SS-RSSI-Measurement information element**

```
-- ASN1START
-- TAG-SS-RSSI-MEASUREMENT-START

SS-RSSI-Measurement ::=
    measurementSlots          SEQUENCE {
        endSymbol              BIT STRING (SIZE (1..80)),
    }                          INTEGER(0..3)

-- TAG-SS-RSSI-MEASUREMENT-STOP
-- ASN1STOP
```

**SS-RSSI-Measurement field descriptions****endSymbol**

Within a slot that is configured for RSSI measurements (see *measurementSlots*) the UE measures the RSSI from symbol 0 to symbol *endSymbol*. This field identifies the entry in Table 5.1.3-1 in TS 38.215 [9], which determines the actual end symbol.

**measurementSlots**

Indicates the slots in which the UE can perform RSSI measurements. The length of the BIT STRING is equal to the number of slots in the configured SMTC window (determined by the duration and by the subcarrierSpacing). The first (left-most / most significant) bit in the bitmap corresponds to the first slot in the SMTC window, the second bit in the bitmap corresponds to the second slot in the SMTC window, and so on. The UE measures in slots for which the corresponding bit in the bitmap is set to 1. In case this field is configured for a SCell with *ca-SlotOffset-r16*, the bits in the bitmap corresponds to the slots that are fully contained in the SMTC window.

## – SubcarrierSpacing

The IE *SubcarrierSpacing* determines the subcarrier spacing. Restrictions applicable for certain frequencies, channels or signals are clarified in the fields that use this IE.

**SubcarrierSpacing information element**

```
-- ASN1START
-- TAG-SUBCARRIERSPACING-START

SubcarrierSpacing ::=
    ENUMERATED {kHz15, kHz30, kHz60, kHz120, kHz240, kHz480-v1700, kHz960-v1700, spare1}

-- TAG-SUBCARRIERSPACING-STOP
-- ASN1STOP
```

## – TAG-Config

The IE *TAG-Config* is used to configure parameters for a time-alignment group.

**TAG-Config information element**

```
-- ASN1START
-- TAG-TAG-CONFIG-START

TAG-Config ::=
    SEQUENCE {
        tag-ToReleaseList
            SEQUENCE (SIZE (1..maxNrofTAGs)) OF TAG-Id
            OPTIONAL, -- Need N
        tag-ToAddModList
            SEQUENCE (SIZE (1..maxNrofTAGs)) OF TAG
            OPTIONAL -- Need N
    }

TAG ::=
    SEQUENCE {
        tag-Id
            TAG-Id,
        timeAlignmentTimer
            TimeAlignmentTimer,
        ...
    }

TAG-Id ::=
    INTEGER (0..maxNrofTAGs-1)
```

```
-- TAG-TAG-CONFIG-STOP
-- ASN1STOP
```

<b>TAG field descriptions</b>
<p><b><i>tag-Id</i></b> Indicates the TAG of the SpCell or an SCell, see TS 38.321 [3]. Uniquely identifies the TAG within the scope of a Cell Group (i.e. MCG or SCG).</p>
<p><b><i>timeAlignmentTimer</i></b> The <i>timeAlignmentTimer</i> for TAG with ID <i>tag-Id</i>, as specified in TS 38.321 [3].</p>

## – TAR-Config

The IE *TAR-Config* is used to configure Timing Advance reporting in non-terrestrial networks and ATG network.

### **TAR-Config information element**

```
-- ASN1START
-- TAG-TAR-CONFIG-START

TAR-Config-r17 ::=
    offsetThresholdTA-r17          SEQUENCE {
                                   ENUMERATED {ms0dot5, ms1, ms2, ms3, ms4, ms5, ms6 ,ms7, ms8, ms9, ms10, ms11, ms12,
                                   ms13, ms14, ms15, spare13, spare12, spare11, spare10, spare9, spare8, spare7,
                                   spare6, spare5, spare4, spare3, spare2, spare1}          OPTIONAL,      -- Need R
    timingAdvanceSR-r17          ENUMERATED {enabled}          OPTIONAL,      -- Need R
    ...
    }
TAR-Config-r18 ::=
    offsetThresholdTA-r18          SEQUENCE {
                                   INTEGER (1..56)          OPTIONAL,      -- Need R
    timingAdvanceSR-r18          ENUMERATED {enabled}          OPTIONAL,      -- Need R
    ...
    }

-- TAG-TAR-CONFIG-STOP
-- ASN1STOP
```

<b>TAR-Config field descriptions</b>
<p><b><i>offsetThresholdTA</i></b> Offset for TA reporting as specified in TS 38.321 [3]. Network only configures this parameter for MCG. For <i>offsetThresholdTA-r17</i>, value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms1</i> corresponds to 1 ms, and so on. Network only configures <i>offsetThresholdTA-r18</i> for ATG, which is in unit of symbols based on the subcarrier spacing of the BWP indicated by <i>firstActiveDownlinkBWP-Id</i> if received in the same RRC message, otherwise, it is based on the subcarrier spacing of the active DL BWP of the PCell when <i>offsetThresholdTA-r18</i> is received. Once configured, the value of TA offset threshold does not change autonomously by the UE with BWP switching.</p>
<p><b><i>timingAdvanceSR</i></b> Used to configure whether a Timing Advance report may trigger a Scheduling Request as specified in TS 38.321 [3].</p>

## – *TCI-ActivatedConfig*

The IE *TCI-ActivatedConfig* is used to provide activated TCI states for PDSCH and/or PDCCH of the PSCell or of an SCell.

### *TCI-ActivatedConfig* information element

```
-- ASN1START
-- TAG-TCI-ACTIVATEDCONFIG-START

TCI-ActivatedConfig-r17 ::= SEQUENCE {
    pdcch-TCI-r17          SEQUENCE (SIZE (1..5)) OF TCI-StateId,
    pdsch-TCI-r17         BIT STRING (SIZE (1..maxNrofTCI-States))
}

-- TAG-TCI-ACTIVATEDCONFIG-STOP
-- ASN1STOP
```

#### *TCI-ActivatedConfig* field descriptions

##### ***pdccch-TCI***

Indicates the TCI state for PDCCH for each configured CORESET of the DL BWP to be activated at SCell activation, to be activated for the PSCell at SCG activation and/or to be used for BFD, RLM and measurements while the SCG is deactivated. The list includes exactly as many entries as CORESETs configured in this BWP, ordered by increasing values of *ControlResourceSet-Id*, i.e. the first entry indicates the TCI state for the configured CORESET with the lowest *ControlResourceSet-Id* value, the second value indicates the TCI states for the configured CORESET with the second lowest *ControlResourceSet-Id* value, and so on.

##### ***pdsch-TCI***

Indicates TCI states for PDSCH reception at SCell addition/activation or of the PSCell at SCG activation. This field indicates activated TCI state(s) for this BWP ordered by increasing values of *TCI-StateId*, i.e. the first bit indicates the activation state of the TCI state with the lowest *TCI-StateId* value, the second value indicates the activation status of the TCI state with the second lowest *TCI-StateId* value, and so on. A bit set to 0 indicates that the corresponding TCI state is deactivated, a bit set to 1 indicates that the TCI state is activated.

## – *TCI-State*

The IE *TCI-State* associates one or two DL reference signals with a corresponding quasi-colocation (QCL) type.

### *TCI-State* information element

```
-- ASN1START
-- TAG-TCI-STATE-START

TCI-State ::=
    tci-StateId          TCI-StateId,
    qcl-Type1            QCL-Info,
    qcl-Type2            QCL-Info                                OPTIONAL, -- Need R
    ...,
    [[
    additionalPCI-r17    AdditionalPCIIndex-r17                OPTIONAL, -- Need R
    pathlossReferenceRS-Id-r17 PathlossReferenceRS-Id-r17    OPTIONAL, -- Cond JointTCI1
    ul-powerControl-r17  Uplink-powerControlId-r17         OPTIONAL, -- Cond JointTCI
```

```

    ]],
    [[
    tag-Id-ptr-r18          ENUMERATED {n0,n1}          OPTIONAL    -- Cond 2TA
    ]]
}

QCL-Info ::=
    cell                   SEQUENCE {
        cell                ServCellIndex             OPTIONAL,    -- Need R
        bwp-Id              BWP-Id                    OPTIONAL,    -- Cond CSI-RS-Indicated
        referenceSignal     CHOICE {
            csi-rs          NZP-CSI-RS-ResourceId,
            ssb              SSB-Index
        },
        qcl-Type            ENUMERATED {typeA, typeB, typeC, typeD},
        ...
    }

-- TAG-TCI-STATE-STOP
-- ASN1STOP

```

#### QCL-Info field descriptions

***bwp-Id***

The DL BWP which the RS is located in. If the field is absent, the RS is located in the DL BWP in which the *TCI-State* is applied by the UE.

***cell***

The UE's serving cell in which the *referenceSignal* is configured. If the field is absent, the *referenceSignal* is configured in the serving cell in which the *TCI-State* is applied by the UE. The RS can be located on a serving cell other than the serving cell for which the *TCI-State* is applied by the UE only if the *qcl-Type* is configured as *typeC* or *typeD*. If the *referenceSignal* is set to *csi-rs* and *unifiedTCI-StateType* is configured, either both *cell* and *bwp-Id* are present or both *cell* and *bwp-Id* are absent. See TS 38.214 [19] clause 5.1.5.

***referenceSignal***

Reference signal with which quasi-collocation information is provided as specified in TS 38.214 [19] clause 5.1.5.

***qcl-Type***

QCL type as specified in TS 38.214 [19] clause 5.1.5.

<b>TCI-State field descriptions</b>
<p><b>additionalPCI</b> Indicates the physical cell IDs (PCI) of the SSBs when <i>referenceSignal</i> is configured as SSB for both QCL-Type1 and QCL-Type2. In case the <i>cell</i> is present, the <i>additionalPCI</i> refers to a PCI value configured in the list configured using <i>additionalPCI-ToAddModList</i> in the serving cell indicated by the field <i>cell</i>. Otherwise, it refers to a PCI value configured in a list <i>additionalPCI-ToAddModList</i> configured in the serving cell where the <i>TCI-State</i> is applied by the UE. When this field is present the <i>cell</i> for <i>qcl-Type1</i> and <i>qcl-Type2</i> is configured with same value, if present.</p>
<p><b>pathlossReferenceRS-Id</b> The ID of the reference signal (e.g. a CSI-RS or an SS block) used for PUSCH, PUCCH and SRS path loss estimation. This field refers to an element in the list configured using <i>pathlossReferenceRSToAddModList</i> in the serving cell and UL BWP where the TCI State is applied by the UE.</p>
<p><b>qcl-Type1, qcl-Type2</b> QCL information for the TCI state as specified in TS 38.214 [19] clause 5.1.5.</p>
<p><b>tag-Id-ptr</b> It indicates the TAG that is associated with this TCI state, value n0 means the TCI state associate with the TAG indicated by <i>tag-Id</i>, value n1 means this TCI state associated with the TAG indicated by <i>tag2-Id</i>. The <i>tag-Id-ptr</i> refers to the TAG of the serving cell where the TCI state is applied.</p>
<p><b>tci-StateId</b> ID number of the TCI state.</p>
<p><b>ul-PowerControl</b> Configures power control parameters for PUCCH, PUSCH and SRS for this TCI state. The field is present here only if <i>ul-powerControl</i> is not configured in any <i>BWP-Uplink-Dedicated</i> of this serving cell. This field refers to an element in the list configured using <i>uplink-PowerControlToAddModList</i> in the serving cell where the <i>dl-OrJointTCI-StateToAddModList</i> is configured.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>2TA</i>	This field is mandatory present if <i>tag2</i> is present for the serving cell and the serving cell is configured with <i>unifiedTCI-StateType</i> set to <i>joint</i> . It is absent, Need R, otherwise.
<i>CSI-RS-Indicated</i>	This field is mandatory present if <i>csi-rs</i> is included and <i>unifiedTCI-StateType</i> is not configured. This field is optionally present, Need R, if <i>csi-rs</i> is included and <i>unifiedTCI-StateType</i> is configured. Otherwise, it is absent, Need R.
<i>JointTCI</i>	This field is optionally present, Need R, if this serving cell is configured with <i>unifiedTCI-StateType</i> set to ' <i>joint</i> '. It is absent, Need R, otherwise.
<i>JointTCI1</i>	This field is mandatory present, if this serving cell is configured with <i>unifiedTCI-StateType</i> set to ' <i>joint</i> '. It is absent, Need R, otherwise.

## – *TCI-StateId*

The IE *TCI-StateId* is used to identify one *TCI-State* configuration.

### ***TCI-StateId* information element**

```
-- ASN1START
-- TAG-TCI-STATEID-START

TCI-StateId ::=
    INTEGER (0..maxNrofTCI-States-1)

-- TAG-TCI-STATEID-STOP
-- ASN1STOP
```

– *TCI-UL-State*

The IE *TCI-UL-State* indicates the TCI state information for UL transmission.

***TCI-UL-State* information element**

```

-- ASN1START
-- TAG-TCI-UL-STATE-START

TCI-UL-State-r17 ::=
    tci-UL-StateId-r17          SEQUENCE {
    servingCellId-r17          TCI-UL-StateId-r17,
    bwp-Id-r17                 ServCellIndex                OPTIONAL, -- Need R
    referenceSignal-r17       BWP-Id                OPTIONAL, -- Cond CSI-RSorSRS-Indicated
        ssb-Index-r17         CHOICE {
        csi-RS-Index-r17      SSB-Index,
        srs-r17               NZP-CSI-RS-ResourceId,
        },
    additionalPCI-r17          SRS-ResourceId
    ul-powerControl-r17       AdditionalPCIIndex-r17          OPTIONAL, -- Need R
    pathlossReferenceRS-Id-r17 Uplink-powerControlId-r17     OPTIONAL, -- Need R
    ...
    [[
    tag-Id-ptr-r18             PathlossReferenceRS-Id-r17     OPTIONAL, -- Cond Mandatory
    ]]
    ]
}

-- TAG-TCI-UL-STATE-STOP
-- ASN1STOP

```

<b>TCI-UL-State field descriptions</b>
<p><b>additionalPCI</b> Indicates the physical cell IDs (PCI) of the SSBs when <i>referenceSignal</i> is configured as SSB. In case the <i>servicingCellId</i> is present, the <i>additionalPCI</i> refers to a PCI value configured in the list configured using <i>additionalPCI-ToAddModList</i> in the serving cell indicated by the field <i>servicingCellId</i>. Otherwise, it refers to a PCI value configured in the list configured using <i>additionalPCI-ToAddModList</i> in the serving cell where the <i>ul-TCI-StateList</i> is applied by the UE.</p>
<p><b>bwp-Id</b> The DL BWP which the CSI-RS is located in or UL BWP where the SRS is located in.</p>
<p><b>servicingCellId</b> The UE's serving cell in which the <i>referenceSignal</i> is configured. If the field is absent, the <i>referenceSignal</i> is configured in the serving cell in which the <i>TCI-UL-State</i> is applied by the UE.</p>
<p><b>pathlossReferenceRS-Id</b> The ID of the reference Signal (e.g. a CSI-RS or a SS block) used for PUSCH, PUCCH and SRS path loss estimation. This field refers to an element in the list configured using <i>pathlossReferenceRSToAddModList</i> in the serving cell and UL BWP where the UL TCI State is applied by the UE.</p>
<p><b>tag-Id-Ptr</b> It indicates the TAG that is associated with this TCI state, value n0 means the TCI state associate with the TAG indicated by <i>tag-Id</i>, value n1 means this TCI state associated with the TAG indicated by <i>tag2-Id</i>. The <i>tag-Id-Ptr</i> refers to the TAG of the serving cell where the TCI state is applied.</p>
<p><b>ul-powerControl</b> Configures power control parameters for PUCCH, PUSCH and SRS for this TCI state. The field is present here only if <i>ul-powerControl</i> is not configured in any <i>BWP-Uplink-Dedicated</i> of this serving cell. This field refers to an element in the list configured using <i>uplink-PowerControlToAddModList</i> in the serving cell where the <i>ul-TCI-ToAddModList</i> is configured.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>2TA</i>	This field is mandatory present if <i>tag2</i> is present for the serving cell. It is absent, Need R, otherwise.
<i>CSI-RS or SRS-Indicated</i>	This field is mandatory present if <i>referenceSignal</i> is set to <i>csi-RS-index</i> or to <i>srs</i> , absent otherwise
<i>Mandatory</i>	The field is mandatory present.

## – *TCI-UL-StateId*

The IE *TCI-UL-StateId* is used to identify one *TCI-UL-State* configuration.

### ***TCI-UL-StateId* information element**

```
-- ASN1START
-- TAG-TCI-UL-STATEID-START
TCI-UL-StateId-r17 ::=          INTEGER (0..maxUL-TCI-1-r17)
-- TAG-TCI-UL-STATEID-STOP
-- ASN1STOP
```

## – *TDD-UL-DL-ConfigCommon*

The IE *TDD-UL-DL-ConfigCommon* determines the cell specific Uplink/Downlink TDD configuration.

**TDD-UL-DL-ConfigCommon** information element

```

-- ASN1START
-- TAG-TDD-UL-DL-CONFIGCOMMON-START

TDD-UL-DL-ConfigCommon ::=          SEQUENCE {
    referenceSubcarrierSpacing        SubcarrierSpacing,
    pattern1                          TDD-UL-DL-Pattern,
    pattern2                          TDD-UL-DL-Pattern                                OPTIONAL, -- Need R
    ...
}

TDD-UL-DL-Pattern ::=              SEQUENCE {
    dl-UL-TransmissionPeriodicity    ENUMERATED {ms0p5, ms0p625, ms1, ms1p25, ms2, ms2p5, ms5, ms10},
    nrofDownlinkSlots                INTEGER (0..maxNrofSlots),
    nrofDownlinkSymbols              INTEGER (0..maxNrofSymbols-1),
    nrofUplinkSlots                  INTEGER (0..maxNrofSlots),
    nrofUplinkSymbols                INTEGER (0..maxNrofSymbols-1),
    ...
    [[
    dl-UL-TransmissionPeriodicity-v1530  ENUMERATED {ms3, ms4}                                OPTIONAL -- Need R
    ]]
}

-- TAG-TDD-UL-DL-CONFIGCOMMON-STOP
-- ASN1STOP

```

**TDD-UL-DL-ConfigCommon** field descriptions**referenceSubcarrierSpacing**

Reference SCS used to determine the time domain boundaries in the UL-DL pattern which must be common across all subcarrier specific carriers, i.e., independent of the actual subcarrier spacing using for data transmission.

Only the following values are applicable depending on the used frequency:

FR1: 15, 30, or 60 kHz

FR2-1: 60 or 120 kHz

FR2-2: 120, 480, or 960 kHz

The network configures a not larger than any SCS of configured BWPs for the serving cell. The network or *SL-PreconfigGeneral* configures a not larger than the SCS of (pre-)configured SL BWP. See TS 38.213 [13], clause 11.1.

<i>TDD-UL-DL-Pattern</i> field descriptions
<b><i>dl-UL-TransmissionPeriodicity</i></b> Periodicity of the DL-UL pattern, see TS 38.213 [13], clause 11.1. If the <i>dl-UL-TransmissionPeriodicity-v1530</i> is signalled, UE shall ignore the <i>dl-UL-TransmissionPeriodicity</i> (without suffix).
<b><i>nrofDownlinkSlots</i></b> Number of consecutive full DL slots at the beginning of each DL-UL pattern, see TS 38.213 [13], clause 11.1. In this release, the maximum value for this field is 320.
<b><i>nrofDownlinkSymbols</i></b> Number of consecutive DL symbols in the beginning of the slot following the last full DL slot (as derived from <i>nrofDownlinkSlots</i> ). The value 0 indicates that there is no partial-downlink slot. (see TS 38.213 [13], clause 11.1).
<b><i>nrofUplinkSlots</i></b> Number of consecutive full UL slots at the end of each DL-UL pattern, see TS 38.213 [13], clause 11.1. In this release, the maximum value for this field is 320.
<b><i>nrofUplinkSymbols</i></b> Number of consecutive UL symbols in the end of the slot preceding the first full UL slot (as derived from <i>nrofUplinkSlots</i> ). The value 0 indicates that there is no partial-uplink slot. (see TS 38.213 [13], clause 11.1).

### – *TDD-UL-DL-ConfigDedicated*

The IE *TDD-UL-DL-ConfigDedicated* determines the UE-specific Uplink/Downlink TDD configuration.

#### *TDD-UL-DL-ConfigDedicated* information element

```

-- ASN1START
-- TAG-TDD-UL-DL-CONFIGDEDICATED-START

TDD-UL-DL-ConfigDedicated ::= SEQUENCE {
    slotSpecificConfigurationsToAddModList SEQUENCE (SIZE (1..maxNrofSlots)) OF TDD-UL-DL-SlotConfig OPTIONAL, -- Need N
    slotSpecificConfigurationsToReleaseList SEQUENCE (SIZE (1..maxNrofSlots)) OF TDD-UL-DL-SlotIndex OPTIONAL, -- Need N
    ...
}

TDD-UL-DL-ConfigDedicated-IAB-MT-r16 ::= SEQUENCE {
    slotSpecificConfigurationsToAddModList-IAB-MT-r16 SEQUENCE (SIZE (1..maxNrofSlots)) OF TDD-UL-DL-SlotConfig-IAB-MT-r16 OPTIONAL, -- Need
N
    slotSpecificConfigurationsToReleaseList-IAB-MT-r16 SEQUENCE (SIZE (1..maxNrofSlots)) OF TDD-UL-DL-SlotIndex OPTIONAL, -- Need
N
    ...
}

TDD-UL-DL-SlotConfig ::= SEQUENCE {
    slotIndex TDD-UL-DL-SlotIndex,
    symbols CHOICE {
        allDownlink NULL,
        allUplink NULL,
        explicit SEQUENCE {
            nrofDownlinkSymbols INTEGER (1..maxNrofSymbols-1) OPTIONAL, -- Need S
            nrofUplinkSymbols INTEGER (1..maxNrofSymbols-1) OPTIONAL, -- Need S
        }
    }
}

```

```

TDD-UL-DL-SlotConfig-IAB-MT-r16 ::= SEQUENCE {
  slotIndex-r16          TDD-UL-DL-SlotIndex,
  symbols-IAB-MT-r16    CHOICE {
    allDownlink-r16     NULL,
    allUplink-r16      NULL,
    explicit-r16       SEQUENCE {
      nrofDownlinkSymbols-r16  INTEGER (1..maxNrofSymbols-1)  OPTIONAL, -- Need S
      nrofUplinkSymbols-r16    INTEGER (1..maxNrofSymbols-1)  OPTIONAL, -- Need S
    },
    explicit-IAB-MT-r16 SEQUENCE {
      nrofDownlinkSymbols-r16  INTEGER (1..maxNrofSymbols-1)  OPTIONAL, -- Need S
      nrofUplinkSymbols-r16    INTEGER (1..maxNrofSymbols-1)  OPTIONAL, -- Need S
    }
  }
}

TDD-UL-DL-SlotIndex ::= INTEGER (0..maxNrofSlots-1)

-- TAG-TDD-UL-DL-CONFIGDEDICATED-STOP
-- ASN1STOP

```

#### **TDD-UL-DL-ConfigDedicated field descriptions**

##### ***slotSpecificConfigurationsToAddModList***

The *slotSpecificConfigurationToAddModList* allows overriding UL/DL allocations provided in tdd-UL-DL-configurationCommon, see TS 38.213 [13], clause 11.1.

#### **TDD-UL-DL-ConfigDedicated-IAB-MT field descriptions**

##### ***slotSpecificConfigurationsToAddModList-IAB-MT***

The *slotSpecificConfigurationToAddModList-IAB-MT* allows overriding UL/DL allocations provided in tdd-UL-DL-configurationCommon with a limitation that effectively only flexible symbols can be overwritten in Rel-16.

##### ***slotSpecificConfigurationsToReleaseList-IAB-MT***

The *slotSpecificConfigurationsToReleaseList-IAB-MT* allows release of a set of slot configuration previously add with *slotSpecificConfigurationToAddModList-IAB-MT*.

<b>TDD-UL-DL-SlotConfig field descriptions</b>
<p><b><i>nrofDownlinkSymbols</i></b> Number of consecutive DL symbols in the beginning of the slot identified by <i>slotIndex</i>. If the field is absent the UE assumes that there are no leading DL symbols. (see TS 38.213 [13], clause 11.1).</p>
<p><b><i>nrofUplinkSymbols</i></b> Number of consecutive UL symbols in the end of the slot identified by <i>slotIndex</i>. If the field is absent the UE assumes that there are no trailing UL symbols. (see TS 38.213 [13], clause 11.1).</p>
<p><b><i>slotIndex</i></b> Identifies a slot within a slot configuration period given in <i>tdd-UL-DL-configurationCommon</i>, see TS 38.213 [13], clause 11.1.</p>
<p><b><i>symbols</i></b> The direction (downlink or uplink) for the symbols in this slot. Value <i>allDownlink</i> indicates that all symbols in this slot are used for downlink; value <i>allUplink</i> indicates that all symbols in this slot are used for uplink; value <i>explicit</i> indicates explicitly how many symbols in the beginning and end of this slot are allocated to downlink and uplink, respectively.</p>

<b>TDD-UL-DL-SlotConfig-IAB-MT field descriptions</b>
<p><b><i>symbols-IAB-MT</i></b> The <i>symbols-IAB-MT</i> is used to configure an IAB-MT with the SlotConfig applicable for one serving cell. Value <i>allDownlink</i> indicates that all symbols in this slot are used for downlink; value <i>allUplink</i> indicates that all symbols in this slot are used for uplink; value <i>explicit</i> indicates explicitly how many symbols in the beginning and end of this slot are allocated to downlink and uplink, respectively; value <i>explicit-IAB-MT</i> indicates explicitly how many symbols in the beginning and end of this slot are allocated to uplink and downlink, respectively.</p>

## – *TrackingAreaCode*

The IE *TrackingAreaCode* is used to identify a tracking area within the scope of a PLMN/SNPN, see TS 24.501 [23].

### ***TrackingAreaCode* information element**

```
-- ASN1START
-- TAG-TRACKINGAREACODE-START

TrackingAreaCode ::= BIT STRING (SIZE (24))

-- TAG-TRACKINGAREACODE-STOP
-- ASN1STOP
```

## – *T-Reselection*

The IE *T-Reselection* concerns the cell reselection timer  $T_{reselction_{RAT}}$  for NR and E-UTRA. Value in seconds. For value 0, behaviour as specified in 7.1.2 applies.

### ***T-Reselection* information element**

```
-- ASN1START
-- TAG-TRESELECTION-START
```

```
T-Reselection ::=                INTEGER (0..7)
-- TAG-TRESELECTION-STOP
-- ASN1STOP
```

### – *TimeAlignmentTimer*

The IE *TimeAlignmentTimer* is used to configure the time alignment timer as specified in TS 38.321 [3]. The values are in ms.

#### ***TimeAlignmentTimer* information element**

```
-- ASN1START
-- TAG-TIMEALIGNMENTTIMER-START
TimeAlignmentTimer ::=          ENUMERATED {ms500, ms750, ms1280, ms1920, ms2560, ms5120, ms10240, infinity}
-- TAG-TIMEALIGNMENTTIMER-STOP
-- ASN1STOP
```

### – *TimeToTrigger*

The IE *TimeToTrigger* specifies the value range used for time to trigger parameter, which concerns the time during which specific criteria for the event needs to be met in order to trigger a measurement report. Value *ms0* corresponds to 0 ms and behaviour as specified in 7.1.2 applies, value *ms40* corresponds to 40 ms, and so on.

#### ***TimeToTrigger* information element**

```
-- ASN1START
-- TAG-TIMETOTRIGGER-START
TimeToTrigger ::=              ENUMERATED {
                                ms0, ms40, ms64, ms80, ms100, ms128, ms160, ms256,
                                ms320, ms480, ms512, ms640, ms1024, ms1280, ms2560,
                                ms5120}
-- TAG-TIMETOTRIGGER-STOP
-- ASN1STOP
```

### – *TN-Areald*

The IE *TN-Areald* is used to identify a TN coverage area in an NTN system.

***TN-AreaId* information element**

```

-- ASN1START
-- TAG-TN-AREAID-START

TN-AreaId-r18 ::=
    INTEGER (1..maxTN-AreaInfo-r18)

-- TAG-TN-AREAID-STOP
-- ASN1STOP

```

– ***UAC-BarringInfoSetIndex***

The IE *UAC-BarringInfoSetIndex* provides the index of the entry in *uac-BarringInfoSetList*. Value 1 corresponds to the first entry in *uac-BarringInfoSetList*, value 2 corresponds to the second entry in this list and so on. An index value referring to an entry not included in *uac-BarringInfoSetList* indicates no barring.

***UAC-BarringInfoSetIndex* information element**

```

-- ASN1START
-- TAG-UAC-BARRINGINFOSETINDEX-START

UAC-BarringInfoSetIndex ::=
    INTEGER (1..maxBarringInfoSet)

-- TAG-UAC-BARRINGINFOSETINDEX-STOP
-- ASN1STOP

```

– ***UAC-BarringInfoSetList***

The IE *UAC-BarringInfoSetList* provides a list of access control parameter sets. An access category can be configured with access parameters according to one of the sets.

***UAC-BarringInfoSetList* information element**

```

-- ASN1START
-- TAG-UAC-BARRINGINFOSETLIST-START

UAC-BarringInfoSetList ::=
    SEQUENCE (SIZE(1..maxBarringInfoSet)) OF UAC-BarringInfoSet

UAC-BarringInfoSetList-v1700 ::= SEQUENCE (SIZE(1..maxBarringInfoSet)) OF UAC-BarringInfoSet-v1700

UAC-BarringInfoSet ::=
    SEQUENCE {
        uac-BarringFactor      ENUMERATED {p00, p05, p10, p15, p20, p25, p30, p40,
                                           p50, p60, p70, p75, p80, p85, p90, p95},
        uac-BarringTime       ENUMERATED {s4, s8, s16, s32, s64, s128, s256, s512},
        uac-BarringForAccessIdentity BIT STRING (SIZE(7))
    }

UAC-BarringInfoSet-v1700 ::= SEQUENCE {
    uac-BarringFactorForAI3-r17 ENUMERATED {p00, p05, p10, p15, p20, p25, p30, p40, p50, p60, p70, p75, p80, p85, p90, p95}

```

```

}
OPTIONAL -- Need S
-- TAG-UAC-BARRINGINFOSETLIST-STOP
-- ASN1STOP

```

#### ***UAC-BarringInfoSetList* field descriptions**

<p><b><i>uac-BarringInfoSetList</i></b> List of access control parameter sets. Each access category can be configured with access parameters corresponding to a particular set by <i>uac-barringInfoSetIndex</i>. Association of an access category with an index that has no corresponding entry in the <i>uac-BarringInfoSetList</i> is valid configuration and indicates no barring.</p>
<p><b><i>uac-BarringForAccessIdentity</i></b> Indicates whether access attempt is allowed for each Access Identity. The leftmost bit, bit 0 in the bit string corresponds to Access Identity 1, bit 1 in the bit string corresponds to Access Identity 2, bit 2 in the bit string corresponds to Access Identity 11, bit 3 in the bit string corresponds to Access Identity 12, bit 4 in the bit string corresponds to Access Identity 13, bit 5 in the bit string corresponds to Access Identity 14, and bit 6 in the bit string corresponds to Access Identity 15. Value 0 means that access attempt is allowed for the corresponding access identity.</p>
<p><b><i>uac-BarringFactor</i></b> Represents the probability that access attempt would be allowed during access barring check.</p>
<p><b><i>uac-BarringFactorForAI3</i></b> Barring factor applicable for Access Identity 3. Represents the probability that access attempt would be allowed during access barring check. If absent, the UE considers the access attempt as allowed.</p>
<p><b><i>uac-BarringTime</i></b> The average time in seconds before a new access attempt is to be performed after an access attempt was barred at access barring check for the same access category, see 5.3.14.5.</p>

### – *UAC-BarringPerCatList*

The IE *UAC-BarringPerCatList* provides access control parameters for a list of access categories.

#### ***UAC-BarringPerCatList* information element**

```

-- ASN1START
-- TAG-UAC-BARRINGPERCATLIST-START

UAC-BarringPerCatList ::= SEQUENCE (SIZE (1..maxAccessCat-1)) OF UAC-BarringPerCat

UAC-BarringPerCat ::= SEQUENCE {
    accessCategory          INTEGER (1..maxAccessCat-1),
    uac-barringInfoSetIndex UAC-BarringInfoSetIndex
}

-- TAG-UAC-BARRINGPERCATLIST-STOP
-- ASN1STOP

```

**UAC-BarringPerCatList field descriptions****accessCategory**

The Access Category according to TS 22.261 [25].

## – UAC-BarringPerPLMN-List

The IE *UAC-BarringPerPLMN-List* provides access category specific access control parameters, which are configured per PLMN/SNPN.

**UAC-BarringPerPLMN-List information element**

```
-- ASN1START
-- TAG-UAC-BARRINGPERPLMN-LIST-START

UAC-BarringPerPLMN-List ::=          SEQUENCE (SIZE (1.. maxPLMN)) OF UAC-BarringPerPLMN

UAC-BarringPerPLMN ::=              SEQUENCE {
  plmn-IdentityIndex                INTEGER (1..maxPLMN),
  uac-ACBarringListType              CHOICE {
    uac-ImplicitACBarringList        SEQUENCE (SIZE(maxAccessCat-1)) OF UAC-BarringInfoSetIndex,
    uac-ExplicitACBarringList        UAC-BarringPerCatList
  }
}
-- TAG-UAC-BARRINGPERPLMN-LIST-STOP
-- ASN1STOP
```

OPTIONAL -- Need S

**UAC-BarringPerPLMN-List field descriptions****uac-ACBarringListType**

Access control parameters for each access category valid only for a specific PLMN or SNP. UE behaviour upon absence of this field is specified in clause 5.3.14.2.

**plmn-IdentityIndex**

Index of the PLMN or SNP across the *plmn-IdentityInfoList* and *npn-IdentityInfoList* fields included in SIB1.

## – UE-TimersAndConstants

The IE *UE-TimersAndConstants* contains timers and constants used by the UE in RRC\_CONNECTED, RRC\_INACTIVE and RRC\_IDLE.

**UE-TimersAndConstants information element**

```
-- ASN1START
-- TAG-UE-TIMERSANDCONSTANTS-START

UE-TimersAndConstants ::=          SEQUENCE {
  t300                               ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000},
  t301                               ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000},
  t310                               ENUMERATED {ms0, ms50, ms100, ms200, ms500, ms1000, ms2000},
}
```

```

n310      ENUMERATED {n1, n2, n3, n4, n6, n8, n10, n20},
t311      ENUMERATED {ms1000, ms3000, ms5000, ms10000, ms15000, ms20000, ms30000},
n311      ENUMERATED {n1, n2, n3, n4, n5, n6, n8, n10},
t319      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000},
...
}

-- TAG-UE-TIMERSANDCONSTANTS-STOP
-- ASN1STOP

```

## – *UE-TimersAndConstantsRemoteUE*

The IE *UE-TimersAndConstantsRemoteUE* contains timers and constants used by the L2 U2N Remote UE in RRC\_CONNECTED, RRC\_INACTIVE and RRC\_IDLE.

### *UE-TimersAndConstantsRemoteUE* information element

```

-- ASN1START
-- TAG-UE-TIMERSANDCONSTANTSREMOTEUE-START

UE-TimersAndConstantsRemoteUE-r17 ::= SEQUENCE {
  t300-RemoteUE-r17      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000} OPTIONAL, -- Need S
  t301-RemoteUE-r17      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000} OPTIONAL, -- Need S
  t319-RemoteUE-r17      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000} OPTIONAL, -- Need S
  ...
}

-- TAG-UE-TIMERSANDCONSTANTSREMOTEUE-STOP
-- ASN1STOP

```

### *UE-TimersAndConstantsRemoteUE* field descriptions

<b><i>t300-RemoteUE</i></b>
Indicates the timer value of T300 used by L2 U2N Remote UE. If the field is absent, the timer value indicated in t300 applies to L2 U2N Remote UE.
<b><i>t301-RemoteUE</i></b>
Indicates the timer value of T301 used by L2 U2N Remote UE. If the field is absent, the timer value indicated in t301 applies to L2 U2N Remote UE.
<b><i>t319-RemoteUE</i></b>
Indicates the timer value of T319 used by L2 U2N Remote UE. If the field is absent, the timer value indicated in t319 applies to L2 U2N Remote UE.

## – *UL-DelayValueConfig*

The IE *UL-DelayValueConfig* specifies the configuration of the UL PDCP Packet Delay value per DRB measurement specified in TS 38.314 [53].

### *UL-DelayValueConfig* information element

```

-- ASN1START
-- TAG-ULDELAYVALUECONFIG-START

```

```

UL-DelayValueConfig-r16 ::= SEQUENCE {
    delay-DRBlist-r16          SEQUENCE (SIZE(1..maxDRB)) OF DRB-Identity
}

-- TAG-ULDELAYVALUECONFIG-STOP
-- ASN1STOP

```

<i>UL-DelayValueConfig</i> field descriptions
<b><i>delay-DRBlist</i></b> Indicates the DRB IDs used by UE to provide results of UL PDCP Packet Delay value per DRB measurement as specified in TS 38.314 [53].

### – *UL-ExcessDelayConfig*

The IE *UL-ExcessDelayConfig* IE specifies the configuration of the UL PDCP Excess Packet Delay per DRB measurement specified in TS 38.314 [53].

#### *UL-ExcessDelayConfig* information element

```

-- ASN1START
-- TAG-ULEXCESSDELAYCONFIG-START

UL-ExcessDelayConfig-r17 ::= SEQUENCE {
    excessDelay-DRBlist-r17      SEQUENCE (SIZE(1..maxDRB)) OF ExcessDelay-DRB-IdentityInfo-r17
}

ExcessDelay-DRB-IdentityInfo-r17 ::= SEQUENCE {
    drb-IdentityList             SEQUENCE (SIZE (1..maxDRB)) OF DRB-Identity,
    delayThreshold               ENUMERATED {ms0dot25, ms0dot5, ms1, ms2, ms4, ms5, ms10, ms20, ms30, ms40, ms50, ms60, ms70,
                                           ms80, ms90, ms100, ms150, ms300, ms500}
}

-- TAG-ULEXCESSDELAYCONFIG-STOP
-- ASN1STOP

```

<i>UL-ExcessDelayConfig</i> field descriptions
<b><i>drb-IdentityList</i></b> Indicates the DRB IDs used by UE to provide results of UL PDCP Excess Packet Delay per DRB measurement as specified in TS 38.314 [53].
<b><i>delayThreshold</i></b> Indicates the delay threshold for the DRB IDs indicated in DRB-IdentityList. Value ms0dot25 corresponds to 0.25ms, ms0dot5 corresponds to 0.5ms, ms1 corresponds to 1ms and so on.

### – *UL-GapFR2-Config*

The IE *UL-GapFR2-Config* specifies the FR2 uplink gap configuration.

**UL-GapFR2-Config** information element

```

-- ASN1START
-- TAG-UL-GAPFR2-CONFIG-START

UL-GapFR2-Config-r17 ::= SEQUENCE {
    gapOffset-r17          INTEGER (0..159),
    ugl-r17                ENUMERATED {ms0dot125, ms0dot25, ms0dot5, ms1},
    ugrp-r17               ENUMERATED {ms5, ms20, ms40, ms160},
    refFR2-ServCellAsyncCA-r17 ServCellIndex
}
-- TAG-UL-GAPFR2-CONFIG-STOP
-- ASN1STOP

```

**UL-GapFR2-Config** field descriptions

<b>gapOffset</b>	Value <i>gapOffset</i> is the gap offset of the FR2 UL gap pattern with UGRP indicated in the field <i>ugrp</i> . The value range is from 0 to <i>ugrp</i> -1.
<b>refFR2-ServCellAsyncCA</b>	Indicates the FR2 serving cell identifier whose SFN and subframe is used for FR2 UL gap calculation for this gap pattern with asynchronous CA involving FR2 carrier(s).
<b>ugl</b>	Value <i>ugl</i> is the gap length in ms of the FR2 UL gap. The FR2 UL gap length is according to Table 9.1.11-1 in TS 38.133 [14]. Value <i>ms0dot125</i> corresponds to 0.125 ms, <i>ms0dot25</i> corresponds to 0.25 ms and so on.
<b>ugrp</b>	Value <i>ugrp</i> is the gap repetition period in (ms) of the FR2 UL gap. The FR2 UL gap repetition period is according to Table 9.1.11-1 in TS 38.133 [14].

Conditional Presence	Explanation
<i>AsyncCA</i>	This field is mandatory present when configuring FR2 UL gap pattern to UE in: - (NG)EN-DC, NR SA, NE-DC or NR-DC without FR2-FR2 band combination, with asynchronous CA involving FR2 carriers. Otherwise, it is absent.

– **UplinkCancellation**

The IE *UplinkCancellation* is used to configure the UE to monitor PDCCH for the CI-RNTI.

**UplinkCancellation** information element

```

-- ASN1START
-- TAG-UPLINKCANCELLATION-START

UplinkCancellation-r16 ::= SEQUENCE {
    ci-RNTI-r16          RNTI-Value,
    dci-PayloadSizeForCI-r16 INTEGER (0..maxCI-DCI-PayloadSize-r16),
    ci-ConfigurationPerServingCell-r16 SEQUENCE (SIZE (1..maxNrofServingCells)) OF CI-ConfigurationPerServingCell-r16,
    ...
}

```

```

CI-ConfigurationPerServingCell-r16 ::= SEQUENCE {
  servingCellId          ServCellIndex,
  positionInDCI-r16     INTEGER (0..maxCI-DCI-PayloadSize-1-r16),
  positionInDCI-ForSUL-r16  INTEGER (0..maxCI-DCI-PayloadSize-1-r16) OPTIONAL, -- Cond SUL-Only
  ci-PayloadSize-r16     ENUMERATED {n1, n2, n4, n5, n7, n8, n10, n14, n16, n20, n28, n32, n35, n42, n56, n112},
  timeFrequencyRegion-r16 SEQUENCE {
    timeDurationForCI-r16  ENUMERATED {n2, n4, n7, n14} OPTIONAL, -- Cond
SymbolPeriodicity
    timeGranularityForCI-r16  ENUMERATED {n1, n2, n4, n7, n14, n28},
    frequencyRegionForCI-r16  INTEGER (0..37949),
    deltaOffset-r16          INTEGER (0..2),
    ...
  },
  uplinkCancellationPriority-v1610  ENUMERATED {enabled} OPTIONAL -- Need S
}

-- TAG-UPLINKCANCELLATION-STOP
-- ASN1STOP

```

<b>UplinkCancellation field descriptions</b>
<b>ci-ConfigurationPerServingCell</b> Indicates (per serving cell) the position of the <i>ci-PayloadSize</i> bit CI values inside the DCI payload (see TS 38.213 [13], clause 11.2A).
<b>ci-RNTI</b> RNTI used for indication cancellation in UL (see TS 38.212 [17] clause 7.3.1 and TS 38.213 [13], clause 11.2A).
<b>dci-PayloadSizeForCI</b> Total length of the DCI payload scrambled with CI-RNTI (see TS 38.213 [13], clause 11.2A).

<b>CI-ConfigurationPerServingCell field descriptions</b>	
<b>ci-PayloadSize</b>	Configures the field size for each UL cancelation indicator of this serving cell ( <i>servingCellId</i> ) (see TS 38.213 [13], clause 11.2A).
<b>deltaOffset</b>	Configures the additional offset from the end of a PDCCH reception where the UE detects the DCI format 2_4 and the first symbol of the T_"CI" symbols, in the unit of OFDM symbols (see TS 38.213 [13], clause 11.2A).
<b>frequencyRegionForCI</b>	Configures the reference frequency region where a detected UL CI is applicable (see TS 38.213 [13], clause 11.2A). It is defined in the same way as <i>locationAndBandwidth</i> .
<b>positionInDCI</b>	Starting position (in number of bit) of the <i>ci-PayloadSize</i> bit CI value applicable for this serving cell ( <i>servingCellId</i> ) within the DCI payload (see TS 38.213 [13], clause 11.2A).
<b>positionInDCI-ForSUL</b>	Starting position (in number of bit) of the <i>ci-PayloadSize</i> bit CI value applicable for SUL of this serving cell ( <i>servingCellId</i> ) within the DCI payload (see TS 38.213 [13], clause 11.2A).
<b>timeDurationForCI</b>	Configures the duration of the reference time region in symbols where a detected UL CI is applicable of this serving cell ( <i>servingCellId</i> ) (see TS 38.213 [13], clause 11.2A). If the field is absent, i.e., the configured UL CI monitoring periodicity indicated by <i>monitoringSlotPeriodicityAndOffset</i> for DCI format 2_4 is larger than 1 slot or 1 slot with only one monitoring occasion, the UE applies the value of the configured UL CI monitoring periodicity,
<b>timeFrequencyRegion</b>	Configures the reference time and frequency region where a detected UL CI is applicable of this serving cell ( <i>servingCellId</i> ) (see TS 38.213 [13], clause 11.2A).
<b>timeGranularityForCI</b>	Configures the number of partitions within the time region of this serving cell ( <i>servingCellId</i> ) (see TS 38.213 [13], clause 11.2A).
<b>uplinkCancellationPriority</b>	Configures uplink cancellation behavior if both UL CI and intra-UE priority indicator are configured for a given UE. If the field is present, then UL CI is only applicable to the UL transmissions indicated/configured as low priority level. If the field is absent, UL CI is applicable to UL transmission irrespective of its priority level (see TS 38.213 [13], clause 11.2A).

Conditional Presence	Explanation
<i>SUL-Only</i>	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured in <i>ServingCellConfig</i> . It is absent otherwise.
<i>SymbolPeriodicity</i>	This field is mandatory present if the configured UL CI monitoring periodicity indicated by <i>monitoringSlotPeriodicityAndOffset</i> for DCI format 2_4 is 1 slot with more than one monitoring occasion, otherwise absent.

## – UplinkConfigCommon

The IE *UplinkConfigCommon* provides common uplink parameters of a cell.

### UplinkConfigCommon information element

```

-- ASN1START
-- TAG-UPLINKCONFIGCOMMON-START

UplinkConfigCommon ::=
    SEQUENCE {
        frequencyInfoUL          FrequencyInfoUL          OPTIONAL,  -- Cond InterFreqHOAndServCellAdd
        initialUplinkBWP         BWP-UplinkCommon          OPTIONAL,  -- Cond ServCellAdd
        dummy                    TimeAlignmentTimer
    }

```

```

UplinkConfigCommon-v1700 ::= SEQUENCE {
    initialUplinkBWP-RedCap-r17 BWP-UplinkCommon OPTIONAL -- Need R
}

-- TAG-UPLINKCONFIGCOMMON-STOP
-- ASN1STOP

```

#### ***UplinkConfigCommon* field descriptions**

<b><i>frequencyInfoUL</i></b>
Absolute uplink frequency configuration and subcarrier specific virtual carriers.
<b><i>initialUplinkBWP</i></b>
The initial uplink BWP configuration for a serving cell (see TS 38.213 [13], clause 12).
<b><i>initialUplinkBWP-RedCap</i></b>
If present, (e)RedCap UEs use this UL BWP instead of <i>initialUplinkBWP</i> . If absent, (e)RedCap UEs use <i>initialUplinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).

Conditional Presence	Explanation
<i>InterFreqHOAndServCellAdd</i>	This field is mandatory present for inter-frequency handover and upon serving cell (PSCell/SCell) addition. Otherwise, the field is optionally present, Need M.
<i>ServCellAdd</i>	This field is mandatory present upon serving cell addition (for PSCell and SCell) and upon handover from E-UTRA to NR. It is optionally present, Need M otherwise.

## – *UplinkConfigCommonSIB*

The IE *UplinkConfigCommonSIB* provides common uplink parameters of a cell.

#### ***UplinkConfigCommonSIB* information element**

```

-- ASN1START
-- TAG-UPLINKCONFIGCOMMONSIB-START

UplinkConfigCommonSIB ::= SEQUENCE {
    frequencyInfoUL          FrequencyInfoUL-SIB,
    initialUplinkBWP         BWP-UplinkCommon,
    timeAlignmentTimerCommon TimeAlignmentTimer
}

UplinkConfigCommonSIB-v1700 ::= SEQUENCE {
    initialUplinkBWP-RedCap-r17 BWP-UplinkCommon OPTIONAL -- Need R
}

UplinkConfigCommonSIB-v1760 ::= SEQUENCE {
    frequencyInfoUL-v1760      FrequencyInfoUL-SIB-v1760
}

```

```
-- TAG-UPLINKCONFIGCOMMONSIB-STOP
-- ASN1STOP
```

<b>UplinkConfigCommonSIB field descriptions</b>
<b>frequencyInfoUL</b> Absolute uplink frequency configuration and subcarrier specific virtual carriers.
<b>InitialUplinkBWP</b> The initial uplink BWP configuration for a PCell (see TS 38.213 [13], clause 12).
<b>initialUplinkBWP-RedCap</b> If present, (e)RedCap UEs use this UL BWP instead of <i>initialUplinkBWP</i> . If absent, (e)RedCap UEs use <i>initialUplinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).

## – Uplink-PowerControl

The IE *Uplink-PowerControl* is used to configure UE specific power control parameter for PUSCH, PUCCH and SRS.

### **Uplink-PowerControl information element**

```
-- ASN1START
-- TAG-UPLINK-POWERCONTROL-START

Uplink-powerControl-r17 ::= SEQUENCE {
    ul-powerControlId-r17      Uplink-powerControlId-r17,
    p0AlphaSetforPUSCH-r17    P0AlphaSet-r17                OPTIONAL, -- Need R
    p0AlphaSetforPUCCH-r17    P0AlphaSet-r17                OPTIONAL, -- Need R
    p0AlphaSetforSRS-r17      P0AlphaSet-r17                OPTIONAL  -- Need R
}

P0AlphaSet-r17 ::=
    SEQUENCE {
        p0-r17                INTEGER (-16..15)                OPTIONAL, -- Need R
        alpha-r17              Alpha                          OPTIONAL, -- Need S
        closedLoopIndex-r17    ENUMERATED { i0, i1 }
    }

Uplink-powerControlId-r17 ::= INTEGER(1.. maxUL-TCI-r17)

-- TAG-UPLINK-POWERCONTROL-STOP
-- ASN1STOP
```

<b>Uplink-PowerControl field descriptions</b>
<b>p0AlphaSetforPUSCH, p0AlphaSetforPUCCH, p0AlphaSetforSRS</b> Configures power control parameters for PUSCH, PUCCH and SRS (see TS 38.213 [13], clause 7.2). When the field <i>alpha</i> is absent in <i>p0AlphaSetforPUSCH</i> , the UE applies the value 1 for PUSCH power control. When the field <i>alpha</i> is absent in <i>p0AlphaSetforSRS</i> , the UE applies the value 1 for SRS power control. In <i>p0AlphaSetForPUCCH</i> , the field <i>alpha</i> is absent (not used).

## – *Uu-RelayRLC-ChannelConfig*

The IE *Uu-RelayRLC-ChannelConfig* is used to configure an RLC entity, a corresponding logical channel in MAC for Uu Relay RLC channel between L2 U2N Relay UE and network, or between a N3C relay UE and network in case of MP.

### ***Uu-RelayRLC-ChannelConfig* information element**

```
-- ASN1START
-- TAG-UU-RELAYRLC-CHANNELCONFIG-START

Uu-RelayRLC-ChannelConfig-r17 ::= SEQUENCE {
    uu-LogicalChannelIdentity-r17    LogicalChannelIdentity          OPTIONAL,    -- Cond RelayLCH-SetupOnly
    uu-RelayRLC-ChannelID-r17       Uu-RelayRLC-ChannelID-r17,
    reestablishRLC-r17              ENUMERATED {true}              OPTIONAL,    -- Need N
    rlc-Config-r17                  RLC-Config                      OPTIONAL,    -- Cond RelayLCH-Setup
    mac-LogicalChannelConfig-r17    LogicalChannelConfig            OPTIONAL,    -- Cond RelayLCH-Setup
    ...
}

-- TAG-UU-RELAYRLC-CHANNELCONFIG-STOP
-- ASN1STOP
```

### ***Uu-RelayRLC-ChannelConfig* field descriptions**

<b><i>uu-LogicalChannelIdentity</i></b>	Indicates the logical channel id for Uu Relay RLC channel of the L2 U2N Relay UE.
<b><i>uu-RelayRLC-ChannelID</i></b>	Indicates the Uu Relay RLC channel in the link between L2 U2N Relay UE and network.
<b><i>reestablishRLC</i></b>	Indicates that RLC should be re-established.
<b><i>rlc-Config</i></b>	Determines the RLC mode (UM, AM) and provides corresponding parameters.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>RelayLCH-Setup</i>	This field is mandatory present upon creation of a new logical channel for a Uu Relay RLC channel. It is optionally present, Need M, otherwise.
<i>RelayLCH-SetupOnly</i>	This field is mandatory present upon creation of a new logical channel for a Uu Relay RLC channel. It is absent otherwise.

## – *Uu-RelayRLC-ChannelID*

The IE *Uu-RelayRLC-ChannelID* is used to identify a Uu Relay RLC channel in the link between L2 U2N Relay UE and network.

### ***Uu-RelayRLC-ChannelID* information element**

```
-- ASN1START
```

```
-- TAG-UU-RELAYRLC-CHANNELID-START
Uu-RelayRLC-ChannelID-r17 ::= INTEGER (1..maxLC-ID)
-- TAG-UU-RELAYRLC-CHANNELID-STOP
-- ASN1STOP
```

### *UplinkTxDirectCurrentList*

The IE *UplinkTxDirectCurrentList* indicates the Tx Direct Current locations per serving cell for each configured UL BWP in the serving cell, based on the BWP numerology and the associated carrier bandwidth.

#### *UplinkTxDirectCurrentList* information element

```
-- ASN1START
-- TAG-UPLINKTXDIRECTCURRENTLIST-START
UplinkTxDirectCurrentList ::= SEQUENCE (SIZE (1..maxNrofServingCells)) OF UplinkTxDirectCurrentCell
UplinkTxDirectCurrentCell ::= SEQUENCE {
    servCellIndex ServCellIndex,
    uplinkDirectCurrentBWP SEQUENCE (SIZE (1..maxNrofBWPs)) OF UplinkTxDirectCurrentBWP,
    ...,
    [[
        uplinkDirectCurrentBWP-SUL SEQUENCE (SIZE (1..maxNrofBWPs)) OF UplinkTxDirectCurrentBWP OPTIONAL
    ]]
}
UplinkTxDirectCurrentBWP ::= SEQUENCE {
    bwp-Id BWP-Id,
    shift7dot5kHz BOOLEAN,
    txDirectCurrentLocation INTEGER (0..3301)
}
-- TAG-UPLINKTXDIRECTCURRENTLIST-STOP
-- ASN1STOP
```

#### *UplinkTxDirectCurrentBWP* field descriptions

##### ***bwp-Id***

The BWP-Id of the corresponding uplink BWP.

##### ***shift7dot5kHz***

Indicates whether there is 7.5 kHz shift or not. 7.5 kHz shift is applied if the field is set to *true*. Otherwise 7.5 kHz shift is not applied.

##### ***txDirectCurrentLocation***

The uplink Tx Direct Current location for the carrier. Only values in the value range of this field between 0 and 3299, which indicate the subcarrier index within the carrier corresponding to the numerology of the corresponding uplink BWP and value 3300, which indicates "Outside the carrier" and value 3301, which indicates "Undetermined position within the carrier" are used in this version of the specification.

<i>UplinkTxDirectCurrentCell</i> field descriptions
<b><i>servCellIndex</i></b> The serving cell ID of the serving cell corresponding to the <i>uplinkDirectCurrentBWP</i> .
<b><i>uplinkDirectCurrentBWP</i></b> The Tx Direct Current locations for all the uplink BWPs configured at the corresponding serving cell.
<b><i>uplinkDirectCurrentBWP-SUL</i></b> The Tx Direct Current locations for all the supplementary uplink BWPs configured at the corresponding serving cell.

## – *UplinkTxDirectCurrentMoreCarrierList*

The IE *UplinkTxDirectCurrentMoreCarrierList* indicates the Tx Direct Current locations for intra-band CA including one, two or more uplink carriers. The UE does not report the uplink Direct Current location information for SUL carrier(s).

### *UplinkTxDirectCurrentMoreCarrierList* information element

```
-- ASN1START
-- TAG-UPLINKTXDIRECTCURRENTMORECARRIERLIST-START

UplinkTxDirectCurrentMoreCarrierList-r17 ::= SEQUENCE (SIZE (1..maxNrofCC-Group-r17)) OF CC-Group-r17

CC-Group-r17 ::= SEQUENCE {
    servCellIndexLower-r17 ServCellIndex,
    servCellIndexHigher-r17 ServCellIndex OPTIONAL,
    defaultDC-Location-r17 DefaultDC-Location-r17,
    offsetToDefault-r17 CHOICE {
        offsetValue OffsetValue-r17,
        offsetlist SEQUENCE (SIZE (1..maxNrofReqComDC-Location-r17)) OF OffsetValue-r17
    } OPTIONAL
}

OffsetValue-r17 ::= SEQUENCE {
    offsetValue-r17 INTEGER (-20000.. 20000),
    shift7dot5kHz-r17 BOOLEAN
}

DefaultDC-Location-r17 ::= CHOICE {
    ul FrequencyComponent-r17,
    dl FrequencyComponent-r17,
    ulAndDL FrequencyComponent-r17
}

FrequencyComponent-r17 ::= ENUMERATED {activeCarrier, configuredCarrier, activeBWP, configuredBWP}

-- TAG-UPLINKTXDIRECTCURRENTMORECARRIERLIST-STOP
-- ASN1STOP
```

<b><i>UplinkTxDirectCurrentMoreCarrierList</i> and <i>CC-Group</i> field descriptions</b>
<p><b><i>CC-Group</i></b> The contiguous carriers sharing the same PA in an intra-band UL CA configuration. The UE shall report only one DC location for an intra-band CC combination with one active uplink carrier in case <i>DefaultDC-Location</i> is set to <i>activeCarrier</i> or <i>activeBWP</i>.</p>
<p><b><i>defaultDC-Location</i></b> Indicates the default DC location derivation option. The default Tx Direct Current is located at the mathematical center of the UE bandwidth, i.e. between the lower edge of the lowest subcarrier of the lowest frequency component and the upper edge of the highest subcarrier of the highest frequency component, rounded to the subcarrier grid of the lowest SCS defined for the component carrier on which the default Direct Current is located. The lowest and highest frequency components used for derivation of mathematical center are indicated by <i>FrequencyComponent</i> in the associated <i>CC-Group</i>, where the lowest frequency component and the highest frequency component may be the same. If the mathematical center of the UE bandwidth lands on frequencies where there is no subcarrier grid defined, the subcarrier grid of the lowest SCS of the nearest lower frequency component carrier shall be extended to cover the frequency of the mathematical default Direct Current location.</p>
<p><b><i>offsetToDefault</i></b> Indicates the DC location offset to the default DC location derived from <i>defaultDC-Location</i>. The lowest SCS in the CC group is used as the offset granularity. Value 0 represents no offset. offsetValue is used in case <i>DefaultDC-Location</i> is set to <i>configuredCarrier</i> or <i>configuredBWP</i>. <i>offsetlist</i> is used in case <i>DefaultDC-Location</i> is set to <i>activeCarrier</i> or <i>activeBWP</i>. Each entity in this list corresponds to the entry in carriers combination in <i>IntraBandCC-CombinationReqList</i> of the intra-band CA component. For each CC group, the UE shall include the same number of entries, and listed in the same order as in <i>CC-CombinationList</i>. If <i>DefaultDC-Location</i> is set the <i>activeCarrier</i>, same offsetValue is signalled for all requested carriers combinations with same active carriers states (regardless of the active BWP index).</p>
<p><b><i>servCellIndexHigher</i></b> Indicates the serving cell index of the highest edge of the <i>CC-Group</i>. If absent, there is only one carrier in this group indicated by <i>servCellIndexLower</i>.</p>
<p><b><i>servCellIndexLower</i></b> Indicates the serving cell index of the lowest edge of the <i>CC-Group</i>.</p>
<p><b><i>shift7dot5kHz</i></b> Indicates whether there is 7.5 kHz shift or not. 7.5 kHz shift is applied if the field is set to true, otherwise 7.5 kHz shift is not applied.</p>

<b><i>DefaultDC-Location</i> field descriptions</b>
<p><b><i>dl</i></b> Indicates that the default DC location is derived based on the DL frequencies of the frequency component.</p>
<p><b><i>ul</i></b> Indicates that the default DC location is derived based on the UL frequencies of the frequency component.</p>
<p><b><i>ulAndDL</i></b> Indicates that the default DC location is derived based on the edge most frequencies among any DL and UL frequency components.</p>

## – *UplinkTxDirectCurrentTwoCarrierList*

The IE *UplinkTxDirectCurrentTwoCarrierList* indicates the Tx Direct Current locations when uplink intra-band CA with two carriers is configured, based on the configured carriers and BWP numerology and the associated carrier bandwidth of the carriers. The UE does not report the uplink Direct Current location information for SUL carrier(s).

### ***UplinkTxDirectCurrentTwoCarrierList* information element**

```
-- ASN1START
-- TAG-UPLINKTXDIRECTCURRENTTWCARRIERLIST-START
```

```
UplinkTxDirectCurrentTwoCarrierList-r16 ::= SEQUENCE (SIZE (1..maxNrofTxDC-TwoCarrier-r16)) OF UplinkTxDirectCurrentTwoCarrier-r16
```

```

UplinkTxDirectCurrentTwoCarrier-r16 ::= SEQUENCE {
  carrierOneInfo-r16          UplinkTxDirectCurrentCarrierInfo-r16,
  carrierTwoInfo-r16         UplinkTxDirectCurrentCarrierInfo-r16,
  singlePA-TxDirectCurrent-r16 UplinkTxDirectCurrentTwoCarrierInfo-r16,
  secondPA-TxDirectCurrent-r16 UplinkTxDirectCurrentTwoCarrierInfo-r16
}
OPTIONAL

UplinkTxDirectCurrentCarrierInfo-r16 ::= SEQUENCE {
  servCellIndex-r16          ServCellIndex,
  servCellInfo-r16          CHOICE {
    bwp-Id-r16               BWP-Id,
    deactivatedCarrier-r16    ENUMERATED {deactivated}
  }
}

UplinkTxDirectCurrentTwoCarrierInfo-r16 ::= SEQUENCE {
  referenceCarrierIndex-r16  ServCellIndex,
  shift7dot5kHz-r16         BOOLEAN,
  txDirectCurrentLocation-r16 INTEGER (0..3301)
}

-- TAG-UPLINKTXDIRECTCURRENTTWCARRIERLIST-STOP
-- ASN1STOP

```

#### **UplinkTxDirectCurrentTwoCarrierInfo field descriptions**

##### **referenceCarrierIndex**

The serving cell ID of the carrier which is to be used as the reference for interpreting the Tx Direction Current location as reported using *txDirectCurrentLocation-r16*. The numerology of the uplink BWP ID reported with *bwp-Id-r16* for this serving cell is the numerology used for interpreting the reported subcarrier location.

##### **shift7dot5kHz**

Indicates whether there is 7.5 kHz shift or not. 7.5 kHz shift is applied if the field is set to *true*. Otherwise 7.5 kHz shift is not applied.

##### **txDirectCurrentLocation**

The uplink Tx Direct Current location for the two carrier uplink CA with the serving cells reported using *carrierOneInfo-r16* and *carrierTwoInfo-r16*. Values in the range of this field between 0 and 3299 indicate the subcarrier index of the uplink Tx Direct Current location with the subcarrier taken from the serving cell with ID *referenceCarrierIndex* and the numerology of the corresponding uplink BWP reported for this serving cell. Value 3300 indicates "Outside the carrier" and value 3301 indicates "Undetermined position within the carrier".

#### **UplinkTxDirectCurrentCarrierInfo field descriptions**

##### **bwp-Id**

The BWP ID of the serving cell which is part of the two carrier uplink carrier aggregation. The UE shall not report this field if the serving cell is reported as deactivated using *deactivatedCarrier-r16*.

##### **deactivatedCarrier**

For the reported uplink Tx Direct Current location(s) corresponding to *singlePA-TxDirectCurrent-r16*, indicates whether the carrier is deactivated or not for this serving cell. If the carrier refers to the PCell, the UE shall not set this field to *deactivated*.

##### **servCellIndex**

The serving cell ID of the serving cell which is part of the two carrier uplink carrier aggregation.

<b>UplinkTxDirectCurrentTwoCarrier field descriptions</b>
<p><b>carrierOneInfo</b> The serving cell ID and BWP ID of the first carrier of the uplink carrier aggregation for which the uplink Tx Direct Current location(s) are being reported.</p>
<p><b>carrierTwoInfo</b> The serving cell ID and BWP ID of the second carrier of the uplink carrier aggregation for which the uplink Tx Direct Current location(s) are being reported.</p>
<p><b>singlePA-TxDirectCurrent</b> The uplink Tx Direct Current location for the UE which support single PA for this uplink carrier aggregation. For the UEs which support dual PA for this uplink carrier aggregation, this field is for reporting the uplink Tx Direct Current location of the first PA.</p>
<p><b>secondPA-TxDirectCurrent</b> The uplink Tx Direct Current location used by the UE with the second PA for the UEs which support dual PA for this uplink carrier aggregation. This field shall be absent for the <i>UplinkTxDirectCurrentTwoCarrier</i> entity where <i>deactivatedCarrier</i> of <i>carrierOneInfo</i> or <i>carrierTwoInfo</i> is set to <i>deactivated</i>.</p>

## – ZP-CSI-RS-Resource

The IE *ZP-CSI-RS-Resource* is used to configure a Zero-Power (ZP) CSI-RS resource (see TS 38.214 [19], clause 5.1.4.2). Reconfiguration of a *ZP-CSI-RS-Resource* between periodic or semi-persistent and aperiodic is not supported.

### ZP-CSI-RS-Resource information element

```

-- ASN1START
-- TAG-ZP-CSI-RS-RESOURCE-START

ZP-CSI-RS-Resource ::=
    zp-CSI-RS-ResourceId          SEQUENCE {
        resourceMapping          ZP-CSI-RS-ResourceId,
        periodicityAndOffset     CSI-RS-ResourceMapping,
        ...                      CSI-ResourcePeriodicityAndOffset          OPTIONAL, --Cond PeriodicOrSemiPersistent
    }

ZP-CSI-RS-ResourceId ::=
    INTEGER (0..maxNrofZP-CSI-RS-Resources-1)

-- TAG-ZP-CSI-RS-RESOURCE-STOP
-- ASN1STOP

```

<b>ZP-CSI-RS-Resource field descriptions</b>
<p><b>periodicityAndOffset</b> Periodicity and slot offset for periodic/semi-persistent ZP-CSI-RS (see TS 38.214 [19], clause 5.1.4.2). Network always configures the UE with a value for this field for periodic and semi-persistent ZP-CSI-RS resource (as indicated in PDSCH-Config).</p>
<p><b>resourceMapping</b> OFDM symbol and subcarrier occupancy of the ZP-CSI-RS resource within a slot.</p>
<p><b>zp-CSI-RS-ResourceId</b> ZP CSI-RS resource configuration ID (see TS 38.214 [19], clause 5.1.4.2).</p>

Conditional Presence	Explanation
<i>PeriodicOrSemiPersistent</i>	The field is optionally present, Need M, for periodic and semi-persistent ZP-CSI-RS-Resources (as indicated in PDSCH-Config). The field is absent otherwise.

## – *ZP-CSI-RS-ResourceSet*

The IE *ZP-CSI-RS-ResourceSet* refers to a set of *ZP-CSI-RS-Resources* using their *ZP-CSI-RS-ResourceIds*.

### ***ZP-CSI-RS-ResourceSet* information element**

```
-- ASN1START
-- TAG-ZP-CSI-RS-RESOURCESET-START

ZP-CSI-RS-ResourceSet ::=          SEQUENCE {
    zp-CSI-RS-ResourceSetId        ZP-CSI-RS-ResourceSetId,
    zp-CSI-RS-ResourceIdList      SEQUENCE (SIZE(1..maxNrofZP-CSI-RS-ResourcesPerSet)) OF ZP-CSI-RS-ResourceId,
    ...
}

-- TAG-ZP-CSI-RS-RESOURCESET-STOP
-- ASN1STOP
```

### ***ZP-CSI-RS-ResourceSet* field descriptions**

#### ***zp-CSI-RS-ResourceIdList***

The list of *ZP-CSI-RS-ResourceId* identifying the *ZP-CSI-RS-Resource* elements belonging to this set.

## – *ZP-CSI-RS-ResourceSetId*

The IE *ZP-CSI-RS-ResourceSetId* identifies a *ZP-CSI-RS-ResourceSet*.

### ***ZP-CSI-RS-ResourceSetId* information element**

```
-- ASN1START
-- TAG-ZP-CSI-RS-RESOURCESETID-START

ZP-CSI-RS-ResourceSetId ::=          INTEGER (0..maxNrofZP-CSI-RS-ResourceSets-1)

-- TAG-ZP-CSI-RS-RESOURCESETID-STOP
-- ASN1STOP
```

### 6.3.3 UE capability information elements

#### – *AccessStratumRelease*

The IE *AccessStratumRelease* indicates the release supported by the UE.

#### ***AccessStratumRelease* information element**

```
-- ASN1START
-- TAG-ACCESSSTRATUMRELEASE-START

AccessStratumRelease ::= ENUMERATED {
    rel15, rel16, rel17, rel18, spare4, spare3, spare2, spare1, ... }

-- TAG-ACCESSSTRATUMRELEASE-STOP
-- ASN1STOP
```

#### – *AerialParameters*

The IE *AerialParameters* is used to convey the capabilities supported by the UE for aerial operation.

#### ***AerialParameters* information element**

```
-- ASN1START
-- TAG-AERIALPARAMETERS-START

AerialParameters-r18 ::= SEQUENCE {
    -- Support of Aerial UE features
    aerialUE-Capability-r18          ENUMERATED {supported}                OPTIONAL,

If the field is included in <i>supportedBandCombinationListNEDC-Only-v1610</i>, the UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList</i> of <i>supportedBandCombinationListNEDC-Only</i> (without suffix) field.</p> <p>If the field is included in <i>supportedBandCombinationListNEDC-Only-v15a0</i>, the UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList</i> (without suffix) of <i>supportedBandCombinationListNEDC-Only</i> (without suffix) field.</p>
<p><b><i>BandCombinationList-UplinkTxSwitch-r16, BandCombinationList-UplinkTxSwitch-v1630, BandCombinationList-UplinkTxSwitch-v1640, BandCombinationList-UplinkTxSwitch-v1650, BandCombinationList-UplinkTxSwitch-v1690, BandCombinationList-UplinkTxSwitch-v16a0, BandCombinationList-UplinkTxSwitch-v16e0, BandCombinationList-UplinkTxSwitch-v16j0, BandCombinationList-UplinkTxSwitch-v1700, BandCombinationList-UplinkTxSwitch-v1720, BandCombinationList-UplinkTxSwitch-v1730, BandCombinationList-UplinkTxSwitch-v1760, BandCombinationList-UplinkTxSwitch-v1780, BandCombinationList-UplinkTxSwitch-v1790, BandCombinationList-UplinkTxSwitch-v17b0, BandCombinationList-UplinkTxSwitch-v1800, BandCombinationList-UplinkTxSwitch-v1830, BandCombinationList-UplinkTxSwitch-v1840</i></b></p> <p>The UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList-UplinkTxSwitch-r16</i>.</p> <p>For the field of <i>supportedBandCombinationList-UplinkTxSwitch-v1700</i>, if the UE does not support 2Tx-2Tx switching for a given band combination, the field of <i>supportedBandPairListNR-v1700</i> in the corresponding entry is absent.</p>
<p><b><i>ca-ParametersNRDC</i></b></p> <p>If the field (without suffix) is included for a band combination in the NR capability container, the field (without suffix) indicates support of NR-DC. Otherwise, the field is absent. If a version of the field (with suffix) is absent for a band combination, <i>ca-ParametersNR</i> field version in <i>BandCombination</i> corresponding to the <i>ca-ParametersNR-ForDC</i> field version in the field (with suffix) is applicable to the UE configured with NR-DC for the band combination.</p>
<p><b><i>featureSetCombinationDAPS</i></b></p> <p>If this field is present for a band combination, it reports the feature set combination supported for the band combination when any DAPS bearer is configured.</p>
<p><b><i>ne-DC-BC</i></b></p> <p>If the field is included for a band combination in the MR-DC capability container, the field indicates support of NE-DC. Otherwise, the field is absent.</p>
<p><b><i>supportedBandPairListNR-r16, supportedBandPairListNR-v1700</i></b></p> <p>Indicates a list of band pair supporting UL Tx switching as defined in TS 38.101-1 [15] for a given band combination.</p> <p>A UE supporting 2Tx-2Tx switching should include both of <i>supportedBandPairListNR-r16</i> and <i>supportedBandPairListNR-v1700</i>. And the UE shall include the same number of entries listed in the same order as in <i>supportedBandPairListNR-r16</i>.</p> <p>If the UE does not support 2Tx-2Tx switching for a given band pair, the field of <i>uplinkTxSwitchingPeriod2T2T</i> in the corresponding entry is absent.</p>
<p><b><i>supportedBandPairListNR-r18, supportedBandPairListNR-v1840</i></b></p> <p>Indicates a list of band pair supporting UL Tx switching up to 4 bands as defined in TS 38.101-1 [15] for a given band combination. The UE shall include all the possible band pairs. If <i>supportedBandPairListNR-v1840</i> is included, the UE shall include the same number of entries listed in the same order as in <i>supportedBandPairListNR-r18</i>.</p> <p>For a band pair only supporting 1Tx-1Tx switching, the UE should include <i>switchingPeriodFor1T</i> in <i>ULTxSwitchingBandPair-r18</i>.</p> <p>For a band pair supporting 1Tx-2Tx switching, the UE always supports 1Tx-1Tx switching, and the UE should include <i>switchingPeriodFor1T</i> in <i>ULTxSwitchingBandPair-r18</i>.</p> <p>For a band pair supporting 2Tx-2Tx switching, the UE always supports 1Tx-2Tx switching and 1Tx-1Tx switching, the UE should include <i>switchingPeriodFor2T</i> as well as <i>switchingPeriodFor1T</i> in <i>ULTxSwitchingBandPair-r18</i>.</p>
<p><b><i>srs-SwitchingTimesListNR</i></b></p> <p>Indicates, for a particular pair of NR bands, the RF retuning time when switching between a NR carrier corresponding to this band entry and another (PUSCH-less) NR carrier corresponding to the band entry in the order indicated below:</p> <ul style="list-style-type: none"> <li>- For the first NR band, the UE shall include the same number of entries for NR bands as in <i>bandList</i>, i.e. first entry corresponds to first NR band in <i>bandList</i> and so on,</li> <li>- For the second NR band, the UE shall include one entry less, i.e. first entry corresponds to the second NR band in <i>bandList</i> and so on</li> <li>- And so on</li> </ul>

<p><b>srs-SwitchingTimesListEUTRA</b> Indicates, for a particular pair of E-UTRA bands, the RF retuning time when switching between an E-UTRA carrier corresponding to this band entry and another (PUSCH-less) E-UTRA carrier corresponding to the band entry in the order indicated below:</p> <ul style="list-style-type: none"> <li>- For the first E-UTRA band, the UE shall include the same number of entries for E-UTRA bands as in <i>bandList</i>, i.e. first entry corresponds to first E-UTRA band in <i>bandList</i> and so on,</li> <li>- For the second E-UTRA band, the UE shall include one entry less, i.e. first entry corresponds to the second E-UTRA band in <i>bandList</i> and so on</li> <li>- And so on</li> </ul>
<p><b>srs-TxSwitch</b> Indicates supported SRS antenna switch capability for the associated band. If the UE indicates support of <i>SRS-SwitchingTimeNR</i>, the UE is allowed to set this field for a band with associated <i>FeatureSetUplinkId</i> set to 0 for SRS carrier switching.</p>
<p><b>supportedIntraENDC-BandCombinationList</b> Indicates BCS and/or spectrum contiguity capability for each entry in a list of intra-band (NG)EN-DC components in an inter-band (NG)EN-DC band combination. The UE shall include the entries in the order corresponding to the order of NR band entries of the intra-band (NG)EN-DC components in the <i>bandList</i> in the inter-band (NG)EN-DC band combination (i.e., <i>BandCombination</i> without suffix).</p>
<p><b>uplinkTxSwitchingBandParametersList-v1700</b> Indicates a list of per band per band combination capabilities for UL Tx switching.</p>

– **BandCombinationListSidelinkEUTRA-NR**

The IE *BandCombinationListSidelinkEUTRA-NR* contains a list of V2X sidelink and NR sidelink band combinations.

#### **BandParametersSidelinkEUTRA-NR field descriptions**

##### **bandParametersSidelinkEUTRA1, bandParametersSidelinkEUTRA2**

This field includes the *V2X-BandParameters-r14* and *V2X-BandParameters-v1530* IE as specified in 36.331 [10]. It is used for reporting the per-band capability for V2X sidelink communication.

## – *BandCombinationListSL-Discovery*

The IE *BandCombinationListSL-Discovery* contains a list of NR Sidelink discovery band combinations.

### ***BandCombinationListSidelinkSL-Discovery* information element**

```
-- ASN1START
-- TAG-BANDCOMBINATIONLISTSLDISCOVERY-START

BandCombinationListSL-Discovery-r17 ::= SEQUENCE (SIZE (1..maxSimultaneousBands)) OF BandParametersSidelinkDiscovery-r17

BandParametersSidelinkDiscovery-r17 ::= SEQUENCE {
  sl-CrossCarrierScheduling-r17          ENUMERATED {supported}                OPTIONAL,

#### CA-ParametersNR field description

##### **codebookParametersPerBC**

For a given supported band combination, this field indicates the alternative list of *SupportedCSI-RS-Resource* supported for each codebook type, amongst the supported CSI-RS resources included in *codebookParametersPerBand* in *MIMO-ParametersPerBand*.

## – CA-ParametersNRDC

The IE *CA-ParametersNRDC* contains dual connectivity related capabilities that are defined per band combination.

#### **CA-ParametersNRDC information element**

#### CA-ParametersNRDC field descriptions

##### **ca-ParametersNR-forDC (with and without suffix)**

If this field is present for a band combination, it reports the UE capabilities when NR-DC is configured with the band combination. If a version of this field (i.e., with or without suffix) is absent for a band combination, the corresponding *ca-ParametersNR* field version in *BandCombination* is applicable to the UE configured with NR-DC for the band combination. If a version of this field (i.e., with or without suffix) is present for a band combination but does not contain any parameters, the UE does not support the corresponding field version when configured with NR-DC for the band combination.

##### **featureSetCombinationDC**

If this field is present for a band combination, it reports the feature set combination supported for the band combination when NR-DC is configured. If this field is absent for a band combination, the *featureSetCombination* in *BandCombination* (without suffix) is applicable to the UE configured with NR-DC for the band combination.

## – CarrierAggregationVariant

The IE *CarrierAggregationVariant* informs the network about supported "placement" of the SpCell in an NR cell group.

#### CarrierAggregationVariant information element

```

-- ASN1START
-- TAG-CARRIERAGGREGATIONVARIANT-START
CarrierAggregationVariant ::=
    SEQUENCE {

```

```

### CodebookParameters field descriptions

#### **supportedCSI-RS-ResourceListAlt**

This field indicates the alternative list of *SupportedCSI-RS-Resource* supported for each codebook type. The supported CSI-RS resource is indicated by an integer value which pinpoints *SupportedCSI-RS-Resource* defined in *CodebookVariantsList*. The value 0 corresponds to the first entry of *CodebookVariantsList*. The value 1 corresponds to the second entry of *CodebookVariantsList*, and so on. For each codebook type, the field shall be included in both *codebookParametersPerBC* (but optional for single CC) and *codebookParametersPerBand*.

### – *DL-PRS-MeasurementWithRxFH-RRC-Connected*

The IE *DL-PRS-MeasurementWithRxFH-RRC-Connected* is used to convey the capabilities supported by the UE for PRS measurement with Rx frequency hopping within a measurement gap and measurement reporting in RRC\_CONNECTED for RedCap UEs.

#### ***DL-PRS-MeasurementWithRxFH-RRC-Connected* information element**

```

## – *FeatureSetCombination*

The IE *FeatureSetCombination* is a two-dimensional matrix of *FeatureSet* entries.

Each *FeatureSetsPerBand* contains a list of feature sets applicable to the carrier(s) of one band entry of the associated band combination. Across the associated bands, the UE shall support the combination of *FeatureSets* at the same position in the *FeatureSetsPerBand*. All *FeatureSetsPerBand* in one *FeatureSetCombination* must have the same number of entries.

The number of *FeatureSetsPerBand* in the *FeatureSetCombination* must be equal to the number of band entries in an associated band combination. The first *FeatureSetPerBand* applies to the first band entry of the band combination, and so on.

Each *FeatureSet* contains either a pair of NR or E-UTRA feature set IDs for UL and DL.

In case of NR, the actual feature sets for UL and DL are defined in the *FeatureSets* IE and referred to from here by their ID, i.e., their position in the *featureSetsUplink* / *featureSetsDownlink* list in the *FeatureSet* IE.

In case of E-UTRA, the feature sets referred to from this list are defined in TS 36.331 [10] and conveyed as part of the *UE-EUTRA-Capability* container.

The *FeatureSetUplink* and *FeatureSetDownlink* referred to from the *FeatureSet* comprise, among other information, a set of *FeatureSetUplinkPerCC-Ids* and *FeatureSetDownlinkPerCC-Ids*. The number of these per-CC IDs determines the number of carriers that the UE is able to aggregate contiguously in frequency domain in the corresponding band. The number of carriers supported by the UE is also restricted by the bandwidth class indicated in the associated *BandCombination*, if present.

In feature set combinations the UE shall exclude entries with same or lower capabilities, since the network may anyway assume that the UE supports those.

NOTE 1: The UE may advertise fallback band-combinations in which it supports additional functionality explicitly in two ways: Either by setting *FeatureSet* IDs to zero (inter-band and intra-band non-contiguous fallback) and by reducing the number of *FeatureSet-PerCC* IDs in a *FeatureSet* (intra-band contiguous fallback). Or by separate *BandCombination* entries with associated *FeatureSetCombinations*.

NOTE 2: The UE may advertise a *FeatureSetCombination* containing only fallback band combinations. That means, in a *FeatureSetCombination*, each group of *FeatureSets* across the bands may contain at least one pair of *FeatureSetUplinkId* and *FeatureSetDownlinkId* which is set to 0/0.

NOTE 3: The Network configures serving cell(s) and BWP(s) configuration to comply with capabilities derived from the combination of FeatureSets at the same position in the FeatureSetsPerBand, regardless of activated/deactivated serving cell(s) and BWP(s).

### ***FeatureSetCombination* information element**

```
-- ASN1START
-- TAG-FEATURESETCOMBINATION-START

FeatureSetCombination ::=          SEQUENCE (SIZE (1..maxSimultaneousBands)) OF FeatureSetsPerBand
FeatureSetsPerBand ::=            SEQUENCE (SIZE (1..maxFeatureSetsPerBand)) OF FeatureSet

FeatureSet ::=                     CHOICE {
    eutra                           SEQUENCE {
        downlinkSetEUTRA            FeatureSetEUTRA-DownlinkId,
        uplinkSetEUTRA              FeatureSetEUTRA-UplinkId
    },
    nr                               SEQUENCE {
        downlinkSetNR                FeatureSetDownlinkId,
        uplinkSetNR                  FeatureSetUplinkId
    }
}

-- TAG-FEATURESETCOMBINATION-STOP
-- ASN1STOP
```

### ***FeatureSetCombinationId***

The IE *FeatureSetCombinationId* identifies a *FeatureSetCombination*. The *FeatureSetCombinationId* of a *FeatureSetCombination* is the position of the *FeatureSetCombination* in the featureSetCombinations list (in *UE-NR-Capability* or *UE-MRDC-Capability*). The *FeatureSetCombinationId* = 0 refers to the first entry in the *featureSetCombinations* list (in *UE-NR-Capability* or *UE-MRDC-Capability*).

NOTE: The *FeatureSetCombinationId* = 1024 is not used due to the maximum entry number of *featureSetCombinations*.

### ***FeatureSetCombinationId* information element**

```
-- ASN1START
-- TAG-FEATURESETCOMBINATIONID-START

FeatureSetCombinationId ::=        INTEGER (0.. maxFeatureSetCombinations)

#### FeatureSetDownlink field descriptions

##### **featureSetListPerDownlinkCC**

Indicates which features the UE supports on the individual DL carriers of the feature set (and hence of a band entry that refer to the feature set). The UE shall hence include at least as many *FeatureSetDownlinkPerCC-Id* in this list as the number of carriers it supports according to the *ca-BandwidthClassDL*, except if indicating additional functionality by reducing the number of *FeatureSetDownlinkPerCC-Id* in the feature set (see NOTE 1 in *FeatureSetCombination* IE description). The order of the elements in this list is not relevant, i.e., the network may configure any of the carriers in accordance with any of the *FeatureSetDownlinkPerCC-Id* in this list.

##### **supportedSRS-Resources**

Indicates supported SRS resources for SRS carrier switching to the band associated with this *FeatureSetDownlink*. The UE is only allowed to set this field for a band with associated *FeatureSetUplinkId* set to 0.

## – *FeatureSetDownlinkId*

The IE *FeatureSetDownlinkId* identifies a downlink feature set. The *FeatureSetDownlinkId* of a *FeatureSetDownlink* is the index position of the *FeatureSetDownlink* in the *featureSetsDownlink* list in the *FeatureSets* IE. The first element in that list is referred to by *FeatureSetDownlinkId* = 1. The *FeatureSetDownlinkId*=0 is not used by an actual *FeatureSetDownlink* but means that the UE does not support a carrier in this band of a band combination.

### ***FeatureSetDownlinkId* information element**

```
-- ASN1START
-- TAG-FEATURESETDOWNLINKID-START

FeatureSetDownlinkId ::=          INTEGER (0..maxDownlinkFeatureSets)

-- TAG-FEATURESETDOWNLINKID-STOP
-- ASN1STOP
```

## – *FeatureSetDownlinkPerCC*

The IE *FeatureSetDownlinkPerCC* indicates a set of features that the UE supports on the corresponding carrier of one band entry of a band combination.

### ***FeatureSetDownlinkPerCC* information element**

```

### – *FeatureSetEUTRA-DownlinkId*

The IE *FeatureSetEUTRA-DownlinkId* identifies a downlink feature set in E-UTRA list (see TS 36.331 [10]). The first element in that list is referred to by *FeatureSetEUTRA-DownlinkId* = 1. The *FeatureSetEUTRA-DownlinkId=0* is used when the UE does not support a carrier in this band of a band combination.

#### **FeatureSetEUTRA-DownlinkId information element**

```

-- ASN1START
-- TAG-FEATURESETEUTRADOWNLINKID-START

FeatureSetEUTRA-DownlinkId ::= INTEGER (0..maxEUTRA-DL-FeatureSets)

-- TAG-FEATURESETEUTRADOWNLINKID-STOP
-- ASN1STOP

```

## – *FeatureSetEUTRA-UplinkId*

The IE *FeatureSetEUTRA-UplinkId* identifies an uplink feature set in E-UTRA list (see TS 36.331 [10]). The first element in that list is referred to by *FeatureSetEUTRA-UplinkId* = 1. The *FeatureSetEUTRA-UplinkId* = 0 is used when the UE does not support a carrier in this band of a band combination.

### ***FeatureSetEUTRA-UplinkId* information element**

```
-- ASN1START
-- TAG-FEATURESETEUTRAUPLINKID-START

FeatureSetEUTRA-UplinkId ::=                INTEGER (0..maxEUTRA-UL-FeatureSets)

-- TAG-FEATURESETEUTRAUPLINKID-STOP
-- ASN1STOP
```

## – *FeatureSets*

The IE *FeatureSets* is used to provide pools of downlink and uplink features sets. A *FeatureSetCombination* refers to the IDs of the feature set(s) that the UE supports in that *FeatureSetCombination*. The *BandCombination* entries in the *BandCombinationList* then indicate the ID of the *FeatureSetCombination* that the UE supports for that band combination.

The entries in the lists in this IE are identified by their index position. For example, the *FeatureSetUplinkPerCC-Id* = 4 identifies the 4<sup>th</sup> element in the *featureSetsUplinkPerCC* list.

NOTE: When feature sets (per CC) IEs require extension in future versions of the specification, new versions of the *FeatureSetDownlink*, *FeatureSetUplink*, *FeatureSets*, *FeatureSetDownlinkPerCC* and/or *FeatureSetUplinkPerCC* will be created and instantiated in corresponding new lists in the *FeatureSets* IE. For example, if new capability bits are to be added to the *FeatureSetDownlink*, they will instead be defined in a new *FeatureSetDownlink-rxy* which will be instantiated in a new *featureSetDownlinkList-rxy* list. If a UE indicates in a *FeatureSetCombination* that it supports the *FeatureSetDownlink* with ID #5, it implies that it supports both the features in *FeatureSetDownlink* #5 and *FeatureSetDownlink-rxy* #5 (if present). The number of entries in the new list(s) shall be the same as in the original list(s).

### ***FeatureSets* information element**

### FeatureSetUplink field descriptions

#### featureSetListPerUplinkCC

Indicates which features the UE supports on the individual UL carriers of the feature set (and hence of a band entry that refers to the feature set). The UE shall hence include at least as many *FeatureSetUplinkPerCC-Id* in this list as the number of carriers it supports according to the *ca-BandwidthClassUL*, except if indicating additional functionality by reducing the number of *FeatureSetUplinkPerCC-Id* in the feature set (see NOTE 1 in *FeatureSetCombination* IE description). The order of the elements in this list is not relevant, i.e., the network may configure any of the carriers in accordance with any of the *FeatureSetUplinkPerCC-Id* in this list.

#### – FeatureSetUplinkId

The IE *FeatureSetUplinkId* identifies an uplink feature set. The *FeatureSetUplinkId* of a *FeatureSetUplink* is the index position of the *FeatureSetUplink* in the *featureSetsUplink* list in the *FeatureSets* IE. The first element in the list is referred to by *FeatureSetUplinkId* = 1, and so on. The *FeatureSetUplinkId* = 0 is not used by an actual *FeatureSetUplink* but means that the UE does not support a carrier in this band of a band combination.

### FeatureSetUplinkId information element

```
-- ASN1START
```

```
-- TAG-FEATURESETUPLINKID-START
FeatureSetUplinkId ::=                INTEGER (0..maxUplinkFeatureSets)
-- TAG-FEATURESETUPLINKID-STOP
-- ASN1STOP
```

## – FeatureSetUplinkPerCC

The IE *FeatureSetUplinkPerCC* indicates a set of features that the UE supports on the corresponding carrier of one band entry of a band combination.

### FeatureSetUplinkPerCC information element

```

## – *FeatureSetUplinkPerCC-Id*

The IE *FeatureSetUplinkPerCC-Id* identifies a set of features applicable to one carrier of a feature set. The *FeatureSetUplinkPerCC-Id* of a *FeatureSetUplinkPerCC* is the index position of the *FeatureSetUplinkPerCC* in the *featureSetsUplinkPerCC*. The first element in the list is referred to by *FeatureSetUplinkPerCC-Id* = 1, and so on.

### ***FeatureSetUplinkPerCC-Id* information element**

```
-- ASN1START
-- TAG-FEATURESETUPLINKPERCC-ID-START

FeatureSetUplinkPerCC-Id ::=          INTEGER (1..maxPerCC-FeatureSets)

-- TAG-FEATURESETUPLINKPERCC-ID-STOP
-- ASN1STOP
```

## – *FreqBandIndicatorEUTRA*

```
-- ASN1START
-- TAG-FREQBANDINDICATOREUTRA-START

FreqBandIndicatorEUTRA ::=  INTEGER (1..maxBandsEUTRA)

-- TAG-FREQBANDINDICATOREUTRA-STOP
-- ASN1STOP
```

## – *FreqBandList*

The IE *FreqBandList* is used by the network to request NR CA, NR non-CA and/or MR-DC band combinations for specific NR and/or E-UTRA frequency bands and/or up to a specific number of carriers and/or up to specific aggregated bandwidth. This is also used to request feature sets (for NR) and feature set combinations (for NR and MR-DC). For NR sidelink communication, this is used by the initiating UE to request sidelink UE radio access capabilities from the peer UE. This is also used to request lower MSD capability for specific NR frequency bands for the UE supporting lower MSD.

### ***FreqBandList* information element**

```
-- ASN1START
-- TAG-FREQBANDLIST-START

FreqBandList ::=          SEQUENCE (SIZE (1..maxBandsMRDC)) OF FreqBandInformation

FreqBandInformation ::=  CHOICE {
    bandInformationEUTRA   FreqBandInformationEUTRA,
    bandInformationNR      FreqBandInformationNR
}

FreqBandInformationEUTRA ::= SEQUENCE {
    bandEUTRA              FreqBandIndicatorEUTRA,
```

```

    ca-BandwidthClassDL-EUTRA      CA-BandwidthClassEUTRA      OPTIONAL,  -- Need N
    ca-BandwidthClassUL-EUTRA      CA-BandwidthClassEUTRA      OPTIONAL,  -- Need N
}

FreqBandInformationNR ::=
    SEQUENCE {
        bandNR                      FreqBandIndicatorNR,
        maxBandwidthRequestedDL     AggregatedBandwidth          OPTIONAL,  -- Need N
        maxBandwidthRequestedUL     AggregatedBandwidth          OPTIONAL,  -- Need N

-- TAG-FREQBANDLIST-STOP
-- ASN1STOP

```

### – *FreqSeparationClass*

The IE *FreqSeparationClass* is used for an intra-band non-contiguous CA band combination to indicate frequency separation between lower edge of lowest CC and upper edge of highest CC in a frequency band.

#### ***FreqSeparationClass* information element**

```

-- ASN1START
-- TAG-FREQSEPARATIONCLASS-START

FreqSeparationClass ::= ENUMERATED { mhz800, mhz1200, mhz1400, ..., mhz400-v1650, mhz600-v1650}

FreqSeparationClassDL-v1620 ::= ENUMERATED {mhz1000, mhz1600, mhz1800, mhz2000, mhz2200, mhz2400}

FreqSeparationClassUL-v1620 ::= ENUMERATED {mhz1000}

-- TAG-FREQSEPARATIONCLASS-STOP
-- ASN1STOP

```

### – *FreqSeparationClassDL-Only*

The IE *FreqSeparationClassDL-Only* is used to indicate the frequency separation between lower edge of lowest CC and upper edge of highest CC of DL only frequency spectrum in a frequency band.

#### ***FreqSeparationClassDL-Only* information element**

```

-- ASN1START
-- TAG-FREQSEPARATIONCLASSDL-Only-START

```

```
FreqSeparationClassDL-Only-r16 ::= ENUMERATED {mhz200, mhz400, mhz600, mhz800, mhz1000, mhz1200}
```

```
-- TAG-FREQSEPARATIONCLASSDL-Only-STOP
-- ASN1STOP
```

## – FR2-2-AccessParamsPerBand

The IE *FR2-2-AccessParamsPerBand* is used to convey FR2-2 related parameters specific for a certain frequency band (not per feature set or band combination).

### FR2-2-AccessParamsPerBand information element

```
-- ASN1START

-- ASN1STOP

```

#### **MIMO-ParametersPerBand field descriptions**

##### **codebookParametersPerBand**

For a given frequency band, this field indicates the alternative list of *SupportedCSI-RS-Resource* supported for each codebook type. The supported CSI-RS resources indicated by this field are referred by *codebookParametersperBC* in *CA-ParametersNR* to indicate the supported CSI-RS resource per band combination.

##### **csi-RS-IM-ReceptionForFeedback/ csi-RS-ProcFrameworkForSRS/ csi-ReportFramework**

CSI related capabilities which the UE supports on each of the carriers operated on this band. If the network configures the UE with serving cells on both FR1 and FR2 bands these values may be further limited by the corresponding fields in *fr1-fr2-Add-UE-NR-Capabilities*.

##### **supportNewDMRS-Port**

Presence of this field set to *supported1*, *supported2* or *supported3* indicates that the UE supports the new DMRS port entry {0,2,3}.

## – *ModulationOrder*

The IE *ModulationOrder* is used to convey the maximum supported modulation order.

### ***ModulationOrder* information element**

```
-- ASN1START
-- TAG-MODULATIONORDER-START

ModulationOrder ::= ENUMERATED {bpsk-halfpi, bpsk, qpsk, qam16, qam64, qam256}

-- TAG-MODULATIONORDER-STOP
-- ASN1STOP
```

## – *MRDC-Parameters*

The IE *MRDC-Parameters* contains the band combination parameters specific to MR-DC for a given MR-DC band combination.

### ***MRDC-Parameters* information element**

```

### **Phy-ParametersFRX-Diff field descriptions**

#### **csi-RS-IM-ReceptionForFeedback/ csi-RS-ProcFrameworkForSRS/ csi-ReportFramework**

These fields are optionally present in *fr1-fr2-Add-UE-NR-Capabilities* in *UE-NR-Capability*. They shall not be set in any other instance of the IE *Phy-ParametersFRX-Diff*. If the network configures the UE with serving cells on both FR1 and FR2 bands, these parameters, if present, limit the corresponding parameters in *MIMO-ParametersPerBand*.

## – *Phy-ParametersMRDC*

The IE *Phy-ParametersMRDC* is used to convey physical layer capabilities for MR-DC.

### **Phy-ParametersMRDC information element**

```

-- ASN1START
-- TAG-PHY-PARAMETERSMRDC-START

Phy-ParametersMRDC ::=

<i>RF-Parameters</i> field descriptions
<p><b><i>appliedFreqBandListFilter</i></b> In this field the UE mirrors the <i>FreqBandList</i> that the NW provided in the capability enquiry, if any, as described in clause 5.6.1.4. The UE filtered the band combinations in the <i>supportedBandCombinationList</i> in accordance with this <i>appliedFreqBandListFilter</i>. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field <i>eutra-nr-only</i> [10].</p>
<p><b><i>dummy1, dummy2, dummy-ltm-MAC-CE-JointTCI-r18, dummy-ltm-MAC-CE-SeparateTCI-r18</i></b> The fields are not used in the specification and the network ignores the received values.</p>
<p><b><i>supportedBandCombinationList</i></b> A list of band combinations that the UE supports for NR (and NR-DC, if requested). The <i>FeatureSetCombinationId</i>s in this list refer to the <i>FeatureSetCombination</i> entries in the <i>featureSetCombinations</i> list in the <i>UE-NR-Capability</i> IE. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field <i>eutra-nr-only</i> [10].</p>
<p><b><i>supportedBandCombinationListSidelinkEUTRA-NR</i></b> A list of band combinations that the UE supports for NR sidelink communication only, for joint NR sidelink communication and V2X sidelink communication, or for V2X sidelink communication only. The UE does not include this field if the UE capability is requested by E-UTRAN (see TS 36.331[10]) and the network request includes the field <i>eutra-nr-only</i>.</p>
<p><b><i>supportedBandCombinationListSL-NonRelayDiscovery</i></b> A list of band combinations that the UE supports for NR sidelink non-relay discovery. The encoding is defined in PC5 <i>BandCombinationListSidelinkNR-r16</i>.</p>
<p><b><i>supportedBandCombinationListSL-RelayDiscovery</i></b> A list of band combinations that the UE supports for NR sidelink relay discovery. The encoding is defined in PC5 <i>BandCombinationListSidelinkNR-r16</i>.</p>
<p><b><i>supportedBandCombinationListSL-U2U-DiscoveryExt</i></b> This field indicates the band parameter in <i>BandCombinationListSL-Discovery-r17</i> that the UE supports for NR U2U sidelink relay discovery in a band included in <i>supportedBandCombinationListSL-U2U-RelayDiscovery</i>.</p>
<p><b><i>supportedBandCombinationListSL-U2U-RelayDiscovery</i></b> A list of band combinations that the UE supports for NR U2U sidelink relay discovery. The encoding is defined in PC5 <i>BandCombinationListSidelinkNR-r16</i>.</p>
<p><b><i>supportedBandCombinationList-UplinkTxSwitch</i></b> A list of band combinations that the UE supports dynamic uplink Tx switching for NR UL CA and SUL. The <i>FeatureSetCombinationId</i>s in this list refer to the <i>FeatureSetCombination</i> entries in the <i>featureSetCombinations</i> list in the <i>UE-NR-Capability</i> IE. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field <i>eutra-nr-only</i> [10].</p>
<p><b><i>supportedBandListNR</i></b> A list of NR bands supported by the UE. If <i>supportedBandListNR-v16c0</i> is included, the UE shall include the same number of entries, and listed in the same order, as in <i>supportedBandListNR</i> (without suffix).</p>

#### SidelinkParametersEUTRA field descriptions

##### **sl-ParametersEUTRA1, sl-ParametersEUTRA2, sl-ParametersEUTRA3**

This field includes IE of *SL-Parameters-v1430* (where *v2x-eNB-Scheduled-r14* and *V2X-SupportedBandCombination-r14* shall not be included), *SL-Parameters-v1530* (where *V2X-SupportedBandCombination-r1530* shall not be included) and *SL-Parameters-v1540* respectively defined in 36.331 [10]. It is used for reporting the per-UE capability for V2X sidelink communication.

– *SimultaneousRxTxPerBandPair*

The IE *SimultaneousRxTxPerBandPair* contains the simultaneous Rx/Tx UE capability for each band pair in a band combination.

***SimultaneousRxTxPerBandPair* information element**

```
-- ASN1START
-- TAG-SIMULTANEOUSRXTXPERBANDPAIR-START

SimultaneousRxTxPerBandPair ::=          BIT STRING (SIZE (3..496))

-- TAG-SIMULTANEOUSRXTXPERBANDPAIR-STOP
-- ASN1STOP
```

– *SON-Parameters*

The IE *SON-Parameters* contains SON related parameters.

***SON-Parameters* information element**

```
-- ASN1START
-- TAG-SON-PARAMETERS-START

**– UE-CapabilityRAT-ContainerList**

The IE *UE-CapabilityRAT-ContainerList* contains a list of radio access technology specific capability containers.

**UE-CapabilityRAT-ContainerList information element**

```

-- ASN1START
-- TAG-UE-CAPABILITYRAT-CONTAINERLIST-START

UE-CapabilityRAT-ContainerList ::= SEQUENCE (SIZE (0..maxRAT-CapabilityContainers)) OF UE-CapabilityRAT-Container

UE-CapabilityRAT-Container ::= SEQUENCE {
    rat-Type          RAT-Type,
    ue-CapabilityRAT-Container OCTET STRING
}

-- TAG-UE-CAPABILITYRAT-CONTAINERLIST-STOP
-- ASN1STOP

```

**UE-CapabilityRAT-ContainerList field descriptions****ue-CapabilityRAT-Container**

Container for the UE capabilities of the indicated RAT. The encoding is defined in the specification of each RAT:

For *rat-Type* set to *nr*: the encoding of UE capabilities is defined in *UE-NR-Capability*.

For *rat-Type* set to *eutra-nr*: the encoding of UE capabilities is defined in *UE-MRDC-Capability*.

For *rat-Type* set to *eutra*: the encoding of UE capabilities is defined in *UE-EUTRA-Capability* specified in TS 36.331 [10].

For *rat-Type* set to *utra-fdd*: the octet string contains the INTER RAT HANDOVER INFO message defined in TS 25.331 [45].

– **UE-CapabilityRAT-RequestList**

The IE *UE-CapabilityRAT-RequestList* is used to request UE capabilities for one or more RATs from the UE.

**UE-CapabilityRAT-RequestList information element**

```
-- ASN1START
-- TAG-UE-CAPABILITYRAT-REQUESTLIST-START

UE-CapabilityRAT-RequestList ::=          SEQUENCE (SIZE (1..maxRAT-CapabilityContainers)) OF UE-CapabilityRAT-Request

UE-CapabilityRAT-Request ::=             SEQUENCE {
    rat-Type                               RAT-Type,
    capabilityRequestFilter                OCTET STRING                               OPTIONAL,  -- Need N
    ...
}

-- TAG-UE-CAPABILITYRAT-REQUESTLIST-STOP
-- ASN1STOP
```

**UE-CapabilityRAT-Request field descriptions****capabilityRequestFilter**

Information by which the network requests the UE to filter the UE capabilities.

For *rat-Type* set to *nr* or *eutra-nr*: the encoding of the *capabilityRequestFilter* is defined in *UE-CapabilityRequestFilterNR*.

For *rat-Type* set to *eutra*: the encoding of the *capabilityRequestFilter* is defined by *UECapabilityEnquiry* message defined in TS36.331 [10], in which *RAT-Type* in *UE-CapabilityRequest* includes only '*eutra*'.

**rat-Type**

The RAT type for which the NW requests UE capabilities.

– **UE-CapabilityRequestFilterCommon**

The IE *UE-CapabilityRequestFilterCommon* is used to request filtered UE capabilities. The filter is common for all capability containers that are requested.

**UE-CapabilityRequestFilterCommon information element**

```

-- ASN1START

}

-- TAG-UE-CAPABILITYREQUESTFILTERCOMMON-STOP
-- ASN1STOP

```

<b>UE-CapabilityRequestFilterCommon field descriptions</b>	
<b>codebookTypeRequest</b>	Only if this field is present, the UE includes <i>SupportedCSI-RS-Resource</i> supported for the codebook type(s) requested within this field (i.e. type I single/multi-panel, type II and type II port selection) into <i>codebookVariantsList</i> , <i>codebookParametersPerBand</i> and <i>codebookParametersPerBC</i> . If this field is present and none of the codebook types is requested within this field (i.e. empty field), the UE includes <i>SupportedCSI-RS-Resource</i> supported for all codebook types into <i>codebookVariantsList</i> , <i>codebookParametersPerBand</i> and <i>codebookParametersPerBC</i> .
<b>fallbackGroupFiveRequest</b>	Only if this field is present, the UE supporting FR2 CA bandwidth class from fallback group 5 shall include band combinations with FR2 CA bandwidth class from fallback group 5, and shall omit band combinations with FR2 CA bandwidth class from fallback group 2 or 3 (see TS 38.101-2 [39]) with same or lower capabilities.
<b>includeNE-DC</b>	Only if this field is present, the UE supporting NE-DC shall indicate support for NE-DC in band combinations and include feature set combinations which are applicable to NE-DC. Band combinations supporting both NE-DC and (NG)EN-DC shall be included in <i>supportedBandCombinationList</i> , band combinations supporting only NE-DC shall be included in <i>supportedBandCombinationListNE-DC-Only</i> .
<b>includeNR-DC</b>	Only if this field is present, the UE supporting NR-DC shall indicate support for NR-DC in band combinations and include feature set combinations which are applicable to NR-DC.
<b>lowerMSDRequest</b>	Only if this field is present, the UE supporting lower MSD shall indicate the lower MSD capability for the requested power class if supported. If no power class is explicitly requested, the UE supporting lower MSD shall indicate the lower MSD capability for the highest supported power class of the band combination consisting of victim band and aggressor band(s).
<b>mode</b>	The mode of NR-DC operation that the NW is interested in for this cell grouping. The value <i>sync</i> means that the UE only indicates NR-DC support for band combinations for which it supports synchronous NR-DC with the requested cell grouping. The value <i>async</i> means that the UE only indicates NR-DC support for band combinations for which it supports asynchronous NR-DC with the requested cell grouping.
<b>omitEN-DC</b>	Only if this field is present, the UE shall omit band combinations and feature set combinations which are only applicable to (NG)EN-DC.
<b>requestedCellGrouping</b>	The NR-DC cell groupings that the NW is interested in, i.e., the bands that it might use in an MCG and the bands that it might use in an SCG. Only if this field is present, the UE indicates NR-DC support for band combinations for which it supports the requested cell grouping, i.e., in which it supports at least one of the <i>mcg</i> bands on MCG and at least one of the <i>scg</i> bands on the SCG. In its <i>supportedBandCombinationList</i> , the UE indicates which of its NR-DC band combinations supports which of the requested cell groupings. The first element in this list is referred to by ID#0, the second by ID#1 and so on. If this field is absent, the UE only includes band combinations for which it supports NR-DC with only FR1 bands in MCG and only FR2 bands in SCG. Example 1: <i>requestedCellGrouping</i> is set to <i>mcg</i> =[n1, n7, n41, n66] and <i>scg</i> =[n78, n261]. This assumes that the NW would always use CA among n1, n7, n41 and n66 (depending on which are deployed on a given site) whereas with n78 and/or n261 the NW may need to use DC. With this filter a UE may report a band combination n1A-n7A-n78A for NR-DC only if it supports that serving cells for n1 and n7 are in the MCG and a serving cell for n78 is in the SCG. The UE may also report a band combination n41C-n261M for NR-DC provided that it supports a serving cell for n41 in the MCG and a serving cell for n261 in the SCG. Example 2: One <i>requestedCellGrouping</i> is set to <i>mcg</i> =[n1, n7, n41, n66] and <i>scg</i> =[n78, n261] and another <i>requestedCellGrouping</i> is set to <i>mcg</i> =[n1, n7, n66] and <i>scg</i> =[n41, n78, n261]. This assumes that the NW uses sometimes CA among n1, n7, n41 and n66 (as in example 1) and sometimes CA among n1, n7 and n66 but DC towards one or several of n41, n78, n261. If a UE supports n1A-n41A-n78A only if n41A and n78A are in the same cell group, this UE may only indicate cell grouping ID#1 (not #0) in its BC.
<b>uplinkTxSwitchRequest</b>	Only if this field is present, the UE supporting dynamic UL Tx switching shall indicate support for UL Tx switching in band combinations which are applicable to inter-band UL CA, SUL and (NG)EN-DC.

Conditional Presence	Explanation
NRDC	The field is optionally present, Need N, if <i>includeNR-DC</i> is included. It is absent otherwise.

## – *UE-CapabilityRequestFilterNR*

The IE *UE-CapabilityRequestFilterNR* is used to request filtered UE capabilities.

### *UE-CapabilityRequestFilterNR* information element

### **UE-NR-Capability field descriptions**

#### **featureSetCombinations**

A list of *FeatureSetCombination*:s for *supportedBandCombinationList* in *UE-NR-Capability*. The *FeatureSetDownlink*:s and *FeatureSetUplink*:s referred to from these *FeatureSetCombination*:s are defined in the *featureSets* list in *UE-NR-Capability*.

### **UE-NR-Capability-v1540 field descriptions**

#### **fr1-fr2-Add-UE-NR-Capabilities**

This instance of *UE-NR-CapabilityAddFRX-Mode* does not include any other fields than *csi-RS-IM-ReceptionForFeedback*/ *csi-RS-ProcFrameworkForSRS*/ *csi-ReportFramework*.

## – *UE-RadioPagingInfo*

The IE *UE-RadioPagingInfo* contains UE capability information needed for paging.

**UE-RadioPagingInfo information element**

```

-- ASN1START
-- TAG-UE-RADIOPAGINGINFO-START

UE-RadioPagingInfo-r17 ::= SEQUENCE {
  -- R1 29-1: Paging enhancement
  pei-SubgroupingSupportBandList-r17 SEQUENCE (SIZE (1..maxBands)) OF FreqBandIndicatorNR OPTIONAL,
  ...
}

-- TAG-UE-RADIOPAGINGINFO-STOP
-- ASN1STOP

```

**6.3.4 Other information elements****– AbsoluteTimeInfo**

The IE *AbsoluteTimeInfo* indicates an absolute time in a format YY-MM-DD HH:MM:SS and using BCD encoding. The first/ leftmost bit of the bit string contains the most significant bit of the most significant digit of the year and so on.

**AbsoluteTimeInfo information element**

```

-- ASN1START
-- TAG-ABSOLUTETIMEINFO-START

AbsoluteTimeInfo-r16 ::= BIT STRING (SIZE (48))

-- TAG-ABSOLUTETIMEINFO-STOP
-- ASN1STOP

```

**– AppLayerIdleInactiveConfig**

The IE *AppLayerIdleInactiveConfig* indicates parameters specific to application layer measurements applicable to RRC\_IDLE and RRC\_INACTIVE. The configured application layer measurement is also applicable to RRC\_CONNECTED.

**AppLayerIdleInactiveConfig information element**

```

-- ASN1START
-- TAG-APPLAYERIDLEINACTIVECONFIG-START

AppLayerIdleInactiveConfig-r18 ::= SEQUENCE {

#### ***AppLayerIdleInactiveConfig*** field descriptions

##### ***appLayerBufferLevelList***

The field defines whether the buffer level for DASH streaming and VR service types can be collected as a RAN visible QoE metric from the UE.

##### ***qoe-AreaScope***

The field contains the area where the application layer measurement shall start if an application layer session starts.

##### ***qoe-MeasurementType***

Indicates whether the application layer measurement is signalling based or management based.

##### ***qoe-Reference***

Indicates the QoE Reference as defined in TS 28.405 [80], clause 5.2.

##### ***mce-id***

The field contains the Measurement Collection Entity ID.

##### ***playbackDelayForMediaStartup***

The field defines whether the playback delay for DASH streaming and VR service types can be collected as a RAN visible QoE metric from the UE.

## – ***AppLayerMeasConfig***

The IE *AppLayerMeasConfig* indicates configuration of application layer measurements.

#### ***AppLayerMeasConfig*** information element

```

-- ASN1START
-- TAG-APPLAYERMEASCONFIG-START

```

```

AppLayerMeasConfig-r17 ::= SEQUENCE {

```

<b>AppLayerMeasConfig field descriptions</b>
<p><b>appLayerMeasPriority</b> The field indicates the priority of the application layer measurement configuration, where a higher value indicates lower priority. If the field is not configured, the application layer measurement configuration has the lowest priority.</p>
<p><b>idleInactiveReportAllowed</b> The field indicates whether transmission of application layer measurement configurations and reports for application layer measurements applicable to RRC_IDLE and/or RRC_INACTIVE is allowed in the cell where the field is received. If the field is not configured, transmission of application layer measurement reports and configurations for RRC_IDLE/RRC_INACTIVE is not allowed.</p>
<p><b>measConfigAppLayerContainer</b> The field contains configuration of application layer measurements, see Annex L (normative) in TS 26.247 [68], clause 16.5 in TS 26.114 [69] and clause 9.4 in TS 26.118 [70].</p>
<p><b>measConfigAppLayerId</b> The field contains the identity of the application layer measurements. When application layer measurements are configured for an SCG, the <i>measConfigAppLayerId</i> is obtained according to TS 38.423 [37], clauses 8.3.1 and 8.3.3.</p>
<p><b>pauseReporting</b> The field indicates whether the transmission of <i>measReportAppLayerContainer</i> is paused or not. Value <i>true</i> indicates the transmission of <i>measReportAppLayerContainer</i> is paused; value <i>false</i> indicates the transmission of <i>measReportAppLayerContainer</i> is not paused.</p>
<p><b>ran-VisibleParameters</b> The field indicates whether RAN visible application layer measurements shall be reported or not.</p>
<p><b>ran-VisibleReportingSRB</b> The field indicates the SRB to be used for transmission of RAN visible application layer measurement reports.</p>
<p><b>reportingSRB</b> The field indicates the SRB to be used for transmission of encapsulated application layer measurement reports.</p>
<p><b>rrc-SegAllowedSRB4</b> This field indicates that RRC segmentation of <i>MeasurementReportAppLayer</i> is enabled on SRB4. The field is only configured for an MCG. It may be present only if the UE supports RRC segmentation of the <i>MeasurementReportAppLayer</i> message.</p>
<p><b>rrc-SegAllowedSRB5</b> This field indicates that RRC segmentation of <i>MeasurementReportAppLayer</i> is enabled on SRB5. The field is only configured for an SCG. It may be present only if the UE supports RRC segmentation of the <i>MeasurementReportAppLayer</i> message.</p>
<p><b>serviceType</b> Indicates the type of application layer measurement. Value <i>streaming</i> indicates Quality of Experience Measurement Collection for streaming services (see TS 26.247 [68]), value <i>mtsi</i> indicates Quality of Experience Measurement Collection for MTSI (see TS 26.114 [69]) and value <i>vr</i> indicates Quality of Experience Measurement Collection for VR service (see TS 26.118 [70]). The network always configures <i>serviceType</i> when application layer measurements are initially configured and at <i>fullConfig</i>.</p>
<p><b>transmissionOfSessionStartStop</b> Value <i>true</i> indicates that the UE shall transmit indications when the measurement session in the application layer starts and stops. Value <i>false</i> indicates that the UE shall not transmit any session status indications. The UE transmits a session start indication upon configuration of this field set to value <i>true</i> if a session already has started in the application layer.</p>

<i>RAN-VisibleParameters</i> field descriptions
<p><b><i>numberOfBufferLevelEntries</i></b> The field contains the maximum number of buffer level entries that can be reported for RAN visible application layer measurements. This field is also used by application layer to calculate the interval of RAN visible buffer level measurement, which is equal to the periodicity of RAN visible application layer measurements reporting divided by <i>numberOfBufferLevelEntries</i>.</p>
<p><b><i>ran-VisiblePeriodicity</i></b> The field indicates the periodicity of RAN visible application layer measurements reporting. Value <i>ms120</i> indicates 120 ms, value <i>ms240</i> indicates 240 ms and so on. If this field is absent, the periodicity of RAN visible application layer measurements reporting is the same as the reporting periodicity indicated in <i>measConfigAppLayerContainer</i>.</p>
<p><b><i>reportPlayoutDelayForMediaStartup</i></b> The field indicates whether the UE shall report Playout Delay for Media Startup for RAN visible application layer measurements.</p>

Conditional Presence	Explanation
<i>QoENRDC</i>	This field is optionally present, Need M, when QoE for an NR-DC configuration is configured, i.e. when either QoE for an SCG is configured or when SRB5 is configured. Otherwise, it is absent.
<i>ServiceType</i>	This field is optionally present, Need M, when <i>serviceType</i> is set to <i>streaming</i> or <i>vr</i> . Otherwise, it is absent.

## – *AreaConfiguration*

The *AreaConfiguration* indicates area for which UE is requested to perform measurement logging. If not configured, measurement logging is not restricted to specific cells or tracking areas but applies as long as the RPLMN is contained in *plmn-IdentityList* stored in *VarLogMeasReport*.

### ***AreaConfiguration* information element**

```
-- ASN1START
-- TAG-AREACONFIGURATION-START

AreaConfiguration-r16 ::= SEQUENCE {
    areaConfig-r16          AreaConfig-r16,
    interFreqTargetList-r16 SEQUENCE(SIZE (1..maxFreq)) OF InterFreqTargetInfo-r16 OPTIONAL -- Need R

    nid-IdentityList-r18
}
SNPN-ConfigID-List-r18 ::= SEQUENCE (SIZE (1..maxSNPN-ConfigID-r18)) OF SNPN-ConfigID-r18
SNPN-ConfigID-r18 ::= SEQUENCE {
    plmn-Identity-r18
    nid-IdentityList-r18
}
-- TAG-AREACONFIGURATION-STOP
-- ASN1STOP
```

**AreaConfiguration field descriptions****cag-IdentityList**

The *cag-IdentityList* contains one or more CAG IDs. A PLMN ID may be present more than once within *CAG-ConfigList*.

**InterFreqTargetInfo**

If configured, it indicates the neighbouring frequency and cells for which UE is requested to perform measurement logging. It can include sync raster or non-sync raster frequencies.

**nid-IdentityList**

The *nid-IdentityList* contains one or more NID. All NIDs associated to the same PLMN ID are listed in the same *nid-IdentityList* entry.

– **BT-NameList**

The IE *BT-NameList* is used to indicate the names of the Bluetooth beacon which the UE is configured to measure.

**BT-NameList information element**

```
-- ASN1START
-- TAG-BTNAMELIST-START

BT-NameList-r16 ::=
    SEQUENCE (SIZE (1..maxBT-Name-r16)) OF BT-Name-r16

BT-Name-r16 ::=
    OCTET STRING (SIZE (1..248))

-- TAG-BTNAMELIST-STOP
-- ASN1STOP
```

**BT-NameList field descriptions****bt-Name**

If configured, the UE only performs Bluetooth measurements according to the names identified. For each name, it refers to LOCAL NAME defined in Bluetooth specification [51].

– **DedicatedInfoF1c**

The IE *DedicatedInfoF1c* is used to transfer IAB-DU specific F1-C related information between the network and the IAB node. The carried information consists of F1AP message encapsulated in SCTP/IP or F1-C related (SCTP)/IP packet, see TS 38.472 [64]. The RRC layer is transparent for this information.

**DedicatedInfoF1c information element**

```
-- ASN1START
-- TAG-DEDICATEDINFOF1C-START

DedicatedInfoF1c-r17 ::=
    OCTET STRING

-- TAG-DEDICATEDINFOF1C-STOP
-- ASN1STOP
```

## – *EUTRA-AllowedMeasBandwidth*

The IE *EUTRA-AllowedMeasBandwidth* is used to indicate the maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "N<sub>RB</sub>" in TS 36.104 [33]. The values *mbw6*, *mbw15*, *mbw25*, *mbw50*, *mbw75*, *mbw100* indicate 6, 15, 25, 50, 75 and 100 resource blocks, respectively.

### ***EUTRA-AllowedMeasBandwidth* information element**

```
-- ASN1START
-- TAG-EUTRA-ALLOWEDMEASBANDWIDTH-START

EUTRA-AllowedMeasBandwidth ::=
    ENUMERATED {mbw6, mbw15, mbw25, mbw50, mbw75, mbw100}

-- TAG-EUTRA-ALLOWEDMEASBANDWIDTH-STOP
-- ASN1STOP
```

## – *EUTRA-MBSFN-SubframeConfigList*

The IE *EUTRA-MBSFN-SubframeConfigList* is used to define an E-UTRA MBSFN subframe pattern (for the purpose of NR rate matching).

### ***EUTRA-MBSFN-SubframeConfigList* information element**

```
-- ASN1START
-- TAG-EUTRA-MBSFN-SUBFRAMECONFIGLIST-START

EUTRA-MBSFN-SubframeConfigList ::= SEQUENCE (SIZE (1..maxMBSFN-Allocations)) OF EUTRA-MBSFN-SubframeConfig

EUTRA-MBSFN-SubframeConfig ::=
    SEQUENCE {
        radioframeAllocationPeriod    ENUMERATED {n1, n2, n4, n8, n16, n32},
        radioframeAllocationOffset    INTEGER (0..7),
        subframeAllocation1           CHOICE {
            oneFrame                   BIT STRING (SIZE(6)),
            fourFrames                 BIT STRING (SIZE(24))
        },
        subframeAllocation2           CHOICE {
            oneFrame                   BIT STRING (SIZE(2)),
            fourFrames                 BIT STRING (SIZE(8))
        }
    }
    ...
}

-- TAG-EUTRA-MBSFN-SUBFRAMECONFIGLIST-STOP
-- ASN1STOP
```

OPTIONAL, -- Need R

<i>EUTRA-MBSFN-SubframeConfig</i> field descriptions
<b>radioframeAllocationOffset</b> Field as defined in <i>MBSFN-SubframeConfig</i> in TS 36.331 [10].
<b>radioframeAllocationPeriod</b> Field as defined in <i>MBSFN-SubframeConfig</i> in TS 36.331 [10], where <i>SFN</i> refers to the SFN of the NR serving cell.
<b>subframeAllocation1</b> Field as defined in <i>MBSFN-SubframeConfig</i> in TS 36.331 [10], where the UE assumes the duplex mode (FDD or TDD) of the NR cell for which the <i>E-UTRA-MBSFN-SubframeConfig</i> is provided.
<b>subframeAllocation2</b> Field as defined in <i>MBSFN-SubframeConfig-v1430</i> in TS 36.331 [10], where the UE assumes the duplex mode (FDD or TDD) of the NR cell for which the <i>E-UTRA-MBSFN-SubframeConfig</i> is provided.

### – *EUTRA-MultiBandInfoList*

The IE *EUTRA-MultiBandInfoList* indicates the list of frequency bands in addition to the band represented by *CarrierFreq* for which cell reselection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

#### *EUTRA-MultiBandInfoList* information element

```
-- ASN1START
-- TAG-EUTRA-MULTIBANDINFOLIST-START

EUTRA-MultiBandInfoList ::= SEQUENCE (SIZE (1..maxMultiBands)) OF EUTRA-MultiBandInfo

EUTRA-MultiBandInfo ::= SEQUENCE {
    eutra-FreqBandIndicator    FreqBandIndicatorEUTRA,
    eutra-NS-PmaxList          EUTRA-NS-PmaxList           OPTIONAL -- Need R
}

-- TAG-EUTRA-MULTIBANDINFOLIST-STOP
-- ASN1STOP
```

### – *EUTRA-MultiBandInfoListAerial*

The IE *EUTRA-MultiBandInfoListAerial* indicates the list of frequency bands for aerial UE in addition to the band represented by *CarrierFreq* for which cell reselection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

#### *EUTRA-MultiBandInfoListAerial* information element

```
-- ASN1START
-- TAG-EUTRA-MULTIBANDINFOLISTAERIAL-START

EUTRA-MultiBandInfoListAerial-r18 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF EUTRA-MultiBandInfoAerial-r18

EUTRA-MultiBandInfoAerial-r18 ::= SEQUENCE {
```

```

    eutra-FreqBandIndicator-r18          FreqBandIndicatorEUTRA,
    eutra-NS-PmaxListAerial-r18         EUTRA-NS-PmaxList          OPTIONAL  -- Need R
}
-- TAG-EUTRA-MULTIBANDINFOLISTAERIAL-STOP
-- ASN1STOP

```

## – *EUTRA-NS-PmaxList*

The IE *EUTRA-NS-PmaxList* concerns a list of *additionalPmax* and *additionalSpectrumEmission*, as defined in TS 36.101 [22], clause 6, for a given frequency band.

### ***EUTRA-NS-PmaxList* information element**

```

-- ASN1START
-- TAG-EUTRA-NS-PMAXLIST-START

EUTRA-NS-PmaxList ::=
    SEQUENCE (SIZE (1..maxEUTRA-NS-Pmax)) OF EUTRA-NS-PmaxValue

EUTRA-NS-PmaxValue ::=
    SEQUENCE {
        additionalPmax          INTEGER (-30..33)          OPTIONAL,  -- Need R
        additionalSpectrumEmission  INTEGER (1..288)        OPTIONAL  -- Need R
    }

-- TAG-EUTRA-NS-PMAXLIST-STOP
-- ASN1STOP

```

## – *EUTRA-PhysCellId*

The IE *EUTRA-PhysCellId* is used to indicate the physical layer identity of the cell, as defined in TS 36.211 [31].

### ***EUTRA-PhysCellId* information element**

```

-- ASN1START
-- TAG-EUTRA-PHYSCELLID-START

EUTRA-PhysCellId ::=
    INTEGER (0..503)

-- TAG-EUTRA-PHYSCELLID-STOP
-- ASN1STOP

```

## – *EUTRA-PhysCellIdRange*

The IE *EUTRA-PhysCellIdRange* is used to encode either a single or a range of physical cell identities. The range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range. For fields comprising multiple occurrences of *EUTRA-PhysCellIdRange*, NW may configure overlapping ranges of physical cell identities.

### *EUTRA-PhysCellIdRange* information element

```
-- ASN1START
-- TAG-EUTRA-PHYSCCELLIDRANGE-START

EUTRA-PhysCellIdRange ::=          SEQUENCE {
    start          EUTRA-PhysCellId,
    range          ENUMERATED {n4, n8, n12, n16, n24, n32, n48, n64, n84, n96,
                               n128, n168, n252, n504, spare2, spare1}
}
-- TAG-EUTRA-PHYSCCELLIDRANGE-STOP
-- ASN1STOP
```

OPTIONAL -- Need N

## – *EUTRA-PresenceAntennaPort1*

The IE *EUTRA-PresenceAntennaPort1* is used to indicate whether all the neighbouring cells use Antenna Port 1. When set to *true*, the UE may assume that at least two cell-specific antenna ports are used in all neighbouring cells.

### *EUTRA-PresenceAntennaPort1* information element

```
-- ASN1START
-- TAG-EUTRA-PRESENCEANTENNAPORT1-START

EUTRA-PresenceAntennaPort1 ::=    BOOLEAN

-- TAG-EUTRA-PRESENCEANTENNAPORT1-STOP
-- ASN1STOP
```

## – *EUTRA-Q-OffsetRange*

The IE *EUTRA-Q-OffsetRange* is used to indicate a cell, or frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value in dB. Value *dB-24* corresponds to -24 dB, value *dB-22* corresponds to -22 dB and so on.

### *EUTRA-Q-OffsetRange* information element

```
-- ASN1START
-- TAG-EUTRA-Q-OFFSETRANGE-START
```

```

EUTRA-Q-OffsetRange ::=
    ENUMERATED {
        dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
        dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
        dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
        dB6, dB8, dB10, dB12, dB14, dB16, dB18,
        dB20, dB22, dB24}

-- TAG-EUTRA-Q-OFFSETRANGE-STOP
-- ASN1STOP

```

## – IAB-IP-Address

The IE *IAB-IP-Address* is used to indicate the IP address/prefix.

### **IAB-IP-Address** information element

```

-- ASN1START
-- TAG-IABIPADDRESS-START

IAB-IP-Address-r16 ::= CHOICE {
    IPv4-Address-r16          BIT STRING (SIZE(32)),
    IPv6-Address-r16         BIT STRING (SIZE(128)),
    IPv6-Prefix-r16         BIT STRING (SIZE(64)),
    ...
}

-- TAG-IABIPADDRESS-STOP
-- ASN1STOP

```

### **IAB-IP-Address** field descriptions

<b>IPv4-Address</b>
This field is used to provide the allocated IPv4 address.
<b>IPv6-Address</b>
This field is used to provide the allocated IPv6 address.
<b>IPv6-Prefix</b>
This field is used to provide the allocated IPv6 prefix.

## – IAB-IP-AddressIndex

The IE *IAB-IP-AddressIndex* is used to identify a configuration of an IP address.

### **IAB-IP-AddressIndex** information element

```

-- ASN1START
-- TAG-IABIPADDRESSINDEX-START

```

```
IAB-IP-AddressIndex-r16 ::= INTEGER (1..maxIAB-IP-Address-r16)
```

```
-- TAG-IABIPADDRESSINDEX-STOP  
-- ASN1STOP
```

### – *IAB-IP-Usage*

The IE *IAB-IP-Usage* is used to indicate the usage of the assigned IP address/prefix.

#### ***IAB-IP-Usage* information element**

```
-- ASN1START  
-- TAG-IAB-IP-USAGE-START
```

```
IAB-IP-Usage-r16 ::= ENUMERATED {f1-C, f1-U, non-F1, spare}
```

```
-- TAG-IAB-IP-USAGE-STOP  
-- ASN1STOP
```

### – *LoggingDuration*

The *LoggingDuration* indicates the duration for which UE is requested to perform measurement logging. Value min10 corresponds to 10 minutes, value min20 corresponds to 20 minutes and so on.

#### ***LoggingDuration* information element**

```
-- ASN1START  
-- TAG-LOGGINGDURATION-START
```

```
LoggingDuration-r16 ::= ENUMERATED {  
    min10, min20, min40, min60, min90, min120, spare2, spare1}
```

```
-- TAG-LOGGINGDURATION-STOP  
-- ASN1STOP
```

### – *LoggingInterval*

The *LoggingInterval* indicates the periodicity for logging measurement results. Value ms1280 corresponds to 1.28s, value ms2560 corresponds to 2.56s and so on. Value infinity means it is equal to the configured value of the *LoggingDuration* IE.

#### ***LoggingInterval* information element**

```
-- ASN1START
```

```
-- TAG-LOGGINGINTERVAL-START
LoggingInterval-r16 ::= ENUMERATED {
    ms320, ms640, ms1280, ms2560, ms5120, ms10240, ms20480,
    ms30720, ms40960, ms61440 , infinity}
-- TAG-LOGGINGINTERVAL-STOP
-- ASN1STOP
```

## – *LogMeasResultListBT*

The IE *LogMeasResultListBT* covers measured results for Bluetooth.

### ***LogMeasResultListBT* information element**

```
-- ASN1START
-- TAG-LOGMEASRESULTLISTBT-START
LogMeasResultListBT-r16 ::= SEQUENCE (SIZE (1..maxBT-IdReport-r16)) OF LogMeasResultBT-r16
LogMeasResultBT-r16 ::= SEQUENCE {
    bt-Addr-r16          BIT STRING (SIZE (48)),
    rssi-BT-r16         INTEGER (-128..127)      OPTIONAL,
    ...
}
-- TAG-LOGMEASRESULTLISTBT-STOP
-- ASN1STOP
```

#### ***LogMeasResultListBT* field descriptions**

##### ***bt-Addr***

This field indicates the Bluetooth public address of the Bluetooth beacon as defined in TS 37.355 [49].

##### ***rssi-BT***

This field provides the beacon received signal strength indicator (RSSI) in dBm as defined in TS 37.355 [49].

## – *LogMeasResultListWLAN*

The IE *LogMeasResultListWLAN* covers measured results for WLAN.

### ***LogMeasResultListWLAN* information element**

```
-- ASN1START

<i>LogMeasResultListWLAN</i> field descriptions
<b><i>bssid</i></b> Basic Service Set Identifier (BSSID) defined in IEEE 802.11-2012 [50].
<b><i>hessid</i></b> Homogenous Extended Service Set Identifier (HESSID) defined in IEEE 802.11-2012 [50].

<i>LogMeasResultListWLAN</i> field descriptions
<p><b><i>rsstWLAN</i></b> Measured WLAN RSSI result in dBm. The IE WLAN-RSSI-Range specifies the value range used in WLAN RSSI measurements and thresholds. Integer value for WLAN RSSI measurements is according to mapping table in TS 36.133 [40]. Value 0 corresponds to -infinity, value 1 to -100dBm, value 2 to -99dBm, and so on (i.e. in steps of 1dBm) until value 140, which corresponds to 39dBm, while value 141 corresponds to +infinity.</p>
<p><b><i>rtt-WLAN</i></b> This field provides the measured roundtrip time between the target device and WLAN AP and optionally the accuracy expressed as the standard deviation of the delay. Units for each of these are 1000ns, 100ns, 10ns, 1ns, and 0.1ns as defined in TS 37.355 [49].</p>
<p><b><i>rttValue</i></b> This field specifies the Round Trip Time (RTT) measurement between the target device and WLAN AP in units given by the field rttUnits as defined in TS 37.355 [49].</p>
<p><b><i>rttUnits</i></b> This field specifies the Units for the fields rttValue and rttAccuracy. The available Units are 1000ns, 100ns, 10ns, 1ns, and 0.1ns as defined in TS 37.355 [49].</p>
<p><b><i>rttAccuracy</i></b> This field provides the estimated accuracy of the provided rttValue expressed as the standard deviation in units given by the field rttUnits as defined in TS 37.355 [49].</p>
<p><b><i>ssid</i></b> Service Set Identifier (SSID) defined in IEEE 802.11-2012 [50].</p>
<p><b><i>wlan-Identifiers</i></b> Indicates the WLAN parameters used for identification of the WLAN for which the measurement results are applicable.</p>

### – *MeasConfigAppLayerId*

The IE *MeasConfigAppLayerId* identifies the application layer measurement.

#### ***MeasConfigAppLayerId* information element**

```
-- ASN1START
-- TAG-MEASCONFIGAPPLAYERID-START

<b>OtherConfig field descriptions</b>
<b>aerial-FlightPathAvailabilityConfig</b> Configuration for the UE to indicate the availability of flight path information for Aerial UE operation.
<b>bfd-RelaxationReportingConfig</b> Configuration for the UE to report the relaxation state of BFD measurements.
<b>btNameList</b> Configuration for the UE to report measurements from specific Bluetooth beacons. NG-RAN configures the field if <i>includeBT-Meas</i> is configured for one or more measurements.
<b>candidateBandwidth</b> Indicates the bandwidth of the candidate frequency range around the center frequency.
<b>candidateCenterFreq</b> Indicates the center frequency of the candidate frequency range.
<b>candidateServingFreqListNR</b> Indicates for each candidate NR serving cells, the center frequency around which UE is requested to report IDC issues.
<b>candidateServingFreqRangeListNR</b> Indicates the candidate frequency range with the combination of the center frequency and the candidate bandwidth, around which the UE is requested to report IDC issues.
<b>connectedReporting</b> Indicates that the UE can report a preference to remain in RRC_CONNECTED state following a report to leave RRC_CONNECTED state. If absent, the UE cannot report a preference to stay in RRC_CONNECTED state.
<b>delayBudgetReportingProhibitTimer</b> Prohibit timer for delay budget reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot4</i> means prohibit timer is set to 0.4 seconds, and so on.
<b>drx-PreferenceConfig</b> Configuration for the UE to report assistance information to inform the gNB about the UE's DRX preferences for power saving.
<b>drx-PreferenceProhibitTimer</b> Prohibit timer for DRX preferences assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b>idc-AssistanceConfig</b> Configuration for the UE to report assistance information to inform the gNB about UE detected IDC problem.
<b>maxBW-PreferenceConfig</b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred bandwidth for power saving.
<b>maxBW-PreferenceProhibitTimer</b> Prohibit timer for preferred bandwidth assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b>maxCC-PreferenceConfig</b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of carriers for power saving.
<b>maxBW-PreferenceConfigFR2-2</b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred bandwidth for power saving for FR2-2.
<b>maxCC-PreferenceProhibitTimer</b> Prohibit timer for preferred number of carriers assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b>maxMIMO-LayerPreferenceConfig</b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of MIMO layers for power saving.
<b>maxMIMO-LayerPreferenceConfigFR2-2</b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of MIMO layers for power saving for FR2-2.
<b>maxMIMO-LayerPreferenceProhibitTimer</b> Prohibit timer for preferred number of number of MIMO layers assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.

<b><i>minSchedulingOffsetPreferenceConfig</i></b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred <i>minimumSchedulingOffset</i> value for cross-slot scheduling for power saving.
<b><i>minSchedulingOffsetPreferenceConfigExt</i></b> Configuration for the UE to report assistance information to inform the gNB about the UE's preferred <i>minimumSchedulingOffset</i> value for cross-slot scheduling for power saving for SCS 480 kHz and/or 960 kHz.
<b><i>minSchedulingOffsetPreferenceProhibitTimer</i></b> Prohibit timer for preferred <i>minimumSchedulingOffset</i> assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b><i>multiRx-PreferenceReportingConfigFR2</i></b> Configuration for the UE to report assistance information to inform gNB about the UE's preference on multi-Rx operation for FR2.
<b><i>multiRx-PreferenceReportingConfigFR2ProhibitTimer</i></b> Prohibit timer for multi-Rx operation preference reporting for FR2. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b><i>musim-CandidateBandList</i></b> A list of candidate bands that the network intends to use, e.g., for serving cells and for which the UE is requested to provide information on temporary restricted capabilities for MUSIM operation as specified in clause 5.7.4.3.
<b><i>musim-GapAssistanceConfig</i></b> Configuration for the UE to report assistance information for gap preference.
<b><i>musim-GapPriorityAssistanceConfig</i></b> Indicates the UE is allowed to provide MUSIM assistance information for gap(s) priority or MUSIM gaps keep preference.
<b><i>musim-GapProhibitTimer</i></b> Prohibit timer for MUSIM assistance information reporting for gap preference.
<b><i>musim-LeaveAssistanceConfig</i></b> Configuration for the UE to report assistance information for leaving RRC_CONNECTED for MUSIM purpose.
<b><i>musim-LeaveWithoutResponseTimer</i></b> Indicates the timer for the UE to enter RRC_IDLE for MUSIM purpose as defined in clause 5.3.8.6.
<b><i>musim-ProhibitTimer</i></b> Indicates the prohibit timer for UE temporary restricted capabilities for MUSIM operation. Value in milliseconds. Value <i>ms0</i> means prohibit timer is set to 0 milliseconds, value <i>ms10</i> means prohibit timer is set to 10 milliseconds and so on.
<b><i>musim-WaitTimer</i></b> Indicates the wait timer for UE temporary restricted capabilities for MUSIM operation. Value in milliseconds. Value <i>ms10</i> means wait timer is set to 10 milliseconds, value <i>ms20</i> means wait timer is set to 20 milliseconds and so on.
<b><i>obtainCommonLocation</i></b> Requests the UE to attempt to have detailed location information available using GNSS. NR configures the field if <i>includeCommonLocationInfo</i> is configured for one or more measurements.
<b><i>overheatingAssistanceConfig</i></b> Configuration for the UE to report assistance information to inform the gNB about UE detected internal overheating.
<b><i>overheatingIndicationProhibitTimer</i></b> Prohibit timer for overheating assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b><i>pdu-SessionsToReportUL-TrafficInfoList</i></b> A list of PDU sessions for which the UE shall report UL traffic information.
<b><i>propDelayDiffReportConfig</i></b> Configuration for the UE to report service link propagation delay difference between serving cell and neighbour cell(s).
<b><i>qfi-ToReportUL-TrafficInfoList</i></b> A list of QFIs of a PDU session for which the UE shall report UL traffic information.

<b>referenceTimePreferenceReporting</b> If present, the field indicates the UE is configured to provide reference time assistance information.
<b>releasePreferenceConfig</b> Configuration for the UE to report assistance information to inform the gNB about the UE's preference to leave RRC_CONNECTED state.
<b>rlm-RelaxationReportingConfig</b> Configuration for the UE to report the relaxation state of RLM measurements.
<b>releasePreferenceProhibitTimer</b> Prohibit timer for release preference assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. Value <i>infinity</i> means that once a UE has reported a release preference, the UE cannot report a release preference again during the RRC connection.
<b>s-SearchDeltaP-Stationary</b> Parameter "S <sub>SearchDeltaP-StationaryConnected</sub> " in 5.7.4.4. Value <i>dB2</i> corresponds to 2 dB, <i>dB3</i> corresponds to 3 dB and so on.
<b>scg-DeactivationPreferenceConfig</b> Configuration of the UE to indicate its preference for SCG deactivation.
<b>scg-StatePreferenceProhibitTimer</b> Prohibit timer for UE indication of its preference for SCG deactivation. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b>sensorNameList</b> Configuration for the UE to report measurements from specific sensors. NG-RAN configures the field if <i>includeSensor-Meas</i> is configured for one or more measurements.
<b>sl-AssistanceConfigNR</b> Indicate whether UE is configured to provide configured grant assistance information for NR sidelink communication.
<b>sl-PRS-AssistanceConfigNR</b> Indicate whether UE is configured to provide configured grant assistance information for NR sidelink positioning.
<b>sn-InitiatedPSCellChange</b> This field indicates whether the PSCell change procedure or the CPC included in the <i>RRCReconfiguration</i> message is SN initiated or not. In case of SN initiated inter-SN PSCell change procedure or SN configured inter-SN CPC, MN includes this field in the MCG RRC Reconfiguration message. In case of intra-SN PSCell change, or intra-SN CPC, source SN includes the field in the SCG RRC Reconfiguration.
<b>sourceDAPS-FailureReporting</b> This field indicates whether the UE shall generate the SHR upon successfully completing the DAPS handover to the target cell and if a radio link failure was experienced in the source PCell while executing the DAPS handover. This field is set in the <i>otherConfig</i> configured by the source cell of the DAPS handover.
<b>successHO-Config</b> Configuration for the UE to report the successful handover information to the network.
<b>successPSCell-Config</b> Configuration for the UE to report the successful PSCell change or addition information to the network. When this field is configured in CG-Config, the <i>thresholdPercentageT304-SCG</i> is absent.
<b>t-SearchDeltaP-Stationary</b> Parameter "T <sub>SearchDeltaP-StationaryConnected</sub> " in 5.7.4.4. Value in seconds. Value <i>s5</i> means 5 seconds, value <i>s10</i> means 10 seconds and so on.
<b>thresholdPercentageT304</b> This field indicates the threshold for the ratio in percentage between the elapsed T304 timer and the configured value of the T304 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the target cell of the handover.
<b>thresholdPercentageT310</b> This field indicates the threshold for the ratio in percentage between the elapsed T310 timer and the configured value of the T310 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the source cell of the handover.
<b>thresholdPercentageT312</b> This field indicates the threshold for the ratio in percentage between the elapsed T312 timer and the configured value(s) of the T312 timer. Value <i>p20</i> corresponds to 20%, value <i>p40</i> corresponds to 40% and so on. This field is set in the <i>otherConfig</i> configured by the source cell of the handover.

<b>thresholdPercentageT304-SCG</b>
This field indicates the threshold for the ratio in percentage between the elapsed T304 timer associated to the target PSCell and the configured value of the T304 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the target PSCell of the PSCell change or addition.
<b>thresholdPercentageT310-SCG</b>
This field indicates the threshold for the ratio in percentage between the elapsed T310 timer associated to the source PSCell and the configured value of the T310 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the source PSCell of the PSCell change or CPC, or in the <i>otherConfig</i> configured by the PCell for the PSCell change or CPC. This field is not configured at the time of PSCell change via SRB3.
<b>thresholdPercentageT312-SCG</b>
This field indicates the threshold for the ratio in percentage between the elapsed T312 timer associated to the measurement identity of the target PSCell and the configured value of the T312 timer. Value <i>p20</i> corresponds to 20%, value <i>p40</i> corresponds to 40% and so on. This field is set in the <i>otherConfig</i> configured by the source PSCell of the PSCell change or CPC, or in the <i>otherConfig</i> configured by the PCell for the PSCell change or CPC. This field is not configured at the time of PSCell change via SRB3.
<b>threshPropDelayDiff</b>
Threshold for one-way service link propagation delay difference report as specified in 5.7.4.2.
<b>ul-GapFR2-PreferenceConfig</b>
Indicates whether UE is configured to request for FR2 UL gap activation/deactivation and preferred FR2 UL gap pattern.
<b>wlanNameList</b>
Configuration for the UE to report measurements from specific WLAN APs. NG-RAN configures the field if <i>includeWLAN-Meas</i> is configured for one or more measurements.
<b>ul-TrafficInfoProhibitTimer</b>
Prohibit timer for UL traffic information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.
<b>ul-TrafficInfoReportingConfig</b>
Configuration for the UE to report UL traffic information.

Conditional Presence	Explanation
<i>FDM</i>	This field is optionally present, need R, if <i>idc-AssistanceConfig-r16</i> or <i>idc-FDM-AssistanceConfig</i> is setup. Otherwise, it is absent, need R.
<i>maxBW</i>	This field is optionally present, need R, if <i>maxBW-PreferenceConfig-r16</i> is setup; otherwise it is absent, need R.
<i>maxMIMO</i>	This field is optionally present, need R, if <i>maxMIMO-LayerPreferenceConfig-r16</i> is setup; otherwise it is absent, need R.
<i>minOffset</i>	This field is optionally present, need R, if <i>minSchedulingOffsetPreferenceConfig-r16</i> is setup; otherwise it is absent, need R.
<i>musimGapConfig</i>	This field is optionally present, need R, if <i>musim-GapAssistanceConfig-r17</i> is setup; otherwise it is absent, need R.
<i>SCG</i>	This field is optionally present, need M, in an <i>RRCReconfiguration</i> message not within <i>mrdc-SecondaryCellGroup</i> and received, either via SRB3 within <i>DLInformationTransferMRDC</i> or via SRB1. Otherwise, it is absent.

## – PhysCellIdUTRA-FDD

The IE *PhysCellIdUTRA-FDD* is used to indicate the physical layer identity of the cell, i.e. the primary scrambling code, as defined in TS 25.331 [45].

### PhysCellIdUTRA-FDD information element

```
-- ASN1START
-- TAG-PHYSCCELLIDUTRA-FDD-START
```

```
PhysCellIdUTRA-FDD-r16 ::= INTEGER (0..511)
```

```
-- TAG-PHYSCELLIDUTRA-FDD-STOP
-- ASN1STOP
```

### – *RRC-TransactionIdentifier*

The IE *RRC-TransactionIdentifier* is used, together with the message type, for the identification of an RRC procedure (transaction).

#### ***RRC-TransactionIdentifier* information element**

```
-- ASN1START
-- TAG-RRC-TRANSACTIONIDENTIFIER-START

RRC-TransactionIdentifier ::=      INTEGER (0..3)

-- TAG-RRC-TRANSACTIONIDENTIFIER-STOP
-- ASN1STOP
```

### – *Sensor-NameList*

The IE *Sensor-NameList* is used to indicate the names of the sensors which the UE is configured to measure.

#### ***Sensor-NameList* information element**

```
-- ASN1START
-- TAG-SENSORNAMELIST-START

Sensor-NameList-r16 ::= SEQUENCE {
    measUncomBarPre-r16      ENUMERATED {true}          OPTIONAL, -- Need R
    measUeSpeed              ENUMERATED {true}          OPTIONAL, -- Need R
    measUeOrientation        ENUMERATED {true}          OPTIONAL, -- Need R
}

-- TAG-SENSORNAMELIST-STOP
-- ASN1STOP
```

#### ***Sensor-NameList* field descriptions**

##### ***measUncomBarPre***

If configured, the UE reports the uncompensated Barometric pressure measurement as defined in TS 37.355 [49].

##### ***measUeSpeed***

If configured, the UE reports the UE speed measurement as defined in TS 37.355 [49].

##### ***measUeOrientation***

If configured, the UE reports the UE orientation information as defined in TS 37.355 [49].

## – *TraceReference*

The *TraceReference* contains parameter Trace Reference as defined in TS 32.422 [52].

### **TraceReference information element**

```
-- ASN1START
-- TAG-TRACEREFERENCE-START

TraceReference-r16 ::= SEQUENCE {
    plmn-Identity-r16      PLMN-Identity,
    traceId-r16           OCTET STRING (SIZE (3))
}

-- TAG-TRACEREFERENCE-STOP
-- ASN1STOP
```

## – *UE-MeasurementsAvailable*

The IE *UE-MeasurementsAvailable* is used to indicate all relevant available indicators for UE measurements.

### **UE-MeasurementsAvailable information element**

```
-- ASN1START
-- TAG-UE-MeasurementsAvailable-START

UE-MeasurementsAvailable-r16 ::= SEQUENCE {
    logMeasAvailable-r16          ENUMERATED {true}          OPTIONAL,
    logMeasAvailableBT-r16       ENUMERATED {true}          OPTIONAL,
    logMeasAvailableWLAN-r16     ENUMERATED {true}          OPTIONAL,
    connEstFailInfoAvailable-r16 ENUMERATED {true}          OPTIONAL,
    rlf-InfoAvailable-r16        ENUMERATED {true}          OPTIONAL,
    ...,
    [[
    successHO-InfoAvailable-r17   ENUMERATED {true}          OPTIONAL,
    sigLogMeasConfigAvailable-r17 BOOLEAN                  OPTIONAL
    ]],
    [[
    successPSCell-InfoAvailable-r18 ENUMERATED {true}          OPTIONAL
    ]]
}

-- TAG-UE-MeasurementsAvailable-STOP
-- ASN1STOP
```

## – UTRA-FDD-Q-OffsetRange

The IE *UTRA-FDD-Q-OffsetRange* is used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB. Value *dB-24* corresponds to -24 dB, value *dB-22* corresponds to -22 dB and so on.

### UTRA-FDD-Q-OffsetRange information element

```
-- ASN1START
-- TAG-UTRA-FDD-Q-OFFSETRANGE-START

UTRA-FDD-Q-OffsetRange-r16 ::=          ENUMERATED {
                                         dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
                                         dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
                                         dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
                                         dB6, dB8, dB10, dB12, dB14, dB16, dB18,
                                         dB20, dB22, dB24}

-- TAG-UTRA-FDD-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

## – VisitedCellInfoList

The IE *VisitedCellInfoList* includes the mobility history information of maximum of 16 most recently visited primary cells or time spent in any cell selection state and/or camped on any cell state in NR or E-UTRA and, in case of Dual Connectivity, the mobility history information of *maxPSCellHistory* most recently visited primary secondary cell group cells across all the primary cells included in the *VisitedCellInfoList*. The most recently visited cell is stored first in the list. The list includes cells visited in RRC\_IDLE, RRC\_INACTIVE and RRC\_CONNECTED states for NR and RRC\_IDLE and RRC\_CONNECTED for E-UTRA.

### VisitedCellInfoList information element

```
-- ASN1START
-- TAG-VISITEDCELLINFORLIST-START

VisitedCellInfoList-r16 ::= SEQUENCE (SIZE (1..maxCellHistory-r16)) OF VisitedCellInfo-r16

VisitedCellInfo-r16 ::= SEQUENCE {
    visitedCellId-r16          CHOICE {
        nr-CellId-r16         CHOICE {
            cgi-Info          CGI-Info-Logging-r16,
            pci-arfcn-r16     PCI-ARFCN-NR-r16
        },
        eutra-CellId-r16      CHOICE {
            cellGlobalId-r16  CGI-InfoEUTRA,
            pci-arfcn-r16     PCI-ARFCN-EUTRA-r16
        }
    }
    ,
    timeSpent-r16             OPTIONAL,
                              INTEGER (0..4095),
    ...,
    [[
        visitedPSCellInfoListReport-r17  VisitedPSCellInfoList-r17          OPTIONAL
    ]]
```

```

    }}
  }
VisitedPSCellInfoList-r17 ::= SEQUENCE (SIZE (1..maxPSCellHistory-r17)) OF VisitedPSCellInfo-r17
VisitedPSCellInfo-r17 ::= SEQUENCE {
  visitedCellId-r17 CHOICE {
    nr-CellId-r17 CHOICE {
      cgi-Info-r17 CGI-Info-Logging-r16,
      pci-arfcn-r17 PCI-ARFCN-NR-r16
    },
    eutra-CellId-r17 CHOICE {
      cellGlobalId-r17 CGI-InfoEUTRALogging,
      pci-arfcn-r17 PCI-ARFCN-EUTRA-r16
    }
  }
  timeSpent-r17 INTEGER (0..4095), OPTIONAL,
  ...
}
-- TAG-VISITEDCELLINFOLIST-STOP
-- ASN1STOP

```

#### **VisitedCellInfoList field descriptions**

##### ***timeSpent***

This field indicates the duration of stay in the cell or in any cell selection state and/or camped on any cell state in NR or E-UTRA approximated to the closest second. If included in *VisitedPSCellInfo*, it indicates the duration of stay in the PSCell or without any PSCell. If the duration of stay exceeds 4095s, the UE shall set it to 4095s.

##### ***visitedCellId***

This field indicates the visited cell id including NR and E-UTRA cells.

## – **WLAN-NameList**

The IE *WLAN-NameList* is used to indicate the names of the WLAN AP for which the UE is configured to measure.

#### **WLAN-NameList information element**

```

-- ASN1START
-- TAG-WLANNAMELIST-START

WLAN-NameList-r16 ::= SEQUENCE (SIZE (1..maxWLAN-Name-r16)) OF WLAN-Name-r16

WLAN-Name-r16 ::= OCTET STRING (SIZE (1..32))

-- ASN1STOP
-- TAG-WLANNAMELIST-STOP

```

**WLAN-NameList** field descriptions**WLAN-Name**

If configured, the UE only performs WLAN measurements according to the names identified. For each name, it refers to Service Set Identifier (SSID) defined in IEEE 802.11-2012 [50].

## 6.3.5 Sidelink information elements

### – *SL-BWP-Config*

The IE *SL-BWP-Config* is used to configure the UE specific NR sidelink communication/discovery/positioning on one particular sidelink bandwidth part.

#### **SL-BWP-Config** information element

```

-- ASN1START
-- TAG-SL-BWP-CONFIG-START

SL-BWP-Config-r16 ::=
    SEQUENCE {
        sl-BWP-Id                BWP-Id,
        sl-BWP-Generic-r16       SL-BWP-Generic-r16                OPTIONAL, -- Need M
        sl-BWP-PoolConfig-r16    SL-BWP-PoolConfig-r16            OPTIONAL, -- Need M
        ...,
        [[
            sl-BWP-PoolConfigPS-r17 SetupRelease {SL-BWP-PoolConfig-r16}    OPTIONAL, -- Need M

}

-- TAG-SL-BWP-CONFIG-STOP
-- ASN1STOP

```

<b>SL-BWP-Config field descriptions</b>
<p><b>sl-BWP-DiscPoolConfig</b> This field indicates the NR sidelink discovery dedicated resource pool configurations on the configured sidelink BWP. The total number of Rx/Tx resource pools configured for communication and discovery does not exceed the maximum number of Rx/Tx resource pool for NR sidelink communication (i.e. <i>maxNrofRXPool-r16/maxNrofTXPool-r16</i>).</p>
<p><b>sl-BWP-Generic</b> This field indicates the generic parameters on the configured sidelink BWP.</p>
<p><b>sl-BWP-Id</b> An identifier for this sidelink bandwidth part.</p>
<p><b>sl-BWP-PoolConfig</b> This field indicates the resource pool configurations on the configured sidelink BWP.</p>
<p><b>sl-BWP-PoolConfigA2X</b> This field indicates the resource pool configurations for A2X services on the configured sidelink BWP. This field does not include <i>sl-TxPoolScheduling</i>. This field does not include <i>sl-TxPoolExceptional</i>.</p>
<p><b>sl-BWP-PoolConfigPS</b> This field indicates the resource pool configurations for power saving on the configured sidelink BWP. This field does not include <i>sl-TxPoolExceptional</i>.</p>
<p><b>sl-BWP-PRS-PoolConfig</b> This field indicates the dedicated SL-PRS resource pool configurations for SL-PRS on the configured sidelink BWP. This field does not include <i>sl-PRS-TxPoolExceptional</i>.</p>

<b>SL-BWP-Generic field descriptions</b>
<p><b>sl-LengthSymbols</b> This field indicates the number of symbols used for sidelink in a slot without S-SSB. A single value can be (pre)configured per sidelink bandwidth part.</p>
<p><b>sl-StartSymbol</b> This field indicates the starting symbol used for sidelink in a slot without S-SSB. A single value can be (pre)configured per sidelink bandwidth part.</p>
<p><b>sl-Unlicensed</b> This field indicates the configurations for sidelink carrier of shared spectrum channel access. This field is not expected to be provided when <i>sl-FreqInfoListSizeExt</i> or <i>sl-PreconfigFreqInfoListSizeExt</i> is present.</p>
<p><b>sl-TxDirectCurrentLocation</b> The sidelink Tx/Rx Direct Current location for the carrier. Only values in the value range of this field between 0 and 3299, which indicate the subcarrier index within the carrier corresponding to the numerology of the corresponding sidelink BWP and value 3300, which indicates "Outside the carrier" and value 3301, which indicates "Undetermined position within the carrier" are used in this version of the specification.</p>

<b>SL-Unlicensed field descriptions</b>
<p><b><i>sl-AbsoluteFrequencySSB-NonAnchorList</i></b> Indicates the lowest S-SSB in a non-anchor RB set via each parameter in this list. Anchor RB set refers to the RB set where S-SSB indicated by <i>sl-AbsoluteFrequencySSB-r16</i> locates.</p>
<p><b><i>sl-CPE-StartingPositionS-SSB</i></b> Indicates the CPE starting position within the last symbol before the start of S-SSB transmission. The value is an index of the set of all candidate CPE starting positions specified in Table 5.3.1-3 of [16, TS 38.211] for <math>C_i=1</math> and the corresponding SCS of the SL BWP.</p>
<p><b><i>sl-CWS-ForPsschWithoutHarqAck</i></b> The latest <math>CW\_p</math> is autonomously increased to the next higher allowed value for every priority class <math>p</math> of {1,2,3,4} if the same <math>CW\_p</math> which is different from <math>CW\_(max,p)</math> is consecutively used for general of <math>N\_init</math> in SL Type 1 LBT for a number of times indicated by this parameter. This operation is restricted only to PSCCH/PSSCH transmission(s) with "HARQ feedback enabled/disabled indicator" in the 2nd stage SCI set to disabled, regardless of whether PSFCH resources being configured in a resource pool.</p>
<p><b><i>sl-GapOfAdditionalSSSB-Occasion</i></b> Indicate the gap between each R16/R17 NR SL S-SSB slot and its first corresponding additional candidate S-SSB occasion, and the gap between adjacent two additional candidate S-SSB occasions corresponding to a R16/R17 NR SL S-SSB slot.</p>
<p><b><i>sl-IntraCellGuardBandsSL-List</i></b> List of intra-cell guard bands for operation with shared spectrum channel access. If not configured, the guard bands are defined according to 38.101-1 [15], see TS 38.214 [19], clause 7. For operation in licensed spectrum, this field is absent, and no UE action is required. NOTE: Value '0' is not expected to be (pre-)configured for <i>nrofCRBs</i> when the SL BWP is larger than UE supported RF bandwidth for SL-U operation.</p>
<p><b><i>sl-LBT-FailureRecoveryConfig</i></b> Configures parameters used for detection and cancellation of Sidelink consistent LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].</p>
<p><b><i>sl-NumOfAdditionalSSSBOccasion</i></b> Indicate the number of additional candidate S-SSB occasion(s) for each R16/R17 NR SL S-SSB slot.</p>
<p><b><i>sl-SSSBPowerOffsetOfAnchorRBSet</i></b> Indicate the power offset for one S-SSB transmission on anchor RB set, where anchor RB set refers to the RB set where S-SSB indicated by <i>sl-AbsoluteFrequencySSB-r16</i> locates. Value <i>value1</i> corresponds to the power offset of <math>10\lg(N)</math>, where <math>N</math> is the number of S-SSB repetitions within the anchor RB set, and <i>value2</i> corresponds to the power offset of <math>10\lg(W)</math>, where <math>W</math> is the maximum total number of S-SSB repetitions on RB sets within the SL-BWP.</p>
<p><b><i>sl-StartingSymbolFirst</i></b> Indicates the location of first starting symbol within a slot. Value <i>sym0</i> corresponds to first symbol, value <i>sym1</i> corresponds to the second symbol and so on. If the field is not configured, the UE shall use value <i>sym0</i>.</p>
<p><b><i>sl-StartingSymbolSecond</i></b> Indicates the location of second starting symbol within a slot. Value <i>sym3</i> corresponds to fourth symbol, value <i>sym4</i> corresponds to the fifth symbol and so on. The number of symbols used for PSCCH/PSSCH transmission from second starting symbol is not smaller than 6. Within a slot, the second starting symbol is later than the first starting symbol. PSCCH/PSSCH transmission starting from first or second starting symbol shall have the same ending symbol within a slot.</p>
<p><b><i>sl-TransmissionStructureForPSCCHandPSSCH</i></b> Indicate a SL-BWP is (pre-)configured with contiguous RB-based or interlace RB-based PSCCH/PSSCH transmission. Contiguous RB-based PSCCH/PSSCH are applicable in region with no OCB requirement, or with OCB exemption.</p>

– ***SL-BWP-ConfigCommon***

The IE *SL-BWP-ConfigCommon* is used to configure the cell-specific configuration information on one particular sidelink bandwidth part.

### SL-BWP-ConfigCommon field descriptions

#### **sl-BWP-DiscPoolConfigCommon**

This field indicates the NR sidelink discovery dedicated resource pool configurations on the configured sidelink BWP. The total number of Rx/Tx resource pools configured for communication and discovery does not exceed the maximum number of Rx/Tx resource pool for NR sidelink communication (i.e. *maxNrofRXPool-r16/maxNrofTXPool-r16*).

#### **sl-BWP-Generic**

This field indicates the generic parameters on the configured sidelink BWP.

#### **sl-BWP-PoolConfigCommon**

This field indicates the resource pool configurations on the configured sidelink BWP.

#### **sl-BWP-PoolConfigCommonA2X**

This field indicates the resource pool configurations for A2X services on the configured sidelink BWP. This field does not include *sl-TxPoolExceptional*.

#### **sl-BWP-PoolConfigCommonPS**

This field indicates the resource pool configurations for power saving on the configured sidelink BWP. This field does not include *sl-TxPoolExceptional*.

## – SL-BWP-DiscPoolConfig

The IE *SL-BWP-DiscPoolConfig* is used to configure UE specific NR sidelink discovery dedicated resource pool.

### SL-BWP-DiscPoolConfig information element

```

-- ASN1START
-- TAG-SL-BWP-DISCPoolConfig-START

SL-BWP-DiscPoolConfig-r17 ::=
  SL-DiscRxPool-r17
  SL-DiscTxPoolSelected-r17
  SL-DiscTxPoolScheduling-r17
}

SEQUENCE {
  SEQUENCE (SIZE (1..maxNrofRXPool-r16)) OF SL-ResourcePool-r16
  SL-TxPoolDedicated-r16
  SL-TxPoolDedicated-r16
}

-- TAG-SL-BWP-DISCPoolConfig-STOP
-- ASN1STOP

```

**SL-BWP-DiscPoolConfig field descriptions****sl-DiscTxPoolScheduling**

Indicates the resources by which the UE is allowed to transmit NR sidelink discover based on network scheduling on the configured BWP. For the PSFCH related configuration, if configured, will be used for PSFCH transmission/reception.

When this field is configured together with *sl-TxPoolScheduling*, the resource pool index (which is used in DCI Format 3\_0 in TS 38.212 [17], clause 7.3.1.4.1) is defined as 0, 1, ..., x-1 for the resource pools included in the *sl-TxPoolScheduling*, and x, x+1, ..., x+y-1 for the resource pools included in *sl-DiscTxPoolScheduling*, where x is the number of the resource pools in *sl-TxPoolScheduling*, and y is the number of resource pools in *sl-DiscTxPoolScheduling*.

Conditional Presence	Explanation
HO	This field is optionally present, need M, in an <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> ; otherwise it is absent, need M.

– **SL-BWP-DiscPoolConfigCommon**

The IE *SL-BWP-DiscPoolConfigCommon* is used to configure the cell-specific NR sidelink discovery dedicated resource pool.

**SL-BWP-DiscPoolConfigCommon information element**

```
-- ASN1START

```

<b>SL-BWP-PoolConfig field descriptions</b>	
<b>sl-RxPool</b>	Indicates the receiving resource pool on the configured BWP. For the PSFCH related configuration, if configured, will be used for PSFCH transmission/reception. If the field is included, it replaces any previous list, i.e. all the entries of the list are replaced and each of the <i>SL-ResourcePool</i> entries is considered to be newly created.
<b>sl-TxPoolExceptional</b>	Indicates the resources by which the UE is allowed to perform NR sidelink transmission in exceptional conditions on the configured BWP. For the PSFCH related configuration, if configured, will be used for PSFCH transmission/reception.
<b>sl-TxPoolScheduling</b>	Indicates the resources by which the UE is allowed to perform NR sidelink transmission based on network scheduling on the configured BWP. For the PSFCH related configuration, if configured, will be used for PSFCH transmission/reception.
<b>sl-TxPoolSelectedNormal</b>	Indicates the resources by which the UE is allowed to perform NR sidelink transmission by UE autonomous resource selection on the configured BWP. For the PSFCH related configuration, if configured, will be used for PSFCH transmission/reception.

Conditional Presence	Explanation
<i>HO</i>	This field is optionally present, need M, in an <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> ; otherwise it is absent, Need M.

– **SL-BWP-PoolConfigCommon**

The IE *SL-BWP-PoolConfigCommon* is used to configure the cell-specific NR sidelink communication resource pool.

**SL-BWP-PoolConfigCommon information element**

```

-- ASN1START
-- TAG-SL-BWP-POOLCONFIGCOMMON-START

```

```

-- ASN1STOP
```

<b>SL-BWP-PRS-PoolConfigCommon field descriptions</b>	
<b>sl-PRS-TxPoolExceptional</b>	Indicates the resources by which the UE is allowed to perform NR sidelink transmission in exceptional conditions on the configured BWP. This field is not present when <i>SL-BWP-PRS-PoolConfigCommon</i> is included in <i>SL-PreconfigurationNR</i>

## – SL-CBR-PriorityTxConfigList

The IE *SL-CBR-PriorityTxConfigList* indicates the mapping between PSSCH transmission parameter (such as MCS, PRB number, retransmission number, CR limit) sets by using the indexes of the configurations provided in *sl-CBR-PSSCH-TxConfigList*, CBR ranges by an index to the entry of the CBR range configuration in *sl-CBR-RangeConfigList*, and priority ranges. It also indicates the default PSSCH transmission parameters to be used when CBR measurement results are not available, and MCS range for the MCS tables used in the resource pool.

**SL-CBR-PriorityTxConfigList information element**

```

-- ASN1START
-- TAG-SL-CBR-PRIORITYTXCONFIGLIST-START

SL-CBR-PriorityTxConfigList-r16 ::= SEQUENCE (SIZE (1..8)) OF SL-PriorityTxConfigIndex-r16

SL-CBR-PriorityTxConfigList-v1650 ::= SEQUENCE (SIZE (1..8)) OF SL-PriorityTxConfigIndex-v1650

SL-PriorityTxConfigIndex-r16 ::= SEQUENCE {
    sl-PriorityThreshold-r16          INTEGER (1..8)                OPTIONAL,    -- Need M
    sl-DefaultTxConfigIndex-r16      INTEGER (0..maxCBR-Level-1-r16)  OPTIONAL,    -- Need M
    sl-CBR-ConfigIndex-r16           INTEGER (0..maxCBR-Config-1-r16)  OPTIONAL,    -- Need M
    sl-Tx-ConfigIndexList-r16        SEQUENCE (SIZE (1.. maxCBR-Level-r16)) OF SL-TxConfigIndex-r16  OPTIONAL    -- Need M
}

SL-PriorityTxConfigIndex-v1650 ::= SEQUENCE {
    sl-MCS-RangeList-r16              SEQUENCE (SIZE (1..maxCBR-Level-r16)) OF SL-MinMaxMCS-List-r16  OPTIONAL    -- Need M
}

SL-TxConfigIndex-r16 ::= INTEGER (0..maxTxConfig-1-r16)

-- TAG-SL-CBR-PRIORITYTXCONFIGLIST-STOP
-- ASN1STOP

```

**SL-CBR-PriorityTxConfigList field descriptions****sl-CBR-ConfigIndex**

Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in *sl-CBR-RangeConfigList*.

**sl-DefaultTxConfigIndex**

Indicates the PSSCH transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in *sl-Tx-ConfigIndexList*. Value 0 indicates the first entry in *sl-Tx-ConfigIndexList*. The field is ignored if the UE has available CBR measurement results.

**sl-MCS-RangeList**

Indicates the minimum MCS value and maximum MCS value for the associated MCS table(s). UE shall ignore the minimum MCS value and maximum MCS value used for table of 64QAM indicated in *SL-CBR-PriorityTxConfigList-r16* if *SL-CBR-PriorityTxConfigList-v1650* is present.

**sl-PriorityThreshold**

Indicates the upper bound of priority range which is associated with the configurations in *sl-CBR-ConfigIndex* and in *sl-Tx-ConfigIndexList*. The upper bounds of the priority ranges are configured in ascending order for consecutive entries of *SL-PriorityTxConfigIndex* in *SL-CBR-PriorityTxConfigList*. For the first entry of *SL-PriorityTxConfigIndex*, the lower bound of the priority range is 1.

**SL-CBR-PriorityTxConfigList-v1650**

If included, it includes the same number of entries, and listed in the same order, as in *SL-CBR-PriorityTxConfigList-r16*.

– **SL-CBR-CommonTxConfigList**

The IE *SL-CBR-CommonTxConfigList* indicates the list of PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number, CR limit) in *sl-CBR-PSSCH-TxConfigList*, and the list of CBR ranges in *sl-CBR-RangeConfigList*, to configure congestion control to the UE for sidelink communication.

**SL-CBR-CommonTxConfigList** information element

```

-- ASN1START
-- TAG-SL-CBR-COMMONTXCONFIGLIST-START

SL-CBR-CommonTxConfigList-r16 ::= SEQUENCE {
    sl-CBR-RangeConfigList-r16 SEQUENCE (SIZE (1..maxCBR-Config-r16)) OF SL-CBR-LevelsConfig-r16 OPTIONAL, -- Need M
    sl-CBR-PSSCH-TxConfigList-r16 SEQUENCE (SIZE (1.. maxTxConfig-r16)) OF SL-CBR-PSSCH-TxConfig-r16 OPTIONAL -- Need M
}

SL-CBR-LevelsConfig-r16 ::= SEQUENCE (SIZE (1..maxCBR-Level-r16)) OF SL-CBR-r16

SL-CBR-PSSCH-TxConfig-r16 ::= SEQUENCE {
    sl-CR-Limit-r16 INTEGER (0..10000) OPTIONAL, -- Need M
    sl-TxParameters-r16 SL-PSSCH-TxParameters-r16 OPTIONAL -- Need M
}

SL-CBR-r16 ::= INTEGER (0..100)

-- TAG-SL-CBR-COMMONTXCONFIGLIST-STOP
-- ASN1STOP

```

**SL-CBR-CommonTxConfigList** field descriptions**sl-CBR-RangeConfigList**

Each entry in *sl-CBR-RangeConfigList* is *SL-CBR-LevelsConfig* containing the list of CBR ranges. The values within each *SL-CBR-LevelsConfig* indicate the upper bound of the each CBR range (and implicitly indicate the lower bound of next CBR range) and are configured in ascending order. For the first CBR range of each *SL-CBR-LevelsConfig*, the lower bound of the CBR range is 0. Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.

**sl-CR-Limit**

Indicates the maximum limit on the occupancy ratio. Value 0 corresponds to 0, value 1 to 0.0001, value 2 to 0.0002, and so on (i.e. in steps of 0.0001) until value 10000, which corresponds to 1.

**sl-CBR-PSSCH-TxConfigList**

Indicates the list of available PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number and CR limit) configurations.

**sl-TxParameters**

Indicates PSSCH transmission parameters.

**SL-CBR-CommonTxDedicatedSL-PRS-RP-List**

The IE *SL-CBR-CommonTxDedicatedSL-PRS-RP-List* indicates the list of SL PRS transmission parameters (such as Maximum SL PRS transmission power, Maximum Number of SL PRS (re-)transmissions, and CR limit) in *sl-CBR-SL-PRS-TxConfigList*, and the list of CBR ranges in *sl-CBR-RangeDedicatedSL-PRS-RP-List*, to configure congestion control to the UE for sidelink positioning.

**SL-CBR-CommonTxDedicatedSL-PRS-RP-List** information element

#### SL-CBR-CommonTxDedicatedSL-PRS-RP-List field descriptions

##### **sl-CBR-RangeDedicatedSL-PRS-RP-List**

Indicates the list of CBR ranges. Each entry of the list in *SL-CBR-LevelsDedicatedSL-PRS-RP* indicates the upper bound of the CBR range for the respective entry. The upper bounds of the CBR ranges are configured in ascending order for consecutive entries of *SL-CBR-LevelsDedicatedSL-PRS-RP*. For the first entry of *SL-CBR-LevelsDedicatedSL-PRS-RP* the lower bound of the CBR range is 0. Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.

##### **sl-CBR-SL-PRS-TxConfigList**

Indicates the list of available SL PRS transmission parameters configurations.

##### **sl-PRS-CR-Limit**

Indicates the maximum limit on the occupancy ratio. Value 0 corresponds to 0, value 1 to 0.0001, value 2 to 0.0002, and so on (i.e. in steps of 0.0001) until value 10000, which corresponds to 1.

##### **sl-PRS-MaxNum-Transmissions**

Indicates maximum Number of SL PRS (re-)transmissions.

##### **sl-PRS-MaxTx-power**

Indicates maximum SL PRS transmission power. The unit is dBm.

## – SL-ConfigDedicatedNR

The IE *SL-ConfigDedicatedNR* specifies the dedicated configuration information for NR sidelink communication/discovery/positioning.

#### SL-ConfigDedicatedNR information element

```

-- ASN1START

#### **SL-ConfigDedicatedNR field descriptions**

##### ***sl-LBT-SchedulingRequestId***

Indicates the scheduling request configuration applicable for Sidelink consistent LBT failure report, as specified in TS 38.321 [3].

##### ***sl-MaxTransPowerCA***

The maximum total transmit power to be used by the UE across all sidelink carriers.

##### ***sl-MeasConfigInfoToAddModList***

This field indicates the RSRP measurement configurations for unicast destinations to add and/or modify.

##### ***sl-MeasConfigInfoToReleaseList***

This field indicates the RSRP measurement configurations for unicast destinations to remove.

##### ***sl-PHY-MAC-RLC-Config***

This field indicates the lower layer sidelink radio bearer configurations.

##### ***sl-RadioBearerToAddModList***

This field indicates one or multiple sidelink radio bearer configurations to add and/or modify. This field is not configured to the PC5 connection used for L2 U2N relay operation.

##### ***sl-RadioBearerToReleaseList***

This field indicates one or multiple sidelink radio bearer configurations to remove. This field is not configured to the PC5 connection used for L2 U2N relay operation.

<b>SL-PHY-MAC-RLC-Config field descriptions</b>
<p><b>networkControlledSyncTx</b> This field indicates whether the UE shall transmit synchronisation information (i.e. become synchronisation source). Value <i>on</i> indicates the UE to transmit synchronisation information while value <i>off</i> indicates the UE to not transmit such information.</p>
<p><b>sl-DRX-Config</b> This field indicates the sidelink DRX configuration(s) for unicast, groupcast and/or broadcast communication, as specified in TS 38.321 [3].</p>
<p><b>sl-MaxNumConsecutiveDTX</b> This field indicates the maximum number of consecutive HARQ DTX before triggering sidelink RLF. Value n1 corresponds to 1, value n2 corresponds to 2, and so on.</p>
<p><b>sl-FreqInfoToAddModList, sl-FreqInfoToAddModListExt</b> This field indicates the NR sidelink communication configuration on some carrier frequency (ies) to add and/or modify. If the network includes <i>sl-FreqInfoToAddModListExt</i>, it includes the same number of entries, and listed in the same order, as in <i>sl-FreqInfoToAddModList</i>.</p>
<p><b>sl-FreqInfoToReleaseList</b> This field indicates the NR sidelink communication configuration on some carrier frequency (ies) to remove. In this release, only one entry can be configured in the list.</p>
<p><b>sl-RLC-BearerToAddModList, sl-RLC-BearerToAddModListSizeExt</b> This field indicates one or multiple sidelink RLC bearer configurations to add and/or modify.</p>
<p><b>sl-RLC-BearerToReleaseList, sl-RLC-BearerToReleaseListSizeExt</b> This field indicates one or multiple sidelink RLC bearer configurations to remove.</p>
<p><b>sl-RLC-ChannelToAddModList</b> This field indicates one or multiple PC5 Relay RLC Channel configurations to add and/or modify. Each PC5 Relay RLC channel configuration provided by network to L2 U2N Relay UE is uniquely associated with one L2 U2N Remote UE.</p>
<p><b>sl-RLC-ChannelToReleaseList</b> This field indicates one or multiple PC5 Relay RLC Channel configurations to remove.</p>
<p><b>sl-ScheduledConfig</b> Indicates the configuration for UE to transmit NR sidelink communication based on network scheduling. This field is not configured simultaneously with <i>sl-UE-SelectedConfig</i>. This field is not configured to a L2 U2N Remote UE.</p>
<p><b>sl-UE-SelectedConfig</b> Indicates the configuration used for UE autonomous resource selection. This field is not configured simultaneously with <i>sl-ScheduledConfig</i>.</p>
<p><b>sl-CSI-Acquisition</b> Indicates whether CSI reporting is enabled in sidelink unicast. If the field is absent, sidelink CSI reporting is disabled.</p>
<p><b>sl-CSI-SchedulingRequestId</b> If present, it indicates the scheduling request configuration applicable for Sidelink CSI Reporting MAC CE and Sidelink DRX Command MAC CE, as specified in TS 38.321 [3].</p>
<p><b>sl-PRS-SchedulingRequestId</b> If present, it indicates the scheduling request configuration applicable for Sidelink PRS Request MAC CE, as specified in TS 38.321 [3].</p>
<p><b>sl-SSB-PriorityNR</b> This field indicates the priority of NR sidelink SSB transmission and reception.</p>
<p><b>sl-SyncFreqList</b> Indicates a list of candidate carrier frequencies that can be used for the synchronisation of NR sidelink communication.</p>
<p><b>sl-SyncTxMultiFreq</b> Indicates that the UE transmits S-SSB on multiple carrier frequencies for NR sidelink communication. If this field is absent, the UE transmits S-SSB only on the synchronisation carrier frequency.</p>

**SL-SCCH-CarrierSetConfig field descriptions****sl-AllowedCarrierFreqSet1, sl-AllowedCarrierFreqSet2**

Indicates the set of carrier frequencies applicable for the transmission of the MAC SDUs from the sidelink SRB logical channels whose associated destination is included in sl-destinationList. If present, network ensures sl-AllowedCarrierFreqSet1 and sl-AllowedCarrierFreqSet2 do not include the same carrier frequency. The value 1 corresponds to the frequency of first entry in sl-FreqInfoList broadcast in SIB12, the value 2 corresponds to the frequency of first entry in sl-FreqInfoListSizeExt broadcast in SIB12, the value 3 corresponds to the frequency of second entry in sl-FreqInfoListSizeExt broadcast in SIB12 and so on.

**sl-DestinationList**

This field indicates the list of destination identify that the sl-AllowedCarrierFreqSet1 and sl-AllowedCarrierFreqSet2 apply. Only destination identity for unicast link can be included in this field.

**sl-SRB-Identity**

This field indicates the list of sidelink SRB identities that the sl-AllowedCarrierFreqSet1 and sl-AllowedCarrierFreqSet2 apply.

Conditional Presence	Explanation
L2RelayUE	For L2 U2N Relay UE, the field is optionally present, Need M. Otherwise, it is absent.
L2RemoteUE	For L2 U2N Remote UE, the field is optionally present, Need M. Otherwise, it is absent.
L2U2N	The field is optional present for L2 U2N or L2 U2U Relay UE and L2 U2N or L2 U2U Remote UE, need N. Otherwise, it is absent.
U2URelayUE	For U2U Relay UE, the field is optionally present, Need M. Otherwise, it is absent.
U2URemoteUE	For U2U Remote UE, the field is optionally present, Need M. Otherwise, it is absent.

– **SL-ConfiguredGrantConfig**

The IE *SL-ConfiguredGrantConfig* specifies the configured grant configuration information for NR sidelink communication.

```

<b>SL-ConfiguredGrantConfig field descriptions</b>
<p><b>rrc-ConfiguredSidelinkGrant</b> Configuration for "sidelink configured grant" transmission with fully RRC-configured SL grant (Type1). If this field is not configured, the UE uses SL grant configured by DCI addressed to SL-CS-RNTI (Type2).</p>
<p><b>sl-ConfigIndexCG</b> This field indicates the ID to identify sidelink configured grant.</p>
<p><b>sl-CG-MaxTransNumList</b> This field indicates the maximum number of times that a TB can be transmitted using the resources provided by the sidelink configured grant. <i>sl-Priority</i> corresponds to the logical channel priority.</p>
<p><b>sl-FreqResourceCG-Type1</b> Indicates the frequency resource location of sidelink configured grant type 1. An index giving valid combinations of one or two starting sub-channel and length (jointly encoded) as resource indicator value (RIV), as defined in TS 38.214 [19].</p>
<p><b>sl-HARQ-ProclD-Offset</b> Indicates the offset used in deriving the HARQ process ID for sidelink configured grant type 1 or sidelink configured grant type 2, see TS 38.321 [3], clause 5.8.3.</p>
<p><b>sl-N1PUCCH-AN</b> This field indicates the PUCCH resource for HARQ feedback for sidelink configured grant type 1. The actual PUCCH-Resource is configured in <i>sl-PUCCH-Config</i> and referred to by its ID.</p>
<p><b>sl-N1PUCCH-AN-Type2</b> This field indicates the PUCCH resource for HARQ feedback for PSCCH/PSSCH transmissions without a corresponding PDCCH on sidelink configured grant type 2. The actual PUCCH-Resource is configured in <i>sl-PUCCH-Config</i> and referred to by its ID.</p>
<p><b>sl-NrOfHARQ-Processes</b> This field indicates the number of HARQ processes configured for a specific sidelink configured grant. It applies for both type 1 and type 2.</p>
<p><b>sl-PeriodCG</b> This field indicates the period of sidelink configured grant in the unit of ms.</p>
<p><b>sl-PSFCH-ToPUCCH-CG-Type1</b> This field, for sidelink configured grant type 1, indicates slot offset between the PSFCH associated with the last PSSCH resource of each period and the PUCCH occasion used for reporting sidelink HARQ.</p>
<p><b>sl-ResourcePoolID</b> Indicates the resource pool in which the sidelink configured grant type 1 is applied.</p>
<p><b>sl-StartRBsetCG-Type1</b> Indicates starting RB set index of the initial PSSCH transmission of the sidelink configured grant Type 1 for interlace RB-based PSSCH transmission.</p>
<p><b>sl-StartSubchannelCG-Type1</b> This field indicates the starting sub-channel of sidelink configured grant type 1. An index giving valid sub-channel index.</p>
<p><b>sl-TimeOffsetCG-Type1</b> This field indicates the slot offset with respect to logical slot defined by <i>sl-TimeReferenceSFN-Type1</i>, as specified in TS 38.321 [3].</p>
<p><b>sl-TimeReferenceSFN-Type1</b> Indicates SFN used for determination of the offset of a resource in time domain. If it is present, the UE uses the 1<sup>st</sup> logical slot of associated resource pool after the starting time of the closest SFN with the indicated number preceding the reception of the sidelink configured grant configuration type 1 as reference logical slot, see TS 38.321 [3], clause 5.8.3. If it is not present, the reference SFN is 0.</p>
<p><b>sl-TimeResourceCG-Type1</b> This field indicates the time resource location of sidelink configured grant type 1. An index giving valid combinations of up to two slot positions (jointly encoded) as time resource indicator value (TRIV), as defined in TS 38.212 [17].</p>

– *SL-ConfiguredGrantConfigDedicated-SL-PRS-RP*

The IE *SL-ConfiguredGrantConfigDedicated-SL-PRS-RP* specifies the configured grant configuration information for NR sidelink positioning in a dedicated SL-PRS resource pool.

***SL-ConfiguredGrantConfigDedicated-SL-PRS-RP* information element**

```
-- ASN1START
-- TAG-SL-CONFIGUREDGRANTCONFIGDEDICATEDSL-PRS-RP-START

SL-ConfiguredGrantConfigDedicatedSL-PRS-RP-r18 ::= SEQUENCE {

***SL-ConfiguredGrantConfigDedicated-SL-PRS-RP* field descriptions**

<b><i>sl-PRS-ConfigIndexCG</i></b>	This field indicates the ID to identify sidelink configured grant. The field value should not be duplicated with <i>sl-ConfigIndexCG</i> in IE <i>SL-ConfiguredGrantConfig</i> .
<b><i>sl-PRS-PeriodCG</i></b>	This field indicates the period of SL PRS configured grant in a dedicated resources in ms for either CG type 1 or CG type 2.
<b><i>sl-PRS-ResourceIndicationFirstType1</i></b>	Indicates SL-PRS Resource ID for the first SL-PRS transmission.
<b><i>sl-PRS-ResourceIndicationFutureType1</i></b>	Indicates SL-PRS resource IDs for future SL PRS transmissions. An index giving valid combinations of up to two SL PRS resource IDs (jointly encoded) .
<b><i>sl-PRS-ResourcePoolID</i></b>	Indicates the resource pool in which the configured sidelink grant Type 1 is applied. The field value should not be duplicated with <i>sl-ResourcePoolID</i> in IE <i>SL-ConfiguredGrantConfig</i> .
<b><i>sl-TimeOffsetCG-Type1</i></b>	This field indicates the slot offset with respect to logical slot defined by <i>sl-TimeReferenceSFN-Type1-Dedicated-SL-PRS-RP</i> , as specified in TS 38.321 [3].
<b><i>sl-TimeReferenceSFN-Type1</i></b>	Indicates SFN used for determination of the offset of a resource in time domain. If it is present, the UE uses the 1 <sup>st</sup> logical slot of associated resource pool after the starting time of the closest SFN with the indicated number preceding the reception of the sidelink configured grant configuration type 1 as reference logical slot, see TS 38.321 [3], clause 5.8.3. If it is not present, the reference SFN is 0.
<b><i>sl-TimeResourceCG-Type1</i></b>	This field indicates the time resource location of sidelink configured grant type 1. An index giving valid combinations of up to two slot positions (jointly encoded) as time resource indicator value (TRIV), as defined in TS 38.212 [17].

## – *SL-DestinationIdentity*

The IE *SL-DestinationIdentity* is used to identify a destination of a NR sidelink communication.

### ***SL-DestinationIdentity* information element**

```
-- ASN1START
-- TAG-SL-DESTINATIONIDENTITY-START

SL-DestinationIdentity-r16 ::=          BIT STRING (SIZE (24))

-- TAG-SL-DESTINATIONIDENTITY-STOP
-- ASN1STOP
```

## – *SL-DRX-Config*

The IE *SL-DRX-Config* is used to configure DRX related parameters for NR sidelink communication/discovery. The SL DRX timers should be calculated in the unit of physical slot.

### ***SL-DRX-Config* information element**

```
-- ASN1START
-- TAG-SL-DRX-CONFIG-START

SL-DRX-Config-r17 ::=
    SL-DRX-ConfigGC-BC-r17          SEQUENCE {

### SL-DRX-ConfigGC-BC field descriptions

<p><b>sl-DefaultDRX-GC-BC</b> Indicates the default sidelink DRX configuration for groupcast and broadcast communications, which is used for QoS profile(s) that cannot be mapped into DRX configuration(s) configured for dedicated QoS profile(s). This field can be applied for the broadcast based or unicast based communication of Direct Link Establishment Request as described in TS 24.587 [57], ProSe Direct Link Establishment Request message and discovery message as described in TS 24.554 [72].</p>
<p><b>sl-DRX-GC-BC-PerQoS-List</b> List of one or multiple sidelink DRX configurations for groupcast and broadcast communication, which are mapped from QoS profile(s).</p>
<p><b>sl-DRX-GC-BC-Cycle</b> Value in ms, ms10 corresponds to 10ms, ms20 corresponds to 20 ms, ms32 corresponds to 32 ms, and so on.</p>
<p><b>sl-DRX-GC-BC-MappedQoS-FlowsList</b> List of QoS profiles of the NR sidelink communication, which are mapped to a sidelink DRX configuration.</p>
<p><b>sl-DRX-GC-BC-OnDurationTimer</b> Value in multiples of 1/32 ms (subMilliseconds) or in ms (milliSecond). For the latter, value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, and so on.</p>
<p><b>sl-DRX-GC-HARQ-RTT-Timer1, sl-DRX-GC-HARQ-RTT-Timer2</b> Value in number of slot lengths of the sidelink BWP where the transport block was received. Value s10 corresponds to 0 slots, s11 corresponds to 1 slot, s12 corresponds to 2 slots, and so on. <i>sl-DRX-GC-HARQ-RTT-Timer1</i> is used for HARQ feedback enabled sidelink retransmission if SCI does not indicate retransmission resource(s). <i>sl-DRX-GC-HARQ-RTT-Timer2</i> is used for HARQ feedback disabled sidelink retransmission in resource pool configured with PSFCH if SCI does not indicate retransmission resource(s).</p>
<p><b>sl-DRX-GC-Generic</b> Indicates a sidelink DRX configuration for groupcast communication, which is applicable to any QoS profile or any Destination Layer-2 ID.</p>
<p><b>sl-DRX-GC-InactivityTimer</b> Value in multiple integers of 1 ms, ms0 corresponds to 0, ms1 corresponds to 1 ms, ms2 corresponds to 2 ms, and so on. This field is only valid for groupcast communication.</p>
<p><b>sl-DRX-GC-RetransmissionTimer</b> Value in number of slot lengths of the sidelink BWP where the transport block was received. Value s10 corresponds to 0 slots, s11 corresponds to 1 slot, s12 corresponds to 2 slots, and so on.</p>

### – SL-DRX-ConfigUC

The IE *SL-DRX-ConfigUC* is used to configure sidelink DRX related parameters for unicast communication.

-- ASN1STOP
```

<b>SL-FreqConfig field descriptions</b>
<p><b>absenceOfAnyOtherTechnology</b> Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.5. This parameter is not expected to be provided if the sidelink carrier is overlapped with uplink carrier.</p>
<p><b>sl-EnergyDetectionConfig</b> Indicates whether to use the <i>maxEnergyDetectionThreshold</i> or the <i>energyDetectionThresholdOffset</i> (see TS 37.213 [48], clause 4.5.5).</p>
<p><b>sl-EnergyDetectionThresholdOffset</b> Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.5.5.</p>
<p><b>frequencyShift7p5khzSL</b> Enable the NR SL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.</p>
<p><b>harq-ACK-FeedbackRatioforCW-AdjustmentGC-Option2</b> Indicates the ratio threshold for contention window adjustment for SL groupcast option 2 as specified in TS 37.213 [48], clause 4.5.4. Unit is percentage.</p>
<p><b>sl-MaxEnergyDetectionThreshold</b> Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.5.5.</p>
<p><b>sl-AbsoluteFrequencyPointA</b> Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.</p>
<p><b>sl-AbsoluteFrequencySSB</b> Indicates the frequency location of sidelink SSB. The transmission bandwidth for sidelink SSB is within the bandwidth of this sidelink BWP.</p>
<p><b>sl-BWP-ToAddModList</b> This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration is to be added or reconfigured. In this release, only one BWP is allowed to be configured for NR sidelink communication.</p>
<p><b>sl-BWP-ToReleaseList</b> This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration is to be released.</p>
<p><b>sl-Freq-Id</b> This field indicates the identity of the dedicated configuration information on the carrier frequency for NR sidelink communication.</p>
<p><b>sl-SCS-SpecificCarrierList</b> A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. In this release, only one <i>SCS-SpecificCarrier</i> is allowed to be configured for NR sidelink communication.</p>
<p><b>sl-SyncTxDisabled</b> Indicates that the carrier, even though equipped with synchronisation resources, cannot be used as a synchronisation carrier frequency to transmit S-SSB.</p>
<p><b>sl-SyncPriority</b> This field indicates synchronization priority order, as specified in clause 5.8.6. <i>sl-SyncPriority</i> is configured with the same value across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.</p>
<p><b>ue-ToUE-COT-SharingED-Threshold</b> Indicates the energy detection threshold that a UE uses to initiate a channel occupancy with other UE(s), and the other UE(s) that shares the initiated channel occupancy shall use this configured parameter for accessing the channel(s) as specified in TS 37.213 [48], clause 4.5.5 for sidelink channel access. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm).</p>
<p><b>valueN</b> Indicate the NR SL transmission with a valueN *5kHz shift to the LTE raster. (see TS 38.101-1 [15], clause 5.4E.2).</p>

Conditional Presence	Explanation
V2X-SL-Shared	This field is mandatory present if the carrier frequency configured for NR sidelink communication is shared by V2X sidelink communication. It is absent, Need R, otherwise.

## – SL-FreqConfigCommon

The IE *SL-FreqConfigCommon* specifies the cell-specific configuration information on one particular carrier frequency for NR sidelink communication/positioning.

### SL-FreqConfigCommon information element

```
-- ASN1START
-- TAG-SL-FREQCONFIGCOMMON-START

SL-FreqConfigCommon-r16 ::= SEQUENCE {

  } OPTIONAL, -- Cond SIB12
  sl-PosBWP-List-r18 SEQUENCE ( SIZE (1..maxNrofSL-BWPs-r16)) OF SL-PosBWP-ConfigCommon-r18 OPTIONAL, -- Cond SIB23
  ]]
}
-- TAG-SL-FREQCONFIGCOMMON-STOP
-- ASN1STOP
```

<b>SL-FreqConfigCommon field descriptions</b>
<p><b>absenceOfAnyOtherTechnology</b> Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.5.5. This parameter is not expected to be provided if the sidelink carrier is overlapped with uplink carrier.</p>
<p><b>sl-EnergyDetectionConfig</b> Indicates whether to use the <i>maxEnergyDetectionThreshold</i> or the <i>energyDetectionThresholdOffset</i> (see TS 37.213 [48], clause 4.5.5).</p>
<p><b>sl-EnergyDetectionThresholdOffset</b> Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.5.5.</p>
<p><b>frequencyShift7p5khzSL</b> Enable the NR SL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.</p>
<p><b>harq-ACK-FeedbackRatioforCW-AdjustmentGC-Option2</b> Indicates the ratio threshold for contention window adjustment for SL groupcast option 2 as specified in TS 37.213 [48], clause 4.5.4. Unit is percentage.</p>
<p><b>sl-MaxEnergyDetectionThreshold</b> Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.5.5.</p>
<p><b>sl-AbsoluteFrequencyPointA</b> Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.</p>
<p><b>sl-AbsoluteFrequencySSB</b> Indicates the frequency location of sidelink SSB. The transmission bandwidth for sidelink SSB is within the bandwidth of this sidelink BWP.</p>
<p><b>sl-BWP-List</b> This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration. In this release, only one BWP is allowed to be configured for NR sidelink communication.</p>
<p><b>sl-NbAsSync</b> This field indicates whether the network can be selected as synchronization reference directly/indirectly only, if <i>sl-SyncPriority</i> is set to gss. If this field is set to TRUE, the network is enabled to be selected as synchronization reference directly/indirectly. The field is only present in <i>SidelinkPreconfigNR</i>. Otherwise it is absent. All values in <i>sl-NbAsSync</i> are same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.</p>
<p><b>sl-SyncTxDisabled</b> Indicates that the carrier, even though equipped with synchronisation resources, cannot be used as a synchronisation carrier frequency to transmit S-SSB.</p>
<p><b>sl-SyncPriority</b> This field indicates synchronization priority order, as specified in clause 5.8.6. All values in <i>sl-SyncPriority</i> are same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.</p>
<p><b>sl-SyncConfigList</b> This field indicates the configuration by which the UE is allowed to receive and transmit synchronisation information for NR sidelink communication. Network configures <i>sl-SyncConfig</i> including <i>txParameters</i> when configuring UEs to transmit synchronisation information. If this field is configured in <i>SL-PreconfigurationNR-r16</i>, only one entry is configured in <i>sl-SyncConfigList</i>.</p>
<p><b>ue-ToUE-COT-SharingED-Threshold</b> Indicates the energy detection threshold that a UE uses to initiate a channel occupancy with to other UE(s), and the other UE(s) that shares the initiated channel occupancy shall use this configured parameter for accessing the channel(s) as specified in TS 37.213 [48], clause 4.5.5 for sidelink channel access. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm).</p>
<p><b>valueN</b> Indicate the NR SL transmission with a valueN *5kHz shift to the LTE raster (see TS 38.101-1 [15], clause 5.4E.2).</p>

Conditional Presence	Explanation
<i>SIB12</i>	This field is optional present if included within <i>SIB12</i> , need R. Otherwise, the field is absent.
<i>SIB23</i>	This field is optional present if included within <i>SIB23</i> , need R. Otherwise, the field is absent.
<i>V2X-SL-Shared</i>	This field is mandatory present if the carrier frequency configured for NR sidelink communication is shared by V2X sidelink communication. It is absent, Need R, otherwise.

## – *SL-FreqSelectionConfig*

The IE *SL-FreqSelectionConfig* specifies the configuration information for carrier selection for NR sidelink transmission using UE autonomous resource selection.

### *SL-FreqSelectionConfig* information element

```
-- ASN1START
-- TAG-SL-FREQSELECTIONCONFIG-START

SL-FreqSelectionConfig-r18 ::= SEQUENCE {
    sl-priorityList-r18          SEQUENCE (SIZE (1..8)) OF INTEGER (1..8),
    sl-threshCBR-FreqReselection-r18 SL-CBR-r16,
    sl-threshCBR-FreqKeeping-r18  SL-CBR-r16
}

-- TAG-SL-FREQSELECTIONCONFIG-STOP
-- ASN1STOP
```

### *SL-FreqSelectionConfig* field descriptions

#### ***sl-priorityList***

Indicates the list of sidelink logical channel priority which is associated with the configurations in *sl-threshCBR-FreqReselection* and in *sl-threshCBR-FreqKeeping*.

#### ***sl-threshCBR-FreqReselection***

Indicates the CBR threshold based on which UE determines whether the carrier frequency can be (re)selected for the transmission of NR sidelink. See TS 38.321 [3].

#### ***sl-threshCBR-FreqKeeping***

Indicates the CBR threshold based on which UE determines whether the UE can keep using the carrier which was selected for the transmission of NR sidelink. See TS 38.321 [3].

## – *SL-IndirectPathAddChange*

The IE *SL-IndirectPathAddChange* specifies the configuration information of SL indirect path for SL indirect path addition/change in MP.

### *SL-IndirectPathAddChange* information element

```
-- ASN1START
-- TAG-SL-INDIRECTPATHADDCHANGE-START

SL-IndirectPathAddChange-r18 ::= SEQUENCE {
    sl-IndirectPathRelayUE-Identity-r18  SL-SourceIdentity-r17,
```

```

sl-IndirectPathCellIdentity-r18      CellIdentity,
t421-r18                             ENUMERATED {ms50, ms100, ms150, ms200, ms500, ms1000, ms2000, ms10000} OPTIONAL, -- Need M
...
}
-- TAG-SL-INDIRECTPATHADDCHANGE-STOP
-- ASN1STOP

```

#### SL-IndirectPathAddChange field descriptions

<b>sl-IndirectPathRelayUEIdentity</b>
Indicates the L2 source ID of the L2 U2N Relay UE of SL indirect path.
<b>sl-IndirectPathCellIdentity</b>
Identifies the serving cell of the indicated L2 U2N Relay UE.
<b>t421</b>
Indicates the timer value of T421 to be used during indirect path addition or change.

### – SL-InterUE-CoordinationConfig

The IE *SL-InterUE-CoordinationConfig* is used to configure the sidelink inter-UE coordination (between a UE, UE-A, and a peer UE, UE-B) parameters. The network ensures sidelink inter-UE coordination and sidelink DRX are not configured at the same time for a UE.

#### SL-InterUE-CoordinationConfig information element

```

<b><i>SL-InterUE-CoordinationScheme1</i> field descriptions</b>
<p><b><i>sl-Condition1-A-2</i></b> Indicates disabling the use of condition of excluding from preferred resource set resource(s) in slot(s) where UE-A, when it is intended receiver of UE-B, does not expect to perform SL reception from UE-B due to half duplex operation.</p>
<p><b><i>sl-ContainerCoordInfo</i></b> Indicates whether a SCI format 2-C can be used as the container of inter-UE coordination information transmission from UE-A to UE-B in Scheme 1 in addition to using MAC CE.</p>
<p><b><i>sl-ContainerRequest</i></b> Indicates whether a SCI format 2-C can be used as the container of an explicit request for inter-UE coordination information transmission from UE-B to UE-A in Scheme 1 in addition to using MAC CE.</p>
<p><b><i>sl-DetermineResourceType</i></b> Indicates how to determine the resource set type to be provided by inter-UE coordination information transmission. Value "uea" means the resource set type is determined by UE-A's implementation. Value "ueb" means the resource set type is determined by UE-B's request.</p>
<p><b><i>sl-IUC-Condition</i></b> Indicates whether inter-UE coordination information triggered by a condition is enabled or not other than explicit request reception.</p>
<p><b><i>sl-IUC-Explicit</i></b> Indicates whether inter-UE coordination information triggered by an explicit request is enabled or not.</p>
<p><b><i>sl-MaxSlotOffsetTRIV</i></b> Indicates the maximum value of logical slot offset with respect to a reference slot that is used for representing the first resource location of each TRIV to indicate the set of resources in Scheme 1 as specified in TS 38.214 [19].</p>
<p><b><i>sl-NumSubCH-PreferredResourceSet</i></b> Indicates the number of sub-channels used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition other than explicit request reception.</p>
<p><b><i>sl-PriorityCoordInfoCondition</i></b> Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC MAC CE, triggered by a condition other than explicit request reception in Scheme 1. The priority value of IUC MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1".</p>
<p><b><i>sl-PriorityCoordInfoExplicit</i></b> Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC MAC CE, triggered by an explicit request in Scheme 1. The priority value of IUC MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1".</p>
<p><b><i>sl-PriorityPreferredResourceSet</i></b> Indicates the priority value used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition other than explicit request reception.</p>
<p><b><i>sl-PriorityRequest</i></b> Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC request MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC request MAC CE, in an explicit request for inter-UE coordination information in Scheme 1. The priority value of IUC request MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1".</p>
<p><b><i>sl-ReservedPeriodPreferredResourceSet</i></b> Indicates the resource reservation interval used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition, by means of an index to the corresponding entry of <i>sl-ResourceReservePeriodList-r16</i>.</p>
<p><b><i>sl-TriggerConditionCoordInfo</i></b> Indicates the additional alternative trigger condition of inter-UE coordination information triggered by a condition rather than request reception in Scheme-1 from UE-A to UE-B. Value 0 means inter-UE coordination information is triggered by UE-A's implementation. Value 1 means inter-UE coordination information can be triggered only when UE-A has data to be transmitted together with the inter-UE coordination information to UE-B.</p>

<b><i>sl-TriggerConditionRequest</i></b>
Indicates the trigger condition of an explicit request from UE-B to UE-A for transmission in a shared SL PRS resource pool. Value 0 means the explicit request is triggered by UE-B's implementation. Value 1 means the explicit request can be triggered only when UE-B has data or SL-PRS to be transmitted to UE-A.
<b><i>sl-ThresholdRSRP-Condition1-B-1-Option1List</i></b>
Indicates the RSRP threshold used to determine reserved resource(s) of other UE(s) whose RSRP measurement is larger than it as the set of resource(s) non-preferred for UE-B's transmission for Condition 1-B-1 of Scheme 1, as specified in TS 38.214 [19]. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to $(-128 + (n-1)*2)$ dBm and so on, value 66 corresponds to infinity dBm.
<b><i>sl-ThresholdRSRP-Condition1-B-1-Option2List</i></b>
Indicates the RSRP threshold used to determine reserved resource(s) of other UE(s) whose RSRP measurement is smaller than it as the set of resource(s) non-preferred for UE-B's transmission for Condition 1-B-1 of Scheme 1, as specified in TS 38.214 [19]. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to $(-128 + (n-1)*2)$ dBm and so on, value 66 corresponds to infinity dBm.

#### ***SL-InterUE-CoordinationScheme2*** field descriptions

<b><i>sl-DeltaRSRP-Thresh</i></b>
Indicates the RSRP threshold delta value corresponding to <i>deltaRSRPThresh</i> specified in clause 16.3.0 of TS 38.213 [13] and used to determine reserved resource(s) of other UE(s). Value in dB. Only even values (step size 2) allowed.
<b><i>sl-IndicationUE-B</i></b>
Indicates whether to enable or disable the usage of 1 LSB of reserved bits of a SCI format 1-A to indicate of whether UE scheduling a conflict TB can be UE-B or not.
<b><i>sl-IUC-Scheme2</i></b>
Indicates whether inter-UE coordination Scheme 2 is enabled or not.
<b><i>sl-OptionForCondition2-A-1</i></b>
Indicates the RSRP threshold used to consider additional criteria for condition 2-A-1. Value 0 corresponds to using the RSRP threshold according to the priorities included in the SCI, UE uses thresholds <i>sl-Thres-RSRP-List</i> , in its resource pool configuration <i>sl-UE-SelectedConfigRP</i> , corresponding to <i>ThresPSSCH-RSRP-List</i> specified in clause 16.3.0 of TS 38.213 [13]. Value 1 corresponds to using a (pre)configured RSRP threshold delta value <i>sl-DeltaRSRP-Thresh</i> , corresponding to <i>deltaRSRPThresh</i> specified in clause 16.3.0 of TS 38.213 [13].
<b><i>sl-PSFCH-Occasion</i></b>
Indicates the reference slot from which a PSFCH occasion for inter-UE coordination information transmission is derived. Value 0 corresponds to the slot where UE-B's SCI is transmitted and value 1 corresponds to the slot where expected/potential resource conflict occurs on PSSCH resource indicated by UE-B's SCI.
<b><i>sl-RB-SetPSFCH</i></b>
Indicates the set of PRBs that are actually used for inter-UE coordination information transmission and reception in Scheme 2. The leftmost bit of the bitmap refers to the lowest RB index in the resource pool, and so on.
<b><i>sl-SlotLevelResourceExclusion</i></b>
Indicates that physical layer of UE-B reports resources in a slot including the next reserved resource indicated by the corresponding UE-B's SCI to higher layer.
<b><i>sl-TypeUE-A</i></b>
Indicates that a non-destination UE of a TB transmitted by UE-B can be UE-A which sends inter-UE coordination information to UE-B, when UE-A is a destination UE of another TB conflicting with the TB transmitted by UE-B.

## – *SL-LBT-FailureRecoveryConfig*

The IE *SL-LBT-FailureRecoveryConfig-r18* is used to configure the parameters used for detection and cancellation of Sidelink consistent LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].

### ***SL-LBT-FailureRecoveryConfig* information element**

```
-- ASN1START
-- TAG-SL-LBT-FAILURERECOVERYCONFIG-START

SL-LBT-FailureRecoveryConfig-r18 ::= SEQUENCE {
    sl-LBT-FailureInstanceMaxCount-r18    ENUMERATED {n4, n8, n16, n32, n64, n128, spare2, spare1}    OPTIONAL, -- Need M
    sl-LBT-FailureDetectionTimer-r18      ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320, spare2, spare1}    OPTIONAL, -- Need M
    sl-LBT-RecoveryTimer-r18              ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320, spare2, spare1}    OPTIONAL, -- Need M
    ...
}

-- TAG-SL-LBT-FAILURERECOVERYCONFIG-STOP
-- ASN1STOP
```

### ***SL-LBT-FailureRecoveryConfig* field descriptions**

#### ***sl-LBT-FailureDetectionTimer***

Timer for consistent sidelink LBT failure detection (see TS 38.321 [3]). Value ms10 corresponds to 10 ms, value ms20 corresponds to 20 ms, and so on.

#### ***sl-LBT-FailureInstanceMaxCount***

This field determines after how many LBT failure indications received from the physical layer the UE triggers sidelink LBT failure recovery (see TS 38.321 [3]). Value n4 corresponds to 4, value n8 corresponds to 8, and so on.

#### ***sl-LBT-RecoveryTimer***

Timer for consistent sidelink LBT failure cancellation (see TS 38.321 [3]). Value ms10 corresponds to 10 ms, value ms20 corresponds to 20 ms, and so on.

## – *SL-LogicalChannelConfig*

The IE *SL-LogicalChannelConfig* is used to configure the sidelink logical channel parameters.

### ***SL-LogicalChannelConfig* information element**

```
-- ASN1START
-- TAG-SL-LOGICALCHANNELCONFIG-START

SL-LogicalChannelConfig-r16 ::= SEQUENCE {
    sl-Priority-r16                INTEGER (1..8),

]]
}
-- TAG-SL-LOGICALCHANNELCONFIG-STOP
-- ASN1STOP

```

<b>SL-LogicalChannelConfig field descriptions</b>
<p><b>sl-AllowedCarriers</b> If present, SL MAC SDUs from this logical channel can only be mapped to the sidelink carriers indicated in this list. Otherwise, SL MAC SDUs from this logical channel can be mapped to any configured sidelink carriers. The value 1 corresponds to the frequency of first entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i>, the value 2 corresponds to the frequency of first entry in <i>sl-FreqInfoListSizeExt</i> broadcast in <i>SIB12</i>, the value 3 corresponds to the frequency of second entry in <i>sl-FreqInfoListSizeExt</i> broadcast in <i>SIB12</i> and so on.</p>
<p><b>sl-AllowedCG-List</b> This restriction applies only when the SL grant is a configured grant. If present, SL MAC SDUs from this logical channel can only be mapped to the indicated configured grant configuration. If the size of the sequence is zero, then SL MAC SDUs from this logical channel cannot be mapped to any configured grant configurations. If the field is not present, SL MAC SDUs from this logical channel can be mapped to any configured grant configurations. If the field <i>sl-ConfiguredGrantType1Allowed</i> is present, only those sidelink configured grant type 1 configurations indicated in this sequence are allowed for use by this sidelink logical channel; otherwise, this sequence shall not include any sidelink configured grant type 1 configuration. Corresponds to "sl-AllowedCG-List" as specified in TS 38.321 [3].</p>
<p><b>sl-AllowedSCS-List</b> If present, it indicates the numerology of UL-SCH resources that this sidelink logical channel is mapped to, when checking the SR trigger condition. Corresponds to 'sl-AllowedSCS-List' in TS 38.321 [3].</p>
<p><b>sl-BucketSizeDuration</b> Value in ms. <i>ms5</i> corresponds to 5 ms, value <i>ms10</i> corresponds to 10 ms, and so on.</p>
<p><b>sl-ChannelAccessPriority</b> Indicates the Channel Access Priority Class (CAPC), as specified in TS 38.300 [2], to be used on sidelink transmissions for operation with shared spectrum channel access in FR1. The network configures this field only for DRBs.</p>
<p><b>sl-ConfiguredGrantType1Allowed</b> If present and set to true, or if the capability <i>lcp-RestrictionSidelink</i> as specified in TS 38.306 [26] is not indicated, SL MAC SDUs from this sidelink logical channel can be transmitted on a sidelink configured grant type 1. Otherwise, SL MAC SDUs from this logical channel cannot be transmitted on a sidelink configured grant type 1. Corresponds to 'sl-configuredGrantType1Allowed' in TS 38.321 [3].</p>
<p><b>sl-HARQ-FeedbackEnabled</b> Network always includes this field. It indicates the HARQ feedback enabled/disabled restriction in LCP for this sidelink logical channel. If set to <i>enabled</i>, the sidelink logical channel will be multiplexed only with a logical channel which enabling the HARQ feedback. If set to <i>disabled</i>, the sidelink logical channel cannot be multiplexed with a logical channel which enabling the HARQ feedback. Corresponds to 'sl-HARQ-FeedbackEnabled' in TS 38.321 [3]. If this field of at least one sidelink logical channel for the UE is set to enabled, <i>sl-PSFCH-Config</i> should be mandatory present in configuration <i>SL-ResourcePool</i> of at least one of the sidelink resource pools.</p>
<p><b>sl-LogicalChannelGroup</b> ID of the sidelink logical channel group, as specified in TS 38.321 [3], which the sidelink logical channel belongs to.</p>
<p><b>sl-LogicalChannelSR-DelayTimerApplied</b> Indicates whether to apply the delay timer for SR transmission for this sidelink logical channel. Set to false if <i>logicalChannelSR-DelayTimer</i> is not included in <i>sl-BSR-Config</i>.</p>
<p><b>sl-MaxPUSCH-Duration</b> If present, it indicates the maximum PUSCH duration of UL-SCH resources that this sidelink logical channel is mapped to, when checking the SR trigger condition. Corresponds to "sl-MaxPUSCH-Duration" in TS 38.321 [3].</p>
<p><b>sl-PrioritisedBitRate</b> Value in kiloBytes/s. Value <i>kBps0</i> corresponds to 0 kiloBytes/s, value <i>kBps8</i> corresponds to 8 kiloBytes/s, value <i>kBps16</i> corresponds to 16 kiloBytes/s, and so on.</p>
<p><b>sl-Priority</b> Sidelink logical channel priority, as specified in TS 38.321 [3].</p>
<p><b>sl-SchedulingRequestld</b> If present, it indicates the scheduling request configuration applicable for this sidelink logical channel, as specified in TS 38.321 [3].</p>

Conditional Presence	Explanation
<i>CONNECTED</i>	This field is optionally present, Need M, in an RRCReconfiguration message, for a SL DRB with additional sidelink RLC bearer being configured. The field is absent otherwise.

## – *SL-L2RelayUE-Config*

The IE *SL-L2RelayUE-Config* is used to configure L2 U2N relay operation related configurations used by L2 U2N Relay UE, or L2 U2U relay operation related configurations used by L2 U2U Relay UE.

<b>sl-UEIdentityRemote</b> Indicates the C-RNTI to the L2 U2N Remote UE.
<b>sl-U2U-RelayUE-ToAddModList</b> List of L2 U2U Relay UEs for which the related configuration is to be added and modified to the L2 U2U Remote UE.
<b>sl-U2U-RelayUE-ToReleaseList</b> List of L2 U2U Relay UEs for which the related configuration is to be released by the L2 U2U Remote UE.
<b>sl-U2U-TargetRemoteUE-ToAddModList</b> List of target L2 U2U Remote UEs for which the related configuration is to be added and modified relative to the L2 U2U Relay UE identified by the <i>sl-L2IdentityRelay</i> .
<b>sl-U2U-TargetRemoteUE-ToReleaseList</b> List of target L2 U2U Remote UEs for which the related configuration is to be released relative to the L2 U2U Relay UE identified by the <i>sl-L2IdentityRelay</i> .

<b>Conditional Presence</b>	<b>Explanation</b>
<i>FirstRRCReconfig</i>	This field is mandatory present in the first <i>RRCReconfiguration</i> for L2 U2N Remote UE when PCell is on indirect path, i.e. MP configuration is not present. Otherwise the field is absent.

## – *SL-MeasConfigCommon*

The IE *SL-MeasConfigCommon* is used to set the cell specific SL RSRP measurement configurations for unicast destinations.

### ***SL-MeasConfigCommon* information element**

```
-- ASN1START
-- TAG-SL-MEASCONFIGCOMMON-START

SL-MeasConfigCommon-r16 ::=
    SEQUENCE {
        sl-MeasObjectListCommon-r16          SL-MeasObjectList-r16          OPTIONAL, -- Need R
        sl-ReportConfigListCommon-r16       SL-ReportConfigList-r16       OPTIONAL, -- Need R
        sl-MeasIdListCommon-r16             SL-MeasIdList-r16            OPTIONAL, -- Need R
        sl-QuantityConfigCommon-r16         SL-QuantityConfig-r16        OPTIONAL, -- Need R
        ...
    }

-- TAG-SL-MEASCONFIGCOMMON-STOP
-- ASN1STOP
```

<i>SL-MeasConfigCommon</i> field descriptions
<b><i>sl-MeasIdListCommon</i></b> List of sidelink measurement identities
<b><i>sl-MeasObjectListCommon</i></b> List of sidelink measurement objects.
<b><i>sl-QuantityConfigCommon</i></b> Indicates the layer 3 filtering coefficient for sidelink measurement.
<b><i>sl-ReportConfigListCommon</i></b> List of sidelink measurement reporting configurations.

## – *SL-MeasConfigInfo*

The IE *SL-MeasConfigInfo* is used to set RSRP measurement configurations for unicast destinations.

### *SL-MeasConfigInfo* information element

```
-- ASN1START
-- TAG-SL-MEASCONFIGINFO-START

SL-MeasConfigInfo-r16 ::= SEQUENCE {
    sl-DestinationIndex-r16      SL-DestinationIndex-r16,
    sl-MeasConfig-r16           SL-MeasConfig-r16,
    ...
}

SL-MeasConfig-r16 ::= SEQUENCE {
    sl-MeasObjectToRemoveList-r16  SL-MeasObjectToRemoveList-r16      OPTIONAL, -- Need N
    sl-MeasObjectToAddModList-r16  SL-MeasObjectList-r16                OPTIONAL, -- Need N
    sl-ReportConfigToRemoveList-r16 SL-ReportConfigToRemoveList-r16    OPTIONAL, -- Need N
    sl-ReportConfigToAddModList-r16 SL-ReportConfigList-r16             OPTIONAL, -- Need N
    sl-MeasIdToRemoveList-r16       SL-MeasIdToRemoveList-r16         OPTIONAL, -- Need N
    sl-MeasIdToAddModList-r16       SL-MeasIdList-r16                 OPTIONAL, -- Need N
    sl-QuantityConfig-r16           SL-QuantityConfig-r16              OPTIONAL, -- Need M
    ...
}

SL-MeasObjectToRemoveList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-ObjectId-r16)) OF SL-MeasObjectId-r16

SL-ReportConfigToRemoveList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-ReportConfigId-r16)) OF SL-ReportConfigId-r16

SL-MeasIdToRemoveList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF SL-MeasId-r16

-- TAG-SL-MEASCONFIGINFO-STOP
-- ASN1STOP
```

<b>SL-MeasConfigInfo field descriptions</b>
<b>sl-MeasIdToAddModList</b> List of sidelink measurement identities to add and/or modify.
<b>sl-MeasIdToRemoveList</b> List of sidelink measurement identities to remove.
<b>sl-MeasObjectToAddModList</b> List of sidelink measurement objects to add and/or modify.
<b>sl-MeasObjectToRemoveList</b> List of sidelink measurement objects to remove.
<b>sl-QuantityConfig</b> Indicates the layer 3 filtering coefficient for sidelink measurement.
<b>sl-ReportConfigToAddModList</b> List of sidelink measurement reporting configurations to add and/or modify.
<b>sl-ReportConfigToRemoveList</b> List of sidelink measurement reporting configurations to remove.

## – *SL-MeasIdList*

The IE *SL-MeasIdList* concerns a list of SL measurement identities to add or modify for a destination, with for each entry the *sl-MeasId*, the associated *sl-MeasObjectId* and the associated *sl-ReportConfigId*.

### **SL-MeasIdList information element**

```

-- ASN1START
-- TAG-SL-MEASIDLIST-START

SL-MeasIdList-r16 ::=
    SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF SL-MeasIdInfo-r16

SL-MeasIdInfo-r16 ::=
    SEQUENCE {
        sl-MeasId-r16
            SL-MeasId-r16,
        sl-MeasObjectId-r16
            SL-MeasObjectId-r16,
        sl-ReportConfigId-r16
            SL-ReportConfigId-r16,
        ...
    }

SL-MeasId-r16 ::=
    INTEGER (1..maxNrofSL-MeasId-r16)

-- TAG-SL-MEASIDLIST-STOP
-- ASN1STOP

```

## – *SL-MeasObjectList*

The IE *SL-MeasObjectList* concerns a list of SL measurement objects to add or modify for a destination.

**SL-MeasObjectList** information element

```

-- ASN1START
-- TAG-SL-MEASOBJECTLIST-START

SL-MeasObjectList-r16 ::=                SEQUENCE (SIZE (1..maxNrofSL-ObjectId-r16)) OF SL-MeasObjectInfo-r16

SL-MeasObjectInfo-r16 ::=                SEQUENCE {
    sl-MeasObjectId-r16                    SL-MeasObjectId-r16,
    sl-MeasObject-r16                      SL-MeasObject-r16,
    ...
}

SL-MeasObjectId-r16 ::=                  INTEGER (1..maxNrofSL-ObjectId-r16)

SL-MeasObject-r16 ::=                    SEQUENCE {
    frequencyInfoSL-r16                    ARFCN-ValueNR,
    ...
}

-- TAG-SL-MEASOBJECTLIST-STOP
-- ASN1STOP

```

**SL-MeasObjectList** field descriptions**frequencyInfoSL**

It indicates the lowest usable subcarrier on the carrier where SL RSRP is measured, determined according to *sl-AbsoluteFrequencyPointA* in IE *SL-FreqConfig/SL-FreqConfigCommon* and *offsetToCarrier* in IE *SCS-SpecificCarrier* configured for *sl-SCS-SpecificCarrierList* in IE *SL-FreqConfig/SL-FreqConfigCommon*. See TS 38.211 [16], clause 8.2.5.

**sl-MeasObjectId**

It is used to identify a sidelink measurement object configuration.

**sl-MeasObject**

It specifies information applicable for sidelink DMRS, SL-PRS measurement.

– **SL-PagingIdentityRemoteUE**

The IE *SL-PagingIdentityRemoteUE* includes the Remote UE's paging UE ID.

**SL-PagingIdentityRemoteUE** information element

```

-- ASN1START
-- TAG-SL-PAGINGIDENTITYREMOTEUE-START

SL-PagingIdentityRemoteUE-r17 ::= SEQUENCE {
    ng-5G-S-TMSI-r17                    NG-5G-S-TMSI,
    fullI-RNTI-r17                       I-RNTI-Value                    OPTIONAL -- Need R
}

-- TAG-SL-PAGINGIDENTITYREMOTEUE-STOP

```

```
-- ASN1STOP
```

## – *SL-PBPS-CPS-Config*

The IE *SL-PBPS-CPS-Config* specifies the operation information for a resource pool which can be (pre-)configured to enable full sensing only, partial sensing only, random resource selection only, or any combination(s) thereof.

### *SL-PBPS-CPS-Config* information element

```
-- ASN1START
-- TAG-SL-PBPS-CPS-CONFIG-START

SL-PBPS-CPS-Config-r17 ::=
sl-AllowedResourceSelectionConfig-r17 SEQUENCE {
sl-MinNumCandidateSlotsPeriodic-r17   ENUMERATED {c1, c2, c3, c4, c5, c6, c7}           OPTIONAL, -- Need M
sl-PBPS-OccasionReservePeriodList-r17 INTEGER (1..32)                       OPTIONAL, -- Need M
sl-Additional-PBPS-Occasion-r17       SEQUENCE (SIZE (1..16)) OF INTEGER (1..16)  OPTIONAL, -- Need M
sl-CPS-WindowPeriodic-r17            ENUMERATED { monitored }                 OPTIONAL, -- Need M
sl-MinNumCandidateSlotsAperiodic-r17  INTEGER (5..30)                       OPTIONAL, -- Need M
sl-MinNumRssiMeasurementSlots-r17     INTEGER (1..800)                       OPTIONAL, -- Need M
sl-DefaultCBR-RandomSelection-r17     INTEGER (0..100)                       OPTIONAL, -- Need M
sl-DefaultCBR-PartialSensing-r17     INTEGER (0..100)                       OPTIONAL, -- Need M
sl-CPS-WindowAperiodic-r17           INTEGER (0..30)                       OPTIONAL, -- Need M
sl-PartialSensingInactiveTime-r17     ENUMERATED { enabled, disabled }       OPTIONAL, -- Need M
...
}

-- TAG-SL-PBPS-CPS-CONFIG-STOP
-- ASN1STOP
```

**SL-PBPS-CPS-Config field descriptions*****sl-Additional-PBPS-Occasion***

Indicates that UE additionally monitors periodic sensing occasions that correspond to a set of values. (see TS 38.214 [19], clause 8.1.4).

***sl-AllowedResourceSelectionConfig***

Indicates the allowed resource selection mechanism(s), i.e. full sensing only, partial sensing only, random resource selection only, or any combination(s) thereof. (see TS 38.214 [19], clause 8.1.4). Only *c1*, *c4*, *c5* or *c7* can be configured for a Rel-16 resource pool. Only *c1* can be configured for a resource pool included in *sl-TxPoolSelectedNormal*, for which *sl-NRPSFCH-EUTRA-ThresRSRP-List/sl-NRPSSCH-EUTRA-ThresRSRP-List* is configured. If this field is not configured for a resource pool included in *sl-TxPoolSelectedNormal*, only full sensing is allowed in the corresponding resource pool.

*c1*: only full sensing allowed

*c2*: only partial sensing allowed

*c3*: only random selection allowed

*c4*: full sensing+random selection allowed

*c5*: full sensing+ partial sensing allowed

*c6*: partial sensing + random selection allowed

*c7*: full sensing+ partial sensing + random selection allowed.

***sl-CPS-WindowAperiodic***

Parameter that indicates the minimum size of contiguous partial sensing window in logical slot units for a resource (re)selection procedure and re-evaluation/pre-emption checking triggered by aperiodic transmission. (see TS 38.214 [19], clause 8.1.4). If not configured, the size of contiguous partial sensing window in logical slot units is 31.

***sl-CPS-WindowPeriodic***

Indicates the size of contiguous partial sensing window in logical slot units when UE performs periodic-based and contiguous partial sensing for a resource (re)selection procedure triggered by periodic transmission. If not configured, the size of contiguous partial sensing window in logical slot units is 31.

***sl-DefaultCBR-PartialSensing***

Indicates default value of SL CBR measurement for a UE that is configured to perform partial sensing by its higher layer (including when SL DRX is configured) if the number of SL RSSI measurement slots over CBR measurement window is below *sl-MinNumRssiMeasurementSlots*, (see TS 38.214 [19], clause 8.1.6). Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.

***sl-DefaultCBR-RandomSelection***

Indicates default value of CBR measurement for a UE that performs random resource selection if no SL CBR measurement result over SL CBR measurement window, (see TS 38.214 [19], clause 8.1.6). Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.

***sl-MinNumCandidateSlotsAperiodic***

Indicates the minimum number of Y slots that are included in the possible candidate resources corresponding to periodic-based partial sensing and/or contiguous partial sensing for resource (re)selection triggered by aperiodic transmission. (see TS 38.214 [19], clause 8.1.4).

***sl-MinNumCandidateSlotsPeriodic***

Indicates the minimum number of Y slots that are included in the possible candidate resources corresponding to periodic-based partial sensing for resource (re)selection triggered by periodic transmission. (see TS 38.214 [19], clause 8.1.4).

***sl-MinNumRssiMeasurementSlots***

Indicates a threshold for a minimum number of SL RSSI measurement slots over CBR measurement window for which the SL RSSI is measured for a UE that is configured to perform partial sensing by its higher layer (including when SL DRX is configured). (see TS 38.214 [19], clause 8.1.6).

***sl-PartialSensingInactiveTime***

Indicates whether or not UE is required to perform SL reception of PSCCH and RSRP measurement for partial sensing on slots in SL DRX inactive time when partial sensing is configured by its higher layer. (see TS 38.214 [19], clause 8.1.4).

***sl-PBPS-OccasionReservePeriodList***

Indicates the subset of periodicity values from *sl-ResourceReservePeriodList* used to determine periodic sensing occasions in periodic-based partial sensing, by means of an index to the corresponding entry in *sl-ResourceReservePeriodList-r16*. If not configured, all periodicity values from *sl-ResourceReservePeriodList* are used to determine periodic sensing occasions in periodic-based partial sensing (see TS 38.214 [19], clause 8.1.4).

## – *SL-PDCP-Config*

The IE *SL-PDCP-Config* is used to set the configurable PDCP parameters for a sidelink radio bearer.

### ***SL-PDCP-Config* information element**

```
-- ASN1START
-- TAG-SL-PDCP-CONFIG-START

SL-PDCP-Config-r16 ::= SEQUENCE {
    sl-DiscardTimer-r16      ENUMERATED {ms3, ms10, ms20, ms25, ms30, ms40, ms50, ms60, ms75, ms100, ms150, ms200,
                                     ms250, ms300, ms500, ms750, ms1500, infinity} OPTIONAL, -- Cond Setup
    sl-PDCP-SN-Size-r16     ENUMERATED {len12bits, len18bits}          OPTIONAL, -- Cond Setup2
    sl-OutOfOrderDelivery   ENUMERATED { true }                      OPTIONAL, -- Need R
    ...
}

-- TAG-SL-PDCP-CONFIG-STOP
-- ASN1STOP
```

#### ***SL-PDCP-Config* field descriptions**

<b><i>sl-DiscardTimer</i></b>
Value in ms of <i>discardTimer</i> specified in TS 38.323 [5]. Value <i>ms50</i> corresponds to 50 ms, value <i>ms100</i> corresponds to 100 ms and so on.
<b><i>sl-OutOfOrderDelivery</i></b>
Indicates whether or not <i>outOfOrderDelivery</i> specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the radio bearer is established.
<b><i>sl-PDCP-SN-Size</i></b>
PDCP sequence number size for unicast NR sidelink communication, 12 or 18 bits, as specified in TS 38.323 [5]. For groupcast and broadcast NR sidelink communication, only 12 bits is applicable, as specified in 9.1.1.5.

Conditional Presence	Explanation
<i>Setup</i>	The field is mandatory present in case of sidelink DRB setup via dedicated signaling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M.
<i>Setup2</i>	The field is mandatory present in case of sidelink DRB setup via dedicated signaling and in case of sidelink DRB configuration via system information and pre-configuration for RLC-AM and RLC-UM for unicast NR sidelink communication; otherwise the field is not present, Need M.

## - *SL-PosBWP-ConfigCommon*

The IE *SL-PosBWP-ConfigCommon* is used to configure the cell-specific configuration for sidelink positioning on one particular sidelink bandwidth part.

### ***SL-PosBWP-ConfigCommon* information element**

```
-- ASN1START
```

```

-- TAG-SL-POSBWP-CONFIGCOMMON
SL-PosBWP-ConfigCommon-r18 ::=          SEQUENCE {
    sl-BWP-Generic-r18                  SL-BWP-Generic-r16          OPTIONAL, -- Need R
    sl-BWP-PRS-PoolConfigCommon-r18    SL-BWP-PRS-PoolConfigCommon-r18  OPTIONAL, -- Need R
    ...
}
-- TAG- SL-POSBWP-CONFIGCOMMON
-- ASN1STOP

```

### **SL-PosBWP-ConfigCommon field descriptions**

#### **sl-BWP-Generic**

This field indicates the generic parameters on the configured sidelink BWP.

## – SL-PRS-ResourcePool

The IE *SL-PRS-ResourcePool* specifies the configuration information for NR sidelink PRS dedicated resource pool.

### **SL-PRS-ResourcePool information element**

```

-- ASN1START
-- TAG-SL-PRS-RESOURCEPOOL-START
SL-PRS-ResourcePool-r18 ::=          SEQUENCE {
    sl-PRS-PSCCH-Config-r18           SetupRelease { SL-PSCCH-ConfigDedicatedSL-PRS-RP-r18}  OPTIONAL, -- Need M

### SL-PRS-ResourcePool field descriptions

<p><b>sl-CBR-ConfigIndexDedicatedSL-PRS-RP</b> Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in <i>sl-CBR-RangeDedicatedSL-PRS-RP-List</i>.</p>
<p><b>sl-CBR-PriorityTxConfigDedicatedSL-PRS-RP-List</b> Indicates the mapping between SL-PRS transmission parameter (such as transmission power, etc.) sets by using the indexes of the configurations in <i>sl-CBR-SL-PRS-TxConfigList</i>, CBR ranges by using the indexes to the entry of the CBR range configurations in <i>sl-CBR-SL-PRS-RangeDedicatedSL-PRS-RP-List</i>, and priority ranges. It also indicates the default SL-PRS transmission parameters to be used when CBR measurement results are not available.</p>
<p><b>sl-DefaultTxConfigIndexDedicatedSL-PRS-RP</b> Indicates the SL PRS transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in <i>sl-PRS-TxConfigIndexList</i>. Value 0 indicates the first entry in <i>sl-PRS-TxConfigIndexList</i>. The field is ignored if the UE has available CBR measurement results.</p>
<p><b>sl-FilterCoefficient</b> This field indicates the filtering coefficient for long-term measurement and reference signal power derivation used for sidelink open-loop power control.</p>
<p><b>sl-MaxNumPerReserveDedicatedSL-PRS-RP</b> Indicates the maximum number of SL PRS reservations that can be indicated by an SCI.</p>
<p><b>sl-NumReservedBitsSCI1B-DedicatedSL-PRS-RP</b> Indicates the number of reserved bits in SCI format 1-B.</p>
<p><b>sl-NumSubchannelDedicatedSL-PRS-RP</b> Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only.</p>
<p><b>sl-PosAllowedResourceSelectionConfig</b> Indicates allowed resource allocation method configured per resource pool. C1: only sensing allowed c2: only random resource selection allowed c3: sensing and random resource selection allowed</p>
<p><b>sl-PreemptionEnableDedicatedSL-PRS-RP</b> Indicates whether pre-emption is disabled or enabled in a resource pool. If the field is present and the value is <i>p1</i>, <i>p2</i>, and so on (but not <i>enabled</i>), it means that pre-emption is enabled and a priority level <i>p_preemption</i> is configured. If the field is present and the value is <i>enabled</i>, the pre-emption is enabled (but <i>p_preemption</i> is not configured) and pre-emption is applicable to all levels.</p>
<p><b>sl-PriorityThreshold</b> Indicates the threshold used to determine whether NR sidelink transmission in dedicated SL PRS resource pool is prioritized over uplink transmission of priority index 0 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 0 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.</p>
<p><b>sl-PriorityThresholdDedicatedSL-PRS-RP</b> Indicates the upper bound of priority range which is associated with the configurations in <i>sl-CBR-ConfigIndexDedicatedSL-PRS-RP</i> and in <i>sl-PRS-TxConfigIndexList</i>. The upper bounds of the priority ranges are configured in ascending order for consecutive entries of <i>SL-PriorityTxConfigIndexDedicatedSL-PRS-RP</i> in <i>sl-CBR-PriorityTxConfigDedicatedSL-PRS-RP-List</i>. For the first entry of <i>sl-PriorityThreshold-DedicatedSL-PRS-RP</i>, the lower bound of the priority range is 1.</p>
<p><b>sl-PriorityThreshold-UL-URLLC</b></p>

Indicates the threshold used to determine whether NR sidelink transmission in dedicated SL PRS resource pool is prioritized over uplink transmission of priority index 1 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 1 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
<b>sl-PRS-ResourceReservePeriodList</b> Indicates set of possible resource reservation period in the unit of ms allowed in the resource pool. Up to 16 values can be configured per resource pool. The value <i>ms0</i> is always configured.
<b>sl-PRS-ResourcesDedicatedSL-PRS-RP</b> Indicates SL PRS resources in a slot of dedicated SL PRS resource pool as defined in TS 38.211 [16].
<b>sl-PRS-TxConfigIndex</b> Indicates SL PRS transmission Configuration index.
<b>sl-PRS-TxConfigIndexList</b> Indicates List of <i>sl-PRS-Tx-ConfigIndex</i> indicating the SL PRS transmission index
<b>sl-RB-Number</b> Indicates the number of PRBs in the corresponding SL PRS dedicated resource pool, which consists of contiguous PRBs only.
<b>sl-SCI-basedSL-PRS-TxTriggerSCI1-B</b> Indicates presence of a bit-field in SCI format 1-B to trigger SL-PRS transmission by a receiving UE.
<b>sl-SelectionWindowListDedicatedSL-PRS-RP</b> Parameter that determines the end of the selection window in the resource selection for a SL-PRS with respect to priority indicated in SCI. Value <i>n1</i> corresponds to $1 \cdot 2^\mu$ , value <i>n5</i> corresponds to $5 \cdot 2^\mu$ , and so on, where $\mu = 0,1,2,3$ refers to SCS 15,30,60,120 kHz respectively.
<b>sl-SensingWindowDedicated-SL-PRS-RP</b> Indicates Parameter that indicates the start of the sensing window for SL PRS in a dedicated resource pool.
<b>sl-SRC-ID-LenDedicatedSL-PRS-RP</b> Indicates the number of bits used for the source ID in SCI format 1-B.
<b>sl-StartRB-Subchannel-DedicatedSL-PRS-RP</b> Indicates the lowest RB index of the SL PRS dedicated resource pool with respect to the lowest RB index of a SL BWP.
<b>sl-SubchannelSizeDedicatedSL-PRS-RP</b> Indicates size of a subchannel for PSCCH in number of RBs.
<b>sl-Thres-RSRP-ListDedicatedSL-PRS-RP</b> Indicates a list of 64 thresholds, the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted.
<b>sl-ThreshS-RSSI-PRS-CBR</b> Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the SL-PRS CBR measurement in a dedicated SL-PRS resource pool. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value <i>n</i> to $(-112 + n \cdot 2)$ dBm, and so on.
<b>sl-TimeResource</b> This field indicates the bitmap of the SL PRS dedicated resource pool, which is defined by repeating the bitmap with a periodicity during a SFN or DFN cycle.
<b>sl-TimeWindowSizeCBR-DedicatedSL-PRS-RP</b> Indicates the time window size for CBR measurement in a dedicated SL-PRS resource pool.
<b>sl-TimeWindowSizeCR-DedicatedSL-PRS-RP</b> Indicates the time window size for CR evaluation in a dedicated SL-PRS resource pool.
<b>sl-TxPercentageDedicatedSL-PRS-RP-List</b> Indicates List of minimum Tx percentage (list per priority)

<b><i>SL-PRS-PSCCH-Config</i> field descriptions</b>
<b><i>sl-DMRS-ScrambleID-DedicatedSL-PRS-RP</i></b> Indicates the initialization value for PSCCH DMRS scrambling in a dedicated SL PRS resource pool.
<b><i>sl-FreqResourcePSCCH-DedicatedSL-PRS-RP</i></b> Indicates the number of PRBs for PSCCH in a dedicated SL PRS resource pool.
<b><i>sl-TimeResourcePSCCH-DedicatedSL-PRS-RP</i></b> Indicates the number of symbols for PSCCH in a dedicated SL PRS resource pool.

<b><i>SL-PRS-PowerControl</i> field descriptions</b>
<b><i>dl-P0-SL-PRS</i></b> Indicates P0 value for DL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool.
<b><i>dl-AlphaSL-PRS</i></b> Indicates alpha value for DL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool.
<b><i>sl-P0-SL-PRS</i></b> Indicates P0 value for SL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool.
<b><i>sl-AlphaSL-PRS</i></b> Indicates alpha value for downlink pathloss based power control for PSCCH/PSSCH when <i>dl-P0-PSSCH-PSCCH</i> is configured. When the field is absent the UE applies the value 1.

## – *SL-PSBCH-Config*

The IE *SL-PSBCH-Config* indicates PSBCH transmission parameters on each sidelink bandwidth part.

### ***SL-PSBCH-Config* information element**

```
-- ASN1START
-- TAG-SL-PSBCH-CONFIG-START

SL-PSBCH-Config-r16 ::= SEQUENCE {
    dl-P0-PSBCH-r16          INTEGER (-16..15)                OPTIONAL,    -- Need M
    dl-Alpha-PSBCH-r16      ENUMERATED {alpha0, alpha04, alpha05, alpha06, alpha07, alpha08, alpha09, alpha1} OPTIONAL,    -- Need M
    ...,
    [[
    dl-P0-PSBCH-r17          INTEGER (-202..24)                OPTIONAL    -- Need M
    ]]
}

-- TAG-SL-PSBCH-CONFIG-STOP
-- ASN1STOP
```

**SL-PSBCH-Config field descriptions****dl-Alpha-PSBCH**

Indicates alpha value for DL pathloss based power control for PSBCH. When the field is not configured the UE applies the value 1.

**dl-P0-PSBCH**

Indicates P0 value for DL pathloss based power control for PSBCH. If not configured, DL pathloss based power control is disabled for PSBCH. When *dl-P0-PSBCH-r17* is configured, the UE ignores *dl-P0-PSBCH-r16*.

A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSBCH when *dl-P0-PSBCH* is configured.

– **SL-PSSCH-TxConfigList**

The IE *SL-PSSCH-TxConfigList* indicates PSSCH transmission parameters. When lower layers select parameters from the range indicated in IE *SL-PSSCH-TxConfigList*, the UE considers both configurations in IE *SL-PSSCH-TxConfigList* and the CBR-dependent configurations represented in IE *SL-CBR-PriorityTxConfigList*. Only one IE *SL-PSSCH-TxConfig* is provided per *SL-TypeTxSync*.

**SL-PSSCH-TxConfigList information element**

```
-- ASN1START
-- TAG-SL-PSSCH-TXCONFIGLIST-START

SL-PSSCH-TxConfigList-r16 ::= SEQUENCE (SIZE (1..maxPSSCH-TxConfig-r16)) OF SL-PSSCH-TxConfig-r16

SL-PSSCH-TxConfig-r16 ::= SEQUENCE {
    sl-TypeTxSync-r16          SL-TypeTxSync-r16          OPTIONAL,    -- Need R
    sl-ThresUE-Speed-r16      ENUMERATED {kmph60, kmph80, kmph100, kmph120,
                                             kmph140, kmph160, kmph180, kmph200},
    sl-ParametersAboveThres-r16 SL-PSSCH-TxParameters-r16,
    sl-ParametersBelowThres-r16 SL-PSSCH-TxParameters-r16,
    ...,
    [[
    sl-ParametersAboveThres-v1650 SL-MinMaxMCS-List-r16      OPTIONAL,    -- Need R
    sl-ParametersBelowThres-v1650 SL-MinMaxMCS-List-r16      OPTIONAL,    -- Need R
    ]]
}

SL-PSSCH-TxParameters-r16 ::= SEQUENCE {
    sl-MinMCS-PSSCH-r16        INTEGER (0..27),
    sl-MaxMCS-PSSCH-r16        INTEGER (0..31),

}

-- TAG-SL-PSSCH-TXCONFIGLIST-STOP
-- ASN1STOP
```

<b>SL-PSSCH-TxConfigList field descriptions</b>
<b>sl-MaxTxTransNumPSSCH</b> Indicates the maximum transmission number (including new transmission and retransmission) for PSSCH.
<b>sl-MaxTxPower</b> This field indicates the maximum transmission power for transmission on PSSCH and PSCCH.
<b>sl-MinMCS-PSSCH, sl-MaxMCS-PSSCH</b> This field indicates the minimum and maximum MCS values used for transmissions on PSSCH. The UE shall ignore the minimum and maximum MCS values used for the associated MCS table(s) in <i>sl-ParametersAboveThres-r16</i> and <i>sl-ParametersBelowThres-r16</i> if <i>sl-ParametersAboveThres-v1650</i> and <i>sl-ParametersBelowThres-v1650</i> are present, respectively.
<b>sl-MinSubChannelNumPSSCH, sl-MaxSubChannelNumPSSCH</b> This field indicates the minimum and maximum number of sub-channels which may be used for transmissions on PSSCH.
<b>sl-TypeTxSync</b> This field indicates the synchronization reference type. For configurations by the eNB/gNB, only <i>gnbEnb</i> can be configured; and for pre-configuration or when this field is absent, the configuration is applicable for all synchronization reference types.
<b>sl-ThresUE-Speed</b> This field indicates a UE absolute speed threshold.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>CBR</i>	The field is optionally present, Need R, when the IE <i>SL-PSSCH-TxParameters</i> is present in <i>SL-CBR-CommonTxConfigList</i> , <i>SL-UE-SelectedConfig</i> , <i>SIB12</i> or <i>SidelinkPreconfigNR</i> ; otherwise the field is not present, need R.

## – *SL-QoS-FlowIdentity*

The IE *SL-QoS-FlowIdentity* is used to identify a sidelink QoS flow.

### ***SL-QoS-FlowIdentity* information element**

```
-- ASN1START
-- TAG-SL-QOS-FLOWIDENTITY-START

SL-QoS-FlowIdentity-r16 ::=
    INTEGER (1..maxNrofSL-QFIs-r16)

-- TAG-SL-QOS-FLOWIDENTITY-STOP
-- ASN1STOP
```

## – *SL-QoS-Profile*

The IE *SL-QoS-Profile* is used to give the QoS parameters for a sidelink QoS flow. Need codes or conditions specified for *SL-QoS-Profile* do not apply, in case *SL-QoS-Profile* is included in *SidelinkUEInformationNR*.

### ***SL-QoS-Profile* information element**

```
-- ASN1START
```

```

-- TAG-SL-QOS-PROFILE-START

SL-QoS-Profile-r16 ::=          SEQUENCE {

        sl-AveragingWindow-r16    INTEGER (0..4095)             OPTIONAL, -- Need R
        sl-MaxDataBurstVolume-r16 INTEGER (0..4095)             OPTIONAL, -- Need R
        ...
    }
}

-- TAG-SL-QOS-PROFILE-STOP
-- ASN1STOP

```

#### **SL-QoS-Profile field descriptions**

**sl-GFBR**

Indicate the guaranteed bit rate for a GBR QoS flow. The unit is: Kbit/s

**sl-MFBR**

Indicate the maximum bit rate for a GBR QoS flow. The unit is: Kbit/s

**sl-PQI**

This field indicates either the PQI for standardized PQI or non-standardized QoS parameters.

**sl-Range**

This field indicates the range parameter of the QoS flow, as defined in clause 5.4.1.1.1, TS 23.287 [55]. It is present only for groupcast. The unit is meter.

<b>SL-PQI field descriptions</b>
<b>sl-AveragingWindow</b> Indicates the Averaging Window for a QoS flow, and applies to GBR QoS flows only. Unit: ms. The default value of the IE is 2000ms.
<b>sl-MaxDataBurstVolume</b> Indicates the Maximum Data Burst Volume for a QoS flow, and applies to delay critical GBR QoS flows only. Unit: byte.
<b>sl-PacketDelayBudget</b> Indicates the Packet Delay Budget for a QoS flow. Upper bound value for the delay that a packet may experience expressed in unit of 0.5ms.
<b>sl-PacketErrorRate</b> Indicates the Packet Error Rate for a QoS flow. The packet error rate is expressed as Scalar x 10-k where k is the Exponent.
<b>sl-PriorityLevel</b> Indicates the Priority Level for a QoS flow. Values ordered in decreasing order of priority, i.e. with 1 as the highest priority and 8 as the lowest priority.
<b>sl-StandardizedPQI</b> Indicate the PQI for standardized PQI.

## – *SL-QuantityConfig*

The IE *SL-QuantityConfig* specifies the layer 3 filtering coefficients for NR SL RSRP measurement for a destination.

### **SL-QuantityConfig information element**

```
-- ASN1START
-- TAG-SL-QUANTITYCONFIG-START

SL-QuantityConfig-r16 ::=
    sl-FilterCoefficientDMRS-r16          SEQUENCE {
        FilterCoefficient                DEFAULT fc4,
        ...
    }

-- TAG-SL-QuantityConfig-STOP
-- ASN1STOP
```

<b>SL-QuantityConfig field descriptions</b>
<b>sl-FilterCoefficientDMRS</b> DMRS based L3 filter configuration: Specifies L3 filter configuration for sidelink RSRP measurement result from the L1 filter(s), as defined in TS 38.215 [9].

## – *SL-RadioBearerConfig*

The IE *SL-RadioBearerConfig* specifies the sidelink DRB configuration information for NR sidelink communication.

### **SL-RadioBearerConfig information element**

```
-- ASN1START
```

```

-- TAG-SL-RADIOBEARERCONFIG-START

SL-RadioBearerConfig-r16 ::= SEQUENCE {
  slrb-Uu-ConfigIndex-r16 SLRB-Uu-ConfigIndex-r16,
  sl-SDAP-Config-r16 SL-SDAP-Config-r16 OPTIONAL, -- Cond SLRBSetup
  sl-PDCP-Config-r16 SL-PDCP-Config-r16 OPTIONAL, -- Cond SLRBSetup
  sl-TransRange-r16 ENUMERATED {m20, m50, m80, m100, m120, m150, m180, m200, m220, m250, m270, m300, m350, m370,
  m400, m420, m450, m480, m500, m550, m600, m700, m1000, spare9, spare8, spare7, spare6,
  spare5, spare4, spare3, spare2, spare1} OPTIONAL, -- Need R
  ...
}

-- TAG-SL-RADIOBEARERCONFIG-STOP
-- ASN1STOP

```

<b>SL-RadioBearerConfig field descriptions</b>	
<b>sl-PDCP-Config</b>	This field indicates the PDCP parameters for the sidelink DRB.
<b>sl-SDAP-Config</b>	This field indicates how to map sidelink QoS flows to sidelink DRB.
<b>slrb-Uu-ConfigIndex</b>	This field indicates the index of sidelink DRB configuration.
<b>sl-TransRange</b>	This field indicates the transmission range of the sidelink DRB. The unit is meter.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SLRBSetup</i>	The field is mandatory present in case of sidelink DRB setup via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M.

– **SL-RBSetConfig**

The IE SL-RBSetConfig specifies the configuration information for RB set for NR Sidelink Communication.

**SL-RBSetConfig information element**

```

-- ASN1START
-- TAG-SL-RBSETCONFIG-START

SL-RBSetConfig-r18 ::= SEQUENCE {
  sl-RBSetIndex-r18 INTEGER (0..4),
  sl-NumOfSSSBRepetition-r18 INTEGER (2..9) OPTIONAL, -- Need R
  sl-GapBetweenSSSBRepetition-r18 INTEGER (1..84) OPTIONAL, -- Need R
}

-- TAG-SL-RBSETCONFIG-STOP
-- ASN1STOP

```

<i>SL-RBSetConfig</i> field descriptions
<p><b><i>sl-GapBetweenSSSBRepetition</i></b> Indicate the gap between two adjacent S-SSB repetitions in frequency domain in one RB set, and the gap is between the lowest subcarrier of the upper PSBCH and the highest subcarrier of the lower PSBCH. The Unit is PRB.</p>
<p><b><i>sl-NumOfSSSBRepetition</i></b> Indicate the number of S-SSB repetitions in frequency domain in one RB set. S-SSB in the frequency domain indicated by <i>sl-AbsoluteFrequencySSB</i> (i.e. S-SSB transmission without repetition) is applicable in region with no OCB requirement, or with OCB exemption.</p>
<p><b><i>sl-RBSetIndex</i></b> Indicates the index of RB-set for which the configuration applies.</p>

## – *SL-RelayIndicationMP*

The IE *SL-RelayIndicationMP* is used to indicate the L2 U2N Relay UE supporting RRC connection establishment/resume for MP operation triggered by receiving *RemoteUEInformationSidelink* containing the *connectionForMP* as specified in 5.3.3.1a and 5.3.13.1a in Rel-18.

### ***SL-RelayIndicationMP* information element**

```
-- ASN1START
-- TAG-SL-RELAYINDICATIONMP-START

SL-RelayIndicationMP-r18 ::= ENUMERATED {support}

-- TAG-SL-RELAYINDICATIONMP-STOP
-- ASN1STOP
```

## – *SL-RelayUE-Config*

The IE *SL-RelayUE-Config* specifies the configuration information for NR sidelink U2N Relay UE.

### ***SL-RelayUE-Config* information element**

```
-- ASN1START
-- TAG-SL-RELAYUE-CONFIG-START

SL-RelayUE-Config-r17 ::= SEQUENCE {
    threshHighRelay-r17          RSRP-Range          OPTIONAL,  -- Need R
    threshLowRelay-r17          RSRP-Range          OPTIONAL,  -- Need R
    hystMaxRelay-r17            Hysteresis            OPTIONAL,  -- Cond ThreshHighRelay
    hystMinRelay-r17            Hysteresis            OPTIONAL,  -- Cond ThreshLowRelay
}

-- TAG-SL-RELAYUE-CONFIG-STOP
-- ASN1STOP
```

**SL-RelayUE-Config field descriptions****threshHighRelay**

Indicates the upper threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N relay UE operation.

**threshLowRelay**

Indicates the lower threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N relay UE operation.

Conditional Presence	Explanation
<i>ThreshHighRelay</i>	This field is mandatory present if threshHighRelay is included. Otherwise, the field is absent, Need R.
<i>ThreshLowRelay</i>	This field is mandatory present if threshLowRelay is included. Otherwise, the field is absent, Need R.

– **SL-RelayUE-ConfigU2U**

The IE *SL-RelayUE-ConfigU2U* specifies the threshold configuration information for NR sidelink U2U Relay UE.

**SL-RelayUE-ConfigU2U information element**

```

-- ASN1START
-- TAG-SL-RELAYUE-CONFIGU2U-START

SL-RelayUE-ConfigU2U-r18 ::=
    SEQUENCE {
        sl-RSRP-Thresh-DiscConfig-r18          SL-RSRP-Range-r16          OPTIONAL, -- Need R
        sd-RSRP-ThreshDiscConfig-r18          SL-RSRP-Range-r16          OPTIONAL, -- Need R
        sd-hystMaxRelay-r18                    Hysteresis                  OPTIONAL, -- Cond SD-RSRP-ThreshRelay
    }

SL-RelayUE-ConfigU2U-v1840 ::=
    SEQUENCE {
        sl-FilterCoefficientU2U-r18            FilterCoefficient           OPTIONAL, -- Need R
        sd-FilterCoefficientU2U-r18            FilterCoefficient           OPTIONAL, -- Need R
        ...
    }

-- TAG-SL-RELAYUE-CONFIGU2U-STOP
-- ASN1STOP

```

<b>SL-RelayUE-ConfigU2U field descriptions</b>	
<b>sd-FilterCoefficientU2U</b>	Specifies L3 filter coefficient for SD-RSRP measurement results from L1 filter, and for SL-RSRP measurements.
<b>sd-RSRP-ThreshDiscConfig</b>	Indicates the threshold of SD-RSRP for a U2U Relay UE to evaluate AS layer conditions for discovery. The U2U relay UE applies the value of this field to evaluate AS layer conditions to decide which UE(s) can be announced as proximity UE(s) in the discovery message when performing U2U Relay Discovery with Model A, and decide whether to forward the discovery message when performing the U2U Relay Discovery with Model B or U2U relay communication with integrated Discovery as specified in TS 23.304 [65].
<b>sl-FilterCoefficientU2U</b>	Specifies L3 filter coefficient for SL-RSRP measurement results from L1 filter.
<b>sl-RSRP-Thresh-DiscConfig</b>	Indicates the threshold of SL-RSRP for a U2U Relay UE to evaluate AS layer conditions for discovery. The U2U relay UE applies the value of this field to decide which UE(s) can be announced as proximity UE(s) in the discovery message when performing U2U Relay Discovery with Model A.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SD-RSRP-ThreshRelay</i>	This field is mandatory present if <i>sd-RSRP-ThreshDiscConfig</i> is included. Otherwise, the field is absent, Need R.

## – *SL-RemoteUE-Config*

The IE *SL-RemoteUE-Config* specifies the configuration information for NR sidelink U2N Remote UE.

### **SL-RemoteUE-Config information element**

```

-- ASN1START

```

<i>SL-RemoteUE-Config</i> field descriptions
<b><i>sl-ReselectionConfig</i></b> Includes the parameters used by the U2N remote UE when selecting/ reselecting a U2N relay UE.
<b><i>threshHighRemote</i></b> Indicates the threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N remote UE operation.

<i>SL-ReselectionConfig</i> field descriptions
<b><i>sl-FilterCoefficientRSRP</i></b> Specifies L3 filter coefficient for SL communication/ discovery RSRP measurement results from L1 filter.
<b><i>sl-RSRP-Thresh</i></b> Indicates the threshold of SL communication/ discovery RSRP for a U2N remote UE to perform relay UE selection/ reselection.

Conditional Presence	Explanation
<i>SL-RSRP-Thresh</i>	This field is mandatory present if <i>sl-RSRP-Thresh</i> is included. Otherwise, the field is absent, Need R.
<i>ThreshHighRemote</i>	This field is mandatory present if <i>threshHighRemote</i> is included. Otherwise, the field is absent, Need R.

## – *SL-RemoteUE-ConfigU2U*

The IE *SL-RemoteUE-ConfigU2U* specifies the threshold configuration information for NR sidelink U2U Remote UE.

### *SL-RemoteUE-ConfigU2U* information element

```

-- ASN1START
-- TAG-SL-REMOTEUE-CONFIGU2U-START

SL-RemoteUE-ConfigU2U-r18 ::=
SEQUENCE {
    sl-RSRP-ThreshU2U-r18          SL-RSRP-Range-r16          OPTIONAL,    -- Need R

-- TAG-SL-REMOTEUE-CONFIGU2U-STOP
-- ASN1STOP

```

<b>SL-RemoteUE-ConfigU2U field descriptions</b>
<p><b>sl-FilterCoefficientU2U</b> Specifies L3 filter coefficient for SL-RSRP measurement results from L1 filter.</p>
<p><b>sl-RSRP-ThreshU2U</b> Indicates the threshold of SL-RSRP for a U2U Remote UE to perform Relay UE selection/ reselection. The U2U remote UE applies the value of this field to evaluate AS layer conditions on direct PC5 link with the peer U2U Remote UE to trigger relay selection, and evaluate AS layer conditions on U2U relay link with U2U Relay UE to trigger relay reselection.</p>
<p><b>sd-RSRP-ThreshU2U</b> Indicates the threshold of SD-RSRP for a U2U Remote UE to perform discovery and Relay UE selection/ reselection. For discovery, the U2U Remote UE applies the value of this field to evaluate AS layer conditions to decide whether to respond the discovery message when performing the U2U Relay Discovery with Model B as specified in TS 23.304 [65]. For relay selection and reselection, the U2U remote UE applies the value of this field to evaluate AS layer conditions on direct PC5 link to trigger relay selection, and evaluate AS layer conditions on U2U relay link to trigger relay reselection. The target U2U remote UE applies the value of this field to evaluate AS layer conditions trigger relay selection when performing U2U relay communication with integrated Discovery as specified in TS 23.304 [65].</p>
<p><b>sd-FilterCoefficientU2U</b> Specifies L3 filter coefficient for SD-RSRP measurement results from L1 filter, and for SL-RSRP measurement.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SL-RSRP-ThreshU2U</i>	This field is mandatory present if <i>sl-RSRP-ThreshU2U</i> is included. Otherwise, the field is absent, Need R.
<i>SD-RSRP-ThreshU2U</i>	This field is mandatory present if <i>sd-RSRP-ThreshU2U</i> is included. Otherwise, the field is absent, Need R.

## – *SL-ReportConfigList*

The IE *SL-ReportConfigList* concerns a list of SL measurement reporting configurations to add or modify for a destination.

### ***SL-ReportConfigList* information element**

```

-- TAG-SL-REPORTCONFIGLIST-STOP
-- ASN1STOP

```

<b><i>SL-ReportConfig</i></b> field descriptions
<b><i>sl-ReportType</i></b> Type of the configured sidelink measurement report.
<b><i>SL-EventTriggerConfig</i></b> field descriptions
<b><i>sl-EventId</i></b> Choice of sidelink measurement event triggered reporting criteria.
<b><i>sl-ReportAmount</i></b> Number of sidelink measurement reports applicable for <i>sl-EventTriggered</i> report type.
<b><i>sl-ReportInterval</i></b> Indicates the interval between periodical reports (i.e., when <i>sl-ReportAmount</i> exceeds 1) for <i>sl-EventTriggered</i> report type.
<b><i>sl-ReportOnLeave</i></b> indicates whether or not the UE shall initiate the sidelink measurement reporting procedure when the leaving condition is met for a frequency in <i>sl-FrequencyTriggeredList</i> , as specified in 5.8.10.4.1.
<b><i>sl-ReportQuantity</i></b> The sidelink measurement quantities to be included in the sidelink measurement report.
<b><i>sl-TimeToTrigger</i></b> Time during which specific criteria for the event needs to be met in order to trigger a sidelink measurement report.
<b><i>sN-Threshold</i></b> Threshold used for events S1 and S2 specified in clauses 5.8.10.4.2 and 5.8.10.4.3, respectively.
<b><i>SL-PeriodicalReportConfig</i></b> field descriptions
<b><i>sl-ReportAmount</i></b> Number of sidelink measurement reports applicable for <i>sl-Periodical</i> report type.
<b><i>sl-ReportInterval</i></b> Indicates the interval between periodical reports (i.e., when <i>sl-ReportAmount</i> exceeds 1) for <i>sl-Periodical</i> report type.
<b><i>sl-ReportQuantity</i></b> The sidelink measurement quantities to be included in the sidelink measurement report.

## – *SL-ResourcePool*

The IE *SL-ResourcePool* specifies the configuration information for NR sidelink communication resource pool.

### SL-ZoneConfigMCR field descriptions

#### **sl-TransRange**

Indicates the communication range requirement for the corresponding *sl-ZoneConfigMCR-Index*. The unit is meter.

#### **sl-ZoneConfig**

Indicates the zone configuration for the corresponding *sl-ZoneConfigMCR-Index*.

#### **sl-ZoneConfigMCR-Index**

Indicates the codepoint of the communication range requirement field in SCI.

<b>SL-ResourcePool field descriptions</b>
<p><b><i>dummy, dummy1</i></b> This field is not used in the specification. If received it shall be ignored by the UE.</p>
<p><b><i>numSym-SL-PRS-2ndStageSCI</i></b> Indicates the number symbols to be assumed for SL PRS in determining the number of coded modulation symbols for second stage SCI in a slot of a shared SL PRS resource pool.</p>
<p><b><i>sl-A2X-Service</i></b> Presence of this field indicates the resource pool is dedicated for A2X service, i.e., not to be used for other than A2X service. Value <i>brid</i> indicates the resource pool is for BRID, value <i>daa</i> indicates the resource pool is for DAA, and value <i>bridAndDAA</i> indicates the resource pool is for both BRID and DAA. If this field is absent in all the configured resource pools, the UE may choose non-dedicated resource pool for A2X service.</p>
<p><b><i>sl-Additional-MCS-Table</i></b> Indicates the MCS table(s) additionally used in the resource pool. 64QAM table is (pre-)configured as default. Zero, one or two can be additionally (pre-)configured using the 256QAM and/or low-SE MCS tables. If two MCS tables are indicated, 256QAM MCS table is the 1<sup>st</sup> table and qam64lowSE MCS table is the 2<sup>nd</sup> table as specified in TS 38.214 [19], clause 8.1.3.1.</p>
<p><b><i>sl-CPE-StartingPositionsPSCCH-PSSCH-InitiateCOT-Default</i></b> Indicates CPE starting position index for the default CPE starting position, to be used for PSCCH/PSSCH transmission when UE initiating a COT.</p>
<p><b><i>sl-CPE-StartingPositionsPSCCH-PSSCH-InitiateCOT-List</i></b> Indicates a set of selected indices that correspond to multiple candidate CPE starting positions to be used for PSCCH/PSSCH transmission when UE initiating a COT, associated per L1 priority of PSSCH.</p>
<p><b><i>sl-CPE-StartingPositionsPSCCH-PSSCH-WithinCOT-Default</i></b> Indicates CPE starting position index for the default CPE starting position, to be used by UE for PSCCH/PSSCH transmission within a COT.</p>
<p><b><i>sl-CPE-StartingPositionsPSCCH-PSSCH-WithinCOT-List</i></b> Indicates a set of one or multiple selected indices that correspond to one or multiple candidate CPE starting positions to be used by UE for PSCCH/PSSCH transmission within a COT, associated per L1 priority of PSSCH.</p>
<p><b><i>sl-CPE-StartingPositionPSFCH</i></b> Indicates CPE starting position within the GP symbol before PSFCH transmission. The value is an index of the set of all candidate CPE starting positions specified in Table 5.3.1-3 of [16, TS38.211] for Ci=1 and the corresponding SCS of the SL BWP.</p>
<p><b><i>sl-FilterCoefficient</i></b> This field indicates the filtering coefficient for long-term measurement and reference signal power derivation used for sidelink open-loop power control.</p>
<p><b><i>sl-InterUE-CoordinationConfig</i></b> Indicates the configured sidelink inter-UE coordination parameters.</p>
<p><b><i>sl-IUC-RB-SetList</i></b> The n-th value in the list indicates the set of PRBs of n-th PSFCH occasion that are actually used for inter-UE coordination information transmission and reception in Scheme 2. It shall be (pre-)configured such that N candidate PSFCH occasion(s) are associated with N different PRB sets. PRBs within intra-cell guard band are not used for PSFCH transmission. The length of this list is aligned with <i>sl-NumPSFCH-Occasions</i>. For each PSFCH occasion, the set of PRBs are indicated in the same format as in <i>sl-PSFCH-RB-Set</i>.</p>
<p><b><i>sl-NumDedicatedPRBs-ForPSFCH</i></b> Indicates the value of K3 when each PSFCH transmission occupies "1 common interlace and K3 dedicated PRB(s)" (as indicated by <i>sl-TransmissionStructureForPSFCH</i>). Value <i>prb1</i> corresponds to K3=1, value <i>prb2</i> corresponds to K3=2, and so on. UE expects the same (pre-)configured value of <i>sl-NumDedicatedPRBs-ForPSFCH</i> across all resource pools.</p>
<p><b><i>sl-NumInterlacePerSubchannel</i></b> Indicates the number of (K) interlaces per sub-channel within a resource pool. Value <i>sc1</i> corresponds to 1 interlace per sub-channel, and value <i>sc2</i> corresponds to 2 interlaces per sub-channel. The applicable values are related to the subcarrier spacing as below: For SCS = 15 kHz: K=1 or 2 For SCS = 30 kHz: K=1</p>

<b><i>sl-NumPSFCH-Occasions</i></b>
Indicates one PSCCH/PSSCH transmission has N associated candidate PSFCH occasion(s). Value <i>o1</i> corresponds to N=1, value <i>o2</i> corresponds to N=2, and so on. If the field is not configured, the UE shall use value <i>o1</i> .
<b><i>sl-NumReferencePRBs-OfInterlace</i></b>
Indicate reference number of PRBs of one interlace within 1 RB set. Value <i>prb10</i> corresponds to 10 PRBs, and value <i>prb11</i> corresponds to 11 PRBs.
<b><i>sl-NumRefSymbolLength</i></b>
Indicates a reference number of symbols for TBS determination.
<b><i>sl-NumSubchannel</i></b>
Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only.
<b><i>sl-PBPS-CPS-Config</i></b>
Indicates the allowed resource allocation schemes of full sensing only, partial sensing only, random resource selection only, or any combination(s), and the related configuration for power saving resource allocation schemes. This field is absent for <i>sl-TxPoolExceptional</i> .
<b><i>sl-PreemptionEnable</i></b>
Indicates whether pre-emption is disabled or enabled in a resource pool. If the field is present and the value is <i>p1</i> , <i>p2</i> , and so on (but not <i>enabled</i> ), it means that pre-emption is enabled and a priority level <i>p_preemption</i> is configured. If the field is present and the value is <i>enabled</i> , the pre-emption is enabled (but <i>p_preemption</i> is not configured) and pre-emption is applicable to all levels.
<b><i>sl-PriorityThreshold-UL-URLLC</i></b>
Indicates the threshold used to determine whether NR sidelink transmission is prioritized over uplink transmission of priority index 1 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 1 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
<b><i>sl-PriorityThreshold</i></b>
Indicates the threshold used to determine whether NR sidelink transmission is prioritized over uplink transmission of priority index 0 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 0 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
<b><i>sl-PRS-ResourcesSharedSL-PRS-RP</i></b>
Indicates SL PRS resources in a slot of shared SL PRS resource pool as defined in TS 38.211 [16]. The UE can use the resource pool to transmit or receive SL-PRS only if this field is present.
<b><i>sl-PSFCH-CommonInterlaceIndex</i></b>
Indicate the index of common interlace to meet OCB requirements when <i>transmissionStructureForPSFCH</i> is set to common interlace. Value 0 corresponds to interlace 0 is used as common interlace, value 1 corresponds to interlace 1 is used as common interlace and so on.
<b><i>sl-PSFCH-PowerOffset</i></b>
Indicates the power offset between Tx power on one common PRB ( <i>P_common</i> ) and Tx power on one dedicated PRB ( <i>P_dedicated</i> ) when <i>sl-TransmissionStructureForPSFCH</i> is (pre-)configured as <i>commonInterlace</i> , i.e., $P_{common} = P_{dedicated} - offset$ . UE expects the same (pre-)configured value of <i>sl-PSFCH-PowerOffset</i> across all resource pools. The unit is dB.
<b><i>sl-PSFCH-RB-SetList</i></b>
The n-th value in the list indicates the set of PRBs that are actually used for PSFCH transmission and reception of n-th PSFCH occasion of a PSCCH/PSSCH transmission. It shall be (pre-)configured such that N candidate PSFCH occasion(s) are associated with N different PRB sets. PRBs within intra-cell guard band are not used for PSFCH transmission. The length of this list is aligned with <i>sl-NumPSFCH-Occasions</i> . For each PSFCH occasion, the set of PRBs are indicated in the same format as in <i>sl-PSFCH-RB-Set</i> .
<b><i>sl-RB-Number</i></b>
Indicates the number of PRBs in the corresponding resource pool, which consists of contiguous PRBs only. The remaining RB cannot be used (See TS 38.214[19], clause 8).
<b><i>sl-RBSetIndexOfResourcePool</i></b>
For interlace RB based PSCCH/PSSCH, indicates the RB set index(s) included in the resource pool. Contiguous RB sets are (pre-)configured for a resource pool.
<b><i>sl-SCI-basedSL-PRS-TxTriggerSCI2-D</i></b>
Indicates presence of a bit-field in SCI format 2-D to trigger SL-PRS transmission by a receiving UE.
<b><i>sl-StartRB-Subchannel</i></b>
Indicates the lowest RB index of the subchannel with the lowest index in the resource pool with respect to the lowest RB index of a SL BWP.

<b><i>sl-SubchannelSize</i></b>
Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB.
<b><i>sl-SyncAllowed</i></b>
Indicates the allowed synchronization reference(s) which is (are) allowed to use the configured resource pool.
<b><i>sl-SyncConfigIndex</i></b>
Indicates the synchronisation configuration that is associated with a reception pool, by means of an index to the corresponding entry <i>SL-SyncConfigList</i> of in <i>SIB12</i> for NR sidelink communication.
<b><i>sl-TDD-Configuration</i></b>
Indicates the TDD configuration associated with the reception pool of the cell indicated by <i>sl-SyncConfigIndex</i> .
<b><i>sl-ThreshS-RSSI-CBR</i></b>
Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the CBR measurement. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value n to $(-112 + n*2)$ dBm, and so on.
<b><i>sl-TimeResource</i></b>
Indicates the bitmap of the resource pool, which is defined by repeating the bitmap with a periodicity during a SFN or DFN cycle.
<b><i>sl-TimeWindowSizeCBR</i></b>
Indicates the time window size for CBR measurement.
<b><i>sl-TimeWindowSizeCR</i></b>
Indicates the time window size for CR evaluation.
<b><i>sl-TransmissionStructureForPSFCH</i></b>
Indicate each PSFCH transmission occupies "1 common interlace and K3 dedicated PRB(s)", or "1 dedicated interlace". Value <i>commonInterlace</i> corresponds to "1 common interlace and K3 dedicated PRB(s)", and value <i>dedicatedInterlace</i> corresponds to "1 dedicated interlace". UE expects the same (pre-)configured value of <i>transmissionStructureForPSFCH</i> across all resource pools.
<b><i>sl-TxPercentageList</i></b>
Indicates the portion of candidate single-slot PSSCH resources over the total resources. Value p20 corresponds to 20%, and so on.
<b><i>sl-Type1-LBT-BlockingOption1</i></b>
Indicates UE may avoid selection of N consecutive resource(s) before a reserved resource of another UE when the L1 SL priority value for the transmission is higher than the L1 SL priority value of the reserved resource, and UE may also avoid selection of M consecutive resource(s) after a reserved resource of another UE when the transmitting symbols of the reserved resource overlap with LBT of the selected resource. The selection of the value N is up to UE implementation from {0, 1, 2}. M is determined based on UE implementation (at least including 0).
<b><i>sl-Type1-LBT-BlockingOption2</i></b>
Indicates UE may prioritize/select resource(s) in the slot(s) for transmission, if UE's transmission in slot(s) before a reserved resource is able to share its initiated COT to the reservation.
<b><i>sl-X-Overhead</i></b>
Accounts for overhead from CSI-RS, PT-RS. If the field is absent, the UE applies value <i>n0</i> (see TS 38.214 [19], clause 8.1.3.2).

#### ***SL-SyncAllowed* field descriptions**

***gnbEnb-Sync***

If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to eNB or gNB (i.e., synchronized to a reference UE which is directly synchronized to eNB or gNB).

***gnss-Sync***

If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to GNSS (i.e., synchronized to a reference UE which is directly synchronized to GNSS).

***ue-Sync***

If configured, the (pre-) configured resources can be used if the UE is synchronized to a reference UE which is not synchronized to eNB, gNB and GNSS directly or indirectly.

<b>SL-PSCCH-Config field descriptions</b>
<p><b>sl-FreqResourcePSCCH</b> Indicates the number of PRBs for PSCCH in a resource pool where it is not greater than the number PRBs of the subchannel.</p>
<p><b>sl-DMRS-ScrambleID</b> Indicates the initialization value for PSCCH DMRS scrambling.</p>
<p><b>sl-NumReservedBits</b> Indicates the number of reserved bits in first stage SCI.</p>
<p><b>sl-TimeResourcePSCCH</b> Indicates the number of symbols of PSCCH in a resource pool.</p>

<b>SL-PSSCH-Config field descriptions</b>
<p><b>sl-BetaOffsets2ndSCI</b> Indicates candidates of beta-offset values to determine the number of coded modulation symbols for second stage SCI. The value indicates the index of Table 9.3-2 of TS 38.213 [13].</p>
<p><b>sl-PSSCH-DMRS-TimePatternList</b> Indicates the set of PSSCH DMRS time domain patterns in terms of PSSCH DMRS symbols in a slot that can be used in the resource pool.</p>
<p><b>sl-Scaling</b> Indicates a scaling factor to limit the number of resource elements assigned to the second stage SCI on PSSCH. Value <math>f0p5</math> corresponds to 0.5, value <math>f0p65</math> corresponds to 0.65, and so on.</p>

<b>SL-PSFCH-Config field descriptions</b>
<p><b>sl-MinTimeGapPSFCH</b> The minimum time gap between PSFCH and the associated PSSCH in the unit of slots.</p>
<p><b>sl-NumMuxCS-Pair</b> Indicates the number of cyclic shift pairs used for a PSFCH transmission that can be multiplexed in a PRB.</p>
<p><b>sl-PSFCH-CandidateResourceType</b> Indicates the number of PSFCH resources available for multiplexing HARQ-ACK information in a PSFCH transmission (see TS 38.213 [13], clause 16.3).</p>
<p><b>sl-PSFCH-HopID</b> Scrambling ID for sequence hopping of the PSFCH used in the resource pool.</p>
<p><b>sl-PSFCH-Period</b> Indicates the period of PSFCH resource in the unit of slots within this resource pool. If set to <math>s/0</math>, no resource for PSFCH, and HARQ feedback for all transmissions in the resource pool is disabled.</p>
<p><b>sl-PSFCH-RB-Set</b> Indicates the set of PRBs that are actually used for PSFCH transmission and reception. The leftmost bit of the bitmap refers to the lowest RB index in the resource pool, and so on. Value 0 in the bitmap indicates that the corresponding PRB is not used for PSFCH transmission and reception while value 1 indicates that the corresponding PRB is used for PSFCH transmission and reception (see TS 38.213 [13]).</p>

<b>SL-PTRS-Config field descriptions</b>
<p><b>sl-PTRS-FreqDensity</b> Presence and frequency density of SL PT-RS as a function of scheduled BW. If the field is not configured, the UE uses <math>K_{PT-RS} = 2</math></p>
<p><b>sl-PTRS-TimeDensity</b> Presence and time density of SL PT-RS as a function of MCS. If the field is not configured, the UE uses <math>L_{PT-RS} = 1</math></p>
<p><b>sl-PTRS-RE-Offset</b> Indicates the subcarrier offset for SL PT-RS. If the field is not configured, the UE applies the value <i>offset00</i> (see TS 38.211 [16], clause 8.4.1.2.2).</p>

<b>SL-UE-SelectedConfigRP field descriptions</b>
<p><b>sl-CBR-PriorityTxConfigList</b> Indicates the mapping between PSSCH transmission parameter (such as MCS, PRB number, retransmission number, CR limit) sets by using the indexes of the configurations in <i>sl-CBR-PSSCH-TxConfigList</i>, CBR ranges by using the indexes of the CBR range configurations in <i>sl-CBR-RangeConfigList</i>, and priority ranges. It also indicates the default PSSCH transmission parameters to be used when CBR measurement results are not available, and MCS range for the MCS tables used in the resource pool. The field <i>sl-CBR-PriorityTxConfigList-v1650</i> is present only when <i>sl-CBR-PriorityTxConfigList-r16</i> is configured.</p>
<p><b>sl-MaxNumPerReserve</b> Indicates the maximum number of reserved PSCCH/PSSCH resources that can be indicated by an SCI.</p>
<p><b>sl-MultiReserveResource</b> Indicates if it is allowed to reserve a sidelink resource for an initial transmission of a TB by an SCI associated with a different TB, based on sensing and resource selection procedure.</p>
<p><b>sl-NRPSFCH-EUTRA-ThresRSRP-List</b> Indicates a list of 64 thresholds from which a threshold should be selected based on the priority in the decoded EUTRA SCI and the priority in the NR SCI to be transmitted. A NR SL resource is excluded if the corresponding PSFCH transmission occasions overlap with resources indicated or reserved by the decoded EUTRA SCI in time domain and EUTRA PSSCH RSRP in the associated data resource is above the threshold.</p>
<p><b>sl-NRPSSCH-EUTRA-ThresRSRP-List</b> Indicates a list of 64 thresholds, and a threshold should be selected based on the priority in the decoded EUTRA SCI and the priority in the NR SCI to be transmitted. A NR SL resource is excluded if it is indicated or reserved by the decoded EUTRA SCI and EUTRA PSSCH RSRP in the associated data resource is above the threshold. If the field is present, the UE shall perform the dynamic co-channel coexistence of LTE sidelink and NR sidelink as specified in TS 38.214; otherwise it shall not perform it.</p>
<p><b>sl-ResourceReservePeriodList</b> Set of possible resource reservation period allowed in the resource pool in the unit of ms. Up to 16 values can be configured per resource pool. The value <i>ms0</i> is always configured.</p>
<p><b>sl-RS-ForSensing</b> Indicates whether DMRS of PSCCH or PSSCH is used for L1 RSRP measurement in the sensing operation.</p>
<p><b>sl-SensingWindow</b> Parameter that indicates the start of the sensing window.</p>
<p><b>sl-SelectionWindowList</b> Parameter that determines the end of the selection window in the resource selection for a TB with respect to priority indicated in SCI. Value <math>n1</math> corresponds to <math>1 \cdot 2^\mu</math>, value <math>n5</math> corresponds to <math>5 \cdot 2^\mu</math>, and so on, where <math>\mu = 0,1,2,3</math> refers to SCS 15,30,60,120 kHz respectively.</p>
<p><b>sl-Thres-RSRP-List</b> Indicates a list of 64 thresholds, and the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted. A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH/PSCCH RSRP in the associated data resource is above a threshold.</p>

<b>SL-PowerControl field descriptions</b>
<p><b><i>sl-MaxTransPower</i></b> Indicates the maximum value of the UE's sidelink transmission power on this resource pool when the sidelink transmission is performed only on this resource pool. The unit is dBm. If the sidelink transmission is PSFCH, and multiple resource pools are used, the maximum transmission power for PSFCH is configured as sum of fields <i>sl-MaxTransPower</i> over multiple resource pools, as specified in TS 38.101-1 [15].</p>
<p><b><i>sl-Alpha-PSSCH-PSCCH</i></b> Indicates alpha value for sidelink pathloss based power control for PSCCH/PSSCH when <i>sl-P0-PSSCH-PSCCH</i> is configured. When the field is absent the UE applies the value 1.</p>
<p><b><i>sl-P0-PSSCH-PSCCH</i></b> Indicates P0 value for sidelink pathloss based power control for PSCCH/PSSCH. If not configured, sidelink pathloss based power control is disabled for PSCCH/PSSCH. When <i>sl-P0-PSSCH-PSCCH-r17</i> is configured, the UE ignores <i>sl-P0-PSSCH-PSCCH-r16</i>.</p>
<p><b><i>dl-Alpha-PSSCH-PSCCH</i></b> Indicates alpha value for downlink pathloss based power control for PSCCH/PSSCH when <i>dl-P0-PSSCH-PSCCH</i> is configured. When the field is absent the UE applies the value 1.</p>
<p><b><i>dl-P0-PSSCH-PSCCH</i></b> Indicates P0 value for downlink pathloss based power control for PSCCH/PSSCH. If not configured, downlink pathloss based power control is disabled for PSCCH/PSSCH. When <i>dl-P0-PSSCH-PSCCH-r17</i> is configured, the UE ignores <i>dl-P0-PSSCH-PSCCH-r16</i>. A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSCCH/PSSCH when <i>dl-P0-PSSCH-PSCCH</i> is configured.</p>
<p><b><i>dl-Alpha-PSFCH</i></b> Indicates alpha value for downlink pathloss based power control for PSFCH when <i>dl-P0-PSFCH</i> is configured. When the field is absent the UE applies the value 1. For resource pools configured with PSFCH resources overlapping in time, this field is either not configured in any of the resource pools or configured with the same value for all the resource pools.</p>
<p><b><i>dl-P0-PSFCH</i></b> Indicates P0 value for downlink pathloss based power control for PSFCH. If not configured, downlink pathloss based power control is disabled for PSFCH. When <i>dl-P0-PSFCH-r17</i> is configured, the UE ignores <i>dl-P0-PSFCH-r16</i>. For resource pools configured with PSFCH resources overlapping in time, this field is either not configured in any of the resource pools or configured with the same value for all the resource pools. A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSFCH when <i>dl-P0-PSFCH</i> is configured.</p>

<b>SL-MinMaxMCS-Config field descriptions</b>
<p><b><i>sl-MaxMCS-PSSCH</i></b> Indicates the maximum MCS value when using the associated MCS table. If no MCS is configured, UE autonomously selects MCS from the full range of values.</p>
<p><b><i>sl-MinMCS-PSSCH</i></b> Indicates the minimum MCS value when using the associated MCS table. If no MCS is configured, UE autonomously selects MCS from the full range of values.</p>

<b>SL-CPE-StartingPositionsPSCCH-PSSCH field descriptions</b>
<p><b><i>sl-Priority</i></b> Indicates L1 priority of PSSCH.</p>
<p><b><i>sl-CPE-StartingPositions</i></b> Indicates a set of candidate CPE starting positions specified in Table 5.3.1-3 [16, TS38.211],</p>

Conditional Presence	Explanation
A2X	The field is mandatory present in <i>sl-BWP-PoolConfigA2X</i> and <i>sl-BWP-PoolConfigCommonA2X</i> ; otherwise the field is optionally present, Need M.

## – *SL-RLC-BearerConfig*

The IE *SL-RLC-BearerConfig* specifies the SL RLC bearer configuration information for NR sidelink communication.

### *SL-RLC-BearerConfig* information element

```

-- ASN1START
-- TAG-SL-RLC-BEARERCONFIG-START

SL-RLC-BearerConfig-r16 ::=
    SL-RLC-BearerConfigIndex-r16          SEQUENCE {
        SL-RLC-BearerConfigIndex-r16,
        SL-ServedRadioBearer-r16         OPTIONAL, -- Cond LCH-SetupOnly
        SL-RLC-Config-r16                 OPTIONAL, -- Cond LCH-Setup
        SL-MAC-LogicalChannelConfig-r16   OPTIONAL, -- Cond LCH-Setup
        . . .
        [[
        SL-RLC-BearerConfigIndex-v1800    SL-RLC-BearerConfigIndex-v1800  OPTIONAL -- Need R
        ]]
    }

-- TAG-SL-RLC-BEARERCONFIG-STOP
-- ASN1STOP

```

### *SL-RLC-BearerConfig* field descriptions

#### ***sl-MAC-LogicalChannelConfig***

The field is used to configure MAC SL logical channel parameters.

#### ***sl-RLC-BearerConfigIndex***

The index of the RLC bearer configuration. If the field *sl-RLC-BearerConfigIndex-v1800* is present, the UE shall ignore the *sl-RLC-BearerConfigIndex-r16* field.

#### ***sl-RLC-Config***

Determines the RLC mode (UM, AM) and provides corresponding parameters.

#### ***sl-ServedRadioBearer***

Associates the sidelink RLC Bearer with a sidelink DRB. It indicates the index of SL radio bearer configuration, which is corresponding to the RLC bearer configuration.

Conditional Presence	Explanation
<i>LCH-Setup</i>	The field is mandatory present upon creation of a new sidelink logical channel via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, Need M.
<i>LCH-SetupOnly</i>	This field is mandatory present upon creation of a new sidelink logical channel via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration. Otherwise, it is absent, Need M.

## – *SL-RLC-BearerConfigIndex*

The IE *SL-RLC-BearerConfigIndex* is used to identify a SL RLC bearer configuration.

### ***SL-RLC-BearerConfigIndex* information element**

```
-- ASN1START
-- TAG-SL-RLC-BEARERCONFIGINDEX-START

SL-RLC-BearerConfigIndex-r16 ::=                INTEGER (1..maxSL-LCID-r16)

SL-RLC-BearerConfigIndex-v1800 ::=             INTEGER (maxSL-LCID-Plus1-r18..maxSL-LCID-r18)

-- TAG-RLC-BEARERCONFIGINDEX-STOP
-- ASN1STOP
```

## – *SL-RLC-ChannelConfig*

The IE *SL-RLC-ChannelConfig* specifies the configuration information for PC5 Relay RLC channel between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Remote UE and L2 U2U Relay UE.

### ***SL-RLC-ChannelConfig* information element**

```
-- ASN1START
-- TAG-SL-RLC-RLC-CHANNEL-CONFIG-START

SL-RLC-ChannelConfig-r17 ::=
  SEQUENCE {
    sl-RLC-ChannelID-r17          SL-RLC-ChannelID-r17,
    sl-RLC-Config-r17            SL-RLC-Config-r16          OPTIONAL, -- Need M
    sl-MAC-LogicalChannelConfig-r17 SL-LogicalChannelConfig-r16 OPTIONAL, -- Need M
    sl-PacketDelayBudget-r17     INTEGER (0..1023)           OPTIONAL, -- Need M
    ...}

-- TAG-SL-RLC-CHANNEL-CONFIG-STOP
-- ASN1STOP
```

<b><i>SL-RLC-ChannelConfig</i></b> field descriptions
<b><i>sl-MAC-LogicalChannelConfig</i></b> The field is used to configure MAC SL logical channel parameters.
<b><i>sl-RLC-ChannelID</i></b> Indicates the PC5 Relay RLC channel in the link between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Remote UE and L2 U2U Relay UE.
<b><i>sl-RLC-Config</i></b> Determines the RLC mode (UM, AM) and provides corresponding parameters.
<b><i>sl-PacketDelayBudget</i></b> Indicates the Packet Delay Budget for a PC5 Relay RLC channel used in L2 U2N relay operation. Upper bound value for the delay that a packet may experience expressed in unit of 0.5ms.

### – *SL-RLC-ChannelID*

The IE *SL-RLC-ChannelID* is used to identify a PC5 Relay RLC channel in the link between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Relay UE and L2 U2U Remote UE.

#### ***SL-RLC-ChannelID*** information element

```
-- ASN1START
-- TAG-SL-RLC-CHANNELID-START

SL-RLC-ChannelID-r17 ::=  INTEGER (1..maxSL-LCID-r16)

-- TAG-SL-RLC-CHANNELID-STOP
-- ASN1STOP
```

### – *SL-RLC-Config*

The IE *SL-RLC-Config* is used to specify the RLC configuration of sidelink DRB. RLC AM configuration is only applicable to the unicast NR sidelink communication.

#### ***SL-RLC-Config*** information element

```
-- ASN1START

<b>SL-RLC-Config field descriptions</b>
<p><b>sl-MaxRetxThreshold</b> Parameter value of <i>maxRetxThreshold</i> for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value <i>t1</i> corresponds to 1 retransmission, value <i>t2</i> corresponds to 2 retransmissions and so on.</p>
<p><b>sl-PollByte</b> Parameter value of <i>pollByte</i> for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value <i>kB25</i> corresponds to 25 kBytes, value <i>kB50</i> corresponds to 50 kBytes and so on. <i>infinity</i> corresponds to an infinite amount of kBytes.</p>
<p><b>sl-PollPDU</b> Parameter value of <i>pollPDU</i> for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value <i>p4</i> corresponds to 4 PDUs, value <i>p8</i> corresponds to 8 PDUs and so on. <i>infinity</i> corresponds to an infinite number of PDUs.</p>
<p><b>sl-SN-FieldLength</b> This field indicates the RLC SN field size for NR sidelink communication, see TS 38.322 [4]. For groupcast and broadcast, only value <i>size6</i> (6 bits) is configured for the field <i>sl-SN-FieldLengthUM</i>.</p>
<p><b>sl-T-PollRetransmit</b> Timer value of <i>t-PollRetransmit</i> for RLC AM for NR sidelink communications, see TS 38.322 [4], in milliseconds. Value <i>ms5</i> means 5 ms, value <i>ms10</i> means 10 ms and so on.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SLRBSetup</i>	The field is mandatory present in case of sidelink DRB setup via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M.

– **SL-ScheduledConfig**

The IE *SL-ScheduledConfig* specifies sidelink communication/positioning configurations used for network scheduled NR sidelink communication/positioning.

**SL-ScheduledConfig information element**

### SL-ScheduledConfig field descriptions

#### **sl-CS-RNTI**

Indicate the RNTI used to scramble CRC of DCI format 3\_0, see TS 38.321 [3].

#### **sl-DCI-ToSL-Trans**

Indicate the time gap between DCI reception and the first sidelink transmission scheduled by the DCI (see TS 38.214 [19], clause 8.1.2.1). Value 1 included in this field corresponds to 1 slot, value 2 corresponds to 2 slots and so on, based on the numerology of sidelink BWP.

#### **sl-PRS-CS-RNTI**

Indicates the RNTI used to scramble CRC of DCI format 3\_2 for configured grants.

#### **sl-PRS-RNTI**

Indicates the SL-PRS-RNTI used for monitoring the network scheduling to transmit NR sidelink positioning reference signal (i.e. the mode 1) for dynamic grants.

#### **sl-PSFCH-ToPUCCH**

For dynamic grant and configured grant type 2, this field configures the values (in number of slot lengths) of the PSFCH to PUCCH gap. The field PSFCH-to-HARQ\_feedback timing indicator in DCI format 3\_0 selects one of the configured values of the PSFCH to PUCCH gap.

#### **sl-RNTI**

Indicate the SL-RNTI used for monitoring the network scheduling to transmit NR sidelink communication (i.e. the mode 1).

**MAC-MainConfigSL field descriptions****sl-BSR-Config**

This field is to configure the sidelink buffer status report.

**sl-PrioritizationThres**

Indicates the SL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the *sl-PrioritizationThres* and the *ul-PrioritizationThres* to the UE separately.

**ul-PrioritizationThres**

Indicates the UL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the *sl-PrioritizationThres* and the *ul-PrioritizationThres* to the UE separately.

## – SL-SDAP-Config

The IE *SL-SDAP-Config* is used to set the configurable SDAP parameters for a Sidelink DRB.

**SL-SDAP-Config information element**

```

-- ASN1START
-- TAG-SL-SDAP-CONFIG-START

SL-SDAP-Config-r16 ::=
    sl-SDAP-Header-r16
    sl-DefaultRB-r16
    sl-MappedQoS-Flows-r16
        sl-MappedQoS-FlowsList-r16
        sl-MappedQoS-FlowsListDedicated-r16
    }
    sl-CastType-r16
    ...
}

SL-MappedQoS-FlowsListDedicated-r16 ::= SEQUENCE {
    sl-MappedQoS-FlowsToAddList-r16
    sl-MappedQoS-FlowsToReleaseList-r16
}

-- TAG-SL-SDAP-CONFIG-STOP
-- ASN1STOP

```

SEQUENCE {  
 ENUMERATED {present, absent},  
 BOOLEAN,  
 CHOICE {  
 SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-Profile-r16,  
 SL-MappedQoS-FlowsListDedicated-r16  
 }  
 ENUMERATED {broadcast, groupcast, unicast, spare1}  
 OPTIONAL, -- Need M  
 OPTIONAL, -- Need M

SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-FlowIdentity-r16 OPTIONAL, -- Need N  
 SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-FlowIdentity-r16 OPTIONAL -- Need N

<b>SL-SDAP-Config field descriptions</b>
<p><b>sl-DefaultRB</b> Indicates whether or not this is the default sidelink DRB for this NR sidelink communication transmission destination. Among all configured instances of <i>SL-SDAP-Config</i> for this destination, this field shall be set to <i>true</i> in at most one instance of <i>SL-SDAP-Config</i> and to <i>false</i> in all other instances.</p>
<p><b>sl-MappedQoS-Flows</b> Indicates QoS flows to be mapped to the sidelink DRB. If the field is included in dedicated signalling, it is set to <i>sl-MappedQoS-FlowsListDedicated</i>; otherwise, it is set to <i>sl-MappedQoS-FlowsList</i>.</p>
<p><b>sl-MappedQoS-FlowsList</b> Indicates the list of QoS profiles of the NR sidelink communication transmission destination mapped to this sidelink DRB.</p>
<p><b>sl-MappedQoS-FlowsToAddList</b> Indicates the list of SL QoS flows ID of the NR sidelink communication transmission destination to be additionally mapped to this sidelink DRB.</p>
<p><b>sl-MappedQoS-FlowsToReleaseList</b> Indicates the list of SL QoS flows ID of the NR sidelink communication transmission destination to be released from existing QoS flow to SLRB mapping of this sidelink DRB.</p>
<p><b>sl-SDAP-Header</b> Indicates whether or not a SDAP header is present on this sidelink DRB. The field cannot be changed after a sidelink DRB is established. This field is set to present if the field <i>sl-DefaultRB</i> is set to <i>true</i>.</p>

## – SL-ServingCellInfo

The IE *SL-ServingCellInfo* is used to indicate the L2 U2N Relay UE's PCell/camping cell, which is considered as PCell/camping cell by the L2 U2N Remote UEs connecting with this L2 U2N Relay UE.

### SL-ServingCellInfo information element

```
-- ASN1START
-- TAG-SL-SERVINGCELLINFO-START

SL-ServingCellInfo-r17 ::= SEQUENCE {
    sl-PhysCellId-r17 PhysCellId,
    sl-CarrierFreqNR-r17 ARFCN-ValueNR
}

-- TAG-SL-SERVINGCELLINFO-STOP
-- ASN1STOP
```

<b>SL-ServingCellInfo field descriptions</b>
<p><b>sl-CarrierFreqNR</b> Indicates the DL frequency of the cell indicated by <i>sl-PhysCellId</i>.</p>
<p><b>sl-PhysCellId</b> Indicates the PCI of the PCell.</p>

## – *SL-SourceIdentity*

The IE *SL-SourceIdentity* is used to identify a source of a NR sidelink communication.

### ***SL-SourceIdentity* information element**

```
-- ASN1START
-- TAG-SL-SOURCEIDENTITY-START

SL-SourceIdentity-r17 ::= BIT STRING (SIZE (24))

-- TAG-SL-SOURCEIDENTITY-STOP
-- ASN1STOP
```

## – *SL-SRAP-Config*

The IE *SL-SRAP-Config* is used to set the configurable SRAP parameters used by L2 U2N Relay UE and L2 U2N Remote UE as specified in TS 38.351 [66].

### ***SL-SRAP-Config* information element**

```
-- ASN1START
-- TAG-SL-SRAP-CONFIG-START

SL-SRAP-Config-r17 ::=
    SEQUENCE {
        sl-LocalIdentity-r17                INTEGER (0..255)                OPTIONAL, -- Need M
        sl-MappingToAddModList-r17        SEQUENCE (SIZE (1..maxLC-ID)) OF SL-MappingToAddMod-r17    OPTIONAL, -- Need N
        sl-MappingToReleaseList-r17      SEQUENCE (SIZE (1..maxLC-ID)) OF SL-RemoteUE-RB-Identity-r17    OPTIONAL, -- Need N
        ...
    }

SL-MappingToAddMod-r17 ::=
    SEQUENCE {
        sl-RemoteUE-RB-Identity-r17      SL-RemoteUE-RB-Identity-r17,
        sl-EgressRLC-ChannelUu-r17      Uu-RelayRLC-ChannelID-r17                OPTIONAL, -- Cond L2RelayUE
        sl-EgressRLC-ChannelPC5-r17     SL-RLC-ChannelID-r17                OPTIONAL, -- Need N
        ...
    }

SL-RemoteUE-RB-Identity-r17 ::=
    CHOICE {
        srb-Identity-r17                INTEGER (0..3),
        drb-Identity-r17                DRB-Identity,
        ...
    }

-- TAG-SL-SRAP-CONFIG-STOP
-- ASN1STOP
```

<b>SL-SRAP-Config field descriptions</b>
<b>sl-LocalIdentity</b> Indicates the local UE ID of the L2 U2N Remote UE used in SRAP as specified in TS 38.351 [66].
<b>sl-MappingToAddModList</b> Indicates the list of mappings between the bearer identity of the L2 U2N Remote UE and the egress RLC channel as specified in TS 38.351 [66] to be added or modified.
<b>sl-MappingToReleaseList</b> Indicates the list of mappings between the bearer identity of the L2 U2N Remote UE and the egress RLC channel as specified in TS 38.351 [66] to be released.
<b>sl-RemoteUE-RB-Identity</b> Identity of the end-to-end Uu bearer identity of the L2 U2N Remote UE. The value 3 for the field <i>srb-identity-r17</i> (i.e., for configuring SRB3) is not supported in this version of the specification.
<b>sl-EgressRLC-ChannelUu</b> Indicates the egress RLC channel on Uu Hop for uplink transmissions at the L2 U2N Relay UE.
<b>sl-EgressRLC-ChannelPC5</b> Indicates the egress RLC channel on PC5 Hop for downlink transmissions at the L2 U2N Relay UE and for uplink transmissions at the L2 U2N Remote UE.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>L2RelayUE</i>	For L2 U2N Relay UE, the field is optionally present, Need M. Otherwise, it is absent.

## – SL-SRAP-ConfigU2U

The IE *SL-SRAP-ConfigU2U* is used to set the configurable SRAP parameters used by L2 U2U Relay UE and L2 U2U Remote UE as specified in TS 38.351 [66].

### **SL-SRAP-ConfigU2U information element**

```
-- ASN1START
-- TAG-SL-SRAP-CONFIGU2U-START

SL-SRAP-ConfigU2U-r18 ::=
    sl-MappingToAddMod-U2U-List-r18
    sl-MappingToRelease-U2U-List-r18
}

SL-MappingConfig-U2U-r18 ::=

}

SEQUENCE {
    SLRB-Uu-ConfigIndex-r16,
    SL-RLC-ChannelID-r17,
    ...
}
```

<b>SL-SRAP-ConfigU2U field descriptions</b>
<b>sl-MappingToAddMod-U2U-List</b> Indicates the list of mappings between the end-to-end sidelink DRB of a given L2 U2U Remote UE and the egress PC5 Relay RLC channel used by L2 U2U Remote UE and L2 U2U Relay UE when acting as Tx UE, as specified in TS 38.351 [66] to be added or modified.
<b>sl-MappingToRelease-U2U-List</b> Indicates the list of mappings between the end-to-end sidelink DRB of a given L2 U2U Remote UE and the egress PC5 Relay RLC channel as specified in TS 38.351 [66] to be released.
<b>sl-EgressRLC-ChannelPC5</b> Indicates the egress PC5 Relay RLC channel for sidelink transmissions at the L2 U2U Relay UE and at the L2 U2U Remote UE.
<b>sl-RemoteUE-SLRB-Identity</b> Identity of the end-to-end sidelink DRB of the L2 U2U Remote UE.

## – SL-SyncConfig

The IE *SL-SyncConfig* specifies the configuration information concerning reception of synchronisation signals from neighbouring cells as well as concerning the transmission of synchronisation signals for sidelink communication.

### SL-SyncConfig information element

```

-- ASN1START
-- TAG-SL-SYNCCONFIG-START

SL-SyncConfigList-r16 ::=
    SEQUENCE (SIZE (1..maxSL-SyncConfig-r16)) OF SL-SyncConfig-r16

SL-SyncConfig-r16 ::=
    SEQUENCE {
        sl-SyncRefMinHyst-r16          ENUMERATED {dB0, dB3, dB6, dB9, dB12}          OPTIONAL, -- Need R
        sl-SyncRefDiffHyst-r16       ENUMERATED {dB0, dB3, dB6, dB9, dB12, dBinf}  OPTIONAL, -- Need R
        sl-FilterCoefficient-r16     FilterCoefficient                          OPTIONAL, -- Need R
        sl-SSB-TimeAllocation1-r16    SL-SSB-TimeAllocation-r16                OPTIONAL, -- Need R
        sl-SSB-TimeAllocation2-r16    SL-SSB-TimeAllocation-r16                OPTIONAL, -- Need R

            syncTxThreshOoC-r16       SL-RSRP-Range-r16                      OPTIONAL, -- Need R
            syncInfoReserved-r16      BIT STRING (SIZE (2))                   OPTIONAL, -- Need R
        },
        gnss-Sync-r16                 ENUMERATED {true}                        OPTIONAL, -- Need R
        ...
    }

SL-RSRP-Range-r16 ::=
    INTEGER (0..13)

SL-SSB-TimeAllocation-r16 ::=
    SEQUENCE {
        sl-NumSSB-WithinPeriod-r16   ENUMERATED {n1, n2, n4, n8, n16, n32, n64}          OPTIONAL, -- Need R
        sl-TimeOffsetSSB-r16          INTEGER (0..1279)                          OPTIONAL, -- Need R
        sl-TimeInterval-r16           INTEGER (0..639)                            OPTIONAL, -- Need R
    }

```

-- TAG-SL-SYNCCONFIG-STOP  
 -- ASN1STOP

<b>SL-SyncConfig field descriptions</b>
<p><b>gnss-Sync</b>            If configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to GNSS. If not configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to eNB/gNB.</p>
<p><b>sl-SyncRefMinHyst</b>            Hysteresis when evaluating a SyncRef UE using absolute comparison.</p>
<p><b>sl-SyncRefDiffHyst</b>            Hysteresis when evaluating a SyncRef UE using relative comparison.</p>
<p><b>sl-NumSSB-WithinPeriod</b>            Indicates the number of sidelink SSB transmissions within one sidelink SSB period. The applicable values are related to the subcarrier spacing and frequency as follows:            FR1, SCS = 15 kHz: 1            FR1, SCS = 30 kHz: 1, 2            FR1, SCS = 60 kHz: 1, 2, 4            FR2, SCS = 60 kHz: 1, 2, 4, 8, 16, 32            FR2, SCS = 120 kHz: 1, 2, 4, 8, 16, 32, 64            All values in <i>sl-NumSSB-WithinPeriod</i> in <i>sl-SSB-TimeAllocation1</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-NumSSB-WithinPeriod</i> in <i>sl-SSB-TimeAllocation2</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-NumSSB-WithinPeriod</i> in <i>sl-SSB-TimeAllocation3</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured.</p>
<p><b>sl-TimeOffsetSSB</b>            Indicates the slot offset from the start of sidelink SSB period to the first sidelink SSB. All values in <i>sl-TimeOffsetSSB</i> in <i>sl-SSB-TimeAllocation1</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeOffsetSSB</i> in <i>sl-SSB-TimeAllocation2</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeOffsetSSB</i> in <i>sl-SSB-TimeAllocation3</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured.</p>
<p><b>sl-TimeInterval</b>            Indicates the slot interval between neighboring sidelink SSBs. This value is applicable when there are more than one sidelink SSBs within one sidelink SSB period. All values in <i>sl-TimeInterval</i> in <i>sl-SSB-TimeAllocation1</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeInterval</i> in <i>sl-SSB-TimeAllocation2</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeInterval</i> in <i>sl-SSB-TimeAllocation3</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured.</p>
<p><b>sl-SSID</b>            Indicates the ID of sidelink synchronization signal associated with different synchronization priorities.</p>
<p><b>syncInfoReserved</b>            Reserved for future use.</p>
<p><b>syncTxThreshIC, syncTxThreshOoC</b>            Indicates the thresholds used while in coverage and out of coverage, respectively. Value 0 corresponds to -infinity, value 1 to -115 dBm, value 2 to -110 dBm, and so on (i.e. in steps of 5 dBm) until value 12, which corresponds to -60 dBm, while value 13 corresponds to +infinity.</p>

## – *SL-Thres-RSRP-List*

IE *SL-Thres-RSRP-List* indicates a threshold used for sensing based UE autonomous resource selection (see TS 38.215 [9]). A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH/PSCCH RSRP in the associated data resource is above the threshold defined by IE *SL-Thres-RSRP-List*. A NR sidelink resource is excluded if the corresponding PSFCH transmission occasions overlap with resources indicated or reserved by the decoded EUTRA SCI in time domain and EUTRA PSSCH RSRP in the associated data resource is above the threshold defined by IE *sl-NRPSFCH-EUTRA-ThresRSRP-List*. A NR sidelink resource is excluded if it is indicated or reserved by the decoded EUTRA SCI and EUTRA PSSCH RSRP in the associated data resource is above the threshold defined by IE *sl-NRPSSCH-EUTRA-ThresRSRP-List*. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to  $(-128 + (n-1)*2)$  dBm and so on, value 66 corresponds to infinity dBm.

### ***SL-Thres-RSRP-List* information element**

```
-- ASN1START
-- TAG-SL-THRES-RSRP-LIST-START

SL-Thres-RSRP-List-r16 ::= SEQUENCE (SIZE (64)) OF SL-Thres-RSRP-r16

SL-Thres-RSRP-r16 ::= INTEGER (0..66)

-- TAG-SL-THRES-RSRP-LIST-STOP
-- ASN1STOP
```

## – *SL-TxPower*

The IE *SL-TxPower* is used to limit the UE's sidelink transmission power on a carrier frequency. The unit is dBm. Value minusinfinity corresponds to –infinity.

### ***SL-TxPower* information element**

```
-- ASN1START
-- TAG-SL-TXPOWER-START

SL-TxPower-r16 ::= CHOICE {
    minusinfinity-r16          NULL,

-- TAG-SLRB-UU-CONFIGINDEX-STOP
-- ASN1STOP
```

## 6.3.6 MBS information elements

### – *CarrierFreqListMBS*

The IE *CarrierFreqListMBS* is used to inform network of the frequencies on which the UE is receiving or interested to receive MBS broadcast service via a broadcast MRB.

### ***CarrierFreqListMBS* information element**

```
-- ASN1START
-- TAG-CARRIERFREQLISTMBS-START

CarrierFreqListMBS-r17 ::=                SEQUENCE (SIZE (1..maxFreqMBS-r17)) OF ARFCN-ValueNR

-- TAG-CARRIERFREQLISTMBS-STOP
-- ASN1STOP
```

### – *CFR-ConfigMCCH-MTCH*

The IE *CFR-ConfigMCCH-MTCH* is used to configure the common frequency resource used for MCCH, multicast MCCH and MTCH reception.

### ***CFR-ConfigMCCH-MTCH* information element**

```
-- ASN1START
-- TAG-CFR-CONFIGMCCH-MTCH-START

CFR-ConfigMCCH-MTCH-r17 ::= SEQUENCE {
    locationAndBandwidthBroadcast-r17      LocationAndBandwidthBroadcast-r17  OPTIONAL, -- Need S
    pdsch-ConfigMCCH-r17                   PDSCH-ConfigBroadcast-r17        OPTIONAL, -- Need S
    commonControlResourceSetExt-r17        ControlResourceSet                OPTIONAL  -- Cond NotSIB1CommonControlResource
}
```

```

LocationAndBandwidthBroadcast-r17 ::= CHOICE {
    sameAsSib1ConfiguredLocationAndBW    NULL,
    locationAndBandwidth                  INTEGER (0..37949)
}

-- TAG-CFR-CONFIGMCCH-MTCH-STOP
-- ASN1STOP
    
```

**CFR-ConfigMCCH-MTCH field descriptions**

**commonControlResourceSetExt**

An additional common control resource set which may be configured and used for *searchSpaceMCCH/searchSpaceMTCH* or UE-specific search space in the BWP where *searchSpaceMCCH* is configured. It is contained in the bandwidth of the CFR for broadcast and larger than CORESET#0.

**locationAndBandwidthBroadcast**

Indicates starting PRB and the number of PRBs of CFR used for MCCH, multicast MCCH and MTCH reception.

Value *sameAsSib1ConfiguredLocationAndBW* means the CFR for broadcast or multicast has the same location and size as the *locationAndBandwidth* for initial BWP (for (e)RedCap UEs: *initialDownlinkBWP-RedCap* if it is configured and includes CD-SSB and the entire CORESET#0) configured in *SIB1*.

Value *locationAndBandwidth* is used to configure CFR with bandwidth that is larger than and fully contains the bandwidth for the initial DL BWP (for (e)RedCap UEs: *initialDownlinkBWP-RedCap* if it is configured and includes CD-SSB and the entire CORESET#0) configured in *SIB1* and CORESET#0. The value of the field shall be interpreted as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13].

This field is not included in *cf-ConfigMCCH-MTCH-RedCap* if *initialDownlinkBWP-RedCap* in *SIB1* is configured but does not include CD-SSB and the entire CORESET#0. If the field is absent, the CFR for broadcast or multicast has the same location and size as CORESET#0.

**pdsch-ConfigMCCH**

Indicates PDSCH parameters used for MCCH or multicast MCCH transmission. If the field is absent, PDSCH parameters used for MCCH or multicast MCCH are the same as those of PDSCH configuration provided in *initialDownlinkBWP* in *SIB1*.

Conditional Presence	Explanation
<i>NotSIB1CommonControlResource</i>	The field is optional present in case <i>commonControlResourceSet</i> is not configured in <i>SIB1</i> , Need R, otherwise it is absent.

– **DRX-ConfigPTM**

The IE *DRX-ConfigPTM* is used to configure DRX related parameters for PTM transmission as specified in TS 38.321 [3].

**DRX-ConfigPTM information element**

```

-- ASN1START
-- TAG-DRX-CONFIGPTM-START

DRX-ConfigPTM-r17 ::= SEQUENCE {
    drx-onDurationTimerPTM-r17 CHOICE {

  ms5120    INTEGER(0..5119),
  ms10240   INTEGER(0..10239)
},
drx-SlotOffsetPTM-r17           INTEGER (0..31)
}

-- TAG-DRX-CONFIGPTM-STOP
-- ASN1STOP

```

<b>DRX-ConfigPTM field descriptions</b>
<b>drx-HARQ-RTT-TimerDL-PTM</b> Value in number of symbols of the CFR where the transport block was received.
<b>drx-InactivityTimerPTM</b> Value in multiple integers of 1 ms. <i>ms0</i> corresponds to 0, <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on.
<b>drx-LongCycleStartOffsetPTM</b> <i>drx-LongCycle-PTM</i> in ms and <i>drx-StartOffset-PTM</i> in multiples of 1 ms.
<b>drx-onDurationTimerPTM</b> Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on.
<b>drx-RetransmissionTimerDL-PTM</b> Value in number of slot lengths of the CFR where the transport block was received. value <i>s0</i> corresponds to 0 slots, <i>s1</i> corresponds to 1 slot, <i>s2</i> corresponds to 2 slots, and so on.
<b>drx-SlotOffsetPTM</b> Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on.

<b>Conditional Presence</b>	<b>Explanation</b>
<i>HARQFeedback</i>	The field is mandatory present if HARQ feedback is enabled for a G-RNTI/G-CS-RNTI associated with this DRX configuration. It is optionally present. Need R, otherwise.

## – *MBS-NeighbourCellList*

The IE *MBS-NeighbourCellList* indicates a list of neighbour cells where ongoing MBS sessions provided via broadcast/multicast MRB in the current cell may also be provided, as indicated in the *mtch-NeighbourCell*.

### ***MBS-NeighbourCellList* information element**

```
-- ASN1START
-- TAG-MBS-NEIGHBOURCELLLIST-START

MBS-NeighbourCellList-r17 ::= SEQUENCE (SIZE (0..maxNeighCellMBS-r17)) OF MBS-NeighbourCell-r17

MBS-NeighbourCell-r17 ::= SEQUENCE {
    physCellId-r17          PhysCellId,
    carrierFreq-r17        ARFCN-ValueNR                               OPTIONAL -- Need S
}

-- TAG-MBS-NEIGHBOURCELLLIST-STOP
-- ASN1STOP
```

<b><i>MBS-NeighbourCellList</i> field descriptions</b>
<b><i>carrierFreq</i></b> Indicates the frequency of the neighbour cell indicated by <i>physCellId</i> . Absence of the IE means that the neighbour cell is on the same frequency as the current cell.

– *MBS-NonServingInfoList*

The IE *MBS-NonServingInfoList* is used to inform network of the frequencies, CFR information and subcarrier spacing for MBS broadcast reception on the non-serving cell.

***MBS-NonServingInfoList* information element**

```
-- ASN1START
-- TAG-MBS-NONSERVINGINFOLIST-START

MBS-NonServingInfoList-r18 ::= SEQUENCE (SIZE (1..maxFreqMBS-r17)) OF NonServingInfo-r18

NonServingInfo-r18 ::= SEQUENCE {
    freqInfoMBS-r18          FreqInfoMBS-r18          OPTIONAL,
    cfr-InfoMBS-r18         CHOICE {
        cfr-Bandwidth-r18   INTEGER (1..maxNrofPhysicalResourceBlocks),
        cfr-LocationAndBW-r18 CFR-LocationAndBW-r18
    }
    subcarrierSpacing-r18   SubcarrierSpacing          OPTIONAL
}

FreqInfoMBS-r18 ::= SEQUENCE {
    carrierFreqMBS-r18     ARFCN-ValueNR,
    freqBandIndicatorMBS-r18 FreqBandIndicatorNR
}

CFR-LocationAndBW-r18 ::= SEQUENCE {
    locationAndBandwidthMBS-r18 INTEGER (0..37949)          OPTIONAL,
    absoluteFrequencyPointA-MBS-r18 ARFCN-ValueNR          OPTIONAL,
    offsetToCarrierMBS-r18    INTEGER (0..2199)           OPTIONAL
}

-- TAG-MBS-NONSERVINGINFOLIST-STOP
-- ASN1STOP
```

***MBS-NonServingInfoList* field descriptions**

***freqInfoMBS***

Indicates MBS frequency of interest and the frequency band of the non-serving cell for MBS broadcast reception as specified in clause 5.9.4.3.

***cfr-infoMBS***

Indicates the CFR information of the non-serving cell for MBS broadcast reception. It is up to UE implementation to choose *cfr-Bandwidth* or *cfr-LocationAndBW* as the reported CFR information.

***cfr-Bandwidth***

Indicates the CFR bandwidth of the non-serving cell for MBS broadcast reception.

***cfr-LocationAndBW***

Indicates the CFR location and bandwidth of the non-serving cell for MBS broadcast reception.

***subcarrierSpacing***

Indicates the subcarrier spacing of the CORESET#0 of the non-serving cell for MBS broadcast reception.

**CFR-LocationAndBW field descriptions****locationAndBandwidthMBS**

Indicates the starting PRB and the number of PRBs of CFR used for MBS broadcast reception from non-serving cell. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13]. The first PRB is a PRB determined by *subcarrierSpacing*, *offsetToCarrierMBS* and *absoluteFrequencyPointA-MBS* of the non-serving cell.

**absoluteFrequencyPointA-MBS**

Indicates the absolute frequency position of the reference resource block (common RB 0) of the non-serving cell for MBS broadcast reception. Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2).

**offsetToCarrierMBS**

Indicates the offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the *subcarrierSpacing* indicated for the non-serving cell).

– **MBS-ServiceList**

The IE *MBS-ServiceList* is used to inform the network of the MBS services that the UE is receiving or interested to receive.

**MBS-ServiceList information element**

```
-- ASN1START
-- TAG-MBS-SERVICELIST-START

MBS-ServiceList-r17 ::=          SEQUENCE (SIZE (1..maxNrofMBS-ServiceListPerUE-r17)) OF MBS-ServiceInfo-r17

MBS-ServiceInfo-r17 ::=          SEQUENCE {
    tmgi-r17                      TMGI-r17
}

-- TAG-MBS-SERVICELIST-STOP
-- ASN1STOP
```

– **MBS-SessionInfoList**

The IE *MBS-SessionInfoList* provides the list of ongoing MBS broadcast sessions transmitted via broadcast MRB and, for each MBS broadcast session, the associated G-RNTI and scheduling information.

**MBS-SessionInfoList information element**

```
-- ASN1START
-- TAG-MBS-SESSIONINFOLIST-START

MBS-SessionInfoList-r17 ::=      SEQUENCE (SIZE (1..maxNrofMBS-Session-r17)) OF MBS-SessionInfo-r17

MBS-SessionInfo-r17 ::=          SEQUENCE {
    mbs-SessionId-r17             TMGI-r17,
    g-RNTI-r17                    RNTI-Value,
    mrb-ListBroadcast-r17         MRB-ListBroadcast-r17,
}
```

```

    mtch-SchedulingInfo-r17          DRX-ConfigPTM-Index-r17          OPTIONAL, -- Need S
    mtch-NeighbourCell-r17          BIT STRING (SIZE(maxNeighCellMBS-r17))  OPTIONAL, -- Need S

            }
        }
    },
    t-Reordering-r17       ENUMERATED {ms1, ms10, ms40, ms160, ms500, ms1000, ms1250, ms2750}  OPTIONAL -- Need S
}

MRB-RLC-ConfigBroadcast-r17 ::= SEQUENCE {
    logicalChannelIdentity-r17 LogicalChannelIdentity,
    sn-FieldLength-r17      ENUMERATED {size6}          OPTIONAL, -- Need S
    t-Reassembly-r17       T-Reassembly                OPTIONAL -- Need S
}

-- TAG-MBS-SESSIONINFOLIST-STOP
-- ASN1STOP

```

<b>MBS-SessionInfoList field descriptions</b>	
<b>g-RNTI</b>	G-RNTI used to scramble the scheduling and transmission of MTCH.
<b>headerCompression</b>	If <i>rohc</i> is configured, the UE shall apply the configured ROHC profile(s) in downlink.
<b>mbs-SessionId</b>	Indicates an identifier of the MBS session provided by the MTCH.
<b>mrb-listBroadcast</b>	A list of broadcast MRBs to which the associated broadcast MBS session is mapped to.
<b>mtch-neighbourCell</b>	Indicates neighbour cells which provide this service on MTCH. The first bit is set to 1 if the service is provided on MTCH in the first cell in <i>mbs-NeighbourCellList</i> , otherwise it is set to 0. The second bit is set to 1 if the service is provided on MTCH in the second cell in <i>mbs-NeighbourCellList</i> , and so on. If the service is not available in any neighbouring cell and <i>mbs-NeighbourCellList</i> is signalled, the network sets all bits in this field to 0. The field is absent when <i>mbs-NeighbourCellList</i> is absent or an empty <i>mbs-NeighbourCellList</i> is signalled. If this field is absent when <i>mbs-NeighbourCellList</i> is absent or a non-empty <i>mbs-NeighbourCellList</i> is signalled, the related service may or may not be available in any neighbouring cell, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. If this field is absent and an empty <i>mbs-NeighbourCellList</i> is signalled, then the UE shall assume that MBS broadcast services signalled in <i>mbs-SessionInfoList</i> in the <i>MBSBroadcastConfiguration</i> message are not provided in any neighbour cell.
<b>mtch-schedulingInfo</b>	Indicates the index of DRX configuration entry in <i>drx-ConfigPTM-List</i> that is used for scheduling the MTCH. The value 0 corresponds to the first entry in <i>drx-ConfigPTM-List</i> , the value 1 corresponds to the second entry in <i>drx-ConfigPTM-List</i> and so on. In case <i>mtch-schedulingInfo</i> is absent for a G-RNTI (i.e. no PTM DRX), the UE shall monitor for PDCCH scrambled with G-RNTI in any slot according to the search space configured for MTCH [see TS 38.213 [13], clause 10.1].
<b>mtch-SSB-MappingWindowIndex</b>	Indicates the index of <i>MTCH-SSB-MappingWindowCycleOffset</i> configuration entry in <i>MTCH-SSB-MappingWindowList</i> . The value 0 corresponds to the first entry in <i>MTCH-SSB-MappingWindowList</i> , the value 1 corresponds to the second entry in <i>MTCH-SSB-MappingWindowList</i> and so on. This field is set to the same value for all MBS sessions mapped to the same G-RNTI.
<b>pdcp-SN-SizeDL</b>	Indicates that PDCP sequence number size of 12 bits is used, as specified in TS 38.323 [5]. When the field is absent the UE applies the value as specified in 9.1.1.7.
<b>pdschConfigIndex</b>	Indicates the index of PDSCH configuration entry in <i>pdschConfigList</i> for MTCH. Value 0 corresponds to the first entry in <i>pdschConfigList</i> , the value 1 corresponds to the second entry in <i>pdschConfigList</i> and so on. When the field is absent the UE applies the first entry in <i>pdschConfigList</i> for MTCH.
<b>sn-FieldLength</b>	Indicates that the RLC SN field size of 6 bits is used, see TS 38.322 [4]. When the field is absent the UE applies the value as specified in 9.1.1.7.
<b>t-Reassembly</b>	Timer for reassembly in TS 38.322 [4], in milliseconds. Value ms0 means 0 ms, value ms5 means 5 ms and so on. When the field is absent the UE applies the value in specified in 9.1.1.7.
<b>t-Reordering</b>	Value in ms of t-Reordering specified in TS 38.323 [5]. Value ms1 corresponds to 1 ms, value ms10 corresponds to 10 ms, and so on. When the field is absent the UE applies the value as specified in 9.1.1.7.

Conditional Presence	Explanation
<i>MTCH-Mapping</i>	The field is mandatory present if the number of actual transmitted SSBs determined according to <i>ssb-PositionsInBurst</i> in SIB1 is more than 1, and <i>searchspaceMTCH</i> is not set to zero (including the case where <i>searchSpaceMTCH</i> is absent and <i>searchSpaceMCCH</i> is not set to zero). Otherwise, it is absent, Need R.

– *MBS-SessionInfoListMulticast*

The IE *MBS-SessionInfoListMulticast* provides a list of MBS multicast sessions transmitted via multicast MRB for RRC\_INACTIVE UEs and, for each MBS multicast session, the associated G-RNTI and scheduling information.

***MBS-SessionInfoListMulticast* information element**

```

```

<b>MBS-SessionInfoListMulticast field descriptions</b>
<p><b>g-RNTI</b> G-RNTI used to scramble the scheduling and transmission of multicast MTCH.</p>
<p><b>mbs-SessionId</b> Indicates an identifier of the MBS session to be received by the UE in RRC_INACTIVE.</p>
<p><b>mrb-ListMulticast</b> A list of multicast MRBs to which the associated MBS multicast session is mapped to.</p>
<p><b>mtch-NeighbourCell</b> Indicates neighbour cells which provide this service on MTCH for RRC_INACTIVE. The first bit is set to 1 if the service is provided on MTCH in the first cell in <i>mbs-NeighbourCellList</i>, otherwise it is set to 0. The second bit is set to 1 if the service is provided on MTCH in the second cell in <i>mbs-NeighbourCellList</i>, and so on. If the service is not available in any neighbouring cell and <i>mbs-NeighbourCellList</i> is signalled, the network sets all bits in this field to 0. The field is absent when <i>mbs-NeighbourCellList</i> is absent or an empty <i>mbs-NeighbourCellList</i> is signalled. If this field is absent when <i>mbs-NeighbourCellList</i> is absent or a non-empty <i>mbs-NeighbourCellList</i> is signalled, the related service may or may not be available in any neighbouring cell, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. If this field is absent and an empty <i>mbs-NeighbourCellList</i> is signalled, then the UE shall assume that MBS multicast services signalled in <i>mbs-SessionInfoListMulticast</i> in the <i>MBSMulticastConfiguration</i> message are not provided in any neighbour cell.</p>
<p><b>mtch-SchedulingInfo</b> Indicates the index of DRX configuration entry in <i>drx-ConfigPTM-List</i> that is used for scheduling the MTCH. The value 0 corresponds to the first entry in <i>drx-ConfigPTM-List</i>, the value 1 corresponds to the second entry in <i>drx-ConfigPTM-List</i> and so on. In case <i>mtch-schedulingInfo</i> is absent for a G-RNTI (i.e. no PTM DRX), the UE shall monitor for PDCCH scrambled with G-RNTI in any slot according to the search space configured for MTCH.</p>
<p><b>mtch-SSB-MappingWindowIndex</b> Indicates the index of <i>MTCH-SSB-MappingWindowCycleOffset</i> configuration entry in <i>MTCH-SSB-MappingWindowList</i>. The value 0 corresponds to the first entry in <i>MTCH-SSB-MappingWindowList</i>, the value 1 corresponds to the second entry in <i>MTCH-SSB-MappingWindowList</i> and so on. This field is set to the same value for all MBS sessions mapped to the same G-RNTI.</p>
<p><b>pdcp-SN-SizeDL</b> Indicates PDCP sequence number size of 12 or 18 bits, as specified in TS 38.323 [5].</p>
<p><b>pdsch-ConfigIndex</b> Indicates the index of PDSCH configuration entry in <i>pdsch-ConfigList</i> for MTCH. Value 0 corresponds to the first entry in <i>pdsch-ConfigList</i>, the value 1 corresponds to the second entry in <i>pdsch-ConfigList</i> and so on. When the field is absent the UE applies the first entry in <i>pdsch-ConfigList</i> for MTCH.</p>
<p><b>pdcp-SyncIndicator</b> Indicates the PDCP COUNT of the corresponding multicast session is synchronized in the RNA, i.e. the cells in the RNA follow a common QoS flow to MRB mapping rule and at the same time PDCP COUNT is set according to the MBS QoS Flow SN.</p>
<p><b>sn-FieldLength</b> Indicates RLC SN field size of 6 or 12 bits, as specified in TS 38.322 [4].</p>
<p><b>stopMonitoringRNTI</b> Indicates the UE to stop monitoring the G-RNTI for the corresponding multicast session.</p>
<p><b>t-Reassembly</b> Timer for reassembly in TS 38.322 [4], in milliseconds. Value ms0 means 0 ms, value ms5 means 5 ms and so on.</p>
<p><b>t-Reordering</b> Value in ms of <i>t-Reordering</i> specified in TS 38.323 [5]. Value ms1 corresponds to 1 ms, value ms10 corresponds to 10 ms, and so on.</p>
<p><b>thresholdIndex</b> Indicates the index of <i>thresholdMBS</i> entry in <i>thresholdMBS-List</i> that is used for RRC connection resume for a UE receiving the corresponding multicast session in RRC_INACTIVE. Value 0 corresponds to the first entry in <i>thresholdMBS-List</i>, the value 1 corresponds to the second entry in <i>thresholdMBS-List</i> and so on.</p>

Conditional Presence	Explanation
<i>G-RNTI</i>	The field is optionally present, Need R, if <i>g-RNTI</i> is included. Otherwise, it is absent.
<i>MTCH-Mapping</i>	The field is mandatory present if the number of actual transmitted SSBs determined according to <i>ssb-PositionsInBurst</i> in <i>SIB1</i> is more than 1, and <i>searchSpaceMulticastMTCH</i> is not set to zero (including the case where <i>searchSpaceMulticastMTCH</i> is absent and <i>searchSpaceMulticastMCCH</i> is not set to zero). Otherwise, it is absent, Need R.
<i>RRCRelease</i>	The field is optionally present, Need R, if <i>mbs-SessionInfoListMulticast</i> is included in <i>RRCRelease</i> message. Otherwise, it is absent.

## – *MTCH-SSB-MappingWindowList*

The IE *MTCH-SSB-MappingWindowList* is used to configure MTCH PDCCH occasions to SSB mapping window related periodic and offset parameters.

### *MTCH-SSB-MappingWindowList* information element

```
-- ASN1START
-- TAG-MTCH-SSB-MAPPINGWINDOWLIST-START

MTCH-SSB-MappingWindowList-r17 ::= SEQUENCE (SIZE (1..maxNrofMTCH-SSB-MappingWindow-r17)) OF MTCH-SSB-MappingWindowCycleOffset-r17

MTCH-SSB-MappingWindowCycleOffset-r17 ::= CHOICE {
    ms10          INTEGER(0..9),
    ms20          INTEGER(0..19),
    ms32          INTEGER(0..31),
    ms64          INTEGER(0..63),
    ms128         INTEGER(0..127),
    ms256         INTEGER(0..255)
}

-- TAG-MTCH-SSB-MAPPINGWINDOWLIST-STOP
-- ASN1STOP
```

### *MTCH-SSB-MappingWindowList* field descriptions

#### *MTCH-SSB-MappingWindowCycleOffset*

Indicates the *cycle* and *offset* for MTCH PDCCH occasions to SSB mapping. Values in unit of ms. *ms10* corresponds to cycle of 10 ms with corresponding offset between 0 and 9 ms, value *ms20* corresponds to cycle of 20 ms with corresponding offset between 0 and 19 ms, and so on. The mapping window starts at a subframe in a SFN where  $[(\text{SFN number} \times 10) + \text{subframe number}] \bmod (\text{cycle}) = \text{offset}$ .

PDCCH monitoring occasions for MTCH in a mapping window which are not overlapping with UL symbols (determined according to *tdd-UL-DL-ConfigurationCommon*) are sequentially numbered starting from 1 in the mapping window. The  $[xN+K]^{\text{th}}$  PDCCH monitoring occasion for MTCH in this mapping window corresponds to the  $K^{\text{th}}$  transmitted SSB, where  $x = 0, 1, \dots, X-1$ ,  $K = 1, 2, \dots, N$ ,  $N$  is the number of actual transmitted SSBs determined according to *ssb-PositionsInBurst* in *SIB1* and  $X$  is equal to  $\text{CEIL}(\text{number of PDCCH monitoring occasions in MTCH to SSB mapping transmission window}/N)$ . The actual transmitted SSBs are sequentially numbered from one in ascending order of their SSB indexes.

## – PDSCH-ConfigBroadcast

The IE *PDSCH-ConfigBroadcast* is used to configure parameters for acquiring the PDSCH for MCCH, multicast MCCH and MTCH.

### PDSCH-ConfigBroadcast information element

```

-- ASN1START
-- TAG-PDSCH-CONFIGBROADCAST-START

PDSCH-ConfigBroadcast-r17 ::= SEQUENCE {
    pdschConfigList-r17          SEQUENCE (SIZE (1..maxNrofPDSCH-ConfigPTM-r17) ) OF PDSCH-ConfigPTM-r17,
    pdsch-TimeDomainAllocationList-r17 PDSCH-TimeDomainResourceAllocationList-r16 OPTIONAL, -- Need R

}

-- TAG-PDSCH-CONFIGBROADCAST-STOP
-- ASN1STOP

```

#### PDSCH-ConfigBroadcast field descriptions

<b><i>lte-CRS-ToMatchAround</i></b>
Parameters to determine an LTE CRS pattern that the UE shall rate match around.
<b><i>pdschConfigList</i></b>
List of PDSCH parameters which can be configured per G-RNTI. Only one entry is allowed to be configured if included in <i>SIB20</i> or <i>SIB24</i> .
<b><i>pdsch-TimeDomainAllocationList</i></b>
List of time-domain configurations for timing of DL assignment to DL data. The field <i>pdsch-TimeDomainAllocationList</i> applies to DCI format 4_0 (see table 5.1.2.1.1-1 in TS 38.214 [19]). When the field is absent, the UE follows PDSCH time domain resource allocation determination rule as specified in TS 38.214 [19], clause 5.1.2.1.1.
<b><i>rateMatchPatternToAddModList</i></b>
Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns (see TS 38.214 [19], clause 5.1.4.1).
<b><i>mcs-Table</i></b>
Indicates which MCS table the UE shall use for PDSCH. If the field is absent the UE applies the value 64QAM. The field <i>mcs-Table</i> applies to DCI format 4_0 with CRC scrambled by MCCH-RNTI/G-RNTI for MBS broadcast or by Multicast MCCH-RNTI for MBS multicast in RRC_INACTIVE, and applies to DCI format 4_1 with CRC scrambled by G-RNTI for MBS multicast in RRC_INACTIVE (see TS 38.214 [19], clause 5.1.3.1).
<b><i>xOverhead</i></b>
Accounts for an overhead from CSI-RS, CORESET, etc. If the field is absent, the UE applies value x0h0 (see TS 38.214 [19], clause 5.1.3.2).

<b>PDSCH-ConfigPTM field descriptions</b>
<p><b>dataScramblingIdentityPDSCH</b> Identifier(s) used to initialize data scrambling (c_init) for PDSCH as specified in TS 38.211 [16], clause 7.3.1.1. When the field is absent the UE applies the value physCellId configured for this serving cell.</p>
<p><b>dmrs-ScramblingID0</b> DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value <i>physCellId</i> configured for this serving cell.</p>
<p><b>pdsch-AggregationFactor</b> Number of repetitions for dynamic scheduling of MBS broadcast data for MTCH PDSCH (see TS 38.214 [19], clause 5.1.2.1). When the field is absent the UE applies the value 1.</p>

## – TMGI

The IE *TMGI* is used to identify the MBS session.

### **TMGI information element**

```

-- ASN1START
-- TAG-TMGI-START

TMGI-r17 ::=
    plmn-Id-r17
        plmn-Index
        explicitValue
    },
    serviceId-r17
}

SEQUENCE {
    CHOICE {
        INTEGER (1..maxPLMN),
        PLMN-Identity
    }
    OCTET STRING (SIZE (3))
}

-- TAG-TMGI-STOP
-- ASN1STOP

```

<b>TMGI field descriptions</b>
<p><b>plmn-Index</b> PLMN index or NPN index according to the <i>plmn-IdentityInfoList</i> and <i>npn-IdentityInfoList</i> fields included in <i>SIB1</i>. If this field is included in the <i>MRB-ToAddMod-r17</i>, the UE translates the <i>plmn-Index</i> into the PLMN Identity or SNPN Identity based on the configuration in <i>SIB1</i> (which is the <i>SIB1</i> of the target cell in case of handover). The <i>explicitValue</i> is not used for MBS service(s) of an SNPN.</p>
<p><b>serviceId</b> Uniquely identifies the identity of an MBS service within a PLMN. The field contains octet 3- 5 of the IE Temporary Mobile Group Identity (TMGI) as defined in TS 24.008 [38]. The first octet contains the third octet of the TMGI, the second octet contains the fourth octet of the TMGI and so on.</p>

## 6.4 RRC multiplicity and type constraint values

### – Multiplicity and type constraint definitions

```

-- ASN1START
-- TAG-MULTIPLICITY-AND-TYPE-CONSTRAINT-DEFINITIONS-START

maxAdditionalRACH-r17                INTEGER ::= 256    -- Maximum number of additional RACH configurations.

maxNrofPDU-Sessions-r17 INTEGER ::= 256 -- Maximum number of PDU Sessions
maxNrofSR-ConfigPerCellGroup INTEGER ::= 8 -- Maximum number of SR configurations per cell group
maxNrofLCGs-r18 INTEGER ::= 8 -- Maximum number of LCGs
maxLCG-ID INTEGER ::= 7 -- Maximum value of LCG ID
maxLCG-ID-IAB-r17 INTEGER ::= 255 -- Maximum value of LCG ID for IAB-MT

```

maxLC-ID	INTEGER	::= 32	-- Maximum value of Logical Channel ID
maxLC-ID-Tab-r16	INTEGER	::= 65855	-- Maximum value of BH Logical Channel ID extension
maxLTE-CRS-Patterns-r16	INTEGER	::= 3	-- Maximum number of additional LTE CRS rate matching patterns
maxNrOfLinkedSRS-CarriersInactive-1-r18	INTEGER	::= 2	-- Maximum number of carriers for positioning SRS CA in RRC_INACTIVE minus 1
maxNrofTAGs	INTEGER	::= 4	-- Maximum number of Timing Advance Groups
maxNrofTAGs-1	INTEGER	::= 3	-- Maximum number of Timing Advance Groups minus 1
maxNrofBWPs	INTEGER	::= 4	-- Maximum number of BWPs per serving cell
maxNrofCombIDC	INTEGER	::= 128	-- Maximum number of reported MR-DC combinations for IDC
maxNrofSymbols-1	INTEGER	::= 13	-- Maximum index identifying a symbol within a slot (14 symbols, indexed from 0..13)
maxNrofSlots	INTEGER	::= 320	-- Maximum number of slots in a 10 ms period
maxNrofSlots-1	INTEGER	::= 319	-- Maximum number of slots in a 10 ms period minus 1
maxNrofPhysicalResourceBlocks	INTEGER	::= 275	-- Maximum number of PRBs
maxNrofPhysicalResourceBlocks-1	INTEGER	::= 274	-- Maximum number of PRBs minus 1
maxNrofPhysicalResourceBlocksPlus1	INTEGER	::= 276	-- Maximum number of PRBs plus 1
maxNrofControlResourceSets	INTEGER	::= 12	-- Max number of CoReSets configurable on a serving cell
maxNrofControlResourceSets-1	INTEGER	::= 11	-- Max number of CoReSets configurable on a serving cell minus 1
maxNrofControlResourceSets-1-r16	INTEGER	::= 15	-- Max number of CoReSets configurable on a serving cell extended in minus 1
maxNrofCoresetPools-r16	INTEGER	::= 2	-- Maximum number of CORESET pools
maxCoReSetDuration	INTEGER	::= 3	-- Max number of OFDM symbols in a control resource set
maxNrofSearchSpaces-1	INTEGER	::= 39	-- Max number of Search Spaces minus 1
maxNrofSearchSpacesLinks-1-r17	INTEGER	::= 39	-- Max number of Search Space links minus 1
maxNrofBFDResourcePerSet-r17	INTEGER	::= 64	-- Max number of reference signal in one BFD set
maxSFI-DCI-PayloadSize	INTEGER	::= 128	-- Max number payload of a DCI scrambled with SFI-RNTI
maxSFI-DCI-PayloadSize-1	INTEGER	::= 127	-- Max number payload of a DCI scrambled with SFI-RNTI minus 1
maxIAB-IP-Address-r16	INTEGER	::= 32	-- Max number of assigned IP addresses
maxINT-DCI-PayloadSize	INTEGER	::= 126	-- Max number payload of a DCI scrambled with INT-RNTI
maxINT-DCI-PayloadSize-1	INTEGER	::= 125	-- Max number payload of a DCI scrambled with INT-RNTI minus 1
maxNrofRateMatchPatterns	INTEGER	::= 4	-- Max number of rate matching patterns that may be configured
maxNrofRateMatchPatterns-1	INTEGER	::= 3	-- Max number of rate matching patterns that may be configured minus 1
maxNrofRateMatchPatternsPerGroup	INTEGER	::= 8	-- Max number of rate matching patterns that may be configured in one group
maxNrofCSI-ReportConfigurations	INTEGER	::= 48	-- Maximum number of report configurations
maxNrofCSI-ReportConfigurations-1	INTEGER	::= 47	-- Maximum number of report configurations minus 1
maxNrofCSI-ResourceConfigurations	INTEGER	::= 112	-- Maximum number of resource configurations
maxNrofCSI-ResourceConfigurations-1	INTEGER	::= 111	-- Maximum number of resource configurations minus 1
maxNrofAP-CSI-RS-ResourcesPerSet	INTEGER	::= 16	
maxNrOfCSI-AperiodicTriggers	INTEGER	::= 128	-- Maximum number of triggers for aperiodic CSI reporting
maxNrofReportConfigPerAperiodicTrigger	INTEGER	::= 16	-- Maximum number of report configurations per trigger state for aperiodic reporting
maxNrofNZNZP-CSI-RS-Resources	INTEGER	::= 192	-- Maximum number of Non-Zero-Power (NZP) CSI-RS resources
maxNrofNZNZP-CSI-RS-Resources-1	INTEGER	::= 191	-- Maximum number of Non-Zero-Power (NZP) CSI-RS resources minus 1
maxNrofNZNZP-CSI-RS-ResourcesPerSet	INTEGER	::= 64	-- Maximum number of NZP CSI-RS resources per resource set
maxNrofNZNZP-CSI-RS-ResourcesPerSet-1-r18	INTEGER	::= 63	-- Maximum number of NZP CSI-RS resources per resource set minus 1
maxNrofNZNZP-CSI-RS-ResourceSets	INTEGER	::= 64	-- Maximum number of NZP CSI-RS resource sets per cell
maxNrofNZNZP-CSI-RS-ResourceSets-1	INTEGER	::= 63	-- Maximum number of NZP CSI-RS resource sets per cell minus 1
maxNrofNZNZP-CSI-RS-ResourceSetsPerConfig	INTEGER	::= 16	-- Maximum number of resource sets per resource configuration
maxNrofNZNZP-CSI-RS-ResourceSetsPerConfig	INTEGER	::= 128	-- Maximum number of resources per resource configuration
maxNrofZP-CSI-RS-Resources	INTEGER	::= 32	-- Maximum number of Zero-Power (ZP) CSI-RS resources
maxNrofZP-CSI-RS-Resources-1	INTEGER	::= 31	-- Maximum number of Zero-Power (ZP) CSI-RS resources minus 1
maxNrofZP-CSI-RS-ResourceSets-1	INTEGER	::= 15

maxNrofZP-CSI-RS-ResourceSets	INTEGER	::= 16	
maxNrofCSI-IM-Resources	INTEGER	::= 32	-- Maximum number of CSI-IM resources
maxNrofCSI-IM-Resources-1	INTEGER	::= 31	-- Maximum number of CSI-IM resources minus 1
maxNrofCSI-IM-ResourcesPerSet	INTEGER	::= 8	-- Maximum number of CSI-IM resources per set
maxNrofCSI-IM-ResourceSets	INTEGER	::= 64	-- Maximum number of NZP CSI-IM resource sets per cell

maxNrofCSI-IM-ResourceSets-1	INTEGER	::= 63	-- Maximum number of NZP CSI-IM resource sets per cell minus 1
maxNrofCSI-IM-ResourceSetsPerConfig	INTEGER	::= 16	-- Maximum number of CSI IM resource sets per resource configuration
maxNrofCSI-SSB-ResourcePerSet	INTEGER	::= 64	-- Maximum number of SSB resources in a resource set
maxNrofCSI-SSB-ResourceSets	INTEGER	::= 64	-- Maximum number of CSI SSB resource sets per cell
maxNrofCSI-SSB-ResourceSets-1	INTEGER	::= 63	-- Maximum number of CSI SSB resource sets per cell minus 1
maxNrofCSI-SSB-ResourceSetsPerConfig	INTEGER	::= 1	-- Maximum number of CSI SSB resource sets per resource configuration
maxNrofCSI-SSB-ResourceSetsPerConfigExt	INTEGER	::= 2	-- Maximum number of CSI SSB resource sets per resource configuration -- extended
maxNrofFailureDetectionResources	INTEGER	::= 10	-- Maximum number of failure detection resources
maxNrofFailureDetectionResources-1	INTEGER	::= 9	-- Maximum number of failure detection resources minus 1
maxNrofFailureDetectionResources-1-r17	INTEGER	::= 63	-- Maximum number of the enhanced failure detection resources minus 1
maxNrofFreqSL-r16	INTEGER	::= 8	-- Maximum number of carrier frequency for NR sidelink communication
maxNrofFreqSL-1-r18	INTEGER	::= 7	-- Maximum number of carrier frequency for NR sidelink communication minus 1
maxNrofSL-BWPs-r16	INTEGER	::= 4	-- Maximum number of BWP for NR sidelink communication
maxNrofSL-CarrierSetConfig-r18	INTEGER	::= 96	-- Maximum number of SCCH carrier set configuration for NR sidelink -- communication
maxFreqSL-EUTRA-r16	INTEGER	::= 8	-- Maximum number of EUTRA anchor carrier frequency for NR sidelink -- communication
maxNrofSL-MeasId-r16	INTEGER	::= 64	-- Maximum number of sidelink measurement identity (RSRP) per destination
maxNrofSL-ObjectId-r16	INTEGER	::= 64	-- Maximum number of sidelink measurement objects (RSRP) per destination
maxNrofSL-ReportConfigId-r16	INTEGER	::= 64	-- Maximum number of sidelink measurement reporting configuration (RSRP) per destination
maxNrofSL-PoolToMeasureNR-r16	INTEGER	::= 8	-- Maximum number of resource pool for NR sidelink measurement to measure -- for each measurement object (for CBR)
maxNrofDedicatedSL-PRS-PoolToMeas-r18	INTEGER	::= 8	-- Maximum number of SL-PRS dedicated resource pool for positioning -- measurement to measure for each measurement object (for SL-PRS CBR)
maxFreqSL-NR-r16	INTEGER	::= 8	-- Maximum number of NR anchor carrier frequency for NR sidelink communication
maxNrofSL-QFIs-r16	INTEGER	::= 2048	-- Maximum number of QoS flow for NR sidelink communication per UE
maxNrofSL-QFIsPerDest-r16	INTEGER	::= 64	-- Maximum number of QoS flow per destination for NR sidelink communication
maxNrofObjectId	INTEGER	::= 64	-- Maximum number of measurement objects
maxNrofPageRec	INTEGER	::= 32	-- Maximum number of page records
maxNrofPCI-Ranges	INTEGER	::= 8	-- Maximum number of PCI ranges
maxPLMN	INTEGER	::= 12	-- Maximum number of PLMNs broadcast and reported by UE at establishment
maxTAC-r17	INTEGER	::= 12	-- Maximum number of Tracking Area Codes to which a cell belongs to
maxNrofCSI-RS-ResourcesRRM	INTEGER	::= 96	-- Maximum number of CSI-RS resources per cell for an RRM measurement object
maxNrofCSI-RS-ResourcesRRM-1	INTEGER	::= 95	-- Maximum number of CSI-RS resources per cell for an RRM measurement object -- minus 1.
maxNrofMeasId	INTEGER	::= 64	-- Maximum number of configured measurements
maxNrofQuantityConfig	INTEGER	::= 2	-- Maximum number of quantity configurations
maxNrofCSI-RS-CellsRRM	INTEGER	::= 96	-- Maximum number of cells with CSI-RS resources for an RRM measurement object
maxNrofSL-Dest-r16	INTEGER	::= 32	-- Maximum number of destination for NR sidelink communication and discovery
maxNrofSL-Dest-1-r16	INTEGER	::= 31	-- Highest index of destination for NR sidelink communication and discovery
maxNrofSL-PRS-PerDest-r18	INTEGER	::= 8	-- Max number of SL-PRS transmission supported per destination UE
maxNrofSLRB-r16	INTEGER	::= 512	-- Maximum number of radio bearer for NR sidelink communication per UE without duplication
maxSL-LCID-Plus1-r18	INTEGER	::= 513	-- Maximum number of RLC bearer for NR sidelink communication per UE without duplication plus 1
maxSL-LCID-r18	INTEGER	::= 1024	-- Maximum number of RLC bearer for NR sidelink communication per UE with duplication
maxSL-NonAnchorRBsets	INTEGER	::= 4	-- Maximum number of non-anchor RB sets
maxSL-LCID-r16	INTEGER	::= 512	-- Maximum number of RLC bearer for NR sidelink communication per UE
maxSL-SyncConfig-r16	INTEGER	::= 16	-- Maximum number of sidelink Sync configurations
maxNrofRXPool-r16	INTEGER	::= 16	-- Maximum number of Rx resource pool for NR sidelink communication and -- discovery
maxNrofTXPool-r16	INTEGER	::= 8	-- Maximum number of Tx resource pool for NR sidelink communication and -- discovery

```

maxNrofPoolID-r16                INTEGER ::= 16      -- Maximum index of resource pool for NR sidelink communication and
-- discovery
maxNrofSRS-PathlossReferenceRS-r16  INTEGER ::= 64      -- Maximum number of RSs used as pathloss reference for SRS power control.
maxNrofSRS-PathlossReferenceRS-1-r16  INTEGER ::= 63      -- Maximum number of RSs used as pathloss reference for SRS power control
-- minus 1.
maxNrofSRS-ResourceSets            INTEGER ::= 16      -- Maximum number of SRS resource sets in a BWP.
maxNrofSRS-ResourceSets-1          INTEGER ::= 15      -- Maximum number of SRS resource sets in a BWP minus 1.
maxNrofSRS-PosResourceSets-r16      INTEGER ::= 16      -- Maximum number of SRS Positioning resource sets in a BWP.
maxNrofSRS-PosResourceSets-1-r16    INTEGER ::= 15      -- Maximum number of SRS Positioning resource sets in a BWP minus 1.
maxNrofSRS-Resources                INTEGER ::= 64      -- Maximum number of SRS resources.
maxNrofSRS-Resources-1              INTEGER ::= 63      -- Maximum number of SRS resources minus 1.
maxNrofSRS-PosResources-r16         INTEGER ::= 64      -- Maximum number of SRS Positioning resources.
maxNrofSRS-PosResources-1-r16       INTEGER ::= 63      -- Maximum number of SRS Positioning resources minus 1.
maxNrofSRS-ResourcesPerSet          INTEGER ::= 16      -- Maximum number of SRS resources in an SRS resource set
maxNrofSRS-TriggerStates-1          INTEGER ::= 3      -- Maximum number of SRS trigger states minus 1, i.e., the largest code point.
maxNrofSRS-TriggerStates-2          INTEGER ::= 2      -- Maximum number of SRS trigger states minus 2.
maxRAT-CapabilityContainers         INTEGER ::= 8      -- Maximum number of interworking RAT containers (incl NR and MRDC)
maxSimultaneousBands                INTEGER ::= 32      -- Maximum number of simultaneously aggregated bands
maxSimultaneousBands-2-r18          INTEGER ::= 30      -- Maximum number of simultaneously aggregated bands minus 2.
maxULTxSwitchingBandPairs           INTEGER ::= 32      -- Maximum number of band pairs supporting dynamic UL Tx switching in a band
-- combination.
maxULTxSwitchingBetweenBandPairs-r18  INTEGER ::= 32      -- Maximum number of combinations of a band pair and another band pair/band
-- between which dynamic UL Tx switching requires additional switching
-- period.
maxSchedulingBandCombination-r18     INTEGER ::= 32      -- Maximum number of combinations of scheduling cell and co-scheduled cells
-- have same or different carrier type.
maxNrofSlotFormatCombinationsPerSet  INTEGER ::= 512     -- Maximum number of Slot Format Combinations in a SF-Set.
maxNrofSlotFormatCombinationsPerSet-1  INTEGER ::= 511     -- Maximum number of Slot Format Combinations in a SF-Set minus 1.
maxNrofTrafficPattern-r16            INTEGER ::= 8      -- Maximum number of Traffic Pattern for NR sidelink communication.
maxNrofPUCCH-Resources              INTEGER ::= 128     --
maxNrofPUCCH-Resources-1            INTEGER ::= 127     --
maxNrofPUCCH-ResourceSets           INTEGER ::= 4      -- Maximum number of PUCCH Resource Sets
maxNrofPUCCH-ResourceSets-1          INTEGER ::= 3      -- Maximum number of PUCCH Resource Sets minus 1.
maxNrofPUCCH-ResourcesPerSet         INTEGER ::= 32     -- Maximum number of PUCCH Resources per PUCCH-ResourceSet
maxNrofPUCCH-P0-PerSet               INTEGER ::= 8      -- Maximum number of P0-pucch present in a p0-pucch set
maxNrofPUCCH-PathlossReferenceRSs    INTEGER ::= 4      -- Maximum number of RSs used as pathloss reference for PUCCH power control.
maxNrofPUCCH-PathlossReferenceRSs-1  INTEGER ::= 3      -- Maximum number of RSs used as pathloss reference for PUCCH power control
-- minus 1.
maxNrofPUCCH-PathlossReferenceRSs-r16  INTEGER ::= 64     -- Maximum number of RSs used as pathloss reference for PUCCH power control
-- extended.
maxNrofPUCCH-PathlossReferenceRSs-1-r16  INTEGER ::= 63     -- Maximum number of RSs used as pathloss reference for PUCCH power control
-- minus 1 extended.
maxNrofPUCCH-PathlossReferenceRSs-1-r17  INTEGER ::= 7      -- Maximum number of RSs used as pathloss reference for PUCCH power control
-- minus 1.
maxNrofPUCCH-PathlossReferenceRSsDiff-r16  INTEGER ::= 60     -- Difference between the extended maximum and the non-extended maximum
maxNrofPUCCH-ResourceGroups-r16       INTEGER ::= 4      -- Maximum number of PUCCH resources groups.
maxNrofPUCCH-ResourcesPerGroup-r16    INTEGER ::= 128     -- Maximum number of PUCCH resources in a PUCCH group.
maxNrofPowerControlSetInfos-r17       INTEGER ::= 8      -- Maximum number of PUCCH power control set infos
maxNrofMultiplePUSCHs-r16            INTEGER ::= 8      -- Maximum number of multiple PUSCHs in PUSCH TDRA list
maxNrofP0-PUSCH-AlphaSets            INTEGER ::= 30     -- Maximum number of P0-pusch-alpha-sets (see TS 38.213 [13], clause 7.1)
maxNrofP0-PUSCH-AlphaSets-1          INTEGER ::= 29     -- Maximum number of P0-pusch-alpha-sets minus 1 (see TS 38.213 [13], clause 7.1)
maxNrofPUSCH-PathlossReferenceRSs    INTEGER ::= 4      -- Maximum number of RSs used as pathloss reference for PUSCH power control.
maxNrofPUSCH-PathlossReferenceRSs-1  INTEGER ::= 3      -- Maximum number of RSs used as pathloss reference for PUSCH power control
-- minus 1.

```

maxNrofPUSCH-PathlossReferenceRSs-r16	INTEGER ::= 64	-- Maximum number of RSs used as pathloss reference for PUSCH power control -- extended
maxNrofPUSCH-PathlossReferenceRSs-1-r16	INTEGER ::= 63	-- Maximum number of RSs used as pathloss reference for PUSCH power control -- extended minus 1
maxNrofPUSCH-PathlossReferenceRSsDiff-r16	INTEGER ::= 60	-- Difference between maxNrofPUSCH-PathlossReferenceRSs-r16 and -- maxNrofPUSCH-PathlossReferenceRSs
maxNrofPathlossReferenceRSs-r17	INTEGER ::= 64	-- Maximum number of RSs used as pathloss reference for PUSCH, PUCCH, SRS -- power control for unified TCI state operation
maxNrofPathlossReferenceRSs-1-r17	INTEGER ::= 63	-- Maximum number of RSs used as pathloss reference for PUSCH, PUCCH, SRS -- power control for unified TCI state operation minus 1
maxNrofNAICS-Entries	INTEGER ::= 8	-- Maximum number of supported NAICS capability set
maxBands	INTEGER ::= 1024	-- Maximum number of supported bands in UE capability.
maxBandsMRDC	INTEGER ::= 1280	
maxBandsEUTRA	INTEGER ::= 256	
maxCellReport	INTEGER ::= 8	
maxDRB	INTEGER ::= 29	-- Maximum number of DRBs (that can be added in DRB-ToAddModList).
maxFreq	INTEGER ::= 8	-- Max number of frequencies.
maxFreqLayers	INTEGER ::= 4	-- Max number of frequency layers.
maxFreqPlus1	INTEGER ::= 9	-- Max number of frequencies for Slicing.
maxFreqIDC-r16	INTEGER ::= 128	-- Max number of frequencies for IDC indication.
maxCombIDC-r16	INTEGER ::= 128	-- Max number of reported UL CA for IDC indication.
maxFreqIDC-MRDC	INTEGER ::= 32	-- Maximum number of candidate NR frequencies for MR-DC IDC indication
maxNrofCandidateBeams	INTEGER ::= 16	-- Max number of PRACH-ResourceDedicatedBFR in BFR config.
maxNrofCandidateBeams-r16	INTEGER ::= 64	-- Max number of candidate beam resources in BFR config.
maxNrofCandidateBeamsExt-r16	INTEGER ::= 48	-- Max number of PRACH-ResourceDedicatedBFR in the CandidateBeamRSLExt
maxNrofPCIsPerSMTC	INTEGER ::= 64	-- Maximum number of PCIs per SMTC.
maxNrofQFIs	INTEGER ::= 64	
maxNrofResourceAvailabilityPerCombination-r16	INTEGER ::= 256	
maxNrOfSemiPersistentPUSCH-Triggers	INTEGER ::= 64	-- Maximum number of triggers for semi persistent reporting on PUSCH
maxNrofSR-Resources	INTEGER ::= 8	-- Maximum number of SR resources per BWP in a cell.
maxNrofSlotFormatsPerCombination	INTEGER ::= 256	
maxNrofSpatialRelationInfos	INTEGER ::= 8	
maxNrofSpatialRelationInfos-plus-1	INTEGER ::= 9	
maxNrofSpatialRelationInfos-r16	INTEGER ::= 64	
maxNrofSpatialRelationInfosDiff-r16	INTEGER ::= 56	-- Difference between maxNrofSpatialRelationInfos-r16 and maxNrofSpatialRelationInfos
maxNrofIndexesToReport	INTEGER ::= 32	
maxNrofIndexesToReport2	INTEGER ::= 64	
maxNrofSSBs-r16	INTEGER ::= 64	-- Maximum number of SSB resources in a resource set.
maxNrofSSBs-1	INTEGER ::= 63	-- Maximum number of SSB resources in a resource set minus 1.
maxNrofS-NSSAI	INTEGER ::= 8	-- Maximum number of S-NSSAI.
maxNrofTCI-StatesPDCCH	INTEGER ::= 64	
maxNrofTCI-States	INTEGER ::= 128	-- Maximum number of TCI states.
maxNrofTCI-States-1	INTEGER ::= 127	-- Maximum number of TCI states minus 1.
maxUL-TCI-r17	INTEGER ::= 64	-- Maximum number of TCI states.
maxUL-TCI-1-r17	INTEGER ::= 63	-- Maximum number of TCI states minus 1.
maxNrofAdditionalPCI-r17	INTEGER ::= 7	-- Maximum number of additional PCI
maxNrofAdditionalPRACHConfigs-r18	INTEGER ::= 7	-- Maximum number of additional PRACH configurations for 2TA
maxNrofdelayD-r18	INTEGER ::= 4	-- Maximum number of delayD values.
maxMPE-Resources-r17	INTEGER ::= 64	-- Maximum number of pooled MPE resources
maxNrofUL-Allocations	INTEGER ::= 16	-- Maximum number of PUSCH time domain resource allocations.
maxQFI	INTEGER ::= 63	
maxRA-CSIRS-Resources	INTEGER ::= 96	
maxRA-OccasionsPerCSIRS	INTEGER ::= 64	-- Maximum number of RA occasions for one CSI-RS
maxRA-Occasions-1	INTEGER ::= 511	-- Maximum number of RA occasions in the system

```

## 6.5 Short Message

Short Messages can be transmitted on PDCCH using P-RNTI with or without associated *Paging* message using Short Message field in DCI format 1\_0 (see TS 38.212 [17], clause 7.3.1.2.1).

Table 6.5-1 defines Short Messages. Bit 1 is the most significant bit.

Table 6.5-1: Short Messages

Bit	Short Message
1	<b>systemInfoModification</b> If set to 1: indication of a BCCH modification other than <i>SIB6</i> , <i>SIB7</i> , <i>SIB8</i> and <i>posSIBs</i> .
2	<b>etwsAndCmasIndication</b> If set to 1: indication of an ETWS primary notification and/or an ETWS secondary notification and/or a CMAS notification.
3	<b>stopPagingMonitoring</b> This bit can be used for only operation with shared spectrum channel access and if <i>nrofPDCCH-MonitoringOccasionPerSSB-InPO</i> is present. If set to 1: indication that the UE may stop monitoring PDCCH occasion(s) for paging in this Paging Occasion as specified in TS 38.304 [20], clause 7.1.
4	<b>systemInfoModification-eDRX</b> If set to 1: indication of a BCCH modification other than <i>SIB6</i> , <i>SIB7</i> , <i>SIB8</i> and <i>posSIBs</i> . This indication applies only to UEs using IDLE eDRX cycle longer than the BCCH modification period.
5 – 8	Not used in this release of the specification, and shall be ignored by UE if received.

## 6.6 PC5 RRC messages

### 6.6.1 General message structure

## 6.6.2 Message definitions

### – MasterInformationBlockSidelink

The *MasterInformationBlockSidelink* includes the system information transmitted by a UE via SL-BCH.

Signalling radio bearer: N/A

RLC-SAP: TM

Logical channel: SBCCH

Direction: UE to UE

### ***MasterInformationBlockSidelink***

```
-- ASN1START
-- TAG-MASTERINFORMATIONBLOCKSIDELINK-START

MasterInformationBlockSidelink ::=
    sl-TDD-Config-r16
    inCoverage-r16
    directFrameNumber-r16
    slotIndex-r16
    reservedBits-r16
}

-- TAG-MASTERINFORMATIONBLOCKSIDELINK-STOP
-- ASN1STOP
```

```
SEQUENCE {
    BIT STRING (SIZE (12)),
    BOOLEAN,
    BIT STRING (SIZE (10)),
    BIT STRING (SIZE (7)),
    BIT STRING (SIZE (2))
}
```

#### ***MasterInformationBlockSidelink*** field descriptions

##### ***directFrameNumber***

Indicates the frame number in which S-SSB transmitted.

##### ***inCoverage***

Value true indicates that the UE transmitting the *MasterInformationBlockSidelink* is in network coverage, or UE selects GNSS timing as the synchronization reference source.

##### ***slotIndex***

Indicates the slot index in which S-SSB transmitted.

### – ***MeasurementReportSidelink***

The *MeasurementReportSidelink* message is used for the indication of measurement results of NR sidelink.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: UE to UE

<i>MeasurementReportSidelink</i> field descriptions
<b><i>sl-MeasId</i></b> Identifies the sidelink measurement identity for which the reporting is being performed.
<b><i>sl-MeasResult</i></b> Measured RSRP results of a unicast destination.
<b><i>sl-RSRP-DedicatedSL-PRS-RP</i></b> Measured SL PRS-based filtered RSRP.
<b><i>sl-RelayIndicationMP</i></b> Indicate the reported L2 U2N Relay UE supports RRC connection establishment/resume for MP operation triggered by receiving <i>RemoteUEInformationSidelink</i> containing the <i>connectionForMP</i> as specified in 5.3.3.1a and 5.3.13.1a in Rel-18.

## – *NotificationMessageSidelink*

The *NotificationMessageSidelink* message is used to send notification message from U2N Relay UE to the connected U2N Remote UE or from U2U Relay UE to the connected U2U Remote UE.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: U2N Relay UE to U2N Remote UE or U2U Relay UE to U2U Remote UE

### *NotificationMessageSidelink* message

## – RemoteUEInformationSidelink

The *RemoteUEInformationSidelink* message is used to request SIB(s) or provide paging related information, or provide other remote UE information, as specified in clause 5.8.9.8.1.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: L2 U2N Remote UE to L2 U2N Relay UE, or L2 U2U Remote UE to L2 U2U Relay UE

### **RemoteUEInformationSidelink message**

<b>RemoteUEInformationSidelink-IEs field descriptions</b>	
<b>connectionForMP</b>	Indicates the connected L2 U2N Relay UE by the L2 U2N Remote UE that the access is for MP.
<b>sl-DestinationIdentityRemoteUE</b>	Indicates the peer L2 U2U Remote UE upon end-to-end PC5 connection failure or release.
<b>sl-PagingCycleRemoteUE</b>	Indicates the L2 U2N Remote UE's UE specific DRX cycle as the minimum value of the one provided by upper layers (if configured) and the one provided by RRC layer (if configured). Value rf32 corresponds to 32 radio frames, value rf64 corresponds to 64 radio frames and so on.
<b>sl-PagingIdentityRemoteUE</b>	Indicates the L2 U2N Remote UE's paging UE ID.
<b>sl-PagingInfo-RemoteUE</b>	Indicates the paging information used by L2 U2N Relay UE to perform the connected L2 U2N Remote UE's paging monitoring.
<b>sl-RequestedPosSIB-List</b>	Contains a list of requested PosSIBs.
<b>sl-RequestedSIB-List</b>	Contains a list of requested SIBs.
<b>sl-SFN-DFN-OffsetRequested</b>	If present, this field indicates that the L2 U2N Remote UE requests the L2 U2N Relay UE to provide the SFN-DFN offset in a subsequent <i>RRCReconfigurationSidelink</i> message.
<b>SL-SIB-ReqInfo</b>	Indicates the requested SIB type. Values sibNotReq11, sibNotReq10, ..., sibNotReq1 shall be ignored by L2 U2N relay UE (i.e., no SIB requested).

<b>Conditional presence</b>	<b>Explanation</b>
<i>GNSS-ID-SBAS</i>	The field is mandatory present if <i>gnss-id</i> is set to <i>sbas</i> . It is absent otherwise.

## – *RRCReconfigurationSidelink*

The *RRCReconfigurationSidelink* message is the command to AS configuration of the PC5 RRC connection. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: UE to UE

<b><i>RRCReconfigurationSidelink</i> field descriptions</b>	
<b><i>sl-AbsoluteFrequencyPointA</i></b>	Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.
<b><i>sl-CarrierToAddModList</i></b>	Indicate the carrier(s) to be added/modified for transmission by UE transmitting <i>RRCReconfigurationSidelink</i> message, corresponding to the frequency in <i>sl-FreqInfoListSizeExt</i> broadcast in <i>SIB12</i> or corresponding to the frequency in <i>sl-PreconfigFreqInfoListSizeExt</i> in <i>SL-PreconfigurationNR</i> .
<b><i>sl-CarrierToReleaseList</i></b>	Indicate the carrier(s) to be released for the transmission by UE transmitting <i>RRCReconfigurationSidelink</i> message.
<b><i>sl-CSI-RS-FreqAllocation</i></b>	Indicates the frequency domain position for sidelink CSI-RS.
<b><i>sl-CSI-RS-FirstSymbol</i></b>	Indicates the position of first symbol of sidelink CSI-RS.
<b><i>sl-DRX-ConfigUC-PC5</i></b>	Indicates the NR sidelink DRX configuration for unicast communication, as specified in TS 38.321 [3]
<b><i>sl-LatencyBoundCSI-Report</i></b>	Indicates the latency bound of SL CSI report from the associated SL CSI triggering in terms of number of slots.
<b><i>sl-LatencyBoundIUC-Report</i></b>	Indicates the latency bound of SL Inter-UE coordination report from the associated SL Inter-UE coordination explicit request triggering in terms of number of slots.
<b><i>sl-LocalID-PairToAddModList</i></b>	Indicate a list of local ID pair which is assigned for one end-to-end PC5 connection by the L2 U2U Relay UE.
<b><i>sl-LogicalChannelIdentity</i></b>	Indicates the identity of the sidelink logical channel, as specified in TS 38.321 [3], clause 6.2.4. If the <i>sl-LogicalChannelIdentity-v1800</i> is present, the UE shall ignore the <i>sl-LogicalChannelIdentity-r16</i> field.
<b><i>sl-MappedQoS-FlowsToAddList</i></b>	Indicate the QoS flows to be mapped to the configured sidelink DRB. Each entry is indicated by the <i>SL-PQFI</i> , which is used between UEs, as defined in TS 23.287 [55].
<b><i>sl-MappedQoS-FlowsToReleaseList</i></b>	Indicate the QoS flows to be released from the configured sidelink DRB. Each entry is indicated by the <i>SL-PQFI</i> , which is used between UEs, as defined in TS 23.287 [55].
<b><i>sl-MeasConfig</i></b>	Indicates the sidelink measurement configuration for the unicast destination.
<b><i>sl-OffsetToCarrier</i></b>	Offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the <i>subcarrierSpacing</i> defined for this carrier). The maximum value corresponds to $275 \cdot 8 - 1$ . See TS 38.211 [16], clause 4.4.2.
<b><i>sl-OutOfOrderDelivery</i></b>	Indicates whether or not <i>outOfOrderDelivery</i> specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the sidelink radio bearer is established.
<b><i>sl-PDCP-SN-Size</i></b>	Indicates the PDCP SN size of the configured sidelink DRB.
<b><i>sl-Resetconfig</i></b>	Indicates that the full configuration should be applicable for the <i>RRCReconfigurationSidelink</i> message.
<b><i>sl-RLC-BearerToAddModList</i></b>	Indicate the additional Sidelink RLC bearer to be added / modified for the configured sidelink SRB/DRB.
<b><i>sl-RLC-BearerToReleaseList</i></b>	Indicate the additional Sidelink RLC bearer to be released for the configured sidelink SRB/DRB.
<b><i>sl-SDAP-Header</i></b>	Indicates whether or not a SDAP header is present on this sidelink DRB.

<b><i>sl-SFN-DFN-Offset</i></b> Indicates the SFN-DFN offset to be used for determining the SFN timeline based on the DFN timeline.
<b><i>sl-SRB-IdentityWithDuplication</i></b> Indicate the sidelink SRB for which duplication is configured.
<b><i>slrb-PC5-ConfigIndex</i></b> Indicates the identity of the configuration of a sidelink DRB. In case of L2 U2U relay, only value 4-31 can be signaled for an end-to-end sidelink DRB, and all other values are reserved.

<b><i>SL-SRAP-ConfigPC5</i> field descriptions</b>
<b><i>sl-RemoteUE-LocalIdentity</i></b> Indicates the local UE ID of the L2 U2U Remote UE used in SRAP as specified in TS 38.351 [66].
<b><i>sl-RemoteUE-L2Identity</i></b> Indicates the Source L2 ID of the L2 U2U Remote UE as specified in TS 23.304 [65].
<b><i>sl-PeerRemoteUE-LocalIdentity</i></b> Indicates the local UE ID of the peer L2 U2U Remote UE used in SRAP as specified in TS 38.351 [66].
<b><i>sl-PeerRemoteUE-L2Identity</i></b> Indicates the destination L2 ID identifying the peer L2 U2U Remote UE as specified in TS 23.304 [65].

## – *RRCReconfigurationCompleteSidelink*

```

<i>RRCReconfigurationCompleteSidelink</i> field descriptions
<b><i>dummy</i></b> This field is not used in the specification. The UE shall not include this field. If received it shall be ignored by the peer UE.
<b><i>sl-DRX-ConfigReject</i></b> Indicates the rejection of sidelink DRX configuration received from the peer UE for the corresponding NR sidelink unicast communication.

## – *RRCReconfigurationFailureSidelink*

The *RRCReconfigurationFailureSidelink* message is used to indicate the failure of a PC5 RRC AS reconfiguration. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: UE to UE

### *RRCReconfigurationFailureSidelink* message

```

-- ASN1START

```

#### *UECapabilityEnquirySidelink*-IEs field descriptions

##### ***frequencyBandListFilterSidelink***

This field is used to indicate frequency bands for which the peer UE is requested to provide supported bands and band combinations for NR sidelink communications. The UE always provides this field.

##### ***ue-CapabilityInformationSidelink***

This field indicates the *UECapabilityInformationSidelink* message to provide the UE sidelink capability, which can be optionally sent together with *UECapabilityEnquirySidelink*.

## – *UECapabilityInformationSidelink*

The *UECapabilityInformationSidelink* message is used to transfer UE radio access capabilities. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

```

#### ***UEInformationRequestSidelink* field descriptions**

##### ***sl-E2E-QoS-InfoListPC5***

Indicates the per-QoS flow QoS info for a list of end-to-end PC5 connections with each connection indicated by the destination L2 ID of the peer L2 U2U Remote UE. In addition, the end-to-end SLRB index is included to indicate the mapping from the QoS flow to the SLRB.

#### ***SL-E2E-QoS-InfoPC5* field descriptions**

##### ***sl-DestinationIdentityRemoteUE***

Indicates the destination L2 ID of the peer L2 U2U Remote UE for an end-to-end PC5 connection.

##### ***sl-E2E-SLRB-Index***

Indicates the index of an end-to-end SLRB.

##### ***sl-QoS-InfoList***

List of QoS profile of the sidelink QoS flow for an end-to-end PC5 connection, with each QoS flow indicated by *sl-QoS-FlowIdentity* which is unique for different end-to-end PC5 connection in the scope of UE, and uniquely identifies one sidelink QoS flow between the L2 U2U Remote UE and the L2 U2U Relay UE.

– *UEInformationResponseSidelink*

The *UEInformationResponseSidelink* message is used to deliver UE information in sidelink, e.g. the split QoS information for L2 U2U Relay operation.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: L2 U2U Relay UE to L2 U2U Remote UE

## 7 Variables and constants

### 7.1 Timers

#### 7.1.1 Timers (Informative)

Timer	Start	Stop	At expiry
T300	Upon transmission of <i>RRCSetupRequest</i> .	Upon reception of <i>RRCSetup</i> or <i>RRCReject</i> message, cell re-selection, relay (re)selection or cell selection by a L2 U2N Remote UE, and upon abortion of connection establishment by upper layers.	Perform the actions as specified in 5.3.3.7.
T301	Upon transmission of <i>RRCReestablishmentRequest</i>	Upon reception of <i>RRCReestablishment</i> or <i>RRCSetup</i> message as well as when the selected cell becomes unsuitable or the (re)selected L2 U2N Relay UE becomes unsuitable, upon reception of <i>NotificationMessageSidelink</i> indicating <i>relayUE-HO</i> or <i>relayUE-CellReselection</i> .	Go to RRC_IDLE
T302	Upon reception of <i>RRCReject</i> while performing RRC connection establishment or resume, upon reception of <i>RRCRelease</i> with <i>waitTime</i> .	Upon entering RRC_CONNECTED or RRC_IDLE, upon cell re-selection, upon cell change due to relay (re)selection or cell selection by a L2 U2N Remote UE, and upon reception of <i>RRCReject</i> message.	Inform upper layers about barring alleviation as specified in 5.3.14.4

Timer	Start	Stop	At expiry
T304	<p>Upon reception of <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> for the MCG which does not include <i>sI-PathSwitchConfig</i>, or upon reception of <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> for the SCG not indicated as deactivated in the NR or E-UTRA message containing the <i>RRCReconfiguration</i> message or upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i>.</p> <p>Also, for the MCG and SCG upon an indication from lower layer that an LTM cell switch procedure is triggered and, for the MCG, upon performing an LTM cell switch procedure following cell selection performed while timer T311 is running.</p>	<p>Upon successful completion of random access on the corresponding SpCell.</p> <p>Upon receiving an indication from lower layers of successful completion of RACH-less handover, or upon receiving an indication from lower layers of successful completion of an LTM RACH-less cell switch.</p> <p>For T304 of SCG, upon SCG release.</p>	<p>For T304 of MCG, in case of the handover from NR or intra-NR handover, or path switch from a L2 U2N Relay UE to a NR cell, or an LTM cell switch procedure, initiate the RRC re-establishment procedure; In case of handover to NR, perform the actions defined in the specifications applicable for the source RAT. If any DAPS bearer is configured and if there is no RLF in source PCell, initiate the failure information procedure.</p> <p>For T304 of SCG, inform network about the reconfiguration with sync failure by initiating the SCG failure information procedure as specified in 5.7.3.</p>

Timer	Start	Stop	At expiry
T310	Upon detecting physical layer problems for the SpCell i.e. upon receiving N310 consecutive out-of-sync indications from lower layers.	Upon receiving N311 consecutive in-sync indications from lower layers for the SpCell, upon receiving RRCReconfiguration with <i>reconfigurationWithSync</i> for that cell group, upon reception of <i>MobilityFromNRCommand</i> , upon the reconfiguration of <i>rlf-TimersAndConstant</i> , upon initiating the connection re-establishment procedure, upon conditional reconfiguration execution i.e. when applying a stored RRCReconfiguration message including <i>reconfigurationWithSync</i> for that cell group, upon an indication from lower layers that an LTM cell switch procedure is triggered, and upon initiating the MCG failure information procedure. Upon SCG release, if the T310 is kept in SCG.	If the T310 is kept in MCG: If AS security is not activated: go to RRC_IDLE else: initiate the MCG failure information procedure as specified in 5.7.3b or the connection re-establishment procedure as specified in 5.3.7 or the procedure as specified in 5.3.10.3 if any DAPS bearer is configured. If the T310 is kept in SCG, Inform E-UTRAN/NR about the SCG radio link failure by initiating the SCG failure information procedure as specified in 5.7.3.
T311	Upon initiating the RRC connection re-establishment procedure	Upon selection of a suitable NR cell, or upon selection of a suitable L2 U2N Relay UE, or a cell using another RAT.	Enter RRC_IDLE

Timer	Start	Stop	At expiry
T312	<p>If T312 is configured in MCG: Upon triggering a measurement report for a measurement identity for which T312 has been configured and <i>useT312</i> has been set to true, while T310 in PCell is running.</p> <p>If T312 is configured in SCG and <i>useT312</i> has been set to true: Upon triggering a measurement report for a measurement identity for which T312 has been configured, while T310 in PSCell is running.</p>	<p>Upon receiving N311 consecutive in-sync indications from lower layers for the SpCell, receiving <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for that cell group, upon reception of <i>MobilityFromNRCommand</i>, upon initiating the connection re-establishment procedure, upon the reconfiguration of <i>rfl-TimersAndConstant</i>, upon initiating the MCG failure information procedure, upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> for that cell group, upon an indication from lower layers that an LTM cell switch procedure is triggered, and upon the expiry of T310 in corresponding SpCell. Upon SCG release, if the T312 is kept in SCG</p>	<p>If the T312 is kept in MCG, initiate the MCG failure information procedure as specified in 5.7.3b or the connection re-establishment procedure.</p> <p>If the T312 is kept in SCG, Inform E-UTRAN/NR about the SCG radio link failure by initiating the SCG failure information procedure as specified in 5.7.3.</p>
T316	<p>Upon transmission of the <i>MCGFailureInformation</i> message</p>	<p>Upon receiving <i>RRCRelease</i>, <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for the PCell, <i>MobilityFromNRCommand</i>, or upon initiating the re-establishment procedure</p>	<p>Perform the actions as specified in 5.7.3b.5.</p>
T319	<p>Upon transmission of <i>RRCResumeRequest</i> or <i>RRCResumeRequest1</i> when the resume procedure is not initiated for SDT.</p>	<p>Upon reception of <i>RRCResume</i>, <i>RRCSetup</i>, <i>RRCRelease</i>, <i>RRCRelease</i> with <i>suspendConfig</i> or <i>RRCReject</i> message, upon cell re-selection or upon relay (re)selection.</p>	<p>Perform the actions as specified in 5.3.13.5.</p>
T319a	<p>Upon transmission of <i>RRCResumeRequest</i> or <i>RRCResumeRequest1</i> when the resume procedure is initiated for SDT.</p>	<p>Upon reception of <i>RRCResume</i>, <i>RRCSetup</i>, <i>RRCRelease</i>, <i>RRCReject</i> message or upon failure to resume RRC connection for SDT as specified in 5.3.13.5 or upon cell reselection.</p>	<p>Perform the actions as specified in 5.3.13.5.</p>

Timer	Start	Stop	At expiry
T320	Upon reception of <i>t320</i> or upon cell (re)selection to NR from another RAT with validity time configured for dedicated priorities (in which case the remaining validity time is applied).	Upon entering RRC_CONNECTED, upon reception of <i>RRCRelease</i> , when PLMN selection or SNPN selection is performed on request by NAS, when the UE enters RRC_IDLE from RRC_INACTIVE, or upon cell (re)selection to another RAT (in which case the timer is carried on to the other RAT).	Discard the cell reselection priority information provided by dedicated signalling.
T321	Upon receiving <i>measConfig</i> including a <i>reportConfig</i> with the <i>reportType</i> set to <i>reportCGI</i>	Upon acquiring the information needed to set all fields of <i>cgi-info</i> , upon receiving <i>measConfig</i> that includes removal of the <i>reportConfig</i> with the <i>reportType</i> set to <i>reportCGI</i> and upon detecting that a cell is not broadcasting SIB1.	Initiate the measurement reporting procedure, stop performing the related measurements.
T322	Upon receiving <i>measConfig</i> including <i>reportConfigNR</i> with the <i>reportType</i> set to <i>reportSFTD</i> and <i>drx-SFTD-NeighMeas</i> is set to <i>true</i> .	Upon acquiring the SFTD measurement results, upon receiving <i>measConfig</i> that includes removal of the <i>reportConfig</i> with the <i>reportType</i> set to <i>reportSFTD</i> .	Initiate the measurement reporting procedure, stop performing the related measurements.
T325	Upon reception of <i>RRCRelease</i> message with <i>deprioritisationTimer</i> .	When PLMN selection or SNPN selection is performed on request by NAS according to TS 38.304 [20].	Stop deprioritisation of all frequencies or NR signalled by <i>RRCRelease</i> and discard the stored deprioritisation request(s).
T330	Upon receiving <i>LoggedMeasurementConfiguration</i> message	Upon log volume exceeding the suitable UE memory, upon initiating the release of <i>LoggedMeasurementConfiguration</i> procedure	Perform the actions specified in 5.5a.1.4
T331	Upon receiving <i>RRCRelease</i> message with <i>measIdleDuration</i>	Upon receiving <i>RRCSetup</i> , <i>RRCResume</i> , <i>RRCRelease</i> with idle/inactive measurement configuration, upon cell selection/reselection to a cell that does not belong to the <i>validityArea</i> (if configured), or upon cell re-selection to another RAT.	Perform the actions as specified in 5.7.8.3.

Timer	Start	Stop	At expiry
T342	Upon transmitting <i>UEAssistanceInformation</i> message with <i>DelayBudgetReport</i> .	Upon releasing <i>delayBudgetReportingConfig</i> during the connection re-establishment/resume procedures, and upon receiving <i>delayBudgetReportingConfig</i> set to <i>release</i> .	No action.
T345	Upon transmitting <i>UEAssistanceInformation</i> message with <i>overheatingAssistance</i>	Upon releasing <i>overheatingAssistanceConfig</i> during the connection re-establishment procedure, upon initiating the connection resumption procedure, and upon receiving <i>overheatingAssistanceConfig</i> set to <i>release</i> .	No action.
T346a (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>drx-Preference</i> .	Upon releasing <i>drx-PreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>drx-PreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.
T346b (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>maxBW-Preference</i> .	Upon releasing <i>maxBW-PreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>maxBW-PreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.
T346c (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>maxCC-Preference</i> .	Upon releasing <i>maxCC-PreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>maxCC-PreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.

Timer	Start	Stop	At expiry
T346d (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>maxMIMO-LayerPreference</i> .	Upon releasing <i>maxMIMO-LayerPreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>maxMIMO-LayerPreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.
T346e (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>minSchedulingOffsetPreference</i> .	Upon releasing <i>minSchedulingOffsetPreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>minSchedulingOffsetPreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.
T346f	Upon transmitting <i>UEAssistanceInformation</i> message with <i>releasePreference</i> .	Upon releasing <i>releasePreferenceConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>releasePreferenceConfig</i> set to <i>release</i> .	No action.
T346g	Upon transmitting <i>UEAssistanceInformation</i> message with <i>musim-PreferredRRC-State</i> .	Upon receiving <i>RRCRelease</i> , or upon receiving <i>musim-LeaveAssistanceConfig</i> set to <i>release</i> .	Perform the actions as specified in 5.3.8.6.
T346h	Upon transmitting <i>UEAssistanceInformation</i> message with <i>musim-GapPreferenceList</i> and/or <i>musim-GapPriorityPreferenceList</i> and/or <i>musim-GapKeepPreferenceInformation</i> .	Upon releasing <i>musim-GapAssistanceConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>musim-GapAssistanceConfig</i> set to <i>release</i> .	No action.
T346i	Upon transmitting <i>UEAssistanceInformation</i> message with <i>scg-DeactivationPreference</i>	Upon releasing <i>scg-DeactivationPreferenceConfig</i> during RRC connection re-establishment/resume or upon receiving <i>scg-DeactivationPreferenceConfig</i> set to <i>release</i> .	No action.

Timer	Start	Stop	At expiry
T346j (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>rlm-RelaxationReportingConfig</i> .	Upon releasing <i>rlm-RelaxationReportingConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>rlm-RelaxationReportingConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.
T346k (The UE maintains one instance of this timer per cell group)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>bfd-RelaxationReportingConfig</i> .	Upon releasing <i>bfd-RelaxationReportingConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>bfd-RelaxationReportingConfig</i> set to <i>release</i> , or upon performing MR-DC release.	No action.
T346l (The UE maintains one instance of this timer per QoS flow)	Upon transmitting <i>UEAssistanceInformation</i> message with <i>ul-TrafficInfo</i> for the concerned QoS flow.	Upon releasing <i>ul-TrafficInfoReportingConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>ul-TrafficInfoReportingConfig</i> set to <i>release</i> .	No action.
T346m	Upon transmitting <i>UEAssistanceInformation</i> message with <i>multiRx-PreferenceFR2</i> .	Upon releasing <i>multiRx-PreferenceReportingConfigFR2</i> during the connection re-establishment/resume procedures, upon receiving <i>multiRx-PreferenceReportingConfigFR2</i> set to <i>release</i> .	No action.
T346n	Upon transmission of MUSIM temporary restriction of <i>musim-CapRestriction</i> for affected bands or combination of bands and/or avoided band(s) or combination of bands.	Upon releasing <i>musim-CapabilityRestrictionConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>musim-CapabilityRestrictionConfig</i> set to <i>release</i> .	No action.

Timer	Start	Stop	At expiry
T348	Upon transmission of MUSIM temporary restriction of <i>musim-CapRestriction</i> for serving cell(s) with capabilities restricted, release of SCell or PSCell or release of SCG.	Upon reception of <i>RRCReconfiguration</i> message that does not exceed UE temporary capability restriction indicated via <i>musim-CapRestriction</i> .	UE may apply the temporary UE capability restriction in accordance with the one indicated in the last transmission of the <i>UEAssistanceInformation</i> message including <i>musim-CapRestriction</i> . UE may apply the temporary capability restriction that SCG is not supported if <i>ServCellIndex</i> of PSCell was included in indicated <i>MUSIM-CellToRelease-r18</i> .
T350	Upon transmitting <i>DedicatedSIBRequest</i> message with <i>requestedSIB-List</i> and/or <i>requestedPosSIB-List</i> .	Upon acquiring the requested SIB(s) or posSIB(s), upon releasing <i>onDemandSIB-Request</i> during the connection re-establishment procedures, upon receiving <i>onDemandSIB-Request</i> set to release, upon reception of <i>RRCRelease</i> or upon successful change of PCell while in RRC_CONNECTED.	No action
T380	Upon reception of t380 in <i>RRCRelease</i> .	Upon reception of <i>RRCResume</i> , <i>RRCSetup</i> or <i>RRCRelease</i> .	Perform the actions as specified in 5.3.13.
T390	When access attempt is barred at access barring check for an Access Category. The UE maintains one instance of this timer per Access Category.	Upon cell (re)selection, upon relay (re)selection, upon entering RRC_CONNECTED, upon reception of <i>RRCReconfiguration</i> including <i>reconfigurationWithSync</i> , upon change of PCell while in RRC_CONNECTED, upon reception of <i>MobilityFromNRCommand</i> , or upon reception of <i>RRCRelease</i> .	Perform the actions as specified in 5.3.14.4.
T400	Upon transmission of <i>RRCReconfigurationSidelink</i>	Upon reception of <i>RRCReconfigurationFailureSidelink</i> or <i>RRCReconfigurationCompleteSidelink</i>	Perform the Sidelink radio link failure related actions as specified in 5.8.9.3.

Timer	Start	Stop	At expiry
T420	Upon reception of the <i>RRCReconfiguration</i> message including <i>sI-PathSwitchConfig</i> where <i>sI-IndirectPathMaintain</i> is not included in <i>reconfigurationWithSync</i>	Upon successfully sending <i>RRCReconfigurationComplete</i> message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE)	Perform the RRC re-establishment procedure as specified in 5.3.7.
T421	Upon reception of the <i>RRCReconfiguration</i> message including <i>sI-IndirectPathAddChange</i> where <i>sI-IndirectPathMaintain</i> is not included in <i>reconfigurationWithSync</i>	Upon successfully sending <i>RRCReconfigurationComplete</i> message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE) if split SRB1 with duplication is configured, or upon reception of <i>RRCReconfigurationCompleteSi delink</i> if split SRB1 with duplication is not configured, or upon initiation of indirect path failure information procedure.	Perform the Failure Information Reporting as specified in 5.7.3c.
T430	Start or restart from the subframe indicated by <i>epochTime</i> upon reception of <i>SIB19</i> , or upon reception of <i>RRCReconfiguration</i> message for the target cell including <i>reconfigurationWithSync</i> , or upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message for the target cell including <i>reconfigurationWithSync</i> , or upon satellite switch with resynchronization.	Stop T430, if it is running, for the source cell upon reception of <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> , or upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> , or upon satellite switch with resynchronization.	Perform the actions as specified in 5.2.2.6.

## 7.1.2 Timer handling

When the UE applies zero value for a timer, the timer shall be started and immediately expire unless explicitly stated otherwise.

## 7.2 Counters

Counter	Reset	Incremented	When reaching max value
N310	Upon reception of "in-sync" indication from lower layers; upon receiving <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for that cell group; upon initiating the connection re-establishment procedure.	Upon reception of "out-of-sync" from lower layer while the timer T310 is stopped.	Start timer T310
N311	Upon reception of "out-of-sync" indication from lower layers; upon receiving <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for that cell group; upon initiating the connection re-establishment procedure.	Upon reception of the "in-sync" from lower layer while the timer T310 is running.	Stop the timer T310.

## 7.3 Constants

Constant	Usage
N310	Maximum number of consecutive "out-of-sync" indications for the SpCell received from lower layers
N311	Maximum number of consecutive "in-sync" indications for the SpCell received from lower layers

## 7.4 UE variables

NOTE: To facilitate the specification of the UE behavioural requirements, UE variables are represented using ASN.1. Unless explicitly specified otherwise, it is however up to UE implementation how to store the variables. The optionality of the IEs in ASN.1 is used only to indicate that the values may not always be available.

– *NR-UE-Variables*

This ASN.1 segment is the start of the NR UE variable definitions.

## – *VarAppLayerIdleConfig*

The UE variable *VarAppLayerIdleConfig* includes the parameters of the application layer measurements stored in the UE while in RRC\_IDLE.

### *VarAppLayerIdleConfig* UE variable

```

-- ASN1START
-- TAG-VARAPPLAYERIDLECONFIG-START

VarAppLayerIdleConfig-r18 ::= SEQUENCE {
    appLayerIdleConfigList-r18 SEQUENCE (SIZE (1..maxNrofAppLayerMeas-r17)) OF VarAppLayerIdle-r18
}

VarAppLayerIdle-r18 ::= SEQUENCE {
    measConfigAppLayerId-r18 MeasConfigAppLayerId-r17,

```

```

    serviceType-r18           ENUMERATED {streaming, mtsi, vr, spare5, spare4, spare3, spare2, spare1},
    appLayerIdleInactiveConfig-r18 AppLayerIdleInactiveConfig-r18,
    appLayerMeasPriority-r18   INTEGER (1..16)
}
-- TAG-VARAPPLAYERIDLECONFIG-STOP
-- ASN1STOP

```

OPTIONAL

### – *VarAppLayerPLMN-ListConfig*

The UE variable *VarAppLayerPLMN-ListConfig* includes the PLMNs to which application layer measurement reports and application layer measurement configurations are allowed to be sent.

#### *VarAppLayerPLMN-ListConfig* UE variable

```

-- ASN1START
-- TAG-VARAPPLAYERPLMN-LISTCONFIG-START

VarAppLayerPLMN-ListConfig-r18 ::= SEQUENCE {
    plmnConfigList-r18             SEQUENCE (SIZE (1..maxNrofAppLayerMeas-r17)) OF VarAppLayerPLMN-List-r18
}

VarAppLayerPLMN-List-r18 ::= SEQUENCE {
    measConfigAppLayerId-r18      MeasConfigAppLayerId-r17,
    plmn-IdentityList-r18         PLMN-IdentityList2-r16
}

-- TAG-VARAPPLAYERPLMN-LISTCONFIG-STOP
-- ASN1STOP

```

### – *VarConditionalReconfig*

The UE variable *VarConditionalReconfig* includes the accumulated configuration of the conditional handover, conditional PSCell addition or conditional PSCell change configurations including the pointers to conditional handover, conditional PSCell addition, conditional PSCell change, or subsequent CPAC execution condition (associated *measId(s)*), the stored target candidate SpCell *RRCRconfiguration*, the stored reference configuration, and the stored *SK-Counter* configuration.

#### *VarConditionalReconfig* UE variable

```

-- ASN1START
-- TAG-VARCONDITIONALRECONFIG-START

VarConditionalReconfig ::= SEQUENCE {
    condReconfigList              CondReconfigToAddModList-r16           OPTIONAL,
    scpac-ReferenceConfiguration-r18 ReferenceConfiguration-r18         OPTIONAL,
    sk-CounterConfiguration-r18   SEQUENCE (SIZE (1..maxSecurityCellSet-r18)) OF SK-CounterConfig-r18  OPTIONAL
}

```

```
-- TAG-VARCONDITIONALRECONFIG-STOP
-- ASN1STOP
```

## – *VarConnEstFailReport*

The UE variable *VarConnEstFailReport* includes the connection establishment failure and/or connection resume failure information.

### ***VarConnEstFailReport* UE variable**

```
-- ASN1START
-- TAG-VARCONNЕСТFАILREPORT-START

VarConnEstFailReport-r16 ::= SEQUENCE {
    connEstFailReport-r16      ConnEstFailReport-r16,
    networkIdentity-r18       CHOICE {
        plmn-Identity-r18     PLMN-Identity,
        snpn-Identity-r18     SNPN-Identity-r18
    }
}

SNPN-Identity-r18 ::= SEQUENCE {
    plmn-Identity-r18         PLMN-Identity,
    nid-r18                   NID-r16
}

-- TAG-VARCONNЕСТFАILREPORT-STOP
-- ASN1STOP
```

## – *VarConnEstFailReportList*

The UE variable *VarConnEstFailReportList* includes a list of the connection establishment failure and/or connection resume failure information.

### ***VarConnEstFailReportList* UE variable**

```
-- ASN1START
-- TAG-VARCONNЕСТFАILREPORTLIST-START

VarConnEstFailReportList-r17 ::= SEQUENCE {
    connEstFailReportList-r17 SEQUENCE (SIZE (1..maxCEFReport-r17)) OF VarConnEstFailReport-r16
}

-- TAG-VARCONNЕСТFАILREPORTLIST-STOP
-- ASN1STOP
```

## – *VarLogMeasConfig*

The UE variable *VarLogMeasConfig* includes the configuration of the logging of measurements to be performed by the UE while in RRC\_IDLE, RRC\_INACTIVE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements. The UE performs logging of measurements only while in RRC\_IDLE and RRC\_INACTIVE.

### **VarLogMeasConfig UE variable**

```
-- ASN1START
-- TAG-VARLOGMEASCONFIG-START

VarLogMeasConfig-r16 ::= SEQUENCE {
    areaConfiguration-r16      AreaConfiguration-r16      OPTIONAL,
    bt-NameList-r16           BT-NameList-r16           OPTIONAL,
    wlan-NameList-r16         WLAN-NameList-r16         OPTIONAL,
    sensor-NameList-r16       Sensor-NameList-r16       OPTIONAL,
    loggingDuration-r16       LoggingDuration-r16,
    reportType                 CHOICE {
        periodical             LoggedPeriodicalReportConfig-r16,
        eventTriggered         LoggedEventTriggerConfig-r16
    },
    earlyMeasIndication-r17   ENUMERATED {true}      OPTIONAL,
    areaConfiguration-r17     AreaConfiguration-r17   OPTIONAL,
    areaConfiguration-v1800   AreaConfiguration-v1800 OPTIONAL
}
-- TAG-VARLOGMEASCONFIG-STOP
-- ASN1STOP
```

## – *VarLogMeasReport*

The UE variable *VarLogMeasReport* includes the logged measurements information.

### **VarLogMeasReport UE variable**

```
-- ASN1START
-- TAG-VARLOGMEASREPORT-START

VarLogMeasReport-r16 ::= SEQUENCE {
    absoluteTimeInfo-r16      AbsoluteTimeInfo-r16,
    traceReference-r16        TraceReference-r16,
    traceRecordingSessionRef-r16 OCTET STRING (SIZE (2)),
    tce-Id-r16                 OCTET STRING (SIZE (1)),
    logMeasInfoList-r16       LogMeasInfoList-r16,
    sigLoggedMeasType-r17     ENUMERATED {true},
    identityList-r18          CHOICE {
        plmn-IdentityList-r18   PLMN-IdentityList2-r16,
        snpn-ConfigID-List-r18  SNPN-ConfigID-List-r18
    }
}
-- TAG-VARLOGMEASREPORT-STOP
-- ASN1STOP
```

```
-- TAG-VARLOGMEASREPORT-STOP
-- ASN1STOP
```

### – *VarLTM-ServingCellNoResetID*

The IE *VarLTM-ServingCellNoResetID* is used to store the serving cell ID based on which the UE determines whether a L2 reset is needed or not upon an LTM cell switch procedure.

#### ***VarLTM-ServingCellNoResetID* UE variable**

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLNORESETID-START

VarLTM-ServingCellNoResetID-r18 ::= SEQUENCE {
    ltm-ServingCellNoResetID-r18      INTEGER (1..maxNrofLTM-Configs-plus1-r18) OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLNORESETID-STOP
-- ASN1STOP
```

### – *VarLTM-ServingCellUE-MeasuredTA-ID*

The IE *VarLTM-ServingCellUE-MeasuredTA-ID* is used to store the serving cell ID based on which the UE determines whether UE-based TA measurements are needed or not.

#### ***VarLTM-ServingCellUE-MeasuredTA-ID* UE variable**

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLUE-MEASUREDTA-ID-START

VarLTM-ServingCellUE-MeasuredTA-ID-r18 ::= SEQUENCE {
    ltm-ServingCellUE-MeasuredTA-ID-r18  INTEGER (1..maxNrofLTM-Configs-plus1-r18) OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLUE-MEASUREDTA-ID-STOP
-- ASN1STOP
```

### – *VarMeasConfig*

The UE variable *VarMeasConfig* includes the accumulated configuration of the measurements to be performed by the UE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements.

#### ***VarMeasConfig* UE variable**

```
-- ASN1START
```

```

-- TAG-VARMEASCONFIG-START
VarMeasConfig ::=
  -- Measurement identities
  measIdList                               MeasIdToAddModList           OPTIONAL,
  -- Measurement objects
  measObjectList                           MeasObjectToAddModList        OPTIONAL,
  -- Reporting configurations
  reportConfigList                         ReportConfigToAddModList      OPTIONAL,
  -- Other parameters
  quantityConfig                           QuantityConfig                OPTIONAL,
  s-MeasureConfig                           CHOICE {
    ssb-RSRP                               RSRP-Range,
    csi-RSRP                               RSRP-Range
  }                                         OPTIONAL
}
-- TAG-VARMEASCONFIG-STOP
-- ASN1STOP

```

### – *VarMeasConfigSL*

The UE variable *VarMeasConfigSL* includes the accumulated configuration of the NR sidelink measurements to be performed by the UE of unicast destination.

#### *VarMeasConfigSL* UE variable

```

-- ASN1START
-- TAG-VARMEASCONFIGSL-START
VarMeasConfigSL-r16 ::=
  -- NR sidelink measurement identities
  sl-MeasIdList-r16                         SL-MeasIdList-r16           OPTIONAL,
  -- NR sidelink measurement objects
  sl-MeasObjectList-r16                     SL-MeasObjectList-r16      OPTIONAL,
  -- NR sidelink reporting configurations
  sl-ReportConfigList-r16                   SL-ReportConfigList-r16    OPTIONAL,
  -- Other parameters
  sl-QuantityConfig-r16                     SL-QuantityConfig-r16      OPTIONAL
}
-- TAG-VARMEASCONFIGSL-STOP
-- ASN1STOP

```

### – *VarMeasIdleConfig*

The UE variable *VarMeasIdleConfig* includes the configuration of the measurements to be performed by the UE while in RRC\_IDLE or RRC\_INACTIVE for NR inter-frequency and inter-RAT (i.e. EUTRA) measurements.

***VarMeasIdleConfig UE variable***

```

-- ASN1START
-- TAG-VARMEASIDLECONFIG-START

VarMeasIdleConfig-r16 ::= SEQUENCE {
    measIdleCarrierListNR-r16 SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasIdleCarrierNR-r16 OPTIONAL,
    measIdleCarrierListEUTRA-r16 SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasIdleCarrierEUTRA-r16 OPTIONAL,
    measIdleDuration-r16 ENUMERATED {sec10, sec30, sec60, sec120, sec180, sec240, sec300, spare},
    validityAreaList-r16 ValidityAreaList-r16 OPTIONAL
}

VarEnhMeasIdleConfig-r18 ::= SEQUENCE {
    measIdleValidityDuration-r18 MeasurementValidityDuration-r18 OPTIONAL
}

-- TAG-VARMEASIDLECONFIG-STOP
-- ASN1STOP

```

***VarMeasIdleReport***

The UE variable *VarMeasIdleReport* includes the logged measurements information.

***VarMeasIdleReport UE variable***

```

-- ASN1START
-- TAG-VARMEASIDLEREPORT-START

VarMeasIdleReport-r16 ::= SEQUENCE {
    measReportIdleNR-r16 MeasResultIdleNR-r16 OPTIONAL,
    measReportIdleEUTRA-r16 MeasResultIdleEUTRA-r16 OPTIONAL
}

-- TAG-VARMEASIDLEREPORT-STOP
-- ASN1STOP

```

***VarMeasReportList***

The UE variable *VarMeasReportList* includes information about the measurements for which the triggering conditions have been met.

***VarMeasReportList UE variable***

```

-- ASN1START
-- TAG-VARMEASREPORTLIST-START

VarMeasReportList ::= SEQUENCE (SIZE (1..maxNrofMeasId)) OF VarMeasReport

```

```

VarMeasReport ::=
    -- List of measurement that have been triggered
    SEQUENCE {
        measId MeasId,
        cellsTriggeredList CellsTriggeredList OPTIONAL,
        numberOfReportsSent INTEGER,
        cli-TriggeredList-r16 CLI-TriggeredList-r16 OPTIONAL,
        tx-PoolMeasToAddModListNR-r16 Tx-PoolMeasList-r16 OPTIONAL,
        relaysTriggeredList-r17 RelaysTriggeredList-r17 OPTIONAL,
        cellsMetLeavingCond-r18 SEQUENCE (SIZE (1..maxCellReport)) OF PhysCellId OPTIONAL,
        reportedBestNeighbourCell-r18 SEQUENCE (SIZE (1..2)) OF PhysCellId OPTIONAL
    }

CellsTriggeredList ::=
    SEQUENCE (SIZE (1..maxNrofCellMeas)) OF CHOICE {
        physCellId PhysCellId,
        physCellIdEUTRA EUTRA-PhysCellId,
        physCellIdUTRA-FDD-r16 PhysCellIdUTRA-FDD-r16
    }

CLI-TriggeredList-r16 ::=
    CHOICE {
        srs-RSRP-TriggeredList-r16 SRS-RSRP-TriggeredList-r16,
        cli-RSSI-TriggeredList-r16 CLI-RSSI-TriggeredList-r16
    }

SRS-RSRP-TriggeredList-r16 ::=
    SEQUENCE (SIZE (1.. maxNrofCLI-SRS-Resources-r16)) OF SRS-ResourceId

CLI-RSSI-TriggeredList-r16 ::=
    SEQUENCE (SIZE (1.. maxNrofCLI-RSSI-Resources-r16)) OF RSSI-ResourceId-r16

RelaysTriggeredList-r17 ::=
    SEQUENCE (SIZE (1.. maxNrofRelayMeas-r17)) OF SL-SourceIdentity-r17

-- TAG-VARMEASREPORTLIST-STOP
-- ASN1STOP

```

## – *VarMeasReportListSL*

The UE variable *VarMeasReportListSL* includes information about the NR sidelink measurements for which the triggering conditions have been met.

### *VarMeasReportListSL* UE variable

```

-- ASN1START
-- TAG-VARMEASREPORTLISTSL-START

VarMeasReportListSL-r16 ::=
    SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF VarMeasReportSL-r16

VarMeasReportSL-r16 ::=
    SEQUENCE {
        -- List of NR sidelink measurement that have been triggered
        sl-MeasId-r16 SL-MeasId-r16,
        sl-FrequencyTriggeredList-r16 SEQUENCE (SIZE (1..maxNrofFreqSL-r16)) OF ARFCN-ValueNR OPTIONAL,
        sl-NumberOfReportsSent-r16 INTEGER
    }

-- TAG-VARMEASREPORTLISTSL-STOP

```

```
-- ASN1STOP
```

## – *VarMeasReselectionConfig*

The UE variable *VarMeasReselectionConfig* includes the configuration for reporting the NR inter-frequency and inter-RAT (i.e. EUTRA) reselection measurements while in RRC\_IDLE or RRC\_INACTIVE for.

### *VarMeasReselectionConfig* UE variable

```
-- ASN1START
-- TAG-VARMEASRESELECTIONCONFIG-START

VarMeasReselectionConfig-r18 ::= SEQUENCE {
    measReselectionCarrierListNR-r18 SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasReselectionCarrierNR-r18 OPTIONAL,
    measReselectionValidityDuration-r18 MeasurementValidityDuration-r18 OPTIONAL
}

-- TAG-VARMEASRESELECTIONCONFIG-STOP
-- ASN1STOP
```

## – *VarMobilityHistoryReport*

The UE variable *VarMobilityHistoryReport* includes the mobility history information.

### *VarMobilityHistoryReport* UE variable

```
-- ASN1START
-- TAG-VARMOBILITYHISTORYREPORT-START

VarMobilityHistoryReport-r16 ::= VisitedCellInfoList-r16

VarMobilityHistoryReport-r17 ::= SEQUENCE {
    visitedCellInfoList-r16 VisitedCellInfoList-r16,
    visitedPSCellInfoList-r17 VisitedPSCellInfoList-r17 OPTIONAL
}

-- TAG-VARMOBILITYHISTORYREPORT-STOP
-- ASN1STOP
```

## – *VarPendingRNA-Update*

The UE variable *VarPendingRNA-Update* indicates whether there is a pending RNA update procedure or not. The setting of this BOOLEAN variable to *true* means that there is a pending RNA Update procedure.

**VarPendingRNA-Update UE variable**

```

-- ASN1START
-- TAG-VARPENDINGRNA-UPDATE-START

VarPendingRNA-Update ::=
    pendingRNA-Update          SEQUENCE {
                                BOOLEAN          OPTIONAL
    }

-- TAG-VARPENDINGRNA-UPDATE-STOP
-- ASN1STOP

```

– **VarRA-Report**

The UE variable *VarRA-Report* includes the random-access related information.

**VarRA-Report UE variable**

```

-- ASN1START
-- TAG-VARRA-REPORT-START

VarRA-Report-r16 ::=
    SEQUENCE {
        ra-ReportList-r16      RA-ReportList-r16,
        identityList-r18      CHOICE {
            plmn-IdentityList-r18  PLMN-IdentityList2-r16,
            snpn-IdentityList-r18  SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
        }
    }

-- TAG-VARRA-REPORT-STOP
-- ASN1STOP

```

– **VarResumeMAC-Input**

The UE variable *VarResumeMAC-Input* specifies the input used to generate the *resumeMAC-I* during RRC Connection Resume procedure.

**VarResumeMAC-Input UE variable**

```

-- ASN1START
-- TAG-VARRESUMEMAC-INPUT-START

VarResumeMAC-Input ::=
    SEQUENCE {
        sourcePhysCellId      PhysCellId,
        targetCellIdentity     CellIdentity,
        source-c-RNTI          RNTI-Value
    }

```

```
-- TAG-VARRESUMEMAC-INPUT-STOP
-- ASN1STOP
```

<b>VarResumeMAC-Input field descriptions</b>
<p><b>targetCellIdentity</b> An input variable used to calculate the <i>resumeMAC-I</i>. Set to the <i>cellIdentity</i> of the first <i>PLMN-Identity</i> included in the <i>PLMN-IdentityInfoList</i> broadcasted in <i>SIB1</i> of the target cell i.e. the cell the UE is trying to resume.</p>
<p><b>source-c-RNTI</b> Set to C-RNTI that the UE had in the PCell it was connected to prior to suspension of the RRC connection.</p>
<p><b>sourcePhysCellId</b> Set to the physical cell identity of the PCell the UE was connected to prior to suspension of the RRC connection.</p>

## – *VarRLF-Report*

The UE variable *VarRLF-Report* includes the radio link failure information or handover failure information.

### **VarRLF-Report UE variable**

```
-- ASN1START
-- TAG-VARRLF-REPORT-START

VarRLF-Report-r16 ::= SEQUENCE {
    rlf-Report-r16          RLF-Report-r16,
    identityList-r18       CHOICE {
        plmn-IdentityList-r18  PLMN-IdentityList2-r16,
        snpn-IdentityList-r18  SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}

-- TAG-VARRLF-REPORT-STOP
-- ASN1STOP
```

## – *VarServingSecurityCellSetID*

The UE variable *VarServingSecurityCellSetID* includes the security cell set ID of serving PCell.

### **VarServingSecurityCellSetID UE variable**

```
-- ASN1START
-- TAG-VARSERVINGSECURITYCELLSETID-START

VarServingSecurityCellSetID ::= SEQUENCE {
    servingSecurityCellSetId-r18  INTEGER (1.. maxSecurityCellSet-r18)
}

-- TAG-VARSERVINGSECURITYCELLSETID-STOP
-- ASN1STOP
```

```
-- TAG-VARSERVINGSECURITYCELLSETID-STOP
-- ASN1STOP
```

## – *VarShortMAC-Input*

The UE variable *VarShortMAC-Input* specifies the input used to generate the *shortMAC-I* during RRC Connection Reestablishment procedure.

### *VarShortMAC-Input* UE variable

```
-- ASN1START
-- TAG-VARSHORTMAC-INPUT-START

VarShortMAC-Input ::= SEQUENCE {
    sourcePhysCellId      PhysCellId,
    targetCellIdentity    CellIdentity,
    source-c-RNTI         RNTI-Value
}

-- TAG-VARSHORTMAC-INPUT-STOP
-- ASN1STOP
```

### *VarShortMAC-Input* field descriptions

#### ***targetCellIdentity***

An input variable used to calculate the *shortMAC-I*. Set to the *cellIdentity* of the first *PLMN-Identity* in the *PLMN-IdentityInfoList* broadcasted in *SIB1* of the target cell i.e. the cell the UE is trying to reestablish the connection.

#### ***source-c-RNTI***

Set to C-RNTI that the UE had in the PCell it was connected to prior to the reestablishment.

#### ***sourcePhysCellId***

Set to the physical cell identity of the PCell the UE was connected to prior to the reestablishment.

## – *VarSuccessHO-Report*

The UE variable *VarSuccessHO-Report* includes the successful handover information.

### *VarSuccessHO-Report* UE variable

```
-- ASN1START
-- TAG-VARSUCCESSHO-Report-START

VarSuccessHO-Report-r17 ::= SEQUENCE {
    successHO-Report-r17 SuccessHO-Report-r17,
    identityList-r18      CHOICE {
        plmn-IdentityList-r18 PLMN-IdentityList2-r16,
        snpn-IdentityList-r18 SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}
```

```

}
-- TAG-VARSUCCESSHO-Report-STOP
-- ASN1STOP

```

## – *VarSuccessPSCell-Report*

The UE variable *VarSuccessPSCell-Report* includes the successful PSCell change or addition information.

### *VarSuccessPSCell-Report* UE variable

```

-- ASN1START
-- TAG-VARSUCCESSPSCCELL-Report-START

VarSuccessPSCell-Report-r18 ::= SEQUENCE {
    successPSCell-Report-r18      SuccessPSCell-Report-r18,
    identityList-r18             CHOICE {
        plmn-IdentityList-r18    PLMN-IdentityList2-r16,
        snpn-IdentityList-r18    SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}

-- TAG-VARSUCCESSPSCCELL-Report-STOP
-- ASN1STOP

```

## – *VarTSS-Info*

The UE variable *VarTSS-Info* includes information about the current value of *eventID-TSS* and the current value of the global gNB Identity.

### *VarTSS-Info* UE variable

```

-- ASN1START
-- TAG-VARTSS-INFO-START

VarTSS-Info-r18 ::= SEQUENCE {
    storedEventID-r18            INTEGER (0..63),
    storedGlobalGnbID-r18       SEQUENCE {
        plmn-Identity-r18       PLMN-Identity,
        gnb-ID-r18              BIT STRING (SIZE (22..32))
    }
}

-- TAG-VARTSS-INFO-STOP
-- ASN1STOP

```

– End of *NR-UE-Variables*

-- ASN1START

END

-- ASN1STOP

## 8 Protocol data unit abstract syntax

### 8.1 General

The RRC PDU contents in clause 6 and clause 10 are described using abstract syntax notation one (ASN.1) as specified in ITU-T Rec. X.680 [6] and X.681 [7]. Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in ITU-T Rec. X.691 [8].

The following encoding rules apply in addition to what has been specified in X.691:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in X.691, the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field;

NOTE: The terms 'leading bit' and 'trailing bit' are defined in ITU-T Rec. X.680. When using the 'bstring' notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

- When decoding types constrained with the ASN.1 Contents Constraint ("CONTAINING"), automatic decoding of the contained type should not be performed because errors in the decoding of the contained type should not cause the decoding of the entire RRC message PDU to fail. It is recommended that the decoder first decodes the outer PDU type that contains the OCTET STRING or BIT STRING with the Contents Constraint, and then decodes the contained type that is nested within the OCTET STRING or BIT STRING as a separate step;
- When decoding a) RRC message PDUs, b) BIT STRING constrained with a Contents Constraint, or c) OCTET STRING constrained with a Contents Constraint, PER decoders are required to never report an error if there are extraneous zero or non-zero bits at the end of the encoded RRC message PDU, BIT STRING or OCTET STRING.

### 8.2 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/across the radio interface contains the basic production as defined in X.691.

RRC PDUs shall be mapped to and from PDCP SDUs (in case of DCCH) or RLC SDUs (in case of PCCH, BCCH or CCCH) upon transmission and reception as follows:

- when delivering an RRC PDU as an PDCP SDU to the PDCP layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the PDCP SDU and onwards; and
- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and
- upon reception of an PDCP SDU from the PDCP layer, the first bit of the PDCP SDU shall represent the first bit of the RRC PDU and onwards; and
- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

### 8.3 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691. It always contains a multiple of 8 bits.

### 8.4 Extension

The following rules apply with respect to the use of protocol extensions:

- A transmitter compliant with this version of the specification shall, unless explicitly indicated otherwise on a PDU type basis, set the extension part empty. Transmitters compliant with a later version may send non-empty extensions;
- A transmitter compliant with this version of the specification shall set spare bits to zero.

## 8.5 Padding

If the encoded RRC message does not fill a transport block, the RRC layer shall add padding bits. This applies to PCCH and BCCH.

Padding bits shall be set to 0 and the number of padding bits is a multiple of 8.

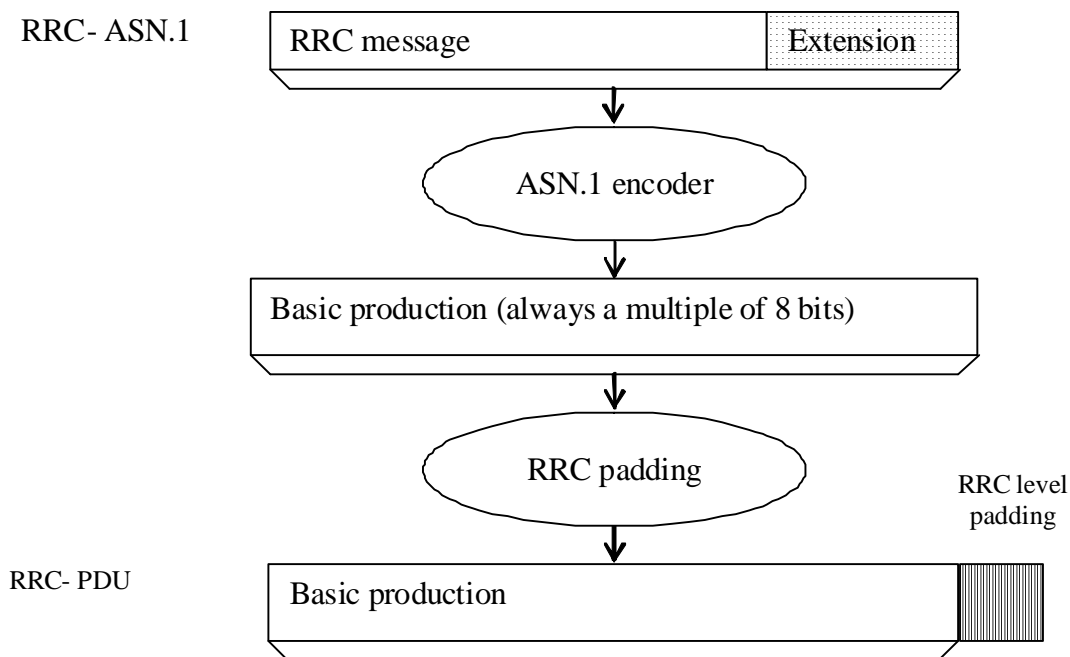

Figure 8.5-1: RRC level padding

## 9 Specified and default radio configurations

Specified and default configurations are configurations of which the details are specified in the standard. Specified configurations are fixed while default configurations can be modified using dedicated signalling. The default value for the parameters not listed in following clauses shall be set such as the corresponding features are not configured, i.e. *release* or *false* unless explicitly stated otherwise.

NOTE: The UE applies the default values specified in the field description of ASN.1 parameters only when the parent IE is present. Hence, the UE does not apply all default values in field descriptions when it applies the "default radio configuration" in accordance with this clause.

### 9.1 Specified configurations

#### 9.1.1 Logical channel configurations

##### 9.1.1.1 BCCH configuration

Parameters

Name	Value	Semantics description	Ver
SDAP configuration	Not used		
PDCP configuration	Not used		
RLC configuration	TM		
Logical channel configuration	Not used		

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

### 9.1.1.2 CCCH configuration

Parameters

Name	Value	Semantics description	Ver
SDAP configuration	Not used		
PDCP configuration	Not used		
RLC configuration	TM		
Logical channel configuration			
>priority	1	Highest priority	
>prioritisedBitRate	infinity		
>bucketSizeDuration	ms1000		
>logicalChannelGroup	0		

### 9.1.1.3 PCCH configuration

Parameters

Name	Value	Semantics description	Ver
SDAP configuration	Not used		
PDCP configuration	Not used		
RLC configuration	TM		
Logical channel configuration	Not used		

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

### 9.1.1.4 SCCH configuration

Parameters that are specified for unicast of NR sidelink communication, which is used for the sidelink signalling radio bearer of PC5-RRC message. The SL-SRB using this SCCH configuration is named as SL-SRB3.

Name	Value	Semantics description	Ver
PDCP configuration			
> <i>t-Reordering</i>	Undefined	Selected by the receiving UE, up to UE implementation	
> <i>pdcp-SN-Size</i>	12		
SRAP configuration		Specified for L2 U2U relay operation, which is used for U2U Remote UE's SL-SRB3 with the peer U2U Remote UE.	
> <i>sl-RemoteUE-SLRB-Identity</i>	3	This parameter is only applicable to L2 U2U relay operation.	
RLC configuration		AM RLC	
> <i>sn-FieldLength</i>	12		
> <i>t-Reassembly</i>	Undefined	Selected by the receiving UE, up to UE implementation

> <i>t-Reassembly</i>	ms0		

## 9.1.2 Void

## 9.2 Default radio configurations

The following clauses only list default values for REL-15 parameters included in protocol version v15.3.0. For all fields introduced in a later protocol version, the default value is "released" or "false" unless explicitly specified otherwise. If the UE is to apply default configuration while it is configured with some critically extended fields, the UE shall apply the original version of those fields with only default values.

NOTE 1: In general, the signalling should preferably support a "release" option for fields introduced after v15.3.0. The "value not applicable" should be used restrictively, mainly limited to for fields which value is relevant only if another field is set to a value other than its default.

NOTE 2: For parameters in *ServingCellConfig*, the default values are specified in the corresponding specification.

### 9.2.1 Default SRB configurations

Parameters

Name	Value			Semantics description	Ver
	SRB1	SRB2	SRB3		
<i>PDCP-Config</i>					
> <i>t-Reordering</i>	infinity				
<i>RLC-Config CHOICE</i>	Am				
<i>ul-AM-RLC</i>

<b>SL-PreconfigurationNR field descriptions</b>
<p><b>sl-DRX-PreConfig-GC-BC</b> This field indicates the sidelink DRX configuration for groupcast and broadcast communication, as specified in TS 38.321 [3].</p>
<p><b>sl-OffsetDFN</b> Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on. If the field is absent, no offset is applied.</p>
<p><b>sl-PosPreconfigFreqInfoList</b> This field indicates the NR sidelink positioning carrier frequencies of SL-PRS dedicated resource pool for SL-PRS transmission and reception. In this release, only one entry of <i>SL-FreqConfigCommon</i> is included in the list.</p>
<p><b>sl-PreconfigDiscConfig</b> This field indicates the configuration for discovery message transmission used by NR sidelink U2N Remote UE, used by NR sidelink U2U Relay UE or used by NR sidelink U2U Remote UE.</p>
<p><b>sl-PreconfigEUTRA-AnchorCarrierFreqList</b> This field indicates the EUTRA anchor carrier frequency list, which can provide the NR sidelink communication configuration.</p>
<p><b>sl-PreconfigFreqInfoList, sl-PreconfigFreqInfoListSizeExt</b> This field indicates the NR sidelink communication and/ or NR sidelink discovery configuration some carrier frequency(ies). In this release, only one <i>SL-FreqConfig</i> can be configured in <i>sl-PreconfigFreqInfoList</i>. More entries of <i>SL-FreqConfig</i> can be configured in <i>sl-PreconfigFreqInfoListSizeExt</i>.</p>
<p><b>sl-PreconfigNR-AnchorCarrierFreqList</b> This field indicates the NR anchor carrier frequency list, which can provide the NR sidelink communication configuration.</p>
<p><b>sl-RadioBearerPreConfigList</b> This field indicates one or multiple sidelink radio bearer configurations.</p>
<p><b>sl-RLC-BearerPreConfigList, sl-RLC-BearerPreConfigListSizeExt</b> This field indicates one or multiple sidelink RLC bearer configurations.</p>
<p><b>sl-RoHC-Profiles</b> This field indicates the supported RoHC profiles for NR sidelink communications.</p>
<p><b>sl-SSB-PriorityNR</b> This field indicates the priority of NR sidelink SSB transmission and reception.</p>
<p><b>sl-SyncFreqList</b> Indicates a list of candidate carrier frequencies that can be used for the synchronisation of NR sidelink communication. For <i>SL-Freq-Id-r16</i>, the value 1 corresponds to the frequency of first entry in <i>sl-PreconfigFreqInfoList</i>, the value 2 corresponds to the frequency of first entry in <i>sl-PreconfigFreqInfoListSizeExt</i>, the value 3 corresponds to the frequency of second entry in <i>sl-PreconfigFreqInfoListSizeExt</i> and so on.</p>
<p><b>sl-SyncTxMultiFreq</b> Indicates that the UE transmits S-SSB on multiple carrier frequencies for NR sidelink communication. If this field is absent, the UE transmits S-SSB only on the synchronisation carrier frequency.</p>
<p><b>sl-TxProfileList</b> List of one or multiple Tx profiles, indicating the compatibility of supporting SL DRX as specified in TS 38.321 [3]. Value <i>drx-Compatible</i> means SL DRX is supported, and value <i>drx-Incompatible</i> means SL DRX is not supported. It is up to the UE implementation whether/how to apply this field.</p>
<p><b>t400</b> Indicates the value for timer T400 as described in clause 7.1. Value <i>ms100</i> corresponds to 100 ms, value <i>ms200</i> corresponds to 200 ms and so on.</p>
<p><b>t400-U2U</b> Indicates the value for timer T400 to be applied for end-to-end PC5 connection in sidelink U2U relay operation as described in clause 7.1. Value <i>ms200</i> corresponds to 200 ms, value <i>ms400</i> corresponds to 400 ms and so on.</p>

# 10 Generic error handling

## 10.1 General

The generic error handling defined in the subsequent clauses applies unless explicitly specified otherwise e.g. within the procedure specific error handling.

The UE shall consider a value as not comprehended when it is set:

- to an extended value that is not defined in the version of the transfer syntax supported by the UE;
- to a spare or reserved value unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved value.

The UE shall consider a field as not comprehended when it is defined:

- as spare or reserved unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved field.

## 10.2 ASN.1 violation or encoding error

The UE shall:

- 1> when receiving an RRC message on the BCCH, CCCH, PCCH, MCCH, multicast MCCH or a PC5 RRC message on SBCCH for which the abstract syntax is invalid [6]:
  - 2> ignore the message.

NOTE: This clause applies in case one or more fields is set to a value, other than a spare, reserved or extended value, not defined in this version of the transfer syntax. E.g. in the case the UE receives value 12 for a field defined as INTEGER (1..11). In cases like this, it may not be possible to reliably detect which field is in the error hence the error handling is at the message level.

## 10.3 Field set to a not comprehended value

The UE shall, when receiving an RRC message or PC5 RRC message on any logical channel:

- 1> if the message includes a field that has a value that the UE does not comprehend:
  - 2> if a default value is defined for this field:
    - 3> treat the message while using the default value defined for this field;
  - 2> else if the concerned field is optional:
    - 3> treat the message as if the field were absent and in accordance with the need code for absence of the concerned field;
  - 2> else:
    - 3> treat the message as if the field were absent and in accordance with clause 10.4.

## 10.4 Mandatory field missing

The UE shall:

- 1> if the message includes a field that is mandatory to include in the message (e.g. because conditions for mandatory presence are fulfilled) and that field is absent or treated as absent:
  - 2> if the RRC message was not received on DCCH or CCCH; or
  - 2> if the PC5 RRC message was not received on SCCH:
    - 3> if the field concerns a (sub-field of) an entry of a list (i.e. a SEQUENCE OF):
      - 4> treat the list as if the entry including the missing or not comprehended field was absent;
    - 3> else if the field concerns a sub-field of another field, referred to as the 'parent' field i.e. the field that is one nesting level up compared to the erroneous field:
      - 4> consider the 'parent' field to be set to a not comprehended value;
      - 4> apply the generic error handling to the subsequent 'parent' field(s), until reaching the top nesting level i.e. the message level;
  - 3> else (field at message level):
    - 4> ignore the message.

NOTE 1: The error handling defined in these clauses implies that the UE ignores a message with the message type or version set to a not comprehended value.

NOTE 2: The nested error handling for messages received on logical channels other than DCCH, CCCH and SCCH applies for errors in extensions also, even for errors that can be regarded as invalid network operation e.g. the network not observing conditional presence.

NOTE 3: UE behaviour on receipt of an RRC message on DCCH or CCCH or a PC5 RRC message on SCCH that does not include a field that is mandatory (e.g. because conditions for mandatory presence are fulfilled) is unspecified.

The following ASN.1 further clarifies the levels applicable in case of nested error handling for errors in extension fields.

```
-- /example/ ASN1START
-- Example with extension addition group

ItemInfoList ::=
    SEQUENCE (SIZE (1..max)) OF ItemInfo

ItemInfo ::=
    SEQUENCE {
        itemIdentity      INTEGER (1..max),
        field1            Field1,
        field2            Field2                OPTIONAL,           -- Need N
        ...
        [[
            field3-r9     Field3-r9            OPTIONAL,           -- Cond Cond1
            field4-r9     Field4-r9            OPTIONAL,           -- Need N
        ]]
    }

-- Example with traditional non-critical extension (empty sequence)

BroadcastInfoBlock1 ::=
    SEQUENCE {
        itemIdentity      INTEGER (1..max),
        field1            Field1,
        field2            Field2                OPTIONAL,           -- Need N
        nonCriticalExtension BroadcastInfoBlock1-v940-IEs OPTIONAL
    }

BroadcastInfoBlock1-v940-IEs ::= SEQUENCE {
        field3-r9         Field3-r9            OPTIONAL,           -- Cond Cond1
        field4-r9         Field4-r9            OPTIONAL,           -- Need N
        nonCriticalExtension SEQUENCE {
            ...
        }
    }

-- ASN1STOP
```

The UE shall, apply the following principles regarding the levels applicable in case of nested error handling:

- an extension addition group is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, a error regarding the conditionality of *field3* would result in the entire *itemInfo* entry to be ignored (rather than just the extension addition group containing *field3* and *field4*);
- a traditional *nonCriticalExtension* is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, an error regarding the conditionality of *field3* would result in the entire *BroadcastInfoBlock1* to be ignored (rather than just the non-critical extension containing *field3* and *field4*).

## 10.5 Not comprehended field

The UE shall, when receiving an RRC message on any logical channel:

- 1> if the message includes a field that the UE does not comprehend:
- 2> treat the rest of the message as if the field was absent.

NOTE: This clause does not apply to the case of an extension to the value range of a field. Such cases are addressed instead by the requirements in clause 10.3.

---

# 11 Radio information related interactions between network nodes

## 11.1 General

This clause specifies RRC messages that are transferred between network nodes. These RRC messages may be transferred to or from the UE via another Radio Access Technology. Consequently, these messages have similar characteristics as the RRC messages that are transferred across the NR radio interface, i.e. the same transfer syntax and protocol extension mechanisms apply.

## 11.2 Inter-node RRC messages

### 11.2.1 General

This clause specifies RRC messages that are sent either across the X2-, Xn- or the NG-interface, either to or from the gNB, i.e. a single 'logical channel' is used for all RRC messages transferred across network nodes. The information could originate from or be destined for another RAT.

## 11.2.2 Message definitions

### – *CG-CandidateList*

This message is used to transfer the SCG radio configuration for one or more candidate cells for Conditional PSCell Addition (CPA), Conditional PSCell Change (CPC), inter-SN subsequent CPAC, or CHO with candidate SCG(s) as generated by the candidate target SgNB, or the serving SgNB in case of intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN.

Direction: Secondary gNB to master gNB or eNB.

#### **CG-CandidateList message**

```

-- ASN1START
-- TAG-CG-CANDIDATELIST-START

CG-CandidateList ::=
    criticalExtensions
        c1
            cg-CandidateList-r17
            spare3 NULL, spare2 NULL, spare1 NULL
        },
    criticalExtensionsFuture
        SEQUENCE {}
}

CG-CandidateList-r17-IEs ::=
    SEQUENCE {
        cg-CandidateToAddModList-r17
            SEQUENCE (SIZE (1..maxNrofCondCells-r16)) OF CG-CandidateInfo-r17 OPTIONAL,

}
-- TAG-CG-CANDIDATELIST-STOP
-- ASN1STOP

```

#### CG-CandidateList field descriptions

##### **cg-CandidateToAddModList**

Contains information regarding candidate target cells to be added or modified for Conditional PSCell Addition (CPA), Conditional PSCell Change (CPC), inter-SN subsequent CPAC, or CHO with candidate SCG(s) from the candidate target secondary node or from the serving secondary node for intra-SN subsequent CPAC in configuration(s) which are delivered embedded within an RRC message generated by the MN.

##### **cg-CandidateToReleaseList**

Contains information regarding candidate target cells for CPA, CPC, inter-SN subsequent CPAC, or CHO with candidate SCG(s) to be removed from the candidate target secondary node or from the serving secondary node for intra-SN subsequent CPAC in configuration(s) which are delivered embedded within an RRC message generated by the MN. This list is not used in CPA, CPC, subsequent CPAC, or CHO with candidate SCG(s) preparation.

#### CG-CandidateInfo field descriptions

##### **cg-CandidateInfo**

SSB frequency and Physical Cell Identity of the candidate target cell.

##### **candidateCG-Config**

CG-Config message corresponding to the cell indicated by *cg-CandidateInfo*.

## – HandoverCommand

This message is used to transfer the handover command as generated by the target gNB.

Direction: target gNB to source gNB/source RAN.

#### HandoverCommand message

```

-- ASN1START
-- TAG-HANDOVER-COMMAND-START

HandoverCommand ::=
    criticalExtensions
        c1
            handoverCommand
            spare3 NULL, spare2 NULL, spare1 NULL
        },
    criticalExtensionsFuture
}

HandoverCommand-IEs ::=

```

    nonCriticalExtension          HandoverCommand-v1800-IEs          OPTIONAL
  }
HandoverCommand-v1800-IEs ::= SEQUENCE {
    candPSCellExecutionConditionInfo-r18 CandPSCellExecutionConditionInfo-r18  OPTIONAL,
    nonCriticalExtension                SEQUENCE {}                    OPTIONAL
}
CandPSCellExecutionConditionInfo-r18 ::= SEQUENCE {
    candPSCellExecCondReportConfigNR-r18 SEQUENCE (SIZE (1..2)) OF ReportConfigNR,
    ...
}
-- TAG-HANDOVER-COMMAND-STOP
-- ASN1STOP

```

#### **HandoverCommand field descriptions**

##### **candPSCellExecCondReportConfigNR**

Contains execution condition parameters of candidate PSCells in case of CHO with candidate SCG(s). This fields can include only *a4-Threshold*, *hysteresis*, *timeToTrigger*, and *rsType* associated to *condEventA4*.

##### **handoverCommandMessage**

Contains the *RRCReconfiguration* message used to perform handover within NR or handover to NR, as generated (entirely) by the target gNB.

## – HandoverPreparationInformation

This message is used to transfer the NR RRC information used by the target gNB during handover preparation or UE context retrieval, e.g. in case of resume or re-establishment, including UE capability information. This message is also used for transferring the information between the CU and DU.

Direction: source gNB/source RAN to target gNB or CU to DU.

<b>HandoverPreparationInformation field descriptions</b>
<p><b>as-Context</b> Local RAN context required by the target gNB or DU.</p>
<p><b>rrm-Config</b> Local RAN context used mainly for RRM purposes.</p>
<p><b>sourceConfig</b> The radio resource configuration as used in the source cell.</p>
<p><b>ue-CapabilityRAT-List</b> The UE radio access related capabilities concerning RATs supported by the UE. A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information.</p>
<p><b>ue-InactiveTime</b> Duration while UE has not received or transmitted any user data. Thus the timer is still running in case e.g., UE measures the neighbour cells for the HO purpose. Value <i>s1</i> corresponds to 1 second, <i>s2</i> corresponds to 2 seconds and so on. Value <i>min1</i> corresponds to 1 minute, value <i>min1s20</i> corresponds to 1 minute and 20 seconds, value <i>min1s40</i> corresponds to 1 minute and 40 seconds and so on. Value <i>hr1</i> corresponds to 1 hour, <i>hr1min30</i> corresponds to 1 hour and 30 minutes and so on.</p>

<b>AS-Config field descriptions</b>
<p><b>rrcReconfiguration</b> Contains the <i>RRCReconfiguration</i> configuration as generated entirely by the MN. If the <i>TMGI-r17</i> is included in the <i>MRB-ToAddMod-r17</i> in the <i>RadioBearerConfig</i>, the <i>plmn-Index</i> is replaced by the PLMN ID, if needed.</p>
<p><b>sdt-Config</b> Contains the IE <i>SDT-Config</i> as generated entirely by the last serving gNB. This field is only used during the SDT procedure and the RNA update procedure with UE context relocation as defined in TS 38.300 [2], clause 18.2 and 9.2.2.5 respectively.</p>
<p><b>sourceRB-SN-Config</b> Contains the IE <i>RadioBearerConfig</i> as generated entirely by the SN. This field is only used when the UE is configured with SN terminated RB(s).</p>
<p><b>sourceSCG-Configured</b> Value <i>true</i> indicates that the UE is configured with NR or EUTRA SCG in source configuration. The field is only used in NR-DC and NE-DC and is included only if the fields <i>sourceSCG-NR-Config</i> and <i>sourceSCG-EUTRA-Config</i> are absent.</p>
<p><b>sourceSCG-EUTRA-Config</b> Contains the current dedicated SCG configuration in <i>RRCConnectionReconfiguration</i> message as specified in TS 36.331 [10] and generated entirely by the SN. In this version of the specification, the E-UTRA <i>RRCConnectionReconfiguration</i> message can only include the field <i>scg-Configuration</i>. This field is only used in NE-DC.</p>
<p><b>sourceSCG-NR-Config</b> Contains the current dedicated SCG configuration in <i>RRCReconfiguration</i> message as generated entirely by the SN. In this version of the specification, the <i>RRCReconfiguration</i> message can only include fields <i>secondaryCellGroup</i>, <i>measConfig</i>, and <i>conditionalReconfiguration</i>. This field is only used in NR-DC.</p>
<p><b>srs-PosRRC-InactiveValidityAreaPreConfigList</b> Contains the IE <i>SRS-PosRRC-InactiveValidityAreaPreConfigList</i> as generated entirely by the last serving gNB. This field is only used UE is preconfigured with SRS for positioning with validity area and during the RNA update procedure with UE context relocation as defined in TS 38.300 [2], clause 18.2 and 9.2.2.5 respectively.</p>

<b>AS-Context field descriptions</b>
<p><b>configRestrictInfoDAPS</b> Includes fields for which source cell explicitly indicates the restriction to be observed by target cell during DAPS handover.</p>
<p><b>mbsInterestIndication</b> Includes the information last reported by the UE in the NR <i>MBSInterestIndication</i> message, where the <i>plmn-Index</i> (if included by the UE in <i>tmgi</i>) is replaced by the PLMN ID, if needed. A TMGI for which the <i>plmn-Index</i> points to a non-serving SNPN is removed from the NR <i>MBSInterestIndication</i> message.</p>
<p><b>needForGapsInfoNR</b> Includes measurement gap requirement information of the UE for NR target bands. The field includes <i>needForGapsInfoNR</i> in <i>RRCReconfigurationComplete</i> message, <i>needForGapsInfoNR</i> in <i>RRCResumeComplete</i> message or <i>musim-needForGapsInfoNR</i> in <i>UEAssistanceInformation</i> message that is last reported by the UE, if any.</p>
<p><b>selectedBandCombinationSN</b> Indicates the band combination selected by SN in (NG)EN-DC, NE-DC, and NR-DC.</p>
<p><b>sidelinkUEInformationEUTRA</b> This field includes <i>SidelinkUEInformation</i> IE as specified in TS 36.331 [10].</p>
<p><b>sidelinkUEInformationNR</b> This field includes <i>SidelinkUEInformationNR</i> IE.</p>
<p><b>ueAssistanceInformation</b> Includes for each UE assistance feature the information last reported by the UE, if any.</p>
<p><b>ueAssistanceInformationSCG</b> Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR <i>UEAssistanceInformation</i> message for the SCG, if any.</p>

<b>ConfigRestrictInfoDAPS field descriptions</b>
<p><b>sourceFeatureSetPerUplinkCC/sourceFeatureSetPerDownlinkCC</b> Indicates an index referring to the position of the <i>FeatureSetUplinkPerCC/FeatureSetDownlinkPerCC</i> selected by source in the <i>featureSetsUplinkPerCC/featureSetsDownlinkPerCC</i>.</p>

<b>RRM-Config field descriptions</b>
<p><b>candidateCellInfoList</b> A list of the best cells on each frequency for which measurement information was available</p>
<p><b>candidateCellInfoListSN-EUTRA</b> A list of EUTRA cells including serving cells and best neighbour cells on each serving frequency, for which measurement results were available. This field is only used in NE-DC.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>HO</i>	The field is mandatory present in case of handover within NR or UE context retrieval, e.g. in case of resume or re-establishment. The field is optionally present in case of handover from E-UTRA/5GC. Otherwise the field is absent.
<i>HO2</i>	The field is optionally present in case of handover within NR; otherwise the field is absent.

NOTE 1: The following table indicates per source RAT whether RAT capabilities are included or not.

Source RAT	NR capabilities	E-UTRA capabilities	MR-DC capabilities	UTRA capabilities
NR	May be included if UE Radio Capability ID as specified in 23.502 [43] is used for the UE. Included otherwise.	May be included	May be included	May be included, ignored by gNB if received
E-UTRAN	May be included if UE Radio Capability ID as specified in 23.502 [43] is used for the UE. Included otherwise.	May be included	May be included	May be included, ignored by gNB if received

NOTE 2: The following table indicates, in case of inter-RAT handover from E-UTRA, which additional IEs are included or not:

Source system	sourceConfig	rrm-Config	as-Context
E-UTRA/EPC	Not included	May be included	Not included
E-UTRA/5GC	May be included, but only <i>radioBearerConfig</i> is included in the <i>RRCReconfiguration</i> .	May be included	Not included

## – CG-Config

This message is used to transfer the SCG radio configuration as generated by the SgNB or SeNB. It can also be used by a CU to request a DU to perform certain actions, e.g. to request the DU to perform a new lower layer configuration.

Direction: Secondary gNB or eNB to master gNB or eNB, alternatively CU to DU.

### CG-Config message

```

<b>CG-Config field descriptions</b>
<p><b>aggregatedBandwidthSN</b> Used to indicate or request the maximum aggregated bandwidth at the SN side if the <i>supportedAggBW-FR1</i> was reported for the <i>selectedBandCombination</i> or <i>requestedBC-MRDC</i>, respectively. This field is only used in NR-DC.</p> <ul style="list-style-type: none"> <li>- <i>aggBW-FDD-DL/UL-r17</i> indicates the aggregated bandwidth across FDD DL/UL CCs in SCG;</li> <li>- <i>aggBW-TDD-DL/UL-r17</i> indicates the aggregated bandwidth across TDD DL/UL CCs in SCG;</li> <li>- <i>aggBW-TotalDL/UL-r17</i> indicates the aggregated bandwidth across all DL/UL CCs in SCG.</li> </ul>
<p><b>candidateCellInfoListCPC</b> Contains information regarding candidate target cells for Conditional PSCell Change (CPC) or inter-SN subsequent CPAC that the source secondary gNB suggests the target secondary gNB to consider configuring for CPC or subsequent CPAC, and/or that the source secondary gNB prepares for intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN. This field is only used in SN initiated CPC and SN initiated subsequent CPAC.</p>
<p><b>candidateCellInfoListSN</b> Contains information regarding cells that the source secondary node suggests the target secondary gNB to consider configuring.</p>
<p><b>candidateCellInfoListSN-EUTRA</b> Includes the <i>MeasResultList3EUTRA</i> as specified in TS 36.331 [10]. Contains information regarding cells that the source secondary node suggests the target secondary eNB to consider configuring. This field is only used in NE-DC.</p>
<p><b>candidateCellInfoListSubsequentCPC</b> Contains information regarding candidate target cells for subsequent CPAC that candidate secondary gNB (or the serving secondary gNB in case of intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN) suggests the master gNB to consider configuring for subsequent CPAC. This field is only used in MN initiated and SN initiated subsequent CPAC. This field is only included in a <i>CG-Config</i> message which is contained within a <i>CG-CandidateList</i> message.</p>
<p><b>candidateServingFreqListNR, candidateServingFreqListEUTRA</b> Indicates frequencies of candidate serving cells for In-Device Co-existence Indication (see TS 36.331 [10]).</p>
<p><b>candidateServingFreqListNR-r16</b> indicates the candidate frequencies configured by SN for IDC. This field is only used in NR-DC.</p>
<p><b>candidateServingFreqRangeListNR</b> indicates the candidate frequency ranges configured by SN for IDC. This field is only used in NR-DC.</p>
<p><b>configRestrictModReq</b> Used by SN to request changes to SCG configuration restrictions previously set by MN to ensure UE capabilities are respected and to indicate the configured/reserved SCG resources. E.g. can be used to request configuring an NR band combination whose use MN has previously forbidden. SN only includes this field in SN-initiated procedures unless this field is used to indicate configured/reserved SCG resources (corresponding to <i>reservedResourceConfigNRDC</i> and/or <i>aggregatedBandwidthSN</i>) only.</p>
<p><b>drx-ConfigSCG</b> This field contains the complete DRX configuration of the SCG. This field is only used in NR-DC.</p>
<p><b>drx-InfoSCG</b> This field contains the DRX long and short cycle configuration of the SCG. This field is used in (NG)EN-DC and NE-DC.</p>
<p><b>drx-InfoSCG2</b> This field contains the drx-onDurationTimer configuration of the SCG. This field is only used in (NG)EN-DC.</p>
<p><b>fr-InfoListSCG</b> Contains information of FR information of serving cells that include PSCell and SCells configured in SCG.</p>
<p><b>fr1-Carriers-SCG, fr2-Carriers-SCG</b> Indicates the number of FR1 or FR2 serving cells configured in SCG.</p>
<p><b>idc-TDM-AssistanceConfig</b> Indicates if the IDC TDM reporting is enabled for the UE by SN. This field is only used in NR-DC.</p>
<p><b>measuredFrequenciesSN</b> Used by SN to indicate a list of frequencies measured by the UE.</p>
<p><b>needForGaps</b> In NE-DC, indicates whether the SN requests gNB to configure measurements gaps.</p>

<b>ph-InfoSCG</b> Power headroom information in SCG that is needed in the reception of PHR MAC CE of MCG
<b>ph-SupplementaryUplink</b> Power headroom information for supplementary uplink. In the case of (NG)EN-DC and NR-DC, this field is only present when two UL carriers are configured for a serving cell and one UL carrier reports type1 PH while the other reports type 3 PH.
<b>ph-Type1or3</b> Type of power headroom for a certain serving cell in SCG (PSCell and activated SCells). Value <i>type1</i> refers to type 1 power headroom, value <i>type3</i> refers to type 3 power headroom. (See TS 38.321 [3]).
<b>ph-Uplink</b> Power headroom information for uplink.
<b>pSCellFrequency, pSCellFrequencyEUTRA</b> Indicates the frequency of PSCell in NR (i.e., <i>pSCellFrequency</i> ) or E-UTRA (i.e., <i>pSCellFrequencyEUTRA</i> ). In this version of the specification, <i>pSCellFrequency</i> is not used in NE-DC whereas <i>pSCellFrequencyEUTRA</i> is only used in NE-DC. <i>pSCellFrequency</i> indicates the <i>absoluteFrequencySSB</i> .
<b>reportCGI-RequestNR, reportCGI-RequestEUTRA</b> Used by SN to indicate to MN about configuring <i>reportCGI</i> procedure. The request may optionally contain information about the cell for which SN intends to configure <i>reportCGI</i> procedure. In this version of the specification, the <i>reportCGI-RequestNR</i> is used in (NG)EN-DC and NR-DC whereas <i>reportCGI-RequestEUTRA</i> is used only for NE-DC.
<b>requestedBC-MRDC</b> Used to request configuring a band combination and corresponding feature sets which are forbidden to use by MN (i.e. outside of the <i>allowedBC-ListMRDC</i> ) to allow re-negotiation of the UE capabilities for SCG configuration.
<b>requestedL1-MeasConfigNRDC</b> Used to request the maximum number of allowed resources for L1 measurements to be configured for LTM at the SCG. This field is only used in NR-DC.
<b>requestedMaxInterFreqMeasIdSCG</b> Used to request the maximum number of allowed measurement identities to configure for inter-frequency measurement. This field is only used in NR-DC.
<b>requestedMaxIntraFreqMeasIdSCG</b> Used to request the maximum number of allowed measurement identities to configure for intra-frequency measurement on each serving frequency.
<b>requestedMaxLTM-CandidateIdSCG</b> Used to request the maximum number of allowed LTM candidate configurations to configure. This field is only used in NR-DC.
<b>requestedPDCCH-BlindDetectionSCG</b> Requested value of the reference number of cells for PDCCH blind detection allowed to be configured for the SCG.
<b>requestedP-MaxEUTRA</b> Requested value for the maximum power for the serving cells the UE can use in E-UTRA SCG. This field is only used in NE-DC.
<b>requestedP-MaxFR1</b> Requested value for the maximum power for the serving cells on frequency range 1 (FR1) in this secondary cell group (see TS 38.104 [12]) the UE can use in NR SCG.
<b>requestedP-MaxFR2</b> Requested value for the maximum power for the serving cells on frequency range 2 (FR2) in this secondary cell group the UE can use in NR SCG. This field is only used in NR-DC.
<b>requestedToffset</b> Requests the new value for the time offset restriction used by the SN for scheduling SCG transmissions (i.e. $T_{proc,SCG}^{max}$ , see TS 38.213 [13]). This field is used in NR-DC only when the fields <i>nrdc-PC-mode-FR1-r16</i> or <i>nrdc-PC-mode-FR2-r16</i> are set to dynamic. Value ms0dot5 corresponds to 0.5 ms, value ms0dot75 corresponds to 0.75 ms, value ms1 corresponds to 1ms and so on.
<b>reservedResourceConfigNRDC</b> Used to request or indicate the maximum number of resources reserved for the SCG. This field is only used in NR-DC.
<b>sCellFrequenciesSN-EUTRA, sCellFrequenciesSN-NR</b> Indicates the frequency of all SCells with SSB configured in SCG. The field <i>sCellFrequenciesSN-EUTRA</i> is used in NE-DC; the field <i>sCellFrequenciesSN-NR</i> is used in (NG)EN-DC and NR-DC. In (NG)EN-DC, the field is optionally provided to the MN. <i>sCellFrequenciesSN-NR</i> indicates <i>absoluteFrequencySSB</i> .

**scg-CellGroupConfig**

Contains the *RRCReconfiguration* message (containing only *secondaryCellGroup* and/or *measConfig* and/or *otherConfig* and/or *appLayerMeasConfig* and/or *conditionalReconfiguration*, *Itm-Config*, and/or *bap-Config* and/or *iab-IP-AddressConfigurationList*):

- to be sent to the UE, used upon SCG establishment or modification (only when the SCG is not released by the SN), as generated (entirely) by the (target) SgNB. In this case, the SN sets the *RRCReconfiguration* message in accordance with clause 6 e.g. regarding the "Need" or "Cond" statements.

or

- including the current SCG configuration of the UE, when provided in response to a query from MN, or in SN triggered SN change in order to enable delta signaling by the target SN, or in SN triggered modification procedure in order to coordinate CHO or MN-initiated CPC with SCG reconfigurations (see TS 38.423 [35]). In this case, the SN sets the *RRCReconfiguration* message in accordance with clause 11.2.3.

The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered modification procedure in order to coordinate CHO or MN-initiated CPC with SCG reconfigurations (see TS 38.423 [35]) nor SN triggered SN change is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG (re)configuration towards the UE. The field is also absent upon an SCG release triggered by the SN. This field is not applicable in NE-DC.

**scg-CellGroupConfigEUTRA**

Includes the E-UTRA *RRCCConnectionReconfiguration* message as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA RRC message can only include the field *scg-Configuration*:

- to be sent to the UE, used to (re-)configure the SCG configuration upon SCG establishment or modification (only when the SCG is not released by the SN), as generated (entirely) by the (target) SeNB. In this case, the SN sets the *scg-Configuration* within the EUTRA *RRCCConnectionReconfiguration* message in accordance with clause 6 in TS 36.331 [10] e.g. regarding the "Need" or "Cond" statements.

or

- including the current SCG configuration of the UE, when provided in response to a query from MN, or in SN triggered SN change in order to enable delta signalling by the target SN.

The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered SN change is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG (re)configuration towards the UE. The field is also absent upon an SCG release triggered by the SN. This field is only used in NE-DC.

**scg-RB-Config**

Contains the IE *RadioBearerConfig*:

- to be sent to the UE, used to (re-)configure the SCG RB configuration upon SCG establishment or modification, as generated (entirely) by the (target) SgNB or SeNB. In this case, the SN sets the *RadioBearerConfig* in accordance with clause 6, e.g. regarding the "Need" or "Cond" statements.

or

- including the current SCG RB configuration of the UE, when provided in response to a query from MN or in SN triggered SN change or in SN triggered SN release or bearer type change between SN terminated bearer to MN terminated bearer in order to enable delta signaling by the MN or target SN. In this case, the SN sets the *RadioBearerConfig* in accordance with clause 11.2.3.

The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered SN change nor SN triggered SN release is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG RB (re)configuration.

**scpac-ReferenceConfigurationSCG**

Includes the reference configuration associated with the SCG for the candidate supporting subsequent CPAC.

**selectedBandCombination**

Indicates the band combination selected by SN in (NG)EN-DC, NE-DC, and NR-DC. The SN should inform the MN with this field whenever the band combination and/or feature set it selected for the SCG changes (i.e. even if the new selection concerns a band combination and/or feature set that is allowed by the *allowedBC-ListMRDC*)

<b>selectedToffset</b>
Indicates the value used by the SN for scheduling SCG transmissions (i.e. $T_{proc,SCG}^{max}$ , see TS 38.213 [13]). This field is used in NR-DC only when the fields <i>nrdc-PC-mode-FR1-r16</i> or <i>nrdc-PC-mode-FR2-r16</i> are set to dynamic. The SN can only indicate a value that is less than or equal to <i>maxToffset</i> received from MN. This field is used in NR-DC only when MN has included the field <i>maxToffset</i> in <i>CG-ConfigInfo</i> . Value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms0dot75</i> corresponds to 0.75 ms, value <i>ms1</i> corresponds to 1ms and so on.
<b>servCellInfoListSCG-EUTRA</b>
Indicates the carrier frequency and the transmission bandwidth of the serving cell(s) in the SCG in intra-band NE-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in NE-DC.
<b>servCellInfoListSCG-NR</b>
Indicates the frequency band indicator, carrier center frequency, UE specific channel bandwidth and SCS of the serving cell(s) in the SCG in intra-band (NG)EN-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in (NG)EN-DC.
<b>subsequentCPAC-Information</b>
Contains information about handling of stored subsequent CPAC configurations for the UE that the target secondary gNB suggests the master gNB to consider configuring for normal PSCell addition or change. It includes information about updates of execution conditions for the subsequent CPAC configurations that are to be kept at the PSCell addition/change.
<b>successPSCell-Config</b>
Include the successful PSCell change or addition report configuration in case of SN initiated PSCell change or CPC. The <i>thresholdPercentageT304-SCG</i> is not configured in this message.
<b>twoPHRModeSCG</b>
Indicates if the power headroom for SCG shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not.
<b>twoSRS-MultipanelScheme</b>
Indicates whether the indicated serving cell is configured with multiple panel simultaneous uplink transmission schemes of multipanelSchemeSDM or multipanelSchemeSFN corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.
<b>twoSRS-PUSCH-Repetition</b>
Indicates whether the indicated serving cell is configured for PUSCH repetition corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.
<b>transmissionBandwidth-EUTRA</b>
Indicates the transmission bandwidth on an E-UTRA carrier frequency as defined by the parameter Transmission Bandwidth Configuration "NRB" TS 36.104 [33]. The values rb6, rb15, rb25, rb50, rb75, rb100 indicate 6, 15, 25, 50, 75 and 100 resource blocks respectively.
<b>ueAssistanceInformationSCG</b>
Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR <i>UEAssistanceInformation</i> message for the SCG, if any.

<b>BandCombinationInfoSN field descriptions</b>
<p><b>bandCombinationIndex</b> In case of NR-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i>. In case of NE-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationListNEDC-Only</i>. In case of (NG)EN-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationList-UplinkTxSwitch</i>. Band combination entries in <i>supportedBandCombinationList</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationListNEDC-Only</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationListNEDC-Only</i> increased by the number of entries in <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList-UplinkTxSwitch</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList-UplinkTxSwitch</i> increased by the number of entries in <i>supportedBandCombinationList</i>.</p>
<p><b>requestedFeatureSets</b> The position in the <i>FeatureSetCombination</i> which identifies one <i>FeatureSetUplink/Downlink</i> for each band entry in the associated band combination</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>FDD</i>	This field is mandatory present if dl-FreqInfo-NR is included and concerns an FDD carrier; otherwise the field is absent.

## – CG-ConfigInfo

This message is used by master eNB or gNB to request the SgNB or SeNB to perform certain actions e.g. to establish, modify or release an SCG. The message may include additional information e.g. to assist the SgNB or SeNB to set the SCG configuration. It can also be used by a CU to request a DU to perform certain actions, e.g. to establish, or modify an MCG or SCG.

Direction: Master eNB or gNB to secondary gNB or eNB, alternatively CU to DU.

```

<b>CG-ConfigInfo field descriptions</b>
<p><b>affectedCarrierFreqCombList</b> This field is signalled upon MN not addressing IDC issue and contains the list of NR carrier frequency combinations reported by UE to MN for IDC problem caused by the NR-DC frequency combination.</p>
<p><b>affectedCarrierFreqRangeCombList</b> This field is signalled upon MN not addressing IDC issue and contains the list of NR carrier frequency range combinations reported by UE to MN for IDC problem caused by the NR-DC frequency combination.</p>
<p><b>alignedDRX-Indication</b> This field is signalled upon MN triggered CGI reporting by the UE that requires aligned DRX configurations between the MCG and the SCG (i.e. same DRX cycle and on-duration configured by MN completely contains on-duration configured by SN).</p>
<p><b>allowedAggregatedBandwidthSNList</b> A list of allowed maximum aggregated bandwidth at the SN side for the band combination included in the <i>allowedBC-ListMRDC</i>. This field is only used in NR-DC.</p>
<p><b>allowedBC-ListMRDC</b> A list of indices referring to band combinations in MR-DC capabilities from which SN is allowed to select the SCG band combination. Each entry refers to: - a band combination numbered according to <i>supportedBandCombinationList</i> and <i>supportedBandCombinationList-UplinkTxSwitch</i> in the <i>UE-MRDC-Capability</i> (in case of (NG)EN-DC), or according to <i>supportedBandCombinationList</i> and <i>supportedBandCombinationListNEDC-Only</i> in the <i>UE-MRDC-Capability</i> (in case of NE-DC), or according to <i>supportedBandCombinationList</i> in the <i>UE-NR-Capability</i> (in case of NR-DC), - and the Feature Sets allowed for each band entry. All MR-DC band combinations indicated by this field comprise the MCG band combination, which is a superset of the MCG band(s) selected by MN.</p>
<p><b>allowedL1-MeasConfigNRDC</b> Used to indicate the maximum number of allowed resources for L1 measurements to be configured for LTM at the SCG. This field is only used in NR-DC.</p>
<p><b>allowedReducedConfigForOverheating</b> Indicates the reduced configuration that the SCG is allowed to configure. <i>reducedMaxCCs</i> in <i>allowedReducedConfigForOverheating</i> indicates the maximum number of downlink/uplink PSCell/SCells that the SCG is allowed to configure. This field is used in (NG)EN-DC and NR-DC. <i>reducedMaxBW-FR1</i> and <i>reducedMaxBW-FR2</i> in <i>allowedReducedConfigForOverheating</i> indicates the maximum aggregated bandwidth across all downlink/uplink carriers of FR1 and FR2-1, respectively that the SCG is allowed to configure. <i>reducedMaxBW-FR2-2</i> in <i>allowedReducedConfigForOverheating-r17</i> indicates the maximum aggregated bandwidth across all downlink/uplink carriers of FR2-2 that the SCG is allowed to configure. This field is only used in NR-DC. <i>reducedMaxMIMO-LayersFR1</i> and <i>reducedMaxMIMO-LayersFR2</i> in <i>allowedReducedConfigForOverheating</i> indicates the maximum number of downlink/uplink MIMO layers of each serving cell operating on FR1 and FR2-1, respectively that the SCG is allowed to configure. <i>reducedMaxMIMO-LayersFR2-2</i> in <i>allowedReducedConfigForOverheating-r17</i> indicates the maximum number of downlink/uplink MIMO layers of each serving cell operating on FR2-2 that the SCG is allowed to configure. This field is only used in NR-DC.</p>
<p><b>allowedResourceConfigNRDC</b> Used to indicate the maximum number of resources reserved for the SCG. This field is only used in NR-DC.</p>
<p><b>candidateCellInfoListMN, candidateCellInfoListSN</b> Contains information regarding cells that the master node or the source node suggests the target gNB or DU to consider configuring. In case of MN initiated CPA, CPC or CHO with candidate SCG(s), the field <i>candidateCellInfoListMN</i> contains information regarding cells that the MN suggests the candidate target secondary node to consider configuring for MN initiated CPA, CPC, CHO with candidate SCG(s), or subsequent CPAC. For (NG)EN-DC, including CSI-RS measurement results in <i>candidateCellInfoListMN</i> is not supported in this version of the specification. For NR-DC, including SSB and/or CSI-RS measurement results in <i>candidateCellInfoListMN</i> is supported.</p>
<p><b>candidateCellInfoListMN-EUTRA, candidateCellInfoListSN-EUTRA</b> Includes the <i>MeasResultList3EUTRA</i> as specified in TS 36.331 [10]. Contains information regarding cells that the master node or the source node suggests the target secondary eNB to consider configuring. These fields are only used in NE-DC.</p>
<p><b>candidateCellListCPC</b> Contains information regarding cells that the source secondary node suggests the candidate target secondary node to consider configuring for SN initiated Conditional PSCell Change (CPC) or SN initiated inter-SN subsequent CPAC.</p>

<b>configRestrictInfo</b> Includes fields for which SgNB is explicitly indicated to observe a configuration restriction.
<b>drx-ConfigMCG</b> This field contains the complete DRX configuration of the MCG. This field is only used in NR-DC.
<b>drx-InfoMCG</b> This field contains the DRX long and short cycle configuration of the MCG. This field is used in (NG)EN-DC and NE-DC.
<b>drx-InfoMCG2</b> This field contains the <i>drx-onDurationTimer</i> configuration of the MCG. This field is only used in (NG)EN-DC.
<b>dummy, dummy1</b> These fields are not used in the specification and SN ignores the received value(s).
<b>fr-InfoListMCG</b> Contains information of FR information of serving cells that include PCell and SCell(s) configured in MCG.
<b>fr1-Carriers-MCG, fr2-Carriers-MCG</b> Indicates the number of FR1 or FR2 serving cells configured in MCG.
<b>idc-TDM-Assistance</b> This field is signalled upon MN not addressing IDC issue and contains IDC TDM assistance information reported by UE to MN for IDC problem.
<b>interFreqNoGap</b> Indicates that the field <i>interFrequencyConfig-NoGap-r16</i> has been included within the <i>MeasConfig</i> IE generated by the MN.
<b>lowMobilityEvaluationConnectedInPCell</b> Indicates if low mobility criterion has been configured in NR PCell.
<b>maxInterFreqMeasIdentitiesSCG</b> Indicates the maximum number of allowed measurement identities that the SCG is allowed to configure for inter-frequency measurement. The maximum value for this field is 10. If the field is absent, the SCG is allowed to configure inter-frequency measurements up to the maximum value. This field is only used in NR-DC.
<b>maxIntraFreqMeasIdentitiesSCG</b> Indicates the maximum number of allowed measurement identities that the SCG is allowed to configure for intra-frequency measurement on each serving frequency. The maximum value for this field is 9 (in case of (NG)EN-DC or NR-DC) or 10 (in case of NE-DC). If the field is absent, the SCG is allowed to configure intra-frequency measurements up to the maximum value on each serving frequency.
<b>maxMeasCLI-ResourceSCG</b> Indicates the maximum number of CLI RSSI resources that the SCG is allowed to configure.
<b>maxMeasFreqsSCG</b> Indicates the maximum number of NR inter-frequency carriers the SN is allowed to configure with PSCell for measurements.
<b>maxMeasSRS-ResourceSCG</b> Indicates the maximum number of SRS resources that the SCG is allowed to configure for CLI measurement.
<b>maxNumberCPCCandidates</b> Indicates the maximum numbers of conditional reconfigurations the SN is allowed to configure for SN initiated CPC. Value 0 indicates that the SN is not allowed to configure SN initiated CPC. If the field is absent, the SN is allowed to configure up to <i>maxNrofCondCells-r16</i> conditional reconfigurations for SN-initiated CPC.
<b>maxNumberEHC-ContextsSN</b> Indicates the maximum number of EHC contexts allowed to the SN terminated bearer. The field indicates the number of contexts in addition to CID = "all zeros", as specified in TS 38.323 [5].
<b>maxNumberLTM-CandidatesSCG</b> Indicates the maximum number of LTM candidate configurations that the SN is allowed to configure. If the field is absent the SN is not allowed to configure LTM candidate configurations. This field is only used in NR-DC.
<b>maxNumberROHC-ContextSessionsSN</b> Indicates the maximum number of ROHC context sessions allowed to SN terminated bearer, excluding context sessions that leave all headers uncompressed.
<b>maxNumberUDC-DRB</b> Indicates the maximum number of UDC DRBs allowed to SN terminated bearer. This field is used in NGEN-DC, NR-DC and NE-DC.

<b>maxToffset</b> Indicates the maximum Toffset value the SN is allowed to use for scheduling SCG transmissions (see TS 38.213 [13]). This field is used in NR-DC only when the fields <i>nrdc-PC-mode-FR1-r16</i> or <i>nrdc-PC-mode-FR2-r16</i> are set to dynamic. Value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms0dot75</i> corresponds to 0.75 ms, value <i>ms1</i> corresponds to 1 ms and so on.
<b>measuredFrequenciesMN</b> Used by MN to indicate a list of frequencies measured by the UE.
<b>measGapConfig</b> Indicates the FR1 and perUE measurement gap configuration configured by MN.
<b>measGapConfigFR2</b> Indicates the FR2 measurement gap configuration configured by MN.
<b>mcg-RB-Config</b> Contains all of the fields in the IE <i>RadioBearerConfig</i> used in MN, used by the SN to support delta configuration to UE (i.e. when MN does not use full configuration option), for bearer type change between MN terminated bearer with NR PDCP to SN terminated bearer. It is also used to indicate the PDCP duplication related information for MN terminated split bearer (whether duplication is configured and if so, whether it is initially activated) in SN Addition/Modification procedure. Otherwise, this field is absent.
<b>measResultReportCGI, measResultReportCGI-EUTRA</b> Used by MN to provide SN with CGI-Info for the cell as per SN's request. In this version of the specification, the <i>measResultReportCGI</i> is used for (NG)EN-DC and NR-DC and the <i>measResultReportCGI-EUTRA</i> is used only for NE-DC.
<b>measResultSCG-EUTRA</b> This field includes the <i>MeasResultSCG-FailureMRDC</i> IE as specified in TS 36.331 [10]. This field is only used in NE-DC.
<b>measResultSFTD-EUTRA</b> SFTD measurement results between the PCell and the E-UTRA PScell in NE-DC. This field is only used in NE-DC.
<b>nrdc-AssistanceInfo</b> Contains the IDC assistance information for MR-DC reported by the UE (see TS 36.331 [10]).
<b>musim-CapRestrictionInfo</b> Indicates the UE's preference on SCell(s) or PScell to be released, serving cell(s) with restricted capability, band(s) or combination(s) of bands with restricted capability, or band(s) or band combination(s) to be avoided for UE temporary capabilities restriction purpose with the <i>musim-candidateBandList-r18</i> only for <i>musim-AffectedBandsList-r18</i> and <i>musim-AvoidedBandsList-r18</i> . All fields in <i>musim-CapRestriction-r18</i> can be sent from MN to SN, i.e., it is up to MN implementation to decide which field(s) need to be sent.
<b>musim-GapConfigInfo</b> Indicates the MUSIM gap configuration configured by MN.
<b>nrdc-PC-mode-FR1</b> Indicates the uplink power sharing mode that the UE uses in NR-DC FR1 (see TS 38.213 [13], clause 7.6).
<b>nrdc-PC-mode-FR2</b> Indicates the uplink power sharing mode that the UE uses in NR-DC FR2 (see TS 38.213 [13], clause 7.6).
<b>overheatingAssistanceSCG</b> Contains the UE's preference on reduced configuration for NR SCG to address overheating. This field is only used in (NG)EN-DC.
<b>overheatingAssistanceSCG-FR2-2</b> Contains the UE's preference on reduced configuration for NR SCG on FR2-2 to address overheating. This field is only used in (NG)EN-DC.
<b>p-maxEUTRA</b> Indicates the maximum total transmit power to be used by the UE in the E-UTRA cell group (see TS 36.104 [33]). This field is used in (NG)EN-DC and NE-DC.
<b>p-maxNR-FR1</b> For (NG)EN-DC and NE-DC, the field indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]). For NR-DC, it indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]) the UE can use in NR SCG.
<b>p-maxUE-FR1</b> Indicates the maximum total transmit power to be used by the UE across all serving cells in frequency range 1 (FR1).

<b><i>p-maxNR-FR1-MCG</i></b> Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]) the UE can use in NR MCG. This field is only used in NR-DC.
<b><i>p-maxNR-FR2-SCG</i></b> Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 2 (FR2) (see TS 38.104 [12]) the UE can use in NR SCG.
<b><i>p-maxUE-FR2</i></b> Indicates the maximum total transmit power to be used by the UE across all serving cells in frequency range 2 (FR2).
<b><i>p-maxNR-FR2-MCG</i></b> Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 2 (FR2) (see TS 38.104 [12]) the UE can use in NR MCG.
<b><i>pdccch-BlindDetectionSCG</i></b> Indicates the maximum value of the reference number of cells for PDCCH blind detection allowed to be configured for the SCG.
<b><i>ph-InfoMCG</i></b> Power headroom information in MCG that is needed in the reception of PHR MAC CE in SCG.
<b><i>ph-SupplementaryUplink</i></b> Power headroom information for supplementary uplink. For UE in (NG)EN-DC, this field is absent.
<b><i>ph-Type1or3</i></b> Type of power headroom for a serving cell in MCG (PCell and activated SCells). <i>type1</i> refers to type 1 power headroom, <i>type3</i> refers to type 3 power headroom. (See TS 38.321 [3]).
<b><i>ph-Uplink</i></b> Power headroom information for uplink.
<b><i>powerCoordination-FR1</i></b> Indicates the maximum power that the UE can use in FR1.
<b><i>powerCoordination-FR2</i></b> Indicates the maximum power that the UE can use in frequency range 2 (FR2). This field is only used in NR-DC.
<b><i>scgFailureInfo</i></b> Contains SCG failure type and measurement results. In case the sender has no measurement results available, the sender may include one empty entry (i.e. without any optional fields present) in <i>measResultPerMOList</i> . This field is used in (NG)EN-DC and NR-DC.
<b><i>scg-RB-Config</i></b> Contains all of the fields in the IE RadioBearerConfig used in SN, used to allow the target SN to use delta configuration to the UE, e.g. during SN change. The field is signalled upon change of SN unless MN uses full configuration option. Otherwise, the field is absent.
<b><i>scpac-ReferenceConfiguration</i></b> Includes the reference configuration associated with the SCG for the candidate supporting subsequent CPAC.
<b><i>selectedBandEntriesMNList</i></b> A list of indices referring to the position of a band entry selected by the MN, in each band combination entry in <i>allowedBC-ListMRDC</i> IE. <i>BandEntryIndex</i> 0 identifies the first band in the <i>bandList</i> of the <i>BandCombination</i> , <i>BandEntryIndex</i> 1 identifies the second band in the <i>bandList</i> of the <i>BandCombination</i> , and so on. This <i>selectedBandEntriesMNList</i> includes the same number of entries, and listed in the same order as in <i>allowedBC-ListMRDC</i> . The SN uses this information to determine which bands out of the NR band combinations in <i>allowedBC-ListMRDC</i> it can configure in SCG in NR-DC. The SN can use this information to determine for which band pair(s) it should check <i>SimultaneousRxTxPerBandPair</i> .
<b><i>servCellIndexRangeSCG</i></b> Range of serving cell indices that SN is allowed to configure for SCG serving cells.
<b><i>servCellInfoListMCG-EUTRA</i></b> Indicates the carrier frequency and the transmission bandwidth of the serving cell(s) in the MCG in intra-band (NG)EN-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in (NG)EN-DC.

<b>servCellInfoListMCG-NR</b>
Indicates the frequency band indicator, carrier center frequency, UE specific channel bandwidth and SCS of the serving cell(s) in the MCG in intra-band NE-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in NE-DC.
<b>servFrequenciesMN-NR</b>
Indicates the frequency of all serving cells that include PCell and SCell(s) with SSB configured in MCG. This field is only used in NR-DC. <i>servFrequenciesMN-NR</i> indicates <i>absoluteFrequencySSB</i> .
<b>sftdFrequencyList-NR</b>
Includes a list of SSB frequencies. Each entry identifies the SSB frequency of a PCell, which corresponds to one <i>MeasResultCellSFTD-NR</i> entry in the <i>MeasResultCellListSFTD-NR</i> .
<b>sftdFrequencyList-EUTRA</b>
Includes a list of E-UTRA frequencies. Each entry identifies the carrier frequency of a PCell, which corresponds to one <i>MeasResultSFTD-EUTRA</i> entry in the <i>MeasResultCellListSFTD-EUTRA</i> .
<b>sidelinkUEInformationEUTRA</b>
This field contains the E-UTRA <i>SidelinkUEInformation</i> message as specified in TS 36.331 [10].
<b>sidelinkUEInformationNR</b>
This field contains the NR <i>SidelinkUEInformationNR</i> message.
<b>sourceConfigSCG</b>
Includes all of the current SCG configurations used by the target SN to build delta configuration to be sent to UE, e.g. during SN change. The field contains the <i>RRCReconfiguration</i> message which may include <i>secondaryCellGroup</i> , <i>measConfig</i> , and <i>conditionalReconfiguration</i> . The field is signalled upon change of SN, unless MN uses full configuration option. Otherwise, the field is absent.
<b>sourceConfigSCG-EUTRA</b>
Includes the E-UTRA <i>RRCConnectionReconfiguration</i> message as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA RRC message can only include the field <i>scg-Configuration</i> . In this version of the specification, this field is absent when master gNB uses full configuration option. This field is only used in NE-DC.
<b>subsequentCPAC-Candidates</b>
Includes the subsequent CPAC candidate PSCells that the UE has stored in MCG <i>VarConditionalReconfig</i> .
<b>twoPHRModeMCG</b>
Indicates if the power headroom for MCG shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not.
<b>twoSRS-PUSCH-Repetition</b>
Indicates whether the indicated serving cell is configured for PUSCH repetition corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.
<b>twoSRS-MultipanelScheme</b>
Indicates whether the indicated serving cell is configured with multiple panel simultaneous uplink transmission schemes of multipanelSchemeSDM or multipanelSchemeSFN corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.
<b>ueAssistanceInformationSourceSCG</b>
Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR <i>UEAssistanceInformation</i> message for the source SCG, if any.
<b>ue-CapabilityInfo</b>
Contains the IE <i>UE-CapabilityRAT-ContainerList</i> supported by the UE (see NOTE 3). A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information.

<b>BandCombinationInfo field descriptions</b>
<p><b>allowedFeatureSetsList</b> Defines a subset of the entries in a <i>FeatureSetCombination</i>. Each index identifies a position in the <i>FeatureSetCombination</i>, which corresponds to one <i>FeatureSetUplink/Downlink</i> for each band entry in the associated band combination.</p>
<p><b>bandCombinationIndex</b> In case of NR-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i>. In case of NE-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationListNEDC-Only</i>. In case of (NG)EN-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationList-UplinkTxSwitch</i>. Band combination entries in <i>supportedBandCombinationList</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationListNEDC-Only</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationListNEDC-Only</i> increased by the number of entries in <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList-UplinkTxSwitch</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList-UplinkTxSwitch</i> increased by the number of entries in <i>supportedBandCombinationList</i>.</p>

<b>AllowedAggregatedBandwidth field descriptions</b>
<p><b>AllowedAggregatedBandwidth</b> Indicates the allowed maximum aggregated bandwidth at the SN side.</p> <ul style="list-style-type: none"> <li>- <i>allowedAggBW-FDD-DL/UL-r17</i> indicates the allowed maximum aggregated bandwidth across FDD DL/UL CCs in SCG;</li> <li>- <i>allowedAggBW-TDD-DL/UL-r17</i> indicates the allowed maximum aggregated bandwidth across TDD DL/UL CCs in SCG;</li> <li>- <i>allowedAggBW-TotalDL/UL-r17</i> indicates the allowed maximum aggregated bandwidth across all DL/UL CCs in SCG.</li> </ul>
<p><b>bandCombinationIndex</b> This field indicates the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList-UplinkTxSwitch</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList-UplinkTxSwitch</i> increased by the number of entries in <i>supportedBandCombinationList</i>.</p>

<b>Conditional Presence</b>	<b>Explanation</b>
<i>SN-AddMod</i>	The field is mandatory present upon SN addition and SN change. It is optionally present upon SN modification and inter-MN handover without SN change. Otherwise, the field is absent.

NOTE 3: The following table indicates per MN RAT and SN RAT whether RAT capabilities are included or not in *ue-CapabilityInfo*.

MN RAT	SN RAT	NR capabilities	E-UTRA capabilities	MR-DC capabilities
E-UTRA	NR	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise	Not included	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise
NR	E-UTRA	Not included	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise
NR	NR	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise	Not included	Not included

### – *MeasurementTimingConfiguration*

The *MeasurementTimingConfiguration* message is used to convey assistance information for measurement timing and to indicate which neighbour cell SSB is CD-SSB. The other indicated SSB can be considered as the NCD-SSB in use.

Direction: en-gNB to eNB, eNB to en-gNB, gNB to gNB, ng-eNB to gNB, gNB to ng-eNB, ng-eNB to ng-eNB, gNB DU to gNB CU, and gNB CU to gNB DU.

#### ***MeasurementTimingConfiguration* message**

```

#### **MeasTiming field descriptions**

##### **carrierFreq, ssbSubcarrierSpacing**

Indicates the frequency and subcarrier spacing of the SS block of the cell for which this message is included, or of other SS blocks within the same carrier.

##### **ssb-MeasurementTimingConfiguration**

Indicates the SMTC which can be used to search for SSB of the cell for which the message is included. When the message is included in "Served NR Cell Information" (see TS 36.423 [37]), "Served Cell Information NR" (see TS 38.423 [35]), or "Served Cell Information" (see TS 38.473 [36]), the timing is based on the cell for which the message is included. When the message is included in "NR Neighbour Information" (see TS 36.423 [37]), or "Served Cell Information" (see TS 38.423 [35]), the timing is based on the cell indicated in the "Served NR Cell Information" or "Served Cell Information NR" with which the "NR Neighbour Information" or "Neighbour Information NR" is provided. When the message is included in "CU to DU RRC Information", the timing is based on the cell indicated by SpCell ID with which the message is included. If the field is provided by an NTN cell, the offset (derived from parameter *periodicityAndOffset*) is based on the assumption that the NTN payload to gNB propagation delay of the cell for which the message is included equals to 0 ms.

##### **ss-RSSI-Measurement**

Provides the configuration which can be used for RSSI measurements of the cell for which the message is included.

<i>MeasurementTimingConfiguration</i> field descriptions
<p><b>campOnFirstSSB</b> Value <i>true</i> indicates that the SSB indicated in the first instance of <i>MeasTiming</i> in the <i>measTiming</i> list can be used for camping and for a PCell configuration (i.e. in <i>spCellConfigCommon</i> of the <i>masterCellGroup</i>) and to indicate which neighbour cell SSB is CD-SSB and which one is NCD-SSB in use.</p>
<p><b>csi-RS-CellMobility</b> Indicates the CSI-RS configuration of the cell for which this message is included. The timing of the CSI-RS resources is based on the SSB indicated by <i>refSSBFreq</i>.</p>
<p><b>csi-RS-SubcarrierSpacing</b> Indicates the subcarrier spacing of the CSI-RS resources included in <i>csi-rs-CellMobility</i>.</p>
<p><b>measTiming</b> A list of SMTC information, SSB RSSI measurement information and associated NR frequency exchanged via EN-DC X2 Setup, EN-DC Configuration Update, Xn Setup and NG-RAN Node Configuration Update procedures, or F1 messages between gNB DU and gNB CU.</p>
<p><b>physCellId</b> Physical Cell Identity of the SSB on the ARFCN indicated by <i>carrierFreq</i>.</p>
<p><b>psCellOnlyOnFirstSSB</b> Value <i>true</i> indicates that only the SSB indicated in the first instance of <i>MeasTiming</i> in the <i>measTiming</i> list can be used for a PCell configuration (i.e. in <i>spCellConfigCommon</i> of the <i>secondaryCellGroup</i>).</p>
<p><b>ssb-ToMeasure</b> The set of SS blocks to be measured within the SMTC measurement duration (see TS 38.215 [9]).</p>

## – *UERadioPagingInformation*

This message is used to transfer radio paging information, covering both upload to and download from the 5GC, and between gNBs.

Direction: gNB to/ from 5GC and gNB to/from gNB

<i>UERadioPagingInformation</i> field descriptions
<b><i>supportedBandListNRForPaging</i></b> Indicates the UE supported NR frequency bands which are derived by the gNB from <i>UE-NR-Capability</i> .
<b><i>dl-SchedulingOffset-PDSCH-TypeA-FDD-FR1</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in FDD FR1.
<b><i>dl-SchedulingOffset-PDSCH-TypeA-FDD-FR2-NTN</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in FDD FR2-NTN.
<b><i>dl-SchedulingOffset-PDSCH-TypeA-TDD-FR1</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in TDD FR1.
<b><i>dl-SchedulingOffset-PDSCH-TypeA-TDD-FR2</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in TDD FR2.
<b><i>dl-SchedulingOffset-PDSCH-TypeB-FDD-FR1</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in FDD FR1.
<b><i>dl-SchedulingOffset-PDSCH-TypeB-FDD-FR2-NTN</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in FDD FR2-NTN.
<b><i>dl-SchedulingOffset-PDSCH-TypeB-TDD-FR1</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in TDD FR1.
<b><i>dl-SchedulingOffset-PDSCH-TypeB-TDD-FR2</i></b> Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in TDD FR2.
<b><i>halfDuplexFDD-TypeA-RedCap</i></b> Indicates whether the (e)RedCap UE only supports half-duplex operation for FDD in the indicated band(s).
<b><i>inactiveStatePO-Determination</i></b> Indicates whether the UE supports to use the same <i>i_s</i> to determine PO in RRC_INACTIVE state as in RRC_IDLE state.
<b><i>numberOfRxERedCap</i></b> Indicates the number of Rx branches supported by an eRedCap UE.
<b><i>numberOfRxRedCap</i></b> Indicates the number of Rx branches supported by a RedCap UE.
<b><i>supportOf2RxXR</i></b> Indicates whether the UE is a 2Rx XR UE.
<b><i>ue-RadioPagingInfo</i></b> The field is used to transfer UE capability information used for paging. The gNB generates the <i>ue-RadioPagingInfo</i> and the contained UE capability information is absent when not supported by the UE.

– *UERadioAccessCapabilityInformation*

This message is used to transfer UE radio access capability information, covering both upload to and download from the 5GC.

Direction: ng-eNB or gNB to/ from 5GC

#### ***UERadioAccessCapabilityInformation-IEs* field descriptions**

##### ***ue-RadioAccessCapabilityInfo***

Including NR, MR-DC, E-UTRA radio access capabilities. A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information.

## 11.2.3 Mandatory information in inter-node RRC messages

For the *AS-Config* transferred within the *HandoverPreparationInformation*:

- The source node shall include all fields necessary to reflect the current AS configuration of the UE, except for the fields *sourceSCG-NR-Config*, *sourceSCG-EUTRA-Config* and *sourceRB-SN-Config*, which can be omitted in case the source MN did not receive the latest configuration from the source SN. For *RRCReconfiguration* included in the field *rrcReconfiguration*, *ReconfigurationWithSync* is included with only the mandatory subfields (e.g. *newUE-Identity* and *t304*) and *ServingCellConfigCommon*;
- Need codes or conditions specified for subfields according to IEs defined in clause 6 do not apply. I.e. some fields shall be included regardless of the "Need" or "Cond" e.g. *discardTimer*;
- Based on the received AS configuration, the target node can indicate the delta (difference) to the current AS configuration (as included in *HandoverCommand*) to the UE. The fields *newUE-Identity* and *t304* included in *ReconfigurationWithSync* are not used for delta configuration purpose.

The *candidateCellInfoListSN(-EUTRA)* in *CG-Config* and the *candidateCellInfoListMN(-EUTRA)/candidateCellInfoListSN(-EUTRA)* in *CG-ConfigInfo* need not be included in procedures that do not involve a change of node.

For fields *scg-CellGroupConfig*, *scg-CellGroupConfigEUTRA* and *scg-RB-Config* in *CG-Config* (sent upon SN initiated SN change or other conditions as specified in field descriptions) and fields *mcg-RB-Config*, *scg-RB-Config* and *sourceConfigSCG* in *CG-ConfigInfo* (sent upon change of SN):

- The source node shall include all fields necessary to reflect the current AS configuration of the UE, unless stated otherwise in the field description. For *RRCReconfiguration* included in the field *scg-CellGroupConfig* in *CG-Config*, *ReconfigurationWithSync* is included with only the mandatory subfields (e.g. *newUE-Identity* and *t304*) and *ServingCellConfigCommon*;
- Need codes or conditions specified for subfields according to IEs defined in clause 6 do not apply;
- Based on the received AS configuration, the target node can indicate the delta (difference) as compared to the current AS configuration to the UE. The fields *newUE-Identity* and *t304* in *ReconfigurationWithSync* are always included by the target node, i.e. they are not used for delta configuration purpose to UE.

For fields in *CG-Config* and *CG-ConfigInfo* listed below, absence of the field means that the receiver maintains the values informed via the previous message. Note that every time there is a change in the configuration covered by a listed field, the MN or SN shall include the field and it shall provide the full configuration provided by that field unless stated otherwise. Otherwise, if there is no change, the field can be omitted:

- *configRestrictInfo*;
- *gapPurpose*;
- *measGapConfig* (for which delta signaling applies);
- *measGapConfigFR2* (for which delta signaling applies);
- *measResultCellListSFTD*;
- *measResultSFTD-EUTRA*;
- *sftdFrequencyList-EUTRA*;
- *sftdFrequencyList-NR*;
- *ue-CapabilityInfo*;
- *servFrequenciesMN-NR*;
- *musim-GapConfigInfo-r18*;
- *musim-CapRestrictionInfo-r18*.

For other fields in *CG-Config* and *CG-ConfigInfo*, the sender shall always signal the appropriate value even if same as indicated in the previous inter-node message, unless explicitly stated otherwise.

## 11.3 Inter-node RRC information element definitions

### – *L1-MeasConfigNRDC*

The IE *L1-MeasConfigNRDC* is used to indicate or request a maximum value that can be used by the SN in NR-DC to configure L1 measurement related to LTM at the SCG. Each value is equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise. The value indicated by each field is applicable to all BCs within the field *allowedBC-ListMRDC*.

#### ***L1-MeasConfigNRDC* information element**

```

    ...
}

-- TAG-L1-MEASCONFIGNRDC-STOP
-- ASN1STOP

```

<i>L1-MeasConfigNRDC field descriptions</i>
<b>maxCellsL1-MeasInterFreqSCG</b> Indicates the maximum number of RRC configured LTM candidate cells for intra- and inter-frequency L1 measurement.
<b>maxCellsL1-MeasIntraFreqSCG</b> Indicates the maximum number of RRC configured LTM candidate cells for intra-frequency L1 measurement.
<b>maxCellsL1-MeasNoGapSCG</b> Indicates the max number of neighbour cells UE can measure per frequency layer for intra-frequency or inter-frequency L1 measurements without measurement gaps.
<b>maxCellsL1-MeasWithGapSCG</b> Indicates the max number of neighbour cells UE can measure per frequency layer for inter-frequency L1 measurements with measurement gaps.
<b>maxL1-MeasNoGapSCG</b> Indicates the max number of frequency layers UE can measure for intra- and inter-frequency L1 measurements without measurement gaps.
<b>maxL1-MeasWithGapSCG</b> Indicates the max number of frequency layers UE can measure for inter-frequency L1 measurements with measurement gaps.
<b>maxReportConfigsAperiodic</b> Indicates the max number of aperiodic LTM CSI report configurations.
<b>maxReportConfigsPeriodic</b> Indicates the max number of periodic LTM CSI report configurations.
<b>maxReportConfigsSemiPersistent</b> Indicates the max number of semi-persistent LTM CSI report configurations.
<b>maxSSBsL1-MeasNoGapSCG</b> Indicates the max number of SSB resources UE can measure per frequency layer for intra-frequency or inter-frequency L1 measurements without measurement gaps.
<b>maxSSBsL1-MeasWithGapSCG</b> Indicates the max number of SSB resources UE can measure per frequency layer for inter-frequency L1 measurements with measurement gaps.
<b>maxTotalCellsL1-MeasNoGapSCG</b> Indicates the max total number of cells, including serving cells and neighboring cells, across all frequency layers of intra-frequency and inter-frequency L1 measurements, UE can measure without measurement gaps.
<b>maxTotalSSBsL1-MeasNoGapSCG</b> Indicates the max total number of SSB resources, including serving cells and neighboring cells, across all frequency layers of intra-frequency and inter-frequency L1 measurements, UE can measure without measurement gaps.

– *ResourceConfigNRDC*

The IE is used to indicate or request the maximum values that can be used by the SCG in NR-DC, with each value equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise.

```

#### ResourceConfigNRDC field descriptions

##### **fr1-ResourceConfig, fr2-ResourceConfig**

Indicates the maximum number of resources that SCG is allowed to configure for FR1/FR2, respectively.

##### **maxNumberResAcrossCC-AcrossFR**

Indicates the maximum number of configured CSI-RS resources. Corresponds to the UE capability *maxNumberResAcrossCC-AcrossFR-r16* in *maxTotalResourcesForAcrossFreqRanges-r16*.

#### ResourceConfigPerFR field descriptions

##### **bm-MaxNumberAperiodicCSI-RS-Resource**

Indicates the maximum number of aperiodic CSI-RS resources that the SCG is allowed to configure for the UE to measure L1-RSRP. Corresponds to the UE capability *maxNumberAperiodicCSI-RS-Resource* in *beamManagementSSB-CSI-RS*.

##### **bm-MaxNumberCSI-RS-Resource**

Indicates the maximum total number of NZP-CSI-RS resources that can be configured for the UE to measure L1-RSRP. Corresponds to the UE capability *maxNumberCSI-RS-Resource* in *beamManagementSSB-CSI-RS*.

##### **cg-MaxNumberConfigsAllCC**

Indicates the maximum number of active configured grant configurations. Corresponds to the UE capability *maxNumberConfigsAllCC-r16* in *activeConfiguredGrant-r16*.

##### **maxNumberCSI-RS-BFD**

Indicates the maximal number of different CSI-RS resources for the UE to monitor PDCCH quality. Corresponds to the UE capability *maxNumberCSI-RS-BFD*.

##### **maxNumberCSI-RS-SSB-CBD**

Indicates the maximal number of different CSI-RS (and/or SSB) resources for new beam identifications. Corresponds to the UE capability *maxNumberCSI-RS-SSB-CBD*.

##### **maxNumberSSB-BFD**

Indicates the maximal number of different SSBs for the UE to monitor PDCCH quality. Corresponds to the UE capability *maxNumberSSB-BFD*.

##### **sps-MaxNumberConfigsAllCC**

Indicates the maximum number of SPS configurations. Corresponds to the UE capability *maxNumberConfigsAllCC-r16* in *sps-r16*.

##### **trs-MaxConfResourceSetsAllCC**

Indicates the maximum configured CSI-RS for tracking (i.e. TRS) resource sets. Corresponds to the UE capability *maxConfiguredResourceSetsAllCC* in *csi-RS-ForTracking*.

## 12 Processing delay requirements for RRC procedures

The UE performance requirements for RRC procedures are specified in the following tables. The performance requirement is expressed as the time in [ms] from the end of reception of the network -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> network response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation). In case the RRC procedure triggers BWP switching, the RRC procedure delay is the value defined in the following table plus the BWP switching delay defined in TS 38.133 [14], clause 8.6.3.

Figure 12.1-1: Illustration of RRC procedure delay

**Table 12.1-1: UE performance requirements for RRC procedures for UEs**

Procedure title:	Network -> UE	UE -> Network	Value [ms]	Notes
<b>RRC Connection Control Procedures</b>				
RRC reconfiguration	<i>RRCReconfiguration</i>	<i>RRCReconfigurationComplete</i>	10	
RRC reconfiguration (scell addition/release)	<i>RRCReconfiguration</i>	<i>RRCReconfigurationComplete</i>	16	
RRC reconfiguration (LTE/NR SCG establishment/ modification/ release)	<i>RRCReconfiguration</i>	<i>RRCReconfigurationComplete</i>	16	
RRC reconfiguration (Intra-NR mobility with LTE/NR SCG establishment/ modification/ release)	<i>RRCReconfiguration</i>	<i>RRCReconfigurationComplete</i>	16	
RRC reconfiguration	<i>DL DedicatedMessage Segment</i>	<i>RRCReconfigurationComplete</i>	16+(Nseg-1)*10	Nseg is number of RRC segments
RRC setup	<i>RRCSetup</i>	<i>RRCSetupComplete</i>	10	
RRC Release	<i>RRCRelease</i>		NA	
RRC re-establishment	<i>RRCReestablishment</i>	<i>RRCReestablishmentComplete</i>	10	

Procedure title:	Network -> UE	UE -> Network	Value [ms]	Notes
RRC resume	<i>RRCResume</i>	<i>RRCResumeComplete</i>	6 or 10	Value=6 applies for a UE supporting reduced CP latency for the case of RRCResume message only including MAC and PHY configuration, reestablishPDCP and reestablishRLC for SRB2, multicast MRB(s) and DRB(s), and no DRX, SPS, configured grant, CA or MIMO re-configuration will be triggered by this message. Further, the UL grant for transmission of <i>RRCResumeComplete</i> and the data is transmitted over common search space with DCI format 0_0. In this scenario, the RRC procedure delay [ms] can extend beyond the reception of the UL grant, up to 7 ms.  For other cases, Value = 10 applies.
RRC resume (MCG SCell addition/restoration/release)	<i>RRCResume</i>	<i>RRCResumeComplete</i>	16	
RRC resume (SCG establishment/restoration/release)	<i>RRCResume</i>	<i>RRCResumeComplete</i>	16	
RRC resume	<i>DLDedicatedMessageSegment</i>	<i>RRCResumeComplete</i>	16+(Nseg-1)*10	Nseg is number of RRC segments
Initial AS security activation	<i>SecurityModeCommand</i>	<i>SecurityModeComplete/SecurityModeFailure</i>	5	
<b>Inter RAT mobility</b>				

Procedure title:	Network -> UE	UE -> Network	Value [ms]	Notes
Handover to NR	<i>RRCReconfiguration</i> (sent by other RAT)	<i>RRCReconfigurationComplete</i>	NA	The performance of this procedure is specified in TS 36.133 [40] clauses 5.3.4.2, 5.3.4A.2 and 5.3.5.2 in case of handover from E-UTRA to NR.
Handover from NR	<i>MobilityFromNRCommand</i>		NA	The performance of this procedure is specified in TS 38.133 [14], clauses 6.1.2.1.2 and 6.1.2.2.2.
<b>Other procedures</b>				
UE assistance information		<i>UEAssistanceInformation</i>	NA	
UE capability transfer	<i>UECapabilityEnquiry</i>	<i>UECapabilityInformation</i>	80

# Annex A (informative): Guidelines, mainly on use of ASN.1

## A.1 Introduction

The following clauses contain guidelines for the specification of RRC protocol data units (PDUs) with ASN.1.

---

## A.2 Procedural specification

### A.2.1 General principles

The procedural specification provides an overall high level description regarding the UE behaviour in a particular scenario.

It should be noted that most of the UE behaviour associated with the reception of a particular field is covered by the applicable parts of the PDU specification. The procedural specification may also include specific details of the UE behaviour upon reception of a field, but typically this should be done only for cases that are not easy to capture in the PDU clause e.g. general actions, more complicated actions depending on the value of multiple fields.

Likewise, the procedural specification need not specify the UE requirements regarding the setting of fields within the messages that are sent to the network i.e. this may also be covered by the PDU specification.

### A.2.2 More detailed aspects

The following more detailed conventions should be used:

- Bullets:
  - Capitals should be used in the same manner as in other parts of the procedural text i.e. in most cases no capital applies since the bullets are part of the sentence starting with 'The UE shall:'
  - All bullets, including the last one in a clause, should end with a semi-colon i.e. an ';'
- Conditions:
  - Whenever multiple conditions apply, a semi-colon should be used at the end of each conditions with the exception of the last one, i.e. as in 'if cond1, or cond2.'

---

## A.3 PDU specification

### A.3.1 General principles

#### A.3.1.1 ASN.1 clauses

The RRC PDU contents are formally and completely described using abstract syntax notation (ASN.1), see X.680 [6], X.681 [7].

The complete ASN.1 code is divided into a number of ASN.1 clauses in the specifications. In order to facilitate the extraction of the complete ASN.1 code from the specification, each ASN.1 clause begins with the following:

- a first text paragraph consisting entirely of an *ASN.1 start tag*, which consists of a double hyphen followed by a single space and the text string "ASN1START" (in all upper case letters);
- a second text paragraph consisting entirely of a *block start tag* is included, which consists of a double hyphen followed by a single space and the text string "TAG-NAME-START" (in all upper case letters), where the "NAME" refers to the main name of the paragraph (in all upper-case letters).

Similarly, each ASN.1 clause ends with the following:

- a first text paragraph consisting entirely of a *blockstop tag*, which consists of a double hyphen followed by a single space and the text string "TAG-NAME-STOP" (in all upper-case letters), where the "NAME" refers to the main name of the paragraph (in all upper-case letters);
- a second text paragraph consisting entirely of an *ASN.1 stop tag*, which consists of a double hyphen followed by a singlespace and the text "ASN1STOP" (in all upper case letters).

This results in the following tags:

```
-- ASN1START
-- TAG-NAME-START

-- TAG-NAME-STOP
-- ASN1STOP
```

The text paragraphs containing either of the start and stop tags should not contain any ASN.1 code significant for the complete description of the RRC PDU contents. The complete ASN.1 code may be extracted by copying all the text paragraphs between an ASN.1 start tag and the following ASN.1 stop tag in the order they appear, throughout the specification.

**NOTE:** A typical procedure for extraction of the complete ASN.1 code consists of a first step where the entire RRC PDU contents description (ultimately the entire specification) is saved into a plain text (ASCII) file format, followed by a second step where the actual extraction takes place, based on the occurrence of the ASN.1 start and stop tags.

### A.3.1.2 ASN.1 identifier naming conventions

The naming of identifiers (i.e., the ASN.1 field and type identifiers) should be based on the following guidelines:

- Message (PDU) identifiers should be ordinary mixed case without hyphenation. These identifiers, *e.g.*, the *RRCCConnectionModificationCommand*, should be used for reference in the procedure text. Abbreviations should be avoided in these identifiers and abbreviated forms of these identifiers should not be used.
- Type identifiers other than PDU identifiers should be ordinary mixed case, with hyphenation used to set off acronyms only where an adjacent letter is a capital, *e.g.*, *EstablishmentCause*, *SelectedPLMN* (not *Selected-PLMN*, since the "d" in "Selected" is lowercase), *InitialUE-Identity* and *MeasSFN-SFN-TimeDifference*.
- Field identifiers shall start with a lowercase letter and use mixed case thereafter, *e.g.*, *establishmentCause*. If a field identifier begins with an acronym (which would normally be in upper case), the entire acronym is lowercase (*plmn-Identity*, not *pLMN-Identity*). The acronym is set off with a hyphen (*ue-Identity*, not *ueIdentity*), in order to facilitate a consistent search pattern with corresponding type identifiers.
- Identifiers should convey the meaning of the identifier and should avoid adding unnecessary postfixes (e.g. abstractions like 'Info') for the name.
- Identifiers that are likely to be keywords of some language, especially widely used languages, such as C++ or Java, should be avoided to the extent possible.
- Identifiers, other than PDU identifiers, longer than 25 characters should be avoided where possible. It is recommended to use abbreviations, which should be done in a consistent manner i.e. use 'Meas' instead of 'Measurement' for all occurrences. Examples of typical abbreviations are given in table A.3.1.2.1-1 below.
- *For future extension:* When an extension is introduced a suffix is added to the identifier of the concerned ASN.1 field and/or type. A suffix of the form "-rX" is used, with X indicating the release, for ASN.1 fields or types introduced in a later release (i.e. a release later than the original/first release of the protocol) as well as for ASN.1 fields or types for which a revision is introduced in a later release replacing a previous version, *e.g.*, *Foo-r9* for the Rel-9 version of the ASN.1 type *Foo*. A suffix of the form "-rXb" is used for the first revision of a field that it appears in the same release (X) as the original version of the field, "-rXc" for a second intra-release revision and so on. A suffix of the form "-vXYZ" is used for ASN.1 fields or types that only are an extension of a corresponding earlier field or type (see clause A.4), *e.g.*, *AnElement-v10b0* for the extension of the ASN.1 type *AnElement* introduced in version 10.11.0 of the specification. A number 0..9, 10, 11, *etc.* is used to represent the first part of the version number, indicating the release of the protocol. Lower case letters *a, b, c, etc.* are used to represent the second (and third) part of the version number if they are greater than 9. In the procedural specification, in field descriptions as well as in headings suffices are not used, unless there is a clear need to distinguish the extension from the original field.
- More generally, in case there is a need to distinguish different variants of an ASN.1 field or IE, a suffix should be added at the end of the identifiers *e.g.* *MeasObjectUTRA*, *ConfigCommon*. When there is no particular need to distinguish the fields (*e.g.* because the field is included in different IEs), a common field identifier name may be used. This may be attractive *e.g.* in case the procedural specification is the same for the different variants.
- It should be avoided to use field identifiers with the same name within the elements of a CHOICE, including using a CHOICE inside a SEQUENCE (to avoid certain compiler errors).

Table A.3.1.2-1: Examples of typical abbreviations used in ASN.1 identifiers

Abbreviation	Abbreviated word
Config	Configuration
DL	Downlink
Ext	Extension
Freq	Frequency
Id	Identity
Ind	Indication
Meas	Measurement
MIB	MasterInformationBlock
Neigh	Neighbour(ing)
Param(s)	Parameter(s)
Phys	Physical
PCI	Physical Cell Id
Proc	Process
Reconfig	Reconfiguration
Reest	Re-establishment
Req	Request
Rx	Reception
Sched	Scheduling
SIB	SystemInformationBlock
Sync	Synchronisation
Thr	Threshold
Tx	Transmission
UL	Uplink

NOTE: The table A.3.1.2.1-1 is not exhaustive. Additional abbreviations may be used in ASN.1 identifiers when needed.

### A.3.1.3 Text references using ASN.1 identifiers

A text reference into the RRC PDU contents description from other parts of the specification is made using the ASN.1 field identifier of the referenced type. The ASN.1 field and type identifiers used in text references should be in the *italic font style*. The "do not check spelling and grammar" attribute in Word should be set. Quotation marks (i.e., "") should not be used around the ASN.1 field or type identifier.

A reference to an RRC PDU should be made using the corresponding ASN.1 field identifier followed by the word "message", e.g., a reference to the *RRCRelease* message.

A reference to a specific part of an RRC PDU, or to a specific part of any other ASN.1 type, should be made using the corresponding ASN.1 field identifier followed by the word "field", e.g., a reference to the *prioritisedBitRate* field in the example below.

```
-- /example/ ASN1START
```

```
LogicalChannelConfig ::=
    ul-SpecificParameters
        priority
        SEQUENCE {
            SEQUENCE {
                Priority,
```

```

        prioritisedBitRate          PrioritisedBitRate,
        bucketSizeDuration         BucketSizeDuration,
        logicalChannelGroup        INTEGER (0..3)
    }                               OPTIONAL
}
-- ASN1STOP

```

NOTE: All the ASN.1 start tags in the ASN.1 clauses, used as examples in this annex to the specification, are deliberately distorted, in order not to include them when the ASN.1 description of the RRC PDU contents is extracted from the specification.

A reference to a specific type of information element should be made using the corresponding ASN.1 type identifier preceded by the acronym "IE", e.g., a reference to the IE *LogicalChannelConfig* in the example above.

References to a specific type of information element should only be used when those are generic, i.e., without regard to the particular context wherein the specific type of information element is used. If the reference is related to a particular context, e.g., an RRC PDU type (message) wherein the information element is used, the corresponding field identifier in that context should be used in the text reference.

A reference to a specific value of an ASN.1 field should be made using the corresponding ASN.1 value without using quotation marks around the ASN.1 value, e.g., 'if the *status* field is set to value *true*'.

## A.3.2 High-level message structure

Within each logical channel type, the associated RRC PDU (message) types are alternatives within a CHOICE, as shown in the example below.

```

-- /example/ ASN1START

DL-DCCH-Message ::= SEQUENCE {
    message          DL-DCCH-MessageType
}

DL-DCCH-MessageType ::= CHOICE {
    c1              CHOICE {
        dlInformationTransfer          DLInformationTransfer,
        handoverFromEUTRAPreparationRequest HandoverFromEUTRAPreparationRequest,
        mobilityFromEUTRACCommand      MobilityFromEUTRACCommand,
        rrcConnectionReconfiguration  RRCConnectionReconfiguration,
        rrcConnectionRelease          RRCConnectionRelease,
        securityModeCommand           SecurityModeCommand,
        ueCapabilityEnquiry            UECapabilityEnquiry,
        spare1 NULL
    },
    messageClassExtension SEQUENCE {}
}
-- ASN1STOP

```

A nested two-level CHOICE structure is used, where the alternative PDU types are alternatives within the inner level *c1* CHOICE.

Spare alternatives (i.e., *spare1* in this case) may be included within the *c1* CHOICE to facilitate future extension. The number of such spare alternatives should not extend the total number of alternatives beyond an integer-power-of-two number of alternatives (i.e., eight in this case).

Further extension of the number of alternative PDU types is facilitated using the *messageClassExtension* alternative in the outer level CHOICE.

### A.3.3 Message definition

Each PDU (message) type is specified in an ASN.1 clause similar to the one shown in the example below.

```
-- /example/ ASN1START

RRCConnectionReconfiguration ::= SEQUENCE {
    rrc-TransactionIdentifier      RRC-TransactionIdentifier,
    criticalExtensions             CHOICE {
        c1                       CHOICE {
            rrcConnectionReconfiguration-r8      RRCConnectionReconfiguration-r8-IEs,
            spare3 NULL, spare2 NULL, spare1 NULL
        },
        criticalExtensionsFuture SEQUENCE {}
    }
}

RRCConnectionReconfiguration-r8-IEs ::= SEQUENCE {
    -- Enter the IEs here.
    ...
}

-- ASN1STOP
```

Hooks for *critical* and *non-critical* extension should normally be included in the PDU type specification. How these hooks are used is further described in clause A.4.

Critical extensions are characterised by a redefinition of the PDU contents and need to be governed by a mechanism for protocol version agreement between the encoder and the decoder of the PDU, such that the encoder is prevented from sending a critically extended version of the PDU type, which is not comprehended by the decoder.

Critical extension of a PDU type is facilitated by a two-level CHOICE structure, where the alternative PDU contents are alternatives within the inner level *c1* CHOICE. Spare alternatives (i.e., *spare3* down to *spare1* in this case) may be included within the *c1* CHOICE. The number of spare alternatives to be included in the original PDU specification should be decided case by case, based on the expected rate of critical extension in the future releases of the protocol.

Further critical extension, when the spare alternatives from the original specifications are used up, is facilitated using the *criticalExtensionsFuture* in the outer level CHOICE.

In PDU types where critical extension is not expected in the future releases of the protocol, the inner level *c1* CHOICE and the spare alternatives may be excluded, as shown in the example below.

```
-- /example/ ASN1START
```

```

RRCConnectionReconfigurationComplete ::= SEQUENCE {
    rrc-TransactionIdentifier      RRC-TransactionIdentifier,
    criticalExtensions              CHOICE {
        rrcConnectionReconfigurationComplete-r8
        RRCConnectionReconfigurationComplete-r8-IEs,
        criticalExtensionsFuture   SEQUENCE {}
    }
}

RRCConnectionReconfigurationComplete-r8-IEs ::= SEQUENCE {
    -- Enter the fields here.
    ...
}

-- ASN1STOP

```

Non-critical extensions are characterised by the addition of new information to the original specification of the PDU type. If not comprehended, a non-critical extension may be skipped by the decoder, whilst the decoder is still able to complete the decoding of the comprehended parts of the PDU contents.

Non-critical extensions at locations other than the end of the message or other than at the end of a field contained in a BIT or OCTET STRING are facilitated by use of the ASN.1 extension marker "...". The original specification of a PDU type should normally include the extension marker at the end of the sequence of information elements contained.

Non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING may be facilitated by use of an empty sequence that is marked OPTIONAL e.g. as shown in the following example:

```

-- /example/ ASN1START

RRCMessage-r8-IEs ::=
    field1          InformationElement1,
    field2          InformationElement2,

    nonCriticalExtension SEQUENCE {} OPTIONAL
}

-- ASN1STOP

```

The ASN.1 clause specifying the contents of a PDU type may be followed by a *field description* table where a further description of, e.g., the semantic properties of the fields may be included. The general format of this table is shown in the example below. The field description table is absent in case there are no fields for which further description needs to be provided e.g. because the PDU does not include any fields, or because an IE is defined for each field while there is nothing specific regarding the use of this IE that needs to be specified.

%PDU-TypeIdentifier% field descriptions	
%field identifier%	Field description.
%field identifier%	Field description.

The field description table has one column. The header row shall contain the ASN.1 type identifier of the PDU type.

The following rows are used to provide field descriptions. Each row shall include a first paragraph with a *field identifier* (in ***bold and italic*** font style) referring to the part of the PDU to which it applies. The following paragraphs at the same row may include (in regular font style), e.g., semantic description, references to other specifications and/or specification of value units, which are relevant for the particular part of the PDU.

The parts of the PDU contents that do not require a field description shall be omitted from the field description table.

## A.3.4 Information elements

Each IE (information element) type is specified in an ASN.1 clause similar to the one shown in the example below.

```
-- /example/ ASN1START
PRACH-ConfigSIB ::=
    rootSequenceIndex
    prach-ConfigInfo
}
SEQUENCE {
    INTEGER (0..1023),
    PRACH-ConfigInfo
}

PRACH-Config ::=
    rootSequenceIndex
    prach-ConfigInfo
}
SEQUENCE {
    INTEGER (0..1023),
    PRACH-ConfigInfo OPTIONAL -- Need N
}

PRACH-ConfigInfo ::=
    prach-ConfigIndex
    highSpeedFlag
    zeroCorrelationZoneConfig
}
SEQUENCE {
    ENUMERATED {ffs},
    ENUMERATED {ffs},
    ENUMERATED {ffs}
}
-- ASN1STOP
```

IEs should be introduced whenever there are multiple fields for which the same set of values apply. IEs may also be defined for other reasons e.g. to break down a ASN.1 definition in to smaller pieces.

A group of closely related IE type definitions, like the IEs *PRACH-ConfigSIB* and *PRACH-Config* in this example, are preferably placed together in a common ASN.1 clause. The IE type identifiers should in this case have a common base, defined as the *generic type identifier*. It may be complemented by a suffix to distinguish the different variants. The "*PRACH-Config*" is the generic type identifier in this example, and the "*SIB*" suffix is added to distinguish the variant. The clause heading and generic references to a group of closely related IEs defined in this way should use the generic type identifier.

The same principle should apply if a new version, or an extension version, of an existing IE is created for *critical* or *non-critical* extension of the protocol (see clause A.4). The new version, or the extension version, of the IE is included in the same ASN.1 clause defining the original. A suffix is added to the type identifier, using the naming conventions defined in clause A.3.1.2, indicating the release or version of the where the new version, or extension version, was introduced.

Local IE type definitions, like the IE *PRACH-ConfigInfo* in the example above, may be included in the ASN.1 clause and be referenced in the other IE types defined in the same ASN.1 clause. The use of locally defined IE types should be encouraged, as a tool to break up large and complex IE type definitions. It can improve the readability of the code.

There may also be a benefit for the software implementation of the protocol end-points, as these IE types are typically provided by the ASN.1 compiler as independent data elements, to be used in the software implementation.

An IE type defined in a local context, like the IE *PRACH-ConfigInfo*, should not be referenced directly from other ASN.1 clauses in the RRC specification. An IE type which is referenced in more than one ASN.1 clause should be defined in a separate clause, with a separate heading and a separate ASN.1 clause (possibly as one in a set of closely related IE types, like the IEs *PRACH-ConfigSIB* and *PRACH-Config* in the example above). Such IE types are also referred to as 'global IEs'.

**NOTE:** Referring to an IE type, that is defined as a local IE type in the context of another ASN.1 clause, does not generate an ASN.1 compilation error. Nevertheless, using a locally defined IE type in that way makes the IE type definition difficult to find, as it would not be visible at an outline level of the specification. It should be avoided.

The ASN.1 clause specifying the contents of one or more IE types, like in the example above, may be followed by a *field description* table, where a further description of, e.g., the semantic properties of the fields of the information elements may be included. This table may be absent, similar as indicated in clause A.3.3 for the specification of the PDU type. The general format of the *field description* table is the same as shown in clause A.3.3 for the specification of the PDU type.

## A.3.5 Fields with optional presence

A field with optional presence may be declared with the keyword **DEFAULT**. It identifies a default value to be assumed, if the sender does not include a value for that field in the encoding:

```
-- /example/ ASN1START
PreambleInfo ::=
    numberOfRA-Preambles          SEQUENCE {
        INTEGER (1..64)          DEFAULT 1,
        ...
    }
-- ASN1STOP
```

Alternatively, a field with optional presence may be declared with the keyword **OPTIONAL**. It identifies a field for which a value can be omitted. The omission carries semantics, which is different from any normal value of the field:

```
-- /example/ ASN1START
PRACH-Config ::=
    rootSequenceIndex            SEQUENCE {
        INTEGER (0..1023),
        prach-ConfigInfo         PRACH-ConfigInfo OPTIONAL -- Need N
    }
-- ASN1STOP
```

The semantics of an optionally present field, in the case it is omitted, should be indicated at the end of the paragraph including the keyword **OPTIONAL**, using a short comment text with a need code. The need code includes the keyword "Need", followed by one of the predefined semantics tags (S, M, N or R) defined in clause 6.1. If the semantics tag S is used, the semantics of the absent field are further specified either in the field description table following the ASN.1 clause, or in procedure text.

The addition of OPTIONAL keywords for capability groups is based on the following guideline. If there is more than one field in the lower level IE, then OPTIONAL keyword is added at the group level. If there is only one field in the lower level IE, OPTIONAL keyword is not added at the group level.

### A.3.6 Fields with conditional presence

A field with conditional presence is declared with the keyword OPTIONAL. In addition, a short comment text shall be included at the end of the paragraph including the keyword OPTIONAL. The comment text includes the keyword "Cond", followed by a condition tag associated with the field ("UL" in this example):

```
-- /example/ ASN1START
LogicalChannelConfig ::=
    ul-SpecificParameters
        priority
        ...
    } OPTIONAL -- Cond UL
-- ASN1STOP
```

When conditionally present fields are included in an ASN.1 clause, the field description table after the ASN.1 clause shall be followed by a *conditional presence* table. The conditional presence table specifies the conditions for including the fields with conditional presence in the particular ASN.1 clause.

Conditional presence	Explanation
UL	Specification of the conditions for including the field associated with the condition tag = "UL". Semantics in case of optional presence under certain conditions may also be specified.

The conditional presence table has two columns. The first column (heading: "Conditional presence") contains the condition tag (in *italic* font style), which links the fields with a condition tag in the ASN.1 clause to an entry in the table. The second column (heading: "Explanation") contains a text specification of the conditions and requirements for the presence of the field. The second column may also include semantics, in case of an optional presence of the field, under certain conditions i.e. using the same predefined tags as defined for optional fields in A.3.5.

Conditional presence should primarily be used when presence of a field depends on the presence and/or value of other fields within the same message. If the presence of a field depends on whether another feature/function has been configured, while this function can be configured independently e.g. by another message and/or at another point in time, the relation is best reflected by means of a statement in the field description table.

If the ASN.1 clause does not include any fields with conditional presence, the conditional presence table shall not be included.

Whenever a field is only applicable in specific cases e.g. TDD, use of conditional presence should be considered.

### A.3.7 Guidelines on use of lists with elements of SEQUENCE type

Where an information element has the form of a list (the SEQUENCE OF construct in ASN.1) with the type of the list elements being a SEQUENCE data type, an information element shall be defined for the list elements even if it would not otherwise be needed.

For example, a list of PLMN identities with reservation flags is defined as in the following example:

```
-- /example/ ASN1START
PLMN-IdentityInfoList ::= SEQUENCE (SIZE (1..6)) OF PLMN-IdentityInfo
PLMN-IdentityInfo ::= SEQUENCE {
    plmn-Identity          PLMN-Identity,
    cellReservedForOperatorUse  ENUMERATED {reserved, notReserved}
}
-- ASN1STOP
```

rather than as in the following (bad) example, which may cause generated code to contain types with unpredictable names:

```
-- /bad example/ ASN1START
PLMN-IdentityList ::= SEQUENCE (SIZE (1..6)) OF SEQUENCE {
    plmn-Identity          PLMN-Identity,
    cellReservedForOperatorUse  ENUMERATED {reserved, notReserved}
}
-- ASN1STOP
```

### A.3.8 Guidelines on use of parameterised SetupRelease type

The usage of the parameterised *SetupRelease* type is like a function call in programming languages where the element type parameter is passed as a parameter. The parameterised type only implies a textual change in abstract syntax where all references to the parameterised type are replaced by the compiler with the release/setup choice. Two examples of the usage are shown below:

```
-- /example/ ASN1START
RRCMessage-rX-IEs ::= SEQUENCE {
    field-rX          SetupRelease { IE-rX }          OPTIONAL,      -- Need M
    ...
}

RRCMessage-rX-IEs ::= SEQUENCE {
    field-rX          SetupRelease { Element-rX }     OPTIONAL,      -- Need M
}

Element-rX ::= SEQUENCE {
    field1-rX          IE1-rX,
    field2-rX          IE2-rX          OPTIONAL,      -- Need N
}
-- /example/ ASN1STOP
```

The *SetupRelease* is always be used with only named IEs, i.e. the example below is not allowed:

```
-- /example/ ASN1START
RRCMessage-rX-IEs ::= SEQUENCE {
  field-rX      SetupRelease { SEQUENCE { -- Unnamed SEQUENCES are not allowed!
    field1-rX   IE1-rX,
    field2-rX   IE2-rX          OPTIONAL    -- Need N
  }
}
OPTIONAL, -- Need M
-- /example/ ASN1STOP
```

Typically, a field defined using the parameterized *SetupRelease* type does not require procedural or field description text that refers to the *setup* or *release* values. If such a field anyway requires procedural text for specific actions, the field is referred to using the values defined for the type itself, namely, "setup" and "release". For example, procedural text for *field-rX* above could be as follows:

- 1> if *field-rX* is set to "setup":
  - 2> do something;
- 1> else (*field-rX* is set to "release"):
  - 2> release *field-rX* (if appropriate).

### A.3.9 Guidelines on use of ToAddModList and ToReleaseList

In order to benefit from delta signalling when modifying lists with many and/or large elements, so-called add/mod- and release- lists should be used. Instead of a single list containing all elements of the list, the ASN.1 provides two lists. One list is used to convey the actual elements that are to be added to the list or modified in the list. The second list conveys only the identities (IDs) of the list elements that are to be released from the list. In other words, the ASN.1 defines only means to signal modifications to a list maintained in the receiver (typically the UE). An example is provided below:

```
-- /example/ ASN1START
AnExampleIE ::= SEQUENCE {
  elementsToAddModList SEQUENCE (SIZE (1..maxNrofElements)) OF Element OPTIONAL, -- Need N
  elementsToReleaseList SEQUENCE (SIZE (1..maxNrofElements)) OF ElementId OPTIONAL, -- Need N
  ...
}

Element ::= SEQUENCE {
  elementId ElementId,
  aField INTEGER (0..16777215),
  anotherField OCTET STRING,
  ...
}
```

```

}
ElementId ::=          INTEGER (0..maxNrofElements-1)
maxNrofElements      INTEGER ::= 50
maxNrofElements-1    INTEGER ::= 49
-- /example/ ASN1STOP

```

As can be seen, the elements of the list must contain an identity (INTEGER) that identifies the elements unambiguously upon addition, modification and removal. It is recommended to define an IE for that identifier (here ElementId) so that it can be used both for a field inside the element as well as in the *elementsToReleaseList*.

Both lists should be made OPTIONAL and flagged as "Need N". The need code reflects that the UE does not maintain the received lists as such but rather updates its configuration using the information therein. In other words, it is not possible to provide via delta signalling an update to a previously signalled *elementsToAddModList* or *elementsToReleaseList* (which Need M would imply). The update is always in relation to the UE's internal configuration.

Note that the release of a field (a list element as well as any other field) releases all its sub-fields (sub-fields configured by *elementsToAddModList* and any other sub-field).

If no procedural text is provided for a set of *ToAddModList* and *ToReleaseList*, the following generic procedure applies:

The UE shall:

- 1> for each *ElementId* in the *elementsToReleaseList*,:
  - 2> if the current UE configuration includes an *Element* with the given *ElementId*:
    - 3> release the *Element* from the current UE configuration;
- 1> for each *Element* in the *elementsToAddModList*:
  - 2> if the current UE configuration includes an *Element* with the given *ElementId*:
    - 3> modify the configured *Element* in accordance with the received *Element*;
  - 2> else:
    - 3> add received *Element* to the UE configuration.

### A.3.10 Guidelines on use of lists (without *ToAddModList* and *ToReleaseList*)

As per clause 6.1.3, when using lists without the *ToAddModList* and *ToReleaseList* structure, the contents of the lists are always replaced. To illustrate this, an example is provided below:

```

-- /example/ ASN1START
-- TAG_EXAMPLE_LISTS_START

```

```

AnExampleIE ::= SEQUENCE {
  elementList SEQUENCE (SIZE (1..maxNrofElements)) OF Element OPTIONAL, -- Need M
  ...
  [[
  elementListExt-v2030 SEQUENCE (SIZE (1..maxNrofElementsExt)) OF Element OPTIONAL, -- Need M
  ]]
}

Element ::= SEQUENCE {
  useFeatureX BOOLEAN,
  aField INTEGER (0..127) OPTIONAL, -- Need M
  anotherField INTEGER (0..127) OPTIONAL, -- Need R
  ...
}

maxNrofElements INTEGER ::= 8
maxNrofElements-1 INTEGER ::= 7
maxNrofElementsExt INTEGER ::= 8
maxNrofElementsExt-1 INTEGER ::= 7

-- TAG_EXAMPLE_LISTS_STOP
-- /example/ ASN1STOP

```

As can be seen, the *elementList* list itself uses Need M, but each list entry *Element* contains mandatory, Need M and Need R fields. If the list is first signalled to UE with 3 entries, and subsequently again with 2 entries, UE shall retain only the latter list, i.e. the list with 2 elements will completely replace the list with 3 elements. That also means that the field *aField* will be treated as if it was newly created, i.e. network must include it if it wishes UE to utilize the field even if it was previously signalled. This also implies that the Need M field (*aField*) will be treated in the same way as the Need R field (*anotherField*), i.e. delta signalling is not applied and the network has to signal the field to ensure UE does not release the value (which is why Need M should not normally be used in the entries of these lists).

---

## A.4 Extension of the PDU specifications

### A.4.1 General principles to ensure compatibility

It is essential that extension of the protocol does not affect interoperability i.e. it is essential that implementations based on different versions of the RRC protocol are able to interoperate. In particular, this requirement applies for the following kind of protocol extensions:

- Introduction of new PDU types (i.e. these should not cause unexpected behaviour or damage).
- Introduction of additional fields in an extensible PDUs (i.e. it should be possible to ignore uncomprehended extensions without affecting the handling of the other parts of the message).
- Introduction of additional values of an extensible field of PDUs. If used, the behaviour upon reception of an uncomprehended value should be defined.

It should be noted that the PDU extension mechanism may depend on the logical channel used to transfer the message e.g. for some PDUs an implementation may be aware of the protocol version of the peer in which case selective ignoring of extensions may not be required.

The non-critical extension mechanism is the primary mechanism for introducing protocol extensions i.e. the critical extension mechanism is used merely when there is a need to introduce a 'clean' message version. Such a need appears when the last message version includes a large number of non-critical extensions, which results in issues like readability, overhead associated with the extension markers. The critical extension mechanism may also be considered when it is complicated to accommodate the extensions by means of non-critical extension mechanisms.

## A.4.2 Critical extension of messages and fields

The mechanisms to critically extend a message are defined in A.3.3. There are both "outer branch" and "inner branch" mechanisms available. The "outer branch" consists of a CHOICE having the name *criticalExtensions*, with two values, *c1* and *criticalExtensionsFuture*. The *criticalExtensionsFuture* branch consists of an empty SEQUENCE, while the *c1* branch contains the "inner branch" mechanism.

The "inner branch" structure is a CHOICE with values of the form "*MessageName-rX-IEs*" (e.g., "*RRCConnectionReconfiguration-r8-IEs*") or "*spareX*", with the spare values having type NULL. The "-rX-IEs" structures contain the *complete* structure of the message IEs for the appropriate release; i.e., the critical extension branch for the Rel-10 version of a message includes all Rel-8 and Rel-9 fields (that are not obviated in the later version), rather than containing only the additional Rel-10 fields.

The following guidelines may be used when deciding which mechanism to introduce for a particular message, i.e. only an 'outer branch', or an 'outer branch' in combination with an 'inner branch' including a certain number of spares:

- For certain messages, e.g. initial uplink messages, messages transmitted on a broadcast channel, critical extension may not be applicable.
- An outer branch may be sufficient for messages not including any fields.
- The number of spares within inner branch should reflect the likelihood that the message will be critically extended in future releases (since each release with a critical extension for the message consumes one of the spare values). The estimation of the critical extension likelihood may be based on the number, size and changeability of the fields included in the message.
- In messages where an inner branch extension mechanism is available, all spare values of the inner branch should be used before any critical extensions are added using the outer branch.

The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release

```
-- /example/ ASN1START                -- Original release
RRCMessage ::=
  rrc-TransactionIdentifier
  criticalExtensions
    c1
      rrcMessage-r8
      spare3 NULL, spare2 NULL, spare1 NULL
    },
  criticalExtensionsFuture
}
SEQUENCE {
  RRC-TransactionIdentifier,
  CHOICE {
    CHOICE {
      RRCMessage-r8-IEs,
    }
  }
  SEQUENCE {}
}
```

```
-- ASN1STOP
```

```
-- /example/ ASN1START          -- Later release
RRCMessage ::=
  rrc-TransactionIdentifier      SEQUENCE {
  criticalExtensions             RRC-TransactionIdentifier,
  c1                             CHOICE {
    rrcMessage-r8                RRCMessage-r8-IEs,
    rrcMessage-r10               RRCMessage-r10-IEs,
    rrcMessage-r11               RRCMessage-r11-IEs,
    rrcMessage-r14               RRCMessage-r14-IEs
  },
  later                           CHOICE {
    c2                             CHOICE {
      rrcMessage-r16             RRCMessage-r16-IEs,
      spare7 NULL, spare6 NULL, spare5 NULL, spare4 NULL,
      spare3 NULL, spare2 NULL, spare1 NULL
    },
    criticalExtensionsFuture     SEQUENCE {}
  }
}
-- ASN1STOP
```

It is important to note that critical extensions may also be used at the level of individual fields i.e. a field may be replaced by a critically extended version. When sending the extended version, the original version may also be included (e.g. original field is mandatory, E-UTRAN is unaware if UE supports the extended version). In such cases, a UE supporting both versions may be required to ignore the original field. The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release.

```
-- /example/ ASN1START          -- Original release
RRCMessage ::=
  rrc-TransactionIdentifier      SEQUENCE {
  criticalExtensions             CHOICE {
    c1                             CHOICE {
      rrcMessage-r8                RRCMessage-r8-IEs,
      spare3 NULL, spare2 NULL, spare1 NULL
    },
    criticalExtensionsFuture     SEQUENCE {}
  }
}

RRCMessage-rN-IEs ::= SEQUENCE {
  field1-rN                      ENUMERATED {
    value1, value2, value3, value4} OPTIONAL, -- Need N
  field2-rN                      InformationElement2-rN OPTIONAL, -- Need N
  nonCriticalExtension           RRCConnectionReconfiguration-vMxy-IEs OPTIONAL
}
-- ASN1STOP
```

```

RRCCOnnectionReconfiguration-vMxy-IEs ::= SEQUENCE {
    field2-rM                InformationElement2-rM        OPTIONAL, -- Cond NoField2rN
    nonCriticalExtension     SEQUENCE {}                 OPTIONAL
}
-- ASN1STOP

```

Conditional presence	Explanation
NoField2rN	The field is optionally present, need N, if field2-rN is absent. Otherwise the field is absent

Finally, it is noted that a critical extension may be introduced in the same release as the one in which the original field was introduced e.g. to correct an essential ASN.1 error. In such cases a UE capability may be introduced, to assist the network in deciding whether or not to use the critical extension.

In the case of list fields (SEQUENCE OF types in ASN.1) using the ToAddMod/ToRelease construction, the use of critical extensions to increase the size of a list should be avoided; that is, replacing the original list field by a new field also used to signal entries previously covered by the original field (i.e. extensions done according to the following example) should be avoided:

```

-- /example/ ASN1START          -- Discouraged example
ContainingStructure ::=
    listElementToAddModList     SEQUENCE {
        SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement    OPTIONAL, -- Need N
        ...
        [[
            listElementToAddModList-rN    SEQUENCE (SIZE (1..maxNrofListElements-rN)) OF ListElement    OPTIONAL -- Need N
        ]]
}-- ASN1STOP

```

Instead, a non-critical list extension mechanism should typically be used, such that the extension field only adds the new entries of the list. This approach is further described in clause A.4.3.6.

If the critical extension mechanism for a list is used, it should be clarified in the field description that the two versions of the list are not configured together, and that the network should release the contents of the original version when configuring the replacement version.

## A.4.3 Non-critical extension of messages

### A.4.3.1 General principles

The mechanisms to extend a message in a non-critical manner are defined in A.3.3. W.r.t. the use of extension markers, the following additional guidelines apply:

- When further non-critical extensions are added to a message that has been critically extended, the inclusion of these non-critical extensions in earlier critical branches of the message should be avoided when possible.

- The extension marker ("...") is the primary non-critical extension mechanism that is used but empty sequences may be used if length determinant is not required. Examples of cases where a length determinant is not required:
  - at the end of a message;
  - at the end of a structure contained in a BIT STRING or OCTET STRING.
- When an extension marker is available, non-critical extensions are preferably placed at the location (e.g. the IE) where the concerned parameter belongs from a logical/functional perspective (referred to as the '*default extension location*').
- It is desirable to aggregate extensions of the same release or version of the specification into a group, which should be placed at the lowest possible level.
- In specific cases it may be preferable to place extensions elsewhere (referred to as the '*actual extension location*') e.g. when it is possible to aggregate several extensions in a group. In such a case, the group should be placed at the lowest suitable level in the message.
- In case placement at the default extension location affects earlier critical branches of the message, locating the extension at a following higher level in the message should be considered.
- In case an extension is not placed at the default extension location, an IE should be defined. The IE's ASN.1 definition should be placed in the same ASN.1 clause as the default extension location. In case there are intermediate levels in-between the actual and the default extension location, an IE may be defined for each level. Intermediate levels are primarily introduced for readability and overview. Hence intermediate levels need not always be introduced e.g. they may not be needed when the default and the actual extension location are within the same ASN.1 clause.

### A.4.3.2 Further guidelines

Further to the general principles defined in the previous clause, the following additional guidelines apply regarding the use of extension markers:

- Extension markers within SEQUENCE:
  - Extension markers are primarily, but not exclusively, introduced at the higher nesting levels.
  - Extension markers are introduced for a SEQUENCE comprising several fields as well as for information elements whose extension would result in complex structures without it (e.g. re-introducing another list).
  - Extension markers are introduced to make it possible to maintain important information structures e.g. parameters relevant for one particular RAT.
  - Extension markers are also used for size critical messages (i.e. messages on BCCH, BR-BCCH, PCCH and CCCH), although introduced somewhat more carefully.
  - The extension fields introduced (or frozen) in a specific version of the specification are grouped together using double brackets.
- Extension markers within ENUMERATED:
  - Spare values may be used until the number of values reaches the next power of 2, while the extension marker caters for extension beyond that limit, given that the use of spare values in a later Release is possible without any error cases.
  - A suffix of the form "vXYZ" is used for the identifier of each new value, e.g. "value-vXYZ".

```

field1          ENUMERATED {
                value1, value2, value3, value4-v880,
                value5-v960, value6-v1170, spare2, spare1, ... },
field2          CHOICE {
  field2a       BOOLEAN,
  field2b       InformationElement2b,
  field2c-v960  InformationElement2c-r9,
  ...,
  field2d-v12b0 INTEGER (0..63)
},
field3-r9       InformationElement3-r10    OPTIONAL,  -- Need R
field4-r9       InformationElement4        OPTIONAL,  -- Need R
field5-r10      BOOLEAN,
field6-r10      InformationElement6-r10    OPTIONAL,  -- Need R
...,
[[
field3-v1170    InformationElement3-v1170  OPTIONAL    -- Need R
]]
}
-- ASN1STOP

```

Some remarks regarding the extensions of *InformationElement1* as shown in the above example:

- The *InformationElement1* is initially extended with a number of non-critical extensions. In release 10 however, a critical extension is introduced for the message using this IE. Consequently, a new version of the IE *InformationElement1* (i.e. *InformationElement1-r10*) is defined in which the earlier non-critical extensions are incorporated by means of a revision of the original field.
- The *value4-v880* is replacing a spare value defined in the original protocol version for *field1*. Likewise *value6-v1170* replaces *spare3* that was originally defined in the r10 version of *field1*.
- Within the critically extended release 10 version of *InformationElement1*, the names of the original fields/IEs are not changed, unless there is a real need to distinguish them from other fields/IEs. E.g. the *field1* and *InformationElement4* were defined in the original protocol version (release 8) and hence not tagged. Moreover, the *field3-r9* is introduced in release 9 and not re-tagged; although, the *InformationElement3* is also critically extended and therefore tagged *InformationElement3-r10* in the release 10 version of *InformationElement1*.

#### A.4.3.4 Typical examples of non critical extension at the end of a message

The following example illustrates the use of non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING i.e. when an empty sequence is used.

```

-- /example/ ASN1START
RRCTestMessage-r8-IEs ::= SEQUENCE {
  field1          InformationElement1,
  field2          InformationElement2,
  field3          InformationElement3    OPTIONAL,  -- Need N
  nonCriticalExtension
                RRCTestMessage-v860-IEs OPTIONAL
}
-- ASN1STOP

```

```

}
RRCMessage-v860-IEs ::=          SEQUENCE {
    field4-v860                InformationElement4          OPTIONAL,    -- Need S
    field5-v860                BOOLEAN                      OPTIONAL,    -- Cond C54
    nonCriticalExtension        RRCMessage-v940-IEs          OPTIONAL
}
RRCMessage-v940-IEs ::=          SEQUENCE {
    field6-v940                InformationElement6-r9        OPTIONAL,    -- Need R
    nonCriticalExtensions       SEQUENCE {}                  OPTIONAL
}
-- ASN1STOP

```

Some remarks regarding the extensions shown in the above example:

- The *InformationElement4* is introduced in the original version of the protocol (release 8) and hence no suffix is used.

#### A.4.3.5 Examples of non-critical extensions not placed at the default extension location

The following example illustrates the use of non-critical extensions in case an extension is not placed at the default extension location.

##### – *ParentIE-WithEM*

The IE *ParentIE-WithEM* is an example of a high level IE including the extension marker (EM). The root encoding of this IE includes two lower level IEs *ChildIE1-WithoutEM* and *ChildIE2-WithoutEM* which not include the extension marker. Consequently, non-critical extensions of the Child-IEs have to be included at the level of the Parent-IE.

The example illustrates how the two extension IEs *ChildIE1-WithoutEM-vNx0* and *ChildIE2-WithoutEM-vNx0* (both in release N) are used to connect non-critical extensions with a default extension location in the lower level IEs to the actual extension location in this IE.

##### ***ParentIE-WithEM* information element**

```

-- /example/ ASN1START
ParentIE-WithEM ::=          SEQUENCE {
    -- Root encoding, including:
    childIE1-WithoutEM        ChildIE1-WithoutEM          OPTIONAL,    -- Need N
    childIE2-WithoutEM        ChildIE2-WithoutEM          OPTIONAL,    -- Need N
    ...,
    [[
    childIE1-WithoutEM-vNx0    ChildIE1-WithoutEM-vNx0    OPTIONAL,    -- Need N
    childIE2-WithoutEM-vNx0    ChildIE2-WithoutEM-vNx0    OPTIONAL,    -- Need N
    ]]
}
-- ASN1STOP

```

Some remarks regarding the extensions shown in the above example:

- The fields *childIE1-WithoutEM-vNx0* may not really need to be optional (depends on what is defined at the next lower level).
- In general, especially when there are several nesting levels, fields should be marked as optional only when there is a clear reason.

### – *ChildIE1-WithoutEM*

The IE *ChildIE1-WithoutEM* is an example of a lower level IE, used to control certain radio configurations including a configurable feature which can be setup or released using the local IE *ChIE1-ConfigurableFeature*. The example illustrates how the new field *chIE1-NewField* is added in release N to the configuration of the configurable feature. The example is based on the following assumptions:

- When initially configuring as well as when modifying the new field, the original fields of the configurable feature have to be provided also i.e. as if the extended ones were present within the setup branch of this feature.
- When the configurable feature is released, the new field should be released also.
- When omitting the original fields of the configurable feature the UE continues using the existing values (which is used to optimise the signalling for features that typically continue unchanged upon handover).
- When omitting the new field of the configurable feature the UE releases the existing values and discontinues the associated functionality (which may be used to support release of unsupported functionality upon handover to an eNB supporting an earlier protocol version).

The above assumptions, which affect the use of conditions and need codes, may not always apply. Hence, the example should not be re-used blindly.

### ***ChildIE1-WithoutEM* information element**

```
-- /example/ ASN1START

ChildIE1-WithoutEM ::=          SEQUENCE {
  -- Root encoding, including:
  chIE1-ConfigurableFeature     ChIE1-ConfigurableFeature     OPTIONAL    -- Need N
}

ChildIE1-WithoutEM-vNx0 ::=    SEQUENCE {
  chIE1-ConfigurableFeature-vNx0 ChIE1-ConfigurableFeature-vNx0  OPTIONAL    -- Cond ConfigF
}

ChIE1-ConfigurableFeature ::=  CHOICE {
  release                        NULL,
  setup                          SEQUENCE {
    -- Root encoding
  }
}

ChIE1-ConfigurableFeature-vNx0 ::= SEQUENCE {
  chIE1-NewField-rN             INTEGER (0..31)
}
}
```

```
-- ASN1STOP
```

Conditional presence	Explanation
<i>ConfigF</i>	The field is optional present, need R, in case of chIE1-ConfigurableFeature is included and set to "setup"; otherwise the field is absent and the UE shall delete any existing value for this field.

### – *ChildIE2-WithoutEM*

The IE *ChildIE2-WithoutEM* is an example of a lower level IE, typically used to control certain radio configurations. The example illustrates how the new field *chIE1-NewField* is added in release N to the configuration of the configurable feature.

#### *ChildIE2-WithoutEM* information element

```
-- /example/ ASN1START
ChildIE2-WithoutEM ::=
  release
  setup
  -- Root encoding
}
ChildIE2-WithoutEM-vNx0 ::=
  chIE2-NewField-rN
}
-- ASN1STOP
```

Conditional presence	Explanation
<i>ConfigF</i>	The field is optional present, need R, in case of chIE2-ConfigurableFeature is included and set to "setup"; otherwise the field is absent and the UE shall delete any existing value for this field.

### A.4.3.6 Non-critical extensions of lists with ToAddMod/ToRelease

When the size of a list using the ToAddMod/ToRelease construction is extended and/or fields are added to the list element structure, the list should be non-critically extended in accordance with the following general principles:

- When only the size of the list is extended, this extension is reflected in a non-critical extension of the list, with a "SizeExt" suffix added to the end of the field name (before the -vNxy suffix). The differential size of the extended list uses the suffix "Diff". A new ToRelease list is needed, and its range should include only the increase in list size. In many cases, extending the list size will also require an extended list element ID type to account for the increased size of the list; in these cases the element type will need to be extended to include the extended element ID, resulting in a more complex extension (see example 3 for further discussion of this case). The field

description table should indicate that the UE considers the original list and the extension list as a single list; thus entries added with the original list can be modified by the extension list (or removed by the extension of the ToRelease list), or vice versa. The result is as shown in the following example:

```
-- /example 1/ ASN1START

ContainingStructure ::=
    listElementToAddModList      SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement      OPTIONAL,    -- Need N
    listElementToReleaseList     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId     OPTIONAL,    -- Need N
    ...,
    [[
    -- Non-critical extension lists
    listElementToAddModListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement      OPTIONAL,    -- Need N
    listElementToReleaseListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId     OPTIONAL,    -- Need N
    ]]
}
-- ASN1STOP
```

- When fields are added to the list element structure, an extension marker should normally be used if available. If no extension marker is available or if overhead or other considerations prevent using the extension marker, an extension structure should be created for the new fields, with the suffix "Ext" added to the end of the field name and the element structure type name (before the -vNxy suffix), and a parallel ToAddMod list introduced to hold the new structures, also with the "Ext" suffix. The field description table should indicate that the parallel list contains the same number of entries, and in the same order, as the original list. No new ToRelease list is typically needed (unless the list element ID type changes). It should typically be ensured that the contained fields in the "Ext" elements are releasable without release and add of the entire list element; this can, for instance, be ensured by having the new fields be OPTIONAL Need R. If multiple extensions of the same list are needed, the version suffix should distinguish the lists (e.g. *listElementToAddModListExt-vNwz* added after *listElementToAddModListExt-vNxy*). The result is as shown in the following example:

```
-- /example 2/ ASN1START

ContainingStructure ::=
    listElementToAddModList      SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement      OPTIONAL,    -- Need N
    listElementToReleaseList     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId     OPTIONAL,    -- Need N
    ...,
    [[
    -- Parallel list
    listElementToAddModListExt-vNxy SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vNxy OPTIONAL -- Need N
    ]],
    [[
    -- Second parallel list from a later spec version
    listElementToAddModListExt-vNwz SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vNwz OPTIONAL -- Need N
    ]]
}

ListElement ::=
    elementId
    field1
    field2
}
SEQUENCE {
    ListElementId,
    INTEGER (0..3),
    ENUMERATED { value1, value2, value3 }
}
```

```

ListElementExt-vNxy ::=          SEQUENCE {
    field3-rN                    BIT STRING (SIZE (8))                OPTIONAL    -- Need R
}

ListElementExt-vNwz ::=          SEQUENCE {
    field4-rN                    INTEGER (0..255)                    OPTIONAL    -- Need R
}
-- ASN1STOP

```

- When the size of a list is extended and fields are added to the list element structure, an extension marker should normally be used for the added fields if available, and the list extended with the non-critical mechanism as described in example 1 above. Note that if the list element ID type changes in this case, the new ID can be added after the extension marker, and the entries of the size-extended ToRelease list should have the type of the new ID (e.g. *ListElementId-vNxy*). If no extension marker is available or if overhead or other considerations prevent using the extension marker, an extension structure should be created for the new fields and a parallel list with ToAddMod introduced to hold the extension structures, as in the second example above, for entries of the original list and for entries of the extension list holding new entries. The field description table should indicate that the parallel list contains the same number of entries, and in the same order, as the concatenation of the original list and the extension list. An extended ToRelease list is needed, but no additional parallel ToRelease list is needed (i.e. there is no *listElementToReleaseListExt-vNxy* in the example below), as the original and extended ToRelease lists suffice to release any element of the combined list. The extended element ID type should be captured as a non-critical extension of the original element ID type, with the field description indicating that if the extended ID is present, the original ID is ignored. The result is as shown in the following example:

```

-- /example 3/ ASN1START

ContainingStructure ::=          SEQUENCE {
    listElementToAddModList      SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement    OPTIONAL,    -- Need N
    listElementToReleaseList     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId   OPTIONAL,    -- Need N
    ...
    [[
    -- Non-critical extension lists
    listElementToAddModListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement    OPTIONAL,    -- Need N
    listElementToReleaseListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId-vNxy  OPTIONAL,    -- Need N
    -- Parallel list with maxNrofListElements-rN = maxNrofListElements + maxNrofListElementsDiff-rN
    listElementToAddModListExt-vNxy    SEQUENCE (SIZE (1..maxNrofListElements-rN)) OF ListElementExt-vNxy    OPTIONAL    -- Need N
    ]]
}

ListElement ::=                SEQUENCE {
    elementId                    ListElementId,
    field1                       INTEGER (0..3),
    field2                       ENUMERATED { value1, value2, value3 }
}

ListElementExt-vNxy ::=        SEQUENCE {
    -- Field description should indicate that if the elementId-vNxy is present, the elementId (without suffix) is ignored
    elementId-vNxy               ListElementId-vNxy                OPTIONAL,    -- Need S
    field3-rN                    BIT STRING (SIZE (8))                OPTIONAL    -- Need R
}

ListElementId ::=             INTEGER (0..maxNrofListElements-1)

ListElementId-vNxy ::=        INTEGER (maxNrofListElements..maxNrofListElements-1-rN)

```

```
-- ASN1STOP
```

- When different extensions are made to a list in separate releases, the extension mechanisms described above may interact. In case fields are added in Rel-M (*listElementToAddModListExt-vMxy*) and later the list size is extended in Rel-N (*listElementToAddModListSizeExt-vNwz*), the size-extended list in Rel-N should be a single list extending the combination of *listElementToAddModList* and *listElementToAddModListExt-vMxy*. This requires creating a new type (*ListElement-rN*) to contain the combined fields of *ListElement* and *ListElementExt-vMxy*. A corresponding ToRelease list is needed. The result is as shown in the following example:

```
-- /example 4/ ASN1START

ContainingStructure ::=
    SEQUENCE {
        listElementToAddModList          SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement          OPTIONAL,    -- Need N
        listElementToReleaseList         SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId         OPTIONAL,    -- Need N
        ...
        [[
            -- Parallel list (Rel-M)
            listElementToAddModListExt-vMxy SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vMxy  OPTIONAL    -- Need N
        ]],
        [[
            -- Size-extended list (Rel-N) with maxNrofListElements-rN = maxNrofListElements + maxNrofListElementsDiff-rN
            listElementToAddModListSizeExt-vNwz SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement-rN  OPTIONAL,    -- Need N
            listElementToReleaseListSizeExt-vNwz SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId-vNwz  OPTIONAL    -- Need N
        ]]
    }

ListElement ::=
    SEQUENCE {
        elementId          ListElementId,
        field1              INTEGER (0..3),
        field2              ENUMERATED { value1, value2, value3 }
    }

ListElementExt-vMxy ::=
    SEQUENCE {
        field3-rM          BIT STRING (SIZE (8))          OPTIONAL    -- Need R
    }

ListElement-rN ::=
    SEQUENCE {
        elementId-vNwz     ListElementId-vNwz,
        field1             INTEGER (0..3),
        field2             ENUMERATED { value1, value2, value3 },
        field3-rN         BIT STRING (SIZE (8))          OPTIONAL    -- Need R
    }

ListElementId ::= INTEGER (0..maxNrofListElements-1)

ListElementId-vNwz ::= INTEGER (maxNrofListElements..maxNrofListElementsDiff-1-rN)

-- ASN1STOP
```

---

## A.5 Guidelines regarding inclusion of transaction identifiers in RRC messages

The following rules provide guidance on which messages should include a Transaction identifier

- 1: DL messages on CCCH that move UE to RRC-Idle should not include the RRC transaction identifier.
- 2: All network initiated DL messages by default should include the RRC transaction identifier.
- 3: All UL messages that are direct response to a DL message with an RRC Transaction identifier should include the RRC Transaction identifier.
- 4: All UL messages that require a direct DL response message should include an RRC transaction identifier.
- 5: All UL messages that are not in response to a DL message nor require a corresponding response from the network should not include the RRC Transaction identifier.

---

## A.6 Guidelines regarding use of need codes

The following rule provides guidance for determining need codes for optional downlink fields:

- if the field needs to be stored by the UE (i.e. maintained) when absent:
  - use Need M (=Maintain);
- else, if the field needs to be released by the UE when absent:
  - use Need R (=Release);
- else, if UE shall take no action when the field is absent (i.e. UE does not even need to maintain any existing value of the field):
  - use Need N (=None);
- else (UE behaviour upon absence does not fit any of the above conditions):
  - use Need S (=Specified);
  - specify the UE behaviour upon absence of the field in the procedural text or in the field description table.

---

## A.7 Guidelines regarding use of conditions

Conditions are primarily used to specify network restrictions, for which the following types can be distinguished:

- Message Contents related constraints e.g. that a field B is mandatory present if the same message includes field A and when it is set value X.

- Configuration Constraints e.g. that a field D can only be signalled if field C is configured and set to value Y. (i.e. regardless of whether field C is present in the same message or previously configured).

The use of these conditions is illustrated by an example.

```
-- /example/ ASN1START
RRCMessage-IEs ::= SEQUENCE {
    fieldA                FieldA                OPTIONAL, -- Need M
    fieldB                FieldB                OPTIONAL, -- Cond FieldAsetToX
    fieldC                FieldC                OPTIONAL, -- Need M
    fieldD                FieldD                OPTIONAL, -- Cond FieldCsetToY
    nonCriticalExtension  SEQUENCE {}          OPTIONAL
}
-- /example/ ASN1STOP
```

Conditional presence	Explanation
<i>FieldAsetToX</i>	The field is mandatory present if fieldA is included and set to valueX. Otherwise the field is optionally present, need R.
<i>FieldCsetToY</i>	The field is optionally present, need M, if fieldC is configured and set to valueY. Otherwise the field is absent and the UE does not maintain the value

## A.8 Miscellaneous

The following miscellaneous convention should be used:

- UE capabilities: TS 38.306 [26] specifies that the network should in general respect the UE's capabilities. Hence there is no need to include statement clarifying that the network, when setting the value of a certain configuration field, shall respect the related UE capabilities unless there is a particular need e.g. particularly complicated cases.
- UE capabilities: If a UE capability for a feature requires at least FR1/FR2 or at least FDD/TDD differentiation, it is defined in per band signaling (under *BandNR* in *RF-Parameters*) in the ASN.1, i.e. no new UE capabilities is defined in the FR1/FR2 and FDD/TDD differentiation capability signaling branches.

---

## Annex B (informative): RRC Information

### B.1 Protection of RRC messages

The following list provides information which messages can be sent (unprotected) prior to AS security activation and which messages can be sent unprotected after AS security activation. Those messages indicated "-" in "P" column should never be sent unprotected by gNB or UE. Further requirements are defined in the procedural text.

P...Messages that can be sent (unprotected) prior to AS security activation

A – I...Messages that can be sent without integrity protection after AS security activation

A – C...Messages that can be sent unciphered after AS security activation

NA... Message can never be sent after AS security activation

Message	P	A-I	A-C	Comment
<i>CounterCheck</i>	-	-	-	
<i>CounterCheckResponse</i>	-	-	-	
<i>DedicatedSIBRequest</i>	+	-	-	
<i>DLDedicatedMessageSegment</i>	NOTE 1			
<i>DLInformationTransfer</i>	+	-	-	
<i>DLInformationTransferMRDC</i>	-	-	-	
<i>FailureInformation</i>	-	-	-	
<i>IABOtherInformation</i>	-	-	-	
<i>IndirectPathFailureInformation</i>	-	-	-

NOTE 2: This message type carries others RRC messages. The protection of an instance of this message is the same as for the message which this message is carrying.				

## B.2 Description of BWP configuration options

There are two possible ways to configure BWP#0 (i.e. the initial BWP) for a UE:

- 1) Configure *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon*, but do not configure dedicated configurations in *BWP-DownlinkDedicated* or *BWP-UplinkDedicated* in *ServingCellConfig*.
- 2) Configure both *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon* and configure dedicated configurations in at least one of *BWP-DownlinkDedicated* or *BWP-UplinkDedicated* in *ServingCellConfig*.

The same way of configuration is used for UL BWP#0 and DL BWP#0 if both are configured.

With the first option (illustrated by figure B2-1 below), the BWP#0 is not considered to be an RRC-configured BWP, i.e., UE only supporting one BWP can still be configured with BWP#1 in addition to BWP#0 when using this configuration. The BWP#0 can still be used even if it does not have the dedicated configuration, albeit in a more limited manner since only the SIB1-defined configurations are available. For example, only DCI format 1\_0 can be used with BWP#0 without dedicated configuration, so changing to another BWP requires RRCReconfiguration since DCI format 1\_0 doesn't support DCI-based switching.

Figure B2-1: BWP#0 configuration without dedicated configuration

With the second option (illustrated by figure B2-2 below), the BWP#0 is considered to be an RRC-configured BWP, i.e. UE only supporting one BWP cannot be configured with BWP#1 in addition to BWP#0 when using this configuration. However, UE supporting more than one BWP can still switch to and from BWP#0 e.g. via DCI normally, and there are no explicit limitations to using the BWP#0 (compared to the first option).

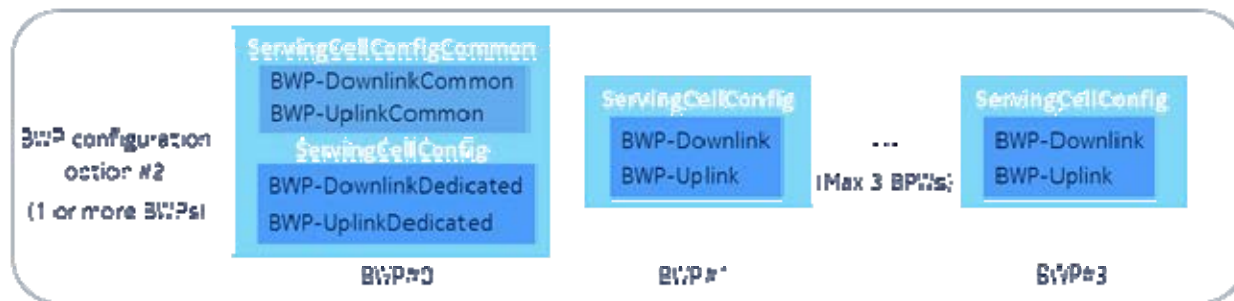

Figure B2-2: BWP#0 configuration with dedicated configuration

For BWP#0, the *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon* should match the parameters configured by MIB and SIB1 (if provided) in the corresponding serving cell.

If an RedCap-specific initial DL BWP is configured, for BWP switching, the BWP #0 always maps to the RedCap-specific initial DL BWP. If a RedCap-specific initial UL BWP is configured, for BWP switching on NUL, the BWP #0 always maps to the RedCap-specific initial UL BWP, for BWP switching on SUL, the BWP#0 always maps to the initial UL BWP.

---

## Annex C (normative): List of CRs Containing Early Implementable Features and Corrections

This annex lists the Change Requests (CRs) whose changes may be implemented by a UE of an earlier release than which the CR was approved in (i.e. CRs that contain on their coversheets the sentence "Implementation of this CR from Rel-N will not cause interoperability issues").

**Table C-1: List of CRs Containing Early Implementable Features and Corrections**

<b>TDoc Number (RP-xxxxxx): CR Title</b>	<b>CR Number(s)</b>	<b>CR Revision Number(s)</b>	<b>Earliest Implementable Release</b>	<b>Additional Information</b>
RP-200335: Correction on usage of access category 2 for UAC for RNA update	1141	2	Release 15	
RP-201185: Introduction of signalling for high-speed train scenarios	1464	5	Release 15	
RP-201216: Release-16 UE capabilities based on RAN1, RAN4 feature lists and RAN2	1665	2	Release 15	Early implementation part is referring to the aspect covered by <ul style="list-style-type: none"> <li>- R2-2006203: Extension of CSI-RS capabilities per codebook type</li> <li>- R2-2006360: Intraband EN_DC power class expansion for 29 dBm</li> </ul>
RP-202768: UE behaviour when UL 7.5KHz shift is not supported	2107	2	Release 15	
RP-202790: Correction on uac-AccessCategory1-SelectionAssistanceInfo	2130	1	Release 15	
RP-211483: Clarification on the initiation of RNA update	2581	1	Release 15	
RP-201190: Introduction of eCall over IMS for NR	1670	-	Release 15	
RP-212598: Distinguishing support of extended band n77	2810	2	Release 15	
RP-213342: Duty cycle signalling for power class 1.5	2817	1	Release 15	
RP-213345: CR on 38.331 for introducing UE capability of txDiversity	2859	1	Release 15	
RP-220497: Introduction of function for RRM enhancements for Rel-17 NR FR1 HST	2898	2	Release 16	
RP-220838: Release-17 UE capabilities based on R1 and R4 feature lists (TS38.331)	2901	1	Release 15	Early implementation part is referring to the aspect covered by: <ul style="list-style-type: none"> <li>- R2-2203898: Introduction of BCS4 and BCS5</li> <li>- R2-2203836: Introducing UE capability for power class 5 for FR2 FWA</li> </ul>
RP-221721: CR on the CBM/IBM reporting-38331	2916	2	Release 16	
RP-221736: Distinguishing support of band n77 restrictions in Canada [n77 Canada]	3078	2	Release 15	

RP-222527: Correction to additionalSpectrumEmission for UL CA in n77 for the US	3476	-	Release 15	
RP-222527: Correction to additionalSpectrumEmission for UL CA in n77 for Canada	3478	-	Release 15	
RP-232570: Addition of extended number range for NS value	3900	6	Release 16	
RP-233888: Introduction of FR2 FBG2 CA BW classes	2867	6	Release 15	
RP-233882: Enhancing SCell A2 event reporting	4375	2	Release 15	
RP-233890: PTM retransmission reception for multicast DRX with HARQ feedback disabled [PTM_ReTx_Mcast_HARQ_Disb]	4504	-	Release 17	
RP-240667: UE capability for Enhanced channel raster	4445	3	Release 16	
RP-240658: Introduction of TxDiversity for 2Tx capability	4639	2	Release 17	
RP-241543: Introduction of barring exemption for RedCap UEs for emergency calls	4570	4	Release 17	
RP-241543: Correction on Redcap 1 Rx and 2 Rx barring	4632	5	Release 17	
RP-241544: Correction on TRS in idle and inactive	4755	3	Release 17	
RP-241544: Clarification RLM/BFD relaxation and short DRX	4771	2	Release 17	
RP-233915: Introduction of further measurement gap enhancements	4063	6	Release 17	Early implementation part is referring to all aspects other than effective measurement window. Early implementation also includes the corresponding capability of R2-2311897 (within CR 4510 of RP-233940).
RP-243227: Introduction of network signalling of maximum number of UL segments [Max-RRC-SegUL]	5004	3	Release 16	
RP-243233: Correction on deprioritisationTimer	5170	2	Release 15	

## Annex D (normative): UE requirements on ASN.1 comprehension

This clause specifies UE requirements regarding the ASN.1 transfer syntax support, i.e. the ASN.1 definitions to be comprehended by the UE.

A UE that indicates release X in field *accessStratumRelease* shall comprehend the entire transfer syntax (ASN.1) of release X, in particular at least the first version upon ASN.1 freeze. The UE is however not required to support dedicated signalling related transfer syntax associated with optional features it does not support.

In case a UE that indicates release X in field *accessStratumRelease* supports a feature specified in release Y, which is later than release X, (i.e. early UE implementation) additional requirements apply. The UE obviously also has to support the ASN.1 parts related to indicating support of the feature (in UE capabilities).

### Critical extensions (dedicated signaling)

If the early implemented feature involves one or more critical extensions in dedicated signalling, the UE shall comprehend the parts of the transfer syntax (ASN.1) of release Y that are related to the feature implemented early. This, in particular, concerns the ASN.1 parts related to configuration of the feature.

If configuration of an early implemented feature introduced in release Y involves a message or field that has been critically extended, the UE shall support configuration of all features supported by the UE that are associated with sub-fields of this critical extension. Apart from the early implemented feature(s), the UE needs, however, not to support functionality beyond what is defined in the release the UE indicates in access stratum release.

Let's consider the example of a UE indicating value X in field *accessStratumRelease* that supports the features A1, A3, and A5, associated with fields *fieldA1*, *fieldA3* and *fieldA5* of *InformationElementA* (see ASN.1 below).

The feature A5 implemented early is associated with *fieldA5*, and can only be configured by the -rY version of *InformationElementA*. In such case, the UE should support configuration of all the features A1, A3 and A5 associated with fields *fieldA1*, *fieldA3* and *fieldA5* by the -rY version of *InformationElementA*.

If, however, one of the features was modified, e.g. the feature A3 associated with *fieldA3*, the network should assume the UE only supports the feature A3 according to the release it indicated in field *accessStratumRelease* (i.e. X).

The UE is neither required to support the additional code-point (*n80-vY0*) nor the additional sub-field (*fieldA3c-rY*).

```

InformationElementA-rX ::= SEQUENCE {
    fieldA1-rX      InformationElementA1-rX      OPTIONAL, -- Need N
    fieldA2-rX      InformationElementA2-rX      OPTIONAL, -- Need R
    fieldA3-rX      InformationElementA3-rX      OPTIONAL, -- Need R
}

InformationElementA-rY ::= SEQUENCE {
    fieldA1-rY      InformationElementA1-rX      OPTIONAL, -- Need N

}

```

### Non-critical extensions (dedicated and broadcast signaling)

If the early implemented feature involves one or more non-critical extensions, the UE shall comprehend the parts of the transfer syntax (ASN.1) of release Y that are related to the feature implemented early.

If the early implemented feature involves one or more non-critical extensions in dedicated signaling, the network does not include extensions introduced after the release X that are not the parts related to the feature which the UE indicates early support of in UE capabilities. The UE shall anyway comprehend the parts of the transfer syntax (ASN.1) which indicate absence of such extensions.

If the early implemented feature involves one or more non-critical extensions in system information, the SIB(s) containing the release Y fields related to the early implemented features may also include other extensions introduced after the release X that are not the parts related to the feature which the UE supports. The UE shall comprehend such intermediate fields (but again is not required to support the functionality associated with these intermediate fields, in case this concerns optional features not supported by the UE).

## Annex E (informative): Change history

	RP-104	RP-241563	4809	-	F	Miscellaneous RRC corrections for NCR	18.2.0
	RP-104	RP-241552	4812	3	A	Adding PCI and ARFCN of target cell for intra-RAT SHR	18.2.0
	RP-104	RP-241552	4814	3	A	Misclassification of RLF reports as Too Early HO failure	18.2.0

	RP-104	RP-241575	4815	2	F	Corrections to 38331 for Rel-18 SONMDT	18.2.0
	RP-104	RP-241543	4816	2	F	Correction on the configuration of Redcap CFR [RedCapMBS_Bcast]	18.2.0
	RP-104	RP-241549	4820	-	A	Clarification on SIB1 reception for ETWS/CMAS	18.2.0
	RP-104	RP-241549	4827	-	A	Corrections for SL RLC mode indication	18.2.0
	RP-104	RP-241555	4831	-	A	Clarification to s-MeasConfig for L2 U2N relay case	18.2.0
	RP-104	RP-241559	4832	1	F	Rapp RRC CR for MC enhancement	18.2.0
	RP-104	RP-241560	4833	1	F	Miscellaneous RRC corrections for Coverage Enhancements	18.2.0
	RP-104	RP-241554	4835	1	A	Correction on NR SL discovery transmission	18.2.0
	RP-104	RP-241570	4838	-	F	Miscellaneous corrections for IDC	18.2.0
	RP-104	RP-241551	4840	1	A	Clarification on the RSRP measurement for SDT	18.2.0
	RP-104	RP-241598	4857	3	F	Correction of the range of DL-DataToUL-ACK for ATG	18.2.0
	RP-104	RP-241543	4858	-	F	B020 Correction of cell barred indication value for 2Rx XR [2Rx_XR_Device]	18.2.0
	RP-104	RP-241553	4860	2	A	Correction on multicast DRX to support NTN	18.2.0
	RP-104	RP-241542	4861	1	B	Updates and Introduction of UE capabilities for Rel-18 WIs	18.2.0
	RP-104	RP-241542	4862	-	B	Corrections and Updates to UE capabilities for RAN1 feature group 55-6	18.2.0
09/2024	RP-105	RP-242240	4788	2	F	Paging monitoring for extended CG period [CG-SDT-Enh]	18.3.0
	RP-105	RP-242240	4863	-	F	Miscellaneous correction on R18 SL Evolution	18.3.0
	RP-105	RP-242235	4865	-	A	Correction on the field of scg-State	18.3.0
	RP-105	RP-242238	4867	2	F	Correction on the capabilities on PTM retransmission [PTM_ReTx_Mcast_HARQ_Disb]	18.3.0
	RP-105	RP-242233	4873	-	A	Correction on the way to include ReconfigurationWithSync in masterCellGroup in RRCReconfiguration	18.3.0
	RP-105	RP-242235	4878	1	A	Clarification on Validity Duration	18.3.0
	RP-105	RP-242237	4881	-	F	Network energy savings for NR miscellaneous RRC CR	18.3.0
	RP-105	RP-242237	4889	1	F	Corrections on SI request with Msg1 repetition	18.3.0
	RP-105	RP-242237	4892	1	F	Correction on the missing PRACH SCS configuration	18.3.0
	RP-105	RP-242240	4898	-	D	Parameter names corrections for XR	18.3.0
	RP-105	RP-242238	4903	1	F	Miscellaneous corrections for Multi-Carrier enhancements	18.3.0
	RP-105	RP-242240	4904	2	F	Miscellaneous corrections for SL relay enhancements	18.3.0
	RP-105	RP-242236	4906	1	A	Correction on T300 and T302 handling due to relay selection or cell selection	18.3.0
	RP-105	RP-242236	4908	1	A	Miscellaneous corrections on mobility history information	18.3.0
	RP-105	RP-242235	4912	2	A	Correction on featureCombination and SI-RequestConfig	18.3.0
	RP-105	RP-242235	4914	-	A	Correction on SL IUC and SL DRX configurations for SL enhancements	18.3.0
	RP-105	RP-242238	4917	1	F	Miscellaneous non-controversial corrections Set XXII	18.3.0
	RP-105	RP-242239	4922	1	F	Correction of Enhancement on NR QoE management and optimizations for diverse services	18.3.0
	RP-105	RP-242235	4927	1	A	Clarification on MBS broadcast acquisition	18.3.0
	RP-105	RP-242237	4928	1	F	Correction on absoluteFrequencySSB corresponding to CD-SSB for PCell	18.3.0
	RP-105	RP-242238	4930	1	F	Misc RRC corrections for feMob	18.3.0
	RP-105	RP-242240	4932	1	F	Misc RRC corrections for RACH-less HO [RACH-lessHO]	18.3.0
	RP-105	RP-242239	4934	3	F	Miscellaneous Positioning Corrections	18.3.0
	RP-105	RP-242238	4935	1	F	Miscellaneous corrections to Rel-18 NR NTN	18.3.0
	RP-105	RP-242238	4936	1	F	Clarification on highSpeedMeasFlagFR2 for HST FR2 RRM	18.3.0
	RP-105	RP-242236	4939	1	A	RRC correction on NR SL U2N Relay UE selection and reselection procedure	18.3.0
	RP-105	RP-242237	4951	1	F	Miscellaneous corrections for further NR coverage enhancements in RRC	18.3.0
	RP-105	RP-242235	4953	1	A	Correction to indication of reserved SN-side NR-DC and aggregated BW resources	18.3.0
	RP-105	RP-242238	4955	1	F	Miscellaneous corrections on eMBS	18.3.0
	RP-105	RP-242236	4957	2	A	Corrections for SL relay measurements	18.3.0
	RP-105	RP-242240	4959	4	F	Correction to EnteringLeavingReport condition [meas_report_enh]	18.3.0
	RP-105	RP-242239	4962	-	F	Clarification on parallel lists in MeasObjectNR	18.3.0
	RP-105	RP-242236	4963	1	A	Correction on power control parameters to support unified TCI state framework	18.3.0
	RP-105	RP-242239	4965	2	F	Extension of cells in Validity area	18.3.0
	RP-105	RP-242240	4966	-	F	Correction on enhancements to measurement report [meas_report_enh]	18.3.0
	RP-105	RP-242240	4967	-	F	Correction on extension of ToAddModList	18.3.0
	RP-105	RP-242237	4968	1	F	Rel-18 SONMDT Corrections	18.3.0
	RP-105	RP-242239	4969	1	F	Correction on MIMOevo	18.3.0
	RP-105	RP-242237	4970	1	F	Correction on NR MUSIM enhancements	18.3.0
	RP-105	RP-242230	4971	-	B	Updates and Introduction of UE capabilities for Rel-18 WIs	18.3.0
12/2024	RP-106	RP-243233	4851	3	F	Correction for cell barring for 2Rx XR UE [2Rx_XR_Device]	18.4.0
	RP-106	RP-243221	4896	3	A	Correction on IE SRS-CarrierSwitching	18.4.0
	RP-106	RP-243227	4900	3	A	Correction for CFRA configuration due to PRACH partitioning	18.4.0
	RP-106	RP-243233	4901	3	F	Correction for Paging monitoring during SDT [CG-SDT-Enh]	18.4.0
	RP-106	RP-243231	4940	2	F	RRC correction on NR sidelink positioning	18.4.0
	RP-106	RP-243232	4976	1	F	Co-configuration of random/partial-sensing resource selection and Co-Ex	18.4.0
	RP-106	RP-243227	4978	2	A	Corrections on the L2 U2N Remote UE measurement	18.4.0
	RP-106	RP-243229	4986	2	F	Miscellaneous corrections for Rel-18 SON/MDT	18.4.0
	RP-106	RP-243232	4994	2	F	Miscellaneous CR for Rel-18 SL relay enhancement	18.4.0
	RP-106	RP-243224	4998	1	A	Correction to unified TCI signalling	18.4.0
	RP-106	RP-243226	5002	1	A	Misc RRC corrections for SL enhancements	18.4.0
	RP-106	RP-243229	5006	3	F	Correction to the musim-AffectedBandsList and musim-AvoidedBandsList	18.4.0

RP-106	RP-243224	5010	1	A	Correction on UE behavior of setting failedPSCellId	18.4.0
RP-106	RP-243228	5011	2	F	Network energy savings for NR rapporteur RRC CR	18.4.0
RP-106	RP-243219	5013	1	B	Introduction of new capability for intra-band EN-DC channel spacing [Intra-Band_EN-DC_Channelspacing]	18.4.0
RP-106	RP-243218	5015	2	A	Correction on UE capabilities for TCI state indication	18.4.0
RP-106	RP-243228	5016	2	F	Clarification of MeasurementTimingConfiguration use	18.4.0
RP-106	RP-243225	5025	2	A	Corrections on measurement gap configuration	18.4.0
RP-106	RP-243231	5030	2	F	Correction of Enhancement on NR QoE management and optimizations for diverse services	18.4.0
RP-106	RP-243224	5045	2	A	Correction on IE perRAInfoList for SCGFailureInformation	18.4.0
RP-106	RP-243232	5048	2	F	RRC correction on NR SL U2U relay operation	18.4.0
RP-106	RP-243222	5060	3	A	RRC correction on sl-X-Overhead field description of SL-ResourcePool	18.4.0
RP-106	RP-243231	5061	2	F	Miscellaneous RRC Positioning Correction	18.4.0
RP-106	RP-243229	5062	2	F	Correction on the idc-TDM-AssistanceConfig	18.4.0
RP-106	RP-243233	5065	1	F	Supporting R17 early implementation of R18 measurement gap enhancements	18.4.0
RP-106	RP-243224	5069	3	A	Correction on PHR for mTRP PUSCH repetition	18.4.0
RP-106	RP-243225	5076	2	A	Corrections to NR NTN (R18)	18.4.0
RP-106	RP-243230	5077	2	F	Correction on applicable BWP for multi-cell scheduling	18.4.0
RP-106	RP-243232	5081	1	F	Clarification for ul-DataSplitThreshold setting in multi-path relay	18.4.0
RP-106	RP-243230	5083	2	F	Miscellaneous non-controversial corrections Set XXIII	18.4.0
RP-106	RP-243227	5087	1	A	Miscellaneous CR for Rel-17 SL relay	18.4.0
RP-106	RP-243222	5091	1	A	Correction to missing NR-DC parameters branches	18.4.0
RP-106	RP-243225	5093	1	A	Clarification on determining about to start sessions	18.4.0
RP-106	RP-243219	5095	3	F	Correction on UE capability for multi-carrier enhancements	18.4.0
RP-106	RP-243230	5096	3	F	Misc RRC corrections for feMob	18.4.0
RP-106	RP-243229	5097	1	F	Paging clarification for MBS	18.4.0
RP-106	RP-243226	5102	1	A	Correction on spatial relation info in SRS configuration (R18)	18.4.0
RP-106	RP-243229	5105	1	F	Correction on logging PSCell identity	18.4.0
RP-106	RP-243231	5106	1	F	Correction for UE indicating its preference TX/RX frequencies for sidelink positioning in SU-I	18.4.0
RP-106	RP-243227	5108	1	A	Correction of maxSI messages [SI-SCHEDULING]	18.4.0
RP-106	RP-243230	5112	1	F	Clarifications on cell barring behaviour [2Rx_XR_Device] [EM_Call_Exemption]	18.4.0
RP-106	RP-243227	5113	1	A	Introduction of network signalling of maximum number of UL segments [Max-RRC-SegUL]	18.4.0
RP-106	RP-243230	5120	2	F	Miscellaneous updates for Rel-18 WIs	18.4.0
RP-106	RP-243232	5125	2	F	Corrections on RRC SRAP configuration for L2 U2U	18.4.0
RP-106	RP-243229	5126	1	F	NR-U related RA information in SCGFailureInformation	18.4.0
RP-106	RP-243229	5134	1	F	Clarification on group paging procedure	18.4.0
RP-106	RP-243229	5135	-	F	Correction on SPR content determination	18.4.0
RP-106	RP-243229	5138	1	F	Correction on logging RSSI measurements in RLF report and SHR	18.4.0
RP-106	RP-243226	5140	-	A	Correction on SL DRX parameters	18.4.0
RP-106	RP-243224	5145	1	A	Correction for RA resource information in RA-report	18.4.0
RP-106	RP-243228	5146	2	F	Miscellaneous corrections for NES	18.4.0
RP-106	RP-243233	5149	2	F	Correction on Band Selection and Cell Barring for Aerial UEs	18.4.0
RP-106	RP-243231	5150	2	F	Correction for positioning SRS CA in RRC_INACTIVE	18.4.0
RP-106	RP-243233	5152	1	F	Correction to RRC for CG-SDT enhancement [CG-SDTenh]	18.4.0
RP-106	RP-243229	5153	3	F	Multicast reception after reselection to cell with MCCH	18.4.0
RP-106	RP-243221	5158	1	A	Corrections to smtc configuration	18.4.0
RP-106	RP-243233	5161	1	F	Miscellaneous corrections on NTN in FR2 bands	18.4.0
RP-106	RP-243218	5162	2	A	Guidelines on implementing FRx/xDD differentiation in per UE capability	18.4.0
RP-106	RP-243231	5165	1	F	Sidelink RRC Positioning Correction	18.4.0
RP-106	RP-243233	5170	2	F	Correction on deprioritisationTimer	18.4.0
RP-106	RP-243231	5174	1	F	RRC correction on NR sidelink positioning	18.4.0
RP-106	RP-243232	5175	1	F	Corrections for U2U relay measurements	18.4.0
RP-106	RP-243231	5179	1	F	Miscellaneous correction on QoE measurement	18.4.0
RP-106	RP-243229	5187	1	F	Correction on the Less than 5M Bandwidth	18.4.0
RP-106	RP-243224	5188	1	A	Correction on PSCell mobility history information	18.4.0
RP-106	RP-243228	5189	2	F	Clarification on the unit of offsetThresholdTA-r18 for ATG	18.4.0
RP-106	RP-243229	5190	1	F	Rapporteur correction on multicast MCCH	18.4.0
RP-106	RP-243229	5191	-	F	Correction on multicast reception in RRC_INACTIVE upon paging	18.4.0
RP-106	RP-243229	5194	1	F	Correction on Group Paging Handling	18.4.0
RP-106	RP-243232	5197	1	F	Corrections on the Terminology of Peer UE	18.4.0
RP-106	RP-243230	5198	-	F	Scope of interFreqL1-MeasConfig-r18	18.4.0
