Two cells are deployed in the test, which are one FR1 NR PCell (Cell 1) and an E-UTRA neighbour cell (Cell 2). The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. NR Cell 1 is already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of higher priority than Cell 1.

Before T1 the UE is camped on to Cell 1. During T1, Cell 2 shall be powered off. At the start of T2 the UE is expected to detect Cell 2, send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on Cell 2. At the start of T3 Cell 2 becomes weaker than Cell 1, and the UE reselects to Cell 1.

In the following test procedure “UE responds” means “UE starts transmitting preamble on PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters connectivity *NR* with Test Mode *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

2. Set the parameters according to T1 in Table 6.1.2.1.5-1 and 6.1.2.1.5-2. T1 starts.

3. During T1, Cell 2 shall be powered off and set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for one iteration of the test procedure loop.

4. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.1.2.1.5-1 and 6.1.2.1.5-2. T2 starts.

5. The SS waits for random access requests information from the UE to perform cell re-selection to a higher priority cell, Cell 2.

6. If the UE responds on Cell 2 during time duration T2 within 68 seconds from the beginning of time period T2, then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

7. If the UE has re-selected Cell 2 within T2, after the re-selection or when T2 expires, continue with step 7a. Otherwise, if T2 expires and the UE has not yet re-selected Cell 2, the TE shall switch off and on the UE and skip to step 11.

7a The SS shall send an *RRCConnectionRelease* message to ensure that the UE is in state RRC_IDLE on Cell 2.

8. The SS shall switch the power setting from T2 to T3 as specified in Table 6.1.2.1.5-1 and 6.1.2.1.5-2. T3 starts.

9. The SS waits for random access requests information from the UE to perform cell re-selection to a lower priority cell, Cell 1.

10. If the UE has re-selected Cell 1 within T3, after the re-selection or when T3 expires, continue with step 10a. Otherwise, if T3 expires and the UE has not yet re-selected Cell 1, the TE shall switch off and on the UE and skip to step 11.

10a. The SS shall send an *RRCRelease* message to ensure that the UE is in state RRC_IDLE on Cell 1.

11. Ensure the UE is in state RRC_IDLE with generic procedure parameters connectivity *NR* according to TS 38.508-1 [14] clause 4.5.

12. Repeat step 2-11 until a test verdict has been achieved.

| $Thresh_{x, highP}$ | dB | 48 | | |
| $Thresh_{serving, lowP}$ | dB | 44 | | |
| $Thresh_{x, lowP (Note 2)}$ | dB | 50 | | |
| Propagation Condition | | AWGN | | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | |
| Note 2: This refers to the value of threshX-Low-r15 which is included in E-UTRA system information, and is a threshold for the NR target cell. | | | | |

The cell reselection delay to a higher priority E-UTRAN cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search}$ + $T_{evaluate, E-UTRAN}$ + $T_{SI-E-UTRA}$,

Where:

$T_{higher_priority_search}$ See clause 4.2.2.7 of TS 38.133 [6]

$T_{evaluate, E-UTRAN}$ See Table 4.2.2.5-1 in clause 4.2.2.5 of TS 38.133 [6]

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority E-UTRAN cell.

## 6.1.2.2 NR SA FR1 – E-UTRA cell re-selection to lower priority E-UTRA

### 6.1.2.2.1 Test purpose

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2.2.5 of TS 38.133 [6] when the E-UTRAN cell is of lower priority.

### 6.1.2.2.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

### 6.1.2.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.1.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.1.2.2.

6.1.2.2.4 Test description

6.1.2.2.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.1.2.2.4.1-1.

**Table 6.1.2.2.4.1-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 6.1.2.2-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.2-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.2-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.2-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |
| 6.1.2.2-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |
| 6.1.2.2-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | | |

Configure the test equirement and the DUT according to the parameters in Table 6.1.2.2.4.1-2.

**Table 6.1.2.2.4.1-2: Initial conditions for NR SA FR1 – E-URTA cell re-selection to lower priority E-UTRA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.1.2.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.6.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.2 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameter settings are set up according to Table 6.1.2.2.4.1-3.

2. Message contents are defined in clause 6.1.2.2.4.3.

3. The test scenario comprises of one NR cell and one E-UTRAN cell. Cell 1 is the NR PCell and Cell 2 is the E-UTRA neighbour cell. Cell 1 is configured according to Annex C.1.1 and C.1.2, Cell 2 is configured according to TS 36.521-3 [26] Annex C.1.0 and C.1.1.

**Table 6.1.2.2.4.1-3: General test parameters for NR to lower priority E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell1 | The UE camps on Cell 1 in the initial phase. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell2 | |
| T1 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell2 | The UE shall perform reselection to Cell 2 during T1. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell1 | |
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell1 | The UE shall perform reselection to Cell 1 during T2 for iteration of the tests. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell2 | |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1, 2, 3, 4, 5, 6 | 1.28 | The value shall be used for all cells in the test. |

| | | | | |
|---|---|---|---|---|

| E-UTRAN PRACH configuration index | | 1, 2, 3 | 53 | As specified in table 5.7.1-2 in TS 36.211 [24] |
| | | 4, 5, 6 | 4 | |
| T1 | s | 1, 2, 3, 4, 5, 6 | 15 | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2 | s | 1, 2, 3, 4, 5, 6 | 75 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

#### 6.1.2.2.4.2 Test procedure

Two cells are deployed in the test, which are one FR1 NR PCell (Cell 1) and an E-UTRA neighbour cell (Cell 2). The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on Cell 2.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters connectivity *NR* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

1a. Set the parameters according to T2 in Table 6.1.2.2.5-1 and 6.1.2.2.5-2. SS waits at least for 32sec($T_{detect,EUTRAN}$) to ensure the UE can detect E-UTRA neighbor cell(Cell2).

2. Set the parameters according to T1 in Table 6.1.2.2.5-1 and 6.1.2.2.5-2. T1 starts.

3. The SS waits for random access requests information from the UE to perform cell re-selection on Cell 2.

4. If the UE responds on Cell 2 during time duration T1 within 8 seconds from the beginning of time period T1 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

5. If the UE has re-selected Cell 2 within T1, after the re-selection or when T1 expires, continue with step 5a. Otherwise, if T1 expires and the UE has not yet re-selected Cell 2, the TE shall switch off and on the UE and skip to step 9.

5a The SS shall send an *RRCConnectionRelease* message to ensure that the UE is in state RRC_IDLE on Cell 2.

6. The SS shall switch the power setting from T1 to T2 as specified in Table 6.1.2.2.5-1 and 6.1.2.2.5-2. T2 starts.

7. The SS waits for random access requests information from the UE to perform cell re-selection on Cell 1.

8. If the UE has re-selected Cell 1 within T2, after the re-selection or when T2 expires, continue with step 8a. Otherwise, if T2 expires and the UE has not yet re-selected Cell 1, the TE shall switch on and off the UE and skip to step 9.

8a. The SS shall send an *RRCRelease* message to ensure that the UE is in state RRC_IDLE on Cell 1.

9. Ensure the UE is in state RRC_IDLE with generic procedure parameters connectivity *NR* according to TS 38.508-1 [14] clause 4.5.

9a. Set the parameters according to T2 in Table 6.1.2.2.5-1 and 6.1.2.2.5-2. SS waits at least for 32sec($T_{detect,EUTRAN}$) to ensure the UE can detect E-UTRA neighbor cell(Cell2).

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.1.2.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| $Treselection_{EUTRAN}$ | S | 0 | |
| SnonintrasearchP | dB | Not sent | |
| $Thresh_{x, highP}$ (Note 2) | dB | 48 | |
| $Thresh_{serving, lowP}$ | dB | 44 | |
| $Thresh_{x, lowP}$ | dB | 50 | |
| Propagation Condition | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: This refers to the value of $Thresh_{x, highP}$ which is included in E-UTRA system information, and is a threshold for the NR target cell

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN}$ See Table 4.2.2.5-1 in clause 4.2.2.5 of TS 38.133 [6]

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 7.68 s, allow 8 s for the cell re-selection delay to a lower priority E-UTRAN cell.

### 6.1.2.3 NR SA FR1 – E-UTRA cell re-selection to lower priority E-UTRAN for UE fulfilling low mobility relaxed measurement criterion

#### 6.1.2.3.1 Test purpose

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection when UE fulfils the low mobility criterion specified in clause 4.2.2.11.2 of TS 38.133 [6] and the E-UTRAN cell is of lower priority.

#### 6.1.2.3.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards supporting relaxed RRM measurement.

#### 6.1.2.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.1.2.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.1.2.3.

#### 6.1.2.3.4 Test description

##### 6.1.2.3.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.1.2.3.4.1-1.

**Table 6.1.2.3.4.1-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 6.1.2.3-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.3-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.3-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.3-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |
| 6.1.2.3-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |
| 6.1.2.3-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | | |

Configure the test requirement and the DUT according to the parameters in Table 6.1.2.3.4.1-2.

**Table 6.1.2.3.4.1-2: Initial conditions for NR SA FR1 – E-URTA cell re-selection to lower priority E-UTRA for UE fulfilling low mobility relaxed measurement criterion**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.1.2.3.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.6.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.2 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameter settings are set up according to Table 6.1.2.3.4.1-3.
2. Message contents are defined in clause 6.1.2.3.4.3.
3. The test scenario comprises of one NR cell and one E-UTRAN cell. Cell 1 is the NR PCell and Cell 2 is the E-UTRA neighbour cell. Cell 1 is configured according to Annex C.1.1 and C.1.2, Cell 2 is configured according to TS 36.521-3 [26] Annex C.1.0 and C.1.1.

**Table 6.1.2.3.4.1-3: General test parameters for NR to lower priority E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell1 | The UE camps on Cell 1 in the initial phase, it fulfils Low Mobility relaxation measurements criterion, and during T1 period the UE reselects to Cell 2. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell2 | |
| | Active cell | | 1, 2, 3, 4, 5, 6 | Cell2 | |

| | | | | | |
|---|---|---|---|---|---|
| T1 end condition | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell1 | The UE shall perform reselection to Cell 2 during T1. |
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell1 | The UE shall perform reselection to Cell 1 with higher priority during T2 for iteration of the tests. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell2 | |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1, 2, 3, 4, 5, 6 | 0.64 | The value shall be used for all cells in the test. |
| NR PRACH configuration index | | | 1, 2, 3, 4, 5, 6 | 102 | The detailed configuration is specified in TS 38.211 [7] clause 6.3.3.2 |
| E-UTRAN PRACH configuration index | | | 1, 2, 3 | 53 | As specified in table 5.7.1-2 in TS 36.211 [24] |
| | | | 4, 5, 6 | 4 | |
| T1 | | s | 1, 2, 3, 4, 5, 6 | 24 | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2 | | s | 1, 2, 3, 4, 5, 6 | 24 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

#### 6.1.2.3.4.2 Test procedure

Two cells are deployed in the test, which are one FR1 NR PCell (Cell 1) and an E-UTRA neighbour cell (Cell 2). The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

The UE is configured with the relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in TS 38.304 [30]. So, Cell 1 configures the UE as follows:

- *lowMobilityEvalutation* [13] criterion is configured according to the parameters listed in Table 6.1.2.3.5-1;
- *cellEdgeEvaluation* [13] criterion is not configured;
- *combineRelaxedMeasCondition* [13] is not configured

The cell reselection delay to a lower priority E-UTRAN cell with UE fulfilling low mobility criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on Cell 2.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR according to TS 38.508-1 [14] clause 4.5.
2. Set the parameters according to T1 in Table 6.1.2.3.5-1 and 6.1.2.3.5-2. T1 starts.
3. The SS waits for random access requests information from the UE to perform cell re-selection on Cell 2.
4. If the UE responds on Cell 2 during time duration T1 within 17 seconds from the beginning of time period T1 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.
5. If the UE has re-selected Cell 2 within T1, after the re-selection or when T1 expires, continue with step 6. Otherwise, if T1 expires and the UE has not yet re-selected Cell 2, the TE shall switch off and on the UE and skip to step 11.

6 The SS shall send an RRCConnectionRelease to ensure that the UE is in state RRC_IDLE.

7. The SS shall switch the power setting from T1 to T2 as specified in Table 6.1.2.3.5-1 and 6.1.2.3.5-2. T2 starts.
8. The SS waits for random access requests information from the UE to perform cell re-selection on Cell 1.
9. If the UE has re-selected Cell 1 within T2, after the re-selection or when T2 expires, continue with step 10. Otherwise, if T2 expires and the UE has not yet re-selected Cell 1, the TE shall switch off and on the UE and skip to step 11.

10 The SS shall send an RRCConnectionRelease to ensure that the UE is in state RRC_IDLE, and then skip to step 12.

11. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR according to TS 38.508-1 [14] clause 4.5.

12. Repeat step 2-11 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.1.2.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

The cell reselection delay to a lower priority E-UTRAN cell with UE fulfilling low mobility criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCConnectionRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN}$ See Table 4.2.2.11.2-1 in clause 4.2.2.11.2 of TS 38.133 [6]

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE fulfilling low mobility criterion.

## 6.1.2.4 NR SA FR1 – E-UTRA cell re-selection to lower priority E-UTRAN for UE fulfilling not-at-cell edge relaxed measurement criterion

### 6.1.2.4.1 Test purpose

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection when UE fulfils the not-at-cell edge criterion specified in clause 4.2.2.11.3 of TS 38.133 [6] and the E-UTRAN cell is of lower priority.

### 6.1.2.4.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards supporting relaxed RRM measurement.

### 6.1.2.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.1.2.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.1.2.4.

### 6.1.2.4.4 Test description

#### 6.1.2.4.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.1.2.4.4.1-1.

**Table 6.1.2.4.4.1-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 6.1.2.4-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.4-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.4-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode | LTE 10MHz bandwidth, TDD duplex mode |
| 6.1.2.4-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | LTE 10MHz bandwidth, FDD duplex mode |

### 6.1.2.4.4.2 Test procedure

Two cells are deployed in the test, which are one FR1 NR PCell (Cell 1) and an E-UTRA neighbour cell (Cell 2). The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

The UE is configured with the relaxed measurement criterion for UE with not-at-cell edge defined in clause 5.2.4.9.2 in TS 38.304 [30]. So, Cell 1 configures the UE as follows:

- *lowMobilityEvalutation* [13] criterion is not configured;
- *cellEdgeEvaluation* [13] criterion is configured according to the parameters listed in Table 6.1.2.4.5-1;
- *combineRelaxedMeasCondition* [13] is not configured

The cell reselection delay to a lower priority E-UTRAN cell with UE fulfilling not-at-cell edge criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on Cell 2.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR according to TS 38.508-1 [14] clause 4.5.
2. Set the parameters according to T1 in Table 6.1.2.4.5-1 and 6.1.2.4.5-2. T1 starts.
3. The SS waits for random access requests information from the UE to perform cell re-selection on Cell 2.
4. If the UE responds on Cell 2 during time duration T1 within 17 seconds from the beginning of time period T1 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

5. If the UE has re-selected Cell 2 within T1, after the re-selection or when T1 expires, continue with step 6. Otherwise, if T1 expires and the UE has not yet re-selected Cell 2, the TE shall switch off and on the UE and skip to step 11.

6 The SS shall send an RRCConnectionRelease to ensure that the UE is in state RRC_IDLE.

7. The SS shall switch the power setting from T1 to T2 as specified in Table 6.1.2.4.5-1 and 6.1.2.4.5-2. T2 starts.

8. The SS waits for random access requests information from the UE to perform cell re-selection on Cell 1.

9. If the UE has re-selected Cell 1 within T2, after the re-selection or when T2 expires, continue with step 10. Otherwise, if T2 expires and the UE has not yet re-selected Cell 1, the TE shall switch off and on the UE and skip to step 11.

10 The SS shall send an RRCConnectionRelease to ensure that the UE is in state RRC_IDLE, and then skip to step 12.

11. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR according to TS 38.508-1 [14] clause 4.5.

12. Repeat step 2-11 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.1.2.4.4.3 Message contents

The cell reselection delay to a lower priority E-UTRAN cell with UE fulfilling not-at-cell edge criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send

preambles on the PRACH for sending the *RRCConnectionRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN}$ See Table 4.2.2.11.3-1 in clause 4.2.2.11.3 of TS 38.133 [6]

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE fulfilling not-at-cell edge criterion.

## 6.1.2.5 NR SA FR1 – E-UTRA cell re-selection to lower priority E-UTRA for UE configured with highSpeedMeasFlag-r16

### 6.1.2.5.1 Test purpose

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements specified in TS 38.133 [6] clause 4.2.2.5 when the E-UTRAN cell is of lower priority.

### 6.1.2.5.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards and supporting measurement enhancements in high speed scenario.

### 6.1.2.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.1.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.1.2.5.

### 6.1.2.5.4 Test description

#### 6.1.2.5.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.1.2.5.4.1-1.

**Table 6.1.2.5.4.1-1: Supported test configurations for NR SA FR1 – E-UTRA cell re-selection to lower priority E-UTRA for UE configured with highSpeedMeasFlag-r16**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 6.1.2.5-1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 6.1.2.5-2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |

### 6.1.2.5.4.2 Test procedure

Two cells are deployed in the test, which are one FR1 NR PCell (Cell 1) and an E-UTRA low priority neighbour cell (Cell 2) on different frequencies. The test consists of 2 successive time periods, with time duration of T1, and T2 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. The E-UTRAN Cell 2 is indicated by NR Cell 1 as an HST cell.

In the following test procedure "UE responds" means "UE starts transmitting preamble on PRACH for sending the *RRCSetupRequest* or *RRCConnectionRequest* message to perform a registration procedure for mobility on NR Cell or E-UTRA Cell respectively.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters connectivity *NR* with Test Mode *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1. Set Cell 2 physical cell identity = initial Cell 2 physical cell identity. *highSpeedMeasFlag-r16* is provided by *SIB1* of Cell 1.
2. Set the parameters according to T2 in Table 6.1.2.5.5-1 and 6.1.2.5.5-2. Then wait 5s to ensure that Cell 2 has been detected by the UE.
3. Set the parameters according to T1 in Table 6.1.2.5.5-1 and 6.1.2.5.5-2. T1 starts.
4. The SS waits for random access requests information from the UE to perform cell re-selection to Cell 2.
5. If the UE responds on Cell 2 within 3 seconds from the beginning of time period T1, then count a success for the event “Re-select Cell 2”. Otherwise count a failure for the event “Re-select Cell 2”.
6. If the UE has re-selected Cell 2 within T1, after the re-selection or when T1 expires, continue with step 7. Otherwise, if T1 expires and the UE has not yet re-selected Cell 2, the TE shall switch off and on the UE and skip to step 13.
7. The SS shall send an *RRCConnectionRelease* message to ensure that the UE is in state RRC_IDLE on Cell 2.
8. The SS shall switch the power setting from T1 to T2 as specified in Table 6.1.2.5.5-1 and 6.1.2.5.5-2. T2 starts.
9. The SS waits for random access requests information from the UE to perform cell re-selection to Cell 1.
10. If the UE has re-selected Cell 1 within T2, after the re-selection or when T2 expires, continue with step 11. Otherwise, if T2 expires and the UE has not yet re-selected Cell 1, the TE shall switch off and on the UE and skip to step 12.
11. The SS shall send an *RRCRelease* message to ensure that the UE is in state RRC_IDLE on Cell 1. skip to 13
12. Ensure the UE is in state RRC_IDLE with generic procedure parameters connectivity *NR* according to TS 38.508-1 [14] clause 4.5 in Cell 1.
13. Set the parameters according to T2 in Table 6.1.2.5.5-1 and 6.1.2.5.5-2. Then wait 5s to ensure that Cell 2 has been detected by the UE.
14. Repeat step 3-13 until a test verdict for the event “Re-select Cell 2” has been achieved, resulting in an event verdict: pass or fail. The event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G clause G.2 is achieved. The test passes if the event pass, otherwise the test fails.

### 6.1.2.5.4.3 Message contents

Same as message contents in 6.1.2.2.4.3 except that

- Table H.2.3-1 in common contents of SIB exceptions is replaced by Table 6.1.2.5.4.3-1.
- Table H.2.3-3 in common contents of SIB exceptions is replaced by Table 6.1.2.5.4.3-3.
- In addition to the message contents mentioned above, exceptions given in Table 6.1.2.5.4.3-4 and Table 6.1.2.5.4.3-5 also apply.

Doppler shift is a constant 1944 Hz. | | | |

The cell reselection delay to a lower priority E-UTRAN cell for UE configured with *highSpeedMeasFlag-r16* is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCConnectionRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN_HST} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN_HST}$ = 0.96s, as defined in TS 38.133 [6] Table 4.2.2.5-2.

$T_{SI\text{-}E\text{-}UTRA}$ = 1.28s, is the maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

This gives a total of 2.24 s, allow 3 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE configured with *highSpeedMeasFlag-r16*.

# 6.2 RRC_INACTIVE state mobility

## 6.2.0 General

The requirements in this clause are applicable when the UE is configured with timing alignment (TA) validation using *cg-SDT-RSRP-ChangeThreshold* for transmitting in uplink using CG-SDT as specified in TS 38.331 [13].

The requirements in this clause are applicable for the UE performing small data tranmissions using configured resources as per TS 38.331 [13].

The UE is allowed to transmit using the configured uplink resources provided that the UE is synchronized towards (i.e. using the timing derived using the latest available $N_{TA}$ value as specified in 38.133 [6] clause 7.1.2) the serving cell prior to transmission. If the UE is not able to obtain the synchronization towards the serving cell then the UE shall drop the small data transmission. The UE determines the small data transmission occasion according to the received CG-SDT configuration TS 38.331 [13].

The normative reference for this requirement is TS 38.133 [6] clauses 5.5.1 and 5.5.2.

### 6.2.0.1 Minimum conformance requirements for TA validation using CG-SDT

When *cg-SDT-RSRP-ChangeThreshold* is configured for TA validation based on the RSRP change criterion according to clause 5.8.2 in TS 38.321 [12], the UE is allowed to transmit using CG-SDT using the timing derived using the latest available $N_{TA}$ value as specified in TS 38.133 [6] clause 7.1 provided that

- the first RSRP ($RSRP_1$) measurement and the second RSRP ($RSRP_2$) measurements used in the TA validation are valid measurements and,
- timing alignment validation for transmission using CG-SDT is valid according to the validation criteria in clause 5.8.2 in TS 38.321 [12].

$RSRP_1$ and $RSRP_2$ are considered valid provided that the conditions in Table 6.2.0.1-1 are met for FR1.

**Table 6.2.0.1-1: Valid measurement for FR1**

| Measurement | FR1 |
|---|---|
| $RSRP_1$ | $(T1 - \min(640ms, M1*T_{DRX})) \le T1' \le (T1 + \min(640ms, M1*T_{DRX}))$ |
| $RSRP_2$ | $(T2 - \min(640ms, M1*T_{DRX})) \le T2' \le T2$ |

If at least one of $RSRP_1$ and $RSRP_2$ is considered to be invalid based on the above conditions, then the UE shall not validate the CG-SDT using $RSRP_1$ and $RSRP_2$ and shall not transmit using CG-SDT. Additionally, the UE shall not transmit in an CG-SDT occasion that occurs more than 640 ms after T2.

Where:

- T1 is the time when
  - *RRCRelease* with CG-SDT configuration (TS 38.331 [13]) is received
  - the latest TA is received if TA is received while in RRC_INACTIVE state.
- T1' is the time when the UE has completed $RSRP_1$.
- T2 is the time when the UE performs TA validation as defined in clause 5.27.2 in (TS 38.321 [12]) for transmission using CG-SDT.
- T2' is the time when the UE has completed $RSRP_2$.
- $T_{DRX}$ is the DRX cycle length in ms.

- M1 the scaling factor as defined in TS 38.133 [6] clause 4.2.2.2.

The normative reference for this requirement is TS 38.133 [6] clause 5.5.3.

## 6.2.1 NR SA FR1 TA Validation for CG-SDT

### 6.2.1.1 Test Purpose

The purpose of this test is to partly verify that the UE properly perform TA validation for CG-SDT transmission in 38.133 [6] clause 5.5.3.

### 6.2.1.2 Test Applicability

This test applies to all types of NR UE release 17 and forward, supporting NR SA, CG-SDT and long DRX cycle.

### 6.2.1.3 Minimum Conformance Requirement

The minimum requirements are specified in clause 6.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.2.1.

### 6.2.1.4 Test Description

The test includes two sub-tests, Sub-test#1 for testing valid TA where UE can initiate CG-SDT transmission, and Sub-test#2 for testing invalid TA where UE does not initiate CG-SDT transmission. Subtest#2 is only tested if Sub-test#1 has passed. For each sub-test, UE is configured with CG-SDT configuration when entering RRC_INACTIVE state. Sub-test#1 consists of four successive time periods, with time duration of T1, T2, T3 and T4, respectively. Sub-test#2 consists of two successive time periods, with time duration of T5 and T6, respectively. There is one cell, which is the active NR cell in FR1. Figure 6.2.1.4-1 shows the variation of the RSRP over the duration of Sub-test#1, and Figure 6.2.1.4-2 shows the variation of the RSRP over the duration of Sub-test#2.

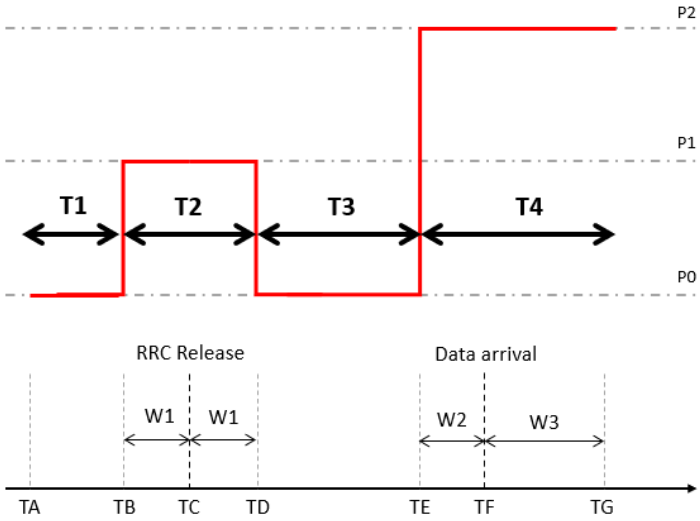

**Figure 6.2.1.4-1: RSRP variation model for Sub-test#1 for NR SA FR1 TA Validation for CG-SDT**

In Sub-test#1:

Prior to the time point TA, the UE shall be fully synchronized to PCell (Cell 1), be registered to the cell and have entered RRC_CONNECTED state.

Before starting the test at time point TA, test equipment configures RSRP to P0.

At time point TB, RSRP is changed from P0 to P1.

At time point TC, which is W1 after time point TB, UE expect to receive RRC release with CG SDT configuration and RRC status is changed to INACTIVE status.

At time point TD, RSRP is changed from P1 to P0.

At time point TE, RSRP is changed from P0 to P2.

Test equipment triggers UL data arrival at UE lower layer at time point TF. After time point TF, test equipment observes whether UE transmits with CG-SDT no later than TG, which is W3 after TF.

After time point TG, RRC status is changed from RRC INACTIVE to RRC CONNECTED.

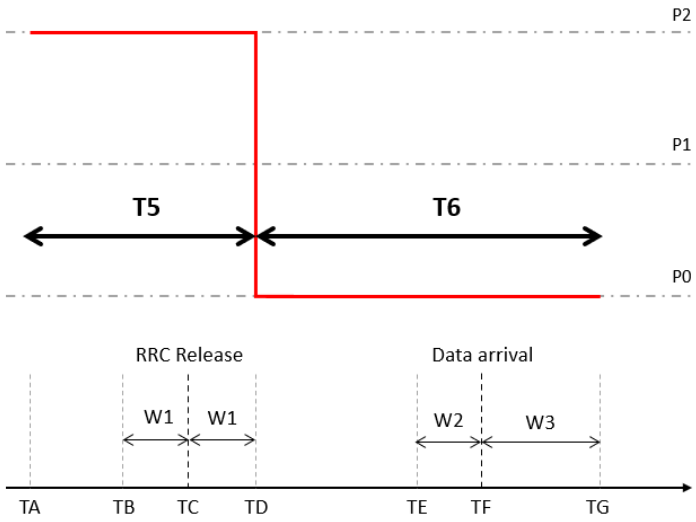

**Figure 6.2.1.4-2: RSRP variation model for Sub-test#2 for NR SA FR1 TA Validation for CG-SDT**

In Sub-test#2:

Prior to the time point TA, the UE shall pass Sub-test#1 and have entered RRC connected mode. Otherwise, Sub-test#2 shall not be executed.

From time point TA to time point TD, RSRP is set to P2.

At time point TC, which is W1 after time point TB, UE expect to receive RRC release with CG SDT configuration and RRC status is changed to INACTIVE status.

At time point TD, RSRP is changed from P2 to P0.

Test equipment triggers UL data arrival at UE lower layer at time point TF. TF is 3360ms after TD. After time point TF, test equipment observes whether UE transmits with CG-SDT no later than TG which is W3 after TF.

W1 equals to 640ms and W2 equals to 640ms, based on requirements in clause 6.2.0. W3 is 860ms.

### 6.2.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.2.1.4.1-1.

**Table 6.2.1.4.1-1: NR configuration for NR SA FR1 TA Validation for CG-SDT**

| Config | Description |
|---|---|
| 6.2.1-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.2.1-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.2.1-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.2.1.4.1-2.

**Table 6.2.1.4.1-2: Initial conditions for NR SA FR1 TA Validation for CG-SDT**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.2.1.4.1-1. | |

| | | | |
|---|---|---|---|

#### 6.2.1.4.2 Test Procedure

The test parameters for the PCell are given in Table 6.2.1.4.1-1, Table 6.2.1.4.1-3, and Table 6.2.1.5-1, for Sub-test#1 and Sub-test#2, respectively. Prior to the start of each of the Sub-tests, the UE shall be fully synchronized to PCell (Cell 1). According to Table 6.2.1.5-1, in time intervals T1 to T6 the SS configures the SS-RSRP by fixing $N_{oc}$ and adjusting SNR correspondingly.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On, Test Loop Function On and Activate UE Test Loop Mode B according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

2. Set the parameters of NR Cell according to T1 in Table 6.2.1.5-1. Propagation conditions are set according to clause C.2.3. Sub-test#1 starts. T1 starts.

3. When T1 expires the SS shall change the SS-RSRP value to T2 as specified in Table 6.2.1.5-1. T2 starts.

4. W1=640ms seconds after the start of T2 (time event TC), the SS shall send CLOSE UE TEST LOOP message for UE Test Loop Mode B and configuring T_delay_modeB as per Table 6.2.1.4.3-5, and transmit one PDCP SDU (which will get buffered at the UE) immediately followed by an *RRCRelease* message containing CG-SDT configuration for the UE to change its RRC state to RRC_INACTIVE, according to section 6.2.1.4.3.

5. When T2 expires the SS shall change the SS-RSRP value to T3 as specified in Table 6.2.1.5-1. T3 starts.

6. When T3 expires the SS shall change the SS-RSRP value to T4 as specified in Table 6.2.1.5-1. T4 starts.

7. T_delay_modeB expires after the start of T4, at time event TF. If the UE transmits PUSCH at the next CG-SDT resource no later than TG, which is W3 seconds after TF, then the number of successful tests for CG-SDT Sub-test#1 is increased by one. Otherwise, the number of failed tests for CG-SDT Sub-test#1 is increased by one and proceed with step 12.

8. The SS shall transmit *RRCRelease*. Set the parameters of NR Cell according to T5 in Table 6.2.1.5-1. Propagation conditions are set according to clause C.2.3. Afterwards, the SS shall ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On, Test Loop Function On and Activate UE Test Loop Mode B according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell. Sub-test#2 starts. T5 starts.

9. W1=640ms seconds before the end of T5 (time event TC), the SS shall send CLOSE UE TEST LOOP message for UE Test Loop Mode B and configuring T_delay_modeB as per Table 6.2.1.4.3-5, and transmit one PDCP SDU (which will get buffered at the UE) immediately followed by an *RRCRelease* message containing CG-SDT configuration for the UE to change its RRC state to RRC_INACTIVE, according to section 6.2.1.4.3.

10. When T5 expires the SS shall change the SS-RSRP value to T6 as specified in Table 6.2.1.5-1. T6 starts.

11. T_delay_modeB expires after the start of T6, at time event TF. If the UE transmits PUSCH at the next CG-SDT resource no later than TG, which is W3 seconds after TF, then the number of failed tests for CG-SDT Sub-test#2 is increased by one. Otherwise, the number of successful tests for CG-SDT Sub-test#2 is increased by one. Proceed with step 12.

12. The SS shall switch off and then on the UE and then proceed with step 13.

13. Repeat steps 1-11 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved for both Sub-tests. If Sub-test#1 fails, there is no need to achieve any confidence level for Sub-test#2.

### 6.2.1.5 Test Requirement

Table 6.2.1.5-1 defines the cell specific primary level settings including test tolerances for NR SA FR1 TA Validation for CG-SDT.

**Table 6.2.1.5-1: Cell-specific test parameters for NR SA FR1 TA Validation for CG-SDT**

| Parameter | Config | Unit | SSB#0 | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T4 | T5 | T6 |
| $N_{oc}$ | 1,2 | dBm/15kHz | -100 | -100 | -100 | -100 | -100 | -100 |
| | 3 | dBm/15kHz | -100 | -100 | -100 | -100 | -100 | -100 |
| $N_{oc}$ | 1,2 | dBm/SSB SCS | -100 | -100 | -100 | -100 | -100 | -100 |
| | 3 | dBm/SSB SCS | -97 | -97 | -97 | -97 | -97 | -97 |
| $\hat{E}_s/I_{ot}$ | 1,2 | dB | 0 | 12 | 0 | 14 | 14 | 0.25 |
| | 3 | dB | 0 | 12 | 0 | 14 | 14 | 0 |
| SS RSRP | 1,2 | dBm/SSB SCS | -100 | -88 | -100 | -86 | -86 | -99.75 |
| | 3 | dBm/SSB SCS | -97 | -85 | -97 | -83 | -83 | -97 |
| Io | 1,2 | dBm/9.36MHz | -69.04 | -59.78 | -69.04 | -57.88 | -57.88 | -68.91 |
| | 3 | dBm/38.16MHz | -62.93 | -53.68 | -62.93 | -51.78 | -51.78 | -62.93 |
| $\hat{E}_s/N_{oc}$ | 1,2 | dB | 0 | 12 | 0 | 14 | 14 | 0.25 |
| | 3 | dB | 0 | 12 | 0 | 14 | 14 | 0 |

The UE behaviour in each test during time durations shall be as follows:

During Sub-test#1, UE shall transmit PUSCH at CG-SDT resource within 860ms after time point TF.

During Sub-test#2, after passing Sub-test#1, UE shall not transmit PUSCH at CG-SDT resources after TF until the end of the test at time point TG.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

# 6.3 RRC_CONNECTED state mobility

## 6.3.1 Handover

### 6.3.1.0 Minimum conformance requirements

#### 6.3.1.0.1 Minimum conformance requirements for NR – E-UTRAN handover

When the UE receives a RRC message implying handover to E-UTRAN the UE shall be ready to start the transmission of the uplink PRACH channel in E-UTRA within $D_{handover}$ seconds from the end of the last TTI containing the RRC command. $D_{handover}$ is defined as

$$D_{handover} = T_{RRC_procedure_delay} + T_{interruption}$$

Where:

$T_{RRC_procedure_delay}$: it is the RRC procedure delay, which is 50ms

$T_{interruption}$: it is the time between end of the last TTI containing the RRC command on the NR PDSCH and the time the UE starts transmission of the PRACH in E-UTRAN, excluding $T_{RRC_procedure_delay}$.

When the inter-RAT handover to E-UTRAN is commanded, the interruption time shall be less than $T_{interrupt}$

$$T_{interrupt} = T_{search} + T_{IU} + 20 \text{ ms}$$

Where:

$T_{search}$ is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{search}$ = 0 ms. If the target cell is unknown and signal quality is sufficient for successful cell detection on the first attempt, then $T_{search}$ = 80 ms. Regardless of whether DRX is in use by the UE, $T_{search}$ shall still be based on non-DRX target cell search times.

$T_{IU}$ is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. $T_{IU}$ can be up to 30 ms.

NOTE: The actual value of $T_{IU}$ shall depend upon the PRACH configuration used in the target cell.

In the interruption requirement a cell is know if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in TS 36.133 [23] clause 9.4.1.

The normative reference for this requirement is TS 38.133 [6] clause 6.1.2.1.

#### 6.3.1.0.2 Minimum conformance requirements for NR FR1 – NR FR1 handover

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{handover}$ seconds from the end of the last TTI containing the RRC command.

Where:

$D_{handover}$ equals the maximum RRC procedure delay to be defined in clause 12 in TS 38.331 [13] plus the interruption time stated in clause 6.1.1.2.2.

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{interrupt}$

$$T_{interrupt} = T_{search} + T_{IU} + 20 + T_{\Delta} \text{ ms}$$

Where:

$T_{search}$ is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{search}$ = 0 ms. If the target cell is an unknown intra-frequency cell and the target cell Es/Iot≥[-2] dB, then $T_{search}$ = 3 *$T_{rs}$ ms if the target cell SSB BW is 12PRBs, otherwise $T_{search}$ = $T_{rs}$ ms.If the target cell is an unknown inter-frequency cell and the target cell Es/Iot≥-2 dB, then $T_{search}$ = [5] *$T_{rs}$ ms if the target cell SSB BW is 12PRBs, otherwise $T_{search}$ = 3* $T_{rs}$ ms.

Regardless of whether DRX is in use by the UE, $T_{search}$ shall still be based on non-DRX target cell search times.

$T_{\Delta}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta}$ = $T_{rs}$.

$T_{IU}$ is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. $T_{IU}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [8].

$T_{rs}$ is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise Trs is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this section is applied with Trs=5 ms assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms.

NOTE 1: The actual value of $T_{IU}$ shall depend upon the PRACH configuration used in the target cell.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause [9.2.5] for intra-frequency handover and Clause [9.3.1] for inter-frequency handover.

The normative reference for this requirement is TS 38.133 [6] clause 6.1.1.2.

#### 6.3.1.0.3 Minimum conformance requirements for NR – UTRAN handover

When the UE receives a RRC message implying handover to UTRAN the UE shall be ready to start the transmission of the new UTRA uplink DPCCH within Dhandover msfrom the end of the last NR TTI containing the RRC *MobilityfromNRCommand* command.

where:

- Dhandover equals the RRC procedure delay, which is 50 ms plus the interruption time stated in TS 38.133 [6] clause 6.1.2.2.3.

The interruption time is the time between the end of the last TTI containing the RRC command on the NR PDSCH and the time the UE starts transmission on the uplink DPCCH in UTRAN, excluding the RRC procedure delay. The interruption time depends on whether the target cell is known to the UE or not.

The target cell is known if it has been measured by the UE during the last 5 seconds otherwise it is unknown. The UE shall always perform a UTRA synchronisation procedure as part of the handover procedure.

If the target cell is known the interruption time shall be less than Tinterrupt1

$$T_{interrupt1} = T_{IU}+T_{sync}+50+ 10*F_{max} + T_{MC} \text{ ms}$$

If the target cell is unknown the interruption time shall be less than $T_{interrupt2}$

$$T_{interrupt2} = T_{IU}+T_{sync}+150 + 10*F_{max} + T_{MC} \text{ ms}$$

This requirement shall be met, provided that there is one target cell in the *MobilityfromNRCommand* command. Performance requirements for E-UTRA to UTRA soft handover are not specified. When UE is connected to an NR cell, UTRA SFN timing measurements are not reported. This implies that the timing of the DPCH of the UTRA target cells in the active set cannot be configured by UTRAN to guarantee that all target cells fall within the UE reception window of T0 +/- 148 chips.

Where:

- $T_{IU}$ is the interruption uncertainty when changing the timing from the NR to the new UTRAN cell. $T_{IU}$ can be up to one UTRA frame (10 ms).
- $F_{max}$ denotes the maximum number of radio frames within the transmission time intervals of all transport channels that are multiplexed into the same CCTrCH on the UTRA target cell. If HS-PDSCH is configured in the UTRA target cell, Fmax is 4 radio frames.
- $T_{sync}$ is the time required for measuring the downlink DPCCH channel as stated in TS 25.214, clause 4.3.1.2. In case higher layers indicate the usage of a post-verification period $T_{sync}$=0 ms. Otherwise $T_{sync}$=40 ms.
- $T_{MC}$ is 0ms if a single UTRA cell is configured as the handover target, otherwise 20ms if handover to UTRA with 1, 2 or 3 UTRA carriers with secondary HS-PDSCH is configured.

The phase reference is the primary CPICH.

The requirements in this clause assume that N312 has the smallest possible value i.e. only one insync is required.

#### 6.3.1.0.4 Minimum conformance requirements for NR FR1- NR FR1 DAPS handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR FR1 cell to NR FR1 cell. A DAPS handover is intra-frequency if the centre frequency of the SSB of the source cell and the centre frequency of the SSB of the target cell are the same, and the subcarrier spacing of the two SSBs are also the same.

Note 1: For intra-frequency DAPS handover, no requirement applies if active DL and UL BWP of target cell is not confined within the active DL and UL BWP of the source cell respectively.

Note 2: For inter-frequency DAPS handover, no requirement applies if the BWP of target cell is overlapped with the BWP of source cell in frequency domain.

An FR1 DAPS handover is synchronous if it meets the conditions in table 6.3.1.0.4-1, otherwise it is asynchronous

**Table 6.3.1.0.4-1: Sync conditions for FR1 DAPS handover**

| Type of handover | Maximum receive timing difference between source and target cell (μs) for sync DAPS handover | Maximum transmit timing difference between source and target cell (μs) for sync DAPS handover |
|---|---|---|
| Intra-frequency Note 1,2,3 | 6μs | 7.6 μs |
| Intra-band inter-frequency Note 1,2,3 | 6μs | 7.6 μs |
| Inter-band inter-frequency | 33 μs | 34.6 μs |
| Note 1: For synchronous DAPS handover, if the receive time difference exceeds the cyclic prefix length of that SCS, demodulation performance degradation is expected for the first symbol of the slot. For asynchronous DAPS handover, if the receive time difference exceeds the cyclic prefix length of that SCS, interruptions may occur depending on UE implementation. The duration and frequency of occurrence of such interruptions is not specified.<br>Note 2: For DAPS handover on a TDD band, a UE is not expected to transmit in the uplink earlier than $N_{RX-TX}$ after the end of the last received downlink symbol in the same cell where $N_{RX-TX}$=25600Tc.<br>Note 3: For DAPS handover on a TDD band, a UE is not expected to receive in the downlink earlier than $N_{TX-RX}$ after the end of the last transmitted uplink symbol in the same cell where $N_{TX-RX}$=25600Tc. | | |

When the UE receives a RRC message implying DAPS handover to NR FR1 the UE shall be ready to start the transmission of the new uplink PRACH channel in NR within $D_{handover1}$ seconds from the end of the last TTI containing the RRC command when UE is configured with dual active protocol stack handover.

$$D_{handover1} = T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

$T_{RRC_procedure}$ is the maximum RRC procedure delay as specified in clause 12 in TS 38.331 [13].

$T_{search}$, $T_{IU}$, $T_{processing}$, $T_{\Delta}$ and $T_{margin}$ are defined in TS 38.133 [6] clause 6.1.1.2.2.

After successful RACH procedure of the target cell, when the UE receives an RRC message implying source cell release command, the UE shall accomplish the release actions specified in TS 38.331 [13] within $D_{handover2}$.

$$D_{handover2} = T_{RRC_procedure} + T_{interrupt2}$$

Where:

$T_{RRC_procedure}$ is the RRC procedure delay as specified in clause 12 in TS 38.331 [13].

$T_{interrupt2}$ is defined in TS 38.133 [6] clause 6.3.1.0.4.

During $D_{handover1}$, the UE is allowed an interruption of up to $T_{interrupt1}$ on source cell.

For FR1-to-FR1 intra-frequency handover, $T_{interrupt1}$ is specified in Table 6.3.1.0.4-2.

**Table 6.3.1.0.4-2: $T_{interrupt1}$ for FR1-to-FR1 intra-frequency DAPS HO**

| $\mu$ | NR Slot length (ms) | Interruption length $T_{interrupt1}$ (slots Note 1), synchronous DAPS HO | Interruption length $T_{interrupt1}$ (slots Note 1), asynchronous DAPS HO |
|---|---|---|---|
| 0 | 1 | 1 | 2 |
| 1 | 0.5 | 2 | 3 |
| 2 | 0.25 | 4 | 5 |
| Note 1: The same SCS of source cell and target cell is assumed. | | | |

| | |
|---|---|
| Note 2: | It is assumed that the BWP of target cell is not larger than the BWP of source cell. It is assumed that the CBW of target cell is not larger than the CBW of source cell |
| Note 3: | Void |

For FR1-to-FR1 intra-band inter-frequency handover, $T_{interrupt1}$ is specified in Table 6.3.1.0.4-3.

**Table 6.3.1.0.4-3: $T_{interrupt1}$ for FR1-to-FR1 intra-band inter-frequency DAPS HO**

| $\mu$ | NR Slot length (ms) | $T_{interrupt1}$ (slots[Note 1]), synchronous DAPS HO | $T_{interrupt1}$ (slots[Note 1]), asynchronous DAPS HO |
|---|---|---|---|
| 0 | 1 | 1 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ | 2+ $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 1 | 0.5 | 2 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ | 3+ $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 2 | 0.25 | 4 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ | 5+ $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| Note 1: The same SCS of source cell and target cell is assumed.<br>Note 2: $T_{SMTC_duration}$ measured in subframes is the longest SMTC duration between source cell and target cell.<br>Note 3: Void<br>Note 4: $N_{slot}^{subframe,\mu}$ is as defined in TS 38.211 [7]. | | | |

For FR1-to-FR1 inter-band handover, $T_{interrupt1}$ is specified in Table 6.3.1.0.4-4.

**Table 6.3.1.0.4-4: $T_{interrupt1}$ for FR1-to-FR1 inter-band DAPS HO**

| $\mu$ | NR Slot length (ms) of source cell | $T_{interrupt1}$ (slots) | |
|---|---|---|---|
| | | Sync | Async |
| 0 | 1 | 1 | 2 |
| 1 | 0.5 | 2 | 3 |
| 2 | 0.25 | 5 | 5 |

For FR1-to-FR1 intra-frequency handover, $T_{interrupt2}$ is specified in Table 6.3.1.0.4-5 when the BWP of target cell is smaller than the BWP of source cell, and $T_{interrupt2}$ is specified in Table 6.3.1.0.4-6 when the same BWP is used for target cell and source cell.

**Table 6.3.1.0.4-5: $T_{interrupt2}$ for FR1-to-FR1 intra-frequency DAPS HO**

| $\mu$ | NR Slot length (ms) | Interruption length X (slots[Note 1]) | $T_{interrupt2}$ (slots[Note 1]) for asynchronous DAPS HO |

| 0 | 1 | 2 | 3 |
| 1 | 0.5 | 4 | 5 |
| 2 | 0.25 | 8 | 9 |
| Note 1: The same SCS of source cell and target cell is assumed.<br>Note 2: It is assumed that the BWP of target cell is smaller than the BWP of source cell. | | | |

**Table 6.3.1.0.4-6: $T_{interrupt2}$ for FR1-to-FR1 intra-frequency DAPS HO**

| $\mu$ | NR Slot length (ms) | Interruption length X (slots[Note 1]) | $T_{interrupt2}$ (slots[Note 1]) for asynchronous DAPS HO |
|---|---|---|---|
| 0 | 1 | 1 | 2 |
| 1 | 0.5 | 2 | 3 |
| 2 | 0.25 | 4 | 5 |
| Note 1: The same SCS of source cell and target cell is assumed.<br>Note 2: It is assumed that the BWP of target cell is the same as the BWP of source cell.<br>Note 3: Void | | | |

For FR1-to-FR1 intra-band inter-frequency handover, $T_{interrupt2}$ is specified in Table 6.3.1.0.4-7.

**Table 6.3.1.0.4-7: $T_{interrupt2}$ for FR1-to-FR1 intra-band inter-frequency DAPS HO**

| $\mu$ | NR Slot length (ms) | $T_{interrupt2}$ (slots[Note 1]) for synchronous DAPS HO | $T_{interrupt2}$ (slots[Note 1]) for asynchronous DAPS HO |
|---|---|---|---|
| 0 | 1 | 1 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ | 2+ $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 1 | 0.5 | 2 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ | 3+ $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 2 | 0.25 | 4 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ | 5+ $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| Note 1: The same SCS of source cell and target cell is assumed.<br>Note 2: $T_{SMTC_duration}$ measured in subframes is the longest SMTC duration between source cell and target cell.<br>Note 3: Void.<br>Note 4: $N_{slot}^{subframe,\mu}$ is as defined in TS 38.211 [7]. | | | |

For FR1-to-FR1 inter-band handover, $T_{interrupt2}$ is specified in Table 6.3.1.0.4-8.

**Table 6.3.1.0.4-8: $T_{interrupt2}$ for FR1-to-FR1 inter-band DAPS HO**

| $\mu$ | NR slot length (ms) of target cell | $T_{interrupt2}$ (slots) | |
|---|---|---|---|
| | | Sync | Async |
| 0 | 1 | 1 | 2 |
| 1 | 0.5 | 2 | 3 |
| 2 | 0.25 | 5 | 5 |

The normative reference for this requirement is TS 38.133 [6] clause 6.1.1.2.

## 6.3.1.1 NR SA FR1 handover with known target cell

### 6.3.1.1.1 Test purpose

To verify the UE's ability to perform NR FR1-NR FR1 intra-frequency handover in RRC_CONNECTED state by meeting the delay requirement and interruption length for handover to a known target cell.

### 6.3.1.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

### 6.3.1.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.1.

### 6.3.1.1.4 Test description

#### 6.3.1.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.1.4.1-1.

**Table 6.3.1.1.4.1-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.1.4.1-2

**Table 6.3.1.1.4.1-2: Initial conditions for NR SA FR1 handover with known target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.1.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.1.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Table 6.3.1.1.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.1.1.4.1-3: General test parameters Intra-frequency handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| A3-Offset | | dB | -1 | Original Value 0dB, post TT Analysis, its -1 dB |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤5 | |
| T3 | | s | 1 | |

### 6.3.1.1.4.2 Test procedure

The test scenario comprises of one NR carrier and two cells as given in tables 6.3.1.1.4.1-3 and 6.3.1.1.5-1. No gap patterns are configured in the test case. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send measurement report A3. An RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.
2. Set the parameters according to T1 in Table 6.3.1.1.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.
3. SS shall transmit an RRCReconfiguration message, configuring measurement object.
4. UE shall transmit RRCReconfigurationComplete message.
5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.15-1.
6. UE shall transmit a MeasurementReport message triggered by Event A3.

7. SS shall transmit the RRCReconfiguration message implying handover is sent to the UE, at that instant the SS shall switch the power settings from T2 to T3 as specified in Table 6.3.1.1.5-1. T3 starts.

8. If the UE transmits the uplink PRACH channel to Cell 2 less than 72 ms from the beginning of time period T3 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

9. The UE shall transmit *RRCReconfigurationComplete* message on Cell 2.

10. After T3 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

11. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod1008) for next iteration of the test procedure loop.

12. Repeat steps 2-8 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.1.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| Propagation condition | | - | AWGN | | | | | |

Note 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [13].

$T_{interrupt}$ = 62 ms in the test. $T_{interrupt}$ is defined in clause 6.3.1.0.2.

This gives a total of 72 ms.

## 6.3.1.2 NR SA FR1 handover with unknown target cell

### 6.3.1.2.1 Test purpose

To verify the UE's ability to perform NR FR1-NR FR1 intra-frequency handover in RRC_CONNECTED state by meeting the delay requirement and interruption length for handover to an unknown target cell.

#### 6.3.1.2.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.1.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.2.

#### 6.3.1.2.4 Test description

##### 6.3.1.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.2.4.1-1.

**Table 6.3.1.2.4.1-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.2.4.1-2

**Table 6.3.1.2.4.1-2: Initial conditions for NR SA FR1 handover with unknown target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.2.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.2.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Table 6.3.1.2.4.1-4 below.

**Table 6.3.1.2.4.1-3: General test parameters Intra-frequency handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤5 | |

#### 6.3.1.2.4.2 Test procedure

The test scenario comprises of one NR carrier and two cells on the carrier as given in tables 6.3.1.2.4.1-3 and 6.3.1.2.5-1. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and start to transmit the PRACH to Cell 2. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.1.2.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.

3. SS shall transmit an RRCReconfiguration message implying handover to Cell 2.

4. The start of T2 is the instant when the last TTI containing the RRC reconfiguration message implying handover is sent to the UE, at that instant the SS shall switch the power settings from T1 to T2 as specified in Table 6.3.1.2.5-1. T2 starts.

5. If the UE transmits the uplink PRACH channel to Cell 2 less than 92 ms from the beginning of time period T2 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

6. The UE shall transmit *RRCReconfigurationComplete* message on Cell 2.

7. After T2 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Repeat step 2-8 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.1.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.3.1.2.4.3-1: Common Exception messages**

| | Config 3 | dBm/ 38.16MHz | -55.31 | -51.84 | -55.31 | -51.84 |
| Propagation condition | | - | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than 92 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [13].

$T_{interrupt}$ = 82 ms in the test. $T_{interrupt}$ is defined in clause 6.3.1.0.2.

This gives a total of 92 ms.

### 6.3.1.3 NR SA FR1-FR1 handover with unknown target cell

#### 6.3.1.3.1 Test purpose

To verify the UE's ability to perform NR FR1-NR FR1 inter-frequency handover in RRC_CONNECTED state by meeting the delay requirement and interruption length for handover to an unknown target cell.

#### 6.3.1.3.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.1.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.3.

#### 6.3.1.3.4 Test description

##### 6.3.1.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.3.4-1.

**Table 6.3.1.3.4.1-1: Inter-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.3.4.1-2

**Table 6.3.1.3.4.1-2: Initial conditions for NR SA FR1 handover with unknown target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.3.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.3.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Tables 6.3.1.3.4.1-3 and 6.3.1.3.5-1 below.

**Table 6.3.1.3.4.1-3: General test parameters Inter-frequency handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |

| T2 | | s | ≤5 | |

### 6.3.1.3.4.2 Test procedure

The test scenario comprises of two NR carriers and one cell on each carrier as given in tables 6.3.1.3.4.1-3 and 6.3.1.3.5-1. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and start to transmit the PRACH to Cell 2.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.1.3.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.

3. SS shall transmit an RRCReconfiguration message implying handover to Cell 2.

4. The start of T2 is the instant when the last TTI containing the RRC reconfiguration message implying handover is sent to the UE, at that instant the SS shall switch the power settings from T1 to T2 as specified in Table 6.3.1.3.5-1. T2 starts.

5. If the UE transmits the uplink PRACH channel to Cell 2 less than 132 ms from the beginning of time period T2 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

6. The UE shall transmit *RRCReconfigurationComplete* message on Cell 2.

7. After T2 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Repeat step 2-8 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

### 6.3.1.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| Propagation condition | | - | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T1 | T2 | T1 | T2 |
| Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | |

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [13].

$T_{interrupt}$ = 122 ms in the test. $T_{interrupt}$ is defined in clause 6.3.1.0.2.

This gives a total of 132 ms.

## 6.3.1.4 NR SA FR1 – E-UTRA handover with known target cell

### 6.3.1.4.1 Test purpose

To verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1.

### 6.3.1.4.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

### 6.3.1.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.4.

### 6.3.1.4.4 Test description

#### 6.3.1.4.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.3.1.4.4.1-1.

**Table 6.3.1.4.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 6.3.1.4-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE FDD |
| 6.3.1.4-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.3.1.4-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.3.1.4-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE TDD |
| 6.3.1.4-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE TDD |
| 6.3.1.4-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE TDD |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test requirement and the DUT according to the parameters in Table 6.3.1.4.4.1-2.

**Table 6.3.1.4.4.1-2: Initial conditions for NR SA FR1 – E-UTRA handover with known target cell**

| Parameter | Value | | Comment |

| T2 | | s | ≤5 | |
| T3 | | s | 1 | |

### 6.3.1.4.4.2 Test procedure

The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 9.1.2-1 of TS 38.133 [6] is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the next instant after the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.1.4.5-1 and 6.3.1.4.5-2. T1 starts.

3. The SS shall transmit an RRCReconfiguration message.

4. The UE shall transmit RRCReconfigurationComplete message.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.4.5-1 and 6.3.1.4.5-2.
6. UE shall transmit a MeasurementReport message triggered by Event B2.
7. SS shall transmit an RRCReconfiguration message implying handover to Cell 2.
8. The start of T3 is the next instant after the last TTI containing the RRCReconfiguration message implying handover is sent to the UE, at that instant the SS shall switch the power setting from T2 to T3 as specified in Table 6.3.1.4.5-1 and 6.3.1.4.5-2.
9. If the UE transmits the uplink PRACH channel to Cell 2 less than 85 ms from the beginning of time period T3 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.
10. The UE shall transmit *RRCConnectionReconfigurationComplete* message on Cell 2.
11. After T3 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.
12. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 14 + 2) for next iteration of the test procedure loop.
13. Repeat step 2-12 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Antenna Configuration and Correlation Matrix[Note7] | | 1, 2, 3, 4, 5, 6 | 1x2 Low | | |

Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [24].
Note 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [24].
Note 3: DL RMCs and OCNG patterns are specified in sections A 3.1 and A 3.2 of TS 36.133 [23] respectively.
Note 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 7: Propagation condition and correlation matrix are defined in section B.2 in TS 36.101 [27].

The UE shall start to transmit the PRACH to Cell 2 less than 85 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in section 6.1.2.1 of TS 38.133 [6].

$T_{interrupt}$ = 35 ms in the test; $T_{interrupt}$ is defined in section 6.1.2.1 of TS 38.133 [6].

This gives a total of 85 ms.

### 6.3.1.5 NR SA FR1 – E-UTRA handover with unknown target cell

#### 6.3.1.5.1 Test purpose

To verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to E-UTRAN handover requirements for the case when the target E-UTRAN cell is unknown as specified in section 6.1.2.1 of TS 38.133 [6].

#### 6.3.1.5.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.1.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.2.

#### 6.3.1.5.4 Test description

##### 6.3.1.5.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.3.1.5.4.1-1.

**Table 6.3.1.5.4.1-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description |
|---|---|
| 6.3.1.5-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE FDD |
| 6.3.1.5-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.3.1.5-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.3.1.5-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE TDD |
| 6.3.1.5-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE TDD |
| 6.3.1.5-6 | NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE TDD |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test requirement and the DUT according to the parameters in Table 6.3.1.5.4.1-2.

**Table 6.3.1.5.4.1-2: Initial conditions for NR SA FR1 – E-UTRA handover with unknown target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.5.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.6.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.2 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameter settings are set up according to Table 6.3.1.5.4.1-3.

2. Message contents are defined in clause 6.3.1.5.4.3.

3. The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is the E-UTRAN neighbour cell. Cell 1 is configured according to Annex C.1.1 and C.1.2. Cell 2 is configured according to TS 36.521-3 [26] Annex C.1.0 and C.1.1.

**Table 6.3.1.5.4.1-3: General test parameters for SA inter-RAT E-UTRAN handover**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | | 1 | 1 NR carrier frequency is used in the test |
| LTE RF Channel Number | | | 2 | 1 E-UTRAN carrier frequency is used in the test |
| Initial conditions | Active cell | | Cell 1 | NR cell |
| | Neighbouring cell | | Cell 2 | E-UTRAN cell |
| Final condition | Active cell | | Cell 2 | |
| NR measurement quantity | | | SS-RSRP | |
| E-UTRAN measurement quantity | | | RSRP | |
| DRX | | | OFF | Non-DRX test |
| Access Barring Information | | - | Not sent | No additional delays in random access procedure |
| Time offset between cells | | | 3 ms | Asynchronous cells |
| T1 | | s | ≤5 | |
| T2 | | s | 1 | |

### 6.3.1.5.4.2 Test procedure

The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of two successive time periods, with time durations of T1 and T2. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable. No Gap pattern shall be configured.

An RRC message implying handover shall be sent to the UE during period T1. The start of T2 is the instant when the last subframe containing the RRC message implying handover is sent to the UE. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and start to transmit the PRACH to Cell 2.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.1.5.5-1 and 6.3.1.5.5-2. T1 starts.

3. SS shall transmit an RRCReconfiguration message implying handover to Cell 2.

4. The start of T2 is the instant when the last subframe containing the RRC Reconfiguration message implying handover is sent to the UE, at that instant the SS shall switch the power settings from T1 to T2 as specified in Table 6.3.1.5.5-1 and 6.3.1.5.5-2. T2 starts.

5. If the UE transmits the uplink PRACH channel to Cell 2 less than 165 ms from the beginning of time period T2 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

6. The UE shall transmit *RRCConnectionReconfigurationComplete* message on Cell 2.

7. After T2 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 14 + 2) for next iteration of the test procedure loop.

9. Repeat step 2-8 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

### 6.3.1.5.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.3.1.5.4.3-1: Common Exception messages**

| Default Message Contents | |
|---|---|
| Common contents of system information blocks exceptions | |
| Default RRC messages and information elements contents exceptions | Table H.3.3-1 |

**Table 6.3.1.5.4.3-2: *PRACH-Config-DEFAULT*: Inter-RAT handover to E-UTRAN unknown cell**

| Derivation Path: TS 36.508 [25], Table 4.6.3-7 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |

| Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [24]. | | | | |
| Note 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [24]. | | | | |
| Note 3: DL RMCs and OCNG patterns are specified in sections A 3.1 and A 3.2 of TS 36.133 [23] respectively. | | | | |
| Note 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | |
| Note 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| Note 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| Note 7: Propagation condition and correlation matrix are defined in section B.2 in TS 36.101 [27]. | | | | |

The UE shall start to transmit the PRACH to Cell 2 less than 165 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in section 6.1.2.1 of TS 38.133 [6].

$T_{interrupt}$ = 115 ms in the test; $T_{interrupt}$ is defined in section 6.1.2.1 of TS 38.133 [6].

This gives a total of 165 ms.

## 6.3.1.6 NR SA FR1 – UTRAN FDD handover with known target cell

### 6.3.1.6.1 Test purpose

To verify that the UE can make correct inter-RAT UTRAN handover when operating in standalone (SA) operation with PCell in FR1.

### 6.3.1.6.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support UTRA FDD.

### 6.3.1.6.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.6.

### 6.3.1.6.4 Test description

#### 6.3.1.6.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.3.1.6.4.1-1.

**Table 6.3.1.6.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 6.3.1.6-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, UTRAN FDD |
| 6.3.1.6-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, UTRAN FDD |
| 6.3.1.6-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, UTRAN FDD |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test requirement and the DUT according to the parameters in Table 6.3.1.6.4.1-2.

**Table 6.3.1.6.4.1-2: Initial conditions for NR SA FR1 – UTRAN handover with known target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-3 and TS 38.508-1 [14] clause 4.3.1. | | |

| T2 | | s | ≤5 | |
| T3 | | s | 1 | |

### 6.3.1.6.4.2 Test procedure

The test comprises of one NR carrier and one UTRAN carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT UTRAN neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement

report. Gap pattern configuration with id #0 as specified in Table 9.1.2-1 of TS 38.133 [6] is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.
2. Set the parameters according to T1 in Table 6.3.1.6.5-1 and 6.3.1.6.5-2. T1 starts.
3. The SS shall transmit an *RRCReconfiguration* message to configure Event B2 measurement reporting.
4. The UE shall transmit an *RRCReconfigurationComplete* message.
5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.6.5-1 and 6.3.1.6.5-2.
6. UE shall transmit a *MeasurementReport* message triggered by Event B2.
7. SS shall transmit a *MobilityFromNRCommand* message implying handover to Cell 2.
8. T3 starts when the last TTI containing the *MobilityFromNRCommand* message implying handover is sent to the UE, at that instant the SS shall switch the power setting from T2 to T3 as specified in Table 6.3.1.6.5-1 and 6.3.1.6.5-2.
9. If the UE transmits the uplink PRACH channel to Cell 2 less than 85 ms from the beginning of time period T3 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.
10. The UE shall transmit HANDOVER TO UTRAN COMPLETE message on Cell 2.
11. After T3 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.
12. The SS shall set Cell 2 primary scrambling code = ((current Cell 2 primary scrambling code - 50) mod 200 + 100) for next iteration of the test procedure loop.
13. Repeat step 2-12 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: $\hat{E}_s/I_{ot}$, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

**Table 6.3.1.6.5-2: Cell specific test parameters for SA inter-RAT UTRAN FDD handover (Cell 2)**

| Parameter | Unit | Cell 2 (UTRA) | | |
|---|---|---|---|---|
| | | T1 | T2 | T3 |
| UTRA RF Channel Number | | 2 | | |
| CPICH_Ec/Ior | dB | -10 | | |
| PCCPCH_Ec/Ior | dB | -12 | | |
| SCH_Ec/Ior | dB | -12 | | |
| PICH_Ec/Ior | dB | -15 | | |
| DCH_Ec/Ior | dB | N/A | N/A | Note 1 |
| OCNS_Ec/Ior | dB | -0.941 | 0.941 | Note 2 |
| $\hat{I}_{or}/I_{oc}$ | dB | -infinity | -1.8 | -1.8 |
| $I_{oc}$ | dBm/3,84 MHz | -70 | -70 | -70 |
| CPICH_Ec/Io | dB | -infinity | -14 | -14 |
| Propagation Condition | | AWGN | | |

Note 1: The DPCH level is controlled by the power control loop
Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$.

The UE shall start to transmit the UL DPCCH to Cell 2 less than 190 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms, which is specified in clause 5.3.1.1.1.

$T_{interrupt}$ = 140 ms in the test; $T_{interrupt}$ is defined in clause 5.3.1.1.2. This gives a total of 190 ms.

## 6.3.1.7 NR SA FR1 synchronous DAPS handover

### 6.3.1.7.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 intra-frequency DAPS handover requirements in synchronous scenario specified in TS 38.133 [6] clause 6.1.3.2.

### 6.3.1.7.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support intra-frequency DAPS handover.

### 6.3.1.7.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.7.

### 6.3.1.7.4 Test description

#### 6.3.1.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.7.4.1-1.

**Table 6.3.1.7.4.1-1: NR SA FR1 synchronous DAPS handover test configurations**

| Config | Description |
|---|---|
| 6.3.1.7-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.1.7-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.1.7-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.7.4.1-2

**Table 6.3.1.7.4.1-2: Initial conditions for NR SA FR1 synchronous DAPS handover**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.7.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.7.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Table 6.3.1.7.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.1.7.4.1-3: General test parameters for NR SA FR1 synchronous DAPS handover**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| A3-Offset | | dB | -1 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤5 | |
| T3 | | s | 1 | |
| T4 | | ms | $D_{handover2}$ | $D_{Handover2}$ is defined in TS 38.133 [6] clause 6.1.3.2.1 |
| T5 | | ms | 100 | |

### 6.3.1.7.4.2 Test procedure

The test scenario comprises of 1 NR carrier and two cells, Cell 1 and Cell 2, on this carrier. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.1.7.4.1-3 and 6.3.1.7.5-1 respectively. No measurement gap is configured in the test case. Both Cell 1 and Cell 2 belong to the same TAG.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to the Cell 1 and not aware of the Cell 2. During T1, the UE does not have any timing information of the Cell 2.

From start of T2, the Cell 2 becomes detectable. During T2, the UE performs cell detection and measurements on the Cell 2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover command for target cell addition to the UE.

T3 starts from the instant when the last TTI containing DAPS handover command for target cell addition sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the Cell 2 while the DL scheduling and UL feedback in the Cell 1 shall be avoided. After successful RACH procedure on the Cell 2, UE is scheduled with PDSCH from Cell 1 and Cell 2 in alternative TTIs. In the end of T3 the network sends a RRC message implying DAPS handover command for source cell release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition need to be verified.

T4 starts from the instant when the last TTI containing DAPS handover command for source cell release sent to the UE. During T4, the UE shall accomplish the release actions within $D_{handover2}$

From start of T5, the UE shall stop sending periodical CSI report on Cell 1.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration message*. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.1.7.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts and the SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the intra-frequency carrier and periodical CSI reporting on Cell 1.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.7.5-1.

7. UE shall transmit a *MeasurementReport* message triggered by Event A3.

8. SS shall transmit an *RRCReconfiguration* with *reconfigurationWithSync* message which reconfiguring DRB as a DAPS radio bearer to the UE, at that instant the SS shall switch the power settings from T2 to T3 as specified in Table 6.3.1.7.5-1. T3 starts and the SS stops scheduling the UE to perform DL reception on Cell 1.

9. If the UE transmits PRACH preamble to Cell 2 within $D_{handover1}$ from the beginning of time period T3 then the number of successful tests is increased by one, continue to step 10. Otherwise, the number of failure tests is increased by one, go to step 17. where:

   - $D_{handover1}$ = 72 ms.

10. The UE transmits an *RRCReconfigurationComplete* message on Cell 2.

11. Upon receiving *RRCReconfigurationComplete* message sent by UE, the SS immediately starts scheduling UE to perform DL reception in Cell 1 and Cell 2 in an alternative manner, and monitoring corresponding ACK/NACK feedbacks sent by the UE.

12. Upon T3 expiring, the SS immediately transmit an *RRCReconfiguration* with *daps-SourceRelease-r16 = true* on Cell 2 to the UE. T4 starts.

13. When T4 expires, T5 starts.

15. If

    a) The UE can report ACK/NACK from the first DL reception scheduled on Cell 2 after the beginning of time period T5,

    and

    b) The UE doesn't send periodical CSI report on Cell 1 during entire time period T5.

    then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

16. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

17. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

18. Repeat steps 2-17 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.1.7.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation condition | | | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for Noc to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than $D_{handover1}$ from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90%, where:

$D_{handover1}$= $T_{RRC_procedure}$ + $T_{search}$ + $T_{IU}$ + $T_{processing}$ + $T_{\Delta}$ + $T_{margin}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in TS 38.331 [13] clause 12;

- $T_{search}$ = 0 ms for known target cell, is the time required to search the target cell specified in 38.133 [6] clause 6.1.1.2.2;

- $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell specified in TS 38.133 [6] clause 6.1.1.2.2.

- $T_{processing}$ = 20 ms, is the time for UE processing specified in TS 38.133 [6] clause 6.1.1.2.2.

- $T_{\Delta}$ = 20 ms, is the time for fine time tracking and acquiring full timing information of the target cell specified in TS 38.133 [6] clause 6.1.1.2.2.

- $T_{margin}$ = 2 ms, is the time for SSB post-processing specified in TS 38.133 [6] clause 6.1.1.2.2.

This gives a total of 72 ms.

After successful RACH to Cell 2 and until the start of time period T4, UE shall be able to receive PDSCH alternatively from Cell 1 and Cell 2. UE is not expected to transmit UL to both Cell 1 and Cell 2 in the same TTI.

The UE shall release Cell 1 less than $D_{handover2}$ from the beginning of time period T4, where:

$D_{handover2}$= $T_{RRC_procedure}$ + $T_{interrupt2}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in TS 38.331 [13] clause 12;

- $T_{interrupt2}$ = 1 ms for sync intra-frequency DAPS handover, is the allowed interruption length during $D_{handover2}$ as in TS 38.133 [6] clause 6.1.3.2.2;

This gives a total of 11 ms.

UE shall not report CSI to Cell 1 during T5.

## 6.3.1.8 NR SA FR1 asynchronous DAPS handover

### 6.3.1.8.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 intra-frequency DAPS handover requirements in asynchronous scenario specified in TS 38.133 [6] clause 6.1.3.2.

### 6.3.1.8.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support intra-frequency asynchronous DAPS handover.

### 6.3.1.8.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.8.

### 6.3.1.8.4 Test description

#### 6.3.1.8.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.8.4.1-1.

**Table 6.3.1.8.4.1-1: NR SA FR1 asynchronous DAPS handover test configurations**

| Config | Description |
|---|---|
| 6.3.1.8-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.1.8-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

| | |
|---|---|
| | Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.1.8-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.8.4.1-2

**Table 6.3.1.8.4.1-2: Initial conditions for NR SA FR1 asynchronous DAPS handover**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.8.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.8.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Table 6.3.1.8.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.1.8.4.1-3: General test parameters for NR SA FR1 asynchronous DAPS handover**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| A3-Offset | | dB | -1 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 7 μs | Asynchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤5 | |
| T3 | | s | 1 | |
| T4 | | ms | $D_{handover2}$ | $D_{Handover2}$ is defined in TS 38.133 [6] clause 6.1.3.2.1 |
| T5 | | ms | 100 | |

### 6.3.1.8.4.2 Test procedure

Same test procedure as described in section 6.3.1.7.4.2.

### 6.3.1.8.4.3 Message contents

Same message contents as described in section 6.3.1.7.4.3.

### 6.3.1.8.5 Test requirements

Table 6.3.1.8.5-1 defines the primary level settings including test tolerances for all tests.

**Table 6.3.1.8.5-1: Cell specific test parameters for NR SA FR1 asynchronous DAPS handover**

| Propagation condition | | | AWGN | | | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.<br>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for Noc to be fulfilled.<br>Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

Same test requirements as described in section 6.3.1.7.5 except:

The UE shall release Cell 1 less than $D_{handover2}$ from the beginning of time period T4, where:

$D_{handover2} = T_{RRC_procedure} + T_{interrupt2}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in TS 38.331 [13] clause 12;
- $T_{interrupt2}$ = 2 slots for test configuration 6.3.1.8-1/2 and $T_{interrupt2}$ = 3 slots for test configuration 6.3.1.8-3, is the allowed interruption length during $D_{handover2}$ as in TS 38.133 [6] clause 6.1.3.2.2;

This gives a total of 10 ms + 2 slots for test configuration 6.3.1.8-1/2 and 10 ms + 3 slots for test configuration 6.3.1.8-3.

## 6.3.1.9 NR SA FR1 Intra-band inter-frequency synchronous DAPS handover

### 6.3.1.9.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 intra-band inter-frequency DAPS handover requirements in synchronous scenario specified in TS 38.133 [6] clause 6.1.3.2.

### 6.3.1.9.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support intra-band inter-frequency DAPS handover.

### 6.3.1.9.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.9.

### 6.3.1.9.4 Test description

#### 6.3.1.9.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.9.4.1-1.

**Table 6.3.1.9.4.1-1: NR SA FR1 Intra-band inter-frequency synchronous DAPS handover test configurations**

| Config | Description |
|---|---|
| 6.3.1.9-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.1.9-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.1.9-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.9.4.1-2

**Table 6.3.1.9.4.1-2: Initial conditions for NR SA FR1 Intra-band inter-frequency synchronous DAPS handover**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. Note 1 | | |

| T5 | | ms | 100 | |

### 6.3.1.9.4.2 Test procedure

The test scenario comprises of two NR carriers and one cell on each carrier, Cell 1 and Cell 2. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.1.9.4.1-3 and 6.3.1.9.5-1 respectively.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to the Cell 1 and not aware of the Cell 2. During T1, the UE may not have any timing information of the Cell 2. Gap pattern ID gp0 is configured as specified in 38.133 [6] Table 9.1.2-1 before T2 in the test case.

From start of T2, the Cell 2 becomes detectable. During T2, the UE performs cell detection and measurements on the Cell 2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover command for target cell addition to the UE.

T3 starts from the instant when the last TTI containing DAPS handover command for target cell addition sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the Cell 2 while the DL scheduling and UL feedback in the Cell 1 shall be avoided. After successful RACH procedure on the Cell 2, UE is scheduled with PDSCH from Cell 1 and Cell 2 in alternative TTIs. In the end of T3 the network sends a RRC message implying DAPS handover command for source cell release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition need to be verified.

T4 starts from the instant when the last TTI containing DAPS handover command for source cell release sent to the UE. Cell 2 is continuously scheduled in DL during T4.During T4, the UE shall accomplish the release actions within $D_{handover2}$

From start of T5, the UE shall stop sending periodical CSI report on Cell 1. And the test system shall observe the periodic reporting of CSI for Cell 1 during T5.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.1.9.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts and the SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the intra-band inter-frequency carrier and periodical CSI reporting on Cell 1.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.9.5-1.

7. UE shall transmit a *MeasurementReport* message triggered by Event A3.

8. SS shall transmit an *RRCReconfiguration* with *reconfigurationWithSync* message which reconfiguring DRB as a DAPS radio bearer to the UE, at that instant the SS shall switch the power settings from T2 to T3 as specified in Table 6.3.1.9.5-1. T3 starts and the SS stops scheduling the UE to perform DL reception on Cell 1.

9. If the UE transmits PRACH preamble to Cell 2 within $D_{handover1}$ from the beginning of time period T3 then the number of successful tests is increased by one, continue to step 10. Otherwise, the number of failure tests is increased by one, go to step 17. where:

   - $D_{handover1}$ = 72 ms.

10. The UE transmits an *RRCReconfigurationComplete* message on Cell 2.

11. Upon receiving *RRCReconfigurationComplete* message sent by UE, the SS immediately starts scheduling UE to perform DL reception in Cell 1 and Cell 2 in an alternative manner, and monitoring corresponding ACK/NACK feedbacks sent by the UE.

12. Upon T3 expiring, the SS immediately transmit an *RRCReconfiguration* with *daps-SourceRelease-r16 = true* on Cell 2 to the UE. T4 starts.

13. When T4 expires, T5 starts.

15. If

    c) The UE can report ACK/NACK from the first DL reception scheduled on Cell 2 after the beginning of time period T5,

    and

    d) The UE doesn't send periodical CSI report during entire time period T5.

    then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

16. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

17. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1. Cell 1 is the active cell.

18. Repeat steps 2-17 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Propagation condition | | | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than $D_{handover1}$ from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90%, where:

$D_{handover1} = T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in 38.331 [13] clause 12;
- $T_{search}$ = 0 ms for known target cell, is the time required to search the target cell specified in 38.133 [6] clause 6.1.1.2.2;
- $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{processing}$ = 20 ms, is the time for UE processing specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{\Delta}$ = 20 ms, is the time for fine time tracking and acquiring full timing information of the target cell specified in TS 38.133 [6] clause 6.1.1.2.2.

- $T_{margin}$ = 2 ms, is the time for SSB post-processing specified in 38.133 [6] clause 6.1.1.2.2.

This gives a total of 72 ms.

During T3 UE is allowed to cause $T_{interrupt1}$ interruption to Cell 1. $T_{interrupt1}$ is defined in TS 38.133 [6] clause 6.1.3.2.2 Table 6.1.3.2.2-2. When UE is transmitting PRACH preamble to Cell 2, interruption to Cell 1 is allowed.

During T4 UE is allowed to cause $T_{interrupt2}$ interruption to Cell 1. $T_{interrupt2}$ is defined in TS 38.133 [6] clause 6.1.3.2.2 Table 6.1.3.2.2-6.

UE shall finish Cell 1 release in T4 and shall not send any CSI reports to Cell 1 during T5.

## 6.3.1.10 NR SA FR1 Intra-band inter-frequency asynchronous DAPS handover

### 6.3.1.10.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 intra-band inter-frequency DAPS handover requirements in asynchronous scenario specified in TS 38.133 [6] clause 6.1.3.2.

### 6.3.1.10.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support intra-band inter-frequency DAPS handover.

### 6.3.1.10.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.10.

### 6.3.1.10.4 Test description

#### 6.3.1.10.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.10.4.1-1.

**Table 6.3.1.10.4.1-1: NR SA FR1 Intra-band inter-frequency asynchronous DAPS handover test configurations**

| Config | Description |
|---|---|
| 6.3.1.10-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.10.4.1-2

**Table 6.3.1.10.4.1-2: Initial conditions for NR SA FR1 Intra-band inter-frequency asynchronous DAPS handover**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. Note 1 | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.10.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |
| Note 1: For UE supporting DAPS HO on intra-band contiguous BC, the test frequencies are selected according to E.1.4.2. For UE supporting DAPS HO on intra-band non-contiguous BC, the test frequencies are selected according to E.1.4.3. | | | |

1. Message contents are defined in clause 6.3.1.10.4.3.

2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.

3. The test parameters are given in Table 6.3.1.10.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.1.10.4.1-3: General test parameters for NR SA FR1 Intra-band inter-frequency asynchronous DAPS handover**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| A3-Offset | | dB | -3 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 10 μs | Asynchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤5 | |
| T3 | | s | 1 | |
| T4 | | ms | $10 + T_{interrupt2}$ | $T_{interrupt2}$ is defined in TS 38.133 [6] 6.1.3.2.2 Table 6.1.3.2.2-6 |
| T5 | | ms | 100 | |

### 6.3.1.10.4.2 Test procedure

The test scenario comprises of two NR carriers and one cell on each carrier, Cell 1 and Cell 2. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.1.10.4.1-3 and 6.3.1.10.5-1 respectively.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to the Cell 1 and not aware of the Cell 2. During T1, the UE may not have any timing information of the Cell 2. Gap pattern ID gp0 is configured as specified in 38.133 [6] Table 9.1.2-1 before T2 in the test case.

From start of T2, the Cell 2 becomes detectable. During T2, the UE performs cell detection and measurements on the Cell 2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover command for target cell addition to the UE.

T3 starts from the instant when the last TTI containing DAPS handover command for target cell addition sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the Cell 2 while the DL scheduling and UL feedback in the Cell 1 shall be avoided. After successful RACH procedure on the Cell 2, UE is scheduled with PDSCH from Cell 1 and Cell 2 in alternative TTIs. In the end of T3 the network sends a RRC message implying DAPS handover command for source cell release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition need to be verified.

T4 starts from the instant when the last TTI containing DAPS handover command for source cell release sent to the UE. During T4, the UE shall accomplish the release actions within $D_{handover2}$

From start of T5, the UE shall stop sending periodical CSI report on Cell 1. And the test system shall observe the periodic reporting of CSI for Cell 1 during T5.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.1.10.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts and the SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the intra-band inter-frequency carrier and periodical CSI reporting on Cell 1.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.10.5-1.

7. UE shall transmit a *MeasurementReport* message triggered by Event A3.

8. SS shall transmit an *RRCReconfiguration* with *reconfigurationWithSync* message which reconfiguring DRB as a DAPS radio bearer to the UE, at that instant the SS shall switch the power settings from T2 to T3 as specified in Table 6.3.1.10.5-1. T3 starts and the SS stops scheduling the UE to perform DL reception on Cell 1.

9. If the UE transmits PRACH preamble to Cell 2 within $D_{handover1}$ from the beginning of time period T3 then the number of successful tests is increased by one, continue to step 10. Otherwise, the number of failure tests is increased by one, go to step 17. where:

   - $D_{handover1}$ = 72 ms.

10. The UE transmits an *RRCReconfigurationComplete* message on Cell 2.

11. Upon receiving *RRCReconfigurationComplete* message sent by UE, the SS immediately starts scheduling UE to perform DL reception in Cell 1 and Cell 2 in an alternative manner, and monitoring corresponding ACK/NACK feedbacks sent by the UE.

12. Upon T3 expiring, the SS immediately transmit an *RRCReconfiguration* with *daps-SourceRelease-r16 = true* on Cell 2 to the UE. T4 starts.

13. The UE transmits an *RRCReconfigurationComplete* message on Cell 2.

13. When T4 expires, T5 starts.

15. If

    e) The UE can report ACK/NACK from the first DL reception scheduled on Cell 2 after the beginning of time period T5,

    and

    f) The UE doesn't send periodical CSI report on Cell 1during entire time period T5.

    then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

16. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

17. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1. Cell 1 is the active cell.

18. Repeat steps 2-17 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.1.10.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation condition | | | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than $D_{handover1}$ from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90%, where:

$D_{handover1} = T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in TS 38.331 [13] clause 12;
- $T_{search}$ = 0 ms for known target cell, is the time required to search the target cell specified in 38.133 [6] clause 6.1.1.2.2;
- $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{processing}$ = 20 ms, is the time for UE processing specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{\Delta}$ = 20 ms, is the time for fine time tracking and acquiring full timing information of the target cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{margin}$ = 2 ms, is the time for SSB post-processing specified in TS 38.133 [6] clause 6.1.1.2.2.

This gives a total of 72 ms.

During T3 UE is allowed to cause $T_{interrupt1}$ interruption to Cell 1. $T_{interrupt1}$is defined in TS 38.133 [6] clause 6.1.3.2.2 Table 6.1.3.2.2-2. When UE is transmitting PRACH preamble to Cell 2, interruption to Cell 1 is allowed.

During T4 UE is allowed to cause $T_{interrupt2}$ interruption to Cell 1. $T_{interrupt2}$ is defined in TS 38.133 [6] clause 6.1.3.2.2 Table 6.1.3.2.2-6.

UE shall finish Cell 1 release in T4 and shall not send any CSI reports to Cell 1 during T5.

## 6.3.1.11 NR SA FR1 Inter-band inter-frequency synchronous DAPS handover

### 6.3.1.11.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 inter-band inter-frequency DAPS handover requirements in synchronous scenario specified in TS 38.133 [6] clause 6.1.3.2.

### 6.3.1.11.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support inter-band inter-frequency DAPS handover.

### 6.3.1.11.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.11.

### 6.3.1.11.4 Test description

#### 6.3.1.11.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.11.4.1-1.

**Table 6.3.1.11.4.1-1: NR SA FR1 Inter-band inter-frequency synchronous DAPS handover test configurations**

| Config | Description |
|---|---|
| 6.3.1.11-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.1.11-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

| Config | Description |
|---|---|
| 6.3.1.11-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.1.11-4 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.1.11-5 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |

| 6.3.1.11-7 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 6.3.1.11-8 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 6.3.1.11-9 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.11.4.1-2

**Table 6.3.1.11.4.1-2: Initial conditions for NR SA FR1 Inter-band inter-frequency synchronous DAPS handover**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.11.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.11.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Table 6.3.1.11.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.1.11.4.1-3: General test parameters for NR SA FR1 Inter-band inter-frequency synchronous DAPS handover**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | PCell on RF channel number 1 |
| | Neighbouring cell | | Cell 2 | Neighbour cell on RF channel number 2 |
| Final condition | Active cell | | Cell 2 | PCell on RF channel number 2 |
| | Neighbouring cell | | Cell 1 | Neighbour cell on RF channel number 1 |
| A3-Offset | Config 1,2,4,5,9 | dB | -7 (Note 1) | |
| | Config 3,6 | dB | -10 (Note 1) | |
| | Config 7,8 | dB | -4 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | µs | 33 | Synchronous cells |
| DRX | | | OFF | |
| Measurement gap pattern Id | | | #0 | Gaps are configured before T2. |
| T1 | | s | 5 | |
| T2 | | s | <5 | |
| T3 | | s | <0.5 | |

| | | | |
|---|---|---|---|
| T4 | ms | $10+T_{interrupt2}$ | $T_{interrupt2}$ as defined in TS 38.133 [6] Table 6.1.3.2.2-7 for synchronous DAPS HO |
| T5 | ms | 100 | |
| Note 1: Including test tolerance given in Annex F.1.3.2 | | | |

### 6.3.1.11.4.2 Test procedure

The test scenario comprises of two NR bands and one cell on each band, Cell 1 and Cell 2. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.1.11.4.1-3, 6.3.1.11.5-1 and 6.3.1.11.5-2 respectively.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to the Cell 1 and not aware of the Cell 2. During T1, the UE does not have any timing information of the Cell 2. Gap pattern ID gp0 is configured as specified in 38.133 [6] Table 9.1.2-1 before T2 in the test case.

From start of T2, the Cell 2 becomes detectable. During T2, the UE performs cell detection and measurements on the Cell 2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover command for target cell addition to the UE.

T3 starts from the instant when the last TTI containing DAPS handover command for target cell addition sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the Cell 2 while the DL scheduling and UL feedback in the Cell 1 shall be avoided. After successful RACH procedure on the Cell 2, UE is scheduled with PDSCH from Cell 1 and Cell 2 in alternative TTIs. In the end of T3 the network sends a RRC message implying DAPS handover command for source cell release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition need to be verified.

T4 starts from the instant when the last TTI containing DAPS handover command for source cell release sent to the UE. During T4, the UE shall accomplish the release actions within $D_{handover2}$

From start of T5, the UE shall stop sending periodical CSI report on Cell 1. And the test system shall observe the periodic reporting of CSI for Cell 1 during T5.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.1.11.5-1 and Table 6.3.1.11.5-2. Propagation conditions are set according to Annex C clause C.2.2. T1 starts and the SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the inter-band inter-frequency carrier and periodical CSI reporting on Cell 1.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.11.5-1 and Table 6.3.1.11.5-2.

7. UE shall transmit a *MeasurementReport* message triggered by Event A3.

8. SS shall transmit an *RRCReconfiguration* with *reconfigurationWithSync* message which reconfiguring DRB as a DAPS radio bearer to the UE, at that instant the SS shall switch the power settings from T2 to T3 as specified in Table 6.3.1.11.5-1 and Table 6.3.1.11.5-2. T3 starts and the SS stops scheduling the UE to perform DL reception on Cell 1.

9. If the UE transmits PRACH preamble to Cell 2 within $D_{handover1}$ from the beginning of time period T3 then the number of successful tests is increased by one, continue to step 10. Otherwise, the number of failure tests is increased by one, go to step 17. where:

- $D_{handover1}$ = 72 ms.

10. The UE transmits an *RRCReconfigurationComplete* message on Cell 2.

11. Upon receiving *RRCReconfigurationComplete* message sent by UE, the SS immediately starts scheduling UE to perform DL reception in Cell 1 and Cell 2 in an alternative manner, and monitoring corresponding ACK/NACK feedbacks sent by the UE.

12. Upon T3 expiring, the SS immediately transmit an *RRCReconfiguration* with *daps-SourceRelease-r16 = true* on Cell 2 to the UE. T4 starts.

13. When T4 expires, T5 starts.

15. If

    g) The UE can report ACK/NACK from the first DL reception scheduled on Cell 2 after the beginning of time period T5,

    and

    h) The UE doesn't send periodical CSI report on Cell 1during entire time period T5.

    then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

16. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

17. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1. Cell 1 is the active cell.

18. Repeat steps 2-17 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Propagation condition | | - | AWGN | |

Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than $D_{handover1}$ from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90%, where:

$D_{handover1} = T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in TS 38.331 [13] clause 12;
- $T_{search}$ = 0 ms for known target cell, is the time required to search the target cell specified in 38.133 [6] clause 6.1.1.2.2;
- $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{processing}$ = 20 ms, is the time for UE processing specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{\Delta}$ = 20 ms, is the time for fine time tracking and acquiring full timing information of the target cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{margin}$ = 2 ms, is the time for SSB post-processing specified in TS 38.133 [6] clause 6.1.1.2.2.

This gives a total of 72 ms.

The UE shall complete to release Cell 1 less than $D_{handover2}$ from the beginning of time period T4. During $D_{handover2}$, the interruption on Cell 2 shall not exceed $T_{interrupt2}$ as defined in TS 38.133 [6] Table 6.1.3.2.2-7 for synchronous DAPS HO.

The handover delay $D_{handover2}$ can be expressed as: $T_{RRC_procedure} + T_{interrupt2}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [13].

## 6.3.1.12 NR SA FR1 Inter-band inter-frequency asynchronous DAPS handover

### 6.3.1.12.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 inter-band inter-frequency DAPS handover requirements in asynchronous scenario specified in TS 38.133 [6] clause 6.1.3.2.

### 6.3.1.12.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and support inter-band inter-frequency DAPS handover.

### 6.3.1.12.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.12.

### 6.3.1.12.4 Test description

#### 6.3.1.12.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.12.4.1-1.

**Table 6.3.1.12.4.1-1: NR SA FR1 Inter-band inter-frequency asynchronous DAPS handover test configurations**

| Config | Description |
|---|---|
| 6.3.1.12-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

| | | | |
|---|---|---|---|
| T5 | ms | 100 | |
| Note 1: Including test tolerance given in Annex F.1.3.2 | | | |

#### 6.3.1.12.4.2 Test procedure

The test scenario comprises of two NR bands and one cell on each band, Cell 1 and Cell 2. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.1.12.4.1-3, 6.3.1.12.5-1 and 6.3.1.12.5-2 respectively.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to the Cell 1 and not aware of the Cell 2. During T1, the UE does not have any timing information of the Cell 2. Gap pattern ID gp0 is configured as specified in 38.133 [6] Table 9.1.2-1 before T2 in the test case.

From start of T2, the Cell 2 becomes detectable. During T2, the UE performs cell detection and measurements on the Cell 2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover command for target cell addition to the UE.

T3 starts from the instant when the last TTI containing DAPS handover command for target cell addition sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the Cell 2 while the DL scheduling and UL feedback in the Cell 1 shall be avoided. After successful RACH procedure on the Cell 2, UE is scheduled with PDSCH from Cell 1 and Cell 2 in alternative TTIs. In the end of T3 the network sends a RRC message implying DAPS handover command for source cell release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition need to be verified.

T4 starts from the instant when the last TTI containing DAPS handover command for source cell release sent to the UE. During T4, the UE shall accomplish the release actions within $D_{handover2}$

From start of T5, the UE shall stop sending periodical CSI report on Cell 1. And the test system shall observe the periodic reporting of CSI for Cell 1 during T5.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.1.12.5-1 and Table 6.3.1.12.5-2. Propagation conditions are set according to Annex C clause C.2.2. T1 starts and the SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the inter-band inter-frequency carrier and periodical CSI reporting on Cell 1.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.1.12.5-1 and Table 6.3.1.12.5-2.

7. UE shall transmit a *MeasurementReport* message triggered by Event A3.

8. SS shall transmit an *RRCReconfiguration* with *reconfigurationWithSync* message which reconfiguring DRB as a DAPS radio bearer to the UE, at that instant the SS shall switch the power settings from T2 to T3 as specified in Table 6.3.1.12.5-1 and Table 6.3.1.12.5-2. T3 starts and the SS stops scheduling the UE to perform DL reception on Cell 1.

9. If the UE transmits PRACH preamble to Cell 2 within $D_{handover1}$ from the beginning of time period T3 then the number of successful tests is increased by one, continue to step 10. Otherwise, the number of failure tests is increased by one, go to step 17. where:

   - $D_{handover1}$ = 72 ms.

10. The UE transmits an *RRCReconfigurationComplete* message on Cell 2.

11. Upon receiving *RRCReconfigurationComplete* message sent by UE, the SS immediately starts scheduling UE to perform DL reception in Cell 1 and Cell 2 in an alternative manner, and monitoring corresponding ACK/NACK feedbacks sent by the UE.

12. Upon T3 expiring, the SS immediately transmit an *RRCReconfiguration* with *daps-SourceRelease-r16 = true* on Cell 2 to the UE. T4 starts.

13. When T4 expires, T5 starts.

15. If

    i) The UE can report ACK/NACK from the first DL reception scheduled on Cell 2 after the beginning of time period T5,

    and

    j) The UE doesn't send periodical CSI report on Cell 1during entire time period T5.

    then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

16. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

17. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1. Cell 1 is the active cell.

18. Repeat steps 2-17 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 less than $D_{handover1}$ from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90%, where:

$D_{handover1} = T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

- $T_{RRC_procedure}$= 10 ms, is the RRC procedure delay specified in TS 38.331 [13] clause 12;
- $T_{search}$ = 0 ms for known target cell, is the time required to search the target cell specified in 38.133 [6] clause 6.1.1.2.2.
- $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{processing}$ = 20 ms, is the time for UE processing specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{\Delta}$ = 20 ms, is the time for fine time tracking and acquiring full timing information of the target cell specified in TS 38.133 [6] clause 6.1.1.2.2.
- $T_{margin}$ = 2 ms, is the time for SSB post-processing specified in TS 38.133 [6] clause 6.1.1.2.2.

This gives a total of 72 ms.

The UE shall complete to release Cell 1 less than $D_{handover2}$ from the beginning of time period T4. During $D_{handover2}$, the interruption on Cell 2 shall not exceed $T_{interrupt2}$ as defined in TS 38.133 [6] Table 6.1.3.2.2-6 for asynchronous DAPS HO.

The handover delay $D_{handover2}$ can be expressed as: $T_{RRC_procedure} + T_{interrupt2}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [13].

## 6.3.1.13 to 6.3.1.17

## 6.3.1.18 NR SA FR1 handover with unknown target cell operating with 12 PRB SSB bandwidth

### 6.3.1.18.1 Test purpose

To verify the UEs ability to perform the NR FR1-NR FR1 intra-frequency handover requirements for unknown target cell operating with 12 PRB SSB bandwidth as specified in TS 38.133[6] clause 6.1.1.2.

### 6.3.1.18.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards supporting in less than 5 MHz bandwidth.

### 6.3.1.18.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.1.18.

### 6.3.1.18.4 Test description

#### 6.3.1.18.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.1.18.4.1-1.

**Table 6.3.1.18.4.1-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 6.3.1.18-1 | Source cell: NR 15 kHz SSB SCS, 3 MHz bandwidth with 15PRB CBW, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 3 MHz bandwidth with 15PRB CBW, FDD duplex mode |
| 6.3.1.18-2 | Source cell: NR 15 kHz SSB SCS, 3 MHz bandwidth with 12PRB CBW, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 3 MHz bandwidth with 12PRB CBW, FDD duplex mode |
| Note1: The UE is only required to be tested in one of the supported test configurations<br>Note2: Configuration 2 is only applied for the testing on band n100 | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.1.18.4.1-2

**Table 6.3.1.18.4.1-2: Initial conditions for NR SA FR1 handover with unknown target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.1.18.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.1.18.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. General test parameters as specified in Table 6.3.1.18.4.1-3 below:

**Table 6.3.1.18.4.1-3: General test parameters Intra-frequency handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| **Initial conditions** | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | unknown target cell operating with 12 PRB SSB bandwidth |
| Final condition | Active cell | | Cell 2 | unknown target cell operating with 12 PRB SSB bandwidth |

### 6.3.1.18.4.2 Test procedure

Same as 6.3.1.2.4.2

### 6.3.1.18.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.3.1.18.4.3-1: Common Exception messages**

| Default Message Contents | |
|---|---|
| Common contents of system information blocks exceptions | |
| Default RRC messages and information elements contents exceptions | Table H.3.2-2 with Condition RBConfig_KeyChange |

### 6.3.1.18.5 Test requirements

Cell specific test parameters as specified in Table 6.3.1.2.5-1 with config 1 apply except those specified in Table 6.3.1.18.5-1.

**Table 6.3.1.18.5-1: Cell specific test parameters for NR FR1-FR1 Intra-frequency handover test case**

| Parameter | | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| $BW_{channel}$ | Config 1 | MHz | 3: $N_{RB,c}$ = 15 | | | |
| | Config 2 | | 3: $N_{RB,c}$ = 12 | | | |
| BWP BW | Config 1 | MHz | 3: $N_{RB,c}$ = 15 | | | |
| | Config 2 | | 3: $N_{RB,c}$ = 12 | | | |
| PDSCH Reference measurement channel | Config 1 | | SR.1.2 FDD | | | |
| | Config 2 | | SR.1.2 FDD | | | |

| | | | | | | |
|---|---|---|---|---|---|---|
| CORESET Reference Channel | Config 1 | | CR.1.3 FDD | | | |
| | Config 2 | | CR.1.2 FDD | | | |
| SSB Configuration | Config 1,2 | | SSB.13 FR1 | | | |
| Io[Note1] | Config 1 | dBm/ 2.7MHz | -66.81 | -64.11 | -66.81 | -64.11 |
| | Config 2 | dBm/ 2.16MHz | -67.78 | -65.07 | -67.78 | -65.07 |
| Propagation condition | | - | AWGN | | AWGN | |
| Note 1: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [13].

$T_{interrupt}$ = 122 ms in the test. $T_{interrupt}$ is defined in TS 38.133 [6] clause 6.1.1.2.2.

This gives a total of 132 ms.

## 6.3.2 RRC connection mobility control

### 6.3.2.1 RRC re-establishment

#### 6.3.2.1.0 Minimum conformance requirements

##### 6.3.2.1.0.1 Minimum conformance requirements for FR1 RRC re-establishment

In RRC_CONNECTED state the UE shall be capable of sending *RRCReestablishmentRequest* message within $T_{re\text{-}establish_delay}$ seconds from the moment it detects a loss in RRC connection. The total RRC connection delay ($T_{re\text{-}establish_delay}$) shall be less than:

$$T_{re-establish_delay} = T_{UE_re-establish_delay} + T_{UL_grant}$$

$T_{UL_grant}$: It is the time required to acquire and process uplink grant from the target PCell. The uplink grant is required to transmit *RRCReestablishmentRequest* message.

The UE re-establishment delay ($T_{UE_re\text{-}establish_delay}$) is the time between the moments when any of the conditions requiring RRC re-establishment as defined in clause 5.3.7 in TS 38.331 [13] is detected by the UE and when the UE sends PRACH to the target PCell. The UE re-establishment delay ($T_{UE_re\text{-}establish_delay}$) requirement shall be less than:

$$T_{UE_re-establish_delay} = 50 + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

The intra-frequency target NR cell shall be considered detectable when for each relevant SSB can satisfy that:

- SS-RSRP related side conditions given in Section 10.1.2 and 10.1.3 are fulfilled for a corresponding NR Band for FR1 and FR2, respectively,
- the conditions of SSB_RP and SSB Ês/Iot according to Annex B.2.2 for a corresponding NR Band are fullfilled.

The inter-frequency target NR cell shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in Section 10.1.4 and 10.1.5 are fulfilled for a corresponding NR Band for FR1 and FR2, respectively,
- the conditions of SSB_RP and SSB Ês/Iot according to Annex B.2.2 for a corresponding NR Band are fullfilled.

$T_{identify_intra_NR}$: It is the time to identify the target intra-frequency NR cell and it depends on whether the target NR cell is known cell or unknown cell and on the frequency range of the target NR cell. If the UE is not configured with intra-

frequency NR carrier for RRC re-establishment then $T_{identify_intra_NR}$=0; otherwise $T_{identify_intra_NR}$ shall not exceed the values defined in table 6.3.2.1.0.1-1.

$T_{identify_inter_NR,i}$: It is the time to identify the target inter-frequency NR cell on inter-frequency carrier *i* configured for RRC re-establishment and it depends on whether the target NR cell is known cell or unknown cell and on the frequency range of the target NR cell. $T_{identify_inter_NR,i}$ shall not exceed the values defined in table 6.3.2.1.0.1-2.

$T_{SMTC}$: It is the periodicity of the SMTC occasion configured for the intra-frequency carrier. If the UE has been provided with higher layer in TS 38.331 [13] signalling of *smtc2*, $T_{smtc}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

$T_{SMTC,i}$: It is the periodicity of the SMTC occasion configured for the inter-frequency carrier *i*. If it is not configured, the UE may assume that the target SSB periodicity is no larger than 20 ms.

$T_{SI-NR}$ = It is the time required for receiving all the relevant system information according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [13] for the target NR cell.

$T_{PRACH}$: It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. $T_{PRACH}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [8].

$N_{freq}$: It is the total number of NR frequencies to be monitored for RRC re-establishment; $N_{freq}$ = 1 if the target intra-frequency NR cell is known, else $N_{freq}$ = 2 and $T_{identify_intra_NR}$ = 0 if the target inter-frequency NR cell is known.

There is no requirement if the target cell does not contain the UE context.

In the requirement defined in the below tables, the target FR1 cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown.

**Table 6.3.2.1.0.1-1: Time to identify target NR cell for RRC connection re-establishment to NR intra-frequency cell**

| Serving cell SSB Ês/Iot (dB) | Frequency range of target NR cell | $T_{identify_intra_NR}$ (ms) | |
|---|---|---|---|
| | | Known NR cell | Unknown NR cell |
| ≥ -8 | FR1 | MAX (200 ms, 5 x $T_{SMTC}$) | MAX (800 ms, 10 x $T_{SMTC}$) |
| ≥ -8 | FR2 | N/A | MAX (1000 ms, 80 x $T_{SMTC}$)) |
| < -8 | FR1 | N/A | 800 Note1 |
| < -8 | FR2 | N/A | 3520 Note1 |
| Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when $T_{SMTC}$ > 20 ms and serving cell SSB Ês/Iot < -8 dB. | | | |

**Table 6.3.2.1.0.1-2: Time to identify target NR cell for RRC connection re-establishment to NR inter-frequency cell**

| Serving cell SSB Ês/Iot (dB) | Frequency range of target NR cell | $T_{identify_inter_NR,\ i}$ (ms) | |
|---|---|---|---|
| | | Known NR cell | Unknown NR cell |
| ≥ -8 | FR1 | MAX (200 ms, 6 x $T_{SMTC,\ i}$) | MAX (800 ms, 13 x $T_{SMTC,\ i}$) |
| ≥ -8 | FR2 | N/A | MAX (1000 ms, 104 x $T_{SMTC,\ i}$)) |
| < -8 | FR1 | N/A | 800 Note1 |
| < -8 | FR2 | N/A | 4000 Note1 |
| Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when $T_{SMTC,i}$ > 20 ms and serving cell SSB Ês/Iot < -8 dB. | | | |

The normative reference for this requirement is TS 38.133 [6] clauses 6.2.1.2.1.

## 6.3.2.1.1 NR SA FR1 RRC re-establishment

### 6.3.2.1.1.1 Test purpose

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR1 with known target cell is within the specified limits.

### 6.3.2.1.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.2.1.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.2.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.2.1.1.

#### 6.3.2.1.1.4 Test description

##### 6.3.2.1.1.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.3.2.1.1.4.1-1

**Table 6.3.2.1.1.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 6.3.2.1.1-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.3.2.1.1-2 | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.3.2.1.1-3 | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test requirement and the DUT according to the parameters in Table 6.3.2.1.1.4.1-2

**Table 6.3.2.1.1.4.1-2: Initial conditions for NR Intra-frequency RRC Re-establishment in FR1**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.1.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.3.2.1.1.4.1-3.
2. Message contents are defined in clause 6.3.2.1.1.4.3.

There is one NR carrier and two cells specified in the test. Cell 1 is the cell used for registration with the power level set according to Annex C.1.1 and C.1.2 for this test.

**Table 6.3.2.1.1.4.1-3: General test parameters for NR intra-frequency RRC Re-establishment test case in FR1**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| Final condition | Active cell | | 1, 2, 3 | Cell 2 | |
| RF Channel Number | | | 1, 2, 3 | 1 | |
| Time offset between cells | | | 1 | 3 ms | Asynchronous cells |
| | | | 2 | 3 µs | Synchronous cells |
| | | | 3 | 3 µs | Synchronous cells |
| N310 | | - | 1, 2, 3 | 1 | Maximum consecutive out-of-sync indications from lower layers |
| N311 | | - | 1, 2, 3 | 1 | Minimum consecutive in-sync indications from lower layers |
| T310 | | ms | 1, 2, 3 | 0 | Radio link failure timer |
| T311 | | ms | 1, 2, 3 | 3000 | RRC re-establishment timer |

| | | | | |
|---|---|---|---|---|
| Access Barring Information | - | 1, 2, 3 | Not Sent | No additional delays in random access procedure. |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| SMTC configuration | | 1 | SMTC.2 | |
| | | 2 | SMTC.1 | |
| | | 3 | SMTC.1 | |
| DRX cycle length | s | 1, 2, 3 | OFF | |
| PRACH configuration | | 1, 2, 3 | PRACH.1 FR1 | Table A.7.1-1 |
| T1 | s | 1, 2, 3 | 5 | |
| T2 | ms | 1, 2, 3 | 240 | Time for the UE to detect RLF (Summation of $T_{Evaluate_out_SSB}$ defined in clause 8.1 in TS 38.133 [6], T310 and the period for UE turns off transmitter defined in clause 8.1.5 in TS 38.133 [6]) |
| T3 | s | 1, 2, 3 | 2 | |

#### 6.3.2.1.1.4.2 Test procedure

The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message.
2. Set the parameters according to T1 in Table 6.3.2.1.1.5-1. T1 starts.
3. SS shall transmit an RRCReconfiguration message.
4. The UE shall transmit RRCReconfigurationComplete message.
5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.2.1.1.5-1. T2 starts
6. When T2 expires, the SS shall switch the power setting from T2 to T3 as specified in Table 6.3.2.1.1.5-1. T3 starts
7. If the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2 within 1840 ms (= 220ms + 1.6 s) from the beginning of time period T2, then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.
8. After T3 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.
9. Repeat step 2-8 until the confidence level according to Table G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.2.1.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3with the following exceptions:

**Table 6.3.2.1.1.4.3-1: Common Exception messages intra-frequency RRC re-establishment**

| Io | dBm/9.36 MHz | 1 | -60.74 | -64.59 | -64.59 | -60.74 | -64.59 | -64.59 |
| | dBm/9.36 MHz | 2 | -60.74 | -64.59 | -64.59 | -60.74 | -64.59 | -64.59 |
| | dBm/38.16 MHz | 3 | -54.65 | -58.50 | -58.50 | -54.65 | -58.50 | -58.50 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | | | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | | | |
| Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | | |

The RRC re-establishment delay is defined as the time from the the moment UE declares RLF, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to a known NR intra-frequency cell shall be less than 1.6 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50 + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 1$

$T_{identify_intra_NR}$ = 200 ms

$T_{SI}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [13] for the target intra-frequency NR cell.

$T_{PRACH}$ = 15 ms; it is the additional delay caused by the random access procedure.

This gives a total of 1545 ms for RRC re-establishment delay, allow 1840ms (240 ms + 1.6 s) from the beginning of T2 in the test case.

### 6.3.2.1.2 NR SA FR1 - FR1 RRC re-establishment

#### 6.3.2.1.2.1 Test purpose

The purpose is to verify that the NR inter-frequency RRC re-establishment delay in FR1 without known target cell is within the specified limits.

#### 6.3.2.1.2.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.2.1.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.2.1.0.1.

The normative reference for this requirement is TS 38.133 [6] A.6.3.2.1.2.

#### 6.3.2.1.2.4 Test description

##### 6.3.2.1.2.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.3.2.1.2.4.1-1

**Table 6.3.2.1.2.4.1-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 6.3.2.1.2-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.3.2.1.2-2 | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.3.2.1.2-3 | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | | |

Configure the test requirement and the DUT according to the parameters in Table 6.3.2.1.2.4.1-2

**Table 6.3.2.1.2.4.1-2: Initial conditions for NR Inter-frequency RRC Re-establishment in FR1**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.1.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.3.2.1.2.4.1-3.
2. Message contents are defined in clause 6.3.2.1.2.4.3.

There are two NR carriers and two cells specified in the test. Cell 1 is the cell used for registration with the power level set according to Annex C.1.1 and C.1.2 for this test.

**Table 6.3.2.1.2.4.1-3: General test parameters for NR inter-frequency RRC Re-establishment test case in FR1**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |

| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| SMTC configuration | | 1 | SMTC.2 | |
| | | 2 | SMTC.1 | |
| | | 3 | SMTC.1 | |
| DRX cycle length | s | 1, 2, 3 | OFF | |
| PRACH configuration | | 1, 2, 3 | PRACH.1 FR1 | Table A.7.1-1 |
| T1 | s | 1, 2, 3 | 5 | |
| T2 | ms | 1, 2, 3 | 240 | Time for the UE to detect RLF (Summation of $T_{Evaluate_out_SSB}$ defined in clause 8.1 in TS 38.133 [6], T310 and the period for UE turns off transmitter defined in clause 8.1.5 in TS 38.133 [6]) |
| T3 | s | 1, 2, 3 | 5 | |

#### 6.3.2.1.2.4.2 Test procedure

The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of Cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of Cell 2 by the end of T1.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message.
2. Set the parameters according to T1 in Table 6.3.2.1.2.5-1. T1 starts.
3. SS shall transmit an RRCReconfiguration message.
4. The UE shall transmit RRCReconfigurationComplete message.
5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.2.1.2.5-1. T2 starts
6. When T2 expires, the SS shall switch the power setting from T2 to T3 as specified in Table 6.3.2.1.2.5-1. T3 starts
7. If the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2 within 3 s from the beginning of time period T3, then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.
8. After T3 expires, cause UE handover back to Cell 1 (if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.
9. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.
10. Repeat step 2-9 until the confidence level according to Table G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.2.1.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3with the following exceptions:

| | dBm/9.36 MHz | 2 | -64.59 | -70.05 | -70.05 | -70.05 | -70.05 | -62.26 |
| | dBm/38.16 MHz | 3 | -58.50 | -63.94 | -63.94 | -63.94 | -63.94 | -56.15 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR inter-frequency cell shall be less than 3 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50 + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 2$

$T_{identify_intra_NR}$ = 800 ms

$T_{identify_inter_NR}$ = 800 ms

$T_{SI}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [13] for the target inter-frequency NR cell.

$T_{PRACH}$ = 15 ms; it is the additional delay caused by the random access procedure.

This gives a total of 2945 ms, allow 3 s in the test case.

### 6.3.2.1.3 NR SA FR1 RRC re-establishment without serving cell timing

#### 6.3.2.1.3.1 Test purpose

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR1 without serving cell timing is within the specified limits and to verify the requirements in TS 38.133 [6] clause 6.2.1

#### 6.3.2.1.3.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.2.1.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.2.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.2.1.3.

#### 6.3.2.1.3.4 Test description

##### 6.3.2.1.3.4.1 Initial conditions

The test shall be tested using any of the test configuration in Table 6.3.2.1.3.4.1-1

**Table 6.3.2.1.3.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 6.3.2.1.3-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.3.2.1.3-2 | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.3.2.1.3-3 | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test requirement and the DUT according to the parameters in Table 6.3.2.1.3.4.1-2

**Table 6.3.2.1.3.4.1-2: Initial conditions for NR SA FR1 RRC re-establishment without serving cell timing**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.1.3.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.3.2.1.3.4.1-3.
2. Message contents are defined in clause 6.3.2.1.3.4.3.
3. There is one NR carrier and two cells specified in the test. Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

**Table 6.3.2.1.3.4.1-3: General test parameters for NR SA FR1 RRC re-establishment without serving cell timing**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| Final condition | Active cell | | 1, 2, 3 | Cell 2 | |
| RF Channel Number | | | 1, 2, 3 | 1 | |
| Time offset between cells | | | 1 | 3 ms | Asynchronous cells |

| | | | | |
|---|---|---|---|---|
| | | 2 | 3 µs | Synchronous cells |
| | | 3 | 3 µs | Synchronous cells |
| N310 | - | 1, 2, 3 | 1 | Maximum consecutive out-of-sync indications from lower layers |
| N311 | - | 1, 2, 3 | 1 | Minimum consecutive in-sync indications from lower layers |
| T310 | ms | 1, 2, 3 | 6000 | Radio link failure timer configured by *RLF-TimersAndConstants* |
| T311 | ms | 1, 2, 3 | 3000 | RRC re-establishment timer |
| Access Barring Information | - | 1, 2, 3 | Not Sent | No additional delays in random access procedure. |
| SSB configuration | | 1 | SSB.1 FR1 | |
| | | 2 | SSB.1 FR1 | |
| | | 3 | SSB.2 FR1 | |
| SMTC configuration | | 1 | SMTC.2 | |
| | | 2 | SMTC.1 | |
| | | 3 | SMTC.1 | |
| DRX cycle length | s | 1, 2, 3 | OFF | |
| PRACH configuration | | 1, 2, 3 | PRACH.1 FR1 | |
| T1 | s | 1, 2, 3 | 5 | |
| T2 | s | 1, 2, 3 | 6.24 | Time for the UE to detect RLF (Summation of Tevaluate_out_SSB defined in clause 8.1 in TS 38.133 [6], T310 and the period for UE turns off transmitter defined in clause 8.1.5 in TS 38.133 [6]) |
| T3 | s | 1, 2, 3 | 3 | |

#### 6.3.2.1.3.4.2 Test procedure

The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message.

2. Set the parameters according to T1 in Table 6.3.2.1.3.5-1. T1 starts.

3. SS shall transmit an RRCReconfiguration message.

4. The UE shall transmit RRCReconfigurationComplete message.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.2.1.3.5-1. T2 starts

6. When T2 expires, the SS shall switch the power setting from T2 to T3 as specified in Table 6.3.2.1.3.5-1. T3 starts

7. If the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2 within 2.2 s from the beginning of time period T3, then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

8. After T3 expires, trigger UE handover back to Cell 1(if the handover fails, switch off the UE) or switch off the UE. Then ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

9. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

10. Repeat step 2-9 until the confidence level according to Table G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.2.1.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.3.2.1.3.4.3-1: Common Exception messages for NR SA FR1 RRC re-establishment without serving cell timing**

| | | 3 | -91 | -infinity | -infinity | -infinity | -infinity | -91 |
| Io | dBm/9.36 MHz | 1 | -64.59 | -70.05 | -70.05 | -70.05 | -70.05 | -64.59 |
| | dBm/9.36 MHz | 2 | -64.59 | -70.05 | -70.05 | -70.05 | -70.05 | -64.59 |
| | dBm/38.16 MHz | 3 | -58.50 | -63.94 | -63.94 | -63.94 | -63.94 | -58.50 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR intra-frequency cell without serving cell timing shall be less than 2.2 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50 + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 1$

$T_{identify_intra_NR}$ = 800 ms

$T_{SI}$ = 1280 ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [13] for the target intra-frequency NR cell.

$T_{PRACH}$ = 15 ms; it is the additional delay caused by the random access procedure.

This gives a total of 2145 ms, allow 2.2 s in the test case.

## 6.3.2.2 Random access

### 6.3.2.2.0 Minimum conformance requirements

#### 6.3.2.2.0.1 Minimum conformance requirements for Contention based random access

The random access procedure is used when establishing the layer 1 communication between the UE and NG-RAN. The random access is as defined in TS 38.213 [8] clause 7.4 and the control of the RACH transmission is as defined in TS 38.321 [12] clause 5.1.

The UE shall have capability to calculate PRACH transmission power according to the PRACH power formula as defined in TS 38.213 [8] clause 7.4 and apply this power level at the first preamble or additional preambles. The absolute power applied to the first preamble shall have an accuracy as defined in TS 38.101-1 [2] Table 6.3.4.2-1. The relative power applied to additional preambles shall have an accuracy as specified in TS 38.101-1 [2] Table 6.3.4.3-1.

The UE shall indicate a Random Access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in TS 38.321 [12] clause 5.1.4.

With the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB*, UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SS blocks is configured, as specified in clause 5.1.2 in TS 38.321 [12].

With the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB*, UE shall have the capability to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [12].

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window defined in clause 5.1.4 in TS 38.321 [12].

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

The UE shall send ACK if the Contention Resolution is successful.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

The UE shall re-select a preamble and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

The normative reference for this requirement is TS 38.133 [6] clauses 6.2.2.

#### 6.3.2.2.0.2 Minimum conformance requirements for Non-Contention based random access

The random access procedure is used when establishing the layer 1 communication between the UE and NG-RAN. The random access is as defined in TS 38.213 [8] clause 7.4 and the control of the RACH transmission is as defined in TS 38.321 [12] clause 5.1.

The UE shall have capability to calculate PRACH transmission power according to the PRACH power formula as defined in TS 38.213 [8] clause 7.4 and apply this power level at the first preamble or additional preambles. The absolute power applied to the first preamble shall have an accuracy as defined in TS 38.101-1 [2] Table 6.3.4.2-1. The relative power applied to additional preambles shall have an accuracy as specified in TS 38.101-1 [2] Table 6.3.4.3-1.

The UE shall indicate a Random Access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in TS 38.321 [12] clause 5.1.4.

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [12].

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs is configured, with the UE selected CSI-RS with CSI-RSRP above *cfra-csirs-DedicatedRACH-Threshold* amongst the associated CSI-RSs, UE shall have the capability to select the Random Access Preamble corresponding to the selected CSI-RS, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions in *ra-OccasionList* corresponding to the selected CSI-RS, and PRACH occasion shall be randomly selected with equal probability amongst the selected CSI-RS associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [12].

The UE may stop monitoring for Random Access Response(s), if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble, unless the random access procedure is initialized for Other SI request from UE.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [12] for the next available PRACH occasion, and transmit the preamble with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [12] for the next available PRACH occasion, and transmit the preamble with the calculated PRACH transmission power, if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon* or if no PDCCH addressed to UE's C-RNTI is received within the RA Response window configured in *BeamFailureRecoveryConfig*, as defined in clause 5.1.4 in TS 38.321 [12].

The normative reference for this requirement is TS 38.133 [6] clauses 6.2.2.

Non-contention based random access procedure is not initialized for Other SI requested from UE or for beam failure recovery, so the requirements related to those features are omitted.

### 6.3.2.2.1 NR SA FR1 contention based random access

#### 6.3.2.2.1.1 Test purpose

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits.

#### 6.3.2.2.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.2.2.1.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clauses A.6.3.2.2.1.

#### 6.3.2.2.1.4 Test description

##### 6.3.2.2.1.4.1 Initial conditions

This test can be run in the configurations defined in Table 6.3.2.2.1.4.1-1.

**Table 6.3.2.2.1.4.1-1: Contention based random access test in FR1 for NR standalone supported test configurations**

| Test Case ID | Test Config Index | Description |
|---|---|---|
| 6.3.2.2.1-1 | 1 | NR: 15 kHz SSB SCS, 10MHz bandwidth, FDD |
| 6.3.2.2.1-2 | 2 | NR: 30 kHz SSB SCS, 40MHz bandwidth, TDD |
| Note: The UE is only required to be tested in one of the supported test configurations | | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.2.1.4.1-2.

**Table 6.3.2.2.1.4.1-2: Initial conditions for Contention based random access test in FR1 for NR standalone**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.2.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

1. Message contents are defined in clause 6.3.2.2.1.4.3.

2. Cell 1 is the NR FR1 serving cell (PCell). The connection setup is done according to the settings in Annex C.1.1 and C.1.2.

### 6.3.2.2.1.4.2 Test procedure

The test consists of a single cell, configured as PCell in FR1. The System Simulator shall not explicitly assign a random access preamble via dedicated signalling in the downlink.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity *NR* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to Table 6.3.2.2.1.5-1.

3. The UE shall establish a connection setup with SS, the random access procedure within the connection setup is used in the test.

4. Test 1: Correct behaviour when transmitting Random Access Preamble

   4.1. The UE shall send a preamble to the System Simulator. The System Simulator shall check that the Random Access Preamble belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured rsrp-ThresholdSSB.

5. Test 2: Correct behaviour when receiving Random Access Response

   5.1. Repeat steps 1-3.

   5.2. The UE shall send preambles to the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response containing Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

   5.3. As the received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the backoff time expires.

5.4. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

5.5. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit the msg3.

5.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in 6.3.2.2.1.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in 6.3.2.2.1.5.

6. Test 3: Correct behaviour when not receiving Random Access Response

6.1. Repeat steps 1-3.

6.2. The UE shall send preambles to the System Simulator. The System Simulator shall not respond to the first 4 preambles.

6.3. As no Random Access Response was received within the RA Response window, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the backoff time expires.

6.4. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

6.5. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit the msg3.

6.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in 6.3.2.2.1.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in 6.3.2.2.1.5.

7. Test 4: Correct behaviour when receiving an UL grant for msg3 retransmission

7.1. Repeat steps 1-3.

7.2. The UE shall send a preamble to the System Simulator. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble.

7.3. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit the msg3.

7.4. The System Simulator shall send PDCCH addressed to the Temporary C-RNTI after receiving the msg3.

7.5. The UE shall re-transmit the msg3.

7.6. The System Simulator shall check if UE re-transmit the msg3.

8. Test 5: Correct behaviour when receiving an unsuccessful UE Contention Resolution

8.1. Repeat steps 1-3.

8.2. The UE shall send a preamble to the System Simulator. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble.

8.3. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit the msg3.

8.4. The System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element not matching the CCCH SDU transmitted in msg3 uplink message.

8.5. As the UE Contention Resolution Identity included in the MAC control element did not match the CCCH SDU transmitted in the uplink message, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the backoff time expires.

8.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in 6.3.2.2.1.5.

9. Test 6: Correct behaviour when receiving a successful UE Contention Resolution

9.1. Repeat steps 1-3.

9.2. The UE shall send a preamble to the System Simulator. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble.

9.3. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit the msg3.

9.4. The System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in msg3 uplink message.

9.5. As the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU, the Contention Resolution is successful and the UE shall send ACK.

10. Test 7: Correct behaviour when contention Resolution timer expires

10.1. Repeat steps 1-3.

10.2. The UE shall send a preamble to the System Simulator. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble.

10.3. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit the msg3.

10.4. The System Simulator shall not send a response.

10.5. As there was no response, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power when the Contention Resolution Timer expires and then after the backoff timer expires.

10.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in 6.3.2.2.1.5.

#### 6.3.2.2.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.3.2.2.1.4.3-0: Common Exception messages**

| | $\hat{E}_s/N_{oc}$ | | dB | -17 | |
| | SS-RSRP | Config 1 | dBm/15kHz | -115 | |
| | | Config 2 | | -118 | |
| | SS-RSRP | | dBm/ SCS | -115 | |
| Io Note 2 | | Config 1 | dBm | -65.3/9.36MHz | For symbols without SSB index 1 |
| | | Config 2 | | -62.2/38.16MHz | |
| ss-PBCH-BlockPower | | | dBm/ SCS | -5 | As defined in clause 6.3.2 in TS 38.331 [13]. |
| Configured UE transmitted power ($P_{cMAX,f,c}$) | | | dBm | 23 | As defined in clause 6.2.4 in TS 38.101-1 [2]. |
| PRACH Configuration | | | | FR1 PRACH configuration 1 | As defined in A. 7.1. |
| Propagation Condition | | | - | AWGN | |

Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
Note 2: Es/Iot, SS-RSRP and Io level have been derived from other parameters for information purpose. They are not settable parameters.
Note 3: Void.
Note 4: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

Test 1: Correct behaviour when transmitting Random Access Preamble

- The Random Access Preamble shall be one of the Random Access Preambles associated with SSB index 0.

Test 2: Correct behaviour when receiving Random Access Response

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.1.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.1.5-3.
- The transmit timing of all PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.1.5-4.

Test 3: Correct behaviour when not receiving Random Access Response

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.1.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.1.5-3.
- The transmit timing of all PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.1.5-4.

Test 4: Correct behaviour when receiving an UL grant for msg3 retransmission

- The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

Test 5: Correct behaviour when receiving an incorrect message over Temporary C-RNTI

- The UE shall re-select a preamble and transmit with the calculated PRACH transmission power when the back off time expires.
- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.1.5-2.
- The transmit timing of the PRACH transmission shall be within the accuracy specified in Table 6.3.2.2.1.5-4.

Test 6: Correct behaviour when receiving a correct message over Temporary C-RNTI

- The UE shall send ACK if the contention resolution is successful.

Test 7: Correct behaviour when contention resolution timer expires

- The UE shall re-select a preamble and transmit with the calculated PRACH transmission power when the back off time expires if the contention resolution timer expires.
- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.1.5-2.
- The transmit timing of the PRACH transmission shall be within the accuracy specified in Table 6.3.2.2.1.5-4.

**Table 6.3.2.2.1.5-2 Absolute power tolerance Test requirements**

| Conditions | Tolerance |
|---|---|
| Normal | ± 19.1 dB |

**Table 6.3.2.2.1.5-3 Relative power tolerance Test requirements**

| Power step ΔP (Up or down) (dB) | PRACH (dB) |
|---|---|
| 2 ≤ ΔP < 3 | ± 3.2 |

**Table 6.3.2.2.1.5-4: $T_e$ Timing error Test requirements**

| Frequency Range | SCS of SSB signals (kHz) | SCS of uplink signals s(kHz) | $T_e$ |
|---|---|---|---|
| 1 | 15 | 15 | $880*T_c$ |
| | 30 | 30 | $624*T_c$ |
| Note 1: $T_c$ is the basic timing unit defined in TS 38.211 [7] | | | |

### 6.3.2.2.2 NR SA FR1 non-contention based random access

#### 6.3.2.2.2.1 Test purpose

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits.

#### 6.3.2.2.2.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards. Additionally Test 2 is applicable to UE that supports CSI-RS based Random Access Preamble which requires UE to support csi-RS-CFRA-ForHO.

#### 6.3.2.2.2.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.2.0.2.

The normative reference for this requirement is TS 38.133 [6] clauses A.6.3.2.2.2.

#### 6.3.2.2.2.4 Test description

##### 6.3.2.2.2.4.1 Initial conditions

This test can be run in the configurations defined in Table 6.3.2.2.2.4.1-1.

**Table 6.3.2.2.2.4.1-1: Non-Contention based random access test in FR1 for NR standalone supported test configurations**

| Test Case ID | Test Config Index | Description |
|---|---|---|
| 6.3.2.2.2-1 | 1 | NR: 15 kHz SSB SCS, 10MHz bandwidth, FDD |
| 6.3.2.2.2-2 | 2 | NR: 30 kHz SSB SCS, 40MHz bandwidth, TDD |
| Note: The UE is only required to be tested in one of the supported test configurations | | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.2.2.4.1-2.

**Table 6.3.2.2.2.4.1-2: Initial conditions for Non-Contention based random access test in FR1 for NR standalone**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] subclause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.2.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

1. Message contents are defined in clause 6.3.2.2.2.4.3.

2. Cell 1 is the NR FR1 serving cell (PCell). The connection setup is done according to the settings in Annex C.1.1 and C.1.2.

#### 6.3.2.2.2.4.2 Test procedure

The test consists of a single cell, configured as PCell in FR1. The System Simulator shall explicitly assign a random access preamble via dedicated signalling in the downlink. There are two subtests, to test both SSB-based non-contention based random access (subtest 1) and CSI-RS-based non-contention based random access (subtest 2).

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Ensure the UE will choose SSB with index 0 to complete this procedure. Establish SRB2 and DRB in the RRC Reconfiguration message.

2. Set the parameters according to Table 6.3.2.2.2.5-1 Subtest 1.

3. The SS shall signal a Random Access Preamble ID via a RRCReconfiguration message to the UE and initiate a Non-contention based Random Access procedure according to Table 6.3.2.2.2.4.3-3 and Table 6.3.2.2.2.4.3-4.

4. Test 1: Correct behaviour when transmitting SSB-based Random Access Preamble

   4.1. The UE shall send a preamble to the System Simulator. The System Simulator shall check that the Random Access Preamble has the Preamble Index associated with the SSB with index 0, that it arrives on a PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and that the selected PRACH occasion belongs to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

5. Test 2: Correct behaviour when transmitting CSI-RS-based Random Access Preamble

   5.1. Set the parameters according to Table 6.3.2.2.2.5-1 Subtest 2.

   5.2. Repeat steps 1-3.

   5.3. The UE shall send a preamble to the System Simulator. The System Simulator shall check that the Random Access Preamble has the Preamble Index associated with the CSI-RS configured, that it arrives on a PRACH occasion which belongs to the PRACH occasions corresponding to the CSI-RS configured, and that the selected PRACH occasion belongs to the PRACH occasions permitted by the restrictions given by the *ra-OccasionList*.

6. Test 3: Correct behaviour when receiving Random Access Response

   6.1. Repeat steps 1-3.

   6.2. The UE shall send preambles to the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response containing Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

   6.3. As the received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power.

   6.4. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

   6.5. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE may stop monitoring for Random Access Response(s).

   6.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in 6.3.2.2.2.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in 6.3.2.2.2.5.

7. Test 4: Correct behaviour when not receiving Random Access Response

   7.1. Repeat steps 1-3.

   7.2. The UE shall send preambles to the System Simulator. The System Simulator shall not respond to the first 4 preambles.

   7.3. As no Random Access Response was received within the RA Response window configured in *RACH-ConfigCommon*, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [12], and transmit with the calculated PRACH transmission power.

   7.4. The System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

   7.5. As the received Random Access Response contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE may stop monitoring for Random Access Response(s).

   7.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in 6.3.2.2.2.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in 6.3.2.2.2.5.

### 6.3.2.2.2.5 Test requirement

Table 6.3.2.2.2.5-1 defines the primary level settings for non-contention based random access test in FR1 for NR Standalone. Tables 6.3.2.2.2.5-2, 6.3.2.2.2.5-3 and 6.3.2.2.2.5-4 define the Absolute power limits, Relative power limits and uplink timing error limits respectively, and all include test tolerances.

**Table 6.3.2.2.2.5-1: General test parameters for non-contention based random access test in FR1 for NR Standalone**

| Parameter | | | Unit | Subtest 1 | Subtest 2 | Comments |
|---|---|---|---|---|---|---|
| SSB Configuration | | Config 1 | | SSB.1 FR1 | SSB.1 FR1 | As defined in A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |
| | | Config 2 | | SSB.2 FR1 | SSB.2 FR1 | |
| Number of SSBs per SS-burst | | | | 2 | 2 | Different from the definition in A.3.10 |
| SS/PBCH block index | | | | 0,1 | 0,1 | Different from the definition in A.3.10 |
| CSI-RS Configuration | | Config 1 | | N/A | CSI-RS.1.1 FDD | As defined in A.3.1.4 |

| Io Note 2 | | Config 1 | dBm | -65.3/9.36MHz | -65.3/9.36MHz | For symbols without SSB index 1 |
| | | Config 2 | | -62.2/38.16MHz | -62.2/38.16MHz | |
| ss-PBCH-BlockPower | | | dBm/ SCS | -5 | -5 | As defined in clause 6.3.2 in TS 38.331 [13]. |
| Configured UE transmitted power ($P_{cMAX,f,c}$) | | | dBm | 23 | 23 | As defined in clause 6.2.4 in TS 38.101-1 [2]. |
| PRACH Configuration | | | | FR1 PRACH configuration 2 | FR1 PRACH configuration 3 | As defined in A. 7.1. |
| Propagation Condition | | | - | AWGN | AWGN | |

Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.

| | |
|---|---|
| Note 2: | Es/Iot, SS-RSRP and Io level have been derived from other parameters for information purpose. They are not settable parameters. |
| Note 3: | Void. |
| Note 4: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required. |

Test 1: Correct behaviour when transmitting SSB-based Random Access Preamble

- The Random Access Preamble shall be one of the Random Access Preambles associated with SSB index 0.
- The Random Access Preamble shall arrive on a PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0.
- The selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

Test 2: Correct behaviour when transmitting CSI-RS-based Random Access Preamble

- The Random Access Preamble shall have the Preamble Index associated with the CSI-RS configured.
- The Random Access Preamble shall arrive on a PRACH occasion which belongs to the PRACH occasions corresponding to the CSI-RS configured.
- The selected PRACH occasion belongs to the PRACH occasions permitted by the restrictions given by the *ra-OccasionList*.

Test 3: Correct behaviour when receiving Random Access Response

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.2.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.2.5-3.
- The transmit timing of all PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.2.5-4.

Test 4: Correct behaviour when not receiving Random Access Response

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.2.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.2.5-3.
- The transmit timing of all PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.2.5-4.

**Table 6.3.2.2.2.5-2 Absolute power tolerance Test requirements**

| Conditions | Tolerance |
|---|---|
| Normal | ± 19.1 dB |

**Table 6.3.2.2.2.5-3 Relative power tolerance Test requirements**

| Power step ΔP (Up or down) (dB) | PRACH (dB) |
|---|---|
| 2 ≤ ΔP < 3 | ± 3.2 |

**Table 6.3.2.2.2.5-4: $T_e$ Timing error Test requirements**

| Frequency Range | SCS of SSB signals (kHz) | SCS of uplink signals s(kHz) | $T_e$ |
|---|---|---|---|
| 1 | 15 | 15 | $880*T_c$ |
| | 30 | 30 | $624*T_c$ |
| Note 1: $T_c$ is the basic timing unit defined in TS 38.211 [7] | | | |

### 6.3.2.2.3 NR SA FR1 2-step contention based random access

#### 6.3.2.2.3.1 Test purpose

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the MsgA PRACH and MsgA PUSCH power settings and timing are within specified limits.

#### 6.3.2.2.3.2 Test applicability

This test applies to all types of NR FR1 UE from Release 16 onwards and twoStepRACH-r16.

#### 6.3.2.2.3.3 Minimum conformance requirement

Same as in clause 4.3.2.2.3.3.

The normative reference for this requirement is TS 38.133 [6] clause 6.2.2 and A.6.3.2.2.3.

#### 6.3.2.2.3.4 Test description

##### 6.3.2.2.3.4.1 Initial conditions

This test can be run in the configurations defined in Table 6.3.2.2.3.4.1-1.

**Table 6.3.2.2.3.4.1-1: Supported test configurations**

| Test Case ID | Test Config Index | Description |
|---|---|---|
| 6.3.2.2.3-1 | 1 | NR: 15 kHz SSB SCS, 10MHz bandwidth, FDD |
| 6.3.2.2.3-2 | 2 | NR: 30 kHz SSB SCS, 40MHz bandwidth, TDD |
| Note: The UE is only required to be tested in one of the supported test configurations | | |

Before the test procedure, Downlink and Uplink calibrations are carried out to derive signalled parameter values. This is necessary to ensure that the test case operates within the specified ranges. The detail of the calibration process is implementation dependent, but shall derive the values of $\Delta_{DL}$ and $\Delta_{UL}$ according to the following principles:

With the UE configured to report SS-RSRP, the $\Delta_{DL}$ value is calculated as (RSRP_$_{REP}$ – RSRP_76), where RSRP_$_{REP}$ is the SS-RSRP Reported value according to TS 38.133 [6] Table 10.1.6.1-1 with -80.6dBm/SCS applied at the Reference point. For a Reported value RSRP_x, x is treated as a positive integer value.

With the UE configured to send a first PRACH preamble, $\Delta_{UL}$ value is calculated as -ROUND(PPRACH0 -1), where PPRACH0 is the measured first PRACH power with -80.6dBm/SCS applied at the Reference point, and with signalled values *preambleReceivedTargetPower* = -100dBm and *ss-PBCH-BlockPower* = 20dBm.

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.2.3.4.1-2.

**Table 6.3.2.2.3.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, E.1.1, E.1.3.1 and Table E.3-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 4.3.2.2.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

1. Message contents are defined in clause 6.3.2.2.3.4.3.
2. Cell 1 is the NR FR1 serving cell (PCell). The connection setup is done according to the settings in Annex C.1.1 and C.1.2.

##### 6.3.2.2.3.4.2 Test procedure

The test consists of a single cell, configured as PCell in FR1. The System Simulator shall not explicitly assign a random access preamble via dedicated signalling in the downlink.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity *NR* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to Table 6.3.2.2.1.5-1.

3. The UE shall establish a connection setup with SS, the random access procedure within the connection setup is used in the test.

4. Test 1: Correct behaviour when transmitting MsgA:

   4.1. The UE shall send a MsgA to the System Simulator. The System Simulator shall check that the MsgA preamble belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SSB_RP above the configured rsrp-ThresholdSSB.

   4.2 Measure the power and timing of the first preamble and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the power of the first MsgA PUSCH transmission and it shall not exceed the values specified in clause 6.3.2.2.3.5.

5. Test 2: Correct behaviour when receiving MsgB:

   5.1. Repeat steps 1-3.

   5.2. The UE shall send preambles to the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB containing identifiers that do not match the transmitted Random Access Preamble.

   5.3. As the received MsgB contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [12], and transmit with the calculated MsgA PRACH transmission power when the backoff time expires.

   5.4. The System Simulator shall transmit a MsgB containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

   5.5. As the received MsgB contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit an ACK and stop monitoring for MsgB.

   5.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the power of the first MsgA PUSCH transmission and it shall not exceed the values specified in clause 6.3.2.2.3.5.

6. Test 3: Correct behaviour when not receiving MsgB:

   6.1. Repeat steps 1-3.

   6.2. The UE shall send preambles to the System Simulator. The System Simulator shall not respond to the first 4 preambles.

   6.3. As no MsgB was received within the RA Response window, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [12], and transmit with the calculated MsgA PRACH transmission power when the backoff time expires.

   6.4. The System Simulator shall transmit a MsgB containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

   6.5. As the received MsgB contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit an ACK and stop monitoring for MsgB.

   6.6 Measure the power and timing of the first preamble and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the power of the first MsgA PUSCH transmission and it shall not exceed the values specified in clause 6.3.2.2.3.5.

#### 6.3.2.2.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3.1 with the following exceptions:

**Table 6.3.2.2.3.4.3-0: Common Exception messages**

| Default Message Contents | |
|---|---|
| Common contents of system information blocks exceptions | |

| Configured UE transmitted power ($P_{\mathrm{cMAX,f,c}}$) | | | dBm | 23 | As defined in clause 6.2.4 in TS 38.101-1 [2]. |
| MsgA Configuration | | | | FR1 MsgA configuration 1 | As defined in A.7A.1. |
| *msgA-RSRP-ThresholdSSB* | | | dBm | RSRP_51 | The actual value of the threshold is -105dBm, as defined in TS 38.331 [13]. |
| Propagation Condition | | | - | AWGN | |

Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
Note 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
Note 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

Test 1: Correct behaviour when transmitting MsgA:

- The MsgA shall be one of the Random Access Preambles associated with SSB index 0.
- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.3.5-2.
- The power of the first MsgA PUSCH transmission shall be -25 dBm for test configuration 1 and -22 dBm for test configuration 2 within the accuracy specified in Table 6.3.2.2.3.5-2A.

Test 2: Correct behaviour when receiving MsgB:

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.3.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.3.5-3.
- The transmit timing of all MsgA PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.3.5-4.
- The power of the first MsgA PUSCH transmission shall be -25 dBm for test configuration 1 and -22 dBm for test configuration 2 within the accuracy specified in Table 6.3.2.2.3.5-2A.

Test 3: Correct behaviour when not receiving MsgB:

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.3.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.3.5-3.
- The transmit timing of all MsgA PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.3.5-4.
- The power of the first MsgA PUSCH transmission shall be -25 dBm for test configuration 1 and -22 dBm for test configuration 2 within the accuracy specified in Table 6.3.2.2.3.5-2A.

**Table 6.3.2.2.3.5-2: MsgA PRACH Absolute power tolerance Test requirements**

| Conditions | Tolerance |
|---|---|
| Normal | ± 19.1 dB |

### 6.3.2.2.4 NR SA FR1 2-step non-contention based random access

#### 6.3.2.2.4.1 Test purpose

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the MsgA PRACH and MsgA PUSCH power settings and timing are within specified limits.

#### 6.3.2.2.4.2 Test applicability

This test applies to all types of NR FR1 UE from Release 16 onwards and twoStepRACH-r16.

#### 6.3.2.2.4.3 Minimum conformance requirement

Same as in clause 4.3.2.2.4.3.

The normative reference for this requirement is TS 38.133 [6] clause 6.2.2 and A.6.3.2.2.4.

#### 6.3.2.2.4.4 Test description

##### 6.3.2.2.4.4.1 Initial conditions

This test can be run in the configurations defined in Table 6.3.2.2.4.4.1-1.

**Table 6.3.2.2.4.4.1-1: Supported test configurations**

| Test Case ID | Test Config Index | Description |
|---|---|---|
| 6.3.2.2.4-1 | 1 | NR: 15 kHz SSB SCS, 10MHz bandwidth, FDD |
| 6.3.2.2.4-2 | 2 | NR: 30 kHz SSB SCS, 40MHz bandwidth, TDD |
| Note: The UE is only required to be tested in one of the supported test configurations | | |

Before the test procedure, Downlink and Uplink calibrations are carried out to derive signalled parameter values. This is necessary to ensure that the test case operates within the specified ranges. The detail of the calibration process is implementation dependent, but shall derive the values of $\Delta_{DL}$ and $\Delta_{UL}$ according to the following principles:

With the UE configured to report SS-RSRP, the $\Delta_{DL}$ value is calculated as (RSRP_$_{REP}$ – RSRP_76), where RSRP_$_{REP}$ is the SS-RSRP Reported value according to TS 38.133 [6] Table 10.1.6.1-1 with -80.6dBm/SCS applied at the Reference point. For a Reported value RSRP_x, x is treated as a positive integer value.

With the UE configured to send a first PRACH preamble, $\Delta_{UL}$ value is calculated as -ROUND(PPRACH0 -1), where PPRACH0 is the measured first PRACH power with -80.6dBm/SCS applied at the Reference point, and with signalled values *preambleReceivedTargetPower* = -100dBm and *ss-PBCH-BlockPower* = 20dBm.

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.2.4.4.1-2.

**Table 6.3.2.2.4.4.1-2: Initial conditions**

| Parameter | Value | Comment |
|---|---|---|

| | | | |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, E.1.1, E.1.3.1 and Table E.3-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 4.3.2.2.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

1. Message contents are defined in clause 6.3.2.2.4.4.3.

2. Cell 1 is the NR FR1 serving cell (PCell). The connection setup is done according to the settings in Annex C.1.1 and C.1.2.

#### 6.3.2.2.4.4.2 Test procedure

The test consists of a single cell, configured as PCell in FR1. The System Simulator shall explicitly assign a random access preamble via dedicated signalling in the downlink.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message.

2. Set the parameters according to Table 6.3.2.2.1.5-1.

3. The SS shall signal a Random Access Preamble ID via a RRCReconfiguration message to the UE and initiate a Non-contention based Random Access procedure according to Table 6.3.2.2.2.4.3-3 and Table 6.3.2.2.2.4.3-4.

4. Test 1: Correct behaviour when transmitting MsgA:

   4.1. The UE shall send a MsgA to the System Simulator. The System Simulator shall check that the MsgA preamble belongs to one of the Random Access Preambles associated with the SSB with index 0, that it arrives on a PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and that the selected PRACH occasion belongs to the PRACH occasions permitted by the restrictions given by the *msgA-SSB-SharedRO-MaskIndex*.

   4.2 Measure the power and timing of the first preamble and it shall not exceed the values specified in clause 6.3.2.2.4.5. Measure the power of the first MsgA PUSCH transmission and it shall not exceed the values specified in clause 6.3.2.2.4.5.

5. Test 2: Correct behaviour when receiving MsgB:

   5.1. Repeat steps 1-3.

   5.2. The UE shall send preambles to the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB containing identifiers that do not match the transmitted Random Access Preamble.

   5.3. As the received MsgB contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [12], and transmit with the calculated MsgA PRACH transmission power when the backoff time expires.

   5.4. The System Simulator shall transmit a MsgB containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

   5.5. As the received MsgB contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit an ACK and stop monitoring for MsgB.

   5.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in clause 6.3.2.2.4.5. Measure the relative power and timing applied to additional preambles (last 4 preambles)

and it shall not exceed the values specified in clause 6.3.2.2.4.5. Measure the power of the first MsgA PUSCH transmission and it shall not exceed the values specified in clause 6.3.2.2.4.5.

6. Test 3: Correct behaviour when not receiving MsgB:

   6.1. Repeat steps 1-3.

   6.2. The UE shall send preambles to the System Simulator. The System Simulator shall not respond to the first 4 preambles.

   6.3. As no MsgB was received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA*, the UE shall perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [12], and transmit with the calculated MsgA PRACH transmission power when the backoff time expires.

   6.4. The System Simulator shall transmit a MsgB containing a Random Access Preamble identifier matching the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator.

   6.5. As the received MsgB contains a Random Access Preamble identifier that matches the transmitted Random Access Preamble, the UE shall transmit an ACK and stop monitoring for MsgB.

   6.6. Measure the power and timing of the first preamble and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the relative power and timing applied to additional preambles (last 4 preambles) and it shall not exceed the values specified in clause 6.3.2.2.3.5. Measure the power of the first MsgA PUSCH transmission and it shall not exceed the values specified in clause 6.3.2.2.4.5.

#### 6.3.2.2.4.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3.1 with the following exceptions:

**Table 6.3.2.2.4.4.3-0: Common Exception messages**

| Default Message Contents | |
|---|---|
| Common contents of system information blocks exceptions | |
| Default RRC messages and information elements contents exceptions | |

| Propagation Condition | | | - | AWGN | |

Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
Note 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
Note 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

Test 1: Correct behaviour when transmitting MsgA:

- The MsgA shall be one of the Random Access Preambles associated with SSB index 0.
- The MsgA shall arrive on a PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0.
- The selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *msgA-SSB-SharedRO-MaskIndex*.
- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.4.5-2.
- The power of the first MsgA PUSCH transmission shall be -25 dBm for test configuration 1 and -22 dBm for test configuration 2 within the accuracy specified in Table 6.3.2.2.4.5-2A.

Test 2: Correct behaviour when receiving MsgB:

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.4.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.4.5-3.
- The transmit timing of all PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.4.5-4.
- The power of the first MsgA PUSCH transmission shall be -25 dBm for test configuration 1 and -22 dBm for test configuration 2 within the accuracy specified in Table 6.3.2.2.4.5-2A.

Test 3: Correct behaviour when not receiving MsgB:

- The power of the first preamble shall be -22 dBm within the accuracy specified in Table 6.3.2.2.4.5-2.
- The relative power for preamble ramping step shall be 2 dB within the accuracy specified in Table 6.3.2.2.4.5-3.
- The transmit timing of all PRACH transmissions shall be within the accuracy specified in Table 6.3.2.2.4.5-4.
- The power of the first MsgA PUSCH transmission shall be -25 dBm for test configuration 1 and -22 dBm for test configuration 2 within the accuracy specified in Table 6.3.2.2.4.5-2A.

**Table 6.3.2.2.4.5-2: MsgA PRACH Absolute power tolerance Test requirements**

| Conditions | Tolerance |

## 6.3.2.3 RRC connection release with redirection

### 6.3.2.3.0 Minimum conformance requirements

#### 6.3.2.3.0.1 Minimum conformance requirements for FR1 RRC connection release with redirection

The UE shall be capable of performing the RRC connection release with redirection to the target NR cell within $T_{connection_release_redirect_NR}$.

The time delay ($T_{connection_release_redirect_NR}$) is the time between the end of the last slot containing the RRC command, "*RRCRelease*" (TS 38.331 [13]) on the NR PDSCH and the time the UE starts to send random access to the target NR cell. The time delay ($T_{connection_release_redirect_NR}$) shall be less than:

$$T_{connection_release_redirect_NR} = T_{RRC_procedure_delay} + T_{identify\text{-}NR} + T_{SI\text{-}NR} + T_{RACH}$$

The target NR cell shall be considered detectable when for each relevant SSB, the side conditions should be met that,

- SSB_RP and SSB Ês/Iot according to Annex B.2.5 for a corresponding NR Band.

$T_{RRC_procedure_delay}$: It is the RRC procedure delay for processing the received message "*RRCRelease*" as defined in clause 6.2.2 of TS 38.331 [13].

$T_{identify\text{-}NR}$: It is the time to identify the target NR cell and depend on the frequency range of the target NR cell. It is defined in table 6.3.2.3.0.1-1. Note that $T_{identify\text{-}NR} = T_{PSS/SSS\text{-}sync} + T_{meas}$, in which $T_{PSS/SSS\text{-}sync}$ is the cell search time and $T_{meas}$ is the measurement time due to cell selection criteria evaluation.

$T_{SI\text{-}NR}$: It is the time required for acquiring all the relevant system information of the target NR cell. This time depends upon whether the UE is provided with the relevant system information of the target NR cell or not by the old NR cell before the RRC connection is released. $T_{SI\text{-}NR} = 0$ provided the UE is provided with the SI (including MIB and all relevant SIBs) of the target NR cell before the RRC connection is released by the old NR cell.

$T_{RACH}$: It is the delay caused due to the random access procedure when sending random access to the target NR cell. This delay depends on the PRACH configuration defined in TS 38.133 [6] Table 6.3.3.2-2 or TS 38.133 [6] Table 6.3.3.2-3 for FR1 and in TS 38.133 [6] Table 6.3.3.2-4 for FR2.

$T_{rs}$ is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the redirection command, otherwise $T_{rs}$ is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing configured for the RRC connection release with redirection. If the UE is not provided with SMTC configuration or measurement object for the frequency which is also configured for the RRC connection release with redirection then:

- the requirement in this section is applied with $T_{rs}$ = 20 ms assuming the SSB transmission periodicity is not larger than 20 ms,
- there is no requirement if the SSB transmission periodicity is larger than 20ms.

**Table 6.3.2.3.0.1-1: Time to identify target NR cell for RRC connection release with redirection to NR**

| Frequency range of target NR cell | $T_{identify\text{-}NR}$ |
|---|---|
| FR1 | MAX (680 ms, 11 x $T_{rs}$) |
| FR2 | MAX (880 ms, 8 x 11 x $T_{rs}$) |
| Note : If the UE has been provided with higher layer in TS 38.331 [13] signalling of *smtc2* prior to the redirection command, SMTC follows *smtc1* or *smtc2* according to the physical cell ID of the target cell. | |

The normative reference for this requirement is TS 38.133 [6] clauses 6.2.3.2.1.

### 6.3.2.3.0.2 Minimum conformance requirements for FR1 – E-UTRAN RRC connection release with redirection

The UE shall be capable of performing the RRC connection release with redirection to the target E-UTRAN cell within $T_{connection_release_redirect_E\text{-}UTRA}$.

The time delay ($T_{connection_release_redirect_E\text{-}UTRA}$) is the time between the end of the last slot containing the RRC command, "*RRCRelease*" (TS 38.331 [13]) on the PDSCH and the time the UE starts to send random access to the target E-UTRA cell. The time delay ($T_{connection_release_redirect_E\text{-}UTRA}$) shall be less than:

$$T_{connection_release_redirect_E\text{-}UTRA} = T_{RRC_procedure_delay} + T_{identify\text{-}E\text{-}UTRA} + T_{SI\text{-}E\text{-}UTRA} + T_{RACH}$$

The target E-UTRA FDD or TDD cell shall be considered detectable when for each relevant SSB:

- RSRP related conditions in the accuracy requirements in Section 10.2.2 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2 and Annex B.3 of TS 36.133 [23],
- RSRQ related conditions in the accuracy requirements in Section 10.2.3 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2 and Annex B.3 of TS 36.133 [23],
- RS-SINR related conditions in the accuracy requirements in Section 10.2.5 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2 and Annex B.3 of TS 36.133 [23].

$T_{RRC_procedure_delay}$: It is the RRC procedure delay for processing the received message "*RRCRelease*" as defined in clause 6.2.2 of TS 38.331 [13].

$T_{identify\text{-}E\text{-}UTRA}$: It is the time to identify the target E-UTRA cell. It shall be less than 320 ms.

$T_{SI\text{-}E\text{-}UTRA}$: It is the time required for acquiring all the relevant system information of the target E-UTRA cell. This time depends upon whether the UE is provided with the relevant system information (SI) of the target E-UTRA cell or not by the old NR cell before the RRC connection is released. $T_{SI\text{-}E\text{-}UTRA}$ = 0 provided the UE is provided with the SI (including MIB and all relevant SIBs) of the target E-UTRA cell before the RRC connection is released by the old NR cell.

$T_{RACH}$: It is the delay caused due to the random access procedure when sending random access to the target E-UTRA cell.

The normative reference for this requirement is TS 38.133 [6] clauses 6.2.3.2.2.

### 6.3.2.3.1 NR SA FR1 RRC connection release with redirection

#### 6.3.2.3.1.1 Test purpose

This test is to verify RRC connection release with redirection from NR to NR.

#### 6.3.2.3.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.2.3.1.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.3.0.1.

The normative reference for this requirement is TS 38.133 [6] A.6.3.2.3.1.

#### 6.3.2.3.1.4 Test description

##### 6.3.2.3.1.4.1 Initial conditions

This test can be run in the configurations defined in Table 6.3.2.3.1.4.1-1.

**Table 6.3.2.3.1.4.1-1: Redirection from NR to NR test configurations**

| Configuration | Description |
|---|---|
| 6.3.2.3.1-1 | Source cell: NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.3.2.3.1-2 | Source cell: NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.3.2.3.1-3 | Source cell: NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.3.1.4.1-2.

**Table 6.3.2.3.1.4.1-2: Initial conditions for Redirection from NR to NR test case**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.3.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameters for PCell and neighbour cell are given in Table 6.3.2.3.1.4.1-3 below.

2. Message contents are defined in clause 6.3.2.3.1.4.3.

3. There are two carriers and two NR cells specified in the test. Cell 1 and Cell 2 are configured according to Annex C.1.1 and C.1.2.

**Table 6.3.2.3.1.4.1-3: General test parameters for Redirection from NR to NR test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | 2.3 | |

### 6.3.2.3.1.4.2 Test procedure

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The "*RRCRelease*" message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2. Cell 1 and Cell 2 belong to different tracking areas.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.
2. Set the parameters according to T1 in Table 6.3.2.3.1.5-1. T1 starts.
3. SS shall transmit an *RRCRelease* during period T1.
4. The SS shall switch the power setting from T1 to T2 as specified in Table 6.3.2.3.1.5-1. When the last TTI containing the *RRCRelease* message is sent to UE, T2 starts.
5. If the UE transmits the PRACH to Cell 2 less than 2240 ms from the beginning of time period T2 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.
6. After T2 expires, the UE shall be switched off. Then ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell and Cell 2 shall be powered OFF.
7. The SS shall set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.
8. Repeat step 2-7 until the confidence level according to Table G.2.3-1 in Annex G clause G.2 is achieved.

### 6.3.2.3.1.4.3 Message contents

| Propagation condition | | - | AWGN | | | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

The UE shall start to transmit the PRACH to Cell 2 less than 2240 ms from the beginning of time period T2.

The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_NR} = T_{RRC_procedure_delay} + T_{identify\text{-}NR} + T_{SI\text{-}NR} + T_{RACH},$$

where:

$T_{RRC_procedure_delay}$ = 110 ms and is specified in clause 12 in TS 38.331 [13].

$T_{identify\text{-}NR}$ = 680 ms in the test.

$T_{SI\text{-}NR}$ = 1280 ms is assumed, it is the time required for receiving all the relevant system information as defined in TS 38.331 [13] for the target NR cell.

$T_{RACH}$ = 170 ms in the test.

This gives a total of 2240 ms.

### 6.3.2.3.2 NR SA FR1 – E-UTRA RRC connection release with redirection

#### 6.3.2.3.2.1 Test purpose

This test is to verify RRC connection release with redirection from NR to E-UTRAN.

#### 6.3.2.3.2.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.3.2.3.2.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.3.0.2.

The normative reference for this requirement is TS 38.133 [6] A.6.3.2.3.2.

#### 6.3.2.3.2.4 Test description

##### 6.3.2.3.2.4.1 Initial conditions

This test can be run in the configurations defined in Table 6.3.2.3.2.4.1-1.

**Table 6.3.2.3.2.4.1-1: Redirection from NR to E-UTRAN test configurations**

| Configuration | Description |
|---|---|
| 6.3.2.3.2-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE FDD |
| 6.3.2.3.2-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE FDD |

| | |
|---|---|
| 6.3.2.3.2-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.3.2.3.2-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE TDD |
| 6.3.2.3.2-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE TDD |
| 6.3.2.3.2-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE TDD |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.3.2.4.1-2.

**Table 6.3.2.3.2.4.1-2: Initial conditions for Redirection from NR to E-UTRAN test case**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.3.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.6.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.2 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameters settings are given in Table 6.3.2.3.2.4.1-3 below.

2. Message contents are defined in clause 6.3.2.3.2.4.3.

3. There are two cells specified in the test. Cell 1 is the NR PCell and Cell 2 is the E-UTRAN neighbour cell. Cell 1 is configured according to Annex C.1.1 and C.1.2, Cell 2 is configured according to TS 36.521-3 [26] Annex C.1.0 and C.1.1.

**Table 6.3.2.3.2.4.1-3: General test parameters for Redirection from NR to E-UTRAN test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | 2.3 | |

### 6.3.2.3.2.4.2 Test procedure

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The "*RRCRelease*" message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.2.3.2.5-1 and 6.3.2.3.2.5-2. T1 starts.

3. SS shall transmit an *RRCRelease* during period T1.

4. The SS shall start T2 timer when the last TTI containing the *RRCRelease* message is sent to UE.

5. When T2 starts, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.2.3.2.5-1 for Cell 1 and Table 6.3.2.3.2.5-2 for Cell 2.

6. The UE shall transmit RRCConnectionRequest message.

7. If the UE transmits the PRACH to Cell 2 less than 2205 ms from the beginning of time period T2 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

8. After T2 expires, the UE shall be switched off. Then ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5. Cell 1 is the active cell and Cell 2 shall be powered OFF.

9. The SS shall set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 14+2) for next iteration of the test procedure loop.

10. Repeat step 2-9 until the confidence level according to Table G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.2.3.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

Note 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [24].
Note 3: DL RMCs and OCNG patterns are specified in sections A 3.1 and A 3.2 of TS 36.133 [23] respectively.
Note 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 7: Propagation condition and correlation matrix are defined in section B.2 in TS 36.101 [27].

The UE shall start to transmit the PRACH to Cell 2 less than 2205 ms from the beginning of time period T2.

The rate of correct RRC connection release redirection to E-UTRAN observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_E\text{-}UTRA} = T_{RRC_procedure_delay} + T_{identify\text{-}E\text{-}UTRA} + T_{SI\text{-}E\text{-}UTRA} + T_{RACH},$$

where:

$T_{RRC_procedure_delay}$ = 110 ms and is specified in clause 12 in TS 38.331 [13].

$T_{identify\text{-}E\text{-}UTRA}$ = 800 ms in the test.

$T_{SI\text{-}E\text{-}UTRA}$ = 1280 ms is assumed, it is the time required for receiving all the relevant system information as defined in TS 38.331 [13] for the target E-UTRAN cell.

$T_{RACH}$ = 15 ms in the test.

This gives a total of 2205 ms.

## 6.3.2.4 LTM PDCCH-order Random Access

### 6.3.2.4.0 Minimum conformance requirements

When PRACH transmission is triggered by PDCCH order on target LTM cell,

- During RACH transmission, the UE is allowed an interruption on activated serving cell's DL slot(s) overlapped with RACH occasion depending on UE capability.
- Before and after PRACH transmission, UE is allowed an interruption on any activated serving cell as follows:
  - an interruption on any active serving cell:
    - of up to the duration shown in table 6.3.2.4.0-1, if PRACH bandwidth is outside active UL BWP but within one of configured UL BWPs of any active serving cell, or
    - of up to ceil(Y/NR Slot length)+1 slots, where Yms as reported in UE capability, if PRACH bandwidth is outside any of the configured UL BWPs of any active serving cell

**Table 6.3.2.4.0-1: Interruption duration due to PDCCH ordered RACH on target LTM cell when PRACH bandwidth is outside active UL BWP but within one of configured UL BWPs of any active serving cell**

| $\mu$ | NR Slot length (ms) of victim cell | Interruption length X (slots) |
|---|---|---|
| 0 | 1 | 2 |
| 1 | 0.5 | 2 |
| 2 | 0.25 | 4 |
| 3 | 0.125 | 6 |

The reference point for the UE initial transmit timing control requirement shall be the downlink timing of the reference cell minus $(N_{\text{TA}} + N_{\text{TA offset}}) \times T_{\text{c}}$. The downlink timing is defined as the time when the first path (in time) of the corresponding downlink frame used by the UE to determine downlink timing is received from the reference cell at the UE antenna. $N_{\text{TA}}$ for PRACH is defined as 0.

$(N_{\text{TA}} + N_{\text{TA offset}}) \times T_{\text{c}}$ (in $T_c$ units) for other channels is the difference between UE transmission timing and the downlink timing immediately after when the last timing advance was applied. $N_{\text{TA}}$ for other channels is not changed until next timing advance is received. The value of $N_{\text{TA offset}}$ depends on the duplex mode of the cell in which the uplink transmission takes place and the frequency range. $N_{\text{TA offset}}$ is defined in Table 6.3.2.4.0-2.

**Table 6.3.2.4.0-2: The Value of $N_{\text{TA offset}}$**

| Frequency range and band of cell used for uplink transmission | $N_{\text{TA offset}}$ (Unit: $T_C$) |
|---|---|
| FR1 FDD or TDD band with neither E-UTRA–NR nor NB-IoT–NR coexistence case | 25600 (Note 1) |
| FR1 FDD band with E-UTRA–NR and/or NB-IoT–NR coexistence case | 0 (Note 1) |
| FR1 TDD band with E-UTRA–NR and/or NB-IoT–NR coexistence case | 39936 (Note 1) |
| FR2 | 13792 |
| Note 1: The UE identifies $N_{\text{TA offset}}$ based on the information n-TimingAdvanceOffset as specified in TS 38.331 [13]. If UE is not provided with the information n-TimingAdvanceOffset, the default value of $N_{\text{TA offset}}$ is set as 25600 for FR1 band.<br>Note 2: Void | |

### 6.3.2.4.1 NR SA FR1 PDCCH-order RACH on neighbour cell when RACH BW is within active UL BWP

#### 6.3.2.4.1.1 Test Purpose

This test is to verify the requirement for PDCCH-order RACH on neighbour cell in FR1 when RACH BW is within active UL BWP specified in TS 38.213 [8] clause 8.1 and UE transmit timing in TS 38.133 [6] clause 7.1 for UE supporting *rach-EarlyTA-Measurement-r18*.

#### 6.3.2.4.1.2 Test applicability

This test applies to all NR UEs supporting NR LTM for MCG with RACH-less, L1-RSRP measurement and report, as well as interruptions caused by PDCCH order from Release 18 onwards, and with optional support for *rach-EarlyTA-Measurement-r18*. The test consists of 3 subtests, and the UE is required to pass one among them.

#### 6.3.2.4.1.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.2.4.1.

#### 6.3.2.4.1.4 Test description

##### 6.3.2.4.1.4.1 Initial conditions

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table 6.3.2.4.1.4-1. No gap patterns are configured in the test case.

**Table 6.3.2.4.1.4-1: PDCCH order RACH on Neighbour cell in FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Candidate cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Candidate cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Candidate: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.4.1.4-2.

**Table 6.3.2.4.1.4-2: Initial conditions for PDCCH-order RACH on Neighbour cell in FR1**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.4.1.4-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | No fader. | | |

1. Message contents are defined in clause 6.3.2.4.1.4.3.
2. Cell 1 is the NR FR1 serving cell (PCell). Cell 2 is the NR FR1 neighbour cell. The UE has to report L3 measurement results and performs SSB based L1-RSRP measurement on Cell 2.

##### 6.3.2.4.1.4.2 Test procedure

This test case contains 3 tests (Test 1, 2, and 3) and UE may have to pass one of the tests based on the defined conditions.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR and Test Mode On according to TS 38.508-1 [14] clause 4.5.
2. Set the parameters according to T1 in Table 6.3.2.4.1.5-1 and 6.3.2.4.1.5-2.

3. The UE shall establish a connection setup with SS Cell 1, the random access procedure within the connection setup is used in the test.

4. The SS shall transmit an RRCReconfiguration message to configure event A3 triggered measurement reporting.

5. The UE shall transmit a MeasurementReport message triggered by Event A3.

6. The SS sends LTM-Candidate-r18 for Cell 2.

7. UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2, and UE shall report a valid L1-RSRP result of Cell 2.

If a UE supports *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 1. If a UE supports *ltm-MAC-CE-SeparateTCI-r18* and does not support *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 2. If a UE supports neither *ltm-MAC-CE-SeparateTCI-r18* nor *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 3.

8. Test 1: Joint TCI state configuration

   8.1. T1 starts from UE transmitting a valid L1 report of Cell 2.

   8.2. The SS sends TCI state activation MAC CE to active CandidateTCI-State#1 of Cell 2 no later than T1 + 100 ms.

   8.3. The start of T2 is the instant when DCI 1_0 PDCCH order to trigger PRACH transmission on Cell 2 is sent to the UE. The SS change the parameters according to T2 in Table 6.3.2.4.1.5-1 and 6.3.2.4.1.5-2. The SS shall schedule on Cell 1 continuously for both UL and DL at available slots.

   8.4. The UE shall transmit the PRACH preamble to Cell 2. If the UE transmits the PRACH preamble in the first available PRACH occasion after $N_{T,2}$ + 0.5ms + $T_{\mathrm{SSB}}$ (specified in clause 6.3.2.4.1.5) from the beginning of T2, then count a success for the event "PRACH occasion". Otherwise count a fail for the event "PRACH occasion".

   8.5. If the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ (specified in clause 6.3.2.4.1.5) of the first detected path of DL SSB of Cell 2, then count a success for the event "PRACH timing". Otherwise, count a fail for the event "PRACH timing".

   8.6. During T2, if UL DTX is only observed by the SS within [the overlapped slot to transmit PRACH] and 2 symbols before and after the PRACH occasion, and DL DTX is only observed by the SS within the overlapped slot to transmit PRACH, then count a success for the event "Pcell DTX". Otherwise, count a fail for the event "Pcell DTX".

   8.7. Repeat step 1-8 until a test verdict has been achieved.

9. Test 2: Separate TCI state configuration

   Test steps are the same as Step 8 with following exceptions:

   9.2. The SS sends TCI state activation MAC CE to active CandidateTCI-State#1 and CandidateTCI-UL-State #1 of Cell 2 no later than T1 + 100 ms.

   Repeat step 1-7 and 9 until a test verdict has been achieved.

10. Test 3: No candidate TCI state configurations

    Test steps are the same as Step 8 with following exceptions:

    The SS shall not send any TCI state activation MAC CE to active TCI state of Cell 2.

    Repeat step 1-7 and 10 until a test verdict has been achieved.

The rate of correct events observed during repeated tests shall be at least 90%.

Each of the events "PRACH occasion", "Pcell DTX" as well as "PRACH timing" are evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved. Different events may require different times for a verdict. If all events pass, the test passes. If one event fails, the test fails.

#### 6.3.2.4.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and clause 7.3 with the following exceptions:

**Table 6.3.2.4.1.4.3-1: Common Exception messages**

| Default Message Contents | |

| Propagation condition | - | AWGN | AWGN |
|---|---|---|---|
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |
| Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | |

The UE shall transmit the PRACH preamble to Cell 2 in the first available PRACH occasion after $N_{T,2}$ + 0.5ms + $T_{SSB}$ from the beginning of time period T2. After transmitting PRACH on Cell 2, UE shall retune back to Cell 1.

NOTE: The PDCCH order RACH delay can be expressed as: $N_{T,2} + T_{BWPswitchDelay} + \Delta_{Delay} + T_{switch} + T_{SSB} + \Delta_{RF/BB\ preparation}$, where:

- $N_{T,2}$ is a time duration of $N_2$ symbols corresponding to a PUSCH preparation time for UE processing capability 1 assuming $\mu$ corresponds to the smallest SCS configuration between the SCS configuration of the PDCCH order and the SCS configuration of the corresponding PRACH transmission and is specified in Table 6.4-1 in 38.214 [9].

- $T_{BWPswitchDelay}$ = 0, $T_{switch}$ = 0, $\Delta_{RF/BB\ preparation}$ = 0

- $\Delta_{Delay}$ = 0.5ms

- $T_{SSB}$ = 0 for UE supporting *ltm-MAC-CE-JointTCI-r18* and/or *ltm-MAC-CE-SeparateTCI-r18*, otherwise $T_{SSB} = T_{first-SSB_RACH} + T_{SSB-proc}$ , where $T_{first-SSB_RACH}$ is the time to first SSB after 1 slot from the end of the slot that UE receives PDCCH-order , and $T_{SSB-proc}$ = 2 ms, which is the time for SSB processing.

During T2, interruption on Cell 1 UL shall not happen outside the overlapped slot to transmit PRACH and *N* symbols before and after the PRACH occasion as defined in clause 8.1 in 38.213 [8], where N=2. During T2, interruption on Cell 1 DL shall not occur outside the overlapped slot to transmit PRACH.

The test equipment will verify that the timing of PRACH transmission on Cell 2 is within (NTA + NTA_offset) ×Tc ± Te of the first detected path of DL SSB of Cell 2.

a. The $N_{TA_offset}$ value (in $T_c$ units) is 25600

b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in TS 38.133 [6] Table 7.1.2-1.

The rate of correct events observed during repeated tests shall be at least 90%.

### 6.3.2.4.2 NR SA FR1 PDCCH-ordered RACH to an inter-frequency candidate cell for LTM

#### 6.3.2.4.2.1 Test Purpose

This test is to verify the requirement for the NR FR1-NR FR1 PDCCH-ordered RACH to an inter-frequency candidate cell in FR1 for LTM. This test is for UE supporting PDCCH-ordered RACH to an inter-frequency candidate cell, whose SSB is outside active BWPs of the UE.

#### 6.3.2.4.2.2 Test applicability

This test applies to all NR UEs supporting NR LTM for MCG with RACH-less, L1-RSRP measurement and report, as well as interruptions caused by PDCCH order from Release 18 onwards, and with optional support for *rach-EarlyTA-Measurement-r18*. The test consists of 2 subtests, and the UE is required to pass one among them.

#### 6.3.2.4.2.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.2.4.2.

#### 6.3.2.4.2.4 Test description

##### 6.3.2.4.2.4.1 Initial conditions

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency from the PCell. Test configurations are given in Table 6.3.2.4.2.4-1. Measurement gap patterns are configured in the test case and the SSB of Cell2 is outside the active BWP of Cell 1. The PCell is continuously scheduled during the whole test.

**Table 6.3.2.4.2.4-1: Inter-frequency PDCCH-ordered RACH from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.4.2.4-2.

**Table 6.3.2.4.2.4-2: Initial conditions for PDCCH-order RACH on Neighbour cell in FR1**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.4.2.4-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | No fader. | | |

1. Message contents are defined in clause 6.3.2.4.2.4.3.
2. Cell 1 is the NR FR1 serving cell (PCell). Cell 2 is the NR FR1 neighbour cell.

#### 6.3.2.4.2.4.2 Test procedure

This test case contains 2 tests and UE is required to pass one among Test 1, Test 2.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR and Test Mode On according to TS 38.508-1 [14] clause 4.5.
2. Set the parameters according to T1 in Table 6.3.2.4.2.5-1 and 6.3.2.4.2.5-2.
3. The UE shall establish a connection setup with SS Cell1, the random access procedure within the connection setup is used in the test.
4. The SS shall transmit an RRCReconfiguration message to configure event A3 triggered measurement reporting.
5. The UE shall transmit a MeasurementReport message triggered by Event A3.
6. The SS sends LTM-Candidate-r18 for Cell 2.
7. UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2, and UE shall report a valid L1-RSRP result of Cell 2.

If a UE supports *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 1. If a UE supports neither *ltm-MAC-CE-SeparateTCI-r18* nor *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 2.

8. Test 1: Joint TCI state configuration

8.1. T1 starts when UE receiving candidate cell TCI state activation MAC CE to active CandidateTCI-State#1 for Cell 2.

8.2. The start of T2 is the instant when DCI 1_0 PDCCH order to trigger PRACH transmission on Cell 2 is sent to the UE. The SS change the parameters according to T2 in Table 6.3.2.4.2.5-1 and 6.3.2.4.2.5-2. The SS shall schedule on Cell 1 continuously for both UL and DL at available slots.

8.3. The UE shall transmit the PRACH preamble to Cell 2. If the UE transmits the PRACH preamble in the first available PRACH occasion after $N_{T,2}$ + 0.5ms + $T_{\mathrm{SSB}}$ (specified in clause 6.3.2.4.2.5) from the beginning of T2, then count a success for the event "PRACH occasion". Otherwise count a fail for the event "PRACH occasion".

8.4. If the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ (specified in clause 6.3.2.4.2.5) of the first detected path of DL SSB of Cell 2, then count a success for the event "PRACH timing". Otherwise, count a fail for the event "PRACH timing".

8.5. During T2, if UL DTX is only observed by the SS within the overlapped slot to transmit PRACH and 2 symbols before and after the PRACH occasion, and DL DTX is only observed by the SS within the overlapped slot to transmit PRACH, then count a success for the event "Pcell DTX". Otherwise, count a fail for the event "Pcell DTX".

8.6. Repeat step 1-8 until a test verdict has been achieved.

9. Test 2: No candidate TCI state configurations

Test steps are the same as Step 8 with following exceptions:

T1 is skipped in Test 2. The SS shall not send any TCI state activation MAC CE to active TCI state of Cell 2.

Repeat step 1-7 and 9 until a test verdict has been achieved.

The rate of correct events observed during repeated tests shall be at least 90%.

Each of the events "PRACH occasion", "Pcell DTX" as well as "PRACH timing" are evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved. Different events may require different times for a verdict. If all events pass, the test passes. If one event fails, the test fails.

Note: PDCCH order is not expected on the frame with SFN mod 8 =3.

| Propagation condition | | - | AWGN | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall transmit the PRACH preamble to Cell 2 in the first available PRACH occasion after $N_{T,2}$ + 0.5ms + $T_{SSB}$ from the beginning of time period T2. After transmitting PRACH on Cell 2, UE shall retune back to Cell 1.

NOTE: The PDCCH order RACH delay can be expressed as: $N_{T,2} + T_{BWPswitchDelay} + \Delta_{Delay} + T_{switch} + T_{SSB} + \Delta_{RF/BB\ preparation}$, where:

- $N_{T,2}$ is a time duration of $N_2$ symbols corresponding to a PUSCH preparation time for UE processing capability 1 assuming $\mu$ corresponds to the smallest SCS configuration between the SCS configuration of the PDCCH order and the SCS configuration of the corresponding PRACH transmission and is specified in Table 6.4-1 in 38.214 [9].

- $T_{BWPswitchDelay}$ = 0, $T_{switch}$ = 0

- $\Delta_{Delay}$ = 0.5ms

- $\Delta_{RF/BB\ preparation}$ is defined in 6.2.2C

- $T_{SSB}$ = 0 for UE supporting *ltm-MAC-CE-JointTCI-r18* and/or *ltm-MAC-CE-SeparateTCI-r18*, otherwise $T_{SSB} = T_{first-SSB_RACH} + T_{SSB-proc}$, where $T_{first-SSB_RACH}$ is the time to first SSB occasion overlapped with MGL after 2ms and 1 slot from the end of the slot that UE receives PDCCH-order, and $T_{SSB-proc}$ = 2 ms, which is the time for SSB processing.

During T2, interruption on Cell 1 UL shall not happen outside ceil (Y/NR Slot length) +1 slots before and after PRACH transmission and the same slot of PRACH, where Y as reported in *pdcch-RACH-SwitchingTimeList-r18*.

The test equipment will verify that the timing of PRACH transmission on Cell 2 is within (NTA + NTA_offset) ×Tc ± Te of the first detected path of DL SSB of Cell 2.

a. The $N_{TA_offset}$ value (in $T_c$ units) is 25600

b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in TS 38.133 [6] Table 7.1.2-1.

The rate of correct events observed during repeated tests shall be at least 90%.

### 6.3.2.4.3 NR SA FR1 PDCCH-order RACH on neighbour cell without L1-RSRP measurement when RACH BW is within active UL BWP

#### 6.3.2.4.3.1 Test Purpose

This test is to verify the requirement for PDCCH-order RACH on neighbour cell without L1-RSRP measurement in FR1 when RACH BW is within active UL BWP specified in TS 38.213 [8] clause 8.1 and UE transmit timing in TS 38.133 [6] clause 7.1 for UE supporting *rach-EarlyTA-Measurement-r18.*

#### 6.3.2.4.3.2 Test applicability

This test applies to all NR UEs supporting NR LTM for MCG with RACH-less and interruptions caused by PDCCH order from Release 18 onwards, and with optional support for *rach-EarlyTA-Measurement-r18*. The test consists of 3 subtests, and the UE is required to pass one among them.

#### 6.3.2.4.3.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.3.2.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.2.4.3.

#### 6.3.2.4.3.4 Test description

##### 6.3.2.4.3.4.1 Initial conditions

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table 6.3.2.4.3.4-1. No gap patterns are configured in the test case.

**Table 6.3.2.4.3.4-1: PDCCH order RACH on Neighbour cell in FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Candidate cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Candidate cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Candidate: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.2.4.3.4-2.

**Table 6.3.2.4.3.4-2: Initial conditions for PDCCH-order RACH on Neighbour cell in FR1**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.2.4.3.4-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | No fader. | | |

1. Message contents are defined in clause 6.3.2.4.3.4.3.

2. Cell 1 is the NR FR1 serving cell (PCell). Cell 2 is the NR FR1 neighbour cell. The UE has to report L3 measurement results on Cell 2.

#### 6.3.2.4.3.4.2 Test procedure

This test case contains 3 tests (Test 1, 2, and 3) and UE may have to pass one of the tests based on the defined conditions.

1. Ensure the UE is in state RRC_IDLE with generic procedure parameters Connectivity NR and Test Mode On according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.3.2.4.3.5-1 and 6.3.2.4.3.5-2.

3. The UE shall establish a connection setup with SS Cell 1, the random access procedure within the connection setup is used in the test.

4. The SS shall transmit an RRCReconfiguration message to configure event A3 triggered measurement reporting.

5. The UE shall transmit a MeasurementReport message triggered by Event A3.

6. The SS sends LTM-Candidate-r18 for Cell 2.

If a UE supports *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 1. If a UE supports *ltm-MAC-CE-SeparateTCI-r18* and does not support *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 2. If a UE supports neither *ltm-MAC-CE-SeparateTCI-r18* nor *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 3.

7. Test 1: Joint TCI state configuration

   7.1. T1 starts from UE transmitting a L3 report of Cell 2.

   7.2. The SS sends TCI state activation MAC CE to active CandidateTCI-State#1 of Cell 2 no later than T1 + 100 ms.

   7.3. The start of T2 is the instant when DCI 1_0 PDCCH order to trigger PRACH transmission on Cell 2 is sent to the UE. The SS change the parameters according to T2 in Table 6.3.2.4.3.5-1 and 6.3.2.4.3.5-2. The SS shall schedule on Cell 1 continuously for both UL and DL at available slots.

   7.4. The UE shall transmit the PRACH preamble to Cell 2. If the UE transmits the PRACH preamble in the first available PRACH occasion after $N_{T,2}$ + 0.5ms + $T_{\mathrm{SSB}}$ (specified in clause 6.3.2.x.3.5) from the beginning of T2, then count a success for the event "PRACH occasion". Otherwise count a fail for the event "PRACH occasion".

   7.5. If the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ (specified in clause 6.3.2.4.3.5) of the first detected path of DL SSB of Cell 2, then count a success for the event "PRACH timing". Otherwise, count a fail for the event "PRACH timing".

   7.6. During T2, if UL DTX is only observed by the SS within the overlapped slot to transmit PRACH and 2 symbols before and after the PRACH occasion, and DL DTX is only observed by the SS within the overlapped slot to transmit PRACH, then count a success for the event "Pcell DTX". Otherwise, count a fail for the event "Pcell DTX".

   7.7. Repeat step 1-7 until a test verdict has been achieved.

8. Test 2: Separate TCI state configuration

   Test steps are the same as step 7 with following exceptions:

   8.2. The SS sends TCI state activation MAC CE to active CandidateTCI-State#1 and CandidateTCI-UL-State #1 of Cell 2 no later than T1 + 100 ms.

   Repeat step 1-6 and 8 until a test verdict has been achieved.

9. Test 3: No candidate TCI state configurations

   Test steps are the same as Step 7 with following exceptions:

   The SS shall not send any TCI state activation MAC CE to active TCI state of Cell 2.

Repeat step 1-6 and 9 until a test verdict has been achieved.

The rate of correct events observed during repeated tests shall be at least 90%.

Each of the events "PRACH occasion", "Pcell DTX" as well as "PRACH timing" are evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved. Different events may require different times for a verdict. If all events pass, the test passes. If one event fails, the test fails.

#### 6.3.2.4.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and clause 7.3 with the following exceptions:

| Propagation condition | | - | AWGN | | AWGN | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.<br>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

The UE shall transmit the PRACH preamble to Cell 2 in the first available PRACH occasion after $N_{T,2}$ + 0.5ms + $T_{SSB}$ from the beginning of time period T2. After transmitting PRACH on Cell 2, UE shall retune back to Cell 1.

NOTE: The PDCCH order RACH delay can be expressed as: $N_{T,2} + T_{BWPswitchDelay} + \Delta_{Delay} + T_{switch} + T_{SSB} + \Delta_{RF/BB\ preparation}$, where:

- $N_{T,2}$ is a time duration of $N_2$ symbols corresponding to a PUSCH preparation time for UE processing capability 1 assuming $\mu$ corresponds to the smallest SCS configuration between the SCS configuration of the PDCCH order and the SCS configuration of the corresponding PRACH transmission and is specified in Table 6.4-1 in 38.214 [9].

- $T_{BWPswitchDelay}$ = 0, $T_{switch}$ = 0, $\Delta_{RF/BB\ preparation}$ = 0

- $\Delta_{Delay}$ = 0.5ms

- $T_{SSB}$ is the time to first SSB occasion, after 1slot from the end of the slot of the PDCCH plus 2ms (SSB processing time).

During T2, interruption on Cell 1 UL shall not happen outside the overlapped slot to transmit PRACH and *N* symbols before and after the PRACH occasion as defined in clause 8.1 in 38.213 [8], where N=2. During T2, interruption on Cell 1 DL shall not occur outside the overlapped slot to transmit PRACH.

The test equipment will verify that the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB of Cell 2.

a. The $N_{TA_offset}$ value (in $T_c$ units) is 25600

b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in TS 38.133 [6] Table 7.1.2-1.

The rate of correct events observed during repeated tests shall be at least 90%.

## 6.3.3 Conditional handover

### 6.3.3.0 Minimum conformance requirements

#### 6.3.3.0.1 Minimum conformance requirements for NR FR1 intra-frequency conditional handover

[TS 38.133, clause 6.1.4.2.1]

Procedure delays for all procedures that can command a conditional handover are specified in TS 38.331 [13].

When the UE receives a RRC message implying conditional handover the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{handover}$ seconds from the end of the last TTI containing the RRC command.

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$$

Where:

$T_{RRC}$ is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

$T_{Event_DU}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional handover command until a condition exists at the measurement reference point which will trigger the conditional handover.

- a condition exists at the measurement reference point which will trigger the conditional handover, or
- a condition exists at the measurement reference point which will trigger the NES-based conditional handover

$T_{measure}$ is the measurements time stated in TS 38.133 [6] clause 6.1.4.2.2.

$T_{CHO_execution}$ is the conditional execution preparation time in TS 38.133 [6] clause 6.1.4.2.3.

$T_{interrupt}$ is the interruption time stated in TS 38.133 [6] clause 6.1.4.2.4.

The NES-based conditional handover delay requirements shall apply if UE receives a RRC message implying NES-based conditional handover before receiving the NES indication in DCI 2-9 command.

UE is not expected to receive a NES indication in DCI 2-9 command before receiving a RRC message implying NES-based conditional handover. When UE receives a RRC message implying NES-based conditional handover but no NES indication in DCI 2-9 command, no NES-based conditional handover requirement is applied. The NES indication is specified in clause 5.5.4 in TS 38.331 [13].

[TS 38.133, clause 6.1.4.2.2]

The measurement time delay is defined from the end of $T_{Event_DU}$ until UE executes a handover to a target cell and interruption time starts.

For conditional intra-frequency handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify\ intra\ with\ index}$ or $T_{identify_intra_without_index}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For NES-based conditional intra-frequency handover:

- If UE successfully decodes DCI 2-9 command earlier than the time at the end of $T_{Event_DU} + T_{identify_intra_with_index}$ or $T_{Event_DU} + T_{identify_intra_without_index}$, then the measurement time delay equal to $T_{identify_intra_with_index}$ or $T_{identify_intra_without_index}$
- If UE successfully decodes DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_intra_with_index}$ or $T_{Event_DU} + T_{identify_intra_without_index}$, and the condition of NES-based CHO keeps existing till UE receiving the DCI 2-9 command, then the measurement time delay equals to the time from the end of $T_{event_DU}$ until UE successfully decodes DCI 2-9 command.When TTT or L3 filtering is used an additional delay can be expected.
- If UE successfully decodes DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_intra_with_index}$ or $T_{Event_DU} + T_{identify_intra_without_index}$, and the condition of NES-based CHO is not met when receiving the DCI 2-9 command, then the measurement time delay equals to the time span from the end of $T_{Event_DU}$ until a condition keeps existing for $T_{SSB\ measurement\ period_intra}$ which will immediately trigger the NES-based conditional handover after DCI 2-9.A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency handover or $T_{identify_inter_without_index}$ for inter-frequency handover. If a cell which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency handover or $T_{identify_inter_without_index}$ for inter-frequency handover becomes undetectable for a period and then the cell becomes detectable again and triggers a handover, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used. When L3 filtering is used, an additional delay can be expected.

[TS 38.133, clause 6.1.4.2.3]

$T_{CHO_execution}$ is the UE execution preparation time for conditional handover.

For conditional handover, it starts after UE realizes the condition of CHO is met and identity of the target cell is determined.

For NES-based conditional handover,

- It starts after UE realizes the condition of CHO is met and identity of the target cell is determined provided that UE has already successfully decoded DCI 2-9.

- Otherwise, it starts after UE successfully decodes DCI 2-9.

And $T_{CHO_execution}$ can be up to 10ms.[TS 38.133, clause 6.1.4.2.4]

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional conditional handover, the measurment time shall be less than

$$T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

$T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 20ms.

$T_{IU}$ is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. $T_{IU}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [8]

$T_{\Delta}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{rs}$.

$T_{margin}$ is time for SSB post-processing. $T_{margin}$ can be up to 2ms.

$T_{rs}$ is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cellin the handover command, otherwise Trs is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}$=5ms assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [13] signaling of *smtc2* prior to the handover command, $T_{rs}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

NOTE 1: The actual value of $T_{IU}$ shall depend upon the PRACH configuration used in the target cell. [TS 38.133 [6], clause 9.2.2]

[TS 38.133, clause 9.2.5.1]

The UE shall be able to identify a new detectable intra-frequency cell within $T_{identify_intra_without_index}$ if the UE is not indicated to report SSB based RRM measurement result with the associated SSB index(*reportQuantityRsIndexes* or *maxNrofRSIndexesToReport* is not configured), or the UE is indicated that the neighbour cell is synchronous with the serving cell (*deriveSSB-IndexFromCell* is enabled). Otherwise UE shall be able to identify a new detectable intra-frequency cell within $T_{identify_intra_with_index}$. The UE shall be able to identify a new detectable intra-frequency SS block of an already detected cell within $T_{identify_intra_without_index.}$ It is assumed that *deriveSSB-IndexFromCell* is always enabled for FR1 TDD and FR2.

$$T_{identify_intra_without_index} = (T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra}) \text{ ms}$$

$$T_{identify_intra_with_index} = (T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra} + T_{SSB_time_index_intra}) \text{ ms}$$

Where:

$T_{PSS/SSS_sync_intra}$: it is the time period used in PSS/SSS detection given in TS 38.133 [6] Table 9.2.5.1-1.

$T_{SSB_time_index_intra}$: it is the time period used to acquire the index of the SSB being measured given in TS 38.133 [6] Table 9.2.5.1-3.

$T_{SSB_measurement_period_intra}$: equal to a measurement period of SSB based measurement given in TS 38.133[6] Table 9.2.5.2-1.

$CSSF_{intra}$: it is a carrier specific scaling factor and is determined

according to $CSSF_{outside_gap,i}$ in TS 38.133 [6] clause 9.1.5.1 for measurement conducted outside measurement gaps, i.e. when intra-frequency SMTC is fully non overlapping or partially overlapping with measurement gaps.

When intra-frequency SMTC is fully non overlapping with measurement gaps or intra-frequency SMTC is fully overlapping with MGs, Kp=1

**Table 9.2.5.1-1: Time period for PSS/SSS detection, (Frequency range 1)**

| DRX cycle | $T_{PSS/SSS_sync_intra}$ |
|---|---|
| No DRX | max( 600ms, ceil( 5 x $K_p$) x SMTC period )[Note 1] x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max( 600ms, ceil(M2 [Note 2]x 5 x $K_p$) x max(SMTC period,DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | ceil(5 x $K_p$) x DRX cycle x $CSSF_{intra}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified<br>NOTE 2: When *highSpeedMeasFlag-r16* is not configured, M2 = 1.5; When *highSpeedMeasFlag-r16* is configured, M2 = 1.5 if SMTC periodicity > 40 ms;,otherwise M2=1.<br>NOTE 3: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *[intraRAT-MeasurementEnhancement-r16]* on measurements of the primary component carrier and do not apply to measurements of a secondary component carrier with active SCell. | |

**Table 9.2.5.1-3: Time period for time index detection (Frequency range 1)**

| DRX cycle | $T_{SSB_time_index_intra}$ |
|---|---|
| No DRX | max(120ms, ceil( 3 x $K_p$ ) x SMTC period)[Note 1] x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max(120ms, ceil (M2 [Note 2] x 3 x $K_p$) x max(SMTC period,DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | Ceil(3 x $K_p$) x DRX cycle x $CSSF_{intra}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified<br>NOTE 2: When *highSpeedMeasFlag-r16* is not configured, M2 = 1.5; When *highSpeedMeasFlag-r16* is configured, M2 = 1.5 if SMTC periodicity > 40 ms;,otherwise M2=1<br>NOTE 3: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *[intraRAT-MeasurementEnhancement-r16]* on measurements of the primary component carrier and do not apply to measurements of a secondary component carrier with active SCell. | |

[TS 38.133, clause 9.2.5.2]

The measurement period for intra-frequency measurements without gaps is as shown in TS 38.133 [6] Table 9.2.5.2-1.

**Table 9.2.5.2-1: Measurement period for intra-frequency measurements without gaps(FR1)**

| DRX cycle | $T_{SSB_measurement_period_intra}$ |
|---|---|
| No DRX | max(200ms, ceil( 5 x $K_p$) x SMTC period)[Note 1] x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max(200ms, ceil(1.5x 5 x $K_p$) x max(SMTC period,DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | ceil( 5 x $K_p$ ) x DRX cycle x $CSSF_{intra}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified | |

### 6.3.3.0.2 Minimum conformance requirements for NR FR1 inter-frequency conditional handover

[TS 38.133, clause 6.1.4.2.1]

Procedure delays for all procedures that can command a conditional handover are specified in TS 38.331 [13].

When the UE receives a RRC message implying conditional handover the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{handover}$ seconds from the end of the last TTI containing the RRC command.

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$$

Where:

$T_{RRC}$ is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

$T_{Event_DU}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional handover command until a condition exists at the measurement reference point which will trigger the conditional handover. - a condition exists at the measurement reference point which will trigger the conditional handover, or

- a condition exists at the measurement reference point which will trigger the NES-based conditional handover

$T_{measure}$ is the measurements time stated in TS 38.133 [6] clause 6.1.4.2.2.

$T_{CHO_execution}$ is the conditional execution preparation time in TS 38.133 [6] clause 6.1.4.2.3.

$T_{interrupt}$ is the interruption time stated in TS 38.133 [6] clause 6.1.4.2.4.

The NES-based conditional handover delay requirements shall apply if UE receives a RRC message implying NES-based conditional handover before receiving the NES indication in DCI 2-9 command.

UE is not expected to receive a NES indication in DCI 2-9 command before receiving a RRC message implying NES-based conditional handover. When UE receives a RRC message implying NES-based conditional handover but no NES indication in DCI 2-9 command, no NES-based conditional handover requirement is applied. The NES indication is specified in clause 5.5.4 in TS 38.331 [13].

[TS 38.133, clause 6.1.4.2.2]

The measurement time delay is defined from the end of $T_{Event_DU}$ until UE executes a handover to a target cell and interruption time starts.

For inter-frequency handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_inter_with_index}$ or $T_{identify_inter_without_index}$ defined in clause 9.3.4.

For NES-based conditional inter-frequency handover:

- If UE successfully decodes DCI 2-9 command earlier than the time at the end of $T_{Event_DU} + T_{identify_inter_with_index}$ or $T_{Event_DU} + T_{identify_inter_without_index}$, and the condition of NES-based CHO keeps existing till UE receiving the DCI 2-9 command, then the measurement time delay equal to $T_{identify_inter_with_index}$ or $T_{identify_inter_without_index}$

- If UE successfully decodes DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_inter_with_index}$ or $T_{Event_DU} + T_{identify_inter_without_index}$, then the measurement time delay equals to the time from the end of $T_{event_DU}$ until UE successfully decodes DCI 2-9 command.

- If UE successfully decodes DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_inter_with_index}$ or $T_{Event_DU} + T_{identify_inter_without_index}$, and the condition of NES-based CHO is not met when receiving the DCI 2-9 command, then the measurement time delay equals to the time span from the end of $T_{Event_DU}$ until a condition keeps existing for $T_{SSB\ measurement\ period_inter}$ which will immediately trigger the NES-based conditional handover after DCI 2-9.When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency handover or $T_{identify_inter_without_index}$ for inter-frequency handover. If a cell which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency handover or $T_{identify_inter_without_index}$ for inter-frequency handover becomes undetectable for a period and then the cell becomes detectable again and triggers a handover, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used. When L3 filtering is used, an additional delay can be expected.

[TS 38.133, clause 6.1.4.2.3]

$T_{CHO_execution}$ is the UE execution preparation time for conditional handover.

For conditional handover, it starts after UE realizes the condition of CHO is met and identity of the target cell is determined.

For NES-based conditional handover,

- It starts after UE realizes the condition of CHO is met and identity of the target cell is determined provided that UE has already successfully decoded DCI 2-9.

- Otherwise, it starts after UE successfully decodes DCI 2-9.

And $T_{CHO_execution}$ can be up to 10ms.[TS 38.133, clause 6.1.4.2.4]

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional conditional handover, the measurment time shall be less than

$$T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

$T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 20ms.

$T_{IU}$ is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. $T_{IU}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [8]

$T_{\Delta}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{rs}$.

$T_{margin}$ is time for SSB post-processing. $T_{margin}$ can be up to 2ms.

$T_{rs}$ is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cellin the handover command, otherwise Trs is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}$=5ms assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [13] signaling of *smtc2* prior to the handover command, $T_{rs}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

NOTE 1: The actual value of $T_{IU}$ shall depend upon the PRACH configuration used in the target cell.

[TS 38.133, clause 9.3.2]

The requirements in clause 9.3 apply, provided:

- The cell being identified or measured is detectable.

An inter-frequency cell shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in TS 38.133 [6] clauses 10.1.4 for FR1, for a corresponding Band,
- SSB_RP and SSB Ês/Iot according to TS 38.133 [6] Annex B.2.3 for a corresponding Band.

[TS 38.133, clause 9.3.4]

When measurement gaps are provided, or the UE supports capability of conducting such measurements without gaps, the UE shall be able to identify a new detectable inter-frequency cell within $T_{identify_inter_without_index}$ if UE is not indicated to report SSB based RRM measurement result with the associated SSB index (*reportQuantityRsIndexes* or *maxNrofRSIndexesToReport* is not configured). Otherwise UE shall be able to identify a new detectable inter-frequency cell within $T_{identify_inter_with_index}$. The UE shall be able to identify a new detectable inter-frequency SS block of an already detected cell within $T_{identify_inter_without_index.}$

$$T_{identify_inter_without_index} = (T_{PSS/SSS_sync_inter} + T_{SSB_measurement_period_inter}) \text{ ms}$$

$$T_{identify_inter_with_index} = (T_{PSS/SSS_sync_inter} + T_{SSB_measurement_period_inter} + T_{SSB_time_index_inter}) \text{ ms}$$

Where:

$T_{PSS/SSS_sync_inter}$: it is the time period used in PSS/SSS detection given in 38.133 [6] Table 9.3.4-1.

$T_{SSB_time_index_inter}$: it is the time period used to acquire the index of the SSB being measured given in 38.133 [6] Table 9.3.4-3.

$T_{SSB_measurement_period_inter}$: equal to a measurement period of SSB based measurement given in 38.133 [6] Table 9.3.5-1.

$CSSF_{inter}$: it is a carrier specific scaling factor and is determined according to $CSSF_{within_gap,i}$ in 38.133 [6] clause 9.1.5.2 for measurement conducted within measurement gaps.

**Table 9.3.4-1: Time period for PSS/SSS detection (Frequency range 1)**

| Condition NOTE1,2 | $T_{PSS/SSS_sync_inter}$ |
|---|---|
| No DRX | $Max(600ms, 8 \times Max(MGRP, SMTC\ period)) \times CSSF_{inter}$ |
| DRX cycle ≤ 320ms | $Max(600ms, Ceil(8*1.5) \times Max(MGRP, SMTC\ period, DRX\ cycle)) \times CSSF_{inter}$ |
| DRX cycle > 320ms | $8 \times DRX\ cycle \times CSSF_{inter}$ |
| NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1<br>NOTE 2: In EN-DC operation, the parameters, timers and scheduling requests referred to in clause 3.6.1 are for the secondary cell group. The DRX cycle is the DRX cycle of the secondary cell group. | |

**Table 9.3.4-3: Time period for time index detection (Frequency range 1)**

| Condition NOTE1,2 | $T_{SSB_time_index_inter}$ |
|---|---|
| No DRX | $Max(120ms, 3 \times Max(MGRP, SMTC\ period)) \times CSSF_{inter}$ |
| DRX cycle ≤ 320ms | $Max(120ms, Ceil(3 \times 1.5) \times Max(MGRP, SMTC\ period, DRX\ cycle)) \times CSSF_{inter}$ |
| DRX cycle > 320ms | $3 \times DRX\ cycle \times CSSF_{inter}$ |
| NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1<br>NOTE 2: In EN-DC operation, the parameters, timers and scheduling requests referred to in clause 3.6.1 are for the secondary cell group. The DRX cycle is the DRX cycle of the secondary cell group. | |

[TS 38.133, clause 9.3.5]

When measurement gaps are provided for inter-frequency measurements, or the UE supports capability of conducting such measurements without gaps, the UE physical layer shall be capable of reporting SS-RSRP, SS-RSRQ and SS-SINR measurements to higher layers with measurement accuracy as specified in TS 38.133 [6] clauses 10.1.4, 10.1.5, 10.1.9, 10.1.10, 10.1.14 and 10.1.15, respectively, as shown in table 9.3.5-1 and 9.3.5-2:

**Table 9.3.5-1: Measurement period for inter-frequency measurements with gaps (Frequency FR1)**

| Condition NOTE1,2 | $T_{SSB_measurement_period_inter}$ |
|---|---|
| No DRX | $Max(200ms, 8 \times Max(MGRP, SMTC\ period)) \times CSSF_{inter}$ |
| DRX cycle ≤ 320ms | $Max(200ms, Ceil(8 \times 1.5) \times Max(MGRP, SMTC\ period, DRX\ cycle)) \times CSSF_{inter}$ |
| DRX cycle > 320ms | $8 \times DRX\ cycle \times CSSF_{inter}$ |
| NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1<br>NOTE 2: In EN-DC operation, the parameters, timers and scheduling requests referred to in clause 3.6.1 are for the secondary cell group. The DRX cycle is the DRX cycle of the secondary cell group. | |

### 6.3.3.0.3 Minimum conformance requirements for SA NR-DC FR1 Conditional handover including target MCG and target SCG

[TS 38.133, clause 6.1.6.1]

Procedure delays for all procedures that can command a conditional handover are specified in TS 38.331 [13].

This clause defines requirements for the delay within which the UE shall be able to conditional handover from NR cell to NR cell and changeNR PSCell in the meantime.

When the UE receives a RRC message implying conditional handover with PSCell,

- The UE shall be ready to start the transmission of the new uplink PRACH channel of the target PCell within $D_{CHOwithPSCell_PCell}$ ms from the end of the last TTI containing the RRC command, and
- The UE shall be capable of transmitting PRACH preamble towards the target PSCell no later than $D_{CHOwithPSCell_PSCell}$ ms from the end of the last TTI containing the RRC command.

$D_{CHOwithPSCell_PCell} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$

$D_{CHOwithPSCell_PSCell}$ is the PSCell change delay as stated below.

Where:

$T_{RRC}$ is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

$T_{Event_DU}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional handover command until a condition exists at the measurement reference point which will trigger the conditional handover.

$T_{measure}$ is the measurements time stated in clause 6.1.4.4.2 of TS 38.133 [6].

$T_{CHO_execution}$ is the conditional execution preparation time in clause 6.1.4.4.3 of TS 38.133 [6].

$T_{interrupt}$ is the interruption time as stated in clause below.

[TS 38.133, clause 6.1.6.1.1]

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional conditional handover, the interruption time shall be less than $T_{interrupt}$

$$T_{interrupt} = T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

- $T_{IU}$, $T_{\Delta}$ and $T_{margin}$ are the same as defined in clause 6.1.4.4.4 of TS 38.133 [6].
- $T_{processing}$ is the SW processing time needed by UE, including RF warm up period.

  For FR1-FR1 NR-DC to FR1-FR1 NR-DC, $T_{processing}$ = 30 ms if SMTC of the target unknown PSCell is configured in *targetcellSMTC-SCG-r16* but not configured in *reconfigurationWithSync*. Otherwise, $T_{processing}$ = 25 ms.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause 9.2.5 for intra-frequency handover and Clause 9.3.4 for inter-frequency handover.

[TS 38.133, clause 6.1.6.1.2]

The requirements in this section shall apply for PSCell change during conditional handover with PSCell from NR DC to NR-DC.

When conditional handover with PSCell from NR-DC to NR-DC is commanded, the PSCell change time shall be less than $D_{CHOwithPSCell_PSCell}$:

- $D_{CHOwithPSCell_PSCell} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{CHO_execution} + T_{processing} + T_{search_PCell_Conditional} + T_{search_PSCell} + T_{\Delta_PSCell} + T_{PSCell_DU} + 2$ ms

Where:

- $T_{RRC_delay}$, $T_{Event_DU}$, $T_{measure}$, $T_{CHO_execution}$ are the same as defined above.
- $T_{processing}$ is the same as defined above. $T_{search_PSCell}$ and $T_{PSCell_DU}$ are the same as defined in clause 8.9.2. - $T_{search_PCell_Conditional}$ is the time for obtaining the timing reference of target PCell. If SMTC of the target unknown PSCell is configured in *targetcellSMTC-SCG-r16* but not configured in *reconfigurationWithSync*, $T_{search_PCell_Conditional} = T_{\Delta} + T_{margin}$, where $T_{\Delta}$ and $T_{margin}$ are specified above Otherwise, $T_{search_PCell_Conditional}$ = 0 ms.
- $T_{\Delta_PSCell}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta_PSCell}$ = 1*Trs ms for a known or unknown PSCell.
- $T_{PSCell_DU}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. $T_{PSCell_DU}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [8].

The $T_{rs}$ definition from clause 8.9.2 is modified as following for requirements in this section:

- $T_{rs}$ is the SMTC periodicity of the target NR cell if target PSCell is unknown and SMTC configuration of target unknown PSCell is present in either *targetcellSMTC-SCG-r16* or *reconfigurationWithSync*, otherwise Trs is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the measObjectNRs having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, Trs is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this section is applied with Trs = 5 ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

PSCell known and unknown condition is as defined in clause 8.9.2.

[TS 38.133, clause 6.1.4.2.4]

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional conditional handover, the measurment time shall be less than

$$T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

$T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 20ms.

$T_{IU}$ is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. $T_{IU}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [8]

$T_{\Delta}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{rs}$.

$T_{margin}$ is time for SSB post-processing. $T_{margin}$ can be up to 2ms.

$T_{rs}$ is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cellin the handover command, otherwise $T_{rs}$ is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}$=5ms assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [13] signaling of *smtc2* prior to the handover command, $T_{rs}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

NOTE 1: The actual value of $T_{IU}$ shall depend upon the PRACH configuration used in the target cell.

#### 6.3.3.0.4 Minimum conformance requirements for NR-DC SA FR1 Conditional handover including target MCG and candidate SCG

[TS 38.133, clause 6.1.7.1]

The purpose of NR Conditional handover including target MCG and candidate SCG for CPC is to change the NR PCell to another NR cell and change the PSCell along with PCell handover. The requirements in this clause are applicable to:

- FR1-FR1 NR-DC to FR1-FR1 NR-DC,

When the CHO execution condition is met but no CPC execution condition is met, and the UE has an available complementary CHO-only configuration, the UE executes CHO without CPC and the delay requirements for CHO defined in section 6.1.4 of TS 38.133[6] shall apply.

When the CHO execution condition is met but no CPC execution condition is met, and the UE has Rel-17 complementary CHO with SCG configuration, the UE executes Rel-17 CHO with SCG execution and the delay requirements for CHO with SCG defined in section 6.1.6 apply.

When the UE receives a RRC message implying conditional handover including target MCG and candidate SCG for CPC,

- The UE shall be ready to start the transmission of the new uplink PRACH channel of the target PCell within $D_{CHOwithCPC_PCell}$ ms from the end of the last TTI containing the RRC command, and

- The UE shall be capable of transmitting PRACH preamble towards the target PSCell no later than $D_{CHOwithCPC_PSCell}$ ms from the end of the last TTI containing the RRC command.

Where:

- $D_{CHOwithCPC_PCell}$ is the PCell conditional handover delay stated below.
- $D_{CHOwithCPC_PSCell}$ is the PSCell conditional change delay stated below.

[TS 38.133, clause 6.1.7.1.1 PCell conditional handover delay]

$D_{CHOwithCPC_PCell} = T_{RRC_delay} + T_{Event_DU} + \max(T_{measure_PCell}, T_{measure_PSCell}) + T_{UE_preparation} + T_{processing} + T_{\Delta_PCell} + T_{PCell_DU} + 2$ ms

- $T_{RRC_delay}$ is the RRC procedure delay defined in clause 12 in TS 38.331 [13] for processing the RRC command.
- $T_{Event_DU}$ in PCell and PSCell handover delay requirement is the delay uncertainty which is the time from when the UE successfully decodes the RRC command for CHO including target MCG and candidate SCG for CPC until conditions exist at the measurement reference point which will trigger the CHO and CPC.
- $T_{measure_PCell}$ is the measurements time stated in clause 6.1.7.1.1.1.
- $T_{measure_PSCell}$ is the measurements time stated in clause 6.1.7.1.2.1.
- $T_{UE_preparation}$ is the UE preparation time for conditional handover with conditional PSCell change, and starts at simultaneous execution of PCell handover and PSCell change to a target PCell and a target PSCell respectively after UE realizes the conditions of conditional PCell handover and conditional PSCell change are met and identities of the target PCell and PSCell are determined. $T_{UE_preparation}$ is up to 10ms.
- $T_{processing}$ is the SW processing time needed by UE, including RF warm up period.

  For FR1-FR1 NR-DC to FR1-FR1 NR-DC, $T_{processing}$ = 25 ms.

- $T_{\Delta_PCell}$ is time for fine time tracking and acquiring full timing information of the target PCell. $T_{\Delta_PCell} = 1*T_{rs}$ ms.
- $T_{rs}$ is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in handover message, otherwise $T_{rs}$ is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}$ = 5 ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.
- $T_{PCell_DU}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PCell. $T_{PCell_DU}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [8].

[TS 38.133, clause 6.1.7.1.1.1 Measurement time]

The measurement time delay for PCell is defined from the end of $T_{Event_DU}$ until UE realizes the condition of PCell handover is met and identity of new PCell is determined.

For intra-frequency PCell handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify\ intra\ with\ index}$ or $T_{identify_intra_without_index}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For inter-frequency PCell handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ defined in clause 9.3.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PCell handover or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PCell handover. If a cell, which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PCell handover or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PCell handover, becomes undetectable for a period and then the cell becomes detectable again and triggers a PCell handover, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used, where $\mu$ is the SCS configuration as defined in clause 4.2 of TS 38.211 [7]. When L3 filtering is used, an additional delay can be expected.

[TS 38.133, clause 6.1.7.1.2 PSCell conditional change delay]

$D_{CHOwithCPC_PSCell} = T_{RRC_delay} + T_{Event_DU} + \max(T_{measure_PCell}, T_{measure_PSCell}) + T_{UE_preparation} + T_{processing} + T_{\Delta_PSCell} + T_{PSCell_DU} + 2$ ms

- $T_{RRC_delay}$ is the RRC procedure delay defined in clause 12 in TS 38.331 [13] for processing the RRC command.
- $T_{Event_DU}$ in PCell and PSCell handover delay requirement is the delay uncertainty which is the time from when the UE successfully decodes the RRC command for CHO including target MCG and candidate SCG for CPC until conditions exist at the measurement reference point which will trigger the CHO and CPC.
- $T_{measure_PCell}$ is the measurements time stated in clause 6.1.7.1.1.1.
- $T_{measure_PSCell}$ is the measurements time stated in clause 6.1.7.1.2.1.
- $T_{UE_preparation}$ is the UE preparation time for conditional handover with conditional PSCell change, and starts at simultaneous execution of PCell handover and PSCell change to a target PCell and a target PSCell respectively after UE realizes the conditions of conditional PCell handover and conditional PSCell change are met and identities of the target PCell and PSCell are determined. $T_{UE_preparation}$ is up to 10ms.
- $T_{processing}$ is as specified above.
- $T_{\Delta_PSCell}$ is time for fine time tracking and acquiring full timing information of the target PSCell. $T_{\Delta_PSCell} = 1*T_{rs}$ ms.
  - $T_{rs}$ is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise $T_{rs}$ is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}$ = 5 ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.
- $T_{PSCell_DU}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. $T_{PSCell_DU}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [8].

[TS 38.133, clause 6.1.7.1.2.1 Measurement Time]

The measurement time delay for PSCell is defined from the end of $T_{Event_DU}$ until UE realizes the condition of PSCell change is met and identity of new PSCell is determined.

For intra-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify\ intra\ with\ index}$ or $T_{identify_intra_without_index}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For inter-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ defined in clause 9.3.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PCell handover or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PCell handover. If a cell, which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PCell handover or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PCell handover, becomes undetectable for a period and then the cell becomes detectable again and triggers a PCell handover, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used, where $\mu$ is the SCS configuration as defined in clause 4.2 of TS 38.211 [7]. When L3 filtering is used, an additional delay can be expected.

## 6.3.3.1 NR SA FR1 conditional handover

### 6.3.3.1.1 Test purpose

To verify the requirement for the NR FR1 intra-frequency conditional handover requirements specified in TS 38.133 [6] clause 6.1.4.2

### 6.3.3.1.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and supporting conditional handover.

#### 6.3.3.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.1.

#### 6.3.3.1.4 Test description

##### 6.3.3.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.1.4.1-1.

**Table 6.3.3.1.4.1-1: NR SA FR1 conditional handover test configurations**

| Config | Description |
|---|---|
| 6.3.3.1-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.3.1-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.3.1-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| T2 | s | ≤2 | |

#### 6.3.3.1.4.2 Test procedure

The test scenario comprises of 1 NR carrier and two cells, Cell 1 and Cell 2, on this carrier. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.3.1.4.1-3 and 6.3.3.1.5-1 respectively. No measurement gap is configured in the test case.

The test consists of two successive time periods, with time durations of T1 and T2 respectively.

At the start of time duration T1, the UE may not have any timing information of Cell 2. The UE is configured with a condition implying handover to Cell 2 at a time earlier than $T_{RRC}$ ms before the beginning of T2. No interruption shall be observed in time period T1, where

- $T_{RRC}$ = 10ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

From start of T2, the Cell 2 becomes detectable and handover condition is satisfied. During T2, the UE performs measurement on Cell 2 and evaluates the execution condition, and starts handover procedure when execution condition is satisifed. The UE shall sent PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ ms from the start of T2. The Interruption length $T_{interrupt}$ shall also be verified in T2.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.1.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure CHO execution condition for the UE.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.3.1.5-1. T2 starts.

7. If

   a) the UE transmits the PRACH preambles to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ ms from the beginning of time period T2,

   and

   b) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

   - $X = T_{interrupt} + k_1$ for test configuration 6.3.3.1-1
   - $X = T_{interrupt}$ for test configuration 6.3.3.1-2
   - $X = 2 \cdot T_{interrupt}$ for test configuration 6.3.3.1-3.

   then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

8. After T2 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

9. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

10. Repeat steps 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| | Config 3 | dBm/ 38.16MHz | -55.31 | -50.56 | -55.31 | -50.56 |
| Propagation condition | | | AWGN | | | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

The rate of correct handovers observed during repeated tests shall be at least 90%.

The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ from the start of T2.
where:

- $T_{measure}$ = 800 ms, is the measurements time specified in TS 38.133 [6] clause 6.1.4.2.2.
- $T_{CHO_execution}$ = 10 ms, is the conditional execution preparation time specified in TS 38.133 [6] clause 6.1.4.2.2.
- $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ ms, is the interruption time specified in TS 38.133 [6] 6.1.4.2.4.
  - $T_{processing}$ = 20 ms, is time for UE processing;
  - $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell;
  - $T_{\Delta}$ = 20 ms, is time for fine time tracking and acquiring full timing information of the target cell;
  - $T_{margin}$ = 2 ms, is time for SSB post-processing.

This gives a total of 872 ms

The interruption during T2 shall not exceeed $T_{interrupt}$ = 62ms.

## 6.3.3.2 NR SA FR1-FR1 conditional handover

### 6.3.3.2.1 Test purpose

To verify the requirement for the NR conditional FR1-NR FR1 inter-frequency conditional handover requirements specified in TS 38.133 [6] clause 6.1.4.2.

### 6.3.3.2.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and supporting conditional handover.

### 6.3.3.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.2.

### 6.3.3.2.4 Test description

#### 6.3.3.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.2.4.1-1.

**Table 6.3.3.2.4.1-1: NR SA FR1-FR1 conditional handover test configurations**

| Config | Description |
|---|---|
| 6.3.3.2-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.3.2-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.3.2-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.3.2.4.1-2

**Table 6.3.3.2.4.1-2: Initial conditions for NR SA FR1-FR1 conditional handover**

| T2 | | s | ≤2 | |

### 6.3.3.2.4.2 Test procedure

The test scenario comprises of 2 NR carrier and two cells, Cell 1 and Cell 2, on each carrier respectively. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.3.2.4.1-3 and 6.3.3.2.5-1 respectively. Measurement gap (gap pattern #0) is configured in the test case.

The test consists of two successive time periods, with time durations of T1 and T2 respectively.

At the start of time duration T1, the UE may not have any timing information of Cell 2. The UE is configured with a condition implying handover to Cell 2 at a time earlier than $T_{RRC}$ ms before the beginning of T2. No interruption shall be observed in time period T1, where

- $T_{RRC}$ = 10ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

From start of T2, the Cell 2 becomes detectable and handover condition is satisfied. During T2, the UE performs measurement on Cell 2 and evaluates the execution condition, and starts handover procedure when execution condition is satisifed. The UE shall sent PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ ms from the start of T2. The Interruption length $T_{interrupt}$ shall also be verified in T2.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.2.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure CHO execution condition and measurement gap pattern #0 for the UE.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.3.2.5-1. T2 starts.

7. If

   c) the UE transmits the PRACH preambles to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ ms from the beginning of time period T2,

   and

   d) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

   - $X = T_{interrupt} + k_1$ for test configuration 6.3.3.2-1
   - $X = T_{interrupt}$ for test configuration 6.3.3.2-2
   - $X = 2 \cdot T_{interrupt}$ for test configuration 6.3.3.2-3.

   then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

8. After T2 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.

9. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

10. Repeat steps 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Io Note3 | Config 1,2 | dBm/ 9.36MHz | -64.59 | -64.59 | -70.05 | -62.51 |
| | Config 3 | dBm/ 38.16MHz | -58.49 | -58.49 | -63.94 | -56.40 |
| Propagation condition | | - | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The rate of correct handovers observed during repeated tests shall be at least 90%.

The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ from the start of T2.
where:

- $T_{measure}$ = 920 ms, is the measurements time specified in TS 38.133 [6] clause 6.1.4.2.2.
- $T_{CHO_execution}$ = 10 ms, is the conditional execution preparation time specified in TS 38.133 [6] clause 6.1.4.2.2.
- $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ ms, is the interruption time specified in TS 38.133 [6] 6.1.4.2.4.
  - $T_{processing}$ = 20 ms, is time for UE processing;
  - $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell;
  - $T_{\Delta}$ = 20 ms, is time for fine time tracking and acquiring full timing information of the target cell;
  - $T_{margin}$ = 2 ms, is time for SSB post-processing.

This gives a total of 992 ms

The interruption during T2 shall not exceed $T_{interrupt}$ = 62ms.

### 6.3.3.3 NR SA FR1 conditional handover including target MCG and target SCG

Editor's Note: This test case is incomplete in following aspects:

- Message contents is TBD.

#### 6.3.3.3.1 Test purpose

The purpose of this test is to verify that UE can make correct NR-DC to NR-DC conditional handover including target MCG in FR1 and target SCG in FR1 as specified in clauses 6.1.6.1 of TS 38.133 [6].

#### 6.3.3.3.2 Test applicability

This test applies to all types of NR UE from Release 17 onwards.

#### 6.3.3.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.3.

#### 6.3.3.3.4 Test description

##### 6.3.3.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.3.4.1-1.

**Table 6.3.3.3.4.1-1: Supported test configurations for NR-DC FR1 conditional handover including target MCG and target SCG**

| Config | Description |
|---|---|
| 1 | Source Cells (PCell and PSCell): FR1 NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target Cells (PCell and PSCell): FR1 NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source Cells (PCell and PSCell): FR1 NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target Cells (PCell and PSCell): FR1 NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source Cells (PCell and PSCell): FR1 NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target Cells (PCell and PSCell): FR1 NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.3.3.4.1-2

**Table 6.3.3.3.4.1-2: Initial conditions for NR-DC FR1 conditional handover including target MCG and target SCG**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.1, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.3.3.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. The power levels and settings for NR Cell 1 and Cell 2 are set according to Annex C.1.2 and C.1.3. Cell 3 and Cell 4 are NR FR1 target PCell and target PSCell respectively, and their power levels and settings are also set according to Annex C.1.2 and C.1.3.

2. The test parameters are given in Table 6.3.3.3.4.1-3 and 6.3.3.3.4.1-4 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.3.3.4.1-3: General test parameters for NR-DC FR1 PCell handover at conditional handover including target MCG and target SCG**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| **Initial conditions** | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 3 | |

| | | | | |
|---|---|---|---|---|
| Final condition | Active cell | | Cell 3 | |
| A3-Offset in handover condition | | dB | -4 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Cell 1 and Cell 3 are synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤2 | |

**Table 6.3.3.3.4.1-4: General test parameters for NR-DC FR1 PSCell change at conditional handover including target MCG and target SCG**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 2 | |
| | Neighbouring cell | | Cell 4 | |
| Final condition | Active cell | | Cell 4 | |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 μs | Cell 2 and Cell 4 are Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤10 | |

### 6.3.3.3.4.2 Test procedure

The test scenario comprises four NR cells, source PCell (Cell 1) and source PSCell (Cell 2), target PCell (Cell 3), and target PSCell (Cell 4). Cell 1 and Cell 3 are on radio channel 1 in FR1. Cell 2 and Cell 4 are on radio channel 2 in FR1.The test consists of two successive time periods, with time durations of T1 and T2 respectively. General test parameters and cell specific parameters are given in Tables 6.3.3.3.4.1-3, 6.3.3.3.4.1-4, 6.3.3.3.5-1 and 6.3.3.3.5-2. No measurement gap is configured in the test case.

At the start of T1, the UE shall be connected to Cell 1 (source PCell) on radio channel 1 and Cell 2 (source PSCell) on radio channel 2. UE is not aware of any timing information of Cell 3 (target PCell) and Cell 4 (target PSCell).

NR shall configure a condition implying conditional handover to Cell 3 and Cell 4 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. UE shall be able to do inter-frequency conditional handover from NR-FR1 Cell 1 to NR-FR1 Cell 3 and intra-frequency PSCell change from NR-FR1 Cell 2 to NR-FR1 Cell 4.

$T_{RRC}$ = 16ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

At the start of T2, Cell 3 and Cell 4 become detectable. The condition for conditional PCell handover is met during T2. During T2, the UE performs measurement on Cell 3.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active PCell and Cell 2 is the active PSCell. Set Cell 3 and Cell 4 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.3.4-1 and 6.3.3.3.4-2. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1, Cell 2 and monitoring corresponding ACK/NACK feedback sent by the UE.

3. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) and Cell 4 physical cell identity = ((current Cell 4 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure CHO execution condition for Cell 3 which is event A3 and subsequent PSCell change from Cell 2 to Cell 4.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting at T1 to power setting at T2 as specified in Table 6.3.3.3.5-1 and 6.3.3.3.5-2. T2 starts.

7. If

   a) The UE shall start to transmit the PRACH to Cell 3 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ =920 +57 +10=987 ms from the start of T2, and the interruption during T2 shall not exceeed $T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$=10+25+20+2=57ms,

   and

   b) The UE shall start to transmit the PRACH to Cell 4 less than $T_{measure} + T_{CHO_execution} + T_{processing} + T_{search_PCell_Conditional} + T_{search_PSCell} + T_{\Delta_PSCell} + T_{PSCell_DU}$ + 2 ms =920+10+25+0+ (3*20)+ 20+2=1037ms from the start of T2,

   and

   c) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

   - $X = T_{interrupt} + k_1$ for test configuration 1 in Table 6.3.3.3.4.1-1
   - $X = T_{interrupt}$ for test configuration 2 in Table 6.3.3.3.4.1-1
   - $X = 2 \cdot T_{interrupt}$ for test configuration 3 in Table 6.3.3.3.4.1-1.

   then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

8. After T2 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1 and Cell 2.

9. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1 and Cell 2, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1 and Cell 2.

10. Repeat steps 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

| | Config 3 | dBm/ 38.16MHz | -58.49 | -58.49 | -63.94 | -57.75 |
| Propagation condition | | - | AWGN | | AWGN | |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to

- Cell 3 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ =920 +57 +10=987 ms from the start of T2, and the interruption during T2 shall not exceeed $T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$=10+25+20+2=57ms.
- Cell 4 less than $T_{measure} + T_{CHO_execution} + T_{processing} + T_{search_PCell_Conditional} + T_{search_PSCell} + T_{\Delta_PSCell} + T_{PSCell_DU}$ + 2 ms =920+10+25+0+ (3*20)+ 20+2=1037ms from the start of T2,

excluding any transmissions which do not occur due to measurement gaps.

The PCell conditional handover delay can be expressed as specified in clause 6.1.6.1:

$D_{CHOwithPSCell_PCell} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH as specified in clause 6.1.6.1.1

$T_{interrupt} = T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$ ms

The PSCell conditional handover delay can be expressed as specified in clause 6.1.6.1.2:

$D_{CHOwithPSCell_PSCell} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{CHO_execution} + T_{processing} + T_{search_PCell_Conditional} + T_{search_PSCell} + T_{\Delta_PSCell} + T_{PSCell_DU}$ + 2 ms

The rate of the conditional handovers observed during repeated tests shall be at least 90%.

## 6.3.3.4 NR SA FR1 conditional handover including target MCG and candidate SCG

Editor's Note: This test case is incomplete in following aspects:

- Message contents is TBD.

### 6.3.3.4.1 Test purpose

This test is to verify the requirement for conditional handover including target MCG and candidate SCG for CPC in FR1 NR-DC specified in clause 6.1.7.1 of TS 38.133[6]. This test verifies the requirements for PCell conditional handover delay and PSCell conditional change delay as defined in section 6.1.7.1.1 and 6.1.7.1.2 of TS 38.133[6] respectively for FR1-FR1 NR-DC to FR1-FR1 NR-DC CHO with CPC. No measurement gap is configured in this test case.

### 6.3.3.4.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards.

### 6.3.3.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.4.

6.3.3.4.4 Test description

6.3.3.4.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.4.4.1-1.

**Table 6.3.3.4.4.1-1: Intra-frequency conditional handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cells (PCell and PSCell): NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cells (PCell and PSCell): NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.3.4.4.1-2

**Table 6.3.3.4.4.1-2: Initial conditions for NR-DC FR1 conditional handover including target MCG and candidate SCG**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.1, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.3.3.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. The power levels and settings for NR Cell 1 and Cell 2 are set according to Annex C.1.2 and C.1.3. Cell 3 and Cell 4 are NR FR1 target PCell and target PSCell respectively, and their power levels and settings are also set according to Annex C.1.2 and C.1.3.

2. The test parameters are given in Table 6.3.3.4.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.3.4.4.1-3: General test parameters Intra-frequency conditional handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cells | | PCell: Cell 1<br>PSCell: Cell 2 | |
| | Neighbouring cells | | Cell 3, Cell 4 | |
| Final condition | Active cells | | PCell: Cell 3<br>PSCell: Cell 4 | |
| A3-Offset | | dBm | 0 | A3-offset is applied for conditions for both CHO and CPC |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| PRACH configuration index | | | FR1 PRACH configuration 1 | As specified in table Table 6.3.3.2-3 in TS 38.211 [7] |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | 1 | |
| T3 | | s | ≤2 | |

#### 6.3.3.4.4.2 Test procedure

The test scenario comprises four NR cells, source PCell (Cell 1) and source PSCell (Cell 2), target PCell (Cell 3), and target PSCell (Cell 4). Cell 1 and Cell 3 are on radio channel 1 in FR1. Cell 2 and Cell 4 are on radio channel 2 in FR1. The test consists of three successive time periods, with time durations of T1, T2, and T3, respectively. General test parameters and cell specific parameters are given in Tables 6.3.3.4.4.1-3, 6.3.3.4.5-1 and 6.3.3.4.5-2.

At the start of time duration T1, the UE is connected to Cell 1 (source PCell) and Cell 2 (source PSCell). The UE may not have any timing information of Cell 3 (target PCell) and Cell 4 (target PSCell).

NR shall configure a condition implying conditional handover to Cell 3 with a condition implying conditional PSCell change to Cell 4 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2.

$T_{RRC}$ = 16ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

At the start of T2, Cell 3 becomes detectable. At the start of T3, Cell 4 becomes detectable. UE meets the handover condition and meets the PSCell change condition during T3.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active PCell and Cell 2 is the active PCSell. Set Cell 3 and Cell 4 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.4.5-1 and 6.3.3.4.5-2. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1, Cell 2 and monitoring corresponding ACK/NACK feedback sent by the UE.

3. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) and Cell 4 physical cell identity = ((current Cell 4 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure CHO execution condition for Cell 3 and Cell 4, where event A3 is the CHO execution condition.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting at T1 to power setting at T2 as specified in Table 6.3.3.4.5-1 and 6.3.3.4.5-2. T2 starts.

7. When T2 expires, the SS shall switch the power settings at T2 to power setting at T3 as per Tables 6.3.3.4.5-1 and 6.3.3.4.5-2. T3 starts.

8. If

   a) The UE shall start to transmit PRACH to Cell 3 less than max ($T_{measure_PCell}$, $T_{measure_PSCell}$) + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta_PCell}$ + $T_{PCell_DU}$ + 2 ms = (800 + 10 + 25 + 20 + 20 + 2) ms = 877 ms from the start of T3 and the interruption during T3 shall not exceeed $T_{processing}$ + $T_{\Delta_PCell}$ + $T_{PCell_DU}$ + 2 ms = (25 + 20 + 20 + 2) ms = 67 ms

   b) The UE shall start to transmit PRACH to Cell 4 less than max ($T_{measure_PCell}$, $T_{measure_PSCell}$) + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta_PSCell}$ + $T_{PSCell_DU}$ + 2 ms = (800 + 10 + 25 + 20 + 20 + 2) ms = 877 ms from the start of T3. The interruption during T3 shall not exceed $T_{processing}$ + $T_{\Delta_PSCell}$ + $T_{PSCell_DU}$ + 2 ms = 25 ms + 20 + 20 ms + 2 ms = 67 ms.
   and

   c) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T3 to the instant the UE transmits the first PRACH preamble, where

      - $X = T_{interrupt} + k_1$ for test configuration 1 in Table 6.3.3.4.4.1-1
      - $X = T_{interrupt}$ for test configuration 2 in Table 6.3.3.4.4.1-1
      - $X = 2 \cdot T_{interrupt}$ for test configuration 3 in Table 6.3.3.4.4.1-1.

   then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

9. After T3 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1 and Cell 2.

10. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

11. Repeat steps 2-10 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.3.4.4.3 Message Contents

TBD

#### 6.3.3.4.5 Test requirements

Table 6.3.3.4.5-1 and Table 6.3.3.4.5-2 defines the primary level settings including test tolerances for all tests.

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

$T_{RRC}$ + $T_{Event_DU}$ occurs during T1 and T2, as the conditional handover condition for Cell 3 becomes satisfied at the start of T2, and the conditional PSCell change condition for Cell 4 becomes satisfied at the start of T3. The test shall verify that there are no interruptions during T1 and T2. The UE shall not send PRACH to Cell 3 before the end of T2.
The UE shall start to transmit PRACH to

- Cell 3 less than max ($T_{measure_PCell}$, $T_{measure_PSCell}$) + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta_PCell}$ + $T_{PCell_DU}$ + 2 ms = (800 + 10 + 25 + 20 + 20 + 2) ms = 877 ms from the start of T3 and the interruption during T3 shall not exceeed $T_{processing}$ + $T_{\Delta_PCell}$ + $T_{PCell_DU}$ + 2 ms = (25 + 20 + 20 + 2) ms = 67 ms

- Cell 4 less than max ($T_{measure_PCell}$, $T_{measure_PSCell}$) + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta_PSCell}$ + $T_{PSCell_DU}$ + 2 ms = (800 + 10 + 25 + 20 + 20 + 2) ms = 877 ms from the start of T3. The interruption during T3 shall not exceed $T_{processing}$ + $T_{\Delta_PSCell}$ + $T_{PSCell_DU}$ + 2 ms = 25 ms + 20 + 20 ms + 2 ms = 67 ms.

The rate of the correct conditional handovers observed during repeated tests shall be at least 90%.

## 6.3.3.5 NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC with complementary conditional handover configuration

Editor's Note: This test case is incomplete in following aspects:

- Message contents is TBD.

- Test applicability is missing

- TT analysis is missing

### 6.3.3.5.1 Test purpose

This test verifies the requirement for conditional handover when the UE is configured with target MCG and candidate SCG for CPC in FR1 NR-DC and additionally configured with a complementary CHO only configuration in FR1. The test verifies that the UE makes the correct decision to proceed with CHO without CPC in case CHO condition is met without CPC condition being met, meanwhile verifying the conditional handover delay requirement in section 6.1.4.2 of TS38.133.

For UE which can pass test case defined in clause A.6.3.3.5, test case defined in clause A.6.3.3.1 can be skipped and corresponding test requirements are deemed to be fulfilled.

#### 6.3.3.5.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards.

#### 6.3.3.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.5.

#### 6.3.3.5.4 Test description

##### 6.3.3.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.5.4.1-1.

**Table 6.3.3.5.4.1-1: Supported test configurations for NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC with complementary conditional handover configuration**

| Config | Description |
|---|---|
| 1 | Source cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cells (PCell and PSCell): NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cells (PCell and PSCell): NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.3.5.4.1-2

**Table 6.3.3.5.4.1-2: Initial conditions for NR-DC FR1 conditional handover including target MCG and candidate SCG**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.1, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.3.5.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |

| A4-Offset in condition for PSCell | | dB | -120 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| PRACH configuration index | | | FR1 PRACH configuration 1 | As specified in table 6.3.3.2-3 in TS 38.211 [6] |
| Time offset between cells | | | 3 μs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | ≤2 | |

### 6.3.3.5.4.2 Test procedure

The test scenario comprises four NR cells, source PCell (Cell 1) and source PSCell (Cell 2), target PCell (Cell 3), and target PSCell (Cell 4). Cell 1 and Cell 3 are on radio channel 1 in FR1. Cell 2 and Cell 4 are on radio channel 2 in FR1.The test consists of two successive time periods, with time durations of T1 and T2 respectively. General test parameters and cell specific parameters are given in Tables 6.3.3.5.4.1-3, 6.3.3.5.5-1 and 6.3.3.5.5-2. No measurement gap is configured in the test case.

At the start of T1, the UE shall be connected to Cell 1 (source PCell) on radio channel 1 and Cell 2 (source PSCell) on radio channel 2. UE is not aware of any timing information of Cell 3 (target PCell) and Cell 4 (target PSCell).

NR shall configure a condition implying conditional handover to Cell 3 and Cell 4 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. UE shall be able to do inter-frequency conditional handover from NR-FR1 cell 1 to NR-FR1 cell 3 and intra-frequency PSCell change from NR-FR1 cell 2 to NR-FR1 cell 4.

$T_{RRC}$ = 16ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

At the start of T2, Cell3 and Cell 4 become detectable. The condition for conditional PCell handover is met during T2. During T2, the UE performs measurement on Cell3.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active PCell and Cell 2 is the active PSCell. Set Cell 3 and Cell 4 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.5.4-1 and 6.3.3.5.4-2. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1, Cell 2 and monitoring corresponding ACK/NACK feedback sent by the UE.

3. Set Cell 3 physical cell identity = ((current cell 3 physical cell identity + 1) mod 1008) and Cell 4 physical cell identity = ((current cell 4 physical cell identity + 1) mod 1008).

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure CHO execution condition for Cell 3 which is event A3 and subsequent PSCell change from Cell 2 to Cell 4.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting at T1 to power setting at T2 as specified in Table 6.3.3.5.5-1 and 6.3.3.5.5-2. T2 starts.

7. If

   a) The UE shall start to transmit the PRACH to Cell 3 less than Tmeasure + Tinterrupt + TCHO_execution = 800 +62 +10=872 ms from the start of T2 and the interruption during T2 shall not exceeed Tinterrupt=Tprocessing + TIU + TΔ + Tmargin =40+20+2 = 62 ms.

   The UE shall not send PRACH to Cell 4.

and

b) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

- $X = T_{interrupt} + k_1$ for test configuration 1 in Table 6.3.3.5.4.1-1
- $X = T_{interrupt}$ for test configuration 2 in Table 6.3.3.5.4.1-1
- $X = 2 \cdot T_{interrupt}$ for test configuration 3 in Table 6.3.3.5.4.1-1.

then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

8. After T2 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1 and Cell 2.
9. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1 and Cell 2, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1 and Cell 2.
10. Repeat steps 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

### 6.3.3.5.4.3 Message Contents

TBD

### 6.3.3.5.5 Test requirements

Table 6.3.3.5.5-1 defines the primary level settings including test tolerances for all tests.

**Table 6.3.3.5.5-1: Cell specific test parameters for NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC with complementary conditional handover configuration (Cell 1 and Cell 3)**

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the conditional handover condition for cell becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 3 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ = 800 +62 +10=872 ms from the start of T2 and the interruption during T2 shall not exceeed $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ =40+20+2 = 62 ms.

The UE shall not send PRACH to Cell 4.

### 6.3.3.6 NR SA FR1 Intra-frequency NES triggering conditional handover

#### 6.3.3.6.1 Test purpose

To verify the requirement for the NR FR1 intra-frequency NES-based conditional handover requirements specified in TS 38.133 [6] clause 6.1.4.2

#### 6.3.3.6.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards and supporting DCI-based enabling/disabling NES-specific CHO execution condition.

#### 6.3.3.6.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.6.

#### 6.3.3.6.4 Test description

##### 6.3.3.6.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.6.4.1-1.

**Table 6.3.3.6.4.1-1: NES triggering Intra-frequency conditional handover from FR1 to FR1 test configurations**

| Config | Description |

### 6.3.3.6.4.2 Test procedure

The test scenario comprises of 1 NR carrier and two cells, Cell 1 and Cell 2, on this carrier. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.3.6.4.1-3 and 6.3.3.6.5-1 respectively. No measurement gap is configured in the test case.

The test consists of two successive time periods, with time durations of T1 and T2 respectively.

At the start of time duration T1, the UE may not have any timing information of Cell 2. The UE is configured with a NES-based condition implying handover to Cell 2 firstly, and then configured with DCI 2-9 with NES-mode indication during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. No interruption shall be observed in time period T1, where

- $T_{RRC}$ = 10ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

From start of T2, the Cell 2 becomes detectable and NES-based event is fulfilled. During T2, the UE performs measurement on Cell 2 and evaluates the execution condition, and starts handover procedure when execution condition is satisfied. The UE shall send PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ ms from the start of T2. The Interruption length $T_{interrupt}$ shall also be verified in T2.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.6.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure NES-based CHO execution condition for the UE.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. The SS shall transmit DCI 2-9 command of ‘1’ value for indicating NES-specific CHO execution condition.

7. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.3.6.5-1. T2 starts.

8. If

   e) the UE transmits the PRACH preambles to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ ms from the beginning of time period T2,

   and

f) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

- $X = T_{interrupt} + k_1$ for test configuration 6.3.3.6-1
- $X = T_{interrupt}$ for test configuration 6.3.3.6-2
- $X = 2 \cdot T_{interrupt}$ for test configuration 6.3.3.6-3.

then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

9. After T2 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.
10. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.
11. Repeat steps 2-10 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Propagation condition | | - | AWGN | | | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The rate of correct handovers observed during repeated tests shall be at least 90%.

The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ from the start of T2.
where:

- $T_{measure}$ = 800 ms, is the measurements time specified in TS 38.133 [6] clause 6.1.4.2.2.
- $T_{CHO_execution}$ = 10 ms, is the conditional execution preparation time specified in TS 38.133 [6] clause 6.1.4.2.2.
- $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ ms = 62ms, is the interruption time specified in TS 38.133 [6] 6.1.4.2.4.
  - $T_{processing}$ = 20 ms, is time for UE processing;
  - $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell;
  - $T_{\Delta}$ = 20 ms, is time for fine time tracking and acquiring full timing information of the target cell;
  - $T_{margin}$ = 2 ms, is time for SSB post-processing.

This gives a total of 872 ms

The interruption during T2 shall not exceed $T_{interrupt}$ = 62ms.

### 6.3.3.7 NR SA FR1-FR1 Inter-frequency NES-based conditional handover

#### 6.3.3.7.1 Test purpose

To verify the requirement for the NES-based NR FR1-NR FR1 inter-frequency conditional handover requirements specified in 38.133 [6] clause 6.1.4.2

#### 6.3.3.7.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards and supporting DCI-based enabling/disabling NES-specific CHO execution condition.

#### 6.3.3.7.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.3.7.

#### 6.3.3.7.4 Test description

##### 6.3.3.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.3.7.4.1-1.

**Table 6.3.3.7.4.1-1: NES-based inter-frequency conditional handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 6.3.3.7-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.3.7-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.3.7-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.3.7.4.1-2

**Table 6.3.3.7.4.1-2: Initial conditions for NR SA FR1 conditional handover**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.1, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.3.7.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. Message contents are defined in clause 6.3.3.7.4.3.
2. The power levels and settings for NR Cell 1 are set according to Annex C.1.2 and C.1.3. Cell 2 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.
3. The test parameters are given in Table 6.3.3.7.4.1-3 below, with A3-Offset modified by Test Tolerance.

**Table 6.3.3.7.4.1-3: General test parameters for NES-based inter-frequency conditional handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |

| | | | | |
|---|---|---|---|---|
| Final condition | Active cell | | Cell 2 | |
| A3-Offset in handover condition without nesEvent-r18 | | dB | 10 | |
| A3-Offset in handover condition with nesEvent-r18 = true | | dB | -4 | |
| Hysteresis | | dB | 0 | |
| Time To Trigger | | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| T1 | | s | 5 | |
| T2 | | s | ≤2 | |

#### 6.3.3.7.4.2 Test procedure

The test scenario comprises of 1 NR carrier and two cells, Cell 1 and Cell 2, on this carrier. General parameters and Cell-specific parameters for Cell 1 and Cell 2 are given in Table 6.3.3.7.4.1-3 and 6.3.3.7.5-1 respectively. Measurement gap (gap pattern #0) is configured in the test case. In this test, UE is not indicated to report SSB based RRM measurement result with the associated SSB index for carrier of Cell 2.

The test consists of two successive time periods, with time durations of T1 and T2 respectively.

At the start of time duration T1, the UE does not have any timing information of Cell 2. The UE is configured with a condition implying handover to Cell 2 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. No interruption shall be observed in time period T1, where

- $T_{RRC}$ = 10ms, is the RRC procedure delay defined in clause 12 in TS 38.331 [13].

At the start of T2, Cell 2 becomes detectable and meets the NES-based handover condition., and DCI 2-9 command of '1' value for indicating NES-specific CHO execution condition is transmitted to UE at 950ms from the start of T2, i.e., UE receives DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_inter_without_index}$.

From start of T2, the Cell 2 becomes detectable and NES-based event is fulfilled. UE is configured with DCI 2-9 command of '1' value for indicating NES-specific CHO execution condition at 950ms from the start of T2, i.e., UE receives DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_inter_without_index}$. During T2, the UE performs measurement on Cell 2 and evaluates the execution condition, and starts handover procedure when execution condition is satisfied. The UE shall send PRACH to Cell 2 less than $950 + T_{CHO_execution} + T_{interrupt}$ ms from the start of T2. The Interruption length $T_{interrupt}$ shall also be verified in T2

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the *RRCReconfiguration* message. Cell 1 is the active cell. Set Cell 2 physical cell identity to the initial physical cell identity.

2. Set the parameters according to T1 in Table 6.3.3.7.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts. The SS starts continuously scheduling the UE to perform DL reception in every DL slot on Cell 1 and monitoring corresponding ACK/NACK feedbacks sent by the UE.

3. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

4. The SS shall transmit an *RRCReconfiguration* message with *conditionalReconfiguration* on Cell 1 to configure NES-based CHO execution condition and measurement gap pattern #0 for the UE.

5. The UE shall transmit an *RRCReconfigurationComplete* message.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.3.7.5-1. T2 starts.

7. At 950ms from the start of T2, the SS shall transmit DCI 2-9 command of '1' value for indicating NES-specific CHO execution condition.

8. If

g) the UE transmits the PRACH preambles to Cell 2 less than 950 + $T_{CHO_execution}$ + $T_{interrupt}$ ms from the beginning of time period T2,

and

h) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

- X = $T_{interrupt}$ +$k_1$ for test configuration 6.3.3.7-1
- X = $T_{interrupt}$ for test configuration 6.3.3.7-2
- X = 2·$T_{interrupt}$ for test configuration 6.3.3.7-3.

then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

9. After T2 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync* to cause UE handover back to Cell 1.
10. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.
11. Repeat steps 2-10 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Propagation condition | | - | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The rate of correct handovers observed during repeated tests shall be at least 90%.

The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{CHO_execution} + T_{interrupt}$ from the start of T2. where:

- $T_{measure}$ = 950 ms, is the measurements time specified in 38.133 [6] clause 6.1.4.2.2.
- $T_{CHO_execution}$ = 10 ms, is the conditional execution preparation time specified in 38.133 [6] clause 6.1.4.2.2.
- $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ ms = 62ms, is the interruption time specified in 38.133 [6] 6.1.4.2.4.
  - $T_{processing}$ = 20 ms, is time for UE processing;
  - $T_{IU}$ = 20 ms, is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell;
  - $T_{\Delta}$ = 20 ms, is time for fine time tracking and acquiring full timing information of the target cell;
  - $T_{margin}$ = 2 ms, is time for SSB post-processing.

This gives a total of 1022 ms

The interruption during T2 shall not exceed $T_{interrupt}$ = 62ms.

## 6.3.4 LTM PCell Switch

### 6.3.4.0 Minimum conformance requirements

#### 6.3.4.0.1 Minimum conformance requirements for LTM PCell Switch

LTM cell switch delay $D_{LTM}$ is the delay from the end of the last TTI containing the MAC-CE command for cell switch until the time the UE transmits the first UL message on the target cell.

When the target cell and the target joint UL/DL TCI state or separate UL and DL TCI states in the MAC-CE LTM cell switch command are known, the LTM cell switch delay is defined as:

$$D_{LTM} = T_{cmd} + T_{LTM\text{-}interrupt}$$

Where:

$T_{cmd}$ equals to $T_{HARQ}$ + 3ms, where $T_{HARQ}$ is the timing between cell switch command and acknowledgement as specified in TS 38.213[8].

$T_{LTM\text{-}interrupt}$ is as stated in TS 38.133[6] section 6.3.1.3.

The target cell in the LTM cell switch command is known if the following conditions are met:

- During the last 5 seconds before the reception of the cell switch command:
  - The UE has sent a valid L1 or L3 measurement report for the target cell, and
  - One of the SSBs measured from the NR target cell configured for measurement remains detectable according to the cell identification conditions specified in TS 38.133[6] clause 9.2 for intra-frequency cell and in TS 38.133[6] clause 9.3 for inter-frequency cell,
- One of the SSBs measured from the NR target cell configured for measurement remains detectable according to the cell identification conditions specified in TS 38.133[6] clause 9.2 for intra-frequency cell and in TS 38.133[6] clause 9.3 for inter-frequency cell,

Otherwise, the cell is unknown.

The target joint DL/UL TCI state or separate DL and UL TCI states in the LTM cell switch command are known if the following conditions are met:

- During the period from the last transmission of the RS resource used for the L1-RSRP measurement reporting for the target DL/UL TCI state to the completion of LTM cell switch, where the RS resource for L1-RSRP measurement is the RS in target DL/UL TCI state or QCLed to the target DL/UL TCI state
  - LTM cell switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
  - The UE has sent at least 1 L1-RSRP report for the target DL/UL TCI state before the LTM cell switch command
  - The target DL/UL TCI state remains detectable during the LTM cell switching period
  - The SSB associated with the target DL/UL TCI state remain detectable during the cell switching period
    - SNR of the TCI state $\geq$ -3dB

Otherwise, the target joint DL/UL TCI state or separate DL and UL TCI state is unknown.

The interruption time $T_{LTM\text{-}interrupt}$ is the time between the end of the last TTI containing the MAC-CE command for LTM cell switch until the time the UE transmits the first UL message on the target cell, excluding $T_{cmd}$ stated in TS 38.133[6] section 6.3.1.2.

$$T_{LTM\text{-}interrupt} = T_{LTM\text{-}RRC\text{-}processing} + T_{LTM\text{-}processing} + T_{first\text{-}RS} + T_{RS\text{-}proc} + T_{LTM\text{-}IU} \text{ ms},$$

Where:

$T_{LTM-RRC-processing}$ is the time for ASN.1 decoding and validity/compliance check for the RRC configuration of the LTM target cell indicated in the LTM cell switch command.

$T_{LTM-RRC-processing}$ = 0, if the UE supports *ltm-FastProcessingConfig-r18* capability, and at least one of the following conditions is met:

- The number of candidate cells in the LTM candidate cell configuration does not exceed *maxNumberConfigs-r18* and the number of the configured serving cells and the cells in the LTM configuration does not exceed *maxNumberStoredConfigCells-r18*, or
- The following conditions are fulfilled for the target cell:
  - UE has received LTM candidate cell TCI state activation command for the target cell at least $T_{HARQ}$ + 13 ms before the LTM cell switch command,
- UE has received PDCCH order for early RACH for the target cell at least $N_{T,2}$+10 ms before the LTM cell switch command, where $N_{T,2}$ is defined in section 8.1 of TS 38.213 [8], and.
  - The number of LTM candidate cells for which TCI state(s) were activated or PDCCH order was received before the cell switch command does not exceed *maxNumberConfigs-r18*, and the total number of serving cells and the cells in the LTM configuration for which TCI state(s) were activated or PDCCH order was received before the cell switch does not exceed *maxNumberStoredConfigCells-r18.*
- [*FFS further conditions*]

Otherwise $T_{LTM-RRC-processing}$ = 10 ms.

$T_{LTM-processing}$ is the time for UE processing, consisting of applying the target cell parameters and L1/L2 change.

If the UE supports *ltm-FastUE-Processing-r18* capability, the value of $T_{LTM-processing}$ equals to

- *fr1-r18* for FR1 to FR1 and FR2 to FR2 LTM cell switch.
- *fr2-r18* for FR1 to FR2 and FR2 to FR1 LTM cell switch.
- *fr1-AndFR2-r18* for FR1 to FR2 and FR2 to FR1 LTM cell switch.

Otherwise, the value of $T_{LTM-processing}$ equals to

- 20 ms for FR1 to FR1 and FR2 to FR2 LTM cell switch.
- 40 ms for FR1 to FR2 and FR2 to FR1 LTM cell switch.

$T_{first-RS}$ is the time for fine time tracking and acquiring full timing information of the target cell.

$T_{RS-proc}$ is the time for SSB processing.

$T_{first-RS}$ = 0 and $T_{RS-proc}$= 0 under the following conditions:

- The target TCI state indicated in the LTM cell switch command is in the serving cell active TCI state list, or
- The UE is configured with LTM L1 intra- and/or inter-frequency measurements for the target cell, and
  - The target TCI state in the cell switch command is in the LTM candidate cell active TCI state list, and
    - the time gap between receiving the LTM candidate cell TCI state activation MAC-CE and the cell switch command is at least TCI state activation delay stated in TS 38.133[6] section 8.25.3, and
    - the time gap between receiving the LTM candidate cell TCI state activation MAC-CE and the cell switch command is not more than TCI state activation delay stated in section 8.25.3 + 160 ms, or
    - the measurement period of the SSB associated to target TCI state is not larger than 160 ms after the LTM candidate cell TCI state activation MAC-CE is received, or

- The target cell is an FR1 cell, and the UE is not configured with LTM L1 intra- and/or inter-frequency measurements for the target cell, and
  - The target TCI state in the cell switch command is in the LTM candidate cell active TCI state list, and
    - the time gap between receiving the LTM candidate cell TCI state activation MAC-CE and the cell switch command is at least TCI state activation delay stated in TS 38.133[6] section 8.25.3, and not more than TCI state activation delay stated in TS 38.133[6] section 8.25.3 + 160 ms, or
  - The time gap between the latest PDCCH ordered RACH preamble transmission on the target cell and the cell switch command is not more than [160 ms].

Otherwise,

$T_{first\text{-}RS}$ is the time to the first SSB transmission on the target cell after $T_{cmd} + T_{LTM\text{-}RRC\text{-}processing} + T_{LTM\text{-}processing}$.

$T_{RS\text{-}proc}$ = 2 ms.

$T_{LTM\text{-}IU}$ is the interruption uncertainty during LTM cell switch.

For RACH-based LTM cell switch, $T_{LTM\text{-}IU}$ is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. $T_{LTM\text{-}IU}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [8].

For RACH-less LTM cell switch, $T_{LTM\text{-}IU_}$is the uncertainty on transmitting the first uplink transmission on the target cell.

## 6.3.4.1 NR SA FR1 RACH-based Intra-frequency PCell switch from FR1 to FR1

### 6.3.4.1.1 Test purpose

To verify the UE's ability to perform NR FR1-NR FR1 FR1 RACH-based intra-frequency PCell switch specified in 38.133 [6] clause 6.3.1 for both with and without early TCI state activation.

### 6.3.4.1.2 Test applicability

This test applies to all types of NR UEs supporting NR LTM for MCG with RACHwith L1-RSRP measurement and report based on SSB(s) of candidate cell(s) from Release 18 onwards.

The test consists of 4 tests, and UE is required to pass one among Test 1A, Test 1B, Test 2A and Test 2B.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18 and/or ltm-MAC-CE-SeparateTCI-r18*
  - Test 1A: for a UE supporting *ltm-MAC-CE-JointTCI-r18*.
  - Test 1B: for a UE supporting *ltm-MAC-CE-SeparateTCI-r18* and does not support *ltm-MAC-CE-JointTCI-r18*.
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18 and ltm-MAC-CE-SeparateTCI-r18*
  - Test 2A: for a UE supporting *ltm-BeamIndicationJointTCI-r18*.
  - Test 2B: for a UE supporting *ltm-BeamIndicationSeparateTCI-r18* and does not support *ltm-BeamIndicationJointTCI-r18*.

### 6.3.4.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.4.1.

### 6.3.4.1.4 Test description

#### 6.3.4.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.4.1.4.1-1.

**Table 6.3.4.1.4.1-1: Intra-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.4.1.4.1-2.

**Table 6.3.4.1.4.1-2: Initial conditions for NR SA FR1 handover with known target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.4.1.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.3.4.1.4.1-3.

2. Message contents are defined in clause 6.3.4.1.4.3.

3. Two cells are deployed in the test, which are FR1 PCell(Cell 1) and FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The power levels and settings are according to Annex C.1.2 and C.1.3 for this test.

**Table 6.3.4.1.4.1-3: General test parameters for Intra-frequency cell switch from FR1 to FR1**

#### 6.3.4.1.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table 6.3.4.3.4.1-1. Both cell switch delay and interruption length are tested by using the parameters in table 6.3.4.1.4.1-2, and 6.3.4.1.4.1-3.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.4.1.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.

3. SS shall transmit an RRCReconfiguration message, configuring measurement object.

4. UE shall transmit RRCReconfigurationComplete message.

5. If the UE transmit an A3 message report, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.4.1.5-1. T2 starts.

6. At the start of T2, the SS shall transmit an *RRCReconfiguration* message with *LTM-Candidate-r18* for Cell 2 and SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

7. UE shall transmit RRCReconfigurationComplete message.

8. If the UE transmits a valid L1-RSRP result of Cell 2:

   Test 1A and 1B: The SS shall switch the power setting from T2 to T3 as specified in Table 6.3.4.1.5-1. T3 starts.

   Test 2A and 2B: T3 is skipped. The SS shall switch the power setting from T2 to T4 as specified in Table 6.3.4.1.5-1. T4 starts, go to step10.

9. At the start of T3, the SS shall transmit the candidate cell TCI activation MAC-CE (Refer TS 38.321 [12], clauses 6.1.3.76) for Cell 2. 50ms after the candidate cell TCI state activation MAC-CE transmission, the SS shall switch the power setting from T3 to T4 as specified in Table 6.3.4.1.5-1. T4 starts.

   candidate cell TCI activation MAC-CE:

   - Test 1A: *CandidateTCI-State#1* is activated.

- Test 1B: *CandidateTCI-State#1* and *CandidateTCI-UL-State#1* is activated.

10. The start of T4 is the instant when the last TTI containing the LTM cell switch command MAC CE(Refer TS 38.321 [12], clauses 6.1.3.75) is sent by Cell 1 to the UE.

    cell switch MAC-CE:

    - Contention-Free Random-Access Resources are indicated and the field of Timing Advance Command is set to FFF

    - Test 1A: CandidateTCI-State#2 is indicated.

    - Test 1B: CandidateTCI-State#2 and CandidateTCI-UL-State#1 are indicated

    - Test 2A: CandidateTCI-State#1 is indicated.

- Test 2B: CandidateTCI-State#1 and CandidateTCI-UL-State#1 are indicated

11. If the UE transmits the uplink PRACH channel to Cell 2 less than $D_{LTM}$ from the beginning of time period T4 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.T4 ends.

12. After T4 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync*, which includes the release of *LTM-Config-r18* to cause UE handover back to Cell 1.

13. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1

14. Power off Cell 2 and set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod1008) for next iteration of the test procedure loop.

15. Repeat steps 2-14 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

| Propagation condition | | - | AWGN | | AWGN | |

| | |
|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |

The UE shall start to transmit the PRACH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T4. The rate of correct cell switches observed during repeated tests shall be at least 90%.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3ms and is specified in 38.133 [6] clause 6.3.1.2. $T_{LTM\text{-}interrupt}$ = $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$ ms and is specified in 38.133 [6] clause 6.3.1.2.1

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1A and 1B, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2A and 2B
- $T_{LTM\text{-}IU_}$=20ms
- $T_{LTM\text{-}RRC\text{-}processing}$ =10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0ms
- $T_{LTM\text{-}processing}$ =10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

## 6.3.4.2 NR SA FR1 RACH-based Inter-frequency LTM PCell switch from FR1 to FR1

### 6.3.4.2.1 Test purpose

To verify the UE's ability to perform NR FR1-NR FR1 FR1 RACH-based inter-frequency PCell switch specified in 38.133 [6] clause 6.3.1 for both with and without early TCI state activation.

### 6.3.4.2.2 Test applicability

This test applies to all types of NR UEs supporting NR LTM for MCG with RACHwith L1-RSRP measurement and report based on SSB(s) of candidate cell(s) from Release 18 onwards.

The test consists of 4 tests, and UE is required to pass one among Test 1A, Test 1B, Test 2A and Test 2B.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18 and/or ltm-MAC-CE-SeparateTCI-r18*
  - Test 1A: for a UE supporting *ltm-MAC-CE-JointTCI-r18*.
  - Test 1B: for a UE supporting *ltm-MAC-CE-SeparateTCI-r18* and does not support *ltm-MAC-CE-JointTCI-r18*.
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18 and ltm-MAC-CE-SeparateTCI-r18*
  - Test 2A: for a UE supporting *ltm-BeamIndicationJointTCI-r18*.
  - Test 2B: for a UE supporting *ltm-BeamIndicationSeparateTCI-r18* and does not support *ltm-BeamIndicationJointTCI-r18*.

### 6.3.4.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.4.2.

6.3.4.2.4 Test description

6.3.4.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.4.2.4.1-1.

**Table 6.3.4.2.4.1-1: Inter-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.4.2.4.1-2

**Table 6.3.4.2.4.1-2: Initial conditions for NR SA FR1 handover with known target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.4.2.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.3.4.2.4.1-3.

2. Message contents are defined in clause 6.3.4.2.4.3.

3. Two cells are deployed in the test, which are FR1 PCell(Cell 1) and FR1 neighbour cell (Cell 2) on the different frequency than the PCell. The power levels and settings are according to Annex C.1.2 and C.1.3 for this test.

**Table 6.3.4.2.4.1-3: General test parameters for Inter-frequency cell switch from FR1 to FR1**

| T3 | | s | ≤0.2 | | | | |
| T4 | | s | ≤0.1 | | | | |

### 6.3.4.2.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the different frequency than the PCell. Test configurations are given in table 6.3.4.2.4.1-1. Both cell switch delay and interruption length are tested by using the parameters in table 6.3.4.2.4.1-2, and 6.3.4.2.4.1-2.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.4.2.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.

3. SS shall transmit an RRCReconfiguration message, configuring measurement object.

4. UE shall transmit RRCReconfigurationComplete message.
5. If the UE transmit an A3 message report, the SS shall switch the power setting from T1 to T2 as specified in Table 6.3.4.2.5-1. T2 starts.
6. At the start of T2, the SS shall transmit an *RRCReconfiguration* message with *LTM-Candidate-r18* for Cell 2 and SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
7. UE shall transmit RRCReconfigurationComplete message.
8. If the UE transmits a valid L1-RSRP result of Cell 2:

   Test 1A and 1B: The SS shall switch the power setting from T2 to T3 as specified in Table 6.3.4.2.5-1. T3 starts.

   Test 2A and 2B: T3 is skipped. The SS shall switch the power setting from T2 to T4 as specified in Table 6.3.4.2.5-1. T4 starts, go to step10.
9. At the start of T3, the SS shall transmit the candidate cell TCI activation MAC-CE (Refer TS 38.321 [12], clauses 6.1.3.76) for Cell 2. 100ms after the candidate cell TCI state activation MAC-CE transmission, the SS shall switch the power setting from T3 to T4 as specified in Table 6.3.4.2.5-1. T4 starts.

   candidate cell TCI activation MAC-CE:

   - Test 1A: *CandidateTCI-State#1* is activated.

   - Test 1B: *CandidateTCI-State#1* and *CandidateTCI-UL-State#1* is activated.
10. The start of T4 is the instant when the last TTI containing the LTM cell switch command MAC CE(Refer TS 38.321 [12], clauses 6.1.3.75) is sent by Cell 1 to the UE.

    cell switch MAC-CE:

    - Contention-Free Random-Access Resources are indicated and the field of Timing Advance Command is set to FFF

    - Test 1A: CandidateTCI-State#2 is indicated.

    - Test 1B: CandidateTCI-State#2 and CandidateTCI-UL-State#1 are indicated

    - Test 2A: CandidateTCI-State#1 is indicated.

- Test 2B: CandidateTCI-State#1 and CandidateTCI-UL-State#1 are indicated

11. If the UE transmits the uplink PRACH channel to Cell 2 less than $D_{LTM}$ from the beginning of time period T4 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.T4 ends.
12. After T4 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync*, which includes the release of *LTM-Config-r18* to cause UE handover back to Cell 1.
13. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1
14. Power off Cell 2 and set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod1008) for next iteration of the test procedure loop.
15. Repeat steps 2-14 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.4.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| Propagation condition | | - | AWGN | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit the PRACH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T4. The rate of correct cell switches observed during repeated tests shall be at least 90%.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3ms and is specified in 38.133 [6] clause 6.3.1.2. $T_{LTM\text{-}interrupt}$ = $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$ ms and is specified in 38.133 [6] clause 6.3.1.2.1

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1A and 1B, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2A and 2B
- $T_{LTM\text{-}IU_}$=20ms

- $T_{LTM\text{-}RRC\text{-}processing}$ =10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0ms
- $T_{LTM\text{-}processing}$ =10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

### 6.3.4.3 NR SA FR1 RACH-less Intra-frequency PCell switch from FR1 to FR1

#### 6.3.4.3.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 RACH-less intra-frequency Pcell switch specified in 38.133 [6] clause 6.3.1, including cell switch delay and interruption length, for both with and without early TCI state activation.

#### 6.3.4.3.2 Test applicability

This test applies to all NR UEs supporting NR LTM for MCG with RACH-less with L1-RSRP measurement and report from Release 18 onwards, and with optional support for *rach-EarlyTA-Measurement-r18*. The test consists of four parts, and the UE is required to pass one among Test 1A, Test 1B, Test 2A and Test 2B:

- Test 1: for a UE that supports *ltm-MAC-CE-JointTCI-r18* and/or *ltm-MAC-CE-SeparateTCI-r18*
  - Test 1A: for a UE that supports *ltm-MAC-CE-JointTCI-r18*.
  - Test 1B: for a UE that supports *ltm-MAC-CE-SeparateTCI-r18* and does not support *ltm-MAC-CE-JointTCI-r18*.
- Test 2: for a UE that does not supports *ltm-MAC-CE-JointTCI-r18* and *ltm-MAC-CE-SeparateTCI-r18*
  - Test 2A: for a UE that supports *ltm-BeamIndicationJointTCI-r18*.
  - Test 2B: for a UE that supports *ltm-BeamIndicationSeparateTCI-r18* and does not support *ltm-BeamIndicationJointTCI-r18.*

#### 6.3.4.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.4.3.

#### 6.3.4.3.4 Test description

##### 6.3.4.3.4.1 Initial conditions

Initial conditions are a set of test configurations that the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.4.3.4.1-1.

**Table 6.3.4.3.4.1-1: Intra-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.4.3.4.1-2.

**Table 6.3.4.3.4.1-2: Test environment parameters**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.4.3.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.3.4.3.4.1-3.
2. Message contents are defined in clause 6.3.4.3.4.3.
3. Two cells are deployed in the test, which are FR1 Pcell (Cell 1) and FR1 neighbour cell (Cell 2) on the same frequency as the Pcell. The power levels and settings are according to Annex C.1.2 and C.1.3 for this test.

**Table 6.3.4.3.4.1-3: General test parameters for Intra-frequency cell switch from FR1 to FR1**

| T5 | | s | ≤0.1 | | | | |

#### 6.3.4.3.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in Table 6.3.4.3.4.1-1. No measurement gap is configured in the test case.

Both cell switch delay and interruption length are tested by using the parameters in table 6.3.4.3.4.1-2, and 6.3.4.3.4.1-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5, respectively.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRCReconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.4.3.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.

3. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the intra-frequency carrier of Cell 2 for Test 1A, 1B, 2A and 2B.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. The UE shall transmit a *MeasurementReport* message triggered by Event A3. T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

6. The SS shall switch the power setting from T1 to T2 as specified in Table 6.3.4.3.5-1. T2 starts.

7. At the start of T2, the SS shall transmit an *RRCReconfiguration* message with *LTM-Candidate-r18* for Cell 2, and SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports for Cell 2 in PUCCH format 2 for Test 1A, 1B, 2A and 2B.

8. The UE shall transmit *RRCReconfigurationComplete* message.

9. T2 ends with UE reporting a valid L1-RSRP result of Cell 2.

   - Test 1A and 1B: The SS shall switch the power setting from T2 to T3 as specified in Table 6.3.4.3.5-1. T3 starts.

   - Test 2A and 2B: T3 is skipped. The SS shall switch the power setting from T2 to T4 as specified in Table 6.3.4.3.5-1 if the UE is capable of *rach-EarlyTA-Measurement-r18*. T4 starts, go to step12. Otherwise, the SS shall switch the power setting from T2 to T5 as specified in Table 6.3.4.3.5-1. T5 starts, go to step14.

10. At the start of T3, the SS shall transmit a Candidate Cell TCI States Activation MAC-CE (Refer to TS 38.321 [12], clauses 5.18.36, 6.1.3.76) of Cell 2.

    - In Test 1A, *CandidateTCI-State#1* is activated.

    - In Test 1B, *CandidateTCI-State#1* and *CandidateTCI-UL-State#1* are activated.

11. T3 ends 50ms after the candidate cell TCI state activation MAC CE transmission. And the SS shall switch the power setting from T3 to T4 as specified in Table 6.3.4.3.5-1. T4 starts.

    - For the UE that incapable of *rach-EarlyTA-Measurement-r18*, T4 is skipped. The SS shall switch the power setting from T3 to T5 as specified in Table 6.3.4.3.5-1. T5 starts, go to step14.

12. At the start of T4, the SS shall transmit a PDCCH order (Refer to TS 38.213 [8], clause 21, and TS 38.212 [31], clause 7.3.1.2.1) to trigger the UE to transmit the PRACH on Cell 2 for Test 1A, 1B, 2A and 2B.

13. T4 ends 5ms after the UE transmits the PRACH to Cell 2. And the SS shall switch the power setting from T4 to T5 as specified in Table 6.3.4.3.5-1. T5 starts.

14. The start of T5 is the instant when the last TTI containing the LTM Cell Switch Command MAC-CE (Refer to TS 38.321 [12], clauses 5.18.35, 6.1.3.75) is sent by Cell 1 to trigger UE switches to Cell 2 for Test 1A, 1B, 2A and 2B. T5 starts.

    - In the cell switch MAC-CE:

      - The target cell is Cell 2.

      - Timing Advance Command is set to 0.

      - In test 1A, *CandidateTCI-State#2* is indicated.

      - In test 1B, *CandidateTCI-State#2* and *CandidateTCI-UL-State#1* are indicated.

      - In test 2A, *CandidateTCI-State#1* is indicated.

      - In test 2B, *CandidateTCI-State#1* and *CandidateTCI-UL-State#1* are indicated.

    - Cell 2 continuously schedules PUSCH for the UE.

15. T5 ends either at the UL slot of PUSCH scheduled by Cell 2 at the first DL slot not earlier than ($T_{cmd}$ + $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$) after the beginning of T5 or upon the reception of PUSCH at Cell 2, whichever is earlier. The values of $T_{cmd}$, $T_{LTM\text{-}RRC\text{-}processing}$ $T_{LTM\text{-}processing}$, $T_{first\text{-}RS}$ and $T_{RS\text{-}proc}$ are specified in 6.3.4.3.5.

16. If the UE transmits PUSCH to Cell 2 in less than $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$) ms from the beginning of time period T5, then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

17. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync*, which includes the release of *LTM-Config-r18*, to cause UE handover back to Cell 1.

18. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 on Cell 1.

19. Power off Cell 2 and set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod1008) for next iteration of the test procedure loop. Upon setting the new physical cell identity for Cell 2, power on Cell 2 to ensure Cell 2 is available for the following test steps.

20. Repeat steps 2-19 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.4.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clauses 4.6 and 7.3 with the following exceptions:

| Propagation condition | | - | AWGN | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit PUSCH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T5.
The rate of correct cell switches observed during repeated tests shall be at least 90%.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3ms, as specified in TS 38.133 [6] clause 6.3.1.2. $T_{LTM\text{-}interrupt}$ = $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$ is defined in TS 38.133 [6] clause 6.3.1.3.

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$=0 for Test 1A and 1B, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$=22ms for Test 2A and 2B.
- $T_{LTM\text{-}IU}$ is the uncertainty in transmitting the first uplink transmission on Cell 2.
- $T_{LTM\text{-}RRC\text{-}processing}$ = 10 ms if the UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0ms
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

## 6.3.4.4 NR SA FR1 RACH-less Intra-frequency PCell switch from FR1 to FR1 without L1-RSRP measurement

### 6.3.4.4.1 Test purpose

To verify the requirement for the NR FR1-NR FR1 RACH-less intra-frequency Pcell switch specified in 38.133 [6] clause 6.3.1 without L1-RSRP measurement and measurement reporting, including cell switch delay and interruption length.

### 6.3.4.4.2 Test applicability

This test applies to all NR UEs supporting NR LTM for MCG with RACH-less without L1-RSRP measurement and report from Release 18 onwards, and with optional support for *rach-EarlyTA-Measurement-r18*. The test consists of four parts, and the UE is required to pass one among Test 1A, Test 1B, Test 2A and Test 2B:

- Test 1: for a UE that supports *ltm-MAC-CE-JointTCI-r18* and/or *ltm-MAC-CE-SeparateTCI-r18*
  - Test 1A: for a UE that supports *ltm-MAC-CE-JointTCI-r18*.
  - Test 1B: for a UE that supports *ltm-MAC-CE-SeparateTCI-r18* and does not support *ltm-MAC-CE-JointTCI-r18*.
- Test 2: for a UE that does not supports *ltm-MAC-CE-JointTCI-r18* and *ltm-MAC-CE-SeparateTCI-r18*
  - Test 2A: for a UE that supports *ltm-BeamIndicationJointTCI-r18*.
  - Test 2B: for a UE that supports *ltm-BeamIndicationSeparateTCI-r18* and does not support *ltm-BeamIndicationJointTCI-r18.*

### 6.3.4.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.4.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.3.4.4.

### 6.3.4.4.4 Test description

#### 6.3.4.4.4.1 Initial conditions

Initial conditions are a set of test configurations that the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.4.4.4.1-1.

**Table 6.3.4.4.4.1-1: Intra-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.4.4.4.1-2.

**Table 6.3.4.4.4.1-2: Test environment parameters**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.4.4.4.1-1 | |
| Propagation conditions | AWGN | As specified in Annex C.2.2. |

| | | | |
|---|---|---|---|
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable Ues without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.3.4.4.4.1-3.
2. Message contents are defined in clause 6.3.4.4.4.3.
3. Two cells are deployed in the test, which are FR1 Pcell (Cell 1) and FR1 neighbour cell (Cell 2) on the same frequency as the Pcell. The power levels and settings are according to Annex C.1.2 and C.1.3 for this test.

**Table 6.3.4.4.4.1-3: General test parameters for Intra-frequency cell switch from FR1 to FR1**

| Parameter | | Unit | Value | | | | Comment |

| T5 | | s | ≤0.1 | | | | |

#### 6.3.4.4.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in Table 6.3.4.4.4.1-1. No measurement gap is configured in the test case.

Both cell switch delay and interruption length are tested by using the parameters in table 6.3.4.4.4.1-2, and 6.3.4.4.4.1-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5, respectively.

1. Ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRCReconfiguration message. Cell 1 is the active cell.

2. Set the parameters according to T1 in Table 6.3.4.4.5-1. Propagation conditions are set according to Annex C clause C.2.2. T1 starts.

3. The SS shall transmit an *RRCReconfiguration* message to configure event A3 triggered measurement reporting on the intra-frequency carrier of Cell 2 for Test 1A, 1B, 2A and 2B.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. The UE shall transmit a *MeasurementReport* message triggered by Event A3. T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

6. The SS shall switch the power setting from T1 to T2 as specified in Table 6.3.4.4.5-1. T2 starts.

7. At the start of T2, the SS shall transmit an *RRCReconfiguration* message with *LTM-Candidate-r18* for Cell 2 for Test 1A, 1B, 2A and 2B.

8. The UE shall transmit *RRCReconfigurationComplete* message.

9. When T2 expires,

   - Test 1A and 1B: The SS shall switch the power setting from T2 to T3 as specified in Table 6.3.4.4.5-1. T3 starts.

   - Test 2A and 2B: T3 is skipped. The SS shall switch the power setting from T2 to T4 as specified in Table 6.3.4.4.5-1 if the UE is capable of *rach-EarlyTA-Measurement-r18*. T4 starts, go to step12. Otherwise, the SS shall switch the power setting from T2 to T5 as specified in Table 6.3.4.4.5-1. T5 starts, go to step14.

10. At the start of T3, the SS shall transmit a Candidate Cell TCI States Activation MAC-CE (Refer to TS 38.321 [12], clauses 5.18.36, 6.1.3.76) of Cell 2.

    - In Test 1A, *CandidateTCI-State#1* is activated.

    - In Test 1B, *CandidateTCI-State#1* and *CandidateTCI-UL-State#1* are activated.

11. T3 ends 50ms after the candidate cell TCI state activation MAC CE transmission. And the SS shall switch the power setting from T3 to T4 as specified in Table 6.3.4.4.5-1. T4 starts.

    - For the UE that incapable of *rach-EarlyTA-Measurement-r18*, T4 is skipped. The SS shall switch the power setting from T3 to T5 as specified in Table 6.3.4.4.5-1. T5 starts, go to step14.

12. At the start of T4, the SS shall transmit a PDCCH order (Refer to TS 38.213 [8], clause 21, and TS 38.212 [31], clause 7.3.1.2.1) to trigger the UE to transmit the PRACH on Cell 2 for Test 1A, 1B, 2A and 2B.

13. T4 ends 5ms after the UE transmits the PRACH to Cell 2. And the SS shall switch the power setting from T4 to T5 as specified in Table 6.3.4.4.5-1. T5 starts.

14. The start of T5 is the instant when the last TTI containing the LTM Cell Switch Command MAC-CE (Refer to TS 38.321 [12], clauses 5.18.35, 6.1.3.75) is sent by Cell 1 to trigger UE switches to Cell 2 for Test 1A, 1B, 2A and 2B. T5 starts.

    - In the cell switch MAC-CE:

      - The target cell is Cell 2.

      - Timing Advance Command is set to 0.

      - In test 1A, *CandidateTCI-State#2* is indicated.

      - In test 1B, *CandidateTCI-State#2* and *CandidateTCI-UL-State#1* are indicated.

      - In test 2A, *CandidateTCI-State#1* is indicated.

      - In test 2B, *CandidateTCI-State#1* and *CandidateTCI-UL-State#1* are indicated.

    - Cell 2 continuously schedules PUSCH for the UE.

15. T5 ends either at the UL slot of PUSCH scheduled by Cell 2 at the first DL slot not earlier than ($T_{cmd}$ + $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$) after the beginning of T5 or upon the reception of PUSCH at Cell 2, whichever is earlier. The values of $T_{cmd}$, $T_{LTM\text{-}RRC\text{-}processing}$ $T_{LTM\text{-}processing}$, $T_{first\text{-}RS}$ and $T_{RS\text{-}proc}$ are specified in 6.3.4.4.5.

16. If the UE transmits PUSCH to Cell 2 in less than $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$) ms from the beginning of time period T5, then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

17. After T5 expires, the SS sends an *RRCReconfiguration* with *reconfigurationWithSync*, which includes the release of *LTM-Config-r18*, to cause UE handover back to Cell 1.

18. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 on Cell 1.

19. Power off Cell 2 and set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod1008) for next iteration of the test procedure loop. Upon setting the new physical cell identity for Cell 2, power on Cell 2 to ensure Cell 2 is available for the following test steps.

20. Repeat steps 2-19 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.3.4.4.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clauses 4.6 and 7.3 with the following exceptions:

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall start to transmit PUSCH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T5.
The rate of correct cell switches observed during repeated tests shall be at least 90%.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3ms, as specified in TS 38.133 [6] clause 6.3.1.2. $T_{LTM\text{-}interrupt}$ = $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$ is defined in TS 38.133 [6] clause 6.3.1.3.

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$=0 for Test 1A and 1B, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$=22ms for Test 2A and 2B.
- $T_{LTM\text{-}IU}$ is the uncertainty in transmitting the first uplink transmission on Cell 2.

- $T_{LTM\text{-}RRC\text{-}processing}$ = 10 ms if the UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0ms
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

## 6.3.5 LTM PSCell Switch

### 6.3.5.0 Minimum conformance requirements

#### 6.3.5.0.1 Minimum conformance requirements for LTM PCell Switch

LTM cell switch delay $D_{LTM}$ is the delay from the end of the last TTI containing the MAC-CE command for cell switch until the time the UE transmits the first UL message on the target cell.

The requirements in this section apply when

- the target cell is known, and
- the target joint UL/DL TCI state or separate UL and DL TCI states in the MAC-CE LTM cell switch command are known, or
- the target cell is an FR1 cell, and the UE has reported L3-RSRP measurement result with SSB index associated to the target TCI state within 5 seconds before receiving the LTM TCI state activation command, and SNR of the SSB associated to the target TCI state ≥ -3dB.

LTM cell switch delay is defined as:

$$D_{LTM} = T_{cmd} + T_{LTM\text{-}RRC\text{-}processing} + T_{LTM\text{-}processing} + T_{first\text{-}RS} + T_{RS\text{-}proc} + T_{LTM\text{-}IU} \text{ ms}$$

Where:

$T_{cmd}$, $T_{LTM\text{-}RRC\text{-}processing}$, $T_{LTM\text{-}processing}$, $T_{first\text{-}RS}$, $T_{RS\text{-}proc}$ and $T_{LTM\text{-}IU}$ are as stated in TS 38.133 [6] section 6.3.1.2.

The definition of known LTM target cell and the definition of known target joint DL/UL TCI state or separate DL and UL TCI states are as stated in TS 38.133 [6] in section 6.3.1.2.

### 6.3.5.1 NR SA FR1 RACH-based intra-frequency LTM PSCell switch

Editor's Note: This test case is incomplete in following aspects:

- TT analysis is missing.
- Test applicability is missing
- Message contents are TBD
- Test procedure is missing

#### 6.3.5.1.1 Test purpose

To verify the UE's ability to perform NR FR1 RACH-based intra-frequency PSCell switch specified in 38.133 [6] clause 8.20 for both with and without early TCI state activation.

#### 6.3.5.1.2 Test applicability

This test applies to all types of NR UEs supporting NR LTM for SCG with RACH from Release 18 onwards.

#### 6.3.5.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.3.5.0.

The normative reference for this requirement is TS 38.133 [6] clauses 8.20 and A.6.3.5.1.

### 6.3.5.1.4 Test description

#### 6.3.5.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

This test shall be tested using any of the test configurations in Table 6.3.5.1.4.1-1.

**Table 6.3.5.1.4.1-1: Intra-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 6.3.5.1-1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.3.5.1-2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.3.5.1-3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.3.5.1.4.1-2.

**Table 6.3.5.1.4.1-2: Initial conditions for NR SA FR1 handover with known target cell**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.3.5.1.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.3.5.1.4.1-3.
2. Message contents are defined in clause 6.3.5.1.4.3.
3. Three cells are deployed in the test, which are FR1 PCell (Cell 1), FR1 PSCell (Cell 2) and a FR1 neighbour cell (Cell 3) on the same frequency as the PSCell. The power levels and settings are according to Table 6.3.5.1.4.1-3 and Table 6.3.5.1.5-1.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

| Note 3: | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
|---|---|

The UE shall start to transmit the PRACH to Cell 3 in no later than $D_{LTM}$ from the beginning of time period T4.

The rate of correct cell switches observed during repeated tests shall be at least 90%.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3ms and is specified in clause 6.3.1.2

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1A and 1B, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2A and 2B
- $T_{LTM\text{-}IU}$ = 20 ms
- $T_{LTM\text{-}RRC\text{-}processing}$ = 10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0ms
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

# 6.4 Timing

## 6.4.1 UE transmit timing

### 6.4.1.0 Minimum conformance requirements

#### 6.4.1.0.1 Minimum conformance requirements for UE transmit timing accuracy

The UE initial transmission timing error shall be less than or equal to $\pm T_e$ where the timing error limit value $T_e$ is specified in Table 6.4.1.0.1-1. This requirement applies:

- when it is the first transmission in a DRX cycle for PUCCH, PUSCH and SRS or it is the PRACH transmission.

The UE shall meet the Te requirement for an initial transmission provided that at least one SSB is available at the UE during the last 160 ms. The reference point for the UE initial transmit timing control requirement shall be the downlink timing of the reference cell minus $(N_{\mathrm{TA}} + N_{\mathrm{TA\,offset}}) \times T_{\mathrm{c}}$. The downlink timing is defined as the time when the first detected path (in time) of the corresponding downlink frame is received from the reference cell. $N_{\mathrm{TA}}$ for PRACH is defined as 0.

$(N_{\mathrm{TA}} + N_{\mathrm{TA\,offset}}) \times T_{\mathrm{c}}$ (in $T_c$ units) for other channels is the difference between UE transmission timing and the downlink timing immediately after when the last timing advance in clause 7.3 was applied. $N_{\mathrm{TA}}$ for other channels is not changed until next timing advance is received. The value of $N_{\mathrm{TA\,offset}}$ depends on the duplex mode of the cell in which the uplink transmission takes place and the frequency range (FR). $N_{\mathrm{TA\,offset}}$ is defined in Table 6.4.1.0.1-2.

**Table 6.4.1.0.1-1: $T_e$ Timing Error Limit**

| Frequency Range | SCS of SSB signals (kHz) | SCS of uplink signals s(kHz) | $T_e$ |
|---|---|---|---|
| 1 | 15 | 15 | $12*64*T_c$ |
| | | 30 | $10*64*T_c$ |
| | | 60 | $10*64*T_c$ |
| | 30 | 15 | $8*64*T_c$ |
| | | 30 | $8*64*T_c$ |
| | | 60 | $7*64*T_c$ |
| 2 | 120 | 60 | $3.5*64*T_c$ |
| | | 120 | $3.5*64*T_c$ |
| | 240 | 60 | $3*64*T_c$ |
| | | 120 | $3*64*T_c$ |
| Note 1: $T_c$ is the basic timing unit defined in TS 38.211 [7] | | | |

**Table 6.4.1.0.1-2: The Value of $N_{\mathrm{TA\,offset}}$**

| Frequency range and band of cell used for uplink transmission | $N_{\mathrm{TA\,offset}}$ (Unit: $T_C$) |
|---|---|
| FR1 FDD band without LTE-NR coexistence case or FR1 TDD band without LTE-NR coexistence case | 25600 (Note 1) |
| FR1 FDD band with LTE-NR coexistence case | 0 (Note 1) |
| FR1 TDD band with LTE-NR coexistence case | 39936 (Note 1) |
| FR2 | 13792 |
| Note 1: The UE identifies $N_{\mathrm{TA\,offset}}$ based on the information n-TimingAdvanceOffset according to TS 38.331 [13]. If UE is not provided with the information n-TimingAdvanceOffset, the default value of $N_{\mathrm{TA\,offset}}$ is set as 25600 for FR1 band. In case of multiple UL carriers in the same TAG, UE expects that the same value of n-TimingAdvanceOffset is provided for all the UL carriers according to section 4.2 in [8] and the value 39936 of $N_{\mathrm{TA\,offset}}$ can also be provided for a FDD serving cell. | |

When it is not the first transmission in a DRX cycle or there is no DRX cycle, and when it is the transmission for PUCCH, PUSCH and SRS transmission, the UE shall be capable of changing the transmission timing according to the received downlink frame of the reference cell except when the timing advance in clause 7.3 is applied.

When the transmission timing error between the UE and the reference timing exceeds $\pm T_e$, the UE is required to adjust its timing to within $\pm T_e$. The reference timing shall be $(N_{TA} + N_{TA\ offset}) \times T_c$ before the downlink timing of the reference cell. All adjustments made to the UE uplink timing shall follow these rules:

1) The maximum amount of the magnitude of the timing change in one adjustment shall be $T_q$.

2) The minimum aggregate adjustment rate shall be $T_p$ per second.

3) The maximum aggregate adjustment rate shall be $T_q$ per 200 ms for SCS of UL signals smaller or equal to 120 kHz and 100 ms for SCS of uplink signals larger or equal to 480 kHz.

where the maximum autonomous time adjustment step $T_q$ and the aggregate adjustment rate $T_p$ are specified in Table 6.4.1.0.1-3.

**Table 6.4.1.0.1-3: $T_q$ Maximum Autonomous Time Adjustment Step and $T_p$ Minimum Aggregate Adjustment rate**

| Frequency Range | SCS of uplink signals (kHz) | $T_q$ | $T_p$ |
|---|---|---|---|
| 1 | 15 | $5.5*64*T_c$ | $5.5*64*T_c$ |
| | 30 | $5.5*64*T_c$ | $5.5*64*T_c$ |
| | 60 | $5.5*64*T_c$ | $5.5*64*T_c$ |
| 2 | 60 | $2.5*64*T_c$ | $2.5*64*T_c$ |
| | 120 | $2.5*64*T_c$ | $2.5*64*T_c$ |
| NOTE 1: $T_c$ is the basic timing unit defined in TS 38.211 [7] | | | |

The normative reference for this requirement is TS.38.133 [6] clause 7.1.2.

## 6.4.1.1 NR SA FR1 UE transmit timing accuracy

### 6.4.1.1.1 Test purpose

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeb and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in TS 38.133 [6] clause 7.1.2.

### 6.4.1.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

### 6.4.1.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.4.1.0.1.

The normative reference for this requirement is TS.38.133 [6] clause A.6.4.1.1

### 6.4.1.1.4 Test Description

#### 6.4.1.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, test channel bandwidths and sub-carrier spacing based on NR operating bands specified in Table 5.3.5-1 of 38.521-1 [17].

This test can be run in one of the configurations defined in Table 6.4.1.1.4.1-1.

**Table 6.4.1.1.4.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 6.4.1.1-1 | NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 6.4.1.1-2 | NR TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 6.4.1.1-3 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

| Note: The UE is only required to be tested in one of the supported test configurations in FR1 depending on UE capability. |
|---|

Configure the test equipment and the DUT according to the parameters in Table 6.4.1.1.4.1-2

**Table 6.4.1.1.4.1-2: Initial conditions for NR SA FR1 transmit timing accuracy**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.4.1.1.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | Without LTE link | | |

1. Message contents are defined in clause 6 6.4.1.1.4.3.

2. A single NR cell is used. The connection setup is done according to the settings in Annex C.1.3, and the downlink signal levels as per Annex C.1. The general test parameters are given in Table 6.4.1.1.5-1 below.

### 6.4.1.1.4.2 Test procedure

The test consists of a single NR cell (PCell). The downlink timing of the NR Cell is changed and the changes in UE transmit timing are observed. The transmit timing is verified by the UE transmitting SRS used as a measurement reference facilitating the SS timing estimation.

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

2. Set up NR Cell according to parameters given in Table 6.4.1.1.4.1-1.

3. The SS shall transmit an RRCReconfiguration message configuring the UE with the message content defined in clause 6.4.1.1.4.3.

4. The UE shall transmit RRCReconfigurationComplete message.

5. After connection set up with the cell and during 2 seconds before DL timing adjustment, the test equipment shall monitor all SRS transmissions and verify that, for each received SRS, the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB.

   a. The $N_{TA}$ offset value (in $T_c$ units) is 25600 for FR1

   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in Table 6.4.1.1.5-4

6. The test system shall adjust the timing of the DL path by values given in Table 6.4.1.1.4.2-1. For Test 2, the DL timing change shall be applied within the first half of the DRX cycle upon expiration of the preceding DRX ON duration.

**Table 6.4.1.1.4.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 15 | +64*64Tc | +32*64Tc |
| 30 | +32*64Tc | +16*64Tc |

7. The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in Table 6.4.1.1.5-5. This will only be done for Test1. The test system samples the UE Transmit Timing once per SRS transmission (as per configured SRS periodicity). To check Rule 1, the SS shall check that the maximum time adjustment step size $T_q$ between one SRS transmission to next consecutive SRS transmission of a valid UL slot is within Rule 1 as specified in clause 6.4.1.0.1 and Table 6.4.1.0.1-3. To check that the minimum adjustment rate is within Rule 2 as specified in clause 6.4.1.0.1 and Table 6.4.1.0.1-3, the SS shall measure the change in SRS transmission timing over a 1 + offset seconds sliding window (offset in ms to the next consecutive SRS transmission), with step size p (where p is the periodicity of SRS) , as long as the resulting slot is a valid UL slot. To check that the maximum adjustment rate is within Rule 3 as specified in clause 6.4.1.0.1 and Table 6.4.1.0.1-3, the SS shall measure the change in SRS transmission timing over a 200ms – offset sliding window of previous SRS transmission, with step size p (where p is the periodicity of SRS) , as long as the resulting slot is a valid UL slot. The three rules apply until the UE transmit timing offset is within the limits specified in 6.4.1.0.1 and Table 6.4.1.0.1-3 with respect to the first detected path (in time) of the corresponding downlink frame of Cell 1. The test system will wait till evaluation interval of T seconds is met to ensure UE transmit timing is stable at the end of the step, where T=.DL_timing_change[Ts]/5.5Ts and DL_timing_change is specified in Table 6.4.1.1.4.2-1.

8. After the UE transmit timing is within the limits specified in step 7, and during 2 seconds, the test system shall monitor all SRS transmissions and verify that, for each received SRS, the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

#### 6.4.1.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

## 6.4.2 UE timer accuracy

## 6.4.3 Timing advance

### 6.4.3.0 Minimum conformance requirement

#### 6.4.3.0.1 Minimum conformance requirement for timing advance adjustment

The UE shall adjust the timing of its transmissions with a relative accuracy better than or equal to the UE Timing Advance adjustment accuracy requirement in Table 6.4.3.0.1-1, to the signalled timing advance value compared to the timing of preceding uplink transmission. The timing advance command step is defined in TS 38.213 [8].

**Table 6.4.3.0.1-1: UE Timing Advance adjustment accuracy**

| Sub Carrier Spacing, SCS kHz | 15 | 30 | 60 | 120 |
|---|---|---|---|---|
| UE Timing Advance adjustment accuracy | ±256 $T_c$ | ±256 $T_c$ | ±128 $T_c$ | ±32 $T_c$ |

## 6.4.3.1 NR SA FR1 timing advance adjustment accuracy

### 6.4.3.1.1 Test purpose

The purpose of the test is to verify UE timing advance adjustment delay and accuracy requirement defined in clause 7.3 of TS 38.133 [6].

### 6.4.3.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

### 6.4.3.1.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.4.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.4.3.1.

### 6.4.3.1.4 Test description

#### 6.4.3.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.4.3.1.4.1-1.

**Table 6.4.3.1.4.1-1: NR SA FR1 timing advance adjustment accuracy supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.4.3.1.4.1-2

**Table 6.4.3.1.4.1-2: Initial conditions for NR SA FR1 timing advance adjustment accuracy**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.4.3.1.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |

| T1 | s | 5 | |
| T2 | s | 5 | |

1. Message contents are defined in clause 6.4.3.1.4.3.

2. Single Cell is used, which is NR FR1 PCell. The connection setup is done according to the settings in Annex C.1.2 and C.1.3.

3. The test parameters are given in Table 6.4.3.1.4.1-3 above.

4. Downlink signals for NR cell are initially set up according to Annex C.1.2 and C.1.3.

5. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

#### 6.4.3.1.4.2 Test Procedure

The test consists of single cell. The test consists of two successive time periods, with time durations of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table 6.4.3.1.5-1 and table 6.4.3.1.4.1-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured. The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [12], shall be configured so that it does not expire in the duration of the test.

1. Set the parameters according to values in Tables 6.4.3.1.4.1-3.

2. SS shall transmit an RRCReconfiguration message.

3. The UE shall transmit RRCReconfigurationComplete message.

4. During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in Clause 6.1.3.4 in TS 38.321 [12]. The Timing Advance Command value shall be set to 31, which according to Clause 4.2 in TS 38.213 [8] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

5. During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value 39 as specified in table 6.4.3.1.4.1-3. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

6. As specified in Clause 7.3.2.1 of TS 38.133 [6], the UE adjusts its uplink timing at slot n+k+1 for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

7. The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [12], shall be configured so that it does not expire in the duration of the test.

8. The result from the SRS and adjustment of the timing advance in step 7) is used to measure that the UE adjusts the timing of its transmission with a relative accuracy better than or equal to value specified in Table 6.4.3.1.3-1 to the signalled timing advance value compared to the timing of preceding uplink transmission.

9. If the UE adjust the timing of its transmission within a relative accuracy greater than or equal to value specified in Table 6.4.3.1.3-1 to the signalled timing advance value compared to the timing of preceding uplink transmission then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one.

10. The SS shall transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

11. After the RRC connection release, the SS transmits in Cell a Paging message (including PagingRecord with ue-Identity) for the UE and ensures the UE is in State RRC_CONNECTED according to TS 38.508-1 [14] clause 4.5.4 or if the paging fails, switch off and on the UE and ensure the UE is in RRC_CONNECTED according to TS 38.508-1 [14] clause 4.5.4.

12. Repeat step 2-11 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.4.3.1.4.3 Message Contents

Message contents are according to TS 38.508-1 [14] clause 7.3, with the following exceptions:

#### 6.4.3.1.5 Test Requirement

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. *k* slots after the reception of the timing advance command, where:

$k$ = 5 for Config 1, 2, and 3

The Timing Advance adjustment accuracy shall be within the limits specified in Table 6.4.3.1.5-3.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90%.

Table 6.4.3.1.5-1 and Table 6.4.3.1.5-2 define the primary level settings.

**Table 6.4.3.1.5-1: Cell specific test parameters for timing advance**

| Parameter | | Unit | Test1 | |

| UE Timing Advance adjustment accuracy | ±344 $T_c$ | ±344 $T_c$ | ±216 $T_c$ |

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

# 6.5 Signaling characteristics

## 6.5.1 Radio link monitoring

### 6.5.1.00 General

The UE shall monitor the downlink link quality based on the reference signal in the configured RLM-RS resource(s) in order to detect the downlink radio link quality of the PCell and PCell as specified in TS 38.213 [8]. The configured RLM-RS resources can be all SSBs, or all CSI-RSs, or a mix of SSBs and CSI-RSs. UE is not required to perform RLM outside the active DL BWP.

On each RLM-RS resource, the UE shall estimate the downlink radio link quality and compare it to the thresholds $Q_{out}$ and $Q_{in}$ for the purpose of monitoring downlink radio link quality of the cell.

The threshold $Q_{out}$ is defined as the level at which the downlink radio link cannot be reliably received and shall correspond to the out-of-sync block error rate ($BLER_{out}$) as defined in Table 6.5.1-1.

The threshold $Q_{in}$ is defined as the level at which the downlink radio link quality can be significantly more reliably received than at $Q_{out}$ and shall correspond to the in-sync block error rate ($BLER_{in}$) as defined in Table 6.5.1-1.

The out-of-sync block error rate ($BLER_{out}$) and in-sync block error rate ($BLER_{in}$) are determined from the network configuration via parameter *rlmInSyncOutOfSyncThreshold* signalled by higher layers. When UE is not configured with *RLM-IS-OOS-thresholdConfig* from the network, UE determines out-of-sync and in-sync block error rates from Configuration #0 in Table 6.5.1-1 as default. All requirements here are applicable for BLER Configuration #0 in Table 6.5.1-1.

**Table 6.5.1-1: Out-of-sync and in-sync block error rates**

| Configuration | $BLER_{out}$ | $BLER_{in}$ |
|---|---|---|
| 0 | 10% | 2% |

UE shall be able to monitor up to $X_{RLM-RS}$ RLM-RS resources of the same or different types in each corresponding carrier frequency range, where $X_{RLM-RS}$ is specified in Table 6.5.1-2, and meet the requirements as specified in this section.

**Table 6.5.1-2: Maximum number of RLM-RS resources $X_{RLM-RS}$**

| Maximum number of RLM-RS resources, $X_{RLM-RS}$ | Carrier frequency range of PCell |
|---|---|
| 2 | FR1, ≤ 3 GHz |
| 4 | FR1, > 3 GHz |
| 8 | FR2 |

If different SCS is used for CSI-RS based RLM-RS and SSB, then CSI-RS based RLM-RS and SSB shall be TDMed. If same SCS is used for CSI-RS based RLM-RS and SSB, then CSI-RS based RLM-RS and SSB can be FDMed or TDMed.

Any uplink signal transmitted by the UE is used for detecting the In-/Out-of-Sync state of the UE. In terms of measurement, the uplink signal is verified on the basis of the UE output power:

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [4]) means uplink signal
- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [4]) means no uplink signal.

Introduction of Requirement on Radio Link Monitoring for UE Configured with Relaxed Measurement Criteria.

For the UE supports *rlm-Relaxation-r17*and configured with explicit signalling *goodServingCellEvaluationRLM,* which is always configured to the UE when the network enables RLM relaxation for the UE as specified in TS 38.331 [13], the relaxed requirements defined in clause 6.5.1.0.4 for SSB based radio link monitoring and the relaxed requirements defined in clause 6.5.1.0.5 for CSI-RS based radio link monitoring are allowed to apply to the relaxed RLM measurements on SpCell after fulfilling the following conditions:

- for the serving cells in intra-band carrier aggregation configured with SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell, when
  - the good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [13] is fulfilled for the serving cell based on the measurements that are configured for SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on Scell in the intra-band carrier aggregation if the *lowMobilityEvaluationConnected* is not configured, or
  - the UE is also configured with *lowMobilityEvaluationConnected* and both low mobility criterion defined in clause 5.7.13.1 of TS 38.331 [13] is fulfilled for a period of $T_{SearchDeltaP-Connected}$ and good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [13] is fulfilled for the serving cell based on the measurements that are configured for SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on Scell in the intra-band carrier aggregation.
- for other serving cells, when

- the good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [13] is fulfilled for the SpCell if the *lowMobilityEvaluationConnected* is not configured, or

- the UE is also configured with *lowMobilityEvaluationConnected* and both low mobility criterion defined in clause 5.7.13.1 of TS 38.331 [13] is fulfilled for a period of $T_{SearchDeltaP-Connected}$ and good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [13] is fulfilled for the SpCell.

otherwise, UE shall apply the requirements defined in TS 38.133 [6] clause 8.1.2.2 for SSB based radio link monitoring and the requirements defined in TS 38.133 [6] clause 8.1.3.2 for CSI-RS based radio link monitoring. Note that when multiple resources are configured on a serving cell for RLM or BFD evaluation, the good serving cell quality criterion is considered as fulfilled for the serving cell when any resource configured for the cell fulfils the good serving defined in clause 5.7.13.2 of TS 38.331 [13].

The UE is no longer allowed to relax RLM measurements and apply the relaxed radio link monitoring provided that at least one of the following conditions is met:

- The UE sends out of sync indications to the higher layers,

- The timer T310 is running.

- No DRX is used or DRX cycle is longer than 80ms

## 6.5.1.0 Minimum conformance requirements

### 6.5.1.0.1 Minimum conformance requirements for out-of-sync SSB-based RLM

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{Evaluate_out_SSB}$ [ms] period becomes worse than the threshold $Q_{out_SSB}$ within $T_{Evaluate_out_SSB}$ [ms] evaluation period. The requirements in this section apply for each SSB based RLM-RS resource configured for PSCell, provided that the SSB configured for RLM is transmitted within UE active DL BWP during the entire evaluation period defined in Table 6.5.1.0.1-1.

$T_{Evaluate_out_SSB}$ is defined in Table 6.5.1.0.1-1 for FR1.

**Table 6.5.1.0.1-1: Evaluation period $T_{Evaluate_out}$ for FR1**

| Configuration | $T_{Evaluate_out_SSB}$ (ms) |
|---|---|
| no DRX | max(200,ceil(10*P)*$T_{SSB}$) |
| DRX cycle≤320 | max(200,ceil(15*P)*max($T_{DRX}$,$T_{SSB}$)) |
| DRX cycle>320 | ceil(10*P)*$T_{DRX}$ |
| NOTE: $T_{SSB}$ is the periodicity of SSB configured for RLM. | |

For FR1,

- P=1/(1 – $T_{SSB}$/MGRP), when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and

- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

If the high layer in TS 38.331 [13] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; otherwise $T_{SMTCperiod}$ follows *smtc1*.

Longer evaluation period would be expected if the combination of RLM-RS, SMTC occasion and measurement gap configurations does not meet pervious conditions.

When the downlink radio link quality on all the configured RLM-RS resources is worse than $Q_{out}$, Layer 1 of the UE shall send an out-of-sync indication for the cell to the higher layers. A Layer 3 filter shall be applied to the out-of-sync indications as specified in TS 38.331 [13].

The out-of-sync and in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [8]. Two successive indications from Layer 1 shall be separated by at least $T_{Indication_interval}$.

If DRX is used, when the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each RLM-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each RLM-RS resource. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When

- the UE transitions from a first configuration of RLM-RS resources to a second configuration of RLM-RS resources that is different from the first configuration,

or

- the UE transitions between DRX and no DRX or DRX cycle periodicity changes,

for each RLM-RS resource, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration and the second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each RLM-RS resource present in the second configuration. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When DRX is not used $T_{Indication_interval}$ is max(10ms, $T_{RLM-RS,M}$), where $T_{RLM,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to $T_{SSB}$ specified in section 8.1.2 if the RLM-RS resource is SSB.

When DRX is used, TIndication_interval is max(10ms, 1.5*DRX_cycle_length, 1.5*$T_{RLM-RS,M}$) if DRX cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [13], the UE shall monitor the configured RLM-RS resources for recovery using the evaluation period and Layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

The transmitter power of the UE in the monitored cell shall be turned off within 40ms after expiry of T310 timer as specified in TS 38.331 [13].

There are no scheduling restrictions due to radio link monitoring performed with a same subcarrier spacing as PDSCH/PDCCH on FR1.

For UE which support *simultaneousRxDataSSB-DiffNumerology* [11] there are no restrictions on scheduling availability due to radio link monitoring based on SSB as RLM-RS. For UE which do not support *simultaneousRxDataSSB-DiffNumerology* [11] the following restrictions apply due to radio link monitoring based on SSB as RLM-RS.

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on SSB symbols to be measured for radio link monitoring.

The normative reference for this requirement is TS 38.133 [6] clauses 8.1.2, 8.1.4, 8.1.5, 8.1.6 and 8.1.7.

#### 6.5.1.0.2 Minimum conformance requirements for in-sync SSB-based RLM

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{Evaluate_in_SSB}$ [ms] period becomes better than the threshold $Q_{in_SSB}$ within $T_{Evaluate_in_SSB}$ [ms] evaluation period.

$T_{Evaluate_out_SSB}$ and $T_{Evaluate_in_SSB}$ are defined in Table 6.5.1.0.2-1 for FR1.

For FR1,

- $P=1/(1 - T_{SSB}/MGRP)$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and

- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

If the high layer in TS 38.331 [13] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*.

Note: The overlap between CSI-RS RLM and SMTC means that CSI-RS based RLM is within the SMTC window duration.Longer evaluation period would be expected if the combination of RLM-RS, SMTC occasion and measurement gap configurations does not meet pervious conditions.

The values of $M_{out}$ and $M_{in}$ used in Table 6.5.1.2.3-1 are defined as:

- $M_{out}$ = 20 and $M_{in}$ = 10, if the CSI-RS resource configured for RLM is transmitted with Density =3.

**Table 6.5.1.0.2-1: Evaluation period $T_{Evaluate_out}$ and $T_{Evaluate_in}$ for FR1**

| Configuration | $T_{Evaluate_out}$ (ms) | $T_{Evaluate_in}$ (ms) |
|---|---|---|
| no DRX | max(200, ceil($M_{out}$×P)×$T_{CSI-RS}$) | max(100, ceil($M_{in}$×P) × $T_{CSI-RS}$) |
| DRX ≤ 320ms | max(200, ceil(1.5×$M_{out}$×P)× max($T_{DRX}$, $T_{CSI-RS}$)) | max(100, ceil(1.5×$M_{in}$×P)× max($T_{DRX}$, $T_{CSI-RS}$)) |
| DRX > 320ms | ceil($M_{out}$×P) × $T_{DRX}$ | ceil($M_{in}$×P) × $T_{DRX}$ |
| NOTE: $T_{CSI-RS}$ is the periodicity of CSI-RS resource configured for RLM. $T_{DRX}$ is the DRX cycle length. | | |

If the high layer in TS 38.331 [13] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*.

When the downlink radio link quality on at least one of the configured RLM-RS resources is better than $Q_{in}$, Layer 1 of the UE shall send an in-sync indication for the cell to the higher layers. A Layer 3 filter shall be applied to the in-sync indications as specified in TS 38.331 [13].

The in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [8]. Two successive indications from Layer 1 shall be separated by at least $T_{Indication_interval}$.

When DRX is not used $T_{Indication_interval}$ is max(10ms, $T_{RLM-RS,M}$), where $T_{RLM,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to $T_{SSB}$ specified in section 8.1.2 of TS 38.133 [6] if the RLM-RS resource is SSB, or $T_{CSI-RS}$ specified later in this if the RLM-RS resource is CSI-RS.

When DRX is used, $T_{Indication_interval}$ is max(10ms, 1.5*DRX_cycle_length, 1.5*$T_{RLM-RS,M}$) if DRX cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [13], the UE shall monitor the configured RLM-RS resources for recovery using the evaluation period and Layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

When the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each RLM-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each RLM-RS resource. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When the UE transitions from a first configuration of RLM-RS resources to a second configuration of RLM-RS resources that is different from the first configuration, for each RLM-RS resource present in the second configuration, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration and the second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each RLM-RS resource present in the second configuration. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

The transmitter power of the UE in the monitored cell shall be turned off within 40ms after expiry of T310 timer as specified in TS 38.331 [13].

There are no scheduling restrictions due to radio link monitoring performed with a same subcarrier spacing as PDSCH/PDCCH on FR1.

For UE which support *simultaneousRxDataSSB-DiffNumerology* [11] there are no restrictions on scheduling availability due to radio link monitoring based on SSB as RLM-RS. For UE which do not support *simultaneousRxDataSSB-DiffNumerology* [11] the following restrictions apply due to radio link monitoring based on SSB as RLM-RS.

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on SSB symbols to be measured for radio link monitoring.

The normative reference for this requirement is TS 38.133 [6] clauses 8.1.2, 8.1.4, 8.1.5, 8.1.6, 8.1.7 and A.7.5.1.

#### 6.5.1.0.3 Minimum conformance requirements for out-of-sync and in-sync CSI-RS based RLM

[TS 38.133 clause 8.1.3.2]

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{Evaluate_out_CSI\text{-}RS}$ [ms] period becomes worse than the threshold $Q_{out_CSI\text{-}RS}$ within $T_{Evaluate_out_CSI\text{-}RS}$ [ms] evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{Evaluate_in_CSI\text{-}RS}$ [ms] period becomes better than the threshold $Q_{in_CSI\text{-}RS}$ within $T_{Evaluate_in_CSI\text{-}RS}$ [ms] evaluation period.

- $T_{Evaluate_out_CSI\text{-}RS}$ and $T_{Evaluate_in_CSI\text{-}RS}$ are defined in Table 8.1.3.2-1 for FR1.

For FR1,

- $P=1/(1 - T_{CSI\text{-}RS}/MGRP)$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and

- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

If the high layer in TS 38.331 [13] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*.

Note: The overlap between CSI-RS RLM and SMTC means that CSI-RS based RLM is within the SMTC window duration. Longer evaluation period would be expected if the combination of RLM-RS, SMTC occasion and measurement gap configurations does not meet pervious conditions.

The values of $M_{out}$ and $M_{in}$ used in Table 8.1.3.2-1 are defined as:

- $M_{out}$ = 20 and $M_{in}$ = 10, if the CSI-RS resource configured for RLM is transmitted with Density =3.

**Table 6.5.1.0.3-1: Evaluation period $T_{Evaluate_out}$ and $T_{Evaluate_in}$ for FR1**

| Configuration | $T_{Evaluate_out}$ (ms) | $T_{Evaluate_in}$ (ms) |
|---|---|---|
| no DRX | $\max(200, \text{ceil}(M_{out}\times P)\times T_{CSI\text{-}RS})$ | $\max(100, \text{ceil}(M_{in}\times P) \times T_{CSI\text{-}RS})$ |
| DRX ≤ 320ms | $\max(200, \text{ceil}(1.5\times M_{out}\times P)\times \max(T_{DRX}, T_{CSI\text{-}RS}))$ | $\max(100, \text{ceil}(1.5\times M_{in}\times P)\times \max(T_{DRX}, T_{CSI\text{-}RS}))$ |
| DRX > 320ms | $\text{ceil}(M_{out}\times P) \times T_{DRX}$ | $\text{ceil}(M_{in}\times P) \times T_{DRX}$ |
| NOTE: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS resource configured for RLM. $T_{DRX}$ is the DRX cycle length. | | |

[TS 38.133 clause 8.1.6]

When the downlink radio link quality on all the configured RLM-RS resources is worse than $Q_{out}$, Layer 1 of the UE shall send an out-of-sync indication for the cell to the higher layers. A Layer 3 filter shall be applied to the out-of-sync indications as specified in TS 38.331 [13].

When the downlink radio link quality on at least one of the configured RLM-RS resources is better than $Q_{in}$, Layer 1 of the UE shall send an in-sync indication for the cell to the higher layers. A Layer 3 filter shall be applied to the in-sync indications as specified in TS 38.331 [13].

The out-of-sync and in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [8]. Two successive indications from Layer 1 shall be separated by at least $T_{Indication_interval}$.

When DRX is not used $T_{Indication_interval}$ is $\max(10ms, T_{RLM\text{-}RS,M})$, where $T_{RLM,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to $T_{SSB}$ specified in section 8.1.2 if the RLM-RS resource is SSB, or $T_{CSI\text{-}RS}$ specified in section 8.1.3 if the RLM-RS resource is CSI-RS.

In case DRX is used, $T_{Indication_interval}$ is $\max(10ms, 1.5*DRX_cycle_length, 1.5*T_{RLM\text{-}RS,M})$ if DRX cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [13], the UE shall monitor the configured RLM-RS resources for recovery

using the evaluation period and Layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

[TS 38.133 clause 8.1.5]

The transmitter power of the UE in the monitored cell shall be turned off within 40ms after expiry of T310 timer as specified in TS 38.331 [13].

The normative reference for this requirement is TS 38.133 [6] clause 8.1.3.2, 8.1.6 and 8.1.5.

#### 6.5.1.0.4 Minimum requirement of SSB based radio link monitoring for UE fulfilling relaxed measurement criteria

[TS 38.133 clause 8.1.2.4]

This clause contains minimum requirements for relaxed radio link monitoring based on SSB.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{Evaluate_out_SSB_Relax}$ [ms] period becomes worse than the threshold $Q_{out_SSB}$ within $T_{Evaluate_out_SSB_Relax}$ [ms] evaluation period.

$T_{Evaluate_out_SSB_Relax}$ is defined in Table 6.5.1.0.4-1 for FR1.

$T_{Evaluate_out_SSB_Relax}$ is defined in Table 6.5.1.0.4-2 for FR2 with scaling factor N=8.

The value of P is defined in TS 38.133 [6] clause 8.1.2.2.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI,E-UTRAN}$ when the UE is requested to decode an LTE CGI.

**Table 6.5.1.0.4-1: Evaluation period $T_{Evaluate_out_SSB_Relax}$ for FR1**

| Configuration | $T_{Evaluate_out_SSB_Relax}$ (ms) |
|---|---|
| $Max(T_{DRX},T_{SSB}) \leq 80ms$ | $Max(200\times K3^{NOTE3}, Ceil(15 \times K1^{NOTE2} \times P) \times Max(T_{DRX},T_{SSB}))$ |
| $80ms < Max(T_{DRX},T_{SSB}) \leq 160ms$ | $Ceil(15 \times P) \times Max(T_{DRX},T_{SSB})$ |
| NOTE 1: $T_{SSB}$ is the periodicity of the SSB configured for RLM. $T_{DRX}$ is the DRX cycle length and no longer than 80ms.<br>NOTE 2: K1 = 4 for $Max(T_{DRX},T_{SSB}) \leq 40ms$ and K1 = 2 for $40ms<Max(T_{DRX},T_{SSB}) \leq 80ms$.<br>NOTE 3: K3 = K1, if K1 ≤ 2; otherwise K3 = 1. | |

**Table 6.5.1.0.4-2: Evaluation period $T_{Evaluate_out_SSB_Relax}$ for FR2**

| Configuration | $T_{Evaluate_out_SSB_Relax}$ (ms) |
|---|---|
| $Max(T_{DRX},T_{SSB}) \leq 80ms$ | $Max(200\times K4^{NOTE3}, Ceil(15 \times K2^{NOTE2} \times P \times N) \times Max(T_{DRX},T_{SSB}))$ |
| $80ms < Max(T_{DRX},T_{SSB}) \leq 160ms$ | $Ceil(15 \times P \times N) \times Max(T_{DRX},T_{SSB})$ |
| NOTE 1: $T_{SSB}$ is the periodicity of the SSB configured for RLM. $T_{DRX}$ is the DRX cycle length and no longer than 80ms.<br>NOTE 2: K2 = 2.<br>NOTE 3: K4 = K2, if K2 ≤ 2; otherwise K4 = 1. | |

#### 6.5.1.0.5 Minimum requirement of CSI-RS based radio link monitoring for UE fulfilling relaxed measurement criteria

[TS 38.133 clause 8.1.3.4]

This clause contains minimum requirements for relaxed radio link monitoring based on CSI-RS.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{Evaluate_out_CSI-RS_Relax}$ [ms] period becomes worse than the threshold $Q_{out_CSI-RS}$ within $T_{Evaluate_out_CSI-RS_Relax}$ [ms] evaluation period.

$T_{Evaluate_out_CSI-RS_Relax}$ is defined in Table 6.5.1.0.5-1 for FR1.

$T_{Evaluate_out_CSI-RS_Relax}$ is defined in Table 6.5.1.0.5-2 for FR2 with scaling factor N=1.

The value of P is defined in TS 38.133 [6] clause 8.1.3.2.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI,E-UTRAN}$ when the UE is requested to decode an LTE CGI.

The values of $M_{out}$ used in Table 6.5.1.0.5-1 and Table 6.5.1.0.5-2 are defined as:

- $M_{out}$ = 20, if the CSI-RS resource configured for RLM is transmitted with higher layer CSI-RS parameter *density* [6, clause 7.4.1] set to 3 and over the bandwidth $\geqslant$ 24 PRBs.

**Table 6.5.1.0.5-1: Evaluation period $T_{Evaluate_out_CSI-RS_Relax}$ for FR1**

| Configuration | $T_{Evaluate_out_CSI-RS_Relax}$ (ms) |
|---|---|
| $Max(T_{DRX}, T_{CSI-RS}) \leq 80$ ms | $Max(200 \times K3^{NOTE3}, Ceil(1.5 \times M_{out} \times P \times K1^{NOTE2}) \times Max(T_{DRX}, T_{CSI-RS})^{NOTE1})$ |
| NOTE1: $T_{CSI-RS}$ is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for $T_{CSI-RS}$ equal to 5 ms, 10ms, 20 ms or 40 ms. $T_{DRX}$ is the DRX cycle length and no longer than 80ms.<br>NOTE2: K1 = 2 for 40 ms < $MAX(T_{DRX}, T_{CSI-RS}) \leq 80$ ms, K1 = 4 for $MAX(T_{DRX}, T_{CSI-RS}) \leq 40$ ms<br>NOTE3: K3 = K1, if K1 ≤ 2; K3 = 1 otherwise. | |

**Table 6.5.1.0.5-2: Evaluation period $T_{Evaluate_out_CSI-RS_Relax}$ for FR2**

| Configuration | $T_{Evaluate_out_CSI-RS_Relax}$ (ms) |
|---|---|
| $Max(T_{DRX}, T_{CSI-RS}) \leq 80$ ms | $Max(200 \times K4^{NOTE3}, Ceil(1.5 \times M_{out} \times P \times N \times K2^{NOTE2}) \times Max(T_{DRX}, T_{CSI-RS})^{NOTE1})$ |
| NOTE1: $T_{CSI-RS}$ is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for $T_{CSI-RS}$ equal to 5 ms, 10 ms, 20 ms or 40 ms. $T_{DRX}$ is the DRX cycle length and no longer than 80ms.<br>NOTE2: K2 = 2.<br>NOTE3: K4 = K2, if K2 ≤ 2; K4 = 1 otherwise. | |

The normative reference for this requirement is TS 38.133 [6] clause 8.1.3.4.

## 6.5.1.1 NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode

### 6.5.1.1.1 Test purpose

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink radio link quality of the PCell configured with SSB-based RLM RS in non-DRX mode. This test will partly verify the NR cell radio link monitoring requirements in TS 38.133 [6] section 8.1.2.

### 6.5.1.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.5.1.1.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.5.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.1.

#### 6.5.1.1.4 Test description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.1.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40ms) in test 1.

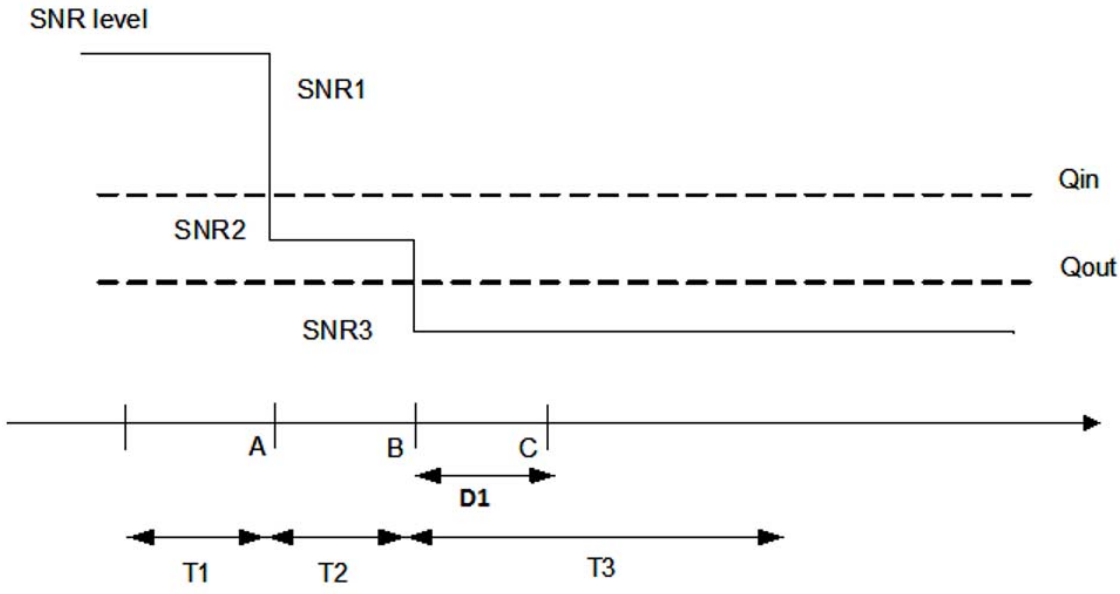

**Figure 6.5.1.1.4-1: SNR variation for out-of-sync testing**

#### 6.5.1.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.1.4.1-1.

**Table 6.5.1.1.4.1-1: NA SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode supported test configurations**

| Configuration | Description |
|---|---|
| 6.5.1.1-1 | FDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |
| 6.5.1.1-2 | TDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |
| 6.5.1.1-3 | TDD, SSB SCS 30 kHz, data SCS 30kHz, BW 40MHz |
| Note: The UE is only required to pass in one of the supported test configurations in FR1. | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.1.4.1-2.

**Table 6.5.1.1.4.1-2: Initial conditions for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | |

| | | | |
|---|---|---|---|
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.1.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

**Table 6.5.1.1.4.1-3: Void**

1. Message contents are defined in clause 6.5.1.1.4.3.

2. Single Cell is used, which is NR FR1 Pcell. The connection setup is done according to the settings in Annex C.1.2 and C.1.3.

3. The test parameters are given in Table 6.5.1.1.4.1-4 below.

4. Downlink signals for NR cell are initially set up according to Annex C.1.2 and C.1.3.

**Table 6.5.1.1.4.1-4: General test parameters for FR1 out-of-sync testing in non-DRX mode**

#### 6.5.1.1.4.2 Test Procedure

There is one cell (Cell 1), which is the active NR cell, in the test. Prior to the start of the time duration T1, the UE shall be fully synchronized to PCell. The UE shall be configured for periodic CQI reporting in PUCCH [format 2] with a reporting periodicity as mentioned in the above table 6.5.1.1.4.1-4.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS shall transmit an RRCReconfiguration message configuring the UE for inter-frequency measurements.

3. The UE shall transmit RRCReconfigurationComplete message.

4. Set the parameters according to T1 in Table 6.5.1.1.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

5. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.1.5-1. T2 starts.

6. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.1.5-1. T3 starts.

7. If the SS:
   a) detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each subframe configured for CQI transmission (according to configured CQI periodicity on PUCCH [format 2]) during the period from time point A to time point B

   and

   b) does not detect any uplink power higher than OFF power defined in TS 38.521-1 [17] clause 6.3.2.5 from time point C (D1 after the start of T3) until T3 expires,
   the number of successful tests is increased by one.

8. Otherwise the number of failed tests is increased by one.

9. When T3 expires the SS shall change the SNR value to T1 as specified in Table 6.5.1.1.5-1.

10. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

11. Repeat steps 4-10 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.1.4.3 Message Contents

Message contents are according to TS 38.508-1 [14] clause 4.6.1 and 7.3.1 with condition "Short_DCI" and with the following exceptions:

**Table 6.5.1.1.4.3-0: Common Exception messages for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode test requirement**

| } | | | |
| } | | | |

#### 6.5.1.1.5 Test Requirement

Table 6.5.1.1.5-1 defines the cell specific primary level settings.

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

**Table 6.5.1.1.5-1: Cell specific test parameters for FR1 (Cell 1) for out-of-sync radio link monitoring tests in non-DRX mode**

| Parameter | | Unit | Test 1 | | |
|---|---|---|---|---|---|
| | | | T1 | T2 | T3 |
| EPRE ratio of PDCCH DMRS to SSS | | dB | 4 | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | dB | 0 | | |
| EPRE ratio of PBCH DMRS to SSS | | dB | 0 | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | |
| EPRE ratio of PSS to SSS | | dB | | | |
| EPRE ratio of PDSCH DMRS to SSS | | dB | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | -6.e | -15.8 |
| | Config 2 | | 1.8 | -6.2 | -15.8 |
| | Config 3 | | 1.8 | -6.2 | -15.8 |
| $N_{oc}$ | Config 1 | dBm/ 15kHz | -98 | | |
| | Config 2 | | -98 | | |
| | Config 3 | | -98 | | |
| $N_{oc}$ | Config 1 | dBm/ SCS | -98 | | |
| | Config 2 | | -98 | | |
| | Config 3 | | -95 | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 4: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in Figure 6.5.1.1.4-1.
Note 5: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR during T3 from D.4.1.1, is -18dB-TT = -18.9dB (including test tolerances).

**Table 6.5.1.1.5-2: Measurement gap configuration for out-of-sync tests in non-DRX mode**

| Field | Test 1 |
|---|---|
| | Value |
| gapOffset | 0 |
| Note Ensure that RLM RS is partially overlapped with measurement gap | |

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.5.1.2 NR SA FR1 radio link monitoring in-sync test for PCell configured with SSB-based RLM RS in non-DRX mode

### 6.5.1.2.1 Test purpose

The purpose of this test is to verify that the UE properly detects in sync for the purpose of monitoring downlink radio link quality of the PCell, when DRX is not used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.2.

### 6.5.1.2.2 Test applicability

This test applies to all types of NR UEs supporting Release 15 and forwared

### 6.5.1.2.3 Minimum conformance requirements

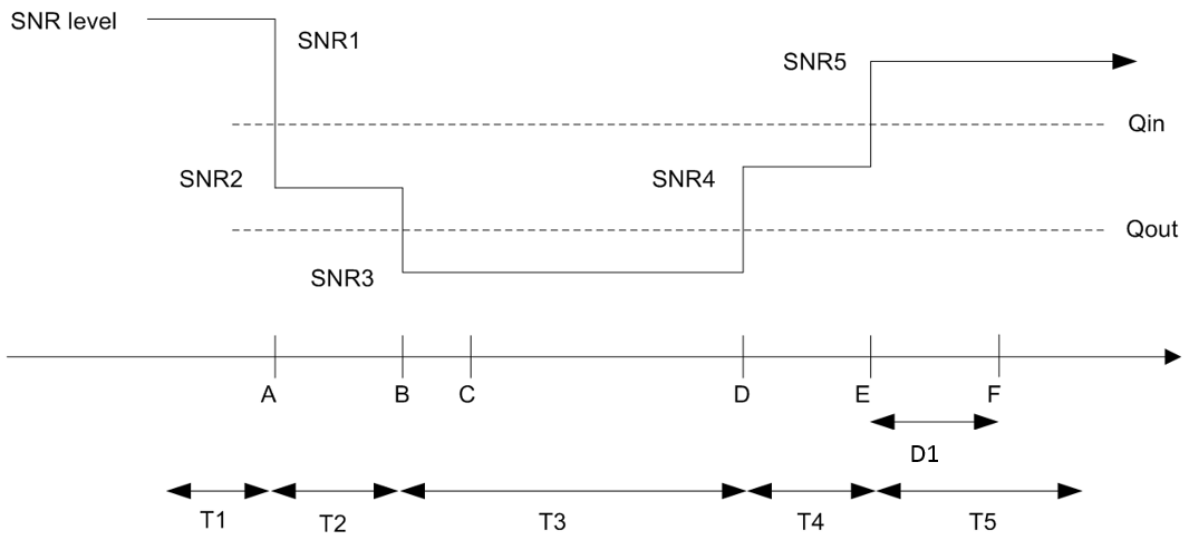
The minimum conformance requirements are specified in clause 6.5.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.2.

### 6.5.1.2.4 Test Description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.2.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

**Figure 6.5.1.2.4-1 - SNR variation for in-sync testing**



### 6.5.1.2.4 Test Requirements

#### 6.5.1.2.4.1 Initial Conditions

This test shall be tested using any of the test configurations in Table 6.5.1.2.4.1-1.

**Table 6.5.1.2.4.1-1: Supported test configurations for FR1 PSCell**

| Configuration | Description |
|---|---|
| 6.5.1.2-1 | FDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |
| 6.5.1.2-2 | TDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |

Note 1: All configurations are assigned to the UE prior to the start of time period T1.
Note 2: UE-specific PDCCH is not transmitted after T1 starts.

#### 6.5.1.2.4.2 Test Procedure

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.2.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states.. Prior to the start of the time duration T1, the UE shall be fully synchronized to PCell. The UE shall be configured for periodic CQI reporting in PUCCH [format 2] with a reporting periodicity as mentioned in the above table 6.5.1.2.4.1-4.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.5.1.2.5-1 for subtest 1 and 2. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.2.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.2.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.1.2.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.1.2.5-1. T5 starts.

7. If the SS detects uplink power equal to or higher than the minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in the subframe according the configured CQI reporting mode (PUCCH 2-0) during the period from time point A to time point F (D1 after the start of time duration T5) the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat steps 2-7 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.2.4.3 Message Contents

Message contents are according to TS 38.508-1 [14] clause 4.6.1 and 7.3.1 with condition “Short_DCI” and with the following exceptions:

| n311 | n1 | | |
| } | | | |

**Table 6.5.1.2.4.3-3: Void**

6.5.1.2.5 Test Requirement

The requirements in this section apply for each SSB based RLM-RS resource configured for the PCell, provided that the SSB configured for RLM are actually transmitted within UE active DL BWP during the entire evaluation period specified in section 6.5.1.2.3.

Table 6.5.1.2.5-1 defines the cell specific primary level settings.

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence interval of 95%.

**Table 6.5.1.2.5-1: Cell specific test parameters for FR1 for in-sync radio link monitoring tests in non-DRX mode**

| Parameter | | Unit | Test 1 | | | | |
|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T4 | T5 |
| EPRE ratio of PDCCH DMRS to SSS | | dB | 0 | | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | dB | 0 | | | | |
| EPRE ratio of PBCH DMRS to SSS | | dB | 0 | | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | | | |
| EPRE ratio of PSS to SSS | | dB | | | | | |
| EPRE ratio of PDSCH DMRS to SSS | | dB | | | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| | Config 2 | | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| | Config 3 | | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| $N_{oc}$ | Config 1 | dBm/15 kHz | -98 | | | | |
| | Config 2 | | -98 | | | | |
| | Config 3 | | -98 | | | | |
| $N_{oc}$ | Config 1 | dBm/SCS | -98 | | | | |
| | Config 2 | | -98 | | | | |
| | Config 3 | | -95 | | | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 4: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in Figure 6.5.1.2.4-1.
Note 5: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE wiht 4RX antennas connected under test, the SNR during T3 and T4 from D.4.1.1 are -18.0-TT and -8.0-TT, which are -18.8dB and -8.8dB(including test tolerances)

## 6.5.1.3 NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in DRX mode

### 6.5.1.3.1 Test purpose

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink radio link quality of the PCell configured with SSB-based RLM RS when DRX is used. This test will partly verify the NR cell radio link monitoring requirements in TS 38.133 [6] section 8.1.2.

### 6.5.1.3.2 Test applicability

This test applies to all types of NR UE Release 15 and forward supporting 5GS NR SA FR1 and long DRX cycle.

### 6.5.1.3.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.5.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.3.

### 6.5.1.3.4 Test description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.3.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

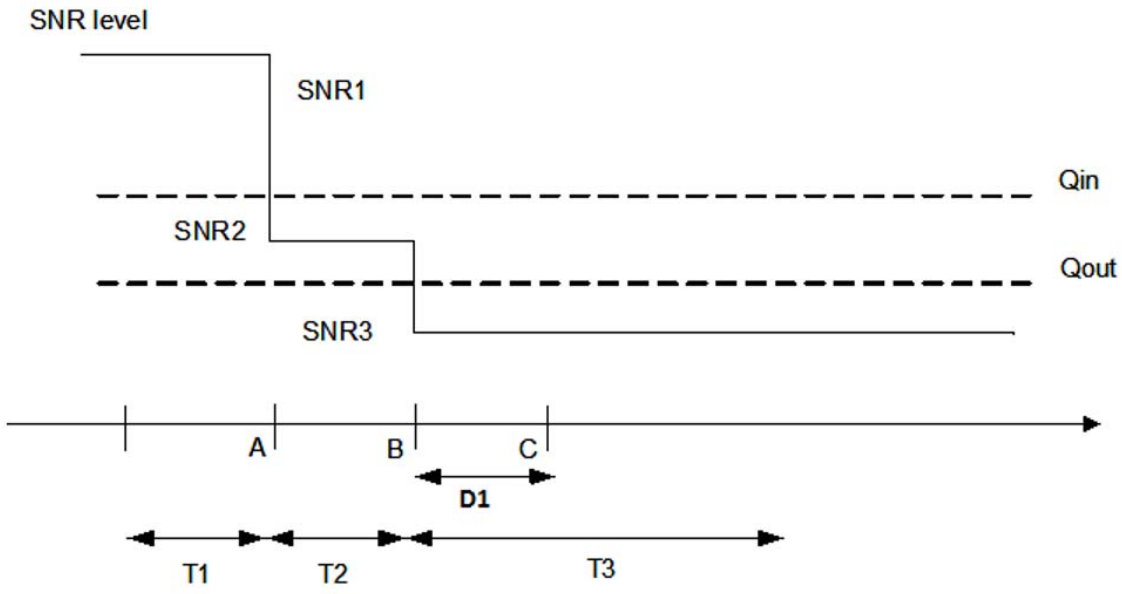

**Figure 6.5.1.3.4-1: SNR variation for out-of-sync testing**

#### 6.5.1.3.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.3.4.1-1.

**Table 6.5.1.3.4.1-1: NA SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in DRX mode supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 6.5.1.3-1 | FDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |
| 6.5.1.3-2 | TDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |
| 6.5.1.3-3 | TDD, SSB SCS 30 kHz, data SCS 30kHz, BW 40MHz |
| Note: The UE is only required to pass in one of the supported test configurations in FR1. | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.3.4.1-2.

**Table 6.5.1.3.4.1-2: Initial conditions for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in DRX mode**

### 6.5.1.3.4.2 Test Procedure

There is one cell (Cell 1), which is the active NR cell, in the test. Prior to the start of the time duration T1, the UE shall be fully synchronized to PCell. The UE shall be configured for periodic CQI reporting in PUCCH [format 2] with a reporting periodicity as mentioned in the above table 6.5.1.3.4.1-4.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.5.1.3.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.3.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.3.5-1. T3 starts.

5. If the SS:
   a) detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each subframe configured for CQI transmission (according to configured CQI periodicity on PUCCH [format 2]) during the period from time point A to time point B

and

   b) does not detect any uplink power higher than OFF power defined in TS 38.521-1 [17] clause 6.3.2.5 from time point C (D1 after the start of T3) until T3 expires,
   the number of successful tests is increased by one.

Otherwise the number of failed tests is increased by one.

6. When T3 expires the SS shall change the SNR value to T1 as specified in Table 6.5.1.3.5-1.

7. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

8. Repeat steps 2-8 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.3.4.3 Message Contents

Message contents are according to TS 38.508-1 [14] clause 4.6.1 and 7.3.1 with condition “Short_DCI” and with the following exceptions:

| } | | | |

6.5.1.3.5 Test Requirement

Table 6.5.1.3.5-1 defines the cell specific primary level settings.

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

| | Config 2 | | -98 | | |
| | Config 3 | | -95 | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 4: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in Figure 6.5.1.3.4-1.
Note 5: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR during T3 from D.4.1.1, is -18dB-TT = -18.9dB (including test tolerances).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.5.1.4 NR SA FR1 radio link monitoring in-sync test for PCell configured with SSB-based RLM RS in DRX mode

### 6.5.1.4.1 Test purpose

The purpose of this test is to verify that the UE properly detects in sync for the purpose of monitoring downlink radio link quality of the Pcell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.2.

### 6.5.1.4.2 Test applicability

This test applies to all types of NR UE Release 15 and forward supporting 5GS NR SA FR1 and long DRX cycle.

### 6.5.1.4.3 Minimum conformance requirements

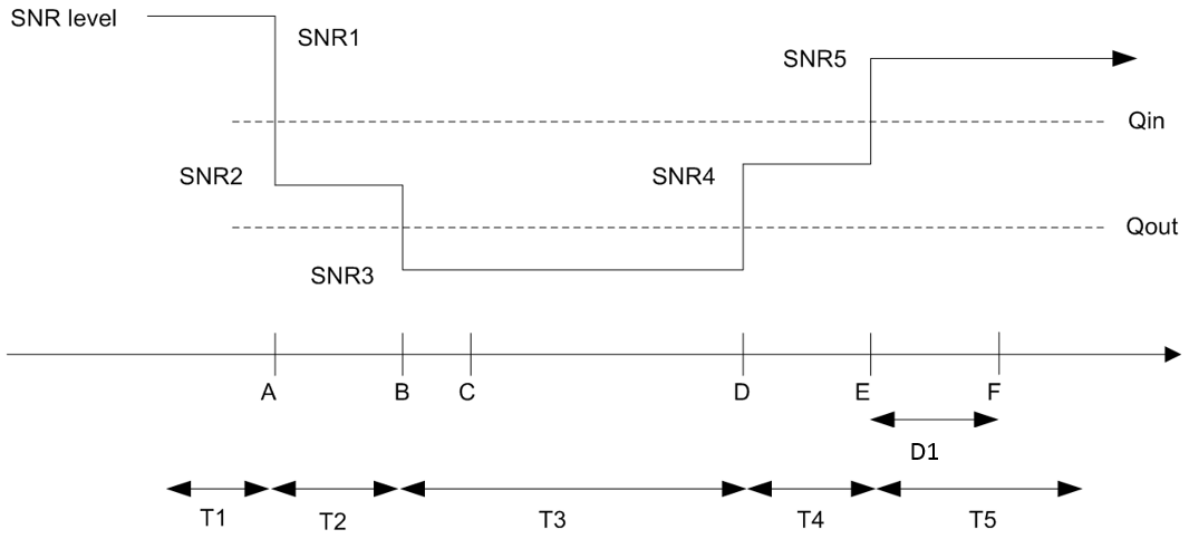
The minimum conformance requirements are specified in clause 6.5.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.4.

### 6.5.1.4.4 Test Description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.4.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.Editor note: whether to revise power level to be gradually changed

**Figure 6.5.1.4.4-1 - SNR variation for in-sync testing**



#### 6.5.1.4.4.1 Initial Conditions

This test shall be tested using any of the test configurations in Table 6.5.1.4.4.1-1.

**Table 6.5.1.4.4.1-1: Supported test configurations for NR FR1 PCell**

| Configuration | Description |
|---|---|
| 6.5.1.4-1 | FDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |
| 6.5.1.4-2 | TDD, SSB SCS 15 kHz, data SCS 15kHz, BW 10MHz |

| | |
|---|---|
| 6.5.1.4-3 | TDD, SSB SCS 30 kHz, data SCS 30kHz, BW 40MHz |
| Note: | The UE is only required to pass in one of the supported test configurations in FR1. |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.4.4.1-2.

**Table 6.5.1.4.4.1-2: Initial conditions for SA FR1 radio link monitoring in-sync test for NR PCell configured with SSB-based RLM RS in DRX mode**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.4.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

**Table 6.5.1.4.4.1-3: Void**

1. Message contents are defined in clause 6.5.1.4.4.3.

2. There is one cell (Cell 1), which is the active NR cell, in the test. The power levels and settings are set according to Annex A.6, Table A.6.1.1-1. The connection setup is done according to the settings in Annex C.1.3, and the downlink signal levels as per Annex C.1.2.

3. The general test parameters are given in Table 6.5.1.4.4.1-4 below.

4. Downlink signals for NR cell are initially set up according to Annex C.1.

**Table 6.5.1.4.4.1-4: General test parameters for FR1 in-sync testing in DRX mode**

| Parameter | | Unit | Value |

| D1 | | | s | 0.84 |

Note 1: All configurations are assigned to the UE prior to the start of time period T1.
Note 2: UE-specific PDCCH is not transmitted after T1 starts.

#### 6.5.1.4.4.2 Test Procedure

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.4.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to PCell. The UE shall be configured for periodic CQI reporting in PUCCH [format 2] with a reporting periodicity as mentioned in the above table 6.5.1.4.4.1-4.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.5.1.4.5-1 for subtest 1 and 2. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.4.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.4.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.1.4.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.1.4.5-1. T5 starts.

7. If the SS detects uplink power equal to or higher than the minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in the On-duration part of every DRX cycle in the subframe according the configured CQI reporting mode (PUCCH 2-0) during the period from time point A to time point F (D1 second after the start of time duration T5) the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat steps 2-7 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.4.4.3 Message Contents

Message contents are according to TS 38.508-1 [14] clause 4.6.1 and 7.3.1 with condition “Short_DCI” and with the following exceptions:

**Table 6.5.1.4.4.3-3: Void**

### 6.5.1.4.5 Test Requirement

The requirements in this section apply for each SSB based RLM-RS resource configured for the PCell, provided that the SSB configured for RLM are actually transmitted within UE active DL BWP during the entire evaluation period specified in section 6.5.1.4.3.

Table 6.5.1.4.5-1 defines the cell specific primary level settings.

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence interval of 95%.

**Table 6.5.1.4.5-1: Cell specific test parameters for FR1 for in-sync radio link monitoring tests in DRX mode**

| Parameter | | Unit | Test 1 | | | | |
|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T4 | T5 |
| EPRE ratio of PDCCH DMRS to SSS | | dB | 0 | | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | dB | 0 | | | | |
| EPRE ratio of PBCH DMRS to SSS | | dB | 0 | | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | | | |
| EPRE ratio of PSS to SSS | | dB | | | | | |
| EPRE ratio of PDSCH DMRS to SSS | | dB | | | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| | Config 2 | | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| | Config 3 | | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| $N_{oc}$ | Config 1 | dBm/15 kHz | -98 | | | | |
| | Config 2 | | -98 | | | | |
| | Config 3 | | -98 | | | | |
| $N_{oc}$ | Config 1 | dBm/SCS | -98 | | | | |
| | Config 2 | | -98 | | | | |
| | Config 3 | | -95 | | | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 4: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in Figure 6.5.1.4.4-1.
Note 5: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR during T3 and T4 from D.4.1.1 are -18.0-TT and -8.0-TT, which are -18.8dB and -8.8dB(including test tolerances).

## 6.5.1.5 NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX mode

### 6.5.1.5.1 Test purpose

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in TS 38.133 [6] clause 8.1.

### 6.5.1.5.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting CSI-RS based RLM.

#### 6.5.1.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.1.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.5.

#### 6.5.1.5.4 Test description

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.5.4-1 shows the three different time durations and the corresponding variation of the downlink SNR in the active cell to emulate out-of-sync states.

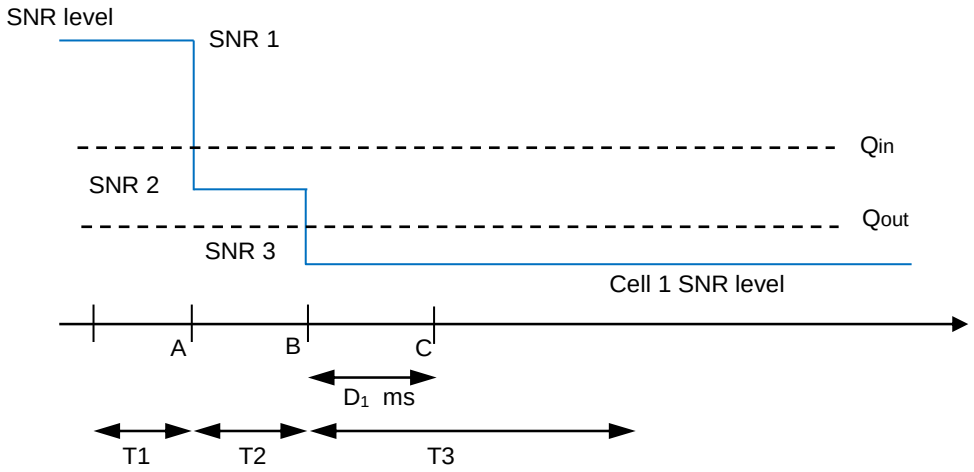

**Figure 6.5.1.5.4-1: SNR variation for out-of-sync testing**

#### 6.5.1.5.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.5.4.1-1.

**Table 6.5.1.5.4.1-1: Supported test configurations for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX**

| Configuration | Description |
|---|---|
| 6.5.1.5-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.5-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.5-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.5.4.1-2.

**Table 6.5.1.5.4.1-2: Initial conditions for NR SA radio link monitoring NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.5.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |

### 6.5.1.5.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. The SS shall transmit an RRCReconfiguration message configuring the UE for inter-frequency measurements.
3. The UE shall transmit RRCReconfigurationComplete message.
4. Set the parameters of Cell 1 according to T1 in Table 6.5.1.5.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.
5. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.5.5-1. T2 starts.
6. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.5.5-1. T3 starts.
7. If the SS:

   a) detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect any uplink power higher than OFF power defined in TS 38.521-1 [17] clause 6.3.2.5 from time point C (D1 after the start of T3) until T3 expires,

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. When T3 expires the SS shall change the SNR value to T1 as specified in Table 6.5.1.5.5-1.

9. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 4-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.5.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and 7.3.1 with condition “Short_DCI” and with the following exceptions:

#### 6.5.1.5.5 Test requirement

Tables 6.5.1.5.4.1-3 and 6.5.1.5.5-1 define the primary level settings including test tolerances for Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode.

**Table 6.5.1.5.5-1: Cell specific test parameters for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX mode**

| Parameter | Unit | Test 1 | | |
|---|---|---|---|---|
| | | T1 | T2 | T3 |
| EPRE ratio of PDCCH DMRS to SSS | dB | 4 | | |

| | | | | | |
|---|---|---|---|---|---|
| EPRE ratio of PDCCH to PDCCH DMRS | | dB | 0 | | |
| EPRE ratio of PBCH DMRS to SSS | | dB | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | |
| EPRE ratio of PDSCH DMRS to SSS | | dB | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | -6.2 | -15.8 |
| | Config 2 | | 1.8 | -6.2 | -15.8 |
| | Config 3 | | 1.8 | -6.2 | -15.8 |
| $N_{oc}$ | Config 1 | dBm/15kHz | -98 | | |
| | Config 2 | | -98 | | |
| | Config 3 | | -98 | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 8: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.1.5.4-1.
Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 from D.4.1.1 is -18 -TT, which is -18.8dB (including test tolerances).

The UE behaviour during time durations T1, T2 and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.1.6 NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX mode

### 6.5.1.6.1 Test purpose

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS in-sync radio link monitoring requirements in TS 38.133 [6] clause 8.1.

### 6.5.1.6.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting CSI-RS based RLM.

#### 6.5.1.6.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.1.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.6.

#### 6.5.1.6.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.6.4-1 shows the five different time durations and the corresponding variation of the downlink SNR in the Pcell to emulate out-of-sync and in-sync states.

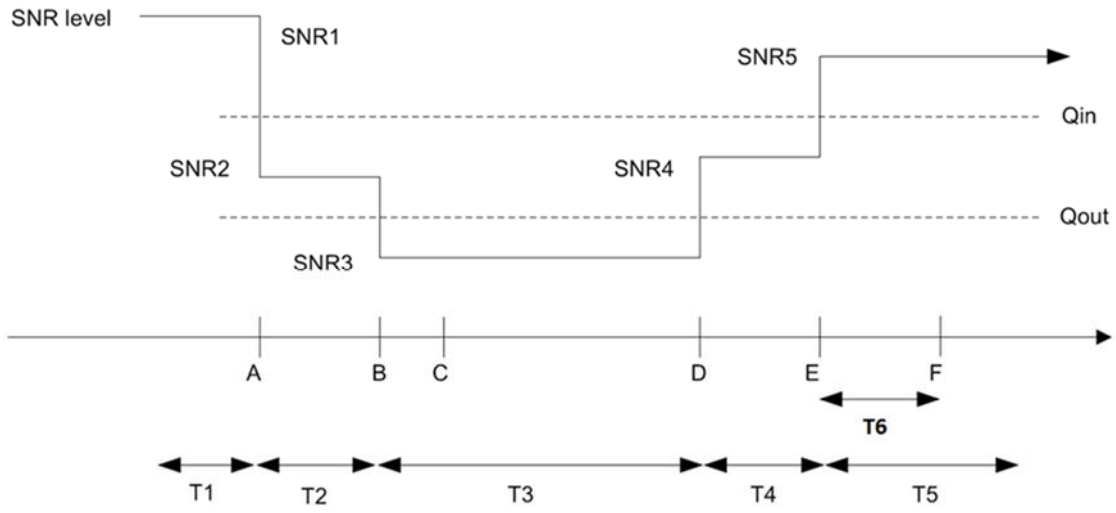

**Figure 6.5.1.6.4-1: SNR variation for In-sync testing**

#### 6.5.1.6.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.6.4.1-1.

**Table 6.5.1.6.4.1-1: Supported test configurations for NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX mode**

| Configuration | Description |
|---|---|
| 6.5.1.6-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.6-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.6-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.6.4.1-2.

**Table 6.5.1.6.4.1-2: Initial conditions for for NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX mode**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |

| Note 1: UE-specific PDCCH is not transmitted after T1 starts. | | | |

#### 6.5.1.6.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is not enabled.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters of Cell 1 according to T1 in Table 6.5.1.6.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.6.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.6.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.1.6.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.1.6.5-1. T5 starts.

7. If the SS detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point F (T6 after the start of time duration T5) the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

9. After T5 expires, repeat steps 2-7 for both subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.6.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and 7.3.1 with the following exceptions:

**Table 6.5.1.6.4.3-1: Common Exception messages for NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in non-DRX mode**

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure 6.5.1.6.4-1.
Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 and T4 from D.4.1.1 are -18.0-TT and -8.0-TT, which are -18.8dB and -8.8dB(including test tolerances).

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.1.7 NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode

### 6.5.1.7.1 Test purpose

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in TS 38.133 [6] clause 8.1.

### 6.5.1.7.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1, CSI-RS based RLM and long DRX cycle.

### 6.5.1.7.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.1.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.7.

### 6.5.1.7.4 Test description

The test consists three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.7.4-1 shows the three different time durations and the corresponding variation of the downlink SNR in the active cell to emulate out-of-sync states.

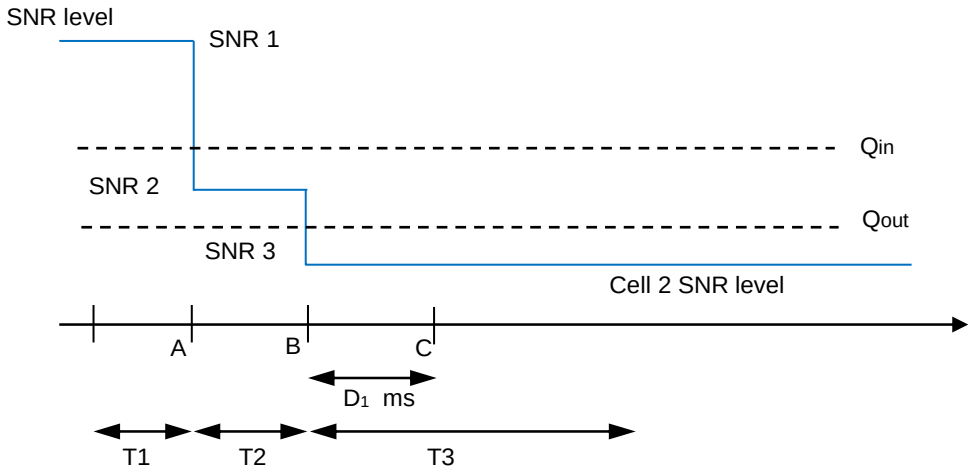

**Figure 6.5.1.7.4-1: SNR variation for out-of-sync testing**

#### 6.5.1.7.4.1 Initial conditions

This test shall be run in one of the configurations defined in Table 6.5.1.7.4.1-1.

**Table 6.5.1.7.4.1-1: Supported test configurations for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Configuration | Description |
|---|---|
| 6.5.1.7-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |

| | |
|---|---|
| 6.5.1.7-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.7-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.7.4.1-2.

**Table 6.5.1.7.4.1-2: Initial conditions for NR SA radio link monitoring for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Parameter | Value | | Comment |
|---|---|---|---|

#### 6.5.1.7.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message.

2. Set the parameters of Cell 1 according to T1 in Table 6.5.1.7.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.7.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.7.5-1. T3 starts.

5. If the SS:

   a) detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in the On-duration part of every DRX cycle in the slots configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

and

b) does not detect any uplink power higher than OFF power defined in TS 38.521-1 [17] clause 6.3.2.5 from time point C (D1 after the start of T3) until T3 expires,

the number of successful tests is increased by one.

Otherwise the number of failed tests is increased by one.

6. When T3 expires the SS shall change the SNR value to T1 as specified in Table 6.5.1.7.5-1.

7. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

8. Repeat steps 2-7 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.7.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and 7.3.1 with the following exceptions:

#### 6.5.1.7.5 Test requirement

Tables 6.5.1.7.4.1-3 and 6.5.1.7.5-1 define the primary level settings including test tolerances for Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode.

**Table 6.5.1.7.5-1: Cell specific test parameters for FR1 for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Parameter | Unit | Test 1 | | |
|---|---|---|---|---|
| | | T1 | T2 | T3 |

| | | | | | |
|---|---|---|---|---|---|
| EPRE ratio of PDCCH DMRS to SSS | | dB | 4 | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | dB | 0 | | |
| EPRE ratio of PBCH DMRS to SSS | | dB | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | |
| EPRE ratio of PDSCH DMRS to SSS | | dB | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | -6.2 | -15.8 |
| | Config 2 | | 1.8 | -6.2 | -15.8 |
| | Config 3 | | 1.8 | -6.2 | -15.8 |
| $N_{oc}$ | Config 1 | dBm/15kHz | -98 | | |
| | Config 2 | | -98 | | |
| | Config 3 | | -98 | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 8: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.6.5.1.7.1-1.
Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 from D.4.1.1 is -18 -TT, which is -18.8dB (including test tolerances).

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on PCell.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.1.8 NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode

### 6.5.1.8.1 Test purpose

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS in-sync radio link monitoring requirements in TS 38.133 [6] clause 8.1.

#### 6.5.1.8.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1, CSI-RS based RLM and long DRX cycle.

#### 6.5.1.8.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.1.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.8.

#### 6.5.1.8.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.8.4-1 shows the five different time durations and the corresponding variation of the downlink SNR in the active cell to emulate in-sync states.

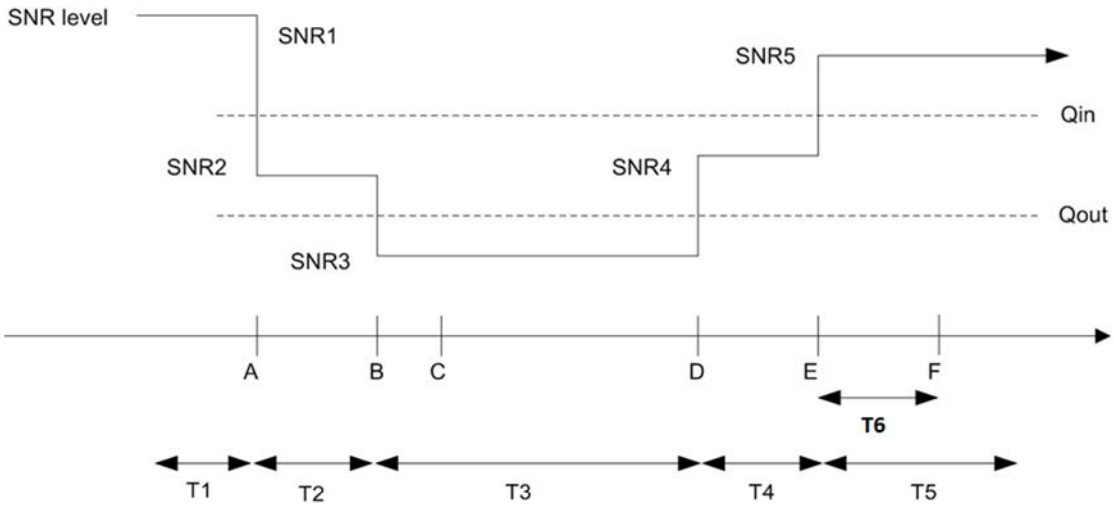

**Figure 6.5.1.8.4-1: SNR variation for In-sync testing**

##### 6.5.1.8.4.1 Initial conditions

This test shall be run in one of the configurations defined in Table 6.5.1.8.4.1-1.

**Table 6.5.1.8.4.1-1: Supported test configurations for NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Configuration | Description |
|---|---|
| 6.5.1.8-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.8-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.8-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.8.4.1-2.

**Table 6.5.1.8.4.1-2: Initial conditions for NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | |

| | | | |
|---|---|---|---|
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.8.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |

### 6.5.1.8.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms).

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS shall transmit an RRCReconfiguration message configuring the UE for inter-frequency measurements.

3. The UE shall transmit RRCReconfigurationComplete message.

4. Set the parameters of Cell 1 according to T1 in Table 6.5.1.8.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.
5. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.8.5-1. T2 starts.
6. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.8.5-1. T3 starts.
7. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.1.8.5-1. T4 starts.
8. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.1.8.5-1. T5 starts.
9. If the SS detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in the On-duration part of every DRX cycle in the configured slots for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point F (T6 after the start of time duration T5) the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.
10. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.
11. Repeat steps 4-10 for both subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

### 6.5.1.8.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and 7.3.1 with the following exceptions:

### 6.5.1.8.5 Test requirement

Tables 6.5.1.8.4.1-3 and 6.5.1.8.5-1 define the primary level settings including test tolerances for Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode.

**Table 6.5.1.8.5-1: Cell specific test parameters for NR SA FR1 radio link monitoring in-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Parameter | Unit | Test 1 | | | | |
|---|---|---|---|---|---|---|
| | | T1 | T2 | T3 | T4 | T5 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| EPRE ratio of PDCCH DMRS to SSS | | dB | 0 | | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | dB | | | | | |
| EPRE ratio of PBCH DMRS to SSS | | dB | | | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | | | |
| EPRE ratio of PBCH to PBCH DMRS | | dB | | | | | |
| EPRE ratio of PDSCH DMRS to SSS | | dB | | | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| | Config 2 | | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| | Config 3 | | 1.8 | -6.2 | -15.8 | -5.3 | 1.8 |
| $N_{oc}$ | Config 1 | dBm/15kHz | -98 | | | | |
| | Config 2 | | -98 | | | | |
| | Config 3 | | -98 | | | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure 6.5.1.8.4-1.
Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 and T4 from D.4.1.1 are -18.0-TT and -8.0-TT, which are -18.8dB and -8.8dB(including test tolerances)

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.1.9 SA FR1 radio link monitoring out-of-sync Test for PCell configured with CSI-RS-based RLM for UE fulfilling relaxed measurement criterion

### 6.5.1.9.1 Test purpose

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in TS 38.133 [6] clause 8.1.3.4 for UE fulfilling good serving cell quality criterion.

### 6.5.1.9.2 Test applicability

This test applies to all types of NR UE release 17 and forward supporting 5GS NR SA FR1, CSI-RS based RLM and long DRX cycle and supporting RLM relaxation criteria *rlm-Relaxation-r17*.

#### 6.5.1.9.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.1.0.5.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.9.

#### 6.5.1.9.4 Test description

There is one cell, Cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.9.4-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test. In the test, SSB0 is configured as the BFD-RS.s.

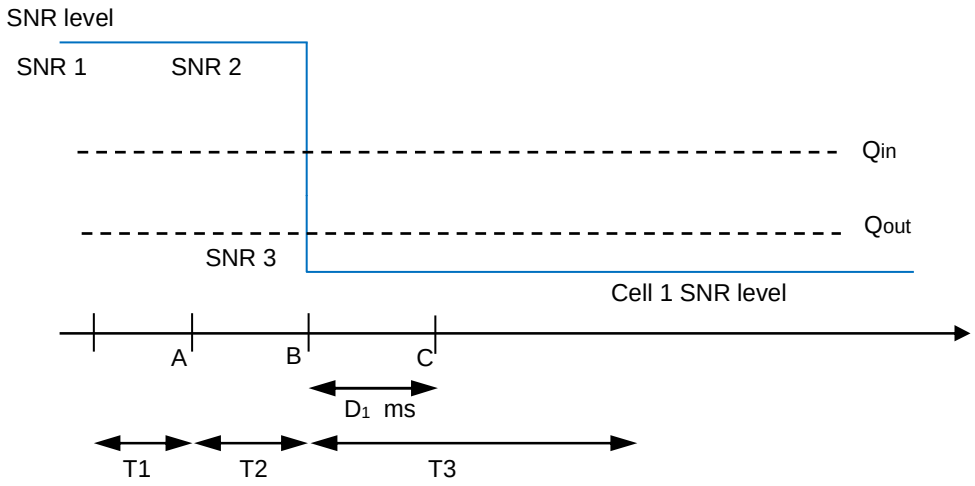

**Figure 6.5.1.9.4-1: SNR variation for CSI-RS out-of-sync testing**

#### 6.5.1.9.4.1 Initial conditions

This test shall be run in one of the configurations defined in Table 6.5.1.9.4.1-1.

**Table 6.5.1.9.4.1-1: Supported test configurations for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Configuration | Description |
|---|---|
| 6.5.1.9-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.9-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.1.9-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.9.4.1-2.

**Table 6.5.1.9.4.1-2: Initial conditions for NR SA radio link monitoring for NR SA FR1 radio link monitoring out-of-sync test for PCell configured with CSI-RS-based RLM RS in DRX mode**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.9.4.1-1. | |

| | | | |

### 6.5.1.9.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 is configured as the BFD-RS.s.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message.

2. Set the parameters of Cell 1 according to T1 in Table 6.5.1.9.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.1.9.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.1.9.5-1. T3 starts.

5. If the SS:

   a) detects uplink power equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in the On-duration part of every DRX cycle in the slots configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect any uplink power higher than OFF power defined in TS 38.521-1 [17] clause 6.3.2.5 from time point C (D1 after the start of T3) until T3 expires,

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

6. When T3 expires the SS shall change the SNR value to T1 as specified in Table 6.5.1.9.5-1.

7. If the UE has not re-established the connection in at least 1s, the UE is switched off and then on. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

8. Repeat steps 2-7 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.1.9.5 Test requirement

Tables 6.5.1.9.4.1-3 and 6.5.1.9.5-1 define the primary level settings including test tolerances for Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode.

**Table 6.5.1.9.5-1: Cell specific test parameters for FR1 for CSI-RS out-of-sync radio link monitoring in DRX mode**

| Parameter | Unit | Test 1 |
|---|---|---|

| | | | T1 | T2 | T3 |
|---|---|---|---|---|---|
| EPRE ratio of PDCCH DMRS to SSSPDCCH_beta | | dB | 4 | | |
| EPRE ratio of PDCCH to PDCCH DMRSPDCCH_DMRS_beta | | dB | 0 | | |
| EPRE ratio of PBCH DMRS to SSSPBCH_beta | | dB | | | |
| EPRE ratio of PBCH to PBCH DMRSPSS_beta | | dB | | | |
| EPRE ratio of PSS to SSSSSS_beta | | dB | | | |
| EPRE ratio of PDSCH DMRS to SSS PDSCH_beta | | dB | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | dB | | | |
| EPRE ratio of OCNG DMRS to SSS | | dB | | | |
| EPRE ratio of OCNG to OCNG DMRS | | dB | | | |
| SNR on RLM-RS | Config 1 | dB | 1.8 | 1.8 | -15.8 |
| | Config 2 | | 1.8 | 1.8 | -15.8 |
| | Config 3 | | 1.8 | 1.8 | -15.8 |
| $N_{oc}$ | Config 1 | dBm/15kHz | -98 | | |
| | Config 2 | | -98 | | |
| | Config 3 | | -98 | | |
| goodServingCellEvaluationRLM | | | configured | | |
| offset in goodServingCellEvaluationRLM | | dB | Not configured | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 8: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.1.9.4-1.
Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 from D.4.1.1 is -18 -0.8dB, which is -18.8 dB (including test tolerances).

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on PCell.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.1.10 to 6.5.1.12

## 6.5.1.13 NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in DRX mode for UE operating on a cell with less than 5MHz BW

### 6.5.1.13.1 Test purpose

The purpose of this test is to verify that the UE supporting less than 5 MHz bandwidth and a long DRX cycle properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3MHz channel bandwidth. This test will partly verify the NR cell radio link monitoring requirements as specified in clause 8.1 of TS 38.133 [6].

### 6.5.1.13.2 Test applicability

This test applies to all types of NR UE Release 18 supporting less than 5 MHz bandwidth and a long DRX cycle.

### 6.5.1.13.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.5.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.13.

### 6.5.1.13.4 Test description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.13.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

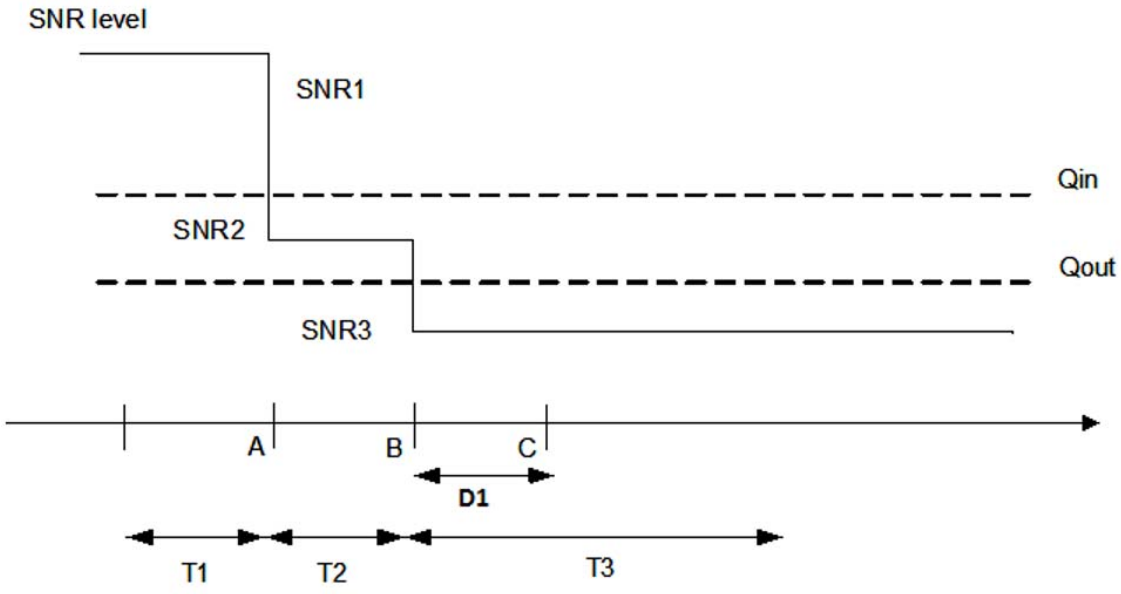

**Figure 6.5.1.13.4-1: SNR variation for out-of-sync testing**

### 6.5.1.13.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.13.4.1-1.

**Table 6.5.1.13.4.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 6.5.1.13-1 | FDD duplex mode, 15 kHz SSB SCS, 3 MHz bandwidth |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.13.4.1-2.

**Table 6.5.1.13.4.1-2: Initial conditions for radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in DRX mode for UE operating on a cell with less than 5MHz mode**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.13.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

General test parameters as specified in Table 6.5.1.3.4.1-4 with config 1 apply except those specified in Table 6.5.1.13.4.1-3.

1. Message contents are defined in clause 6.5.1.13.4.3.
2. Single Cell is used, which is NR FR1 PCell. The connection setup is done according to the settings in Annex C.1.2 and C.1.3.
3. Downlink signals for NR cell are initially set up according to Annex C.1.2 and C.1.3.

**Table 6.5.1.13.4.1-3: General test parameters for FR1 OOS 12 PRB in DRX mode**

## 6.5.1.14 NR SA FR1 radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode for UE operating on a cell with less than 5MHz BW

### 6.5.1.14.1 Test purpose

The purpose of this test is to verify that the UE supporting less than 5 MHz properly detects the out-of-sync and in sync for monitoring downlink radio link quality of the PCell operating on a 3MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in TS 38.133 [6] clause 8.1.2.

### 6.5.1.14.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards for a UE operating on a cell with less than 5 MHz bandwidth.

### 6.5.1.14.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.5.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.14 and 8.1.2.

### 6.5.1.14.4 Test description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure 6.5.1.14.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40ms) in test 1.

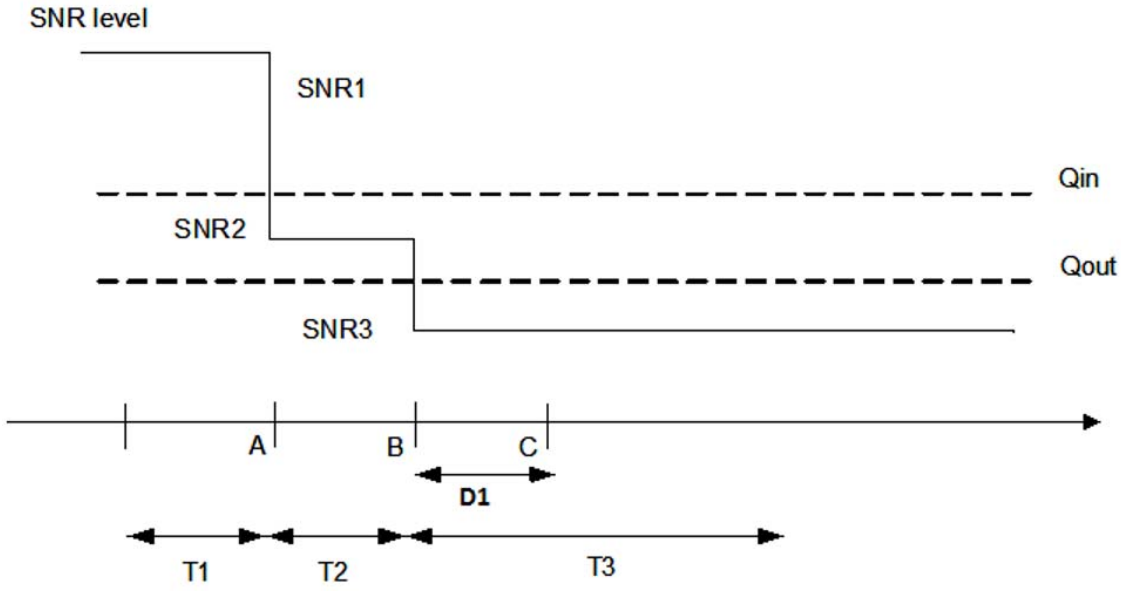

**Figure 6.5.1.14.4-1: SNR variation for out-of-sync testing**

#### 6.5.1.14.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.14.4.1-1.

**Table 6.5.1.14.4.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 6.5.1.14-1 | FDD duplex mode, 15 kHz SSB SCS, 3 MHz bandwidth |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.14.4.1-2.

**Table 6.5.1.14.4.1-2: Initial conditions for radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode for a UE operating on a BW less than 5 MHz BW**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |

## 6.5.1.15 NR SA FR1 Radio Link Monitoring In-sync Test for PCell with 3MHz Channel Bandwidth configured with SSB-based RLM RS in non-DRX mode

Editor's note: This test case is incomplete. The following aspect is either missing or TBD:

- Test tolerance analysis and measurement uncertainty are missing

### 6.5.1.15.1 Test purpose

The purpose of this test is to verify that the UE supporting *support-3MHz-ChannelBW-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in TS 38.133 [6] clause 8.1.

### 6.5.1.15.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards for a UE operating on a cell with 3 MHz channel bandwidth.

### 6.5.1.15.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.5.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.15 and 8.1.

### 6.5.1.15.4 Test description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.15.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

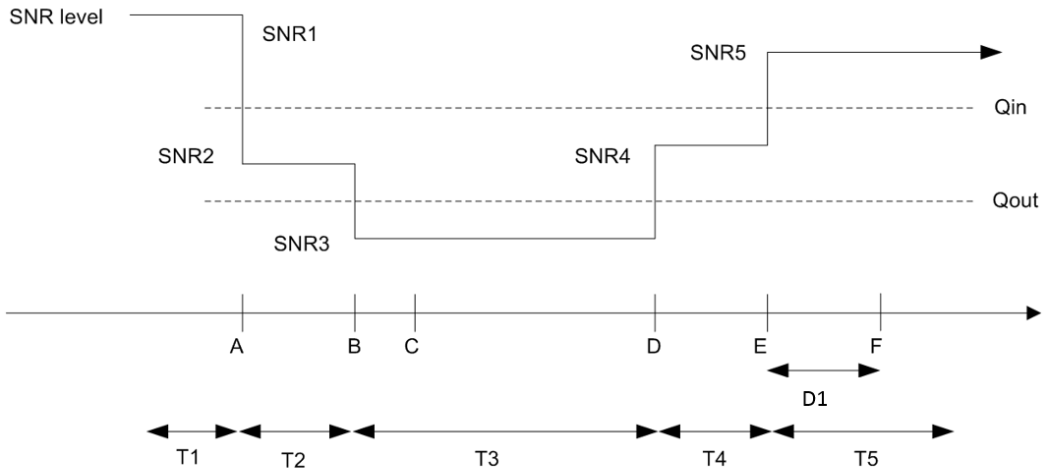

**Figure 6.5.1.15.4-1 - SNR variation for in-sync testing**

#### 6.5.1.15.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.15.4.1-1.

**Table 6.5.1.15.4.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 6.5.1.15-1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 3 MHz (15 PRB) |
| Note: The UE is required to pass the test with configuration 1 for every supported 3MHz band in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.15.4.1-2.

**Table 6.5.1.15.4.1-2: Initial conditions for radio link monitoring in-sync test for PCell configured with SSB-based RLM RS in non-DRX mode for a UE operating with 3 MHz channel BW**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1 |
| Test frequencies | As specified in Annex E.1.2, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.1.15.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.7.4 for TE Part | | |

1. Message contents are defined in clause 6.5.1.15.4.3.

2. Single Cell is used, which is NR FR1 PCell. The connection setup is done according to the settings in Annex C.1.2 and C.1.3.

3. General test parameters as specified in Table 6.5.1.2.4.1-3 with config 1 apply except those specified in Table 6.5.1.15.4.1-3.

4. Downlink signals for NR cell are initially set up according to Annex C.1.2 and C.1.3.

**Table 6.5.1.15.4.1-3: General test parameters for FR1 in-sync testing in non-DRX mode**

| Parameter | | Unit | Value |
|---|---|---|---|
| | | | Test 1 |
| $BW_{channel}$ | Config 1 | MHz | 3: $N_{RB,c}$ = 15 |
| RMSI CORESET Reference Channel | Config 1 | | CR.1.3 FDD |

### 6.5.1.15.5 Test Requirement

Cell specific test parameters as specified in Table 6.5.1.15.5-1 apply except those specified in Table 6.5.1.2.5-1. Test requirements specified in clause 6.5.1.2.5 apply to this test.

**Table 6.5.1.15.5-1: Cell specific test parameters for FR1 (Cell 1) for in-sync radio link monitoring tests in non-DRX mode**

| Parameter | | Unit | Test 1 | | | | |
|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T4 | T5 |
| SNR on RLM-RS | Config 1 | dB | 2.8 | -5.2 | -14.8 | -3.3 | 3.8 |

## 6.5.1.16 NR SA FR1 Radio Link Monitoring In-sync Test for PCell with 3MHz Channel Bandwidth configured with SSB-based RLM RS in DRX mode

### 6.5.1.16.1 Test purpose

The purpose of this test is to verify that the UE supporting less than 5 MHz BW properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in TS 38.133 [6] clause 8.1.

### 6.5.1.16.2 Test applicability

This test applies to all types of NR UE from Release 18 onwards for a UE operating on a cell with 3 MHz channel bandwidth.

### 6.5.1.16.3 Minimum conformance requirement

The minimum conformance requirements are specified in clause 6.5.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.1.16 and 8.1.

### 6.5.1.16.4 Test description

There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.1.16.4-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

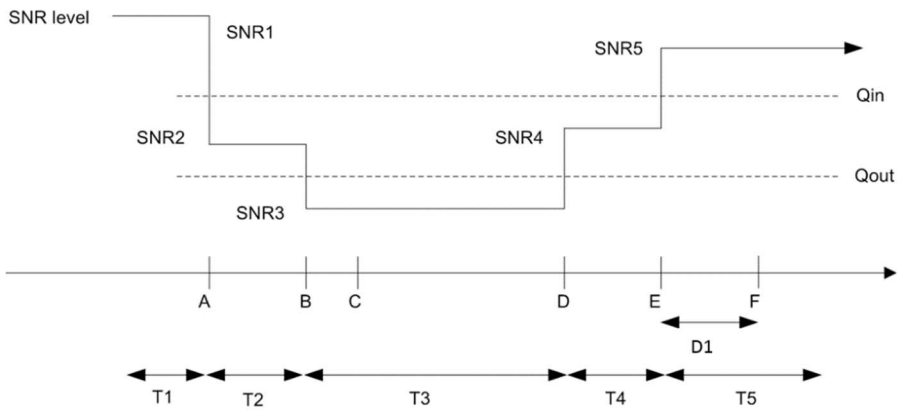

**Figure 6.5.1.16.4-1 - SNR variation for in-sync testing**

#### 6.5.1.16.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.1.16.4.1-1.

**Table 6.5.1.16.4.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 6.5.1.16-1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 3 MHz (12 PRB) |
| Note: The If the UE indicates the support for band n100, the UE is required to pass the test with 12 PRB configuration. | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.1.16.4.1-2.

**Table 6.5.1.16.4.1-2: Initial conditions for radio link monitoring in-sync test for PCell configured with SSB-based RLM RS in DRX mode for a UE operating with 3 MHz channel BW**

| Parameter | Value | | Comment |
|---|---|---|---|

| SNR on RLM-RS | Config 1 | dB | 4.8 | -3.2 | -12.8 | -0.8 | 6.3 |

## 6.5.2 Interruption

### 6.5.2.0 Minimum conformance requirements

#### 6.5.2.0.1 Minimum conformance requirements for interruptions during measurements on deactivated NR SCC

Interruptions on PCell due to measurements when an SCell is deactivated are allowed with up to 0.5% probability of missed ACK/NACK when the configured *measCycleSCell* [13] is 640 ms or longer.

If the PCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on PCell immediately before and immediately after an SMTC. Each interruption shall not exceed requirement in Table 6.5.2.0.1-1

If the PCell is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on PCell no earlier than X slots before $T_{SMTC_duration}$ and no later than X slots after $T_{SMTC_duration}$, provided the cell specific reference signals from the active serving cells and the deactivated SCell are available in the same slot, where X and $T_{SMTC_duration}$ are given by Table 6.5.2.0.1-2. The interruption shall not exceed requirements in Table 6.5.2.0.1-2.

Interruptions on active SCells due to measurements when an SCell is deactivated are allowed with up to 0.5% probability of missed ACK/NACK when the configured *measCycleSCell* [13] is 640 ms or longer.

If the activated SCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on an activated SCell immediately before and immediately after an SMTC. Each interruption shall not exceed requirement in Table 6.5.2.0.1-1

If the activated SCell is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on the activated SCell no earlier than X slots before $T_{SMTC_duration}$ and no later than X slots after $T_{SMTC_duration}$, provided the cell specific reference signals from the active serving cells and the deactivated SCell are available in the same slot, where X and $T_{SMTC_duration}$ are given by Table 6.5.2.0.1-2. The interruption shall not exceed requirements in Table 6.5.2.0.1-2.

**Table 6.5.2.0.1-1: Interruption duration for SCell activation/deactivation for inter-band CA**

| $\mu$ | NR Slot length (ms) of victim cell | Interruption length (slot) | |
|---|---|---|---|
| 0 | 1 | | 1 |
| 1 | 0.5 | | 1 |
| 2 | 0.25 | Both aggressor cell and victim cell are on FR2 | 2 |

| | | | |
|---|---|---|---|
| | | Either aggressor cell or victim cell is on FR1 | 3 |
| 3 | 0.125 | Aggressor cell is on FR2 | 4 |
| | | Aggressor cell is on FR1 | 5 |

**Table 6.5.2.0.1-2: Interruption duration for SCell activation/deactivation for intra-band CA**

| $\mu$ | NR Slot length (ms) | Interruption length (slots) |
|---|---|---|
| 0 | 1 | 1 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 1 | 0.5 | 1 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 2 | 0.25 | 2 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 3 | 0.125 | 4 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| NOTE 1: $T_{SMTC_duration}$ measured in subframes is<br>- the longest SMTC duration among all above active serving cells and the SCell being activated when one SCell is activated. If SSB configuration (*absoluteFrequencySSB*) but no SMTC configuration is provided for the SCell being activated, the SSB transmission periodicity is assumed to be 5ms and $T_{SMTC\ duration}$ for the SCell being activated is [x]ms. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being activated, $T_{SMTC\ duration}$ for the SCell being activated is 0ms;<br>- the longest SMTC duration among all active serving cells in the same band when one SCell is deactivated.<br>NOTE 2: $N_{slot}^{subframe,\mu}$ is as defined in TS 38.211 [7]. | | |

The normative reference for this requirement is TS 38.133 [6] clause 8.2.2.2.

### 6.5.2.0.2 Interruptions at NR SRS carrier based switching

SRS transmission can be configured on a carrier not configured for PUCCH/PUSCH transmission. When a UE needs to transmit periodic, semi-persistent or aperiodic SRS on a carrier of a serving cell not configured for PUCCH/PUSCH transmission, the UE can perform carrier based switching to one or more carriers not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission or from a carrier not configured for PUCCH/PUSCH transmission prior to transmitting SRS, provided that:

- switching is from a configured carrier to another activated carrier;
- the carrier of SCells not configured for PUCCH/PUSCH transmission to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission, or indicated by MAC-CE for semi-persistent SRS transmission, or configured via RRC for periodic SRS transmission;
- the serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by *srs-SwitchFromServCellIndex* and *srs-SwitchFromCarrier* in TS38.331 [13];
- the SRS switching is not colliding with any other transmission with higher priority defined in TS 38.214 [9].
- the SRS switching is not colliding with any SSB/CSI-RS based L3 measurements and the measurements for RLM/BFD.
- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 38.331 [13], and is compliant to the requirements for inter-band CA with uplink in one NR band and without simultaneous Rx/Tx specified in TS 38.101-1 [2], the SRS transmission are not simultaneously scheduled with DL SSB/CSI-RS for L3 or L1 measurements transmission on other carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR1 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 6.5.2.0.1-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR2 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 6.5.2.0.1-2.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR1 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 6.5.2.0.1-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR2 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 6.5.2.0.1-2.

**Table 6.5.2.0.1-1: Interruption length X1 (slot)**

| $\mu$ | NR Slot length (ms) of victim cell | SRS carrier switching time (us)[Note 1] | Interruption length X1 (slots) | |
|---|---|---|---|---|
| | | | Sub carrier spacing for aggressor cell (kHz) | |
| | | | 15 | 30 |
| 0 | 1 | ≤ 200 | 2 | 2 |
| | | 300, 500 | 2 | 2 |
| | | 900 | 2 | 2 |
| 1 | 0.5 | ≤ 200 | 3 | 2 |
| | | 300, 500 | 3 | 3 |
| | | 900 | 4 | 4 |
| 2 | 0.25 | ≤ 200 | 4 | 3 |
| | | 300, 500 | 5 | 4 |
| | | 900 | 7 | 6 |
| 3 | 0.125 | ≤ 200 | 7 | 5 |
| | | 300, 500 | 9 | 7 |
| | | 900 | 12 | 10 |
| Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter *SRS-SwitchingTimeNR*. | | | | |

**Table 6.5.2.0.1-2: Interruption length X2 (slot)**

| $\mu$ | NR Slot length (ms) of victim cell | SRS carrier switching time (us) [Note 1] | Interruption length X2 (slots) | |
|---|---|---|---|---|
| | | | Sub carrier spacing for aggressor cell (kHz) | |
| | | | 60 | 120 |
| 0 | 1 | ≤ 200 | 2 | 2 |
| 1 | 0.5 | ≤ 200 | 2 | 2 |
| 2 | 0.25 | ≤ 200 | 3 | 3 |
| 3 | 0.125 | ≤ 200 | 4 | 4 |
| Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter *SRS-SwitchingTimeNR*. | | | | |

For intra-band SRS carrier switching in FR1 or FR2, interruptions in Table 6.5.2.0.1-1 and in Table 6.5.2.0.1-2 based on SRS carrier switching time ≤ 200us shall apply. For inter-band SRS carrier switching in FR1, interruptions in Table 6.5.2.0.1-1 and in Table 6.5.2.0.1-2 shall apply.

The normative reference for this requirement is TS 38.133 [6] clause 8.2.2.9.

## 6.5.2.1 NR SA FR1 interruptions during measurements on deactivated NR SCC

### 6.5.2.1.1 Test purpose

To verify UE's ability to complete NR PCell interruptions during the measurement on the deactivated NR SCC within the missed ACK/NACK rate in standalone NR requirements.

### 6.5.2.1.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 2DL CA.

### 6.5.2.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.2.1.

### 6.5.2.1.4 Test description

#### 6.5.2.1.4.1 Initial conditions

Test 6.5.2.1 can be run in one of the configurations defined in this clause. Supported test configurations for NR PCell are shown in Table 6.5.2.1.4.1-1. Supported test configurations for NR SCell are shown in Table 6.5.2.1.4.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

**Table 6.5.2.1.4.1-1: Supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 6.5.2.1-1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 6.5.2.1-2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 6.5.2.1-3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table 6.5.2.1.4.1-1A: Supported test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 6.5.2.1-1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 6.5.2.1-2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 6.5.2.1-3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.2.1.4.1-2.

**Table 6.5.2.1.4.1-2: Initial conditions for NR SA FR1 interruptions during measurements on deactivated NR SCC**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.2.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameter settings are set up according to Table 6.5.2.1.4.1-3

2. Message contents are defined in clause 6.5.2.1.4.3.

3. There are two NR carriers and two cells specified in the test. Cell 1 is the PCell on one NR carrier, Cell 2 is the SCell on the other NR carrier. Cell 1 and Cell 2 shall be configured according to Annex C.1.1 and C.1.2.

**Table 6.5.2.1.4.1-3: General test parameters for NR SA FR1 interruptions during measurements on deactivated NR SCC**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2 | Two NR RF channels |
| Active PCell | | Cell 1 | PCell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Deactivated SCell on NR RF channel number 2. |
| CP length | | Normal | Applicable to Cell 1 and Cell 2 |
| DRX | | OFF | |
| Measurement gap pattern Id | | OFF | |
| SCell measurement cycle (measCycleSCell) | ms | 640 | |
| T1 | s | 10 | |

### 6.5.2.1.4.2 Test procedure

The test consists of two cells: Cell 1 and Cell 2. Cell 1 is PCell and Cell 2 is deactivated SCell. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1 and Cell 2 and the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCells is received at the UE antenna connector. Cell 1 shall be configured as PCell and Cell 2 shall be configured as SCell. During T1, PCell is continuously scheduled in DL.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS shall transmit an RRCReconfiguration message including measCycleSCell or allowInterruptions for the deactivated NR SCell.

3. The UE shall transmit RRCReconfigurationComplete message.

4. Set the parameters according to Table 6.5.2.1.5-1. Propagation conditions are set according to Annex C.2.1. T1 starts.

5. SS schedules on PCell continuously and UE shall start sending ACK/NACK reports. The SS shall monitor ACK/NACK/DTX on PCell.

6. If more than 99.5% of uplink transmissions are received by SS then count a success for the event “ACK/NACK”. Otherwise count a fail for the event “ACK/NACK”.

7. If no longer than X consecutive DTX is observed by the SS, then count a success for the event “DTX”. Otherwise count a fail for the event “DTX”. Where

   - For PCell test configuration 6.5.2.1-1,

     - X = interruption length+$k_1$ if $k_1 \leq$ interruption length

     - X = interruption length if $k_1$ > interruption length

     Note: UE expects that the SS won't use $k_1 = 3$ for PCell test configuration 4.5.2.3-1 and 4.5.2.3-4.

   - For PCell test configuration 6.5.2.1-2 and 6.5.2.1-3,

     - X = interruption length.

   - interruption length is given in table 6.5.2.1.5-2 for inter-band case and in 6.5.2.1.5-3 for intra-band case.

8. After the RRC connection release, the SS:

- transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

or

- switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat step 2-8 until a test verdict has been achieved.

Each of the events "ACK/NACK" and "DTX" is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved. Different events may require different times for a verdict.

If all events pass, the test passes. If one event fails, the test fails.

#### 6.5.2.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Note 7: | All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. |
| Note 8: | All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. |
| Note 9: | $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$. |

The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5% of ACK/NACK on PCell.

If the NR PCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in Table 6.5.2.1.5-2.

If the NR PCell is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on PCell no earlier than 1 slot before an SMTC and no later than 1 slot after the SMTC. the interruption on NR PCell shall not exceed the value defined in Table 6.5.2.1.5-3.

**Table 6.5.2.1.5-2: Interruption duration if the PCell is not in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length |
|---|---|---|
| 0 | 1 | 1 |
| 1 | 0.5 | 1 |

**Table 6.5.2.1.5-3: Interruption duration if the PCell is in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length |
|---|---|---|
| 0 | 1 | 2 + SMTC duration |
| 1 | 0.5 | 2 + SMTC duration |

The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.2.2 SA interruptions at NR SRS carrier based switching

### 6.5.2.2.1 Test purpose

The purpose of this test is to verify PCell interruptions during carrier-based switching to one carrier not configured for PUCCH/PUSCH transmission from a CC with PUCCH/PUSCH transmission, when a UE needs to transmit aperiodic SRS.

### 6.5.2.2.2 Test applicability

This test applies to all types of NR UE release 16 and forward supporting 2 DL CA.

### 6.5.2.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.2.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.2.2.

6.5.2.2.4 Test description

6.5.2.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.2.2.4.1-1.

**Table 6.5.2.2.4.1-1: Supported test configurations for SA interruptions at NR SRS carrier based switching**

| Configuration | Description |
|---|---|
| 6.5.2.2-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 6.5.2.2-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 6.5.2.2-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD – TDD duplex mode |
| NOTE.1: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.2.2.4.1-2.

**Table 6.5.2.2.4.1-2: Initial conditions for SA interruptions at NR SRS carrier based switching**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.2.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in clause C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameter settings are set up according to Table 6.5.2.2.4.1-3.
2. Message contents are defined in clause 6.5.2.2.4.3.
3. There are two NR carriers and one E-UTRA carrier, and three cells specified in the test. Each cell is on a different carrier. Cell 1 Is E-UTRAN PCell, Cell 2 is NR FR1 PSCell and Cell 3 is NR activated Scell. Cell 1 is the cell used for connection setup with the power level set according to Table A.6.1.1-1. Cell 2 and Cell 3 shall be configured according to clauses C.1.1 and C.1.2.

**Table 6.5.2.2.4.1-3: General test parameters for SA interruptions at NR SRS carrier based switching**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1 |
| Configured SCell | | Cell 2 | Activated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell 2 timing offset to Cell 1 | μs | 0 | |
| Time alignment error between Cell 2 and Cell 1 | μs | ≤ Time alignment error as specified in TS 38.104 [28] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1 | s | 5 | |
| T2 | ms | 40 | UE shall perform SRS switching during T2 |

6.5.2.2.4.2 Test procedure

The test consists of two cells: Cell 1 and Cell 2. Cell 1 is the PCell and Cell 2 is activated SCell without PUCCH/PUSCH transmission. The test consists of two time periods, with duration of T1 and T2. Prior to the start of

the test, the UE is configured with the SRS carrier based switching between PCell and SCell. UE shall also indicate SRS-SwitchingTimeNR in the capabilities.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.2 with the message exceptions as in 6.5.2.2.4.3.

3. Set the parameters according to T1 in Table 6.5.2.2.5-1. Propagation conditions are set according to clause C.2.1. T1 starts.

4. The SS activates Scell (Cell 2) and starts to schedule DL transmission continuously on both PCell and UE shall start sending ACK/NACK reports. The SS shall monitor ACK/NACK on PCell.

5. Set the parameters according to T2 in Tables 6.5.2.2.5-1. T2 starts.

6. Immediately at the beginning of T2, SRS is requested via DCI format 2_3 and the UE shall initiate NR SRS switching.

7. If the interruption in the received ACK/NACK on PCell during the switching from NR PCell to NR SCell exceeds the value as defined in Table 6.5.2.2.5-2, increase the number of failed iterations by one, otherwise increase the number of passed iterations by one.

8. the SS shall transmit a RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

9. After the RRC connection release, the SS:
- transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5),
or
- switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until a test verdict has been achieved.

#### 6.5.2.2.4.3 Message contents

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

| | |
|---|---|
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2. |

The UE shall be scheduled on PCell continuously throughout the test. During the time duration T2, the interruption on PCell shall not be more than the values specified in Table 6.5.2.2.5-2 depending on the reported *SRS-SwitchingTimeNR* capability.

**Table 6.5.2.2.5-2: Interruption length X1 (slot)**

| $\mu$ | NR Slot length (ms) of victim cell | SRS carrier switching time (us)[Note 1] | Interruption length X1 (slots) | |
|---|---|---|---|---|
| | | | Sub carrier spacing for aggressor cell (kHz) | |
| | | | 15 | 30 |
| 0 | 1 | ≤ 200 | 2 | 2 |
| | | 300, 500 | 2 | 2 |
| | | 900 | 2 | 2 |
| 1 | 0.5 | ≤ 200 | 3 | 2 |
| | | 300, 500 | 3 | 3 |
| | | 900 | 4 | 4 |
| 2 | 0.25 | ≤ 200 | 4 | 3 |
| | | 300, 500 | 5 | 4 |
| | | 900 | 7 | 6 |
| 3 | 0.125 | ≤ 200 | 7 | 5 |
| | | 300, 500 | 9 | 7 |
| | | 900 | 12 | 10 |
| Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter *SRS-SwitchingTimeNR*. | | | | |

The rate of correct events observed during repeated tests shall be at least 90% with the confidence level of 95%.

## 6.5.3 SCell activation and deactivation delay

### 6.5.3.0 Minimum conformance requirements

#### 6.5.3.0.1 Minimum conformance requirements for SCell activation and deactivation delay

Same as in clause 4.5.3.0.1.

#### 6.5.3.0.2 Minimum conformance requirements for TRS based SCell activation

For a UE supporting *scellWithoutSSB-InterBandCA-r18* if the SCell being activated belongs to FR1 and if the UE is not provided with SSB configuration (*absoluteFrequencySSB*) in the target SCell (FrequencyInfoDL) nor SMTC configuration for the target SCell, and if there is one collocated active reference serving cell on different FR1 band, when the following conditions are fulfilled,

- The RTD between the target SCell and the collocated reference serving cell is within CP where CP is corresponding to the SCS of SSB-less SCell, and
- The EPRE difference at the UE is smaller than or equal to [30] dB, where EPRE difference is the power difference between TRS/A-TRS symbol on the SSB-less SCell and SSB symbol on the reference serving cell normalized by SCSs of SSB of reference cell and A-TRS/P-TRS of SSB-less SCell, and
- The RS(s) of the SSB-less SCell being activated is (are) QCL-TypeA with TRS(s) of the SSB-less SCell being activated, and the TRS(s) of the SSB-less SCell being activated is (are) further QCL-TypeC with SSB(s) of an inter-band active serving cell, and the inter-band active serving cell shall be same as the reference serving cell.

where the reference serving cell can be indicated by higher layer parameter *referenceCell-r18*. If UE is not indicated with *referenceCell-r18*, the reference serving cell is assumed to be the QCL-typeC source cell if there is only one active QCL-typeC source cell configured.

Where $T_{activation_time}$ is

- $T_{first_TRS} + T_{TRS}$ +5 ms, if aperiodic CSI-RS resources are not configured for SCell activation or UE do not support *aperiodicCSI-RS-FastScellActivation-r17*

- $T_{first_ATRS} + T_{gap} + T_{ATRS}$ + 5 ms if aperiodic CSI-RS resources are configured for Scell activation for UE supporting *aperiodicCSI-RS-FastScellActivation-r17*

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in TS 38.133 [6] clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\text{ms}}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\text{ms}+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in TS 38.133 [6] clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in TS 38.133 [6] clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The interruption length X2 on any activated serving cell are according to Table 6.5.3.0.2-1 and 6.5.3.0.2-2.

**Table 6.5.3.0.2-1: Interruption length X2 for SCell activation/deactivation for inter-band CA**

| $\mu$ | NR Slot length (ms) of victim cell | Interruption length X2 (slots) | |
|---|---|---|---|
| 0 | 1 | | 1 |
| 1 | 0.5 | | 1 |

**Table 6.5.3.0.2-2 Interruption duration for SCell activation/deactivation for intra-band CA**

| $\mu$ | NR Slot length (ms) | Interruption length (slots) |
|---|---|---|
| 0 | 1 | 1 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| 1 | 0.5 | 1 + $T_{SMTC_duration}$ * $N_{slot}^{subframe,\mu}$ |
| NOTE 1: $T_{SMTC_duration}$ measured in subframes is<br>- the longest SMTC duration among all above active serving cells and the SCell being activated when one SCell is activated. If SSB configuration (*absoluteFrequencySSB*) but no SMTC configuration is provided for the SCell being activated, the SSB transmission periodicity is assumed to be 5ms and $T_{SMTC\ duration}$ for the SCell being activated is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being activated. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being activated, $T_{SMTC\ duration}$ for the SCell being activated is 0ms;<br>- the longest SMTC duration among all active serving | | |
| NOTE 2: $N_{slot}^{subframe,\mu}$ is as defined in TS 38.211 [7]. | | |

The normative reference for this requirement is TS 38.133 [6] clause 8.3.2.

## 6.5.3.1 NR SA FR1 SCell activation and deactivation of known SCell in non-DRX for 160ms SCell measurement cycle

### 6.5.3.1.1 Test purpose

This test is to verify that the SCell activation and deactivation times are within the requirements in TS 38.133 [6] clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

### 6.5.3.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards and supporting 2DL CA.

### 6.5.3.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.3.1.

### 6.5.3.1.4 Test description

#### 6.5.3.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. The supported test configurations for NR PCell are shown in Table 6.5.3.1.4.1-1. Supported test configurations for NR SCell are shown in Table 6.5.3.1.4.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

**Table 6.5.3.1.4.1-1: supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 6.5.3.1-1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 6.5.3.1-2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 6.5.3.1-3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

**Table 6.5.3.1.4.1-1A: Supported test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 6.5.3.1-1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 6.5.3.1-2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 6.5.3.1-3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.3.1.4.1-2 and Table 6.5.3.1.4.1-3.

**Table 6.5.3.1.4.1-2: Initial conditions for known FR1 SCell activation case**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.3.1.5-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.1 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

**Table 6.5.3.1.4.1-3: General test parameters for known FR1 SCell activation case, 160ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to Cell 1 | µs | 0 | |
| Time alignment error between Cell 2 and Cell 1 | µs | ≤ Time alignment error as specified in TS 38.104 [28] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1 | s | 7 | During this time the PCell shall be known and the SCell configured and detected. |
| T2 | s | 1 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| $T_{HARQ}$ | ms | PCell Config 1: 2<br>PCell Config 2: 3<br>PCell Config 3: 2.5 | $k_1$×NR slot length<br><br>$k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [8] that will meet the timing constraints of this test case. |
| $T_{CSI_Reporting}$ | ms | 15 | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214 [9]) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [13]. |

1. Message contents are defined in clause 6.5.3.1.4.3.
2. There are two NR carriers, each with one cell. Cell 1 is NR FR1 PCell and Cell 2 is the deactivated SCell. Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3.

### 6.5.3.1.4.2 Test procedure

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\mathrm{NR\ slot\ length}}$, as defined in TS 38.133 [6] clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\mathrm{HARQ}}+3\mathrm{ms}}{\mathrm{NR\ slot\ length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\mathrm{ms}+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in TS 38.133 [6] clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in TS 38.133 [6] clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$, as defined in TS 38.133 [6] clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\mathrm{T_{HARQ}+3ms}}{NR\ slot\ length}$, as defined in TS 38.133 [6] clause 8.3.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Tables 6.5.3.1.4.1-3 and 6.5.3.1.5**-**1. Propagation conditions are set according to Annex C clauses C.2.2.

3. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1 and provide measurement configurations.

3a. The UE sends a *MeasurementReport* message. If the TE doesn't receive the *MeasurementReport* during T1, go to step 9.

4. The SS shall configure transmission of PDSCH with a maximum number of 1 HARQ transmission.

5. The SS activates SCC by sending the activation MAC-CE (Refer TS 38.321 [12], clauses 5.9, 6.1.3.10) in a slot # denoted n and T2 starts in slot n. If the SS receives ACK for MAC-CE sent by the UE, the test proceeds to step 6, otherwise go to step 9.

6. After at least one CSI-RS transmission occasion for channel measurement, the UE shall start sending CSI reports for SCell and the SS shall monitor CSI reports for SCell sent from the UE and ACK/NACK sent in PCell according to the following criteria:

   - If the first CSI report for SCell is received by the SS no later than slot $s_{first_CSI}$ = n + 1 + $\frac{\mathrm{T_{HARQ}}+3\mathrm{ms}+T_{\mathrm{CSI_Reporting}}}{NR\ slot\ length}$,

     - or slot $s^{int}_{first_CSI} = n + 1 + \frac{T_{HARQ}+3ms+T_{CSI_Reporting}+T_X}{NR\ slot\ length} + N_{interruption} + 1$ if the slot $s_{first_CSI}$ was subject to interruption,

     - or the next CSI report occasion if there is no CSI report occasion in slots $s_{first_CSI}$ or $s^{int}_{first_CSI}$,

   - and CSI report with non-zero CQI index is received by the SS earlier than or equal to slot $s_{nonzero_CQI}$ = n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\mathrm{NR\ slot\ length}}$,

     - or slot $s^{int}_{nonzero_CQI} = max\left(s^{int}_{first_CSI}, s_{nonzero_CQI}\right)$ if slot $s_{nonzero_CQI}$ was subject to interruption,

     - or the next available CSI report occasion if there is no CSI report occasion for reporting the valid CSI in slot $s_{nonzero_CQI}$, or slot $s^{int}_{nonzero_CQI}$ if slot $s_{nonzero_CQI}$ was subject to interruption,

   - and DTX is not observed by the SS outside the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T2

- Then the number of successes for the event "Activation" is increased by one. Otherwise, count a fail for the event "Activation" and go to step 9.

7. When T2 expires, the SS deactivate SCC by sending the deactivation MAC-CE (Refer TS 38.321 [12], clauses 5.9, 6.1.3.10) in a slot # denoted m and T3 starts in slot m. If the SS receives ACK for MAC-CE sent by the UE, the test proceeds to step 8, otherwise go to step 9.

8. The UE shall stop sending CSI reports for SCell and the SS shall monitor CSI reports for SCell sent from the UE and ACK/NACK sent in PCell during SCell deactivation.

   - If the last CSI report is received by the SS earlier than or equal to slot m + $\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$

- and DTX is not observed by the SS outside the slot m + 1 + $\frac{\text{THARQ}}{NR\ slot\ length}$ to $m + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T3,

- Then the number of successes for the event “Deactivation” is increased by one. Otherwise, count a fail for the event “Deactivation”.

9. When T3 expires, or Activation in step 5 was not acknowledged, or a fail was counted for the event “Activation” in step 6, or Deactivation in step 7 was not acknowledged, the SS shall transmit a RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

10. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

11. After the RRC connection release, the SS:
- transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5),
or
- switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

12. Repeat steps 2-11 until a test verdict has been achieved.

Each of the events “Activation” and “Deactivation” is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved. Different events may require different times for a verdict.
If all events pass, the test passes. If one event fails, the test fails.

| Propagation condition | | - | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.

Note 3: SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.

Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.

Note 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5.

| Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2. | | |
| Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. | | |
| Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. | | |
| Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$. | | |
| Note 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5. | | |

During T2 the UE shall send the first CSI report for SCell no later than the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$ UE is allowed to postpone CSI report to next available uplink resource if an available uplink resource is subject to interruption. Whether CSI report in slot $n + 1 + \frac{T_{HARQ}+3ms+T_{CSI_Reporting}}{NR\ slot\ length}$ was interrupted or not is checked by monitoring ACK/NACK sent in PCell in slot $n + 1 + \frac{T_{HARQ}+3ms+T_{CSI_Reporting}}{NR\ slot\ length}$.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstSSB} + 5ms$, as defined in TS 38.133 [6] section 8.3.

During T2 interruption of PCell/PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{\text{NR slot length}} + N_{interruption}$, as defined in TS 38.133 [6] section 8.3.

Figures 6.5.3.1.5-1 shows the derivation of the Test procedure requirement for DTX during T2, based on the core requirements for interruption.

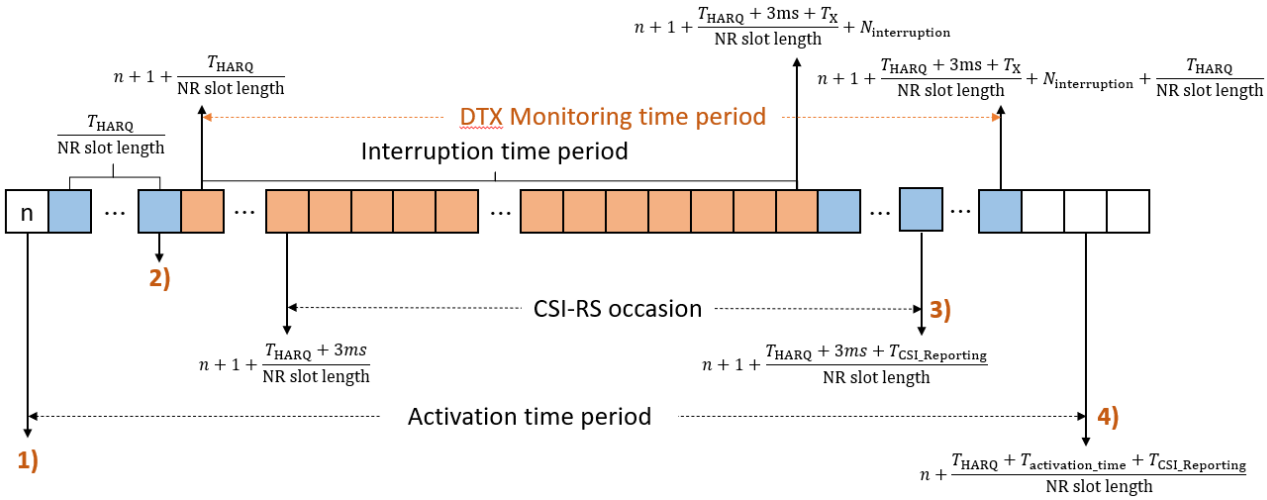

Figure 6.5.3.1.5-1: Procedure derivation for Activation

1) Activation command for SCell
2) ACK for MAC-CE for SCell activation
3) First CSI report timing (could be invalid CQI)

4) First non-zero CSI report transmission

During T3 the UE shall stop sending CSI reports for SCell at latest in a slot m + $\frac{T_{HARQ}+3ms}{NR\ slot\ length}$, as defined in TS 38.133 [6] section 8.3.

During T3 interruption of PCell during SCell deactivation shall not happen outside the slot m + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to m + 1 + $\frac{T_{HARQ}+3ms}{NR\ slot\ length}$, as defined in TS 38.133 [6] section 8.3.

Figures 6.5.3.1.5-2 shows the derivation of the Test procedure requirement for NR PSCell DTX during T3, based on the core requirements for interruption.

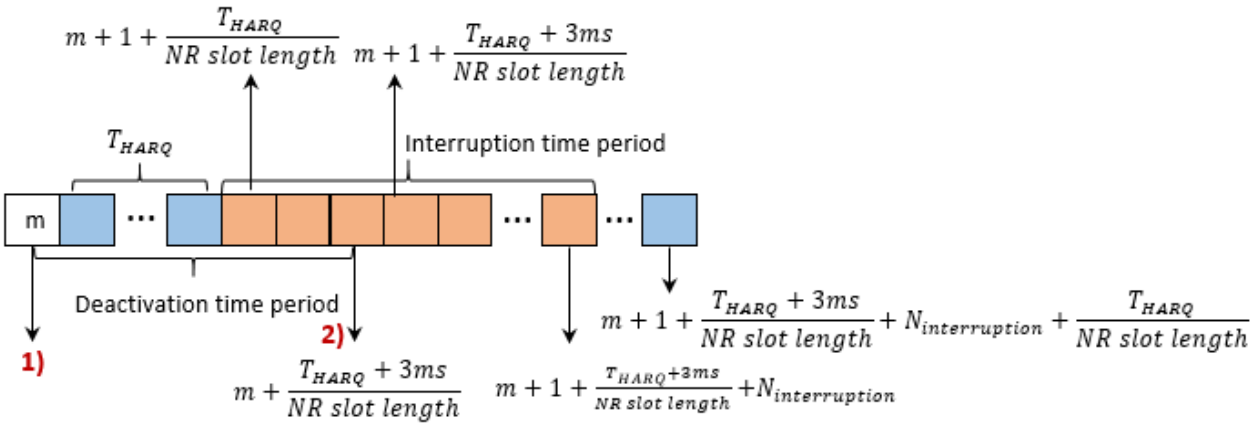

**Figure 6.5.3.1.5-2: Procedure derivation for Deactivation**

1) Deactivation command for SCell

2) Latest slot stop sending CSI reports for SCell

The interruption on any activated serving cell shall not be more than the values specified for SA in TS 38.133 [6] clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in TS 38.133 [6] section 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## 6.5.3.2 NR SA FR1 SCell activation and deactivation of known SCell in non-DRX for 640ms SCell measurement cycle

### 6.5.3.2.1 Test purpose

This test is to verify that the SCell activation and deactivation times are within the requirements in TS 38.133 [6] clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

### 6.5.3.2.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards and supporting 2DL CA.

### 6.5.3.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.3.2.

#### 6.5.3.2.4 Test description

##### 6.5.3.2.4.1 Initial conditions

Same initial conditions as described in section 6.5.3.1.4.1 with following exception:

- The listed parameter values in Tables 6.5.3.2.4.1-2 will replace the values of corresponding parameters in Tables 6.5.3.1.4.1-3.

**Table 6.5.3.2.4.1-1: Void**

**Table 6.5.3.2.4.1-2: General test parameters for known FR1 SCell activation case, 640ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

##### 6.5.3.2.4.2 Test procedure

Same test procedure as described in section 6.5.3.1.4.2.

##### 6.5.3.2.4.3 Message contents

Same message contents as described in section 6.5.3.1.4.3 with following exception:

- Table 6.5.3.1.4.3-3 is replaced by Table 6.5.3.2.4.3-1.

**Table 6.5.3.2.4.3-1: MeasObjectNR for SCell**

| smtc1 | SSB-MTC specified in TS 38.508-1 [14] Table 7.3.1-3 with condition SMTC.1 | | |
| | | | |

#### 6.5.3.2.5 Test requirement

Same test requirement as described in section 6.5.3.1.5, except $T_{activation_time}$ will be replaced with the value $T_{FirstSSB_MAX} + T_{rs} + 5ms$.

### 6.5.3.3 NR SA FR1 SCell activation and deactivation of unknown SCell in non-DRX

#### 6.5.3.3.1 Test purpose

This test is to verify that the SCell activation and deactivation times are within the requirements stated in TS 38.133 [6] clause 8.3, when the SCell in FR1 is unknown by the UE at the time of activation.

#### 6.5.3.3.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards and supporting 2DL CA.

#### 6.5.3.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.3.3.

#### 6.5.3.3.4 Test description

##### 6.5.3.3.4.1 Initial conditions

Same initial conditions as described in section 6.5.3.1.4.1 with following exception:

- The listed parameter values in Tables 6.5.3.3.4.1-2 will replace the values of corresponding parameters in Tables 6.5.3.1.4.1-3.

**Table 6.5.3.3.4.1-1: Void**

**Table 6.5.3.3.4.1-2: General test parameters for unknown FR1 SCell activation case, 160ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| T1 | ms | 100 | During this time the PSCell shall be known and the SCell configured, but not detected. |

##### 6.5.3.3.4.2 Test procedure

Same test procedure as described in section 6.5.3.1.4.2, except step3 and step 5 are replaced by following steps:

3. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1. The SCell (Cell 2) shall be powered OFF till T2 starts.

5. The SS activates SCC by sending the activation MAC-CE (Refer TS 38.321 [12], clauses 5.9, 6.1.3.10) in a slot # denoted n, power ON the SCell (Cell 2), T2 starts in slot n. If the SS receives ACK for MAC-CE sent by the UE, the test proceeds to step 6, otherwise go to step 9.

and,

- step 3a is removed.

##### 6.5.3.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with condition SCELL_CSI_ON_SPCELL with the following exceptions:

**Table 6.5.3.3.4.3-1: *RRCReconfiguration* in step 3: SCell addition**

#### 6.5.3.3.5 Test requirement

Same test requirement as described in section 6.5.3.1.5, except $T_{activation_time}$ will be replaced with the value $T_{FirstSSB_MAX} + T_{SMTC_MAX} + 2*T_{rs} + 5ms$

### 6.5.3.4 NR SA FR1 direct SCell activation at SCell addition of known SCell

#### 6.5.3.4.1 Test purpose

The purpose of this test is to verify that the direct SCell activation delay and interruption is within the requirements, when the SCell in FR1 is known by the UE at the time of activation.

#### 6.5.3.4.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and supporting 2DL CA and direct SCell activation.

#### 6.5.3.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.3.4.

#### 6.5.3.4.4 Test description

##### 6.5.3.4.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. The supported test configurations for NR PCell are shown in Table 6.5.3.4.4.1-1. Supported test configurations for NR SCell are shown in Table 6.5.3.4.4.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

**Table 6.5.3.4.4.1-1: supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

**Table 6.5.3.4.4.1-1A: Supported test configurations for NR PSCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.3.4.4.1-2 and Table 6.5.3.4.4.1-3.

**Table 6.5.3.4.4.1-2: Initial conditions for known FR1 SCell activation case**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.3.4.5-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.1 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

**Table 6.5.3.4.4.1-3: General test parameters for known FR1 SCell activation case**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Inter-frequency neighbour cell (SCell to-be) | | Cell 2 | Inter-frequency neighbour cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Measurement gap pattern | | gp0 | Measurement gap is used during parts of time period T1 for detection of Cell 2. |
| CSI reporting periodicity | ms | 2 | CSI reporting periodicity for periodic reporting of CQI for PCell and, when added, SCell. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | Measurement cycle for SCell does not come into effect in direct activation at SCell addition. |
| Timing offset between Cell 1 and Cell 2 | μs | ≤ MRTD | The value of maximum timing offset depends upon the carrier aggregation scenario. |

| | | | |
|---|---|---|---|
| T1 | s | 7 | During this time period the PCell shall be known and Cell 2 shall be detected as an inter-frequency neighbour cell. |
| T2 | s | 1 | During this time period Cell 2 shall be configured and directly activated as SCell. |
| A3-offset | dB | -15 | |
| THARQ | ms | k1×NR slot length | k1 is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by dl-DataToUL-ACK if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [8] |
| TCSI_Reporting | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [13] |
| k | ms | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe},\,\mu} + 1$ | As specified in clause 4.3 of TS 38.213 [8] |

1. Message contents are defined in clause 6.5.3.4.4.3.

2.There are two NR carriers, each with one cell. Cell 1 is NR FR1 PCell and Cell 2 is the SCell. Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3.

#### 6.5.3.4.4.2 Test procedure

The test consists of two successive time periods with duration T1 and T2, respectively. There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC). Cell 1 and Cell 2 both operate according to one of the configurations in Table 6.5.3.4.4.1-1. Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2. The UE is continuously scheduled in PCell throughout the test.

At the beginning of T1 the UE is configured to measure RF channel 2 in measurement gaps. During T1, the UE detects and measures Cell 2 on RF channel 2 and sends a measurement report containing Cell 2 to the test equipment. After having received a measurement report containing Cell 2, the test equipment deconfigures the measurement gaps and thereafter sends a RRCReconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state (*sCellState* is set to *activated*). The time between reception of the last measurement report carrying SCell and transmission of the RRCReconfiguration message directly activating SCell is kept short enough to allow the SCell to remain known to the UE.

Time period T2 starts when the UE receives the RRC connection reconfiguration message at the UE antenna connector. The corresponding slot at which the message is received at the UE antenna connector is denoted *m.* The UE shall complete activation of the SCell no later than in slot $m + \frac{\mathrm{N_{direct}}}{\text{NR slot length}}$, where $\mathrm{N_{direct}}$ is defined as the time taken for direct SCell activation as specified in clause 8.3.4, TS 38.133 [6]. From slot $m + \frac{\mathrm{N_{direct}}}{\text{NR slot length}}$ and onwards the UE shall report valid CSI both for PCell and SCell. The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received. The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Tables 6.5.3.4.4.1-3 and 6.5.3.4.5**-**1. Propagation conditions are set according to Annex C clauses C.2.2.

3. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1 and provide measurement configurations.

3a. The UE sends a *MeasurementReport* message.

4. The SS shall configure transmission of PDSCH with a maximum number of 1 HARQ transmission.

5. After having received a measurement report containing Cell 2, the SS activates SCC by sending a RRCReconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state as defined in message contents table 6.5.3.4.4.3-5.

6. The UE shall start reporting CSI in PSCell in slot (m+k+$T_{RRC_process}$), where $T_{RRC_process}$ is the RRC procedure delay defined in clause 12 of TS 38.331 [13], and Tx is the time to the end of the first complete the SSB burst as specified in TS 38.133 [6] clause 8.3.4. UE shall report CQI index 0 (out-of-range) until the SCell activation has been completed, and the SS shall monitor CSI reports for SCell sent from the UE according to the following criteria:

   - If the first CSI report for SCell is received by the SS no later than slot m + 1 + $\frac{T_{HARQ}+T_1+\text{TRRC_process}+T_(CSI_Reporting)}{NR\ slot\ length}$,

     - or slot $m + 1 + \frac{T_{HARQ}+\text{TRRC_process}+T_(CSI_Reporting)+T_1+T_X}{NR\ slot\ length} + N_{interruption} + 1$ if the slot m + 1 + $\frac{T_{HARQ}+T_1+\text{TRRC_process}+T_(CSI_Reporting)}{NR\ slot\ length}$ was subject to interruption,

   - and CSI report with non-zero CQI index is received by the SS earlier than or equal to slot m + $\frac{N_{\text{direct}}}{\text{NR slot length}}$,

     - or the next available uplink resource if there are no uplink resources for reporting the valid CSI in a slot m + $\frac{N_{\text{direct}}}{\text{NR slot length}}$

   - and DTX is not observed by the SS outside the slot $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+\text{TRRC_process}+T_1+T_X}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T2

   - Then the number of successes for the event "Activation" is increased by one. Otherwise, count a fail for the event "Activation" and go to step 7.

7. When T2 expires, or Activation in step 5 was not acknowledged, or a failure was counted for the event "Activation" in step 6, the SS shall transmit a RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. After the RRC connection release, the SS:
   - transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5),
   or
   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 2-9 until a test verdict has been achieved.

Each of the event “Activation” is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved.

#### 6.5.3.4.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with condition SCELL_CSI_ON_SPCELL , with the following exceptions:

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP, SCH_RP, and Io levels have been derived from other parameters for information purpose. They are not settable parameters themselves.

The UE shall complete the direct activation of the SCell no later than at slot $n + \frac{N_{direct}}{\text{NR slot length}}$.

The UE shall report non-zero CQI for SCell from slot $n + \frac{N_{direct}}{\text{NR slot length}}$ and onwards throughout time period T2.

The interruption on PCell during direct activation of the SCell shall occur within the interruption window specified in TS 38.133 [6] clause 8.3.4 and shall not exceed the length specified in TS 38.133 [6] clause 8.2.2.2.11.

The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.3.5 NR SA FR1 direct SCell activation at handover with known SCell

### 6.5.3.5.1 Test purpose

The purpose of this test is to verify the requirement for the FDD-FDD and TDD-TDD intra-frequency handover with direct SCell activation requirements specified in is TS 38.133 [6] subclause 8.3.5.

### 6.5.3.5.2 Test applicability

This test applies to all types of NR UE from Release 16 onwards and supporting 2DL CA and direct SCell activation.

### 6.5.3.5.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.5.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.3.5.

### 6.5.3.5.4 Test description

#### 6.5.3.5.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. The supported test configurations for NR PCell are shown in Table 6.5.3.5.4.1-1. Supported test configurations for NR SCell are shown in Table 6.5.3.5.4.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

**Table 6.5.3.5.4.1-1: Intra-frequency handover with direct SCell activation from FR1-to-FR1 test configurations for NR PCell**

| Config | Description |
|---|---|

| | |
|---|---|
| 1 | Source PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode<br>Target PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | Source PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode<br>Target PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |

| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table 6.5.3.5.4.1-1A: Intra-frequency handover with direct SCell activation from FR1-to-FR1 test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.3.5.4.1-2 and Table 6.5.3.5.4.1-3.

**Table 6.5.3.5.4.1-2: Initial conditions for known FR1 SCell activation case**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.3.5.4.1-1 | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.1 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

**Table 6.5.3.5.4.1-3: General test parameters Intra-frequency handover with direct SCell activation from FR1 to FR1**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | PCell | | Cell 1 | |
| | SCell | | Cell 2 | |
| | Target cell | | Cell 3 | |
| Final condition | PCell | | Cell 3 | |
| | SCell | | Cell 2 | |
| | neighbour cell | | Cell 1 | |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| PRACH configuration index | | | FR1 PRACH configuration 1 | As specified in Table 6.3.3.2-3 in TS 38.211 [7] |
| Time offset between cells | | | 3 µs | Synchronous cells |
| T1 | | s | 5 | UE is in connected mode with PCell and SCell (Cell 2) is in activated state. UE receives a handover command |
| T2 | | s | $N_{direct}$ | UE shall accomplish the activation of the SCell |
| T3 | | s | 1 | |
| A3-offset | | dB | -15 | |

| | | | |
|---|---|---|---|
| $T_{HARQ}$ | slot | k | k is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by *dl-DataToUL-ACK* if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [8] |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [13] |
| k | ms | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe},\,\mu} + 1$ | As specified in clause 4.3 of TS 38.213 [8] |

1. Message contents are defined in clause 6.5.3.5.4.3.

2. There are three NR carriers, each with one cell. Cell 1 is NR FR1 PCell and Cell 2 is the SCell. Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3. Cell 3 is NR FR1 target Cell, and its power levels and settings are also set according to Annex C.1.2 and C.1.3.

### 6.5.3.5.4.2 Test Procedure

This test is to verify the requirement for the FDD-FDD and TDD-TDD intra-frequency handover with direct SCell activation requirements specified in TS 38.133 [6] subclause 8.3.5.

Supported test configurations for NR PCell are shown in table 6.5.3.5.4.1-1. Supported test configurations for NR SCell are shown in table 6.5.3.5.4.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. Both handover with direct SCell activation requirements are tested by using the parameters in table 6.5.3.5.4.1-3, 6.5.3.5.5-1 and 6.5.3.5.5-2.

The test scenario comprises of two FR1 carriers and the 3 cells as given in tables 6.5.3.5.4.1-1 and 6.5.3.5.4.1-3. The test consists of three successive time periods, with time durations of T1, T2, and T3 respectively.

At the start of time duration T1, the UE is in connected mode with PCell and SCell (Cell 2) is in activated state and UE is reporting CQI for both PCell and SCell.

Time period T2 starts when UE receives a handover command to Cell 3 that also activates SCell (Cell 2). This is done using an *RRCReconfiguration* message with parameter *sCellState* set to *activated* for the SCell (Cell 2). The message is sent from the test equipment to the UE and is received in a subframe # denoted m at the UE antenna connector. The UE shall accomplish the activation of the SCell no later than subframe ($m + N_{direct}$), where $N_{direct}$ is the time for direct SCell activation at handover as defined in TS 38.133 [6] clause 8.3.5.

Time period T3 starts at ($m + N_{direct}$), at which point UE shall be reporting a valid CQI for both PCell and SCell. The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received. The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

6. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. Establish SRB2 and DRB in the RRC Reconfiguration message

7. Set the parameters according to T1 in Tables 6.5.3.5.4.1-3, 6.5.3.5.5-1, and 6.5.3.5.5-2. Propagation conditions are set according to Annex C clauses C.2.2.

8. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1 and provide measurement configurations.

3a. The UE sends a *MeasurementReport* message.

9. The SS shall configure transmission of PDSCH with a maximum number of 1 HARQ transmission.

10. After having received a measurement report containing Cell 2, the SS activates SCC by sending a RRCReconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state as defined in message contents table 6.5.3.5.4.3-5, and also implying handover to Cell 3.

6. The UE shall transmit the uplink PRACH channel to Cell 3 less than 62 ms from the beginning of time period T2. The UE shall start reporting CSI in PSCell in slot (m+k+ 1+$T_{interrupt}$ +$T_{RRC_process}$), where $T_{RRC_process}$ is the RRC procedure delay defined in clause 12 of TS 38.331 [13], and Tx is the time to the end of the first complete the SSB burst as specified in TS 38.133 [6] clause 8.3.5. $T_{interrupt}$ is the interruption time during handover as specified in TS 38.133 [6] clause 6.1.1, $T_2$ is the delay from slot $n + \frac{T_{RRC_Process}+T_{interrupt}}{NR\ slot\ length}$ until UE has obtained a valid TA command for the target PCell and $T_3$ is the delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to k+1 slot, where k is defined in clause 4.2 in TS 38.213[8], UE shall report CQI index 0 (out-of-range) until the SCell activation has been completed, and the SS shall monitor CSI reports for SCell sent from the UE according to the following criteria:

- If the first CSI report for SCell is received by the SS no later than slot m + 1 + $\frac{T_{HARQ}+T_{interrupt}+T_2+T_3+TRRC_process+T_(CSI_Reporting)}{NR\ slot\ length}$,
  - or slot $m + 1 + \frac{T_{HARQ}+T_{interrupt}+T_2+T_3+T_(CSI_Reporting)\ +TRRC_process+T_X}{NR\ slot\ length} + N_{interruption} + 1$ if the slot m + 1 + $\frac{T_{HARQ}+T_{interrupt}+T_2+T_3+TRRC_process+T_(CSI_Reporting)}{NR\ slot\ length}$ was subject to interruption, where $N_{interruption}$ is the interruption length given in TS 38.133 [6] clause 8.2.
- and CSI report with non-zero CQI index is received by the SS earlier than or equal to slot m + $\frac{N_{direct}}{NR\ slot\ length}$,
  - or the next available uplink resource if there are no uplink resources for reporting the valid CSI in a slot m + $\frac{N_{direct}}{NR\ slot\ length}$.
- and DTX is not observed by the SS outside the slot $m + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to $m + 1 + \frac{TRRC_process+T_2+T_3+T_{interrrupt}+T_{HARQ}+T_X}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T2
- Then the number of successes for the event "Activation" is increased by one. Otherwise, count a fail for the event "Activation" and go to step 7.

7. When T2 expires, or Activation in step 5 was not acknowledged, or a failure was counted for the event "Activation" in step 6, the SS shall transmit a RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008), and Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. After the RRC connection release, the SS:
   - transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5),
   or
   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 2-9 until a test verdict has been achieved.

Each of the event “Activation” is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved.

#### 6.5.3.5.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with condition SCELL_CSI_ON_SPCELL , with the following exceptions:

| Propagation condition | | - | AWGN | | |

Note 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall be capable to transmit valid CSI report for the directly activated SCell no later than in subframe $m+N_{direct}$. The rate of correct observed SCell direct activation delay during repeated tests shall be at least 90%.

NOTE: The SCell activation delay, $N_{direct}$, can be expressed as: $N_{direct} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{activation_time} + T_{CSI_Reporting}$ - 3ms, where:

$T_{RRC_Process}$: RRC procedure delay defined in clause 12 of TS 38.331 [13],

$T_{interrupt}$: Interruption time during handover as specified in TS 38.133 [6] clause 6.1.1,

$T_2$: Delay from slot $m + \frac{T_{RRC_Process} + T_{interrupt}}{\text{NR slot length}}$ until UE has obtained a valid TA command for the target PCell,

$T_3$: Delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to k+1 slot, where k is defined in clause 4.2 in TS 38.213 [8],

$T_{activation_time}$ and $T_{CSI_Reporting}$ are specified in TS 38.133 [6] clause 8.3.2, where the following definitions of $T_{FirstSSB}$ and $T_{FirstSSB_MAX}$ as defined in TS 38.133 [6] section 8.3.5 shall apply:

- $T_{FirstSSB}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot m + $(T_{RRC_Process}+T_{interrupt}+T2+T3)/(NR\ slot\ length)$

- $T_{FirstSSB_MAX}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot m + $(T_{RRCProcess}+T_{interrupt}+T2+T3)/(NR\ slot\ length)$

This gives a total of $N_{direct}$ = 10 + 52 + $T_{IU}$ + $T_2$ + $T_3$ + $T_{activation_time}$ + $T_{CSI_Reporting}$ - 3 ms = 62 + 10 + 13 + 6 + 20 + 2 - 3 = 94 ms for test configurations 1 and 2.

This gives a total of $N_{direct}$ = 10 + 52 + $T_{IU}$ + $T_2$ + $T_3$ + $T_{activation_time}$ + $T_{CSI_Reporting}$ - 3 ms = 62 + 10 + 13 + 6 + 20 + 2 - 3 = 94 ms for test configuration 3.

During T3 the UE shall send valid CSI reports for PCell and SCell with non-zero CQI index and continue to send CSI reports for PCell and SCell (Cell 2) with non-zero CQI index until the end of T3.

All the above test requirements shall be fulfilled for the observed SCell direct activation delay to be counted as correct.

## 6.5.3.6 to 6.5.3.9

## 6.5.3.10 NR SA FR1 fast SCell Activation of known SCell in non-DRX for 160ms SCell measurement cycle

### 6.5.3.10.1 Test purpose

The purpose of this test is to verify that the fast SCell activation times are within the requirements stated in TS 38.133 [6] clause 8.3.16, when the SCell in FR1 is known by the UE at the time of activation.

### 6.5.3.10.2 Test applicability

This test applies to all types of NR UE from Release 17 onwards and supporting 2DL CA in NR and fast SCell activation.

### 6.5.3.10.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 4.5.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clause 8.3.16.

### 6.5.3.10.4 Test description

#### 6.5.3.10.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. The supported test configurations for NR PCell and NR SCell are shown in Table 6.5.3.10.4.1-1.

**Table 6.5.3.10.4.1-1: known FR1 SCell activation in non-DRX for 160ms SCell measurement cycle supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.3.10.4.1-2 and Table 6.5.3.10.4.1-3.

**Table 6.5.3.10.4.1-2: Initial conditions for fast known FR1 SCell activation case**

| Parameter | Value | Comment |

| Cell 2 timing offset to Cell 1 | μs | 0 | |
| Time alignment error between Cell 2 and Cell 1 | μs | ≤ Time alignment error as specified in TS 38.104 [28] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1 | s | 7 | During this time the PSCell shall be known and the SCell configured and detected. |
| T2 | s | 1 | During this time the UE shall activate the SCell. |
| A3-offset | dB | -15 | |
| $T_{HARQ}$ | ms | Config 1: 2<br>Config 2: 3<br>Config 3: 2.5 | $k_1$×NR slot length<br><br>$k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [8] that will meet the timing constraints of this test case. |
| $T_{CSI_Reporting}$ | ms | 15 | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214 [9]) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [13] |

1.Message contents are defined in clause 6.5.3.10.4.3.

2.There are two NR carriers, each with one cell. Cell 1 is NR FR1 PCell and Cell 2 is the SCell. Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3.

### 6.5.3.10.4.2 Test procedure

The test consists of two successive time periods, with duration of T1and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell and triggering the aperiodic CSI-RS for fast SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in TS 38.133 [6] clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\text{ms}}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\text{ms}+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in TS 38.133 [6] clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in TS 38.133 [6] clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Tables 6.5.3.10.4.1-3 and 6.5.3.10.5**-**1. Propagation conditions are set according to Annex C clauses C.2.2.

3. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1 and provide measurement configurations.

3a. The UE sends a *MeasurementReport* message.

4. The SS shall configure transmission of PDSCH with a maximum number of 1 HARQ transmission.

5. The SS activates SCC by sending the activation MAC-CE (Refer TS 38.321 [12], clauses 5.9, 6.1.3.55) in a slot # denoted n and T2 starts in slot n. If the SS receives ACK for MAC-CE sent by the UE, the test proceeds to step 6, otherwise go to step 7.

6. After at least one CSI-RS transmission occasion for channel measurement, the UE shall start sending CSI reports for SCell and the SS shall monitor CSI reports for SCell sent from the UE and ACK/NACK sent in PCell according to the following criteria:

   - If the first CSI report for SCell is received by the SS no later than slot $s_{first_CSI}$ = n + 1 + $\frac{\text{T}_{\text{HARQ}}+3\text{ms}+T_{\text{CSI_Reporting}}}{NR\ slot\ length}$,

     - or slot $s^{int}_{first_CSI} = n + 1 + \frac{T_{HARQ}+3ms+T_{CSI_Reporting}+T_X}{NR\ slot\ length} + N_{interruption} + 1$ if the slot $s_{first_CSI}$ was subject to interruption,

     - or the next CSI report occasion if there is no CSI report occasion in slots $s_{first_CSI}$ or $s^{int}_{first_CSI}$,

   - and CSI report with non-zero CQI index is received by the SS earlier than or equal to slot $s_{nonzero_CQI}$ = n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, where $\text{T}_{\text{activation_time}} = \text{T}_{\text{FirstATRS}}$ + 5ms, as defined in TS 38.133 [6] clause 8.3.16,

     - or slot $s^{int}_{nonzero_CQI} = max\left(s^{int}_{first_CSI}, s_{nonzero_CQI}\right)$ if slot $s_{nonzero_CQI}$ was subject to interruption,

     - or the next available CSI report occasion if there is no CSI report occasion for reporting the valid CSI in slot $s_{nonzero_CQI}$, or slot $s^{int}_{nonzero_CQI}$ if slot $s_{nonzero_CQI}$ was subject to interruption,

   - and DTX is not observed by the SS outside the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T2

- Then the number of successes for the event “Activation” is increased by one. Otherwise, count a fail for the event “Activation” and go to step 7.

7. When T2 expires, or Activation in step 5 was not acknowledged, or a fail was counted for the event “Activation” in step 6, the SS shall transmit a RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. After the RRC connection release, the SS:
   - transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5),
   or
   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 2-9 until a test verdict has been achieved.

The event "Activation" is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved.

#### 6.5.3.10.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with condition SCELL_CSI_ON_SPCELL with the following exceptions:

| Propagation condition | | - | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.

Note 3: SS-RSRP, CSI-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.

Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

| | |
|---|---|
| Note 7: | $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$. |
| Note 8: | On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5. |

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot ($n + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstATRS} + 5ms$, as defined in TS 38.133 [6] clause 8.3.16.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstATRS} + 5ms$, as defined in TS 38.133 [6] clause 8.3.16.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{\text{NR slot length}} + N_{interruption}$, as defined in TS 38.133 [6] clause 8.3.16.

The interruption on any activated serving cell shall not be more than the values specified for SA in TS 38.133 [6] clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in TS 38.133 [6] clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## 6.5.3.11 NR SA FR1 fast SCell Activation of known SCell in non-DRX for 640ms SCell measurement cycle

### 6.5.3.11.1 Test purpose

The purpose of this test is to verify that the fast SCell activation times are within the requirements stated in TS 38.133 [6] clause 8.3.16, when the SCell in FR1 is known by the UE at the time of activation.

### 6.5.3.11.2 Test applicability

This test applies to all types of NR UE from Release 17 onwards and supporting 2DL CA in NR and fast SCell activation.

### 6.5.3.11.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 4.5.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clause 8.3.16.

### 6.5.3.11.4 Test description

#### 6.5.3.11.4.1 Initial conditions

Same initial conditions as described in section 6.5.3.10.4.1 with following exception:

The listed parameter values in Tables 6.5.3.11.4.1-1 will replace the values of corresponding parameters in Tables 6.5.3.10.4.1-3. The listed parameter values in Tables 6.5.3.11.4.1-2 will replace the values of corresponding parameters in Tables 6.5.3.10.5-1.

**Table 6.5.3.11.4.1-1: General test parameters for known FR1 SCell activation case, 640 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| | | | |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

| Propagation condition | | - | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.

| | |
|---|---|
| Note 3: | SS-RSRP, CSI-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2. |
| Note 5: | All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. |
| Note 6: | All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. |
| Note 7: | $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$. |
| Note 8: | On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5. |

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $(n + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length})$. UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstATRS} + T_{gap} + T_{ATRS}$+ 5ms, as defined in clause 8.3.16.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstATRS}$ + 5ms, as defined in clause 8.3.16.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{\text{NR slot length}} + N_{interruption}$, as defined in clause 8.3.16.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## 6.5.3.12 to 6.5.3.14

## 6.5.3.15 NR SA FR1 TRS based SCell Activation of SSB-less SCell in inter-band CA in non-DRX

Editor's note: This test case is incomplete. The following aspect is either missing or TBD:

- Some parameters are defined in brackets
- Test tolerance analysis and measurement uncertainty are missing

### 6.5.3.15.1 Test purpose

The purpose of this test is to verify that the SSB-less SCell activation delay is within the requirements stated in TS 38.133 [6] clause 8.3.2, when the to be activated SCell in FR1 is provided with periodic CSI-RS for tracking instead of SSB. SCell does not provide neither SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration.

### 6.5.3.15.2 Test applicability

This test applies to all types of NR UE release 18 onwards that support *scellWithoutSSB-InterBandCA-r18*.

### 6.5.3.15.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clauses 8.3.2 and 8.2.2.2.

6.5.3.15.4 Test description

6.5.3.15.4.1 Initial conditions

The supported test configurations are shown in Table 6.5.3.15.4.1-1 and 6.5.3.15.4.1-2 below.

**Table 6.5.3.15.4.1-1: FR1 inter-band SSB-less SCell activation based on TRS for NR PCell in non-DRX for 160ms SCell measurement cycle supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table 6.5.3.15.4.1-2: FR1 inter-band SSB-less SCell activation based on TRS for NR SCell in non-DRX for 160ms SCell measurement cycle supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SCS, ≥10 MHz bandwidth, FDD duplex mode |

| $T_{CSI_Reporting}$ | ms | 15 | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214 [9]) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [13] |

### 6.5.3.15.4.2 Test procedure

The test consists of two successive time periods, with duration of T1 and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) but is not aware of Cell 2 (SCell). Cell 1 and Cell 2 are in different bands. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. At the same time, UE also receives the indication of reference serving cell in the same RRC message. The Cell 1 is indicated as the reference cell of Cell 2. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\text{ms}}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\text{ms}+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2,. Set the parameters according to T1 in Tables 6.5.3.15.4.1-1 and 6.5.3.15.5**-**1. Propagation conditions are set according to Annex C clauses C.2.2.

3,. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1, with the message content exceptions defined in clause 6.5.3.15.4.3. NR RRCReconfiguration message is

contained in RRCConnectionReconfiguration and NR RRCReconfigurationComplete message is contained in RRCConnectionReconfigurationComplete.

4. The SS shall configure transmission of PDSCH with a maximum number of 1 HARQ transmission.

5. The SS activates SCC by sending the activation MAC-CE (Refer TS 38.321 [12], clauses 5.9, 6.1.3.10) in a slot # denoted n (where n mode 20=1) and T2 starts in slot n. If the SS receives ACK for MAC-CE sent by the UE, the test proceeds to step 6, otherwise go to step 7.

6. After at least one CSI-RS transmission occasion for channel measurement, the UE shall start sending CSI reports for SCell and the SS shall monitor CSI reports for SCell sent from the UE and ACK/NACK sent in PCell according to the following criteria:

- If the first CSI report for SCell is received by the SS no later than slot $s_{first_CSI}$ = n + 1 + $\frac{\mathrm{T_{HARQ}+3ms+}T_{CSI_Reporting}}{NR\ slot\ length}$

  - or slot $s_{first_CSI}^{int} = n + 1 + \frac{T_{HARQ}+3ms+T_{CSI_Reporting}+T_X}{NR\ slot\ length} + N_{interruption} + 1$ if the slot $s_{first_CSI}$ was subject to interruption,

  - or the next CSI report occasion if there is no CSI report occasion in slots $s_{first_CSI}$ or $s_{first_CSI}^{int}$,

- - and CSI report with non-zero CQI index is received by the SS earlier than or equal to slot $s_{nonzero_CQI}$ = n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\mathrm{NR\ slot\ length}}$, where $\mathrm{T_{activation_time}} = \mathrm{T_{First_TRS}} + \mathrm{T_{TRS}}$ + 5ms, as defined in TS 38.133 [6] clause 8.3.2,

  - or slot $s_{nonzero_CQI}^{int} = max\left(s_{first_CSI}^{int}, s_{nonzero_CQI}\right)$ if slot $s_{nonzero_CQI}$ was subject to interruption,

  - or the next available CSI report occasion if there is no CSI report occasion for reporting the valid CSI in slot $s_{nonzero_CQI}$, or slot $s_{nonzero_CQI}^{int}$ if $s_{nonzero_CQI}$ was subject to interruption,

- and DTX is not observed by the SS outside the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T2

- Then the number of successes for the event "Activation" is increased by one. Otherwise, count a fail for the event "Activation" and go to step 7.

7. When T2 expires, or Activation in step 5 was not acknowledged, or a fail was counted for the event "Activation" in step 6, the SS shall transmit an RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Switch off and on the UE and ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 3-9 until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved.

6.5.3.15.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with condition SCELL_CSI_ON_SPCELL with the following exceptions:

Note 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.

Note 3: Io, SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.
Note 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5.

Note 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
Note 3: Io, SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.
Note 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5.
Note 9: The SSB in referenceSignal in the TCI state is configured as the SSB in Cell 1.

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (n + 1 + $\frac{T_{HARQ}+3ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{first_TRS} + T_{TRS} + 5$ ms, as defined in 6.5.3.0.2.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{\text{NR slot length}} + N_{interruption}$, as defined in TS 38.133 [6] clause 8.3.2.

The interruption on any activated serving cell shall not be more than the values specified as defined in Table 6.5.3.0.2-1 and Table 6.5.3.0.2-2.

All the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in TS 38.133 [6] clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## 6.5.3.16 NR SA FR1 Inter-band SSB-less SCell Activation based on A-TRS in non-DRX

### 6.5.3.16.1 Test purpose

The purpose of this test is to verify that the inter-band SSB-less SCell activation times are within the requirements stated in TS 38.133 [6] clause 8.3.2.

#### 6.5.3.16.2 Test applicability

This test applies to all types of NR UE release 17 onwards and supports *scellWithoutSSB-InterBandCA-r18 and aperiodicCSI-RS-FastScellActivation-r17.*

#### 6.5.3.16.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clauses 8.3.2 and 8.2.2.2.

#### 6.5.3.16.4 Test description

##### 6.5.3.16.4.1 Initial conditions

The supported test configuration is listed in Table 6.5.3.16.4-1 and 6.5.3.16.4-.

**Table 6.5.3.16.4.1-1: Inter-band SSB-less SCell Activation based on A-TRS for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table 6.5.3.16.4.1-2: Inter-band SSB-less SCell Activation based on A-TRS for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.3.16.4.1-3.

**Table 6.5.3.16.4.1-3: Initial conditions for Inter-band SSB-less SCell Activation based on A-TRS**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7A.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2a | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | NA | | |

1. The general test parameter settings are set up according to Table 6.5.3.16.4.1-4.

2. Message contents are defined in clause 6.5.3.16.4.3.

3. The test scenario comprises of two NR Cells. (Cell 1 and Cell 2). Cell 1 and Cell 2 are configured according to Annex E.4.

**Table 6.5.3.16.4.1-4: General test parameters for Inter-band SSB-less SCell Activation based on A-TRS**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channel (1, 2) are used for this test, where NR radio channel 1 and 2 are in different NR bands. |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell 2 timing offset to Cell 1 | μs | Length of CP of Cell 2 | |
| T1 | s | 7 | During this time the PCell shall be known and the SCell configured |
| T2 | s | 1 | During this time the UE shall activate the SCell. |
| $T_{HARQ}$ | ms | Config 1: 2<br>Config 2: 3<br>Config 3: 2.5 | $k_1$×NR slot length<br><br>$k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [8] that will meet the timing constraints of this test case. |
| $T_{CSI_Reporting}$ | ms | 15 | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214 [9]) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [13] |

### 6.5.3.16.4.2 Test procedure

The test consists of two successive time periods, with duration of T1 and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to PCell Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. At the same time, UE also receives the indication of reference serving cell in the same RRC message. The Cell 1 is indicated as the reference cell of Cell 2. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\mathrm{NR\ slot\ length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\mathrm{HARQ}}+3\mathrm{ms}}{\mathrm{NR\ slot\ length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\mathrm{ms}+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Tables 6.5.3.15.4.1-1 and 6.5.3.15.5**-**1. Propagation conditions are set according to Annex C clauses C.2.2.

3. T1 starts. Immediately after, the SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1, with the message content exceptions defined in clause 6.5.3.15.4.3. NR *RRCReconfiguration* message is contained in *RRCConnectionReconfiguration* and NR *RRCReconfigurationComplete* message is contained in *RRCConnectionReconfigurationComplete*.

4. The SS shall configure transmission of PDSCH with a maximum number of 1 HARQ transmission.

5. The SS activates SCC by sending the activation MAC-CE (Refer TS 38.321 [12], clauses 5.9, 6.1.3.10) in a slot # denoted n (where n mode 20=1) and T2 starts in slot n. If the SS receives ACK for MAC-CE sent by the UE, the test proceeds to step 6, otherwise go to step 7.

6. After at least one CSI-RS transmission occasion for channel measurement, the UE shall start sending CSI reports for SCell and the SS shall monitor CSI reports for SCell sent from the UE and ACK/NACK sent in PCell according to the following criteria:

- If the first CSI report for SCell is received by the SS no later than slot $s_{first_CSI} = \text{n} + 1 + \frac{\text{T}_{\text{HARQ}}+3\text{ms}+T_{CSI_Reporting}}{NR\ slot\ length}$
  - or slot $s_{first_CSI}^{int} = n + 1 + \frac{T_{HARQ}+3ms+T_{CSI_Reporting}+T_X}{NR\ slot\ length} + N_{interruption} + 1$ if the slot $s_{first_CSI}$ was subject to interruption,
  - or the next CSI report occasion if there is no CSI report occasion in slots $s_{first_CSI}$ or $s_{first_CSI}^{int}$,
- and CSI report with non-zero CQI index is received by the SS earlier than or equal to slot $s_{nonzero_CQI} = \text{n} + \frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, where $\text{T}_{\text{activation_time}} = \text{T}_{\text{First_ATRS}} + \text{T}_{\text{gap}} + \text{T}_{\text{ATRS}} + 5\text{ms}$, as defined in TS 38.133 [6] clause 8.3.16,
  - or slot $s_{nonzero_CQI}^{int} = max\left(s_{first_CSI}^{int}, s_{nonzero_CQI}\right)$ if slot $s_{nonzero_CQI}$ was subject to interruption,
  - or the next available CSI report occasion if there is no CSI report occasion for reporting the valid CSI in slot $s_{nonzero_CQI}$, or slot $s_{nonzero_CQI}^{int}$ if $s_{nonzero_CQI}$ was subject to interruption,
- and DTX is not observed by the SS outside the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{NR\ slot\ length} + N_{interruption} + \frac{T_{HARQ}}{NR\ slot\ length}$ up to the end of T2
- Then the number of successes for the event "Activation" is increased by one. Otherwise, count a fail for the event "Activation" and go to step 7.

7. When T2 expires, or Activation in step 5 was not acknowledged, or a fail was counted for the event "Activation" in step 6, the SS shall transmit an RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Switch off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 3-9 until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved.

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
Note 3: Io, SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.
Note 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5.

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
Note 3: Io, SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.
Note 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [9] cl. 5.2.2.5.
Note 9: The SSB in referenceSignal in the TCI state is configured as the SSB in Cell 1.

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $(n + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length})$. UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{first_ATRS} + T_{gap} + T_{ATRS} + 5$ ms, as defined in clause 6.5.3.0.2.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in TS 38.133 [6] clause 8.3.2.

The interruption on any activated serving cell shall not be more than the values specified for SA in Table 6.5.3.0.2-1 and Table 6.5.3.0.2-2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay. The rate of correct observed SCell activation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in TS 38.133 [6] clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

The rate of successful tests during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.4 UE UL carrier RRC reconfiguration delay

### 6.5.4.0 Minimum conformance requirements

#### 6.5.4.0.1 Minimum conformance requirements for UL carrier RRC reconfiguration delay

[TS 38.133, clause 8.4.2]

When the UE receives a RRC message implying NR UL or Supplementary UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within $T_{UL_carrier_config}$ from the end of the last slot containing the RRC command.

$T_{UL_carrier_config}$ equals the maximum RRC procedure delay defined in clause x.y in TS 38.331 [13] plus the interruption time specified in TS 38.133 [6] section 8.2.1.2.6.

[TS 38.133, clause 8.4.3]

When the UE receives a RRC message implying NR UL or Supplementary UL carrier deconfiguration RRC signalling, the UE shall stop UL signalling on the deconfigured UL carrier within $T_{UL_carrier_deconfig}$ from the end of the last slot containing the RRC command.

$T_{UL_carrier_deconfig}$ equals the maximum RRC procedure delay defined in clause x.y in TS 38.331 [13].

The normative reference for this requirement is TS 38.133 [6] clause 8.4.

### 6.5.4.1 NR SA FR1 UE UL carrier RRC reconfiguration delay

#### 6.5.4.1.1 Test purpose

To verify that when the UE receives a RRC message implying NR UL or Supplementary UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within the time limits specified in TS 38.133 [6] section 8.4.2 and 8.4.3 for configuring and deconfiguring, respectively.

#### 6.5.4.1.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting SUL.

#### 6.5.4.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.4.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.4.1.

#### 6.5.4.1.4 Test description

##### 6.5.4.1.4.1 Initial conditions

The Test shall be tested using any of the test configuration in Table 6.5.4.1.4.1-1.

**Table 6.5.4.1.4.1-1: Supported test configurations**

| Configuration | PSCell (Cell 1) | SCell (Cell 2) |
|---|---|---|
| 6.5.4.1-1 | 15 kHz SSB SCS, ≥10MHz bandwidth, FDD duplex mode | DL and UL: 15kHz SSB SCS, ≥10MHz bandwidth, FDD duplex mode;<br>SUL: 15kHz SCS, ≥10MHz bandwidth, SUL duplex mode |
| 6.5.4.1-2 | 15 kHz SSB SCS, ≥10MHz bandwidth, FDD duplex mode | DL and UL: 15kHz SSB SCS, ≥10MHz bandwidth, TDD duplex mode;<br>SUL: 15kHz SCS, ≥10MHz bandwidth, SUL duplex mode |
| 6.5.4.1-3 | 15 kHz SSB SCS, ≥10MHz bandwidth, FDD duplex mode | DL and UL: 30kHz SSB SCS, ≥40MHz bandwidth, TDD duplex mode;<br>SUL: 30kHz SCS, ≥40MHz bandwidth, SUL duplex mode |
| 6.5.4.1-4 | 15 kHz SSB SCS, ≥10MHz bandwidth, TDD duplex mode | DL and UL: 15kHz SSB SCS, ≥10MHz bandwidth, FDD duplex mode; |

| | | |
|---|---|---|
| | | SUL: 15kHz SCS, ≥10MHz bandwidth, SUL duplex mode |
| 6.5.4.1-5 | 15 kHz SSB SCS, ≥10MHz bandwidth, TDD duplex mode | DL and UL: 15kHz SSB SCS, ≥10MHz bandwidth, TDD duplex mode;<br>SUL: 15kHz SCS, ≥10MHz bandwidth, SUL duplex mode |
| 6.5.4.1-6 | 15 kHz SSB SCS, ≥10MHz bandwidth, TDD duplex mode | DL and UL: 30kHz SSB SCS, ≥40MHz bandwidth, TDD duplex mode;<br>SUL: 30kHz SCS, ≥40MHz bandwidth, SUL duplex mode |
| 6.5.4.1-7 | 30 kHz SSB SCS, ≥40MHz bandwidth, TDD duplex mode | DL and UL: 15kHz SSB SCS, ≥10MHz bandwidth, FDD duplex mode;<br>SUL: 15kHz SCS, ≥10MHz bandwidth, SUL duplex mode |
| 6.5.4.1-8 | 30 kHz SSB SCS, ≥40MHz bandwidth, TDD duplex mode | DL and UL: 15kHz SSB SCS, ≥10MHz bandwidth, TDD duplex mode;<br>SUL: 15kHz SCS, ≥10MHz bandwidth, SUL duplex mode |
| 6.5.4.1-9 | 30 kHz SSB SCS, ≥40MHz bandwidth, TDD duplex mode | DL and UL: 30kHz SSB SCS, ≥40MHz bandwidth, TDD duplex mode;<br>SUL: 30kHz SCS, ≥40MHz bandwidth, SUL duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | | |

Configure the test requirement and the DUT according to the parameters in Table 6.5.4.1.4.1-2.

**Table 6.5.4.1.4.1-2: Initial conditions for NR SA FR1 UE UL carrier RRC reconfiguration delay**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.4.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.1. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | N/A | | |

1. The general test parameter settings are set up according to Table 6.5.4.1.4.1-3.
2. Message contents are defined in clause 6.5.4.1.4.3.
3. There are two NR FR1 carriers and two cells in the test. Cell 1 is PCell on the primary component carrier, Cell 2 is SCell on the secondary component carrier. Cell 1 is the cell used for connection setup with the power levels set according to Table A.6.5.4.1.5-1 for this test. Cell 2 is configured according to Annex C.1.1 and C.1.2.

**Table 6.5.4.1.4.1-3: General test parameters for NR standalone UE UL carrier RRC reconfiguration Delay on Pcell**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | Config 1,2,3, 4, 5, 6, 7, 8, 9 | 1, 2 | Two radio channels are used for this test. |
| Active cell | | Config 1,2,3, 4, 5, 6, 7, 8, 9 | Cell 1: FR1 PCell<br>Cell 2: FR1 SCell | FR1 PCell on RF channel number 1<br>FR1 SCell on RF channel number 2 |
| CP length | | Config 1,2,3, 4, 5, 6, 7, 8, 9 | Normal | |
| DRX | | Config 1,2,3, 4, 5, 6, 7, 8, 9 | OFF | |

| | | | | |
|---|---|---|---|---|
| Measurement gap pattern Id | | Config 1,2,3, 4, 5, 6, 7, 8, 9 | OFF | |
| Filter coefficient | | Config 1,2,3, 4, 5, 6, 7, 8, 9 | 0 | L3 filtering is not used |
| T1 | s | Config 1,2,3, 4, 5, 6, 7, 8, 9 | 5 | |
| T2 | s | Config 1,2,3, 4, 5, 6, 7, 8, 9 | 5 | |
| T3 | s | Config 1,2,3, 4, 5, 6, 7, 8, 9 | 5 | |

#### 6.5.4.1.4.2 Test procedure

There are two cells: FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Both NR uplink and supplementary uplink are broadcast by *ServingCellConfigCommonSIB.*

The test consists of three time periods, with duration of T1, T2 and T3 respectively. During time duration T1, NR uplink of Cell 1 is configured to UE. At the start of T2, a supplementary uplink cell (Cell 2) is configured to UE through *RRCReconfiguration*, then UE shall start transmission on the supplementary uplink. At the start of T3, the supplementary uplink is released through *RRCReconfiguration*.

At the start of the test the UE is in RRC_CONNECTED state with Cell 1 (NR uplink cell). The SS shall provide continuous UL grants to the UE, so it can transmit in the corresponding uplink carrier as soon as it is ready for transmission.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. Setup PCell (Cell 1) according to parameters given in Table 6.5.4.1.5-1. Propagation conditions are set according to Annex C clause C.2.2.
3. Both Cell 1 NR uplink and SUL Cell 2 supplementary uplink are broadcast by *ServingCellConfigCommonSIB* of Cell 1.
4. During time duration T1, NR uplink (Cell 1) is configured on the UE. Setup Cell 1 according to parameters given in Table 6.5.4.1.5-1.
5. At the start of T2, the supplementary uplink Cell (Cell 2) is configured to UE through *RRCReconfiguration*, then UE shall start transmission on the supplementary uplink Cell (Cell 2) within 20ms. If UE transmits data on the supplementary uplink Cell (Cell 2) within 20ms from the start of T2, then count a success for the event "reconfiguration" otherwise count a failure for event "reconfiguration" and proceed with step 7.
6. At the start of T3, the supplementary uplink is released through *RRCReconfiguration*, then UE shall transmit data only on the NR uplink carrier of SCell within 20ms. If UE stops transmitting data on supplementary uplink carrier on SCell (Cell 2) within 20ms from the start of T3, then count a success for the event "deconfiguration" otherwise count a failure for event "deconfiguration".
7. Repeat steps 1-6 until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved.

#### 6.5.4.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.5.4.1.4.3-1: Common Exception messages**

| Default Message Contents | |

NOTE 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: $\hat{E}_s / I_{ot}$, Io, and SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.

NOTE 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: $\hat{E}_s / I_{ot}$, Io, and SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.

The UE shall be ready to start transmission on the supplementary uplink carrier on SCell within 20 ms from the start of T2.

The UE shall stop the transmission on the supplementary uplink carrier on SCell within 20 ms from the start of T3.

All of the above test requirements shall be fulfilled in order for the observed UE UL carrier configuration delay and UE UL carrier release delay to be counted as correct. The rate of correct observed UE UL carrier configuration delay and UE UL carrier release delay during repeated tests shall be at least 90%.

## 6.5.5 Link recovery procedures

### 6.5.5.0 Minimum conformance requirements

#### 6.5.5.0.1 Minimum conformance requirements for SSB-based BFD and link recovery procedures

Same as in the clause 4.5.5.0.1.

#### 6.5.5.0.2 Minimum conformance requirements for CSI-RS-based BFD and link recovery procedures

UE shall be able to evaluate whether the downlink radio link quality on the configured CSI-RS resource in set $\bar{q}_0$ estimated over the last $T_{Evaluate_BFD_CSI-RS}$ [ms] period becomes worse than the threshold $Q_{out_LR_CSI-RS}$ within $T_{Evaluate_BFD_CSI-RS}$ [ms] period.

The value of $T_{Evaluate_BFD_CSI-RS}$ is defined in Table 8.5.3.2-1 for FR1.

For FR1,

- $P=1/(1 - T_{CSI-RS}/MGRP)$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and
- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

Longer evaluation period would be expected if the combination of BFD-RS, SMTC occasion and measurement gap configurations does not meet pervious conditions.

The values of $M_{BFD}$ used in Table 6.5.5.0.2-1 is defined as

- $M_{BFD}$ = 10, if the CSI-RS resource configured for BFD is transmitted with Density = 3.

**Table 6.5.5.0.2-1: Evaluation period $T_{Evaluate_BFD_CSI-RS}$ for FR1**

| Configuration | $T_{Evaluate_BFD_CSI-RS}$ (ms) |
|---|---|
| no DRX | $\max(50, M_{BFD} * P * T_{CSI-RS})$ |
| DRX cycle ≤ 320ms | $\max(50, 1.5 \times M_{BFD} * P * \max(T_{DRX}, T_{CSI-RS}))$ |
| DRX cycle > 320ms | $M_{BFD} * P * T_{DRX}$ |
| Note: $T_{CSI-RS}$ is the periodicity of CSI-RS resource in the set $\bar{q}_0$. $T_{DRX}$ is the DRX cycle length. | |

When the radio link quality on all the configured RS resources in set $\bar{q}_0$ is worse than $Q_{out_LR}$, Layer 1 of the UE shall send a beam failure instance indication to the higher layers. A Layer 3 filter may be applied to the beam failure instance indications as specified in TS 38.331 [13].

The beam failure instance evaluation for the configured RS resources in set $\bar{q}_0$ shall be performed as specified in section 6 in TS 38.213 [8]. Two successive indications from Layer 1 shall be separated by at least $T_{Indication_interval_BFD}$.

When DRX is not used, $T_{Indication_interval_BFD}$ is max(2ms, $T_{BFD\text{-}RS,M}$), where $T_{BFD\text{-}RS,M}$ is the shortest periodicity of all configured RS resources in set $\bar{q}_0$ for the accessed cell, corresponding to either the shortest periodicity of the SSB in the set $\bar{q}_0$ or CSI-RS resource in the set $\bar{q}_0$.

When DRX is used, $T_{Indication_interval_BFD}$ is max(1.5*DRX_cycle_length, 1.5*$T_{BFD\text{-}RS,M}$) if DRX cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX cycle_length is greater than 320ms.

UE shall be able to evaluate whether the L1-RSRP measured on the configured CSI-RS resource in set $\bar{q}_1$ estimated over the last $T_{Evaluate_CBD_CSI\text{-}RS}$ [ms] period becomes better than the threshold $Q_{in_LR}$ within $T_{Evaluate_CBD_CSI\text{-}RS}$ [ms] period provided CSI-RS Ês/Iot is according to Annex Table B.2.4.2 for a corresponding band.

The value of $T_{Evaluate_CBD_CSI\text{-}RS}$ is defined in Table 6.5.5.0.2-2 for FR1.

For FR1,

- P=1/(1 – $T_{CSI\text{-}RS}$/MGRP), when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and
- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

In both FR1 and FR2, if different SCS is used for SSB and CSI-RS, and the UE does not support *simultaneousRxDataSSB-DiffNumerology*, it is assumed that the CSI-RS configured for candidate beam detection and each SSB shall be TDMed transmitted.

The values of $M_{CBD}$ used in Table 6.5.5.0.2-2 is defined as

- $M_{CBD}$ = 3, if the CSI-RS resource configured in the set $\bar{q}_1$ is transmitted with Density = 3.

**Table 6.5.5.0.2-2: Evaluation period $T_{Evaluate_CBD_CSI\text{-}RS}$ for FR1**

| Configuration | $T_{Evaluate_CBD_CSI\text{-}RS}$ (ms) |
|---|---|
| non-DRX | max(25, ceil($M_{CBD}$ *P) * $T_{CSI\text{-}RS}$) |
| DRX cycle ≤ 320ms | ceil($M_{CBD}$ *P*N) * max($T_{DRX}$, $T_{CSI\text{-}RS}$) |
| DRX cycle > 320ms | ceil($M_{CBD}$ *P) *$T_{DRX}$ |
| Note: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS resource in the set $\bar{q}_1$. $T_{DRX}$ is the DRX cycle length. | |

The normative reference for this requirement is TS 38.133 [6] clause 8.5.3.2, 8.5.4 and 8.5.6.2.

### 6.5.5.0.3 Scheduling availability of UE during beam failure detection and candidate beam detection

Same as in the clause 4.5.5.0.3.

### 6.5.5.0.4 Requirements for Beam Failure Recovery in SCell

Same as in the clause 4.5.5.0.4.

### 6.5.5.0.5 TRP specific Minimum conformance requirements

[TS 38.133, clause 8.18.3]

#### 6.5.5.0.5.1 Requirements for CSI-RS based beam failure detection

UE shall be able to evaluate whether the downlink radio link quality on the CSI-RS resource in two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ estimated over the last $T_{Evaluate_BFD_CSI\text{-}RS}$ ms period becomes worse than the threshold $Q_{out_LR_CSI\text{-}RS}$ within $T_{Evaluate_BFD_CSI\text{-}RS}$ ms period.

The value of $T_{Evaluate_BFD_CSI\text{-}RS}$ is defined in Table 6.5.5.0.5.1-1 for FR1.

For FR1,

- $P = \frac{1}{1-\frac{T_{CSI-RS}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS.
- P = 1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

Longer evaluation period would be expected if the combination of the BFD-RS resource, SMTC occasion and measurement gap configurations does not meet pervious conditions.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

The values of $M_{BFD}$ used in Table 6.5.5.0.5.1-1 is defined as

- $M_{BFD}$ = 10, if the CSI-RS resource(s) in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ used for BFD is transmitted with Density = 3 and over the bandwidth $\geqslant$ 24 PRBs.

The values of $P_{BFD}$ used in Table 6.5.5.0.5.1-1 is defined as

For each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{BFD}$ = 1.

For each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for PSCell in NR-DC

$P_{BFD}$ = 2 if UE is configured for beam failure detection on SCell, 1 otherwise.

For each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for a SCell

- $P_{BFD}$ = Z in EN-DC or NE-DC or SA.
- $P_{BFD}$ = 2* Z in NR-DC.

Where Z is the number of band(s) on which UE is performing beam failure detection only for SCell.

**Table 6.5.5.0.5.1-1: Evaluation period $T_{Evaluate_BFD_CSI\text{-}RS}$ for FR1**

| Configuration | $T_{Evaluate_BFD_CSI\text{-}RS}$ (ms) |
|---|---|
| no DRX | $Max(50, Ceil(M_{BFD} \times P \times P_{BFD}) \times T_{CSI\text{-}RS})$ |
| DRX cycle ≤ 320ms | $Max(50, Ceil(1.5 \times M_{BFD} \times P \times P_{BFD}) \times Max(T_{DRX}, T_{CSI\text{-}RS}))$ |
| RX cycle > 320ms | $Ceil(M_{BFD} \times P \times P_{BFD}) \times T_{DRX}$ |
| Note: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$. $T_{DRX}$ is the DRX cycle length. | |

#### 6.5.5.0.5.2 Requirements for CSI-RS based candidate beam detection

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured CSI-RS resource in sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ estimated over the last $T_{Evaluate_CBD_CSI\text{-}RS}$ [ms] period becomes better than the threshold $Q_{in_LR}$ within $T_{Evaluate_CBD_CSI\text{-}RS}$ [ms] period provided CSI-RS Ês/Iot is according to Annex Table B.2.4.2 for a corresponding band.

The UE shall monitor the configured CSI-RS resources using the evaluation period in Table 6.5.5.0.5.2-1 corresponding to the non-DRX mode, if the configured DRX cycle ≤ 320ms.

The value of $T_{Evaluate_CBD_CSI-RS}$ is defined in Table 6.5.5.0.5.2-1 for FR1.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and measurement gap configurations does not meet pervious conditions.

Longer evaluation period would be expected if the CSI-RS is on the same OFDM symbols with RLM, BFD, BM-RS, or other CBD-RS, according to the measurement restrictions defined in clause 8.18.6.3 of TS 38.133.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{identify_CGI,E-UTRAN}$ when the UE is requested to decode an LTE CGI.

The values of $M_{CBD}$ used in Table 6.5.5.0.5.2-1 is defined as

- $M_{CBD}$ = 3, if the CSI-RS resource configured in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ is transmitted with Density = 3 and over the bandwidth $\geqslant$ 24 PRBs.

The values of $P_{CBD}$ used in Table 6.5.5.0.5.2-1 is defined as

For each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{CBD}$ = 1.

For each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for PSCell in NR-DC

- $P_{CBD}$ = 2 if UE configured for candidate beam detection on SCell, 1 otherwise.

For each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for a SCell

- $P_{CBD}$ = Z in EN-DC or NE-DC or SA.
- $P_{CBD}$ = 2* Z in NR-DC.

  Where Z is the number of band(s) on which UE is performing beam failure detection only for SCell
- $P_{CBD}$ is the number of band(s) on which UE is performing candidate beam detection only for SCell.

**Table 6.5.5.0.5.2-1: Evaluation period $T_{Evaluate_CBD_CSI-RS}$ for FR1**

| Configuration | $T_{EvaluateC_CBD_CSI-RS}$ (ms) |
|---|---|
| non-DRX, DRX cycle ≤ 320ms | Max(25, Ceil($M_{CBD} \times P \times P_{CBD}$) × $T_{CSI-RS}$) |
| DRX cycle > 320ms | Ceil($M_{CBD} \times P \times P_{CBD}$) × $T_{DRX}$ |
| Note: $T_{CSI-RS}$ is the periodicity of CSI-RS resource in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$. $T_{DRX}$ is the DRX cycle length. | |

### 6.5.5.0.5.3 Requirements for TRP specific Beam Failure Recovery

Same as in the clause 4.5.5.0.5.3.

### 6.5.5.0.5.4 Scheduling availability of UE during TRP specific beam failure detection

Same as in the clause 4.5.5.0.5.4.

### 6.5.5.0.5.5 Scheduling availability of FR1 UE during TRP specific candidate beam detection

Same as in the clause 4.5.5.0.5.5

## 6.5.5.1 NR SA FR1 SSB-based beam failure detection and link recovery in non-DRX

### 6.5.5.1.1 Test purpose

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.5.

### 6.5.5.1.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1 and link recovery.

### 6.5.5.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.1.

### 6.5.5.1.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.5.1.4-1 shows the five different time durations and the corresponding variation of the downlink SNR in the active cell to emulate SSB based beam failure. Figure 6.5.5.1.4-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set q1 of the candidate beam used for link recovery

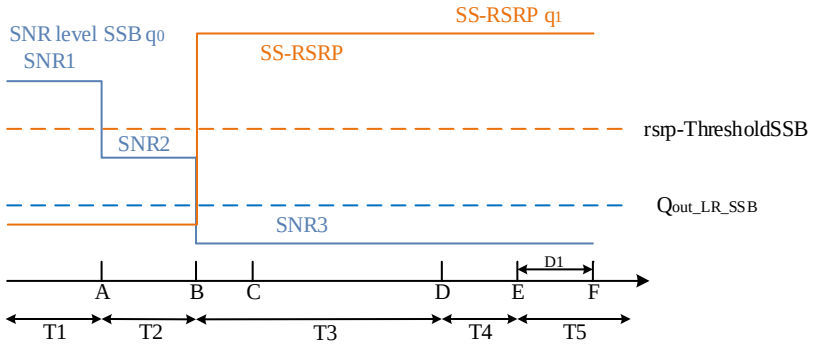

**Figure 6.5.5.1.4-1: SNR and L1-RSRP variation for NR SA FR1 SSB-based beam failure detection and link recovery in non-DRX mode**

#### 6.5.5.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.1.4.1-1.

**Table 6.5.5.1.4.1-1: Supported test configurations for NR SA FR1 SSB-based beam failure detection and link recovery in non-DRX mode**

| Configuration | Description |
|---|---|
| 6.5.5.1-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.1-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.1-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.1.4.1-2.

**Table 6.5.5.1.4.1-2: Initial conditions for NR SA FR1 SSB-based beam failure detection and link recovery in non-DRX mode**

| Parameter | Value | Comment |
|---|---|---|

| | | | |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.5.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2 Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.5.5.1.4.1-3.

2. Message contents are defined in clause 6.5.5.1.4.3.

3. There is one NR carrier and one NR cells specified in the test. Cell 1 is the NR cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

**Table 6.5.5.1.4.1-3: General test parameters for NR SA FR1 SSB-based beam failure detection and link recovery in non-DRX mode**

#### 6.5.5.1.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to NR Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test 1

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS sends an *RRCReconfiguration* message to the UE to configure inter-frequency measurement.

3. The UE sends an *RRCReconfigurationComplete* message.

4. Set the parameters of NR Cell 1 according to T1 in Table 6.5.5.1.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

5. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.5.1.5-1. T2 starts.

6. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.5.1.5-1. T3 starts.

7. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.5.1.5-1. T4 starts.

8. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.5.1.5-1. T5 starts.

9. If the SS:

   a) detects uplink power on NR carrier equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect preamble on a beam associated with the candidate beam set $q_1$before time point B

   and

   c) detects preamble on a beam associated with the candidate beam set $q_1$ before time point F (D1 after the start of T5),

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

10. Switch the UE off and on. Ensure the UE is in RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

11. Repeat steps 4-10 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.5.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 and clause 4.6 and 7.3.1 with condition “Short_DCI” with the following exceptions:

| | Config 3 | | -98 | | | | |
| Propagation condition | | | TDL-C 300ns 100Hz | | | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.1.4-1.
Note 9: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR for RS in set q0 during T3, T4, and T5 from D.4.1.1, is -15dB-TT = -15.8dB (including test tolerances).

**Table 6.5.5.1.5-2: Void**

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 140 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.5.2 NR SA FR1 SSB-based beam failure detection and link recovery in DRX

### 6.5.5.2.1 Test purpose

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.5.

### 6.5.5.2.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1, link recovery and long DRX cycle.

### 6.5.5.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.2.

### 6.5.5.2.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.5.2.4-1 shows the five different time durations and the corresponding variation of the downlink SNR in the active cell to emulate SSB based beam failure. Figure 6.5.5.2.4-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery.

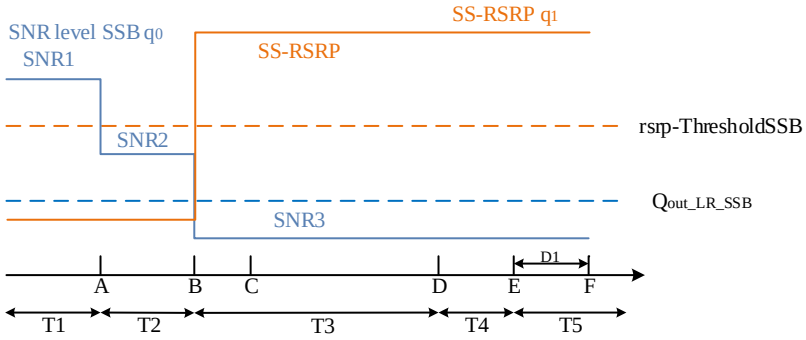

**Figure 6.5.5.2.4-1: SNR and L1-RSRP variation for NR SA FR1 SSB-based beam failure detection and link recovery in DRX**

#### 6.5.5.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.2.4.1-1.

**Table 6.5.5.2.4.1-1: Supported test configurations for NR SA FR1 SSB-based beam failure detection and link recovery in DRX**

| Configuration | Description |
|---|---|
| 6.5.5.2-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.2-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.2-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.2.4.1-2.

**Table 6.5.5.2.4.1-2: Initial conditions for NR SA FR1 SSB-based beam failure detection and link recovery in DRX**

| Parameter | Value | | Comment |

### 6.5.5.2.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to NR Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters of NR Cell 1 according to T1 in Table 6.5.5.2.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.5.2.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.5.2.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.5.2.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.5.2.5-1. T5 starts.

7. If the SS:

   a) detects uplink power on NR carrier equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect preamble on a beam associated with the candidate beam set $q_1$before time point B

   and

   c) detects preamble on a beam associated with the candidate beam set $q_1$ before time point F (D1 after the start of T5),

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. Switch the UE off and on. Ensure the UE is in RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat steps 2-8 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

|---|---|
| Note 1: | OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1. |
| Note 3: | NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1. |
| Note 4: | Void. |
| Note 5: | The timers and layer 3 filtering related parameters are configured prior to the start of time period T1. |
| Note 6: | The signal contains PDCCH for UEs other than the device under test as part of OCNG. |
| Note 7: | SNR levels correspond to the signal to noise ratio over the SSS REs. |
| Note 8: | The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.2.4-1. |
| Note 9: | The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR for RS in set q0 during T3, T4, and T5 from D.4.1.1, is -15dB-TT = -15.8dB (including test tolerances). |

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 1940 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.5.3 NR SA FR1 CSI-RS-based beam failure detection and link recovery in non-DRX

### 6.5.5.3.1 Test purpose

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_1$. To test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.5.

### 6.5.5.3.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1, CSI-RS based RLM and link recovery.

### 6.5.5.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.3.

### 6.5.5.3.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.5.3.4-1 shows the five different time durations and the corresponding variation of the downlink SNR of the CSI-RS in set q0 in the active cell to emulate CSI-RS based beam failure and the variation of the downlink L1-RSRP of the CSI-RS in set q1 of the candidate beam used for link recovery.

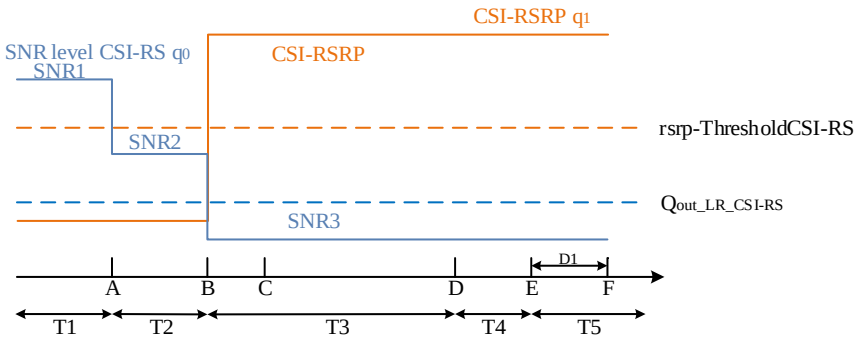

**Figure 6.5.5.3.4-1: SNR and L1-RSRP variation for NR SA FR1 CSI-RS-based beam failure detection and link recovery in non-DRX**

### 6.5.5.3.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.3.4.1-1.

**Table 6.5.5.3.4.1-1: Supported test configurations for NR SA FR1 CSI-RS-based beam failure detection and link recovery in non-DRX**

| Configuration | Description |
|---|---|
| 6.5.5.3-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.3-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.3-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.3.4.1-2.

**Table 6.5.5.3.4.1-2: Initial conditions for NR SA FR1 CSI-RS-based beam failure detection and link recovery in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.5.3.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.5.5.3.4.1-3.
2. Message contents are defined in clause 6.5.5.3.4.3.
3. There is one NR carrier and one NR cell specified in the test. Cell 1 is the NR cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

### 6.5.5.3.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to NR Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters of NR Cell 1 according to T1 in Table 6.5.5.3.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.5.3.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.5.3.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.5.3.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.5.3.5-1. T5 starts.

7. If the SS:

   a) detects uplink power on NR carrier equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect preamble on a beam associated with the candidate beam set $q_1$before time point B

   and

   c) detects preamble on a beam associated with the candidate beam set $q_1$ before time point F (D1 after the start of T5),

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. Switch the UE off and on. Ensure the UE is in RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat steps 2-8 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Void
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.3.4-1.
Note 9: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR for RS in set q0 during T3, T4, and T5 from D.4.1.1, is -15dB-TT = -15.8dB (including test tolerances).

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 50 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.5.4 NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX

### 6.5.5.4.1 Test purpose

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_1$. To test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.5.

### 6.5.5.4.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1, CSI-RS based RLM, link recovery and long DRX cycle.

### 6.5.5.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.4.

### 6.5.5.4.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.5.4.4-1 shows the five different time durations and the corresponding variation of the downlink SNR in the active

cell to emulate CSI-RS based beam failure. Figure 6.5.5.4.4-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery.

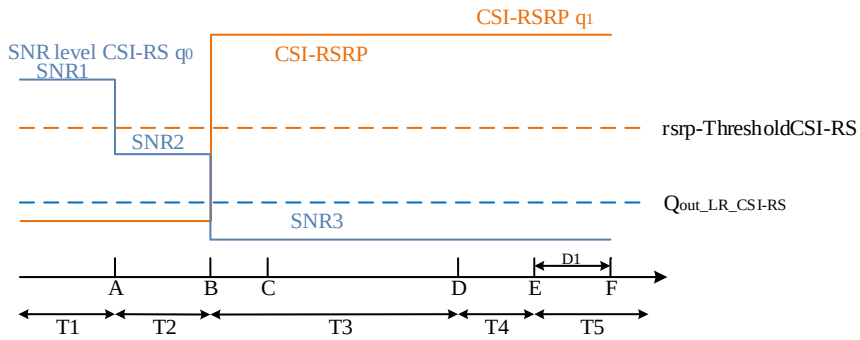

**Figure 6.5.5.4.4-1: SNR and L1-RSRP variation for NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX**

### 6.5.5.4.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.4.4.1-1.

**Table 6.5.5.4.4.1-1: Supported test configurations for NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX**

| Configuration | Description |
|---|---|
| 6.5.5.4-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.4-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.4-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.4.4.1-2.

**Table 6.5.5.4.4.1-2: Initial conditions for NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.5.4.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.5.5.4.4.1-3.
2. Message contents are defined in clause 6.5.5.4.4.3.
3. There is one NR carrier and one NR cells specified in the test. Cell 1 is the NR cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

**Table 6.5.5.4.4.1-3: General test parameters for NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX**

| Note 1: UE-specific PDCCH is not transmitted after T1 starts. | | | | |

#### 6.5.5.4.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to NR Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters of NR Cell 1 according to T1 in Table 6.5.5.4.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR value to T2 as specified in Table 6.5.5.4.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR value to T3 as specified in Table 6.5.5.4.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR value to T4 as specified in Table 6.5.5.4.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR value to T5 as specified in Table 6.5.5.4.5-1. T5 starts.

7. If the SS:

   a) detects uplink power on NR carrier equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect preamble on a beam associated with the candidate beam set $q_1$before time point B

   and

   c) detects preamble on a beam associated with the candidate beam set $q_1$ before time point F (D1 after the start of T5),

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. Switch the UE off and on. Ensure the UE is in RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat steps 2-8 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.5.4.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.5.5.4.4.3-1: Common Exception messages for NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX**

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Void
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.4.4-1.
Note 9: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR for RS in set q0 during T3, T4, and T5 from D.4.1.1, is -15dB-TT = -15.8dB (including test tolerances).

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 1940 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.5.5 NR SA FR1 Scell CSI-RS-based beam failure detection and SSB-based link recovery in non-DRX

### 6.5.5.5.1 Test purpose

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. To test the downlink monitoring for beam failure detection within the UEs active DL BWP without *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.5.

### 6.5.5.5.2 Test applicability

This test applies to all types of NR UE release 16 and forward supporting 5GS NR SA FR1, CSI-RS based RLM, SSB link recovery and SCell beam failure recovery.

#### 6.5.5.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.2 and 6.5.5.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.5.

#### 6.5.5.5.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.5.5.4-1 shows the SNR of the CSI-RS in set $q_0$ in the active SCell to emulate beam failure. Figure 6.5.5.5.4-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery.

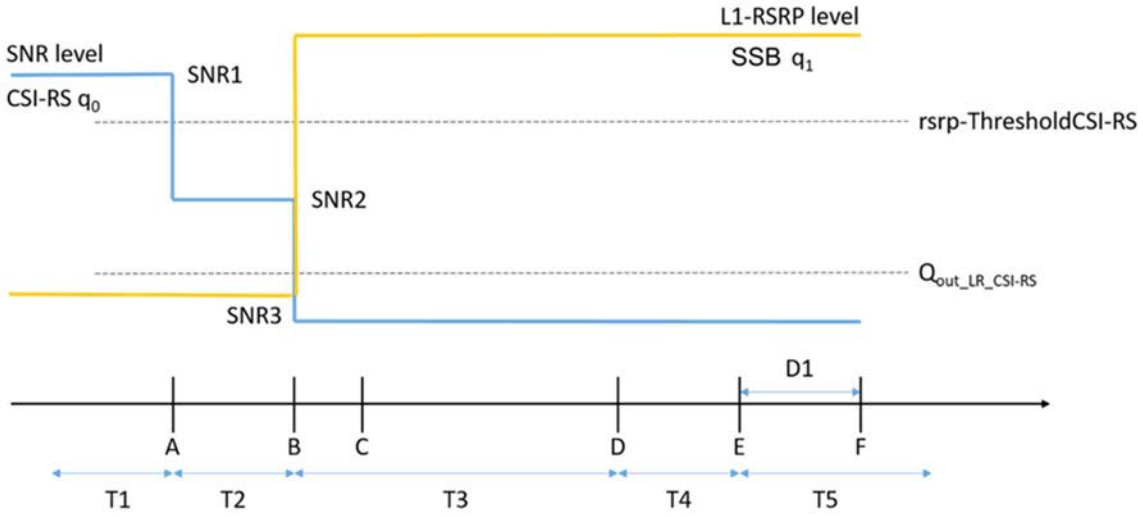

**Figure 6.5.5.5.4-1: SNR and L1-RSRP variation for NR SA FR1 CSI-RS-based beam failure detection and SSB-based link recovery in non-DRX**

#### 6.5.5.5.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.5.4.1-1.

**Table 6.5.5.5.4.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration | Description |
|---|---|
| 6.5.5.5-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.5-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.5-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.5.4.1-2.

**Table 6.5.5.5.4.1-2: Initial conditions for NR SA FR1 CSI-RS-based beam failure detection and SSB-based link recovery in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.5.5.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |

| Note 1: UE-specific PDCCH is not transmitted after T1 starts. | | | | |

### 6.5.5.5.4.2 Test procedure

Same test procedure as described in section 6.5.5.3.4.2, except following exception and steps 7 and 8:

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

7. If the SS:

a) detects uplink power on the PCell equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

and

b) does not detect preamble on the PCell before time point B

and

c) detects preamble on the preconfigured PRACH resource before time point F (D1 after the start of T5).

And

d) SS transmits a RAR to UE after receiving the preamble transmitted by the UE. SS detects the MAC-CE on the PCell transmitted by the UE providing the index for the activated SCell, and the index for the SSB provided by higher layer.

the number of successful tests is increased by one.

Otherwise the number of failed tests is increased by one.

8. If the iteration or random access procedure for BFD fails, the SS shall first attempt to release and add the FR1 SCell, by ensuring the UE is in state RRC_CONNECTED with generic procedure parameter *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 14] clause 4.5. If that also fails, then the UE is switched OFF/ON to proceed with the next iteration.

#### 6.5.5.5.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| | Config 3 | | -98 | -98 | | | | |
| Propagation condition | | | TDL-C 300ns 100Hz | TDL-C 300ns 100Hz | | | | |

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Void
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.5.4-1.
Note 9: The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR for RS in set q0 during T3, T4, and T5 from D.4.1.1, is -15dB-TT = -15.8dB (including test tolerances).

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 120+10 ms after the start of T5, the UE shall transmit preamble for UL-SCH resource application, followed by MAC-CE on the assigned uplink resources containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble earlier than time point B.

During T5, the System Simulator shall transmit a Random Access Response to UE after the System Simulator receives the preamble from UE. The UE shall transmit the msg.3 containing candidate beam set q1 for SCell BFR if UE receives the Random Access Response.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.5.6 NR SA FR1 Scell CSI-RS-based beam failure detection and SSB-based link recovery in DRX

### 6.5.5.6.1 Test purpose

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. To test the downlink monitoring for beam failure detection within the UEs active DL BWP without *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.5.

### 6.5.5.6.2 Test applicability

This test applies to all types of NR UE release 16 and forward supporting 5GS NR SA FR1, CSI-RS based RLM, SSB link recovery and SCell beam failure recovery.

### 6.5.5.6.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.2 and 6.5.5.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.6.

### 6.5.5.6.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure 6.5.5.6.4-1 shows the SNR of the CSI-RS in set $q_0$ in the active SCell to emulate beam failure. Figure 6.5.5.6.4-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery.

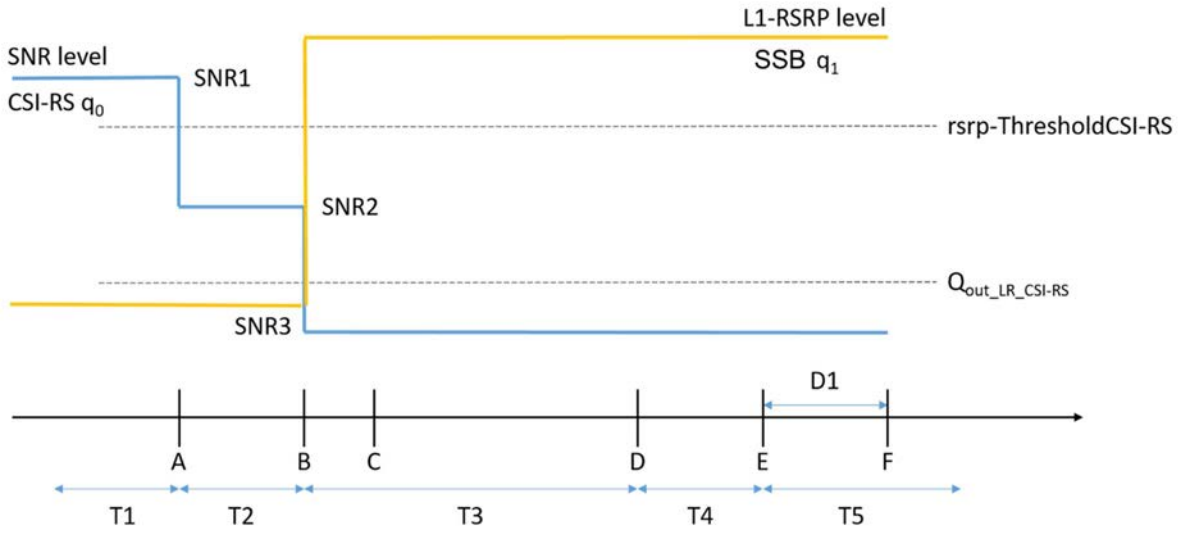

**Figure 6.5.5.6.4-1: SNR and L1-RSRP variation for NR SA FR1 CSI-RS-based beam failure detection and SSB-based link recovery for SCell in DRX**

#### 6.5.5.6.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.6.4.1-1.

**Table 6.5.5.6.4.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration | Description |
|---|---|
| 6.5.5.6-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.6-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.5.6-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.6.4.1-2.

**Table 6.5.5.6.4.1-2: Initial conditions for NR SA FR1 CSI-RS-based beam failure detection and SSB-based link recovery for SCell in DRX**

| T1 | | s | 1 | During this time the UE shall be fully synchronized to Cell 1 |
| T2 | | s | 8.37 | |
| T3 | | s | 6.44 | |
| T4 | | s | 0 | |
| T5 | | s | 1.97 | |
| D1 | | s | 1.93 | |
| Note 1: UE-specific PDCCH is not transmitted after T1 starts. | | | | |

#### 6.5.5.6.4.2 Test procedure

Same test procedure as described in section 6.5.5.3.4.2, except following exception and step 7 and 8:

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

7. If the SS:

   a) detects uplink power on the PCell equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect preamble on the PCell before time point B

   and

   c) detects preamble on the preconfigured PRACH resource before time point F (D1 after the start of T5).

   And

   d) SS transmits a RAR to UE after receiving the preamble transmitted by the UE. SS detects the MAC-CE on the PCell transmitted by the UE providing the index for the activated SCell, and the index for the SSB provided by higher layer.

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. If the iteration or random access procedure for BFD fails, the SS shall first attempt to release and add the FR1 SCell, by ensuring the UE is in state RRC_CONNECTED with generic procedure parameters *Connectivity* NR, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. If that also fails, then the UE is switched OFF/ON to proceed with the next iteration.

#### 6.5.5.6.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| | |
|---|---|
| Note 1: | OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1. |
| Note 3: | NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1. |
| Note 4: | Void |
| Note 5: | The timers and layer 3 filtering related parameters are configured prior to the start of time period T1. |
| Note 6: | The signal contains PDCCH for UEs other than the device under test as part of OCNG. |
| Note 7: | SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS. |
| Note 8: | The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.6.4-1. |
| Note 9: | The SNR values are specified for a UE with 2RX antennas connected under test. For a UE with 4RX antennas connected under test, the SNR for RS in set q0 during T3, T4, and T5 from D.4.1.1, is -15dB-TT = -15.8dB (including test tolerances). |

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 120+10 ms after the start of T5, the UE shall transmit preamble for UL-SCH resource application, followed by MAC-CE on the assigned uplink resources containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble earlier than time point B.

During T5, the System Simulator shall transmit a Random Access Response to UE after the System Simulator receives the preamble from UE. The UE shall transmit the msg.3 containing candidate beam set q1 for SCell BFR if UE receives the Random Access Response.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.5.7 NR SA FR1 PCell TRP Specific CSI-RS-based Beam Failure Detection and Link Recovery in DRX

Editor's Note: This test case is incomplete in following aspects:

- TS 38.522 applicability spec update is pending

### 6.5.5.7.1 Test purpose

The purpose of this test is to verify that the UE properly detects TRP specific CSI-RS-based beam failure in the sets $q_{0,0}$ and $q_{0,1}$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_{1,0}$ and $q_{1,1}$. The purpose is to test the downlink monitoring for beam failure detection on TRP1 within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based TRP specific beam failure detection and link recovery for an FR1 serving cell requirements in TS 38.133 [6] clause 8.18 with *schedulingRequestID-BFR-r17* configured.

### 6.5.5.7.2 Test applicability

This test applies to all types of NR UE release 17 and forward supporting 5GS NR SA FR1, CSI-RS based RLM, TRP Specific CSI-RS-based link recovery and PCell beam failure recovery.

### 6.5.5.7.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.5.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.5.7.

### 6.5.5.7.4 Test description

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.7.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_{0,0}$ and $q_{0,1}$ for TRP1 and TRP2 respectively to emulate CSI-RS based beam failure on TRP1. Figure A.6.5.5.7.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_{1,0}$ and $q_{1,1}$ of the candidate beam used for link recovery.

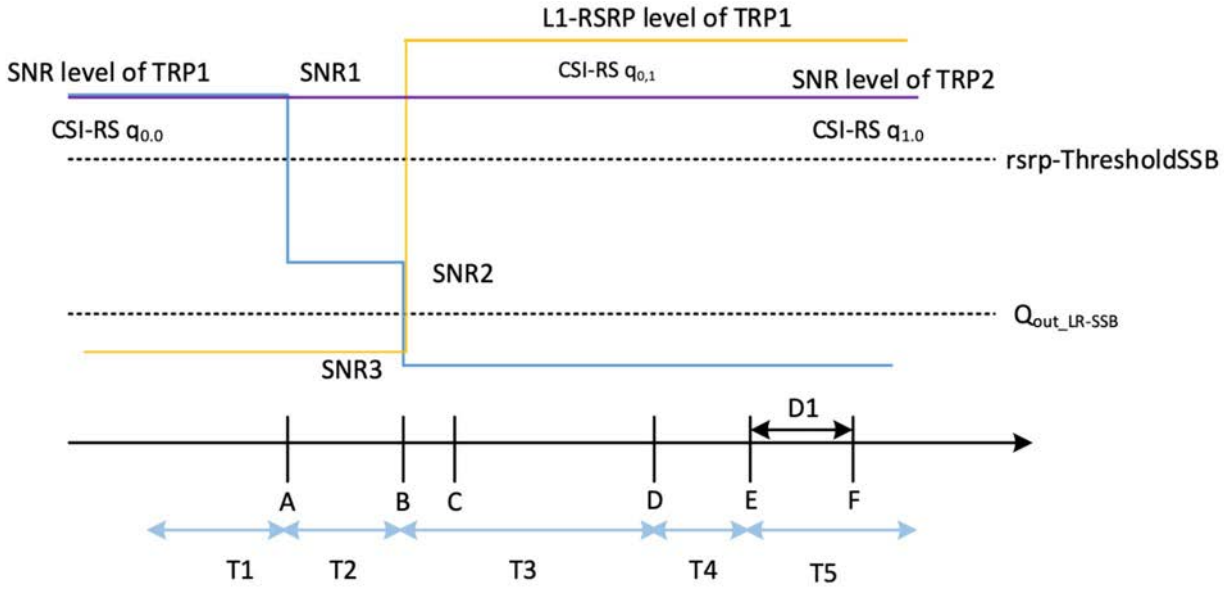

**Figure 6.5.5.7.4-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode**

#### 6.5.5.7.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.5.7.4.1-1.

**Table 6.5.5.7.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.5.7.4.1-2.

**Table 6.5.5.7.4.1-2: Initial conditions for NR SA FR1 CSI-RS-based beam failure detection and link recovery in DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.5.7.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE Part | | |

1. The general test parameter settings are set up according to Table 6.5.5.7.4.1-3.

2. Message contents are defined in clause 6.5.5.7.4.3.

3. There is one NR carrier and one NR cells specified in the test. Cell 1 is the NR cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

| T2 | | s | 8.37 | |
| T3 | | s | 6.44 | |
| T4 | | s | 0 | |
| T5 | | s | 1.97 | |
| D1 | | s | 1.93 | |
| Note 1: UE-specific PDCCH is not transmitted after T1 starts. | | | | |

### 6.5.5.7.4.2 Test procedure

Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters of NR Cell 1 according to T1 in Table 6.5.5.7.5-1. Propagation conditions are set according to Annex C.2.3. T1 starts.

3. When T1 expires the SS shall change the SNR1 and SNR2 values to T2 as specified in Table 6.5.5.7.5-1. T2 starts.

4. When T2 expires the SS shall change the SNR1 and SNR2 values to T3 as specified in Table 6.5.5.7.5-1. T3 starts.

5. When T3 expires the SS shall change the SNR1 and SNR2 values to T4 as specified in Table 6.5.5.7.5-1. T4 starts.

6. When T4 expires the SS shall change the SNR1 and SNR2 values to T5 as specified in Table 6.5.5.7.5-1. T5 starts.

7. If the SS:

   a) detects uplink power on NR carrier equal to or higher than minimum output power defined in TS 38.521-1 [17] clause 6.3.1.5 in each slot configured for CSI transmission (according CSI reporting on PUCCH) during the period from time point A to time point B

   and

   b) does not detect preamble on a beam associated with the candidate beam set $q_{10}$ and $q_{11}$ before time point B

   and

   c) detects preamble on a beam associated with the candidate beam set $q_{10}$ and $q_{11}$ before time point F (D1 after the start of T5),

   the number of successful tests is increased by one.

   Otherwise the number of failed tests is increased by one.

8. If iteration or the random access procedure for BFD fails, switch the UE off and on. Ensure the UE is in RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

9. Repeat steps 2-8 for all subtests until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.5.7.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
Note 4: Void
Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
Note 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure 6.5.5.7.4-1.
Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause TS 38.133 [6] A.3.6.

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_{1,0}$.

No later than time point F occurring no later than D1 = 1920+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{1,0}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{1,0}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.6 Active BWP switch delay

### 6.5.6.1 DCI-based and time-based active BWP switch

#### 6.5.6.1.0 Minimum conformance requirements

##### 6.5.6.1.0.1 Minimum conformance requirements for DCI-based and time-based active BWP switch

For DCI-based BWP switch, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{BWPswitchDelay}$ which starts from the beginning of DL slot n.

The UE is not required to transmit UL signals or receive DL signals until the first DL or UL slot occurs right after a time duration of $T_{BWPswitchDelay}$ which starts from the beginning of DL slot n except DCI triggering BWP switch on the cell where DCI-based BWP switch occurs. The UE is not required to follow the requirements defined in this clause when performing a DCI-based BWP switch between the BWPs in disjoint channel bandwidths or in partially overlapping channel bandwidths.

For timer-based BWP switch, the UE shall start BWP switch at DL slot n, where slot n is the first slot of a DL subframe (FR1) or DL half-subframe (FR2) immediately after a BWP-inactivity timer *bwp-InactivityTimer* [13] expires on a serving cell, and the UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{BWPswitchDelay}$ which starts from the beginning of DL slot n.

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{BWPswitchDelay}$ after *bwp-InactivityTimer* [13] expires on the cell where timer-based BWP switch occurs.

Depending on UE capability *bwp-SwitchingDelay* [13], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in Table 6.5.6.1.0.1-1.

**Table 6.5.6.1.0.1-1: BWP switch delay**

| $\mu$ | NR Slot length (ms) | BWP switch delay $T_{BWPswitchDelay}$ (slots) | |
|---|---|---|---|
| | | Type 1[Note 1] | Type 2[Note 1] |
| 0 | 1 | 1 | 3 |
| 1 | 0.5 | 2 | 5 |
| 2 | 0.25 | 3 | 9 |
| 3 | 0.125 | 6 | 18 |
| Note 1: Depends on UE capability.<br>Note 2: If the BWP switch involves changing of SCS, the BWP switch delay is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch. | | | |

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in TS 38.133 [6] Clause 8.10 in the new BWP.

- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in TS 38.133 [6] Clause 8.10 in the new BWP.

If the BWP switch is triggered within DRX active time, and one of the two BWPs in a BWP switching is a dormant BWP [TS 38.321, 12], UE shall be able to complete active BWP switching within

- $T_{BWPswitchDelay}$, provided that the BWP switching request is received in any of the first 3 OFDM symbols of a slot corresponding to the serving cell where BWP switching occurs, or

- $T_{BWPswitchDelay}$ + 1, provided that the BWP switching request is received after the first 3 OFDM symbols of a slot corresponding to the serving cell where BWP switching occurs

When either of the DCI-based, timer-based or RRC-based downlink BWP switch and/or uplink BWP switch occur on multiple CCs simultaneously or over partially overlapping period, the interruption requirements described in this section apply for each BWP switch.

When UE receives a DCI indicating UE to switch its active BWP involving changes in any of the parameters listed in Table 6.5.6.1.0.1-3, the UE is allowed to cause interruption of up to X slot to other active serving cells if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 6.5.6.1.0.1-3 and the UE is capable of per-FR gap the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 6.5.6.1.0.1-2. The starting time of interruption is only allowed within the BWP switching delay $T_{BWPswitchDelay}$ as defined in TS 38.133 [6] clause 8.6.2. Interruptions are not allowed during BWP switch involving any other parameter change.

When a BWP timer *bwp-InactivityTimer* defined in TS 38.331 [13] expires, UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active BWP involving changes in any of the parameters listed in Table 6.5.6.1.0.1-3 if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 6.5.6.1.0.1-3 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 6.5.6.1.0.1-2. The starting time of interruption is only allowed within the BWP switching delay $T_{BWPswitchDelay}$ as defined in TS 38.133 [6] clause 8.6.2. Interruptions are not allowed during BWP switch involving any other parameter change.

**Table 6.5.6.1.0.1-2: Interruption length X**

| $\mu$ | NR Slot length (ms) | interruption length X (slots) |
|---|---|---|
| 0 | 1 | 1 |
| 1 | 0.5 | 1 |
| 2 | 0.25 | 3 |
| 3 | 0.125 | 5 |
| Note1: | void | |

**Table 6.5.6.1.0.1-3: Parameters which cause interruption other than SCS**

| Parameters | Comment |
|---|---|
| *locationAndBandwidth* | From TS 38.331 [13] |
| *nrofSRS-Ports* | |

The normative reference for this requirement is TS 38.133 [6] clauses 8.6.2 and 8.2.1.2.7

### 6.5.6.1.1 NR SA FR1-FR1 DCI-based DL active BWP switch in non-DRX

#### 6.5.6.1.1.1 Test purpose

The purpose of this test is to verify the DL BWP switch delay requirement defined in TS 38.133 [6] clause 8.6, and interruption requirement on other active serving cell defined in TS 38.133 [6] clause 8.2.2.2.5.

#### 6.5.6.1.1.2 Test applicability

This test applies to all types of NR UE release 15 onwards supporting BWP adaptation of at least 2 BWPs, DCI and timer-based active BWP switching delay Type1 or Type2 and 2DL CA.

#### 6.5.6.1.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.6.1.1.

#### 6.5.6.1.1.4 Test description

##### 6.5.6.1.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. The supported test configurations for PCell are shown in Table 6.5.6.1.1.4.1-1. Supported test configurations for NR SCell are shown in Table 6.5.6.1.1.4.1-1A below. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

**Table 6.5.6.1.1.4.1-1: Supported test configurations for NR PCell for NR SA FR1-FR1 DCI-based DL active BWP switch with SCell in non-DRX**

| Config | Description |
|---|---|
| 6.5.6.1.1-1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 6.5.6.1.1-2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 6.5.6.1.1-3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table 6.5.6.1.1.4.1-1A: Supported test configurations for NR SCell for NR SA FR1-FR1 DCI-based DL active BWP switch with SCell in non-DRX**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.6.1.1.4.1-2.

**Table 6.5.6.1.1.4.1-2: Initial conditions for NR SA FR1-FR1 DCI-based DL active BWP switch in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.6.1.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |

| | | | |
|---|---|---|---|
| Connection Diagram | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.5.6.1.1.4.1-3.

2. Message contents are defined in clause 6.5.6.1.1.4.3.

3. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2). Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3.

4. By step 4 of the test procedure:

   - UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

   - UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

   - UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.

   - UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

   - UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-0 in PCell.

   - UE is configured with a bwp-InactivityTimer timer value for SCell.

**Table 6.5.6.1.1.4.1-3: General test parameters for DL BWP switch in SA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Active SCell | | Cell 2 | SCell on RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | For both PCell and SCell |
| *bwp-InactivityTimer* | ms | 200 | |
| PDCCH and PDSCH maximum number of HARQ transmission | | 1 | For both PCell and SCell |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on PCC. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for cells on SCC. |
| Cell 2 timing offset to Cell 1 | µs | 3 | Time alignment error as specified in TS 38.104 [28] clause 6.5.3.1. |
| T1 | s | 0.2 | |
| T2 | s | 0.2 | |
| T3 | s | 0.2 | |

### 6.5.6.1.1.4.2 Test procedure

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

All cells have constant signal levels throughout the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS shall configure SCell (Cell 2) on the SCC as per TS 38.508-1 [14] clause 7.5.1. Set the parameters according to Tables 6.5.6.1.1.4.1-3 and 6.5.6.1.1.5-1. Propagation conditions are set according to Annex C clauses C.2.2.

3. The SS shall transmit an *RRCReconfiguration* message releasing the dedicated configuration of the *initialDownlinkBWP* and the *initialUplinkBWP* of Cell 2. This message also configures 2 different UE-specific bandwidth parts for Cell 2, BWP-1 and BWP-2, which always include the bandwidth of the initial DL BWP and SSB. The SS indicates BWP-1 as the active DL BWP using *firstActiveDownlinkBWP-Id*, according to Table 6.5.6.1.1.4.3-2. UE is configured with a *bwp-InactivityTimer* timer value for SCell.

4. The SS shall send a DCI format 1_1 command for SCell DL BWP switch.

5. The UE shall receive the DCI format 1_1 command in SCell's slot # denoted i, then T1 starts and the UE switch its bandwidth part from BWP-1 to BWP-2:

   a) If the UE starts to report valid ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k_1$)

   and

   b) If the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}$+ Interruption length + $k_1$)

   and

   c) If the number of consecutive missing ACK/NACK for PCell is no more than 1

   Then, the number of successful subtests is increased by one. Otherwise, count a fail for the test, switch off/on the UE and go to step 1.

6. If the UE sends valid ACK/NACK for the SCell on BWP-2, T2 starts. During T2, the SS shall not transmit DCI format for PDSCH reception on SCell.

7. T3 starts from the first slot #j of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires and the SS restarts to send DCI format for PDSCH reception on SCell. Then, the UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1:

   a) If the UE starts to report valid ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k_1$)

   and

   b) If the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}$+ Interruption length + $k_1$)

   and

   c) If the number of consecutive missing ACK/NACK for PCell is no more than 1.

   Then, the number of successful subtests is increased by one. Otherwise, count a fail for the test, switch off/on the UE and go to step 1.

8. Repeat steps 4-7 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

The SS verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The SS verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

Interruption length is defined in TS 38.133 [6] Table 8.2.2.2.5-1-1.

If all subtests pass, the test passes. If one subtest fails, the test fails.

6.5.6.1.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation Condition | | | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
Note 3 SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [8].
Note 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
Note 7: $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$.

| | |
|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$. |
| Note 3 | SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [8]. |
| Note 5: | All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. |
| Note 6: | All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 RBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. |
| Note 7: | $N_{RB,c}$. is derived from Table 5.3.2-1 in TS 38.101-1 [2] with configured $BW_{channel}$. |

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i$+$T_{BWPswitchDelay}$+$k_1$).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j$+$T_{BWPswitchDelay}$+$k_1$).

Where, $k_1$ is the timing between DL data receiving and acknowledgement as specified in [9].

Depending on UE capability *bwp-SwitchingDelay* [13], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in TS 38.133 [6] Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in TS 38.133 [6] clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ($i$+ $T_{BWPswitchDelay}$+$k_1$), ($j$+ $T_{BWPswitchDelay}$+$k_1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### 6.5.6.1.2 NR SA FR1 DCI-based DL active BWP switch in non-DRX

#### 6.5.6.1.2.1 Test purpose

The purpose of this test is to verify the DL BWP switch delay requirement defined in TS 38.133 [6] clause 8.6.

#### 6.5.6.1.2.2 Test applicability

This test applies to all types of NR UE release 15 onwards supporting BWP adaptation of at least 2 BWPs, DCI and timer-based active BWP switching delay Type1 or Type2.

#### 6.5.6.1.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.6.1.2.

6.5.6.1.2.4 Test description

6.5.6.1.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.6.1.2.4.1-1.

**Table 6.5.6.1.2.4.1-1: Supported test configurations for NR SA FR1 DCI-based DL active BWP switch in non-DRX**

| Config | Description |
|---|---|
| 6.5.6.1.2-1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.5.6.1.2-2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.5.6.1.2-3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: A UE which fulfils the requirements in test case A.6.5.6.1.1 can skip the test cases in A.6.5.6.1.2 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.6.1.2.4.1-2.

**Table 6.5.6.1.2.4.1-2: Initial conditions for NR SA FR1 DCI-based DL active BWP switch in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.6.1.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.5.6.1.2.4.1-3.

2. Message contents are defined in clause 6.5.6.1.2.4.3.

3. The test scenario comprises of one NR PCell (Cell 1). Cell 1 is configured according to Annex C.1.2 and C.1.3.

4. By step 4 of the test procedure:

   - UE is connected to Cell 1 on radio channel 1.

   - UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

   - UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1.

- UE is configured with a bwp-InactivityTimer timer value for PCell.

**Table 6.5.6.1.2.4.1-3: General test parameters for DL BWP switch in SA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active Cell | | Cell 1 | Cell 1 on RF channel number 1. |
| CP length | | Normal | |
| DRX | | OFF | |
| *bwp-InactivityTimer* | ms | 200 | |
| PDCCH and PDSCH maximum number of HARQ transmission | | 1 | |
| T1 | s | 0.2 | |
| T2 | s | 0.2 | |
| T3 | s | 0.2 | |

#### 6.5.6.1.2.4.2 Test procedure

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 1 and the time duration of T2.

The Cell 1 has constant signal levels throughout the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to Tables 6.5.6.1.2.4.1-3 and 6.5.6.1.2.5-1. Propagation conditions are set according to Annex C clauses C.2.2.

3. The SS shall transmit an *RRCReconfiguration* message releasing the dedicated configuration of the *initialDownlinkBWP* and the *initialUplinkBWP*. This message also configures 2 different UE-specific bandwidth parts, BWP-1 and BWP-2, which always include the bandwidth of the initial DL BWP and SSB. The SS indicates BWP-1 as the active DL BWP using *firstActiveDownlinkBWP-Id*, according to Table 6.5.6.1.2.4.3-2. UE is configured with a bwp-InactivityTimer timer value for PCell.

4. The SS shall send a DCI format 1_1 command for Cell 1 DL BWP switch.

5. The UE shall receive the DCI format 1_1 command in slot # denoted i, then T1 starts and the UE switch its bandwidth part from BWP-1 to BWP-2:

   If the UE starts to report valid ACK/NACK for Cell 1 from the first UL slot that occurs after the beginning of DL slot ($i$+$T_{BWPswitchDelay}$+$k_1$). The number of successful subtests is increased by one. Otherwise, count a fail for the test, switch off/on the UE and go to step 1.

6. If the UE sends valid ACK/NACK for the Cell 1 on BWP-2, T2 starts. During T2, the SS shall not transmit DCI format for PDSCH reception on Cell 1.

7. T3 starts from the first slot #j of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires and the SS restarts to send DCI format for PDSCH reception on PCell. Then, the UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part, BWP-1:

   If the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j$+$T_{BWPswitchDelay}$+$k_1$). The number of successful subtests is increased by one and go to step 8 after T3 expires. Otherwise, count a fail for the test, switch off/on the UE and go to step 1.

   8. Repeat steps 4-7 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

The SS verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

If all subtests pass, the test passes. If one subtest fails, the test fails.

#### 6.5.6.1.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| | Config 3 | dBm/ 38.16MHz | -52.86 |
| Propagation Condition | | | AWGN |

| | |
|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for Noc to be fulfilled. |
| Note 3: | SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [8]. |

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i$+$T_{BWPswitchDelay}$+$k_1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs right after the beginning of DL slot ($j$+$T_{BWPswitchDelay}$+$k_1$).

Where, $k_1$ is the timing between DL data receiving and acknowledgement as specified in TS 38.214 [9].

Depending on UE capability *bwp-SwitchingDelay* [13], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in TS 38.133 [6] Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot ($i$+ $T_{BWPswitchDelay}$+$k_1$), ($j$+ $T_{BWPswitchDelay}$+$k_1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

## 6.5.6.2 RRC-based active BWP switch

### 6.5.6.2.0 Minimum conformance requirements

#### 6.5.6.2.0.1 Minimum conformance requirements for RRC-based active BWP switch

For RRC-based BWP switch, after the UE receives RRC reconfiguration involving active BWP switching or parameter change of its active BWP, UE shall be able to receive PDSCH/PDCCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch occurs on the first DL or UL slot right after a time duration of $\frac{T_{RRCprocessing\,Delay}+T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$ slots which begins from the beginning of DL slot n, where

DL slot n is the last slot containing the RRC command, and

$T_{RRCprocessing\,Delay}$ is the length of the RRC procedure delay in ms as defined in clause 12 in TS 38.331 [13], and

$T_{BWPswitchDelayRRC} = 6ms$ is the time used by the UE to perform BWP switch.

The UE is not required to transmit UL signals or receive DL signals during the time defined by $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ on the cell where RRC-based BWP switch occurs.

The normative reference for this requirement is TS 38.133 [6] clauses 8.6.3.

### 6.5.6.2.1 NR SA FR1 RRC-based DL active BWP switch in non-DRX

#### 6.5.6.2.1.1 Test purpose

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in TS 38.133 [6] clause 8.6.

#### 6.5.6.2.1.2 Test applicability

This test applies to all types of NR UE release 15 onwards supporting BWP adaptation of at least 2 BWPs.

#### 6.5.6.2.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.6.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.6.2.1.

#### 6.5.6.2.1.4 Test description

##### 6.5.6.2.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.6.2.1.4.1-1.

**Table 6.5.6.2.1.4.1-1: Supported test configurations for NR SA FR1 RRC-based DL active BWP switch in non-DRX**

| Config | Description |
|---|---|
| 6.5.6.2.1-1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.5.6.2.1-2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.5.6.2.1-3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.6.2.1.4.1-2.

**Table 6.5.6.2.1.4.1-2: Initial conditions for NR SA FR1 RRC-based DL active BWP switch in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.6.2.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.5.6.2.1.4.1-3.
2. Message contents are defined in clause 6.5.6.2.1.4.3.
3. The test scenario comprises of one NR Cell (Cell 1). Cell 1 is configured according to Annex C.1.2 and C.1.3.
4. By step 4 of the test procedure:
   - UE is connected to Cell 1 on radio channel 1.
   - UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1.
   - UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 of initial condition in Cell

**Table 6.5.6.2.1.4.1-3: General test parameters for DL BWP switch in SA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active Cell | | Cell 1 | PCell on RF channel number 1. |
| CP length | | Normal | |
| DRX | | OFF | |
| PDCCH and PDSCH maximum number of HARQ transmission | | 1 | |
| T1 | s | 0.2 | |

#### 6.5.6.2.1.4.2 Test procedure

The test consists of 1 time period, with duration of T1.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Cell 1 has constant signal level throughout the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. Set the parameters according to Tables 6.5.6.2.1.4.1-3 and 6.5.6.2.1.5-1. Propagation conditions are set according to Annex C clauses C.2.2.
3. The SS shall send an *RRCReconfiguration* message releasing the dedicated configuration of the *initialDownlinkBWP* and the *initialUplinkBWP*. This message also configures another UE-specific bandwidth part, BWP-1 and indicates BWP-1 as the active DL BWP using *firstActiveDownlinkBWP-Id*, according to the initial condition of Active BWP-1 in Table 6.5.6.2.1.5-1.
4. The UE shall transmit an *RRCReconfigurationComplete* message.
5. The SS shall send an *RRCReconfiguration* message with updated bandwidth part configuration for DL BWP switch, change the BWP according to the final condition of Active BWP-1 in Table 6.5.6.2.1.5-1. T1 starts.
6. The UE shall receive the *RRCReconfiguration* in PCell's slot # denoted i and reconfigure its bandwidth part with the updated bandwidth part configuration.
7 If the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot i + X + k1 then the number of successful tests is increased by one. Otherwise, the number of failure tests is increased by one. Where:

   - X = 16 for test configuration 6.5.6.2.1-1 and 6.5.6.2.1-2

   - X = 32 for test configuration 6.5.6.2.1-3.

8. After the SS receives the ACK/NACK in step 7) or when T1 expires, the SS shall transmit *RRCRelease* message to release the RRC connection.
9. After the RRC connection release, the SS:

   -transmits in NR Cell 1 a Paging message for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
   or
   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat steps 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

The SS verifies the DL BWP switch time in PCell by counting the slots from the time when the RRC Reconfiguration message including updated BWP configuration is sent till a valid ACK/NACK is received.

#### 6.5.6.2.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.5.6.2.1.4.3-1: Common Exception messages for NR SA FR1 RRC-based DL active BWP switch in non-DRX**

| Default Message Contents | |
|---|---|

|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [8]. |

During T1, the UE shall be ready for the reception of uplink grant for Cell from the first DL slot that occurs right after the beginning of slot $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}} + k1$.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in TS 38.321 [12].

All of the above test requirements shall be fulfilled in order for the observed Cell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

### 6.5.6.3.0 Minimum conformance requirements

#### 6.5.6.3.0.1 Minimum conformance requirements for Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

The minimum requirements given in clause 4.5.6.3.0.1 applies.

### 6.5.6.3.1 NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA

Editor's note: This test case is incomplete in following aspects:

- Test parameters are still in brackets.

#### 6.5.6.3.1.1 Test purpose

To verify the requirement of DL BWP switch delay on multiple CCs in TS 38.133 [6] clause 8.6.2A.1, and interruption requirement for NR victim cell, defined in 38.133 [6] clause 8.2.

#### 6.5.6.3.1.2 Test applicability

This test applies to all types of NR UE release 16 onwards, supporting incremental delay for DCI and timer based active BWP switching on multiple CCs simultaneously and 3DL CA.

#### 6.5.6.3.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.6.3.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.6.3.1.

#### 6.5.6.3.1.4 Test description

##### 6.5.6.3.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. Supported test configurations for NR PCell is shown in Table 6.5.6.3.1.4.1-1. Supported test configurations for NR SCells are shown in Table 6.5.6.3.1.4.1-2. Test configuration for NR PCell and test configuration for NR SCells are chosen independently.

**Table 6.5.6.3.1.4.1-1: Supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

**Table 6.5.6.3.1.4.1-2: Supported test configurations for NR SCells**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration<br>Note 3: Test configurations of two NR SCells are selected independently. | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.6.3.1.4.1-3.

**Table 6.5.6.3.1.4.1-3: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.6.3.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in clause C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.5.6.3.1.4.1-4.

2. Message contents are defined in clause 6.5.6.3.1.4.3.

3. The test scenario comprises of one NR PCell (Cell 1) and two NR SCells (Cell 2 and Cell 3). The power levels and settings for Cell 1, Cell 2 and Cell 3 are configured according to clause C.1.2 and C.1.3.

4. By step 4 of the test procedure:

   - UE is connected to Cell 1 (NR PCell) on radio channel 1 (PCC), Cell 2 (SCell) on radio channel 2 (SCC #1) and Cell 3 (SCell) on radio channel 3 (SCC #2).

   - UE is configured with 2 different UE-specific downlink bandwidth parts for Cell 1, BWP-1 and BWP-2, before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

   - UE is configured with 2 different UE-specific downlink bandwidth parts for Cell 2, BWP-1 and BWP-2, before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

   - UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for SCell (Cell 3). BWP-0 includes the bandwidth of the initial DL BWP and SSB.

   - UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell and SCell (Cell 2).

   - UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell (Cell 3).

- UE is configured with a bwp-InactivityTimer timer value for PCell and SCell (Cell 2).

**Table 6.5.6.3.1.4.1-4: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| E-UTRA RF Channel Number | | 1 | One E-UTRA radio channel is used for this test |
| NR RF Channel Number | | 2,3 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Active SCell | | Cell 2 | SCell on RF channel number 2. |
| Active SCell | | Cell 3 | SCell on RF channel number 3. |
| CP length | | Normal | |
| DRX | | OFF | For both PCell and PSCell |
| *bwp-InactivityTimer* | ms | 200 | For both PSCell and SCell |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on PCC. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for Cell 1 on SCC. |
| Cell-individual offset for cells on RF channel number 3 | dB | 0 | Individual offset for Cell 2 on SCC. |
| Cell 2 and Cell 3 timing offset to Cell 1 | µs | 3 | Time alignment error as specified in TS 38.104 [28] clause 6.5.3.1. |
| T1 | s | [0.2] | |
| T2 | s | [0.2] | |
| T3 | s | [0.2] | |

### 6.5.6.3.1.4.2 Test procedure

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively. All cells have constant signal levels throughout the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR* , Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. NR Cell 2 and Cell 3 are added as the SCells and activated.

2. Set the parameters according to Tables 6.5.6.3.1.4.1-4, Table 6.5.6.3.1.5-1 and Table 6.5.6.3.1.5-2. Propagation conditions are set according to Annex C clauses C.2.2.

3. The SS shall transmit an *RRCReconfiguration* message releasing the dedicated configuration of the *initialDownlinkBWP* and the *initialUplinkBWP* of NR Cell 1 and NR Cell 2. This message also configures 2 different UE-specific bandwidth parts, BWP-1 and BWP-2, which always include the bandwidth of the initial DL BWP and SSB for NR Cell 1 and NR Cell 2. The SS indicates BWP-1 as the active DL BWP using *firstActiveDownlinkBWP-Id*, according to Table 6.5.6.3.1.4.3-2. UE is configured with a *bwp-InactivityTimer* timer value for PCell (Cell 1) and SCell (Cell 2).

4. The UE shall transmit an *RRCReconfigurationComplete* message.

5. PDCCHs indicating new transmissions shall be sent continuously on NR PCell (Cell 1), SCell (Cell 2) and SCell (Cell 3) to ensure that the UE will have ACK/NACK sending.

6. The SS shall send a DCI format 1_1 command on PCell (Cell 1) to trigger PCell DL BWP switch and a DCI format 1_1 command on SCell (Cell 2) to trigger SCell DL BWP switch. Two DCI format 1_1 commands should be sent in the same slot.

7. T1 starts from the end of the slot (denote as slot #i) in which the UE receives the DCI format 1_1 commands in PCell and SCell (Cell 2), then the UE shall switch its bandwidth part from BWP-1 to BWP-2.

   If the SS observes that,

   a) the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of the DL slot ($i+T_{MultipleBWPswitchDelay}+k_1$); and

   b) the UE starts to report valid ACK/NACK for SCell (Cell 2) from the first UL slot that occurs after the beginning of the DL slot ($i+T_{MultipleBWPswitchDelay}+k_1$); and

c) the number of consecutive missing ACK/NACK for SCell (Cell 3) is no more than 1; and

d) no missing ACK/NACK for SCell (Cell 3) is observed from the first UL subframe that occurs after the beginning of the DL slot ($i$+$T_{MultipleBWPswitchDelay}$+$k_1$).

then count a success for the event "DCI based BWP switch" and go to step 8, otherwise count a fail for the event "DCI based BWP switch", switch off/on the UE and go to step 1.

8. T2 starts when the SS receives valid ACK/NACK for the PCell and SCell (Cell 2) on BWP-2. The SS stops sending PDCCHs scheduling new transmissions on PCell and SCell (Cell 2).

9. T3 starts from the first slot (denoted as slot #j) of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires and the SS restarts to send PDCCHs scheduling new transmissions on PCell and SCell (Cell 2). Then, the UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part - BWP-1 on PCell and SCell (Cell 2).

   If the SS observes that,

   a) If the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of the DL slot ($j$+ $T_{MultipleBWPswitchDelay}$ +$k_1$); and

   b) If the UE starts to report valid ACK/NACK for SCell (Cell 2) from the first UL slot that occurs after the beginning of the DL slot ($j$+ $T_{MultipleBWPswitchDelay}$ +$k_1$); and

   c) If the number of consecutive missing ACK/NACK for SCell (Cell 3) is no more than 1; and

   d) no missing ACK/NACK for SCell (Cell 3) is observed from the first UL subframe that occurs after the beginning of the DL slot ($j$+$T_{MultipleBWPswitchDelay}$+$k_1$).

   then count a success for the event "Timer based BWP switch" and go to step 10. Otherwise, count a fail for the event "Timer based BWP switch", switch off/on the UE and go to step 1.

10. Repeat steps 5-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved. Each of the events "DCI based BWP switch" and "Timer based BWP switch" is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Different events may require different times for a verdict. If all events pass, the test passes. If one event fails, the test fails.

#### 6.5.6.3.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| | $Config_{SCell3}$ 3 | dBm/ 38.16MHz | -52.86 |
| Propagation Condition | | | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3 SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [8].

During T1, the UE shall start to send the ACK/NACK for PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot ($i+T_{MultipleBWPswitchDelay}+k_1$).

During T3, the UE shall start to send the ACK/NACK for PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot ($j+T_{MultipleBWPswitchDelay}+k_1$).

Where,

$k_1$ is the timing between PDSCHs on PCell and SCell (Cell 2) and their corresponding acknowledgement as specified in TS 38.214 [9].

$T_{MultipleBWPswitchDelay} = T_{BWPswitchDelay} + D$, is the simultaneous BWP switching delay on multiple CCs specified in TS 38.133 [6] clause 8.6.2A.1.

$T_{BWPswitchDelay}$ is the BWP switching delay on single CC defined in 38.133 [6] Table 8.6.2-1 and depends on UE capability *bwp-SwitchingDelay* [13].

D is the incremental delay for each additional CC involved in simultaneous BWP switch and depends on UE capability *bwp-SwitchingMultiCCs-r16* [13].

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell (Cell 2) active BWP switch delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90%.

During T1, the start time of SCell (Cell 3) interruption during PCell and SCell active BWP switch shall not happen outside the BWP switch delay and the interruption of SCell (Cell 3) shall not be longer than the interruption duration specified for active BWP switch in TS 38.133 [6] clause 8.2.2.2.5.

During T3, the start time of SCell (Cell 3) interruption of during PCell and SCell active BWP switch shall not happen outside the BWP switch delay and the interruption of SCell (Cell 3) shall not be longer than the interruption duration specified for active BWP switch in TS 38.133 [6] clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed SCell (Cell 3) active BWP switch interruption to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ($i$+ $T_{BWPswitchDelay}$+$k_1$), ($j$+ $T_{BWPswitchDelay}$+$k_1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

## 6.5.6.4

## 6.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

### 6.5.6.5.0 Minimum conformance requirements

#### 6.5.6.5.0.1 Minimum conformance requirements for Simultaneous RRC-based Active BWP Switch on multiple CCs

The minimum requirements given in clause 6.5.6.5.0.1 applies.

### 6.5.6.5.1 NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA

Editor's note: This test case is incomplete in following aspects:

- Test parameters are still in brackets.

#### 6.5.6.5.1.1 Test purpose

To verify the DL BWP switch delay requirement on multiple CCs for RRC-based BWP switch defined in 38.133 [6] clause 8.6.3A.1.

#### 6.5.6.5.1.2 Test applicability

This test applies to all types of NR UE release 16 onwards, supporting incremental delay for DCI and timer based active BWP switching on multiple CCs simultaneously and 2DL CA.

#### 6.5.6.5.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.6.5.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.6.5.1.

#### 6.5.6.5.1.4 Test description

#### 6.5.6.5.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in this clause. Supported test configurations for PCell are shown in Table 6.5.6.5.1.4.1-1. Supported test configurations for NR SCell are shown in Table 6.5.6.5.1.4.1-2. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

**Table 6.5.6.5.1.4.1-1: Supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration | |

**Table 6.5.6.5.1.4.1-2: Supported test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.6.5.1.4.1-3.

**Table 6.5.6.5.1.4.1-3: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.6.5.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in clause C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.5.6.5.1.4.1-4.
2. Message contents are defined in clause 6.5.6.5.1.4.3.
3. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2). The power levels and settings for Cell 2 and Cell 3 are configured according to clause C.1.2 and C.1.3.

4. By step 4 of the test procedure:

   - UE is connected to Cell 1 (NR PCell) on radio channel 1 (PCC) and Cell 2 (SCell) on radio channel 2 (SCC).
   - UE has dedicated bandwidth part BWP-1 in its RRC configuration for PCell (Cell 1) and SCell (Cell 2)
   - UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell (Cell 1) and SCell (Cell 2).

**Table 6.5.6.5.1.4.1-4: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |

| | | | |
|---|---|---|---|
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Active SCell | | Cell 2 | SCell on RF channel number 2. |
| CP length | | Normal | |
| DRX | | OFF | For both PCell and SCell (Cell 2) |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cell on PCC. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for cell on SCC. |
| Cell 2 timing offset to Cell 1 | µs | 3 | Time alignment error as specified in TS 38.104 [28] clause 6.5.3.1. |
| T1 | s | [0.2] | |

#### 6.5.6.5.1.4.2 Test procedure

The test consists of 1 time periods with durations of T1. All cells have constant signal levels throughout the test.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. NR Cell 2 is added as the SCell and activated.

2. Set the parameters according to Tables 6.5.6.5.1.4.1-4, Table 6.5.6.5.1.5-1 and Table 6.5.6.5.1.5-2. Propagation conditions are set according to Annex C clauses C.2.2.

3. The SS shall send an *RRCReconfiguration* message releasing the dedicated configuration of the *initialDownlinkBWP* and the *initialUplinkBWP* on NR Cell 1 and NR Cell 2. This message also configures another UE-specific bandwidth part, BWP-1, and indicates BWP-1 as the active DL BWP using *firstActiveDownlinkBWP-Id*, according to the initial condition of Active BWP-1 in Table 6.5.6.5.1.5-1 and Table 6.5.6.5.1.5-2 for NR Cell 1 and NR Cell 2, respectively.

4. The UE shall transmit an *RRCReconfigurationComplete* message.

5. PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 2) to ensure that the UE will have ACK/NACK sending.

6. The SS shall send an *RRCReconfiguration* message with updated bandwidth part configuration for PCell and SCell DL BWP switch, changing the BWP according to the final condition of Active BWP-1 in Table 4.5.6.2.1.5-1 and Table 6.5.6.5.1.5-2.

7. T1 starts from the end of the slot (denote as slot #i) in which the UE receives the RRC message reconfiguring PCell and SCell BWP, then it reconfigures its bandwidth part with the updated bandwidth part configuration.

   If the SS observes that,

   a) the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of the DL slot $(i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{\text{NR slot length}} + k_1)$; and

   b) the UE starts to report valid ACK/NACK for SCell from the first UL slot that occurs after the beginning of the DL slot $(i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{\text{NR slot length}} + k_1)$,

   then count a success for the test, otherwise count a fail for the test.

8. After the SS receives the ACK/NACK in step 7) or when T1 expires, the SS shall transmit *RRCRelease* message to release the RRC connection.

9. After the RRC connection release, the SS:

   - transmits in NR Cell 1 a Paging message for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5), NR Cell 2 is added as the SCell and activated,

   or

- switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5. NR Cell 2 is added as the SCell and activated.

10. Repeat steps 3-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.6.5.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [8]. | | | |

During T1, the UE shall start to send the ACK/NACK for PCell and SCell from the first UL slot that occurs after the beginning of DL slot $(i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{\text{NR slot length}} + k_1)$.

Where,

$k_1$ is the timing between PDSCHs on PCell and SCell and their corresponding acknowledgement as specified in TS 38.214 [9].

$T_{RRCprocessingDelay} = 10$ ms, is the length of the RRC procedure delay in ms as defined in clause 12 in TS 38.331 [13],

$T_{BWPswitchDelayRRC} = 6$ ms, is the time used by the UE to perform BWP switch as defined in 38.133 [6] clause 8.6.3,

$D_{RRC} = 0$ if the UE is capable of type 1 BWP switching delay depending on UE capability *bwp-SwitchingDelay* [11]. $D_{RRC} = D$ for UE which is capable of type 2 BWP switching delay depending on UE capability *bwp-SwitchingDelay* [13]

D is the incremental delay for each additional CC involved in simultaneous BWP switch and depends on UE capability *bwp-SwitchingMultiCCs-r16* [13].

All of the above test requirements shall be fulfilled in order for the observed PSCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.7 DL interruptions at switching between two uplink carriers

### 6.5.7.0 Minimum conformance requirements

The DL interruption requirements at dynamic switching between two uplink carriers specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability *uplinkTxSwitchingPeriod* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [9], where NR uplink carrier 1 is capable of one transmit antenna connector and NR uplink carrier 2 is capable of two transmit antenna connectors, and the two uplink carriers are in different bands with different carrier frequencies.

When dynamic switching between two uplink carriers is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [13]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR carrier 1 or carrier 2 as indicated in RRC signalling [13]. The DL interruption lengths of X are defined in Table 6.5.7.0-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [2].

**Table 6.5.7.0-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability *uplinkTxSwitchingPeriod* | | | | |

The normative reference for this requirement is TS 38.133 [6] clauses 8.2.2.2.10.

## 6.5.7.1 NR SA FR1 DL Interruptions at switching between two uplink carriers in FDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7.1.1 Test purpose

The purpose of this test is to verify the DL interruption requirements during UE dynamic switching between two uplink carriers.

### 6.5.7.1.2 Test applicability

This test applies to all types of NR UE release 16 onwards, configured with *uplinkTxSwitchingPeriod*.

### 6.5.7.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7.1

### 6.5.7.1.4 Test description

#### 6.5.7.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7.1.4.1-1.

**Table 6.5.7.1.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7.1-1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7.1.4.1-2.

**Table 6.5.7.1.4.1-2: Initial conditions for DL interruptions at switching between two uplink carriers in FDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| | TE Part | A.3.1.8.2b | As specified in TS 38.508-1 [14] Annex A. |

| | | | |
|---|---|---|---|
| Connection Diagram | DUT Part | A.3.2.3.4a | |
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part.<br>- Without LTE link<br>- Without Faders | | |

1. The general test parameter settings are set up according to Table 6.5.7.1.4.1-3.

2. Message contents are defined in clause 6.5.7.1.4.3.

3. The test scenario comprises of two NR Cells (Cell 1 and Cell 2). Cell 1 is configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7.1.4.1-3: General test parameters for DL interruptions at switching between two uplink carriers in FDD-TDD CA**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | Config 1 | 1, 2 | Two radio channels are used for this test. |
| Active cell | | Config 1 | Cell 1: FR1 PCell<br>Cell 2: FR1 SCell | FR1 PCell on RF channel number 1<br>FR1 SCell on RF channel number 2 |
| CP length | | Config 1 | Normal | |
| DRX | | Config 1 | OFF | |
| Measurement gap pattern Id | | Config 1 | OFF | |
| Filter coefficient | | Config 1 | 0 | L3 filtering is not used |
| CSI-RS configuration for L1-RSRP reporting | | Config 1 | Cell 1: CSI-RS.1.5 FDD<br>Cell 2: CSI-RS.2.5 TDD | |
| T1 | s | Config 1 | 5 | |

### 6.5.7.1.4.2 Test procedure

The test consists of two active NR cells: Cell 1 (PCell) and Cell 2 (SCell). The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1 and Cell 2 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on both PCell and SCell on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Configure PCell (Cell 1) and SCell (Cell 2) according to Table 6.5.7.1.5-1. Propagation conditions are set according to Annex C clause C.2.2.

3. The SS shall transmit an *RRCReconfiguration* message to configure PCell (Cell 1) and SCell (Cell 2) as per TS 38.508-1 [13] clause 7 with the message content exceptions defined in clause 6.5.7.1.4.3. *UplinkTxSwitching* is configured to the UE.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. Set the parameters according to T1 in Tables 6.5.7.1.5-1. T1 starts.

6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB on following symbol on PCell and SCell:

   For PCell (Cell 1), on the following symbol in the slot overlapping with the 1st special slot of every radio frame of the NR TDD carrier (Cell 2)

   - symbol#12 if UE does not report uplinkTxSwitching-DL-Interruption-r16;

- otherwise,
  - symbol #8 if UE capability uplinkTxSwitchingPeriod is 210us or
  - symbol #9 if UE capability uplinkTxSwitchingPeriod is 140us or
  - symbol #10 if UE capability uplinkTxSwitchingPeriod is 35us.
- For SCell(Cell 2) , on the following symbol in the 2nd special slot of every radio frame
- symbol#9 if UE does not report uplinkTxSwitching-DL-Interruption-r16;
- otherwise,
  - symbol #2 if UE capability uplinkTxSwitchingPeriod is 210us or
  - symbol #3 if UE capability uplinkTxSwitchingPeriod is 140us or
  - symbol #6 if UE capability uplinkTxSwitchingPeriod is 35us.

7. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report for Cell 1 and Cell 2 while meeting the test requirements in Table 6.5.7.1.5-3, if so increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.
8. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

   or

   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.
9. Repeat step 3-8 until a test verdict has been achieved.

#### 6.5.7.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.5.7.1.4.3-1: Common Exception messages for DL interruptions at switching between two uplink carriers in FDD-TDD CA**

| Propagation Condition | | | AWGN | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: Void
Note 5: Receive time difference between slot boundaries of signals received from the two cells at the UE antenna connector including time alignment error between the two cells.
Note 6: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

UE shall send L1-RSRP report while meeting the accuracy requirements defined in TS 38.133 [6] clause 10.1.19.2.

The DL interruption lengths of X are defined in Table 6.5.7.1.5-2

**Table 6.5.7.1.5-2: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability *uplinkTxSwitchingPeriod* | | | | |

The UE shall send L1-RSRP report for Cell 1 and Cell 2 after the reception of corresponding DCI trigger. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7.1.5-3.

**Table 6.5.7.1.5-3: L1-RSRP absolute accuracy requirements for the reported valuesof CSI-RS**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value (CSI-RS#0) | 65 |
| Highest reported value (CSI-RS#0) | 86 |

**Table 6.5.7.1.5-4: Void**

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7.2 NR SA FR1 DL Interruptions at switching between two uplink carriers in TDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7.2.1 Test purpose

The purpose of this test is to verify the DL interruption requirements during UE dynamic switching between two uplink carriers.

#### 6.5.7.2.2 Test applicability

This test applies to all types of NR UE release 16 onwards, configured with *uplinkTxSwitchingPeriod*.

#### 6.5.7.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7.2

#### 6.5.7.2.4 Test description

##### 6.5.7.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7.2.4.1-1.

**Table 6.5.7.2.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7.2-1 | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7.2.4.1-2.

**Table 6.5.7.2.4.1-2: Initial conditions for DL interruptions at switching between two uplink carriers in TDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |

#### 6.5.7.2.4.2 Test procedure

Same as in 6.5.7.1.4.2 with the following exception in step 6.

6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB on following symbol on the special slot on PCell and SCell:

   For PCell (Cell 1), on the following symbol in the 1st special slot of every even radio frame:

   - symbol#10 if UE does not report uplinkTxSwitching-DL-Interruption-r16;
   - otherwise,
     - symbol #4 if UE capability uplinkTxSwitchingPeriod is 210us or
     - symbol #5 if UE capability uplinkTxSwitchingPeriod is 140us or
     - symbol #8 if UE capability uplinkTxSwitchingPeriod is 35us.

   For SCell (Cell 2), on the following symbol on the 2nd special slot of every even radio frame:

   - symbol#10 if UE does not report uplinkTxSwitching-DL-Interruption-r16;
   - otherwise,
     - symbol #4 if UE capability uplinkTxSwitchingPeriod is 210us or
     - symbol #5 if UE capability uplinkTxSwitchingPeriod is 140us or
     - symbol #8 if UE capability uplinkTxSwitchingPeriod is 35us.

#### 6.5.7.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| | |
|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | Void |
| Note 5: | Receive time difference between slot boundaries of signals received from the two cells at the UE antenna connector including time alignment error between the two cells. |
| Note 6: | CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |

UE shall send L1-RSRP report while meeting the accuracy requirements defined in TS 38.133 [6] clause 10.1.19.2.

The DL interruption lengths of X are defined in Table 6.5.7.2.5-2

**Table 6.5.7.2.5-2: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability *uplinkTxSwitchingPeriod* | | | | |

The UE shall send L1-RSRP report for Cell 1 and Cell 2 after the reception of corresponding DCI trigger. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7.1.5-3.

**Table 6.5.7.2.5-3: L1-RSRP absolute accuracy requirements for the reported values**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value (CSI-RS#0) | 65 |
| Highest reported value (CSI-RS#0) | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7A NR SA FR1 DL interruptions at switching between two uplink carriers with two transmit antenna connectors

### 6.5.7A.0 Minimum conformance requirements

The DL interruption requirements at dynamic switching between two uplink carriers specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability *[uplinkTxSwitchingPeriod2T2T]* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [9], where NR UL carrier 1 is capable of two transmit antenna connectors and NR UL carrier 2 is capable of two transmit antenna connectors, and the two uplink carriers are in different bands with different carrier frequencies.

When dynamic switching between two uplink carriers is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [13]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR carrier 1 or carrier 2 as indicated in RRC signalling [13]. The DL interruption lengths of X are defined in Table 8.2.2.2.10A-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [2].

**Table 6.5.7A.0-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability [*uplinkTxSwitchingPeriod2T2T*]. | | | | |

The normative reference for this requirement is TS 38.133 [6] clauses 8.2.2.2.10A.

## 6.5.7A.1 NR SA FR1 DL interruptions at switching between two uplink carriers in FDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in 38.133

This test case is incomplete in following aspects:

- Test parameter are still in brackets in 38.1336.5.7A.1.1 Test purpose

The purpose of this test is to verify the DL interruption requirements during UE dynamic switching between two uplink carriers.

### 6.5.7A.1.2 Test applicability

This test applies to all types of NR UE release 17 onwards configured with *uplinkTxSwitchingPeriod2T2T*.

### 6.5.7A.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7A.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7A.1.

### 6.5.7A.1.4 Test description

#### 6.5.7A.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7A.1.4.1-1.

**Table 6.5.7A.1.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7A.1-1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7A.1.4.1-2.

**Table 6.5.7A.1.4.1-2: Initial conditions for DL interruptions at switching between two uplink carriers in FDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7A.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2b | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4a | |

| | | |
|---|---|---|
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part.<br>- Without LTE link<br>- Without Faders | |

1. The general test parameter settings are set up according to Table 6.5.7A.1.4.1-3.

2. Message contents are defined in clause 6.5.7A.1.4.3.

3. The test scenario comprises of two NR Cells. (Cell 1 and Cell 2). Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7A.1.4.1-3: General test parameters for DL interruptions at switching between two uplink carriers in FDD-TDD CA**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | Config 1 | 1, 2 | Two radio channels are used for this test. |

| Measurement gap pattern Id | | Config 1 | OFF | |
| Filter coefficient | | Config 1 | 0 | L3 filtering is not used |
| CSI-RS configuration for L1-RSRP reporting | | Config 1 | Cell 1: CSI-RS.1.5 FDD<br>Cell 2: CSI-RS.2.5 TDD | |
| T1 | s | Config 1 | 5 | |

### 6.5.7A.1.4.2 Test procedure

The test consists of two active NR cells: FR1 FDD PCell (Cell 1), FR1 TDD SCell (Cell 2). The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1 and Cell 2 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on both PCell and SCell on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Configure PCell (Cell 1) and SCell (Cell 2) according to Table 6.5.7A.1.5-1. Propagation conditions are set according to Annex C clause C.2.2.

3. The SS shall transmit an RRCReconfiguration message to configure PCell (Cell 1) and SCell (Cell 2) as per TS 38.508-1 [14] clause 7 with the message content exceptions defined in clause 6.5.7A.1.4.3. *UplinkTxSwitching* is configured to the UE.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. Set the parameters according to T1 in Tables 6.5.7A.1.5-1. T1 starts.

6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for PCell (Cell 1), on the following symbol in the slot overlapping with the 1st special slot of every radio frame of the SCell (Cell 2):

   PCell (Cell 1)

   - symbol#12 if UE does not report *uplinkTxSwitching-DL-Interruption-r16*;

   - otherwise,

- symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or
- symbol #9 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or
- symbol #10 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

7. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for SCell (Cell 2), on the following symbol in the 2nd special slot of every radio frame:

   SCell (Cell 2)

   - symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption-r16;*
   - otherwise,
     - symbol #4 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or
     - symbol #5 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or
     - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

8. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report while meeting the test requirements in Table 6.5.7A.1.5-3, if so, increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.

9. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

   or

   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 3-9 until a test verdict has been achieved.

#### 6.5.7A.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7A.2 NR SA FR1 DL interruptions at switching between two uplink carriers in TDD-TDD CA

Editor's Notes:

This test case is incomplete in following aspects:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in 38.133
- Test parameter are still in brackets in 38.1336.

### 5.7A.2.1 Test purpose

The purpose of this test is to verify the DL interruption requirements during UE dynamic switching between two uplink carriers.

### 6.5.7A.2.2 Test applicability

This test applies to all types of NR UE release 17 onwards configured with *uplinkTxSwitchingPeriod2T2T* and supports *simultaneousRxTxInterBandCA*.

### 6.5.7A.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7A.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7A.2

### 6.5.7A.2.4 Test description

#### 6.5.7A.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7A.2.4.1-1.

**Table 6.5.7A.2.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7A.2-1 | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7A.2.4.1-2.

**Table 6.5.7A.2.4.1-2: Initial conditions for DL interruptions at switching between two uplink carriers in TDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7A.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2b | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4a | |
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part.<br>- Without LTE link<br>- Without Faders | | |

1. The general test parameter settings are set up according to Table 6.5.7A.2.4.1-3.
2. Message contents are defined in clause 6.5.7A.2.4.3.
3. The test scenario comprises of two NR Cells. (Cell 1 and Cell 2). Cell 1 and Cell 2 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7A.2.4.1-3: General test parameters for DL interruptions at switching between two uplink carriers in TDD-TDD CA**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

### 6.5.7A.2.4.2 Test procedure

The test consists of two active NR cells: FR1 TDD PCell (Cell 1), FR1 TDD SCell (Cell 2). The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1 and Cell 2 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on both PCell and SCell on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. Configure PCell (Cell 1) and SCell (Cell 2) according to Table 6.5.7A.2.5-1. Propagation conditions are set according to Annex C clause C.2.2.
3. The SS shall transmit an *RRCReconfiguration* message to configure PCell (Cell 1) and SCell (Cell 2) as per TS 38.508-1 [14] clause 7 with the message content exceptions defined in clause 6.5.7A.2.4.3. *UplinkTxSwitching* is configured to the UE.
4. The UE shall transmit *RRCReconfigurationComplete* message.
5. Set the parameters according to T1 in Tables 6.5.7A.2.5-1. T1 starts.
6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB on following symbol on the 1st special slot of every even radio frame on PCell (Cell 1):
   - symbol#10 if UE does not report uplinkTxSwitching-DL-Interruption-r16;
   - otherwise,
     - symbol #4 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or
     - symbol #5 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or
     - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.
7. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB on following symbol on the 2nd special slot of every even radio frame on SCell (Cell 2):

- symbol#10 if UE does not report uplinkTxSwitching-DL-Interruption-r16;
- otherwise,
  - symbol #4 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or
  - symbol #5 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or
  - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

8. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report while meeting the test requirements given in Table 6.5.7A.2.5-3, if so, increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.
9. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

   or

   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 3-9 until a test verdict has been achieved.

### 6.5.7A.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.5.7.2.4.3-0A: Common Exception messages**

| Default Message Contents | |
|---|---|

| Io Note3 | Config 1 | dBm/38.16 MHz | -55.78 | -55.78 |
| Time offset to Cell 1 Note 5 | | µs | - | 0 |
| Propagation Condition | | | AWGN | AWGN |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP, CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: Void
Note 5: Receive time difference between slot boundaries of signals received from the two cells at the UE antenna connector including time alignment error between the two cells.

UE shall send L1-RSRP report while meeting the accuracy requirements defined in TS 38.133 [6] clause 10.1.19.2.

The DL interruption lengths of X are defined in Table 6.5.7A.2.5-2

**Table 6.5.7A.2.5-2: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |

Note 1: Uplink Tx switching period depends on UE capability [*uplinkTxSwitchingPeriod2T2T*].

The UE shall send L1-RSRP report for Cell 1 and Cell 2 after the reception of corresponding DCI trigger. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7A.2.5-3.

**Table 6.5.7A.2.5-3: L1-RSRP absolute accuracy requirements for the reported values**

| Normal Conditions | T1 |
|---|---|

| | |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%

## 6.5.7B DL interruptions at switching between one uplink band with one transmit antenna connector and one uplink band with two transmit antenna connectors

### 6.5.7B.0 Minimum conformance requirements

The DL interruption requirements at dynamic switching between two uplink bands specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability *[uplinkTxSwitchingPeriod]* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [9], where NR UL carrier 1 in band A is capable of one transmit antenna connector, NR UL carrier 2 and carrier 3 in band B are capable of two transmit antenna connectors. NR UL carrier 2 and carrier 3 are two contiguous aggregated carriers, and band A and band B are different bands with different carrier frequencies.

When dynamic switching between two uplink bands is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [13]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR band A or band B as indicated in RRC signalling [13]. The DL interruption lengths of X are defined in Table 8.2.2.2.10-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [2].

**Table 6.5.7B.0-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability *uplinkTxSwitchingPeriod* | | | | |

The normative reference for this requirement is TS 38.133 [6] clauses 8.2.2.2.10B.

### 6.5.7B.1 NR SA FR1 DL Interruptions at switching between two uplink bands in FDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

#### 6.5.7B.1.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink bands.

#### 6.5.7B.1.2 Test applicability

This test applies to all types of NR UE release 17 onwards configured with *uplinkTxSwitchingPeriod*.

#### 6.5.7B.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7B.0.

The normative reference for this requirement is TS 38.133 [6] A.6.5.7B.1.

6.5.7B.1.4 Test description

6.5.7B.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7B.1.4.1-1.

**Table 6.5.7B.1.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7B.1-1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7B.1.4.1-2.

**Table 6.5.7B.1.4.1-2: Initial conditions for DL interruptions at switching between two uplink bands in FDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|

### 6.5.7B.1.4.2 Test procedure

The test consists of three active NR cells: FR1 FDD PCell (Cell 1), FR1 TDD SCell (Cell 2) and FR1 TDD SCell (Cell 3) where Cell 1 in band A is with 1TX, Cell 2 and Cell 3 in band B with 2Tx, Cell 2 and Cell 3 are two contiguous aggregated carriers. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1, Cell 2 and Cell 3 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on PCell and SCells on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. Configure PCell (Cell 1) and SCells (Cell 2 and Cell 3) according to Table 6.5.7B.1.5-1. Propagation conditions are set according to Annex C clause C.2.2.
3. The SS shall transmit an *RRCReconfiguration* message to configure PCell (Cell 1) and SCells (Cell 2 and Cell 3) as per TS 38.508-1 [14] clause 7 with the message content exceptions defined in clause 6.5.7B.1.4.3. *UplinkTxSwitching* is configured to the UE.
4. The UE shall transmit *RRCReconfigurationComplete* message.
5. Set the parameters according to T1 in Tables 6.5.7B.1.5-1. T1 starts.
6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for PCell (Cell 1), on the following symbol in the slot overlapping with the 1st special slot of of every radio frame the SCells (Cell 2 and Cell 3):
   - symbol#12 if UE does not report *uplinkTxSwitching-DL-Interruption-r16*;
   - otherwise,
     - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 210us or
     - symbol #9 if UE capability *uplinkTxSwitchingPeriod* is 140us or
     - symbol #10 if UE capability *uplinkTxSwitchingPeriod* is 35us.
7. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for SCells (Cell 2 and Cell 3), on the following symbol in the 2nd special slot of every radio frame:
   - symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption-r16*;
   - otherwise,
     - symbol #4 if UE capability *uplinkTxSwitchingPeriod* is 210us or
     - symbol #5 if UE capability *uplinkTxSwitchingPeriod* is 140us or
     - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 35us.
8. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report while meeting the test requirements in Table 6.5.7B.1.5-3, if so, increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.
9. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

or

- switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 3-9 until a test verdict has been achieved.

#### 6.5.7B.1.4.3 Message contents

| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability *uplinkTxSwitchingPeriod*. | | | | |

The UE shall send L1-RSRP report for Cell 1, Cell 2 and Cell 3 after the reception of DCI trigger. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7B.1.5-3.

**Table 6.5.7B.1.5-3: L1-RSRP absolute accuracy requirements for the reported values**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7B.2 NR SA FR1 DL Interruptions at switching between two uplink bands in TDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7B.2.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink bands.

### 6.5.7B.2.2 Test applicability

This test applies to all types of NR UE release 17 onwards configured with *uplinkTxSwitchingPeriod* and supports *simultaneousRxTxInterBandCA*.

### 6.5.7B.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7B.0.

The normative reference for this requirement is TS 38.133 [6] clauses A.6.5.7B.2

### 6.5.7B.2.4 Test description

#### 6.5.7B.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7B.2.4.1-1.

**Table 6.5.7B.2.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7B.2-1 | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7B.2.4.1-2.

**Table 6.5.7B.2.4.1-2: Initial conditions for DL interruptions at switching between two uplink carriers in TDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |

### 6.5.7B.2.4.2 Test procedure

FR1 TDD PCell (Cell 1), FR1 TDD SCell (Cell 2) and FR1 TDD SCell (Cell 3) where Cell 1 in band A is with 1TX, Cell 2 and Cell 3 in band B with 2Tx, cell2 and Cell 3 are two contiguous aggregated carriers. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1, Cell 2 and Cell 3 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on all the PCell and SCell on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Configure PCell (Cell 1) and SCell (Cell 2 and Cell 3) according to Table 6.5.7B.2.5-1. Propagation conditions are set according to Annex C clause C.2.2.

3. The SS shall transmit an RRCReconfiguration message to configure PCell (Cell 1) and SCell (Cell 2 and Cell 3) as per TS 38.508-1 [14] clause 7 with the message content exceptions defined in clause 6.5.7B.2.4.3. *UplinkTxSwitching* is configured to the UE.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. Set the parameters according to T1 in Tables 6.5.7B.2.5-1. T1 starts.

6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB on following symbol on the 1st special slot of every even radio frame on PCell (Cell 1):

   - symbol#10 if UE does not report uplinkTxSwitching-DL-Interruption-r16;

   - otherwise,

   - symbol #4 if UE capability *uplinkTxSwitchingPeriod* is 210us or

   - symbol #5 if UE capability *uplinkTxSwitchingPeriod* is 140us or

   - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 35us.

7. For NR TDD Cell 2 and NR TDD Cell 3, SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB on following symbol on the 2nd special slot of every even radio frame on SCells (Cell 2 and Cell 3):

- symbol#10 if UE does not report uplinkTxSwitching-DL-Interruption-r16;

- otherwise,

   - symbol #4 if UE capability *uplinkTxSwitchingPeriod* is 210us or

   - symbol #5 if UE capability *uplinkTxSwitchingPeriod* is 140us or

   - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 35us.

8. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report while meeting the test requirements given in Table 6.5.7A.2.5-3, if so, increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.

9. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

   or

   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 3-9 until a test verdict has been achieved.

### 6.5.7B.2.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.5.7B.2.4.3-1: Common Exception messages**

| Default Message Contents | |

| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |

Note 1: Uplink Tx switching period depends on UE capability *uplinkTxSwitchingPeriod*.

The UE shall send L1-RSRP report from the reception of DCI trigger. The L1-RSRP report shall include the results of CSI-RS#0, CSI-RS#1 and CSI-RS#2. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7A.2.5-3.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

# 6.5.7C DL interruptions at switching between two uplink bands with two transmit antenna connectors

## 6.5.7C.0 Minimum conformance requirements

The DL interruption requirements at dynamic switching between two uplink bands specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability *uplinkTxSwitchingPeriod2T2T* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [9], where NR UL carrier 1 in band A is capable of two transmit antenna connectors, NR UL carrier 2 and carrier 3 in band B are capable of two transmit antenna connectors. NR UL carrier 2 and carrier 3 are two contiguous aggregated carriers, and band A and band B are different bands with different carrier frequencies.

When dynamic switching between two uplink bands is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [13]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR band A or band B as indicated in RRC signalling [13]. The DL interruption lengths of X are defined in Table 6.5.7C.0-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DLInterruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [2].

**Table 6.5.7C.0-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability [*uplinkTxSwitchingPeriod2T2T*]. | | | | |

The normative reference for this requirement is TS 38.133 [6] clauses 8.2.2.2.10C.

## 6.5.7C.1 NR SA FR1 DL interruptions at switching between two uplink bands with two transmit antenna connectors in FDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7C.1.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink bands with two transmit antenna connectors in FDD-TDD CA.

### 6.5.7C.1.2 Test applicability

This test applies to all types of NR UE release 17 onwards configured with *uplinkTxSwitchingPeriod2T2T*.

### 6.5.7C.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7C.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7C.1

### 6.5.7C.1.4 Test description

#### 6.5.7C.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7C.1.4.1-1.

**Table 6.5.7C.1.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7C.1-1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7C.1.4.1-2.

**Table 6.5.7C.1.4.1-2: Initial conditions for DL interruptions at switching between two uplink bands with two transmit antenna connectors in FDD-TDD CA**

### 6.5.7C.1.4.2 Test procedure

The test consists of three active NR cells: FR1 FDD PCell (Cell 1), FR1 TDD SCell (Cell 2) and FR1 TDD SCell (Cell 3). The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be

connected to Cell 1, Cell 2 and Cell 3 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on PCell (Cell 1), Scell (Cell 2) and SCell (Cell 3) on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Configure FDD PCell (Cell 1), TDD SCell(Cell 2) and TDD SCell(Cell 3) according to Table 6.5.7C.1.5-1. Propagation conditions are set according to Annex C clause C.2.2.

3. The SS shall transmit an *RRCReconfiguration* message to configure FDD PCell (Cell 1), TDD SCell(Cell 2) and TDD SCell(Cell 3) as per TS 38.508-1 [14] clause 7 with the message content exceptions defined in clause 6.5.7C.1.4.3. *UplinkTxSwitching* is configured to the UE.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. Set the parameters according to T1 in Tables 6.5.7C.1.5-1. T1 starts.

6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for NR FDD carrier (Cell 1), on the following symbol in the slot overlapping with the 1st special slot of every radio frame of the NR TDD carrier (Cell 2) and NR TDD carrier (Cell 3):

   - symbol#12 if UE does not report *uplinkTxSwitching-DL-Interruption*;

   - otherwise,

     - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or

     - symbol #9 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or

     - symbol #10 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

7. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for NR TDD carrier (Cell 2) and NR TDD carrier (Cell 3), on the following symbol in the 2nd special slot of every radio frame:
   - symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption*;

   - otherwise,

     - symbol #4 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or

     - symbol #5 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or

     - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

8. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report while meeting the test requirements in Table 6.5.7C.1.5-3, if so, increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.

9. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

   or

   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 3-9 until a test verdict has been achieved.

### 6.5.7C.1.4.3 Message contents

| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability [*uplinkTxSwitchingPeriod2T2T*]. | | | | |

The UE shall send L1-RSRP report for Cell 1, Cell 2 and Cell 3 after the reception of corresponding DCI trigger. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7C.1.5-3.

**Table 6.5.7C.1.5-3: L1-RSRP absolute accuracy requirements for the reported values**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7C.2 NR SA FR1 DL interruptions at switching between two uplink bands with two transmit antenna connectors in TDD-TDD CA

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7C.2.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink bands with two transmit antenna connectors in TDD-TDD CA.

### 6.5.7C.2.2 Test applicability

This test applies to all types of NR UE release 17 onwards, configured with *uplinkTxSwitchingPeriod2T2T*.and supports *simultaneousRxTxInterBandCA.*

### 6.5.7C.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7C.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7C.2

6.5.7C.2.4 Test description

6.5.7C.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7C.2.4.1-1.

**Table 6.5.7C.2.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7C.2-1 | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7C.2.4.1-2.

**Table 6.5.7C.2.4.1-2: Initial conditions for DL interruptions at switching between two uplink bands with two transmit antenna connectors in TDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |

### 6.5.7C.2.4.2 Test procedure

The test consists of three active NR cells: FR1 TDD PCell (Cell 1), FR1 TDD SCell (Cell 2) and FR1 TDD SCell (Cell 3). The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be connected to Cell 1, Cell 2 and Cell 3 and the RRC message including *uplinkTxSwitching* is received at the UE antenna connector.

UE is configured to transmit SRS on PCell (Cell 1), Scell (Cell 2) and SCell (Cell 3) on the last 2 symbols of special slot. DL interruption is expected to take place prior to the SRS symbols.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Configure TDD PCell (Cell 1), TDD SCell(Cell 2) and TDD SCell(Cell 3) according to Table 6.5.7C.2.5-1. Propagation conditions are set according to Annex C clause C.2.2.

3. The SS shall transmit an *RRCReconfiguration* message to configure TDD PCell (Cell 1), TDD SCell(Cell 2) and TDD SCell(Cell 3) as per TS 38.508-1 [14] clause 7 with the message content exceptions defined in clause 6.5.7C.2.4.3. *UplinkTxSwitching* is configured to the UE.

4. The UE shall transmit *RRCReconfigurationComplete* message.

5. Set the parameters according to T1 in Tables 6.5.7C.2.5-1. T1 starts.

6. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for NR TDD carrier (Cell 1), on the following symbol in the 1st special slot of every even radio frame on PCell (Cell 1):

   - symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption*;
   - otherwise,
     - symbol #4 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or
     - symbol #5 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or
     - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

7. SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boosting 6dB for NR TDD carrier SCell (Cell 2) and NR TDD carrier SCell (Cell 3), on the following symbol on the 2nd special slot of every even radio frame on SCells (Cell 2 and Cell 3):

- symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption*;

- otherwise,

  - symbol #4 if UE capability *uplinkTxSwitchingPeriod2T2T* is 210us or
  - symbol #5 if UE capability *uplinkTxSwitchingPeriod2T2T* is 140us or
  - symbol #8 if UE capability *uplinkTxSwitchingPeriod2T2T* is 35us.

8. After SS transmits the DCI trigger, the UE shall send L1-RSRP report containing valid L1-RSRP report while meeting the test requirements given in Table 6.5.7C.2.5-3, if so, increase the number of passed iterations by one otherwise increase the number of failed iterations by one and switch off the UE.

9. SS transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED TS 38.508-1 [14] clause 4.5),

   or

   - switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 3-9 until a test verdict has been achieved.

### 6.5.7C.2.4.3 Message contents

UE shall send L1-RSRP report while meeting the accuracy requirements defined in TS 38.133 [6] clause 10.1.19.2.

The DL interruption lengths of X are defined in Table 6.5.7C.2.5-2

**Table 6.5.7C.2.5-2: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink bands**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| 2 | 0.25 | 4 | 10 | 14 |
| Note 1: Uplink Tx switching period depends on UE capability [*uplinkTxSwitchingPeriod2T2T*]. | | | | |

The UE shall send L1-RSRP report for Cell 1, Cell 2 and Cell 3 after the reception of DCI trigger. Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7C.2.5-3.

**Table 6.5.7C.2.5-3: L1-RSRP absolute accuracy requirements for the reported values**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

# 6.5.7D DL interruptions at UE switching across three or four uplink bands

## 6.5.7D.0 Minimum conformance requirements

The DL interruption requirements at dynamic switching across three or four uplink bands specified in this clause are applicable for an NR inter-band CA configuration and SUL band configuration with inter-band CA when the capability *BandCombination-UplinkTxSwitch-v1800* is present, and are only applicable for uplink switching mechanisms specified in clause 6.1.6 of TS 38.214 [9]. In the NR inter-band CA configuration and SUL band configuration with inter-band CA, the number of NR uplink bands with different carrier frequencies is three or four. NR UL carrier(s) in each of the three or four uplink bands are capable of one or two transmit antenna connector(s), according to the UE capability.

When dynamic switching across three or four uplink bands is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [13]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL Tx switching period located in uplink NR band(s) as indicated in RRC signalling [13]. The DL interruption lengths of X for single TAG and for 2-TAG are defined in Table 6.5.7D.0-1 and Table 6.5.7D.0-2.

Note: If one downlink carrier is indicated to be interrupted by two band pairs for dynamic switching simultaneously, the DL interruption length on the victim carrier is determined by the maximum of uplink switching periods of the two band pairs. If *UplinkTxSwitchingAdditionalPeriodDualUL-r18* is reported, DL interruption length is determined by the uplink Tx switching period, which is indicated by *UplinkTxSwitchingAdditionalPeriodDualUL-r18*. If *periodOnULBands-r18* is reported, DL interruption length is determined by the uplink Tx switching period, which is indicated by *periodOnULBands-r18*.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations and SUL band configurations with inter-band CA as specified in TS 38.101-1 [2].

**Table 6.5.7D.0-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching across three or four uplink bands for single TAG**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 7 |
| Note 1: Uplink Tx switching period depends on UE capability.<br>Note 2: RTD=3us is assumed to derive the DL interruption length. | | | | |

**Table 6.5.7D.0-2: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching across three or four uplink bands for two TAGs**

| $\mu$ | NR Slot length (ms) | Uplink Tx switching period Note1 | | |
|---|---|---|---|---|
| | | 35us | 140us | 210us |
| 0 | 1 | 2 | 3 | 4 |
| 1 | 0.5 | 3 | 6 | 8 |
| Note 1: Uplink Tx switching period depends on UE capability.<br>Note 2: RTD=9 us is assumed to derive the DL interruption length. | | | | |

The normative reference for this requirement is TS 38.133 [6] clauses 8.2.2.2.10D.

## 6.5.7D.1 NR SA FR1 DL interruptions at switching across three uplink bands in TDD-TDD CA for single TAG

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7D.1.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching across three uplink bands for single TAG defined in TS 38.133 [6] clause 8.2.2.2.10D.

### 6.5.7D.1.2 Test applicability

This test applies to all types of NR UE release 18 onwards supporting of inter-band UL CA (three bands), dynamic UL Tx switching across up to 4 bands and simultaneous transmission and reception in TDD-TDD inter-band NR CA.

### 6.5.7D.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7D.0.

The normative reference for this requirement is TS 38.133 [6] A.6.5.7D.1

### 6.5.7D.1.4 Test description

The test consists of three active FR1 NR cells: PCell (Cell 1), SCell (Cell 2) and SCell (Cell 3), where

- Cell 1, Cell 2 and Cell 3 are on NR UL carrier 1 in band A, NR UL carrier 2 in band B and NR UL carrier 3 in band C, respectively;

- Cell 1, Cell 2 and Cell 3 belong to the same TAG;
- Band A, B and C are three different TDD bands.
- UE is capable to transmit with one, one and two transmitting antenna connector(s) on Cell 1, Cell 2 and Cell 3, respectively;

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *UplinkTxSwitchingMoreBands-r18* is indicated to UE.

#### 6.5.7D.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7D.1.4.1-1.

**Table 6.5.7D.1.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7D.1-1 | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7D.1.4.1-2.

**Table 6.5.7D.1.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7D.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2b | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4a | |
| Exceptions to connection diagram | Without LTE link<br>Without Fader | | |

1. The general test parameter settings are set up according to Table 6.5.7D.1.4.1-3.
2. Message contents are defined in clause 6.5.7D.1.4.3.
3. The test scenario comprises of three NR Cells. (Cell 1, Cell 2 and Cell 3). Cell 1, Cell 2 and Cell 3 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7D.1.4.1-3: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2, 3 | Three radio channels are used for this test. |
| Active cell | | Cell 1: FR1 PCell<br>Cell 2: FR1 SCell<br>Cell 3: FR1 SCell | FR1 PCell on RF channel number 1<br>FR1 SCell on RF channel number 2<br>FR1 SCell on RF channel number 3 |
| CP length | | Normal | |
| DRX | | OFF | |
| Measurement gap pattern Id | | OFF | |
| Filter coefficient | | 0 | L3 filtering is not used |
| CSI-RS configuration for L1-RSRP reporting | | Cell 1: CSI-RS.2.5 TDD<br>Cell 2: CSI-RS.2.5 TDD<br>Cell 3: CSI-RS.2.5 TDD | |
| T1 | s | 5 | |

#### 6.5.7D.1.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. The SS transmits an *RRCReconfiguration* message with *UplinkTxSwitchingMoreBands-r18* to the UE to configure Cell 2 and Cell 3 as SCells according to Table 6.5.7D.1.5-1.
3. The UE shall transmit an *RRCReconfigurationComplete* message.
4. The SS activates Cell 2 and Cell 3.
5. Set the parameters according to T1 in Table 6.5.7D.1.4.1-3 and Table 6.5.7D.1.5-1. Propagation conditions are set according to Annex C clauses C.2.2. T1 starts.
6. For Cell 1 and Cell 2, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the 1st special slot of every even radio frame:
   - symbol #10 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
   - otherwise,
     - symbol #4 if UE capability uplink Tx switching period is 210 us, or
     - symbol #5 if UE capability uplink Tx switching period is 140us, or
     - symbol #8 if UE capability uplink Tx switching period is 35us.
7. For Cell 3, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the 2nd special slot of every even radio frame:
   - symbol #10 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
   - otherwise,
     - symbol #4 if UE capability uplink Tx switching period is 210 us, or
     - symbol #5 if UE capability uplink Tx switching period is 140us, or
     - symbol #8 if UE capability uplink Tx switching period is 35us.
8. If the UE sends L1-RSRP report containing valid L1-RSRP results for Cell 1, Cell 2 and Cell 3 and each L1-RSRP result meet the test requirements given in Table 6.5.7D.1.5-3, increase the number of passed iterations by one otherwise increase the number of failed iterations by one.
9. SS transmits in Cell 1 an *RRCReconfiguration* message to release all SCells and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. (if the reconfiguration fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5)

   or

   switches off and on the UE and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
10. Repeat step 2-9 until a test verdict has been achieved.

| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7D.2 NR SA FR1 DL interruptions at switching across four uplink bands in FDD-TDD CA for single TAG

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7D.2.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching across four uplink bands for single TAG defined in TS 38.133 [6] clause 8.2.2.2.10D.

### 6.5.7D.2.2 Test applicability

This test applies to all types of NR UE release 18 onwards supporting of inter-band UL CA (four bands), dynamic UL Tx switching across up to 4 bands and simultaneous transmission and reception in FDD-TDD inter-band NR CA.

### 6.5.7D.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7D.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7D.2

### 6.5.7D.2.4 Test description

The test consists of four active FR1 NR cells: PCell (Cell 1), SCell (Cell 2), SCell (Cell 3) and SCell (Cell 4), where

- Cell 1, Cell 2, Cell 3 and Cell 4 are on NR UL carrier 1 in band A, NR UL carrier 2 in band B, NR UL carrier 3 in band C and NR UL carrier 4 in band D, respectively;
- Cell 1, Cell 2, Cell 3 and Cell 4 belong to the same TAG;
- Band A and B are two different FDD bands, Band C and D are two different TDD bands;
- UE is capable to transmit with one transmitting antenna connector on Cell 1, Cell 2, Cell 3 and Cell 4, respectively;

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *UplinkTxSwitchingMoreBands-r18* is indicated to UE.

#### 6.5.7D.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7D.2.4.1-1.

**Table 6.5.7D.2.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7D.2-1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 4: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7D.2.4.1-2.

**Table 6.5.7D.2.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7D.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |

| Exceptions to connection diagram | Without LTE link<br>Without fader | | |

1. The general test parameter settings are set up according to Table 6.5.7D.2.4.1-3.

2. Message contents are defined in clause 6.5.7D.2.4.3.

3. The test scenario comprises of four NR Cells. (Cell 1, Cell 2, Cell 3 and Cell 4). Cell 1, Cell 2, Cell 3 and Cell 4 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7D.2.4.1-3: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2, 3, 4 | Four radio channels are used for this test. |
| Active cell | | Cell 1: FR1 PCell<br>Cell 2: FR1 SCell<br>Cell 3: FR1 SCell<br>Cell 4: FR1 SCell | Cell 1: FR1 PCell on RF channel 1 in band A<br>Cell 2: FR1 SCell on RF channel 2 in band B<br>Cell 3: FR1 SCell on RF channel 3 in band C<br>Cell 4: FR1 SCell on RF channel 4 in band D |
| CP length | | Normal | |
| DRX | | OFF | |
| Measurement gap pattern Id | | OFF | |
| Filter coefficient | | 0 | L3 filtering is not used |
| CSI-RS configuration for L1-RSRP reporting | | Cell 1: CSI-RS.1.5 FDD<br>Cell 2: CSI-RS.1.5 FDD<br>Cell 3: CSI-RS.2.5 TDD<br>Cell 4: CSI-RS.2.5 TDD | |
| T1 | s | 5 | |

### 6.5.7D.2.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS transmits an *RRCReconfiguration* message with *UplinkTxSwitchingMoreBands-r18* to the UE to configure Cell 2, Cell 3 and Cell 4 as SCells according to Table 6.5.7D.2.5-1.

3. The UE shall transmit an *RRCReconfigurationComplete* message.

4. The SS activates Cell 2, Cell 3 and Cell 4.

5. Set the parameters according to T1 in Table 6.5.7D.2.4.1-3 and Table 6.5.7D.2.5-1. Propagation conditions are set according to Annex C clauses C.2.2. T1 starts.

6. For Cell 1 and Cell 2, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the slot overlapping with the 1st special slot of every radio frame of Cell 3:

   - symbol #12 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
   - otherwise,
     - symbol #8 if UE capability uplink Tx switching period is 210 us, or

- symbol #9 if UE capability uplink Tx switching period is 140us, or
- symbol #10 if UE capability uplink Tx switching period is 35us.

7. For Cell 3 and Cell 4, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the 2nd special slot of every radio frame:

- symbol #10 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
- otherwise,
  - symbol #4 if UE capability uplink Tx switching period is 210 us, or
  - symbol #5 if UE capability uplink Tx switching period is 140us, or
  - symbol #8 if UE capability uplink Tx switching period is 35us.

8. If the UE sends L1-RSRP report containing valid L1-RSRP results for Cell 1, Cell 2, Cell 3 and Cell 4 and each L1-RSRP result meet the test requirements given in Table 6.5.7D.2.5-3, increase the number of passed iterations by one otherwise increase the number of failed iterations by one.

9. SS transmits in Cell 1 an *RRCReconfiguration* message to release all SCells and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. (if the reconfiguration fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5)

   or

   switches off and on the UE and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until a test verdict has been achieved.

### 6.5.7D.2.4.3 Message contents

Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7D.2.5-3.

**Table 6.5.7D.2.5-3: L1-RSRP absolute accuracy requirements for the reported values of CSI-RS**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7D.3 NR SA FR1 DL interruptions at switching across three uplink bands in FDD-TDD CA for two TAGs

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in RAN4

### 6.5.7D.3.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching across 3 bands with one or two transmit antenna connectors for two TAGs defined in TS 38.133 [6] clause 8.2.2.2.10D.

### 6.5.7D.3.2 Test applicability

This test applies to all types of NR UE release 18 onwards supporting of inter-band UL CA (three bands), dynamic UL Tx switching across up to 4 bands, simultaneous transmission and reception in FDD-TDD inter-band NR CA and at least two TAGs.

### 6.5.7D.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7D.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7D.3

### 6.5.7D.3.4 Test description

The test consists of three active FR1 NR cells: PCell (Cell 1), SCell (Cell 2) and SCell (Cell 3), where

- Cell 1, Cell 2 and Cell 3 are on NR UL carrier 1 in band A, NR UL carrier 2 in band B and NR UL carrier 3 in band C, respectively;
- Cell 1 and Cell 2 belong to one TAG, and Cell 3 belongs to the other TAG;
- Band A and B are two different FDD bands, Band C is a TDD band.
- UE is capable to transmit with one, one and two transmitting antenna connector(s) on Cell 1, Cell 2 and Cell 3, respectively;

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *UplinkTxSwitchingMoreBands-r18* is indicated to UE.

#### 6.5.7D.3.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7D.3.4.1-1.

**Table 6.5.7D.3.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7D.3-1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7D.3.4.1-2.

**Table 6.5.7D.3.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7D.3.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2b | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4a | |

| | | |
|---|---|---|
| Exceptions to connection diagram | Without LTE link<br>Without fader | |

1. The general test parameter settings are set up according to Table 6.5.7D.3.4.1-3.

2. Message contents are defined in clause 6.5.7D.3.4.3.

3. The test scenario comprises of three NR Cells. (Cell 1, Cell 2 and Cell 3). Cell 1, Cell 2 and Cell 3 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7D.3.4.1-3: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2, 3 | Three radio channels are used for this test. |
| Active cell | | Cell 1: FR1 PCell<br>Cell 2: FR1 SCell<br>Cell 3: FR1 SCell | FR1 PCell on RF channel number 1<br>FR1 SCell on RF channel number 2<br>FR1 SCell on RF channel number 3 |
| CP length | | Normal | |
| DRX | | OFF | |
| Measurement gap pattern Id | | OFF | |
| Filter coefficient | | 0 | L3 filtering is not used |
| CSI-RS configuration for L1-RSRP reporting | | Cell 1: CSI-RS.1.5 TDD<br>Cell 2: CSI-RS.1.5 TDD<br>Cell 3: CSI-RS.2.5 TDD | |
| T1 | s | 5 | |

### 6.5.7D.3.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS transmits an *RRCReconfiguration* message with *UplinkTxSwitchingMoreBands-r18* to the UE to configure Cell 2 and Cell 3 as SCells according to Table 6.5.7D.3.5-1.

3. The UE shall transmit an *RRCReconfigurationComplete* message.

4. The SS activates Cell 2 and Cell 3.

5. Set the parameters according to T1 in Table 6.5.7D.3.4.1-3 and Table 6.5.7D.3.5-1. Propagation conditions are set according to Annex C clauses C.2.2. T1 starts.

6. For Cell 1 and Cell 2, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in slot overlapping with the 1st special slot of every radio frame of the NR TDD carrier (Cell 3):

   - symbol #12 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
   - otherwise,
     - symbol #8 if UE capability uplink Tx switching period is 210 us, or
     - symbol #9 if UE capability uplink Tx switching period is 140us, or
     - symbol #10 if UE capability uplink Tx switching period is 35us.

7. For Cell 3, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the 2nd special slot of every radio frame:

   - symbol #10 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;

- otherwise,
  - symbol #3 if UE capability uplink Tx switching period is 210 us, or
  - symbol #5 if UE capability uplink Tx switching period is 140us, or
  - symbol #8 if UE capability uplink Tx switching period is 35us.

8. If the UE sends L1-RSRP report containing valid L1-RSRP results for Cell 1, Cell 2 and Cell 3 and each L1-RSRP result meet the test requirements given in Table 6.5.7D.3.5-3, increase the number of passed iterations by one otherwise increase the number of failed iterations by one.
9. SS transmits in Cell 1 an *RRCReconfiguration* message to release all SCells and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. (if the reconfiguration fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5)

   or

   switches off and on the UE and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
10. Repeat step 2-9 until a test verdict has been achieved.

### 6.5.7D.3.4.3 Message contents

Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7D.3.5-3.

**Table 6.5.7D.3.5-3: L1-RSRP absolute accuracy requirements for the reported values of CSI-RS**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.7D.4 NR SA FR1 DL interruptions at switching across four uplink bands in TDD-TDD CA for two TAGs

Editor's Notes:

- EPRE ratio of the AP NZP-CSI-RS to SSS needs to be added in 38.133

This test case is incomplete in following aspects:

- Test parameter are still in brackets in 38.133

### 6.5.7D.4.1 Test purpose

The purpose of this test is to verify DL interruption requirements during UE dynamic switching across four uplink bands for two TAGs defined in TS 38.133 [6] clause 8.2.2.2.10D.

### 6.5.7D.4.2 Test applicability

This test applies to all types of NR UE release 18 onwards supporting of inter-band UL CA (four bands), dynamic UL Tx switching across up to 4 bands, and simultaneous transmission and reception in TDD-TDD inter-band NR CA and at least two TAGs.

### 6.5.7D.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.7D.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.7D.4

### 6.5.7D.4.4 Test description

The test consists of four active FR1 NR cells: PCell (Cell 1), SCell (Cell 2), SCell (Cell 3) and SCell (Cell 4), where

- Cell 1, Cell 2, Cell 3 and Cell 4 are on NR UL carrier 1 in band A, NR UL carrier 2 in band B, NR UL carrier 3 in band C and NR UL carrier 4 in band D, respectively;
- Cell 1 and Cell 2 belong to one TAG, and Cell 3 and Cell 4 belong to the other TAG;
- Band A, B, C and D are four different TDD bands.
- UE is capable to transmit with one transmitting antenna connector on Cell 1, Cell 2, Cell 3 and Cell 4, respectively;

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *UplinkTxSwitchingMoreBands-r18* is indicated to UE.

#### 6.5.7D.4.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.7D.4.4.1-1.

**Table 6.5.7D.4.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 6.5.7D.4-1 | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 3: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 4: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.5.7D.4.4.1-2.

**Table 6.5.7D.4.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.7D.4.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | Without LTE link<br>Without Fader | | |

1. The general test parameter settings are set up according to Table 6.5.7D.4.4.1-3.
2. Message contents are defined in clause 6.5.7D.4.4.3.
3. The test scenario comprises of four NR Cells. (Cell 1, Cell 2, Cell 3 and Cell 4). Cell 1, Cell 2, Cell 3 and Cell 4 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.7D.4.4.1-3: General test parameters**

### 6.5.7D.4.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.
2. The SS transmits an *RRCReconfiguration* message with *UplinkTxSwitchingMoreBands-r18* to the UE to configure Cell 2, Cell 3 and Cell 4 as SCells according to Table 6.5.7D.4.5-1.
3. The UE shall transmit an *RRCReconfigurationComplete* message.
4. The SS activates Cell 2, Cell 3 and Cell 4.
5. Set the parameters according to T1 in Table 6.5.7D.4.4.1-3 and Table 6.5.7D.4.5-1. Propagation conditions are set according to Annex C clauses C.2.2. T1 starts.
6. For Cell 1 and Cell 2, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the 1st special slot of every even radio frame:
   - symbol #10 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
   - otherwise,
     - symbol #3 if UE capability uplink Tx switching period is 210 us, or
     - symbol #5 if UE capability uplink Tx switching period is 140us, or
     - symbol #8 if UE capability uplink Tx switching period is 35us.
7. For Cell 3 and Cell 4, the SS triggers aperiodic CSI-RS for L1-RSRP reporting with power boost of 6dB on the following symbol in the 2nd special slot of every even radio frame:
   - symbol #10 if UE does not report *uplinkTxSwitching-DL-Interruption-r18*;
   - otherwise,
     - symbol #3 if UE capability uplink Tx switching period is 210 us, or
     - symbol #5 if UE capability uplink Tx switching period is 140us, or
     - symbol #8 if UE capability uplink Tx switching period is 35us.
8. If the UE sends L1-RSRP report containing valid L1-RSRP results for Cell 1, Cell 2, Cell 3 and Cell 4 and each L1-RSRP result meet the test requirements given in Table 6.5.7D.4.5-3, increase the number of passed iterations by one otherwise increase the number of failed iterations by one.
9. SS transmits in Cell 1 an *RRCReconfiguration* message to release all SCells and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. (if the reconfiguration fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5)

or

switches off and on the UE and ensures UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until a test verdict has been achieved.

Each L1-RSRP measurement report shall meet the corresponding absolute accuracy requirements in Table 6.5.7D.4.5-3.

**Table 6.5.7D.4.5-3: L1-RSRP absolute accuracy requirements for the reported values of CSI-RS**

| Normal Conditions | T1 |
|---|---|
| Lowest reported value | 65 |
| Highest reported value | 86 |

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.5.8 UE specific CBW change

### 6.5.8.0 Minimum conformance requirements

#### 6.5.8.0.1 Minimum conformance requirements for UE specific CBW change

The requirements in this clause apply for a UE receives reconfiguration of *offsetToCarrier* or *carrierBandwidth* to change channel bandwidth.

After the UE receives RRC reconfiguration involving *offsetToCarrier* or *carrierBandwidth* change on the old CBW, UE shall be able to receive PDSCH/PDCCH on the DL BWP with BWP ID firstActiveDownlinkBWP-Id or transmit PUSCH on the UL BWP with BWP ID firstActiveUplinkBWP-Id of the new CBW right after a time duration of $\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ slots which begins from the beginning of DL slot n, where

- DL slot n is the last slot overlapping with the PDSCH containing the RRC command, and
- $T_{RRCprocessingDelay}$ is the length of the RRC procedure delay in millisecond as defined in TS 36.331 [29] clause 11.2 is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the length of the RRC procedure delay in millisecond as defined in TS 38.331 [13] clause 12, and
- $T_{CBWchangeDelayRRC} = 6\,ms$ is the time used by the UE to perform CBW change.

The UE is not required to transmit UL signals or receive DL signals during the above defined time duration $\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ on the cell where UE-specific CBW change occurs. When $T_{HARQ} > T_{RRCprocessingDelay}$ a longer switching delay is allowed. Where $T_{HARQ}$ is the time between DL data transmission and acknowledgement as specified in TS 38.213 [8].

The normative reference for this requirement is TS 38.133 [6] clause 8.13.1 and 8.13.2.

## 6.5.8.1 UE specific CBW change on PCell in FR1 in non-DRX

### 6.5.8.1.1 Test purpose

To verify the UE specific CBW change delay requirement defined in 38.133 [6] clause 8.13.

### 6.5.8.1.2 Test applicability

This test applies to all types of NR UEs from Release 16 onwards.

### 6.5.8.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.8.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.8.1.

### 6.5.8.1.4 Test description

The test scenario comprises of one Cell, PCell (Cell 1), which has constant signal levels throughout the test. The test consists of 1 time period with duration of T1.

During T1 the TE sends an *RRCReconfiguration* message containing *SCS-SpecificCarrier* to reconfigure UE-specific CBW. The test equipment verifies the UE specific CBW switching delay in PCell by estimating the time from the moment the *RRCReconfiguration* message including updated UE-specific CBW configuration is sent to the moment a valid ACK/NACK is received.

#### 6.5.8.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.8.1.4.1-1.

**Table 6.5.8.1.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 6.5.8.1-1 | FDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.8.1-2 | TDD duplex mode, 15 kHz SSB SCS, 10MHz bandwidth |
| 6.5.8.1-3 | TDD duplex mode, 30 kHz SSB SCS, 40MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.8.1.4.1-2.

**Table 6.5.8.1.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.8.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link | | |

1. The general test parameter settings are set up according to Table 6.5.8.1.4.1-3.

2. Message contents are defined in clause 6.5.8.1.4.3.

3. There is one NR carrier and one NR cells specified in the test. Cell 1 is the NR cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

**Table 6.5.8.1.4.1-3: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active Cell | | Cell 1 | Cell on RF channel number 1. |
| CP length | | Normal | |
| DRX | | OFF | |
| T1 | s | 0.2 | |

### 6.5.8.1.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. UE has been configured with UE specific CBW (CBW-1), initial BWP (BWP-1) and *firstActiveDownlinkBWP-Id* indicating BWP-1 is the active BWP.

2. The SS starts sending PDCCHs indicating new transmissions continuously on Cell 1.

3. The SS sends an *RRCReconfiguration* message containing *SCS-SpecificCarrier* with updated UE specific CBW (CBW-2), dedicated BWP (BWP-1) and *firstActiveDownlinkBWP-Id* indicating BWP-1 is the active BWP.

4. T1 starts from the beginning of slot i, where slot i is the last slot carrying the PDSCH containing the *RRCReconfiguration* message in step 3.

5 If the UE starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ , then the number of successful tests is increased by one.
Otherwise, the number of failure tests is increased by one.

6. After the SS receives the ACK/NACK in step 5 or when T1 expires, the SS shall

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   or

   - switch the UE off.

7. Depending on the choice in step 6, the SS shall,

   - transmit in NR Cell 1 a *Paging* message including matched ng-5G-S-TMSI for the UE if an *RRCRelease* has been sent in step 6. If the paging fails, switches off and on the UE,

   or

   - switch on the UE if the UE is switched off in step 6.

8. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5. UE has been configured with UE specific CBW (CBW-1), initial BWP (BWP-1) and *firstActiveDownlinkBWP-Id* indicating BWP-1 is the active BWP.

9. Repeat steps 2-8 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

### 6.5.8.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| $\hat{E}_s/N_{oc}$ | | dB | 17 |
| Io Note3 | Config 1,2 | dBm/ 9.36MHz | -58.96 |
| | Config 3 | dBm/ 38.16MHz | -52.86 |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |
| Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | |
| Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.1 is linked with ULBWP.0.1; DLBWP.1.1 is linked with ULBWP.1.1; as defined in clause 12 of TS 38.213 [8]. | | | |

During T1, the UE shall be ready for the reception of uplink grant for the PCell from the first DL slot that occurs right after the beginning of slot $i + \frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot $i + \frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length} + k1$.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in TS 38.213 [8].

All of the above test requirements shall be fulfilled in order for the observed UE specific CBW change delay on the PCell to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## 6.5.9 to 6.5.11

## 6.5.12 Subsequent conditional PSCell addition/change

### 6.5.12.0 [title missing]

#### 6.5.12.0.1 Minimum conformance requirements for Intra-frequency subsequent CPC from FR1-FR1 NR-DC to FR1-FR1 NR-DC

[TS 38.133 8.11E.2]

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

The UE shall be capable to transmit PRACH preamble towards the new target PSCell no later than in slot *n* + $T_{config_PSCell_Subsequent_Change_Conditional}$:

Where:

- Slot n is the time when UE transmits SN *RRCReconfigurationcomplete* message for the previous PSCell addition or change.
- $T_{config_PSCell_Subsequent_Change_Conditional} = T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2$ ms

- $T_{Event_DU}$ is the delay uncertainty which is the time from when UE transmits SN *RRCReconfigurationcomplete* message for the previous PSCell addition or change until a condition exists at the measurement reference point which will trigger the subsequent conditional PSCell change.

- $T_{measure}$ is the measurements time stated in clause 8.11E.2.1.

- $T_{UE_preparation}$ is the UE preparation time for subsequent conditional PSCell change, and starts after UE realizes the condition of PSCell change is met and identity of new PSCell is determined. $T_{UE_preparation}$ is up to 10 ms.

- $T_{processing}$ is the SW processing time needed by UE, including RF warm up period. $T_{processing}$ = 20 ms when source and target cells are in the same FR, and $T_{processing}$ = 40 ms when source and target cells are in different FRs.

- $T_{\Delta}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = 3*T_{rs}$ ms for PSCell operating with 12 PRB SSB BW. Otherwise, $T_{\Delta} = 1*T_{rs}$.

  - $T_{rs}$ is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise $T_{rs}$ is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}$ = 5 ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

- $T_{PSCell_DU}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. $T_{PSCell_DU}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in table 8.1-1 of TS 38.213 [3].

The PCell interruption specified in clause 8.2 is allowed only after the UE starts to execute a subsequent conditional PSCell change.

#### 6.5.12.0.1.1 Measurement time

The measurement time delay is defined from the end of $T_{Event_DU}$ until UE executes a PSCell change to a target cell and interruption time starts.

For intra-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_intra_with_index}$ or $T_{identify_intra_without_index}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For inter-frequency PSCell change, the measurement time delay measured without TTT and L3 filtering shall be less than $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ defined in clause 9.3.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PSCell change or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PSCell change. If a cell, which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PSCell change or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PSCell change, becomes undetectable for a period and then the cell becomes detectable again and triggers a PSCell change, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used, where $\mu$ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3]. When L3 filtering is used, an additional delay can be expected.

### 6.5.12.0.2 Minimum conformance requirements for Inter-frequency subsequent CPA from FR1-FR1 NR-DC to FR1-FR1 NR-DC

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

Upon receiving RRC Command containing MR-DCRelease configuration and sending an *RRCReconfigurationComplete* message confirming the release in subframe *n*, the UE shall be capable to transmit PRACH preamble towards PSCell no later than in subframe $n + T_{config_PSCell_Addition_Conditional}$:

Where:

- $T_{config_PSCell_Addition_Conditional} = T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2$ ms

- $T_{Event_DU}$ is the delay uncertainty which is the time from when the UE successfully transmits an *RRCReconfigurationComplete* message confirming the release of SCG configuration until a condition exists at the measurement reference point which will trigger the conditional PSCell addition.

- $T_{measure}$ is the measurements time stated in clause 8.9C.2.1.

- $T_{UE_preparation}$ is the UE preparation time for conditional PSCell addition, and starts after UE realizes the condition of PSCell addition is met and identity of the PSCell is determined. $T_{UE_preparation}$ is up to 10 ms.

- $T_{processing}$ is the SW processing time needed by UE, including RF warm up period. $T_{processing}$ = 20 ms when PSCell is in FR1, and $T_{processing}$ = 40 ms when PSCell is in FR2.

- $T_{\Delta}$ is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = 3*T_{rs}$ ms for target PSCell operating with 12 PRB SSB BW. Otherwise, $T_{\Delta} = 1*Trs$ ms.

  - Trs is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise Trs is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with Trs = 5 ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

- $T_{PSCell_DU}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. $T_{PSCell_DU}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in table 8.1-1 of TS 38.213 [3].

The PCell interruption specified in clause 8.2 is allowed only after the UE starts to execute a conditional PSCell addition.

#### 6.5.12.0.2.1 Measurement time

The measurement time delay is defined from the end of $T_{Event_DU}$ until UE executes a PSCell addition and interruption time starts.

The measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_inter_with_index}$ defined in clause 9.3.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_inter_with_index}$ for PSCell addition. If a cell, which has been detectable at least for the time period $T_{identify_inter_with_index}$ for PSCell addition, becomes undetectable for a period and then the cell becomes detectable again and triggers a PSCell addition, the measurement time delay shall be less than $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used, where $\mu$ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3]. When L3 filtering is used, an additional delay can be expected.

### 6.5.12.1 Intra-frequency subsequent CPC from FR1-FR1 NR-DC to FR1-FR1 NR-DC

Editor's Note: This test case is incomplete in following aspects:

- Message contents is TBD.

- Test applicability is missing

- TT analysis is missing

#### 6.5.12.1.1 Test purpose

The purpose of this test is to verify that the subsequent conditional NR PSCell change under NR-DC is within the requirements stated in clause 8.11E.2 of TS 38.133.

#### 6.5.12.1.2 Test applicability

This test applies to all types of NR UE release 18 onwards.

6.5.12.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.12.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.12.1

6.5.12.1.4 Test description

6.5.12.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.12.1.4.1-1.

**Table 6.5.12.1.4.1-1: Supported test configurations for Intra-frequency CPC from FR1-FR1 NR-DC to FR1-FR1 NR-DC**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode. PSCell: FDD |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode. PSCell: FDD |
| 3 | PCell: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode. PSCell: FDD |
| 4 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode. PSCell: TDD |
| 5 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode. PSCell: TDD |
| 6 | PCell: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode. PSCell: TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.12.1.4.1-2.

**Table 6.5.12.1.4.1-2: Initial conditions for DL interruptions at switching between two uplink bands with two transmit antenna connectors in FDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.12.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2a | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part.<br>- Without LTE link<br>- Without Faders | | |

1. The general test parameter settings are set up according to Table 6.5.12.1.4.1-3.

2. Message contents are defined in clause 6.5.12.1.4.3.

3. The test scenario comprises of three NR Cells. (Cell 1, Cell 2 and Cell 3). Cell 1, Cell 2 and Cell 3 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.12.1.4.1-3: General Test Parameters for Intra-frequency CPC from FR1-FR1 NR-DC to FR1-FR1 NR-DC**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two radio channels are used for this test. One for PCell and second for NR PSCell |
| Initial | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Neighbour cell | | Cell2, Cell 3 | Neighbour cells on RF channel number 2. |
| Final Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | active PSCell | | Cell 3 | PSCell on RF channel number 2. |
| A4 | Hysteresis | dB | 0 | Used to trigger conditional PSCell addition of Cell 2 |
| | Threshold RSRP | dBm | -118 | |

| | | | |
|---|---|---|---|
| Time to Trigger | s | 0 | |
| A3 | dB | 0 | Used to trigger conditional PSCell change from Cell 2 to Cell 3 |
| DRX | | OFF | Continuous monitoring of primary cell |
| Measurement gap pattern Id | | 0 | Gaps are configured during T1, T2 and released upon T3 starts. |
| PRACH configuration on cell2 and cell3 | | FR1 PRACH configuration 1 | Captured in clause A.3.8.2.1 |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on primary component carrier. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for cells on carrier frequency of cell2. |
| T1 | s | 1 | During this time the PCell is known and Cell 2 is unknown. |
| T2 | s | ≤5 | During this time Cell 2 meets the PSCell addition condition and UE adds this PSCell. |
| T3 | s | ≤5 | During this time Cell 3 meets the PSCell change condition and UE sends PRACH to Cell 3. |

#### 6.5.12.1.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS transmits a SN *RRCReconfiguration* message to the UE to configure Cell 2 and Cell 3 as SCells according to Table 6.5.12.4.5-1.

3. The UE shall transmit an *RRCReconfigurationComplete* message.

4. The SS activates Cell 2 and Cell 3

5. Set the parameters according to T1 in Table 6.5.12.4.4.1-3 and Table 6.5.12.4.5-1. Propagation conditions are set according to Annex C clauses C.2.2. T1 starts.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.5.12.4.5-1. T2 starts.

7. When T2 expires, the SS shall switch the power settings at T2 to power setting at T3 as per Tables 6.5.12.4.5-1 and 6.5.12.4.5-2. T3 starts.

8. If

   a) The UE shall start to transmit the PRACH to Cell 2 less than Tmeasure + TUE_preparation + Tprocessing + TΔ + TPSCell_DU + 2 ms = 920+10+62 ms=992 ms from the start of T2.

   b) The UE shall start to transmit the PRACH to Cell 3 less than TEvent_DU + Tmeasure + TUE_preparation + processing + TΔ + TPSCell_DU + 2 ms = 0+920+10+62 ms=992 ms from the start of T3.

   and

   c) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

   - $X = T_{interrupt} + k_1$ for test configuration 1 in Table 6.5.3.12.4.1-1
   - $X = T_{interrupt}$ for test configuration 2 in Table 6.5.3.12.4.1-1
   - $X = 2 \cdot T_{interrupt}$ for test configuration 3 in Table 6.5.3.12.4.1-1.

9. When T3 expires the UE shall be capable to transmit PRACH preamble towards the Cell3.

10. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

11. Repeat steps 2-10 until the confidence is achieved.

6.5.12.1.4.3 Message contents

TBD

| Propagation condition | | 1,2,3,4,5,6 | AWGN | | | AWGN | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

$T_{RRC_delay}$ + $T_{Event_DU}$ for PSCell addition (Cell 2) occurs during T1 as the addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure}$ + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta}$ + $T_{PSCell_DU}$ + 2 ms = 920+10+62 ms=992 ms from the start of T2.

The UE shall start to transmit the PRACH to Cell 3 less than $T_{Event_DU}$ + $T_{measure}$ + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta}$ + $T_{PSCell_DU}$ + 2 ms = 0+920+10+62 ms=992 ms from the start of T3.
All of the above test requirements shall be fulfilled in order for the observed conditional PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

## 6.5.12.2 Inter-frequency subsequent CPA from FR1-FR1 NR-DC to FR1-FR1 NR-DC

Editor's Note: This test case is incomplete in following aspects:

- Message content is TBD.

- Test applicability is missing

- TT analysis is missing

### 6.5.12.2.1 Test purpose

The purpose of this test is to verify that the subsequent conditional NR PSCell addition under NR-DC is within the requirements stated in clause 8.9C.2 of 38.133.

### 6.5.12.2.2 Test applicability

This test applies to all types of NR UE release 18 onwards.

#### 6.5.12.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.12.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.12.2

#### 6.5.12.2.4 Test description

##### 6.5.12.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.12.2.4.1-1.

**Table 6.5.12.2.4.1-1: Supported test configurations for Inter-frequency Subsequent CPA from FR1-FR1 NR-DC to FR1-FR1 NR-DC**

| Configuration | Description |
|---|---|
| 1 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode. PSCell: FDD |
| 2 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode. PSCell: FDD |
| 3 | PCell: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode. PSCell: FDD |
| 4 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode. PSCell: TDD |
| 5 | PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode. PSCell: TDD |
| 6 | PCell: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode. PSCell: TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.12.2.4.1-2.

**Table 6.5.12.2.4.1-2: Initial conditions for DL interruptions at switching between two uplink bands with two transmit antenna connectors in FDD-TDD CA**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.12.2.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2a | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part.<br>- Without LTE link<br>- Without Faders | | |

1. The general test parameter settings are set up according to Table 6.5.12.1.4.1-3.
2. Message contents are defined in clause 6.5.12.1.4.3.
3. The test scenario comprises of three NR Cells. (Cell 1, Cell 2 and Cell 3). Cell 1, Cell 2 and Cell 3 are configured according to Annex C.1.2 and C.1.3.

**Table 6.5.12.2.4.1-3: General Test Parameters for Subsequent Conditional PSCell Addition and Release**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2, 3 | Three radio channels are used for NR Cells for this test. |
| Initial | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Neighbour cell | | Cell 2 | Neighbour cell on RF channel number 2. |
| | | | Cell 3 | Neighbour cell on RF channel number 3. |
| Final Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Active PSCell | | Cell 3 | PSCell on RF channel number 3 |
| | Neighbour Cell | | Cell 2 | Neighbour cell on RF channel number 2 |
| A4 | Hysteresis | dB | 0 | Hysteresis for evaluation of event A1. |

| | | | | |
|---|---|---|---|---|
| | Threshold RSRP | dBm | -118 | A4 event is used to trigger conditional PSCell addition of Cell 2. |
| | Time to Trigger | s | 0 | |
| DRX | | | OFF | Continuous monitoring of primary cell |
| Measurement gap pattern Id | | | 0 | Gaps are configured during T1, T2, T3 and T4. |
| PRACH configuration on cell2 | | | FR1 PRACH configuration 1 | Captured in clause A.3.8.2.1 |
| Cell-individual offset for cells on RF channel number 1 | | dB | 0 | Individual offset for cells on primary component carrier. |
| Cell-individual offset for cells on RF channel number 2 | | dB | 0 | Individual offset for cells on carrier frequency of Cell 2. |
| Cell-individual offset for cells on RF channel number 3 | | dB | 0 | Individual offset for cells on carrier frequency of Cell 3. |
| T1 | | s | 1 | During this time the PCell is known, PSCell 1 and PSCell 2 are unknown. |
| T2 | | s | ≤7 | During this time PSCell 1 meets the PSCell addition condition and UE adds this PSCell. |
| T3 | | s | ≤1 | During this time the UE releases the PSCell 1. |
| T4 | | s | ≤7 | During this time PSCell 2 meets the addition condition and UE adds this PSCell. |

#### 6.5.12.2.4.2 Test procedure

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. The SS transmits a SN *RRCReconfiguration* message to the UE to configure Cell 2 and Cell 3 as SCells according to Table 6.5.12.2.4.5-1.

3. The UE shall transmit an *RRCReconfigurationComplete* message.

4. The SS activates Cell 2 and Cell 3

5. Set the parameters according to T1 in Table 6.5.12.2.4.4.1-3 and Table 6.5.12.2.4.5-1. Propagation conditions are set according to Annex C clauses C.2.2. T1 starts.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.5.12.2.5-1. T2 starts.

7. When T2 expires, the SS shall switch the power settings at T2 to power setting at T3 as per Tables 6.5.12.2.5-1 and 6.5.12.2.5-2. T4 starts.

8. If

   a) The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms = 1040+10+62 ms=1112 ms from the start of T2.

   b) The UE shall start to transmit the PRACH to Cell 3 less than $T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms = 0+1040+10+62 ms=1112 ms from the start of T4.

   and

   c) no longer than X consecutive ACK/NACK DTXs are observed by the SS from the start of T2 to the instant the UE transmits the first PRACH preamble, where

   - $X = T_{interrupt} + k_1$ for test configuration 1 in Table 6.5.12.1.4.1-1
   - $X = T_{interrupt}$ for test configuration 2 in Table 6.5.12.1.4.1-1
   - $X = 2 \cdot T_{interrupt}$ for test configuration 3 in Table 6.5.12.1.4.1-1.

9. When T4 expires the UE shall be capable to transmit PRACH preamble towards the Cell3.

10. If UE is not in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1, switch off and on the UE. Then ensure

the UE is in State RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 on Cell 1.

11. Repeat steps 2-10 until the confidence is achieved.

| Propagation condition | | 1,2,3,4,5,6 | AWGN | | | | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

$T_{RRC_delay}$ + $T_{Event_DU}$ for PSCell addition (Cell 2) occurs during T1 as the addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure}$ + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta}$ + $T_{PSCell_DU}$ + 2 ms = 1040+10+62 ms=1112 ms from the start of T2.

The UE shall start to transmit the PRACH to Cell 3 less than $T_{Event_DU}$ + $T_{measure}$ + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta}$ + $T_{PSCell_DU}$ + 2 ms = 0+1040+10+62 ms=1112 ms from the start of T4.

All of the above test requirements shall be fulfilled in order for the observed conditional PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

## 6.5.13 Active TCI state switch delay

### 6.5.13.0 Minimum conformance requirements

If the MAC-CE from two TRPs indicating TCI state switch are not overlapped, requirements specified in TS 38.133 [6] clause 8.15.3 are applicable for each target TCI state switch.

The requirements in this clause shall apply for DL TCI state switch using separate DL TCI state or joint TCI state of unified TCI state switch framework.

In case that source RS in DL TCI state or joint TCI state is associated with a PCI different from that of the serving cell, the requirements in this clause shall apply if the cell with different PCI satisfies the known cell condition defined in TS 38.133 [6] clause 8.15.1. If the known cell condition is not met, longer delay may be expected.

In case of joint TCI state switch, if the target PL-RS is not maintained, UE is not expected to receive on DL based on the target TCI state before UE completes the DL and UL TCI state switch.

Upon receiving PDSCH carrying MAC-CE activation command in slot n, if the target TCI state is known, the UE shall be able to receive UE-dedicated PDCCH/PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot n+ $T_{HARQ}$ + $3N_{slot}^{subframe,\mu}$+ $TO_k$*($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$+ OL*$T_{SSB}$) / *NR slot length*.

Upon receiving PDSCH carrying MAC-CE activation command in slot n, if the target TCI state is unknown, the UE shall be able to receive UE-dedicated PDCCH/PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot n+ $T_{HARQ}$ +$3N_{slot}^{subframe,\mu}$ + ($T_{L1\text{-}RSRP}$ +$TO_{uk}$*($T_{first\text{-}SSB}$+ $T_{SSB\text{-}proc}$+ OL*$T_{SSB}$)) / *NR slot length*.

The UE shall be able to receive UE-dedicated PDCCH/PDSCH with the old TCI state until slot n+ $T_{HARQ}$ + $3N_{slot}^{subframe,\mu}$.

Where

- $T_{HARQ}$ (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [8];
- $T_{first\text{-}SSB}$ is the time to the first SSB transmission after MAC CE command is decoded by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{SSB\text{-}proc}$ = 2 ms;
- $TO_k$ = 0 if the target TCI state have QCL relationship with a RS of a TCI state in the active list of TCI states or if the target TCI state is in the active list of TCI states, otherwise $TO_k$ = 1;
- OL = 1 if the SSB overlaps or is adjacent to the SSB from the other TRP in FR2 and the SSB is associated to the TRP with the lowest corestPoolIndex, 0, otherwise.
- $T_{L1\text{-}RSRP}$ = 0 in FR1 or when the TCI state switching not involving QCL-TypeD in FR2. Otherwise,
- $T_{L1\text{-}RSRP}$ is the time for Rx beam refinement in FR2, defined as
- $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ for SSB as specified in clause 9.5.4.1, when receive timing difference is within CP,
  - with the assumption of M=1
  - with $T_{Report}$ = 0
- $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ for CSI-RS as specified in clause 9.5.4.2, when receive timing difference is within CP
  - CSI-RS based L1-RSRP measurement only apply for TCI state switch when source RS is associated with serving cell
  - configured with higher layer parameter *repetition* set to ON
  - with the assumption of M=1 for periodic CSI-RS
  - for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
  - with $T_{Report}$ = 0
  - $TO_{uk}$ = 1 for CSI-RS based L1-RSRP measurement, and 0 for SSB based L1-RSRP measurement when TCI state switching involves QCL-TypeD
- $TO_{uk}$ = 1 when TCI state switching involves other QCL types only
- $T_{first\text{-}SSB}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{first\text{-}SSB}$ is time to first SSB transmission after MAC CE command is decoded by the UE for other QCL types;

- The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state

The normative reference for this requirement is TS 38.133 [6] clause 8.22.3.

## 6.5.13.1 NR SA FR1 MAC-CE based joint TCI state switch for mDCI with two TA when RTD is larger than CP

Editor's Note: This test case is incomplete. Following aspects are either missing or TBD:

- MU/TT analysis is missing.
- Message content is imcomplete.

### 6.5.13.1.1 Test purpose

To verify the active TCI state switch delay requirement defined in 38.133 [6] clause 8.22.3.

### 6.5.13.1.2 Test applicability

This test applies to all types of NR UEs from Release 18 onwards supporting unified TCI with joint DL/UL TCI update for multi-DCI based multi-TRP.

### 6.5.13.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.5.13.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.5.13.1.

### 6.5.13.1.4 Test description

#### 6.5.13.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.5.13.1.4.1-1.

**Table 6.5.13.1.4.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

Configure the test equipment and the DUT according to the parameters in Table 6.5.13.1.4.1-2 and Table 6.5.13.1.4.1-3.

**Table 6.5.13.1.4.1-2: Initial conditions**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.5.13.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.7.1 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link | | |

**Table 6.5.13.1.4.1-3: General test parameters for TCI state switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1 | One NR radio channel is used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| CP length | | Normal | |

| | | | |
|---|---|---|---|
| Timing offset between SSB 0 and SSB1 | µs | 25 | |
| Timing offset between SSB0 and SSB2 | µs | 33 | |
| DRX | | OFF | |
| T1 | s | 0.2 | |
| T2 | s | 0.2 | |

1. Message contents are defined in clause 6.5.13.1.4.3.

2. Single Cell is used, which is NR FR1 PCell containing two TRPs (i.e., TRP 0 and TRP 1) belonging to two TAGs. The connection setup is done according to the settings in Annex C.1.2 and C.1.3. The test parameters are given in Table 6.5.13.1.4.1-3.

#### 6.5.13.1.4.2 Test procedure

PDCCHs associated with corsetPoolIndex 0 and 1 indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending on PUCCH associated with TRP 0.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 different TCI states associated with coresetPoolIndex 0 for PCell, PDCCH TCI state 0 (QCL'd to SSB0), in Cell 1 before starting the test. UE is configured with 2 TCI states associated with coresetPoolIndex 1 for PCell, PDCCH TCI state 0 (QCL'd to SSB1) and TCI state 1 (QCL'd to SSB2).
- UE is indicated in TCI state 0 as the active PDCCH TCI state for PDCCH associated with coresetPoolIndex 0, and UE is indicated in TCI state 0 as the active PDCCH TCI state for PDCCH associated with coresetPoolIndex 1.
- Target TCI state is not in the active TCI state list.

The test consists of two time periods, T1 and T2. During T1 only SSB0 and SSB2 are transmitted. At the beginning of T2, the SSB1 corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1 for PDCCH associated with coresetPoolIndex 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PCell on TCI state 0 associated with coresetPoolIndex 0 till n+ $T_{HARQ}$ +3 ms. The test equipment also verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 associated with coresetPoolIndex 0 after n+ $T_{HARQ}$ +3 ms + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$).

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.4.
2. Set the parameters according to T1 in Table 6.5.13.1.5-1. Propagation conditions are set according to clause C.2.2. T1 starts. During T1 only SSB0 and SSB2 are transmitted.
3. When T1 expires the SS starts transmitting SSB1 corresponding to TCI state 1. T2 starts.
4. The SS transmits an *RRCReconfiguration* message to configure periodic L1-RSRP reporting.
5 The UE transmits an *RRCReconfigurationComplete* message
6. The SS sends a MAC-CE to indicate a switch to TCI state 1 for PDCCH associated with coresetPoolIndex 1 in slot n which is within 1280ms of UE providing L1-RSRP report with results for both SSB0 and SSB1.
7. If the SS:
   a) receives ACK/NACK on each UL transmission occasion scheduled on TCI state 0 associated with coresetPoolIndex 0 and

b) receives ACK/NACK on each UL transmission occasion scheduled on TCI state 0 associated with coresetPoolIndex 1 until slot n+$T_{HARQ}$+3ms, and

c) receives ACK/NACK on each UL transmission occasion scheduled on TCI state 1 associated with coresetPoolIndex 1 after n+ $T_{HARQ}$ +5 ms + $T_{first-SSB}$

the number of successful tests is increased by one, otherwise the number of failed tests is increased by one.

8. When T2 expires the SS shall sends a MAC-CE to indicate switch to TCI state 0 for PDCCH associated with coresetPoolIndex 1.

9. Wait 1s for the UE to switch to TCI state 0 for PDCCH associated with coresetPoolIndex 1. If the SS receives ACK/NACK on each UL transmission occasion scheduled on TCI state 0 associated with coresetPoolIndex 1 continue to step 11. Otherwise continue to step 10.

10. Switch the UE on and off. Ensure the UE is in RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.4.

11. Repeat steps 2-10 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.5.13.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PDSCH RMC for TRP0 and TRP1 are scheduled in non-overlapping PRBs

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall be able to continue receive on TRP 0, and for TRP 1, UE shall:

- be able to continue to receive on TCI state 0 till slot n+ $T_{HARQ}$ +3 ms
- be able to start receiving on TCI state 1 after slot n+ $T_{HARQ}$ +5 ms + $T_{first\text{-}SSB}$

The rate of correct events observed during repeated tests shall be at least 90 %.

# 6.6 Measurement procedures

## 6.6.1 Intra-frequency measurements

### 6.6.1.0 Minimum conformance requirements

#### 6.6.1.0.1 Minimum conformance requirements for event-triggered measurement without gap

Same as 4.6.1.0.1

#### 6.6.1.0.2 Minimum conformance requirements for event-triggered measurement with gap

[TS 38.133 [6], clause 9.2.6.2, 9.2.6.3]

The UE shall be able to identify a new detectable intra-frequency cell within $T_{identify_intra_without_index}$ if UE is not indicated to report SSB based RRM measurement result with the associated SSB index (*reportQuantityRsIndexes* or *maxNrofRSIndexesToReport* is not configured), or the UE is indicated that the neighbour cell is synchronous with the serving cell (*deriveSSB-IndexFromCell* is enabled). It is assumed that *deriveSSB-IndexFromCell* is always enabled for FR1 TDD and FR2.

$$T_{identify_intra_without_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra}\ \text{ms}$$

Where:

$T_{PSS/SSS_sync_intra}$: it is the time period used in PSS/SSS detection given in table 6.6.1.0.2-1.

$T_{SSB_measurement_period_intra}$: equal to a measurement period of SSB based measurement given in table 6.6.1.0.2-2.

$CSSF_{intra}$: it is a carrier specific scaling factor and is determined according to $CSSF_{within_gap,i}$ in TS 38.133 [6] section 9.1.5.2.2 for measurement within outside measurement gaps.

**Table 6.6.1.0.2-1: Time period for PSS/SSS detection (Frequency range 1)**

| DRX cycle | $T_{PSS/SSS_sync_intra}$ |
|---|---|
| No DRX | max( 600ms, 5 x max(MGRP, SMTC period)) x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max( 600ms, ceil(1.5x 5) x max(MGRP, SMTC period, DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle > 320ms | 5 x max(MGRP, DRX cycle) x $CSSF_{intra}$ |

**Table 6.6.1.0.2-2: Measurement period for intra-frequency measurements with gaps (Frequency Range 1)**

| DRX cycle | $T_{SSB_measurement_period_intra}$ |
|---|---|
| No DRX | max( 200ms, 5 x max(MGRP, SMTC period)) x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max( 200ms, ceil(1.5x 5) x max(MGRP, SMTC period, DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | 5 x max(MGRP, DRX cycle) x $CSSF_{intra}$ |

[TS 38.133 [6], clause 9.2.2]

The requirements given above apply, provided:

- The cell being identified or measured is detectable.

An intra-frequency cell shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in TS 38.133 [6] sections 10.1.2 are fulfilled for a corresponding Band,
- SS-RSRQ related side conditions given in TS 38.133 [6] sections 10.1.7 are fulfilled for a corresponding Band,
- SS-SINR related side conditions given in TS 38.133 [6] Sections 10.1.12 are fulfilled for a corresponding Band,

- SSB_RP and SSB Ês/Iot according to TS 38.133 [6] Annex B.2.2 for a corresponding Band.

[TS 38.133 [6], clause 9.2.4.2]

The RSRP measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] clauses 10.1.2.1.1 and 10.1.2.1.2, the RSRQ measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] clauses 10.1.7.1.1, and the SINR measurement accuracy for all measured cells shall be as specified in the TS 38.133 [6] clause 10.1.12.1.1.

Reported RSRP, RSRQ and SINR measurements contained in event triggered measurement reports shall meet the requirements in TS 38.133 [6] clauses 10.1.2.1.1, 10.1.2.1.2, 10.1.7.1.1 and 10.1.12.1.1, respectively.

The UE shall not send any event triggered measurement reports, as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x $TTI_{DCCH}$. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{identify_intra_without_index}$ defined in TS 38.133 [6] section 9.2.6.2. When L3 filtering is used an additional delay can be expected.

The normative reference for this requirement is TS 38.133 [6] clauses 9.2.2, 9.2.4.2, 9.2.6.2 and 9.2.6.3.

### 6.6.1.0.3 Void

### 6.6.1.0.4 Minimum conformance requirements for event-triggered measurement with gap with SSB index reading

[TS 38.133 [6], clause 9.2.6.2, 9.2.6.3]

UE shall be able to identify a new detectable intra-frequency cell within $T_{identify_intra_with_index}$.

$$T_{identify_intra_with_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra} + T_{SSB_time_index_intra}\ ms$$

Where:

$T_{PSS/SSS_sync_intra}$: it is the time period used in PSS/SSS detection given in table 6.6.1.0.4-1.

$T_{SSB_time_index_intra}$: it is the time period used to acquire the index of the SSB being measured given in table 6.6.1.0.4-2.

$T_{SSB_measurement_period_intra}$: equal to a measurement period of SSB based measurement given in table 6.6.1.0.4-3.

$CSSF_{intra}$: it is a carrier specific scaling factor and is determined according to $CSSF_{within_gap,\ i}$ in TS 38.133 [6] section 9.1.5.2.2 for measurement conducted within measurement gaps.

When intrafrequency SMTC is fully non-overlapping with measurement gaps or intrafrequency SMTC is fully overlapping with MGs, $K_p$=1

When intrafrequency SMTC is partially overlapping with measurement gaps, $K_p$ = 1/(1- (SMTC period /MGRP)), where SMTC period < MGRP.

**Table 6.6.1.0.4-1: Time period for PSS/SSS detection (Frequency range 1)**

| DRX cycle | $T_{PSS/SSS_sync_intra}$ |
|---|---|
| No DRX | max( 600ms, 5 x max(MGRP, SMTC period)) x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max( 600ms, ceil(1.5x 5) x max(MGRP, SMTC period, DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | 5 x max(MGRP, DRX cycle) x $CSSF_{intra}$ |

**Table 6.6.1.0.4-2: Time period for time index detection (Frequency range 1)**

| DRX cycle | $T_{SSB_time_index_intra}$ |
|---|---|

| | |
|---|---|
| No DRX | max(120ms, ceil( 3 x $K_p$ ) x SMTC period)[Note 1] x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max(120ms, ceil (1.5 x 3 x $K_p$) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | ceil(3 x $K_p$) x DRX cycle x $CSSF_{intra}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified | |

**Table 6.6.1.0.4-3: Measurement period for intra-frequency measurements with gaps (Frequency Range 1)**

| DRX cycle | $T_{SSB_measurement_period_intra}$ |
|---|---|
| No DRX | max( 200ms, 5 x max(MGRP, SMTC period)) x $CSSF_{intra}$ |
| DRX cycle≤ 320ms | max( 200ms, ceil(1.5x 5) x max(MGRP, SMTC period, DRX cycle)) x $CSSF_{intra}$ |
| DRX cycle>320ms | 5 x max(MGRP, DRX cycle) x $CSSF_{intra}$ |

[TS 38.133 [6], clause 9.2.2]

The requirements given above apply, provided:

- The cell being identified or measured is detectable.

An intra-frequency cell shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in TS 38.133 [6] sections 10.1.2 are fulfilled for a corresponding Band,
- SS-RSRQ related side conditions given in TS 38.133 [6] sections 10.1.7 are fulfilled for a corresponding Band,
- SS-SINR related side conditions given in TS 38.133 [6] sections 10.1.12 are fulfilled for a corresponding Band,
- SSB_RP and SSB Ês/Iot according to TS 38.133 [6] Annex B.2.2 for a corresponding Band.

[TS 38.133 [6], clause 9.2.4.2]

The RSRP measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] clauses 10.1.2.1.1 and 10.1.2.1.2, the RSRQ measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] clauses 10.1.7.1.1, and the SINR measurement accuracy for all measured cells shall be as specified in the TS 38.133 [6] clause 10.1.12.1.1.

Reported RSRP, RSRQ and SINR measurements contained in event triggered measurement reports shall meet the requirements in TS 38.133 [6] clauses 10.1.2.1.1, 10.1.2.1.2, 10.1.7.1.1 and 10.1.12.1.1, respectively.

The UE shall not send any event triggered measurement reports, as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x $TTI_{DCCH}$. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than Tidentify_intra_with_index defined in TS 38.133 [6] section 9.2.6.2. When L3 filtering is used an additional delay can be expected.

The normative reference for this requirement is TS 38.133 [6] clauses 9.2.2, 9.2.4.2, 9.2.6.2 and 9.2.6.3.

### 6.6.1.0.5 Void

### 6.6.1.0.6 Minimum conformance requirements for event-triggered measurement with MUSIM gap configured

[TS 38.133 [6], clause 9.1.10]

If the UE requires gap patterns for MUSIM purpose, the network may provide one or more per-UE MUSIM gap pattern(s) for concurrent monitoring of all frequency layers for MUSIM via *MUSIM-GapConfig* [13]. The UE can be configured with no more than three periodic MUSIM gap patterns and/or one aperiodic MUSIM gap pattern for MUSIM via *MUSIM-GapConfig* [13]. The MUSIM gap patterns specified in Table 6.6.1.0.6-1 are applicable only for MUSIM operation.

The UE is not required to perform cell identification and measurement, paging monitoring, SIB acquisition, and/or on-demand SI request of the target cell in the target network that is outside the MUSIM gaps.

The UE is not required to conduct reception or transmission from or to the [source] network during MUSIM gaps that are not dropped due to collisions, as defined in TS 38.133 [6] clauses 9.1.10.4 and 9.1.10.5.

UE supporting MUSIM capability shall support the MUSIM gap patterns listed in Table 6.6.1.0.6-1 based on UE's capability specified in TS 38.306[11] and the applicability specified in Table 6.6.1.0.6-2.

UE determines MUSIM gap timing based on gap offset configuration from serving cell provided by higher layer signalling as specified in TS 38.331 [13].

**Table 6.6.1.0.6-1: MUSIM Gap Pattern Configurations**

| MUSIM Gap Pattern Id | MUSIM Gap Length (MGL, ms) | MUSIM Gap Repetition Period (MGRP, ms) |
|---|---|---|
| 0 | 6 | 40 |
| 1 | 6 | 80 |
| 2 | 3 | 40 |
| 3 | 3 | 80 |
| 4 | 6 | 20 |
| 5 | 6 | 160 |
| 6 | 4 | 20 |
| 7 | 4 | 40 |
| 8 | 4 | 80 |
| 9 | 4 | 160 |
| 10 | 3 | 20 |
| 11 | 3 | 160 |
| 12 | 10 | 80 |
| 13 | 20 | 160 |
| 14 | 6 | 320 |
| 15 | 6 | 640 |
| 16 | 6 | 1280 |
| 17 | 6 | 2560 |
| 18 | 10 | 320 |
| 19 | 10 | 640 |
| 20 | 10 | 1280 |
| 21 | 10 | 2560 |
| 22 | 20 | 320 |
| 23 | 20 | 640 |
| 24 | 20 | 1280 |
| 25 | 20 | 2560 |
| 26 | 20 | 5120 |
| 27 | 10 | NA |
| 28 | 20 | NA |
| NOTE 1: Measurement gap pattern #27, #28 are the aperiodic gap pattern without MGRP. | | |

**Table 6.6.1.0.6-2: Applicability for MUSIM Gap Pattern Configurations supported by the UE with NR standalone operation (with single carrier, NR CA configuration)**

| MUSIM gap pattern configuration | Serving cell | Gap Purpose | Applicable MUSIM Gap Pattern Id |
|---|---|---|---|
| Per-UE MUSIM gap | FR1, FR2, or FR1 + FR2 | MUSIM Note1 | 0-13, 14-26, 27, 28 |

NOTE 1: Inclusion of MUSIM procedures for per-UE MUSIM gaps only in NR single carrier, NR CA mode: MUSIM purpose which includes cell identification and measurement, paging monitoring, SIB acquisition, and/or on-demand SI request of the target cell in the target network.

[TS 38.133 [6], clause 9.1.10.2]

Priority levels are applied for each periodic MUSIM gap. A UE shall request a priority for all requested periodic MUSIM gaps when the UE requests MUSIM gaps via *MUSIM-GapConfig-r17* [13]. The UE shall request different priority level for each periodic MUSIM gaps. The network may assign priority to each periodic MUSIM gaps. The allocated priorities may differ from the priorities requested by the UE. The UE MUSIM requirements apply if the configured MUSIM gap priorities retain the same relative priorities among MUSIM gaps as requested by the UE.

The requirements in TS 38.133 [6] clause 9.1.10 apply provided different priority levels are allocated to each periodic MUSIM gaps and different priority levels are allocated to each periodic MUSIM gap and each measurement gap configured via *GapConfig-r17* without *preConfigInd-r17* or *ncsgInd-r17*.

An aperiodic MUSIM gap, when configured, is unconditionally kept in case of collisions with any other gap occasions, including MUSIM gaps and measurement gaps.

[TS 38.133 [6], clause 9.1.10.3]

The UE can request use of “keep solution” via *musim-GapKeepPreference* in [13]. Keep solution is for handling collisions among different MUSIM gaps. If the use of “keep solution” is granted, the UE shall keep all colliding periodic and aperiodic MUSIM gaps irrespectively of the priority of the periodic MUSIM gaps.

[TS 38.133 [6], clause 9.1.10.4]

MUSIM gap occasions are considered colliding if at least one of the following conditions is met:

- the MUSIM gap occasions are fully overlapping in time domain, or
- the MUSIM gap occasions partially overlapping in time domain, or
- the distance between the two MUSIM gap occasions is equal to or smaller than 4ms.

The distance between two MUSIM gap occasions is defined as the time difference between the ending point of the first occasion and the starting point of the second occasion, where the first MUSIM gap occasion occurs earlier in time than the second MUSIM gap occasion.

When “keep solution” in TS 38.133 [6] clause 9.1.10.3 is not used, a periodic MUSIM gap occasion colliding with an aperiodic MUSIM gap is dropped.

When “keep solution” in TS 38.133 [6], clause 9.1.10.3 is not used, collisions between periodic MUSIM gap occasions are resolved based on the assigned MUSIM gap priorities. Collisions are resolved sequentially in order of decreasing priority, starting with the gap that has the highest priority. For each collision, the occasion of the MUSIM gap with highest priority shall be kept and the occasion of the MUSIM gap with lower priority shall be dropped.

[TS 38.133 [6], clause 9.1.10.5]

MUSIM gap and measurement gap occasions are considered colliding if at least one of the following conditions is met:

- the MUSIM gap and measurement gap occasions are fully overlapping in time domain, or
- the MUSIM gap and measurement gap occasions are partially overlapping in time domain, or
- the distance between any of the MUSM gap and the measurement gap occasions is equal to or smaller than 4ms.

The distance between two gap occasions is defined as the time difference between the ending point of the first occasion and the starting point of the second occasion, where the first gap occasion occurs earlier in time than the second gap occasion. The gap occasion can be either a MUSIM gap occasion or a measurement gap occasion.

The measurement gap occasion colliding with an aperiodic MUSIM gap is dropped.

Collisions between MUSIM gaps and measurement gaps configured via *GapConfig-r17* with assigned priority but without *preConfigInd-r17* or *ncsgInd-r17* are handled based on their assigned priorities. Collisions are resolved

sequentially in order of decreasing priority, starting with the gap that has the highest priority. For each collision, the occasion of the MUSIM gap or measurement gap with highest priority shall be kept and the occasion of the MUSIM gap or measurement gap with lower priority shall be dropped.

Collisions between MUSIM gaps and measurement gaps configured via GapConfig or configured via *GapConfig-r17* without assigned priority are handled based on MGRP of the colliding gaps. Collisions are resolved sequentially in order of decreasing MGRP, starting with the gap that has the longest MGRP. For each collision, the occasion of the MUSIM gap or measurement gap with longer MGRP shall be kept and the occasion of the MUSIM gap or measurement gap with shorter MGRP shall be dropped. If the colliding MUSIM gap and measurement gap have the same MGRP, the requirements in clause 9 shall not apply.

[TS 38.133 [6], clause 9.1.10.6]

A slot is interrupted by a MUSIM gap if it overlaps with any occasion of the configured MUSIM gap, except for a dropped MUSIM gap occasion.

### 6.6.1.1 NR SA FR1 event-triggered reporting without gap in non-DRX

#### 6.6.1.1.1 Test purpose

To verify the UE's ability to make a correct reporting of an event within intra-frequency cell search without gap under non-DRX.

#### 6.6.1.1.2 Test applicability

This test applies to all types of NR UE release 15 onwards.

#### 6.6.1.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.1.

#### 6.6.1.1.4 Test description

##### 6.6.1.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.1.4.1-1.

**Table 6.6.1.1.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting without gap in non-DRX**

| Test Case ID | Description |
|---|---|
| 6.6.1.1-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.1.1-2 | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.1.1-3 | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test requirement and the DUT according to the parameters in Table 6.6.1.1.4.1-2.

**Table 6.6.1.1.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting without gap in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.1.1.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2 |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The test parameters for PCell and neighbour cell are given in Table 6.6.1.1.4.1-3 below.

2. Message contents are defined in clause 6.6.1.1.4.3.

3. There is one carrier and two cells specified in the test. NR Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.1 and C.1.2 for this test.

### 6.6.1.1.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.1.4.1-3 and Table 6.6.1.1.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.1.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.1.5-1. T2 starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 802 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

- transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

OR

- switch the UE off.

8. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
- if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
Or
- if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.<br>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

The overall delays measured is defined as the time from the beginning of time period T2, to the moment the UE send one Event A3 triggered measurement report to NR Cell 2.

The overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index}$ = ($T_{PSS/SSS_sync_intra}$ + $T_{SSB_measurement_period_intra}$) ms

$T_{PSS/SSS_sync_intr}$= max [ 600 ms, ceil (5 × $K_p$) × SMTC period ] × $CSSF_{intra}$ = 600 ms

$T_{SSB_measurement_period_intra}$= max [ 200 ms, ceil( 5 × $K_p$) × SMTC period ] × $CSSF_{intra}$ = 200 ms

TTI insertion uncertainty = 2 ms

The overall delays measured shall be less than a total of 802 ms in this test case (note: this gives a total of 800 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.6.1.2 NR SA FR1 event-triggered reporting without gap in DRX

### 6.6.1.2.1 Test purpose

To verify the UE's ability to make a correct reporting of an event within intra-frequency cell search without gap under DRX.

### 6.6.1.2.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1 and long DRX cycle. Test 1 can be skipped if test case 6.6.1.13 is executed.

### 6.6.1.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.2.

### 6.6.1.2.4 Test description

#### 6.6.1.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.2.4.1-1.

**Table 6.6.1.2.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting without gap in DRX**

| Test Case ID | Description |
|---|---|
| 6.6.1.2-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.1.2-2 | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.1.2-3 | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.2.4.1-2.

**Table 6.6.1.2.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting without gap in DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |

### 6.6.1.2.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.2.4.1-3 and Table 6.6.1.2.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.2.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.2.5-1. T2 starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 922 ms for Test 1 or less than 6402 ms for Test 2 then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

11. Repeat step 1-10 for each sub-test in Table 6.6.1.2.4.1-1 as appropriate.

### 6.6.1.2.4.3 Message contents

| | | 3 | -91 | -91 | -Infinity | -91 |
| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | Specified in Cell 1 columns | |
| | dBm/9.36 MHz | 2 | -64.60 | -62.25 | | |
| | dBm/38.16 MHz | 3 | -58.50 | -56.16 | | |
| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

In Test 1 when DRX cycle length = 40 ms, the overall delay measured is defined as the time from the beginning of time period T2 to the moment the UE send one Event A3 triggered measurement report on PUSCH.

In Test 2 when DRX cycle length = 640 ms, the overall delay measured is defined as the time from the beginning of time period T2 to the moment the UE starts to send preambles on the PRACH for Scheduling Request (SR) to obtain allocation to send the measurement report to NR Cell 2 on PUSCH.

For both tests:

The overall delays measured is defined as the time from the beginning of time period T2 to the moment the UE send one Event A3 triggered measurement report to NR Cell 2.

The overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delay measured when DRX cycle length is 40 ms test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index} = (T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra})$ ms

$T_{PSS/SSS_sync_intra} = \max[600ms, ceil(1.5 \times 5 \times K_p) \times \max(SMTC\ period, DRX\ cycle)] \times CSSF_{intra} = 600ms$

$T_{SSB_measurement_period_intra} = \max[200ms, ceil(1.5 \times 5 \times K_p) \times \max(SMTC\ period, DRX\ cycle)] \times CSSF_{intra} = 320ms$

TTI insertion uncertainty = 2 ms

The overall delay measured when DRX cycle length is 40 ms shall be less than a total of 922 ms.

The overall delay measured when DRX cycle length is 640 ms test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index} = (T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra})$ ms

$T_{PSS/SSS_sync_intra} = ceil(5 \times K_p) \times DRX\ cycle \times CSSF_{intra} = 3200ms$

$T_{SSB_measurement_period_intra} = ceil(5 \times K_p) \times DRX\ cycle \times CSSF_{intra} = 3200ms$

TTI insertion uncertainty = 2 ms

The overall delay measured when DRX cycle length is 640 ms shall be less than a total of 6402 ms.

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

### 6.6.1.3 NR SA FR1 event-triggered reporting with gap in non-DRX

#### 6.6.1.3.1 Test purpose

The purpose of this test is to verify UE's ability to make a correct reporting of an event with gaps under non-DRX within intra-frequency cell search with gaps requirements.

#### 6.6.1.3.2 Test applicability

This test applies to all types of NR UE release 15 onwards supporting 5GS NR SA FR1, CSI-RS-based RLM and BWP operation without bandwidth restriction.

#### 6.6.1.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.3.

#### 6.6.1.3.4 Test description

##### 6.6.1.3.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.3.4.1-1.

**Table 6.6.1.3.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting with gap in non-DRX**

| Test Case ID | Description |
|---|---|
| 6.6.1.3-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.1.3-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.1.3-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.3.4.1-2.

**Table 6.6.1.3.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting with gap in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.1.3.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.6.1.3.4.1-3.

2. Message contents are defined in clause 6.6.1.3.4.3.

3. There is one NR carrier and two cells specified in the test. Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.1 and C.1.2 for this test.

**Table 6.6.1.3.4.1-3: General test parameters for NR SA FR1 event-triggered reporting with gap in non-DRX**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1, 2, 3 | Cell 1 | |
| Neighbour cell | | 1, 2, 3 | Cell 2 | Cell to be identified. |
| RF Channel Number | | 1, 2, 3 | 1: Cell 1 and Cell 2 | |
| Measurement gap type | | 1, 2, 3 | Per-UE gaps | |
| Measurement gap repetition periodicity | ms | 1, 2, 3 | 40 | |
| Measurement gap length | ms | 1, 2, 3 | 6 | |

| T2 | s | 1, 2, 3 | 5 | |

#### 6.6.1.3.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.3.4.1-3 and Table 6.6.1.3.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.3.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.3.5-1.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 802 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the MeasurementReport message in step 6) or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.6.1.3.4.3-1: Common Exception messages for NR SA FR1 event-triggered reporting with gap in non-DRX**

| RLM-RS | | 1, 2, 3 | CSI-RS | | SSB | |
| $N_{oc}$ Note 2 | dBm/SCS | 1 | -98 | | | |
| | | 2 | -98 | | | |
| | | 3 | -95 | | | |
| $N_{oc}$ Note 2 | dBm/15 kHz | 1 | -98 | | | |
| | | 2 | | | | |
| | | 3 | | | | |
| $\hat{E}_s/I_{ot}$ | dB | 1 | 4 | -1.46 | -Infinity | -1.46 |
| | | 2 | | | | |
| | | 3 | | | | |
| $\hat{E}_s/N_{oc}$ | dB | 1 | 4 | 4 | -Infinity | 4 |
| | | 2 | | | | |
| | | 3 | | | | |
| SS-RSRP Note 3 | dBm/SCS | 1 | -94 | -94 | -Infinity | -94 |
| | | 2 | -94 | -94 | -Infinity | -94 |
| | | 3 | -91 | -91 | -Infinity | -91 |
| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | Specified in Cell 1 columns | |
| | dBm/9.36 MHz | 2 | -64.60 | -62.25 | | |
| | dBm/38.16 MHz | 3 | -58.50 | -56.16 | | |
| Propagation Condition | | 1, 2, 3 | AWGN | | | |
| Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.<br>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

The overall delays measured is defined as the time from the beginning of time period T2, to the moment the UE send one Event A3 triggered measurement report.

The overall delays measured in the test may be up to 2x$TTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra}$

$T_{PSS/SSS_sync_intra}$ = 600 ms

$T_{SSB_measurement_period_intra}$ = 200 ms

TTI insertion uncertainty = 2 ms

The overall delays measured shall be less than a total of 802 ms in this test case (note: this gives a total of 800 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.6.1.4 NR SA FR1 event-triggered reporting with gap in DRX

### 6.6.1.4.1 Test purpose

The purpose of this test is to verify UE's ability to make a correct reporting of an event with gaps under DRX within intra-frequency cell search with gaps requirements.

### 6.6.1.4.2 Test applicability

This test applies to all types of NR UE release 15 and forward supporting 5GS NR SA FR1, CSI-RS-based RLM, BWP operation without bandwidth restriction and long DRX cycle.

### 6.6.1.4.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.4.

### 6.6.1.4.4 Test description

#### 6.6.1.4.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.4.4.1-1.

**Table 6.6.1.4.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting with gap in DRX**

| Test Case ID | Description |
|---|---|
| 6.6.1.4-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.1.4-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.1.4-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.4.4.1-2.

**Table 6.6.1.4.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting with gap in DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.1.4.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.6.1.4.4.1-3.
2. Message contents are defined in clause 6.6.1.4.4.3.
3. There is one NR carrier and two cells specified in the test. Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.1 and C.1.2 for this test.

**Table 6.6.1.4.4.1-3: General test parameters for NR SA FR1 event-triggered reporting with gap in DRX**

### 6.6.1.4.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.4.4.1-3 and Table 6.6.1.4.4.2-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In Test 1 when DRX cycle = 40 ms is used, UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Timer Alignment Timer to keep the UE uplink time alignment. Furthermore, the UE is allocated with PUSCH resource at every DRX cycle.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.4.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.4.5-1.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 922 ms for Test 1 or less than 6402 ms for Test 2 then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

11. Repeat step 1-10 for each sub-test in Table 6.6.1.4.4.1-3 as appropriate.

#### 6.6.1.4.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

They are not settable parameters themselves. | | | | | | |

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra}$

$T_{PSS/SSS_sync_intra}$ = 600 ms for Test 1, and $T_{PSS/SSS_sync_intra}$ =3200 ms for Test 2

$T_{SSB_measurement_period_intra}$ = 320 ms for Test 1, and $T_{SSB_measurement_period_intra}$ = 3200 ms for Test 2

TTI insertion uncertainty = 2 ms

For Test 1, the overall delays measured shall be less than a total of 922 ms (note: this gives a total of 920 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For Test 2, the overall delays measured shall be less than a total of 6402 ms (note: this gives a total of 6400 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.6.1.5 NR SA FR1 event-triggered reporting without gap in non-DRX with SSB index reading

### 6.6.1.5.1 Test purpose

The purpose of this test is to verify UE's ability to make a correct reporting of an event within intra-frequency cell search without gaps requirements.

### 6.6.1.5.2 Test applicability

This test applies to all types of NR UE release 15 onwards.

### 6.6.1.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.5.

6.6.1.5.4 Test description

6.6.1.5.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.5.4.1-1.

**Table 6.6.1.5.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting without gap in non-DRX with SSB index reading**

| Configuration | Description |
|---|---|
| 6.6.1.5-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.5.4.1-2.

**Table 6.6.1.5.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting without gap in non-DRX with SSB index reading**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.1.5.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.6.1.5.4.1-3.
2. Message contents are defined in clause 6.6.1.5.4.3.
3. There is one NR carrier and two cells specified in the test. Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.1 and C.1.2 for this test.

**Table 6.6.1.5.4.1-3: General test parameters for NR SA FR1 event-triggered reporting without gap in non-DRX with SSB index reading**

#### 6.6.1.5.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.5.4.1-3 and Table 6.6.1.5.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.5.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.5.5-1.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 922 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.5.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.6.1.5.4.3-1: Common Exception messages for NR SA FR1 event-triggered reporting without gap in non-DRX with SSB index reading**

| Default Message Contents | |
|---|---|

6.6.1.5.5 Test requirement

Table 6.6.1.5.4.1-3 and Table 6.6.1.5.5-1 define the primary level settings including test tolerances for SA event triggered reporting without gap under non-DRX with SSB index reading test.

**Table 6.6.1.5.5-1: NR Cell specific test parameters for NR SA FR1 event-triggered reporting without gap in non-DRX with SSB index reading**

| Parameter | Unit | Test configuration | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| TDD configuration | | 1 | N/A | | N/A | |
| PDSCH RMC configuration | | 1 | SR.1.1 FDD | | N/A | |
| RMSI CORESET RMC configuration | | 1 | CR.1.1 FDD | | CR.1.1 FDD | |
| Dedicated CORESET RMC configuration | | 1 | CCR.1.1 FDD | | CCR.1.1 FDD | |
| OCNG Patterns | | 1 | OP.1 | | OP.1 | |
| TRS configuration | | 1 | TRS.1.1 FDD | | N/A | |
| Initial BWP configuration | | 1 | DLBWP.0.1<br>ULBWP.0.1 | | DLBWP.0.1<br>ULBWP.0.1 | |
| Active DL BWP configuration | | 1 | DLBWP.1.1 | | DLBWP.1.1 | |
| Active UL BWP configuration | | 1 | ULBWP.1.1 | | ULBWP.1.1 | |
| RLM-RS | | 1 | SSB | | SSB | |
| $N_{oc}$ Note 2 | dBm/SCS | 1 | -98 | | | |
| $N_{oc}$ Note 2 | dBm/15 kHz | 1 | -98 | | | |
| $\hat{E}_s/I_{ot}$ | dB | 1 | 4 | -1.46 | -Infinity | -1.46 |
| $\hat{E}_s/N_{oc}$ | dB | 1 | 4 | 4 | -Infinity | 4 |
| SS-RSRP Note 3 | dBm/SCS | 1 | -94 | -94 | -Infinity | -94 |
| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | Specified in Cell 1 columns | |
| Propagation Condition | | 1 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The overall delays measured is defined as the time from the beginning of time period T2, to the moment the UE send one Event A3 triggered measurement report.

The overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_with_index}$

$T_{identify_intra_with_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra} + T_{SSB_time_index_intra}$

$T_{PSS/SSS_sync_intra}$ = 600 ms

$T_{SSB_time_index_intra}$ = 120 ms

$T_{SSB_measurement_period_intra}$ = 200 ms

TTI insertion uncertainty = 2 ms

The overall delays measured shall be less than a total of 922 ms in this test case (note: this gives a total of 920 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

### 6.6.1.6 NR SA FR1 event-triggered reporting with gap in non-DRX with SSB index reading

#### 6.6.1.6.1 Test purpose

The purpose of this test is to verify UE's ability to make a correct reporting of an event within intra-frequency cell search with gaps requirements.

#### 6.6.1.6.2 Test applicability

This test applies to all types of NR UE release 15 onwards supporting 5GS NR SA FR1, CSI-RS-based RLM and BWP operation without bandwidth restriction.

#### 6.6.1.6.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.6.

#### 6.6.1.6.4 Test description

##### 6.6.1.6.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.6.4.1-1.

**Table 6.6.1.6.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting with gap in non-DRX with SSB index reading**

| Configuration | Description |
|---|---|
| 6.6.1.6-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.3.4.1-2.

**Table 6.6.1.6.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting with gap in non-DRX with SSB index reading**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |

### 6.6.1.6.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.6.4.1-3 and Table 6.6.1.6.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.6.5-1.

3. SS shall transmit an RRCReconfiguration message.

4. The UE shall transmit RRCReconfigurationComplete message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.3.5-1.

6. UE shall transmit a MeasurementReport message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 922 ms then the number of successful tests is increased by one. If the

UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the MeasurementReport message in step 6) or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.6.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| RLM-RS | | 1 | CSI-RS | | SSB | |
| $N_{oc}$ Note 2 | dBm/SCS | 1 | -98 | | | |
| $N_{oc}$ Note 2 | dBm/15 kHz | 1 | -98 | | | |
| $\hat{E}_s/I_{ot}$ | dB | 1 | 4 | -1.46 | -Infinity | -1.46 |
| $\hat{E}_s/N_{oc}$ | dB | 1 | 4 | 4 | -Infinity | 4 |
| SS-RSRP Note 3 | dBm/SCS | 1 | -94 | -94 | -Infinity | -94 |
| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | Specified in Cell 1 columns | |
| Propagation Condition | | 1 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The overall delays measured is defined as the time from the beginning of time period T2, to the moment the UE send one Event A3 triggered measurement report.

The overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_with_index}$

$T_{identify_intra_with_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra} + T_{SSB_time_index_intra}$

$T_{PSS/SSS_sync_intra}$ = 600 ms

$T_{SSB_time_index_intra}$ = 120 ms

$T_{SSB_measurement_period_intra}$ = 200 ms

TTI insertion uncertainty = 2 ms

The overall delays measured shall be less than a total of 922 ms in this test case (note: this gives a total of 920 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

### 6.6.1.7 NR SA FR1 event-triggered reporting without gap in DRX for UE configured with highSpeedMeasFlag-r16

#### 6.6.1.7.1 Test purpose

To verify the UE's ability to make a correct reporting of an event within intra-frequency cell search without gap under DRX for UE configured with highSpeedMeasFlag-r16.

#### 6.6.1.7.2 Test applicability

This test applies to all types of NR UE release 15 onwards that supports measurement enhancements in high speed scenario.

#### 6.6.1.7.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.7.

#### 6.6.1.7.4 Test description

##### 6.6.1.7.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.7.4.1-1.

**Table 6.6.1.7.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting without gap in DRX for UE configured with highSpeedMeasFlag-r16**

| Configuration | Description |
|---|---|
| 6.6.1.7-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.1.7-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.1.7-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.7.4.1-2.

**Table 6.6.1.7.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting without gap in DRX for UE configured with highSpeedMeasFlag-r16**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |

### 6.6.1.7.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.7.4.1-3 and Table 6.6.1.7.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.7.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.7.5-1. T2 starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 5122 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set NR Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.7.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.6.1.7.4.3-1: Common Exception messages for SA intra-frequency event triggered reporting tests without gap under DRX for UE configured with highSpeedMeasFlag-r16**

| | dBm/9.36 MHz | 2 | -64.60 | -62.25T | -64.60 | -62.25 |
| | dBm/38.16 MHz | 3 | -58.50 | -56.16 | -58.50 | -56.16 |
| Propagation Condition | | 1, 2 | AWGN | | AWGN 1944Hz Note 4 | |
| | | 3 | AWGN | | AWGN 3334Hz Note 5 | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: The AWGN 1944 Hz condition is a non-fading propagation channel with one tap. Doppler shift is a constant 1944Hz.
Note 5: The AWGN 3334 Hz condition is a non-fading propagation channel with one tap. Doppler shift is a constant 3334Hz.

The overall delays measured is defined as the time from the beginning of time period T2 to the moment the UE send one Event A3 triggered measurement report to NR Cell 2. When DRX cycle length = 640 ms, the overall delay measured is defined as the time from the beginning of time period T2 to the moment the UE starts to send preambles on the PRACH for Scheduling Request (SR) to obtain allocation to send the measurement report to NR Cell 2 on PUSCH.

The overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delay measured when DRX cycle length is 640 ms test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index} = (T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra})$ ms

$T_{PSS/SSS_sync_intra} = ceil(5 \times K_p) \times DRX\ cycle \times CSSF_{intra} = 3200ms$

$T_{SSB_measurement_period_intra} = ceil(Y \times K_p) \times DRX\ cycle \times CSSF_{intra} = 1920ms$

TTI insertion uncertainty = 2 ms

The overall delay measured when DRX cycle length is 640 ms shall be less than a total of 5122 ms.

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.6.1.8 NR SA FR1 event triggered reporting without gap in DRX for UE configured with highSpeedMeasCA-Scell-r17

### 6.6.1.8.1 Test purpose

The purpose of this test is to verify that the UE makes correct reporting of an event for UE configured with highSpeedMeasCA-Scell-r17. This test will partly verify the intra-frequency cell search requirements in TS 38.133 [6] clauses 9.2.5.1 and 9.2.5.2.

### 6.6.1.8.2 Test applicability

This test applies to all types of E-UTRA UE release 16 and forward supporting enhanced NR CA measurement requirements in high-speed scenario.

### 6.6.1.8.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.1.0.1

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.8.

### 6.6.1.8.4 Test description

#### 6.6.1.8.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.8.4.1-1.

**Table 6.6.1.8.4.1-1: Supported PCell test configurations for NR SA FR1 event triggered reporting without gap in DRX for UE configured with highSpeedMeasCA-Scell-r17**

| Configuration | Description |
|---|---|
| 6.6.1.8-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.1.8-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.1.8-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth (BWchannel) defined in each test configuration. | |

**Table 6.6.1.8.4.1-1A: Supported SCell test configurations for NR SA FR1 event triggered reporting without gap in DRX for UE configured with highSpeedMeasCA-Scell-r17**

| $Configuration_{SCell}$ | Description |
|---|---|
| 6.6.1.8-1A | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.1.8-2A | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.1.8-3A | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.<br>Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth (BWchannel) defined in each test configuration.<br>Note 3: NR Cell 3 has the same SCS, BW and duplex mode as NR Cell 2. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.8.4.1-2.

**Table 6.6.1.8.4.1-2: Initial conditions for NR SA FR1 event triggered reporting without gap in DRX for UE configured with highSpeedMeasCA-Scell-r17**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |

#### 6.6.1.8.4.2 Test procedure

Same test procedure as in 6.6.1.7.4.2 except following step 6:

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 5762 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

| Propagation Condition | | 1,2 | AWGN | | | | AWGN 1944Hz Note 4 | |
| | | 3 | AWGN | | | | AWGN 3334Hz Note 5 | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944Hz.
Note 5: The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334Hz.

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 5760 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% with the confidence level of 95%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.1.9 NR SA FR1 event triggered reporting with MUSIM gap configured

### 6.6.1.9.1 Test purpose

The purpose of this test is to verify that the UE makes correct reporting of an event on an intra-frequency layer based on measurement performed without measurement gaps when the UE is also configured with MUSIM gaps. This test will partly verify the intra-frequency cell search requirements in TS 38.133 [6] clauses 9.2.5.1 and 9.2.5.2.

### 6.6.1.9.2 Test applicability

This test applies to all types of NR UE release 18 and forward, supporting providing MUSIM assistance information with MUSIM gap preference and related MUSIM gap configuration.

### 6.6.1.9.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.1.0.1 and 6.6.1.0.6.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.9.

### 6.6.1.9.4 Test description

#### 6.6.1.9.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.9.4.1-1.

**Table 6.6.1.9.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting with MUSIM gap configured**

| Configuration | Description |
|---|---|
| 6.6.1.9-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.1.9-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.1.9-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.9.4.1-2.

**Table 6.6.1.9.4.1-2: Initial conditions for NR SA FR1 event triggered reporting with MUSIM gap configured**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |

| T1 | s | 1, 2, 3 | 5 | |
| T2 | s | 1, 2, 3 | 5 | |

#### 6.6.1.9.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.9.4.1-3 and Table 6.6.1.9.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.9.5-1.

3. SS shall transmit an *RRCReconfiguration* message with *measConfig* and *musim-GapConfig-r17*.

4. The UE shall transmit an *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.9.5-1. T2 starts.

6. UE shall transmit a MeasurementReport message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 802 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

- transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

OR

- switch the UE off.

8. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
   Or
   - if the device has been switched off, switch on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.9.4.3 Message contents

**Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:Table 6.6.1.9.4.3-1: Common Exception messages SA intra-frequency event triggered reporting with MUSIM gap configured**

| SS-RSRP Note 3 | dBm/SCS | 1 | -94 | -94 | -Infinity | -94 |
| | | 2 | -94 | -94 | -Infinity | -94 |
| | | 3 | -91 | -91 | -Infinity | -91 |
| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | Specified in Cell 1 columns | |
| | dBm/9.36 MHz | 2 | -64.60 | -62.25 | | |
| | dBm/38.16 MHz | 3 | -58.50 | -56.16 | | |
| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_without_index}$

$T_{identify_intra_without_index} = (T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra})$ms

$T_{PSS/SSS_sync_intra}$= max [ 600 ms, ceil (5 × $K_p$) × SMTC period ] × $CSSF_{intra}$= 600 ms

$T_{SSB_measurement_period_intra}$ = max [ 200 ms, ceil( 5 × $K_p$) × SMTC period ] × $CSSF_{intra}$ = 200 ms

TTI insertion uncertainty = 2 ms

The overall delays measured shall be less than a total of 802 ms in this test case (note: this gives a total of 800 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.6.1.10 to 6.6.1.12

## 6.6.1.12 NR SA FR1 event triggered reporting with SSB index detection without measurement gap in non-DRX mode for UE operating with 12 PRB SSB bandwidth

### 6.6.1.12.1 Test purpose

The purpose of this test is to verify UE's ability to make a correct reporting of an event when the intra-frequency target cell is transmitting 12 PRB SSB. This test will partly verify the FDD intra-frequency cell search requirements in TS 38.133 [6] clauses 9.2.5.1 and 9.2.5.2.

### 6.6.1.12.2 Test applicability

This test applies to all types of NR UE Release 18 supporting less than 5 MHz bandwidth.

### 6.6.1.12.3 Minimum conformance requirements

The minimum conformance requirements are specified in TS 38.133 [6] clauses 9.2.5.1 and 9.2.5.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.12.

### 6.6.1.12.4 Test description

#### 6.6.1.12.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.12.4.1-1.

**Table 6.6.1.12.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting with SSB index reading for 12 PRB bandwidth**

| Configuration | Description |
|---|---|
| 6.6.1.12-1 | 15 kHz SSB SCS, 3 MHz bandwidth, FDD duplex mode |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.12.4.1-2.

**Table 6.6.1.12.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting with SSB index reading for 12 PRB bandwidth**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |

| | | | |
|---|---|---|---|
| Connection Diagram | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.6.1.5.4.1-3 with test configuration 1, except those specified in Table 6.6.1.12.4.1-3.

2. Message contents are defined in clause 6.6.1.12.4.3.

3. There is one NR carrier and two cells specified in the test. Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.2 and C.1.3 for this test.

**Table 6.6.1.12.4.1-3: General test parameters for NR SA FR1 event-triggered reporting with SSB index reading for 12 PRB bandwidth**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| SSB configuration | | 1 | SSB.13 FR1 | |

### 6.6.1.12.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.5.4.1-3 config 1 with the exceptions specified in Table 6.6.1.12.4.1-3 and Table 6.6.1.5.5-1 config 1 with the exceptions specified in Table 6.6.1.12.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively.

During time duration T1, the UE shall not have any timing information of Cell 2.

The test steps are same as 6.6.1.5.4.2 except these steps:

2. Set the parameters according to T1 in Table 6.6.1.5.5-1 with the exceptions specified in Table 6.6.1.12.5-1.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.5.5-1 with the exceptions specified in Table 6.6.1.12.5-1.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 942 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

### 6.6.1.12.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.6.1.12.4.3-1: Common Exception messages for NR SA FR1 event-triggered reporting with SSB index reading for 12 PRB bandwidth**

| Default Message Contents | |
|---|---|
| Common contents of system information blocks exceptions | |

#### 6.6.1.12.5 Test requirement

Table 6.6.1.5.4.1-3 config 1 with the exceptions specified in Table 6.6.1.12.4.1-3 and Table 6.6.1.5.5-1 config 1 with the exceptions specified in Table 6.6.1.12.5-1 define the primary level settings.

**Table 6.6.1.12.5-1: NR Cell specific test parameters for NR SA FR1 event-triggered reporting with SSB index reading for 12 PRB bandwidth**

| Parameter | Unit | Test configuration | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| $BW_{channel}$ | MHz | 1 | 3: $N_{RB,c}$ = 15 | | 3: $N_{RB,c}$ = 15 | |
| PDSCH RMC configuration | | 1 | SR.1.2 FDD | | N/A | |
| RMSI CORESET RMC configuration | | 1 | CR.1.3 FDD | | N/A | |
| Dedicated CORESET RMC configuration | | 1 | CCR.1.7 FDD | | N/A | |
| Io | dBm/2.7 MHz | 1 | -70.00 | -67.65 | -70.00 | -67.65 |

The overall delays measured is defined as the time from the beginning of time period T2, to the moment the UE send one Event A3 triggered measurement report.

The overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured test requirement is expressed as:

Overall delays measured = measurement reporting delay + TTI insertion uncertainty

Measurement reporting delay = $T_{identify_intra_with_index}$

$T_{identify_intra_with_index} = T_{PSS/SSS_sync_intra} + T_{SSB_measurement_period_intra} + T_{SSB_time_index_intra_less_than_5MHz}$

$T_{PSS/SSS_sync_intra}$ = 600 ms

$T_{SSB_time_index_intra_less_than_5MHz}$ = 140 ms

$T_{SSB_measurement_period_intra}$ = 200 ms

TTI insertion uncertainty = 2 ms

The overall delays measured shall be less than a total of 942 ms in this test case (note: this gives a total of 940 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

### 6.6.1.13 NR SA FR1 event-triggered reporting tests without gap under Cell DTX

#### 6.6.1.13.1 Test purpose

To verify the UE's ability to make correct reporting of an event within intra-frequency cell search without gap under Cell DTX configuration.

#### 6.6.1.13.2 Test applicability

This test applies to all types of NR UE release 18 and forward and support Cell DTX operation.

#### 6.6.1.13.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.1.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.1.13.

6.6.1.13.4 Test description

6.6.1.13.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.1.13.4.1-1.

**Table 6.6.1.13.4.1-1: Supported test configurations for NR SA FR1 event-triggered reporting without gap with Cell DTX**

| Test Case ID | Description |
|---|---|
| 6.6.1.13-1 | 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.1.13-2 | 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.1.13-3 | 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.<br>Note 2: The UE fulfils the requirements in this Cell DTX test case can skip the test case in 6.6.1.2 DRX.1 configuration. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.1.13.4.1-2.

**Table 6.6.1.13.4.1-2: Initial conditions for NR SA FR1 event-triggered reporting without gap with Cell DTX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.1.13.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The test parameters for PCell and neighbour cell are given in Table 6.6.1.13.4.1-3 below.
2. Message contents are defined in clause 6.6.1.13.4.3.
3. There is one carrier and two cells specified in the test. NR Cell 1 is the cell used for connection setup with the power level set according to Annex C.1.1 and C.1.2 for this test.

**Table 6.6.1.13.4.1-3: General test parameters for SA intra-frequency event triggered reporting without gap for FR1 with Cell DTX**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|

| T2 | s | 1, 2, 3 | 5 | |

### 6.6.1.13.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the same frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.1.13.4.1-3 and Table 6.6.1.13.5-1, respectively. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2. During time duration T2, NW triggers the Cell DTX.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.1.13.5-1.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.1.13.5-1. T2 starts.

6. SS transmit an *RRCReconfiguration* message to configure and activate Cell DTX. The UE shall transmit *RRCReconfigurationComplete* message.

7. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1082 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

8. After the SS receive the *MeasurementReport* message in step 7) or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

9. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

10. Depending on the choice in Step 8, the SS:
    - if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
    OR
    - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

11. Repeat step 2-10 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.1.13.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

| | | 3 | | | | |
| $\hat{E}_s/N_{oc}$ | dB | 1 | 4 | 4 | -Infinity | 4 |
| | | 2 | | | | |
| | | 3 | | | | |
| SS-RSRP Note 3 | dBm/SCS kHz | 1 | -94 | -94 | -Infinity | -94 |
| | | 2 | -94 | -94 | -Infinity | -94 |
| | | 3 | -91 | -91 | -Infinity | -91 |
| Io | dBm/9.36 MHz | 1 | -64.60 | -62.25 | -64.60 | -62.25 |
| | dBm/9.36 MHz | 2 | -64.60 | -62.25 | -64.60 | -62.25 |
| | dBm/38.16 MHz | 3 | -58.50 | -56.16 | -58.50 | -56.16 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | |

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 + 160 = 1080 ms from the beginning of time period T2, while 160ms is the Cell DTX cycle length, which is the delay uncertainty for next available PUSCH for L3 MR reporting during cell DTX. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2 Inter-frequency measurements

### 6.6.2.0 Minimum conformance requirements for Inter-frequency measurements

#### 6.6.2.0.1 Minimum conformance requirements for Inter-frequency measurement with measurement gaps

Same as clause 4.6.2.0 when measurement gaps are provided, or the UE supports capability of conducting such measurements without gaps.

#### 6.6.2.0.2 Minimum conformance requirements for Inter-frequency measurement without measurement gaps

If UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the Network, UE shall be able to identify a new detectable inter-frequency cell within $T_{identify_inter_without_index}$ if UE is not indicated to report SSB based RRM measurement result with the associated SSB index (*reportQuantityRsIndexes* or *maxNrofRSIndexesToReport* is not configured). Otherwise UE shall be able to identify a new detectable inter-frequency cell within $T_{identify_inter_with_index}$. The UE shall be able to identify a new detectable inter-frequency SS block of an already detected cell within $T_{identify_inter_without_index}$. It is assumed that when UE performs inter-frequency measurements without measurement gaps in a TDD bands on FR1 and FR2, the following condition is met:

- SFN and frame boundary across serving cell and inter-frequency neighbour cells is aligned

$T_{identify_inter_without_index} = (T_{PSS/SSS_sync_inter} + T_{SSB_measurement_period_inter})$ ms

$T_{identify_inter_with_index} = (T_{PSS/SSS_sync_inter} + T_{SSB_measurement_period_inter} + T_{SSB_time_index_inter})$ ms

Where:

$T_{PSS/SSS_sync_inter}$: it is the time period used in PSS/SSS detection given in table 6.6.2.0-1

$T_{SSB_time_index_inter}$: it is the time period used to acquire the index of the SSB being measured given in table 6.6.2.0-2.

$T_{SSB_measurement_period_inter}$: equal to a measurement period of SSB based measurement given in table 6.6.2.0-3 and table 6.6.2.0-4.

$CSSF_{inter}$: it is a carrier specific scaling factor and is determined according to $CSSF_{outside_gap,i}$ in clause 9.1.5.1 for measurement conducted outside measurement gaps, i.e. when inter-frequency SMTC is fully non overlapping or partially overlapping with measurement gaps or according to $CSSF_{within_gap,i}$ in clause 9.1.5.2 for measurement conducted within measurement gaps, i.e. when inter-frequency SMTC is fully overlapping with measurement gaps.

$M_{pss/sss_sync_inter}$: For a UE supporting FR2 power class 1, $M_{pss/sss_sync_inter}$ = 40 samples. For a UE supporting FR2 power class 2, $M_{pss/sss_sync_inter}$ = 24 samples. For a UE supporting FR2 power class 3, $M_{pss/sss_sync_inter}$ = 24 samples. For a UE supporting FR2 power class 4, $M_{pss/sss_sync}$ = 24 samples.

$M_{meas_period_inter}$: For a UE supporting FR2 power class 1, $M_{meas_period_inter}$ =40 samples. For a vehicle mounted UE supporting FR2 power class 2, $M_{meas_period_inter}$ =24 samples. For a UE supporting FR2 power class 3, $M_{meas_period_inter}$ =24 samples. For a UE supporting FR2 power class 4, $M_{meas_period_inter}$ = 24 samples.

When inter-frequency SMTC is fully non overlapping with measurement gaps or inter-frequency SMTC is fully overlapping with MGs, Kp=1.

When inter-frequency SMTC is partially overlapping with measurement gaps, Kp = 1/(1- (SMTC period /MGRP)), where SMTC period < MGRP.

For FR2,

$K_{layer1_measurement}$=1,

- if all of the reference signals configured for RLM, BFD, CBD or L1-RSRP for beam reporting on any FR2 serving frequency in the same band outside measurement gap are not fully overlapped by intra-frequency SMTC occasions, or

- if all of the reference signal configured for RLM, BFD, CBD or L1-RSRP for beam reporting on any FR2 serving frequency in the same band outside measurement gap and fully-overlapped by intra-frequency SMTC occasions are not overlapped with any of the SSB symbols and the RSSI symbols, and 1 symbol before each consecutive SSB symbols and the RSSI symbols, and 1 symbol after each consecutive SSB symbols and the RSSI symbols, given that *SSB-ToMeasure* and *SS-RSSI-Measurement* are configured, where SSB symbols are indicated by *SSB-ToMeasure* and RSSI symbols are indicated by *SS-RSSI-Measurement*;

$K_{layer1_measurement}$=1.5, otherwise.

If the above-mentioned reference signal configured for L1-RSRP measurement is aperiodic CSI-RS resource, longer cell identification delay would be expected.

**Table 6.6.2.0-1: Time period for PSS/SSS detection, (FR1)**

| DRX cycle | $T_{PSS/SSS_sync_inter}$ |
|---|---|
| No DRX | max( 600ms, ceil( 5 x $K_p$) x SMTC period )[Note 1] x $CSSF_{inter}$ |
| DRX cycle≤ 320ms | max( 600ms, ceil(1.5x 5 x $K_p$) x max(SMTC period,DRX cycle)) x $CSSF_{inter}$ |
| DRX cycle>320ms | ceil(5 x $K_p$) x DRX cycle x $CSSF_{inter}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified. | |

**Table 6.6.2.0-2: Time period for time index detection (FR1)**

| DRX cycle | $T_{SSB_time_index_inter}$ |
|---|---|
| No DRX | max(120ms, ceil( 3 x $K_p$ ) x SMTC period)[Note 1] x $CSSF_{inter}$ |
| DRX cycle≤ 320ms | max(120ms, ceil (1.5 x 3 x $K_p$) x max(SMTC period,DRX cycle)) x $CSSF_{inter}$ |
| DRX cycle>320ms | Ceil(3 x $K_p$) x DRX cycle x $CSSF_{inter}$ |

| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified. |
|---|

The UE physical layer shall be capable of reporting SS-RSRP, SS-RSRQ and SS-SINR measurements to higher layers with measurement accuracy as specified in TS 38.133 [6] clauses 10.1.4, 10.1.5, 10.1.9, 10.1.10, 10.1.14 and 10.1.15, respectively, as shown in table 6.6.2.0-3 and 6.6.2.0-4, if UE supports inter-frequency measurement without measurement gaps:

**Table 6.6.2.0-3: Measurement period for inter-frequency measurements without gaps ((FR1)**

| DRX cycle | $T_{SSB_measurement_period_inter}$ |
|---|---|
| No DRX | max(200ms, ceil( 5 x $K_p$) x SMTC period)$^{Note\ 1}$ x $CSSF_{inter}$ |
| DRX cycle≤ 320ms | max(200ms, ceil(1.5x 5 x $K_p$) x max(SMTC period,DRX cycle)) x $CSSF_{inter}$ |
| DRX cycle>320ms | ceil( 5 x $K_p$ ) x DRX cycle x $CSSF_{inter}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified. | |

**Table 6.6.2.0-4: Measurement period for inter-frequency measurements without gaps (FR2)**

| DRX cycle | $T_{SSB_measurement_period_inter}$ |
|---|---|
| No DRX | max(400ms, ceil($M_{meas_period_inter}$ x $K_p$ x $K_{layer1_measurement}$) x SMTC period)$^{Note\ 1}$ x $CSSF_{inter}$ |
| DRX cycle≤ 320ms | max(400ms, ceil(1.5x $M_{meas_period_inter}$ x $K_p$ x $K_{layer1_measurement}$) x max(SMTC period,DRX cycle)) x $CSSF_{inter}$ |
| DRX cycle>320ms | ceil($M_{meas_period_inter}$ x$K_p$ x $K_{layer1_measurement}$) x DRX cycle x $CSSF_{inter}$ |
| NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified. | |

If UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the Network, UE is required to be capable of measuring without measurement gaps when the SSB is completely contained in the active bandwidth part of the UE. When any of the conditions in the following clauses is met, there are restrictions on the scheduling availability; otherwise, there is no scheduling restriction. Note that the SSB symbols to be measured in the following clauses are the SSB symbols indicated by *SSB-ToMeasure* [13], if it is configured; otherwise, all L SSB symbols within the SMTC window duration defined in clause 4.1 of TS 38.213 [8] are included.

The scheduling availability requirements when UE performs inter-frequency measurements without measurement gaps in a TDD bands on FR1 and FR2 in TS 38.133 [6] clause 9.3.9.3.1~9.3.9.3.3 are valid under the following conditions:

- SFN and frame boundary across serving cell and inter-frequency neighbour cells is aligned, and

When UE performs inter-frequency measurements without measurement gaps in a TDD band, the following restrictions apply due to SS-RSRP or SS-SINR measurement

- UE is not expected to transmit PUCCH/PUSCH/SRS on SSB symbols to be measured, and on 1 data symbol before each consecutive SSB symbols to be measured and 1 data symbol after each consecutive SSB symbols to be measured within SMTC window duration.

When UE performs inter-frequency measurements without measurement gaps in a TDD band, the following restrictions apply due to SS-RSRQ measurement

- UE is not expected to transmit PUCCH/PUSCH/SRS on SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol before each consecutive SSB to be measured/RSSI symbols and 1 data symbol after each consecutive SSB to be measured/RSSI symbols within SMTC window duration.

When TDD intra-band carrier aggregation is performed, the scheduling restrictions due to one serving cell should also apply to all other serving cells in the same band on the symbols that fully or partially overlap with aforementioned restricted symbols.

For UE which do not support *simultaneousRxDataSSB-DiffNumerology-Inter-r16* [11] the following restrictions apply due to SS-RSRP/RSRQ/SINR measurement

- If UE performs inter-frequency measurements without measurement gaps in a TDD band, UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on SSB symbols to be measured, and on 1 data symbol before each consecutive SSB symbols to be measured and 1 data symbol after each consecutive SSB symbols to be measured within SMTC window duration.

- If UE performs inter-frequency measurements without measurement gaps in a FDD band, UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on all symbols within SMTC window duration.

When intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell should also apply to all other serving cells in the same band on the symbols that fully or partially overlap with aforementioned restricted symbols.

The normative reference for this requirement is TS 38.133 [6] clause 9.3.2, 9.3.4, 9.3.5, 9.3.6.3.

#### 6.6.2.0.3 Minimum conformance requirements for event-triggered measurement with MUSIM gap with lower and higher priority

Same as clause 6.6.1.0.6.

#### 6.6.2.0.4 Minimum conformance requirements for event triggered reporting using MUSIM gap with shorter MGRP

Same as clause 6.6.1.0.6.

### 6.6.2.1 NR SA FR1-FR1 event-triggered reporting in non-DRX

#### 6.6.2.1.1 Test purpose

To verify that the UE makes correct reporting of an event in non-DRX within inter-frequency NR cell search requirements without SSB time index detection in TS 38.133 [6] clause 9.3.4.

#### 6.6.2.1.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

#### 6.6.2.1.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.2.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.1.

#### 6.6.2.1.4 Test description

##### 6.6.2.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.1.4.1-1. Configure the test equipment and the DUT according to the parameters in Table 6.6.2.1.4.1-2. Test environment parameters are given in Table 6.6.2.1.4.1-3.

**Table 6.6.2.1.4.1-1: SA FR1-FR1 event triggered reporting tests in non-DRX supported test configurations**

| Test Case ID | Description |
|---|---|
| 6.6.2.1-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.2.1-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.2.1-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.1 for DUT part and A.3.1.8.4 for TE part. | | |

1. Message contents are defined in clause 6.6.2.1.4.3.

2. There are two NR cells on two carriers specified in the test. Cell 1 is the cell used for connection setup and Cell 2 is a target cell on a different carrier than Cell 1. The power levels and settings for Cell 2 are set according to Annex C.1.2.

### 6.6.2.1.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.1.4.1-2.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.1.4.1-2. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 920 ms, then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

   - if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.), OR:
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.2.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation Condition | | Config 1,2,3 | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{\mathrm{oc}}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. with a confidence level of 95%

UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2\mathrm{xTTI}_{\mathrm{DCCH}}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2.2 NR SA FR1-FR1 event-triggered reporting in DRX

### 6.6.2.2.1 Test purpose

To verify that the UE makes correct reporting of an event in DRX within inter-frequency NR cell search requirements without SSB time index detection in TS 38.133 [6] clause 9.3.4.

### 6.6.2.2.2 Test applicability

This test applies to all types of NR UE Release 15 and forward supporting 5GS NR SA FR1 and long DRX cycle.

### 6.6.2.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.2.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.2.

### 6.6.2.2.4 Test description

#### 6.6.2.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.2.4.1-1. Configure the test equipment and the DUT according to the parameters in Table 6.6.2.2.4.1-2. Test environment parameters are given in Table 6.6.2.2.4.1-3.

1. Message contents are defined in clause 6.6.2.2.4.3.

2. There are two NR cells on two carriers specified in the test. Cell 1 is the cell used for connection setup and Cell 2 is a target cell on a different carrier than Cell 1. The power levels and settings for Cell 2 are set according to Annex C.1.2.

### 6.6.2.2.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.2.4.1-2 and 6.6.2.2.5-1.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.2.5-1. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1080 ms for Test 1 or 10240 ms for Test 2, then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

   - if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.), OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

11. Repeat step 1-10 for each sub-test in Table 6.6.2.2.4.1-2 as appropriate.

| | |
|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. |

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

In test 1 and 2, UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2.3 Void

## 6.6.2.4 Void

## 6.6.2.5 NR SA FR1-FR1 event-triggered reporting in non-DRX with SSB time index detection

### 6.6.2.5.1 Test purpose

To verify that the UE makes correct reporting of an event in non-DRX within inter-frequency NR cell search requirements with SSB time index detection in TS 38.133 [6] clause 9.3.4.

### 6.6.2.5.2 Test applicability

This test applies to all types of NR UE from Release 15 onwards.

### 6.6.2.5.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.2.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.5.

### 6.6.2.5.4 Test description

#### 6.6.2.5.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.5.4.1-1. Configure the test equipment and the DUT according to the parameters in Table 6.6.2.5.4.1-2. Test environment parameters are given in Table 6.6.2.5.4.1-3.

**Table 6.6.2.5.4.1-1: SA FR1-FR1 event triggered reporting tests in non-DRX with SSB time index detection supported test configurations**

| Test Case ID | Description |
|---|---|
| 6.6.2.5-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 6.6.2.5-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6.6.2.5-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

**Table 6.6.2.5.4.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with SSB time index detection in non-DRX**

| Parameter | Unit | Test configuration | Value | Comment |

**Table 6.6.2.5.4.1-3: Environment test parameters for SA inter-frequency event triggered reporting for FR1 without SSB time index detection in non-DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.2.5.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.1 for DUT part and A.3.1.8.4 for TE part. | | |

1. Message contents are defined in clause 6.6.2.5.4.3.

2. There are two NR cells on two carriers specified in the test. Cell 1 is the cell used for connection setup and Cell 2 is a target cell on a different carrier than Cell 1. The power levels and settings for Cell 2 are set according to Annex C.1.2.

### 6.6.2.5.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.5.4.1-2.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.5.4.1-2. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1040 ms for Test 1 then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

   - if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.2.5.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1040 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2.6 NR SA FR1-FR1 event-triggered reporting in DRX with SSB time index detection

### 6.6.2.6.1 Test purpose

To verify that the UE makes correct reporting of an event in DRX within inter-frequency NR cell search requirements with SSB time index detection in TS 38.133 [6] clause 9.3.4.

### 6.6.2.6.2 Test applicability

This test applies to all types of NR UE Release 15 and forward supporting 5GS NR SA FR1 and long DRX cycle.

### 6.6.2.6.3 Minimum conformance requirements

The minimum conformance requirements are specified in clause 6.6.2.0.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.6.

### 6.6.2.6.4 Test description

#### 6.6.2.6.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.6.4.1-1. Configure the test equipment and the DUT according to the parameters in Table 6.6.2.6.4.1-2. Test environment parameters are given in Table 6.6.2.6.4.1-3.

**Table 6.6.2.6.4.1-1: SA FR1-FR1 event triggered reporting tests in DRX with SSB time index detection supported test configurations**

1. Message contents are defined in clause 6.6.2.6.4.3.

2. There are two NR cells on two carriers specified in the test. Cell 1 is the cell used for connection setup and Cell 2 is a target cell on a different carrier than Cell 1. The power levels and settings for Cell 2 are set according to Table Annex C.1.2.

### 6.6.2.6.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.6.4.1-2 and Table 6.6.2.6.5-1.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.6.5-1. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1280 ms for Test 1 or 12160 ms for Test 2, then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

- if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.), OR
- if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

11. Repeat step 1-10 for each sub-test in Table 6.6.2.6.4.1-2 as appropriate.

#### 6.6.2.6.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| | |
|---|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. |

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

In test 1 and 2, UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### 6.6.2.7 Void

### 6.6.2.8 Void

### 6.6.2.9 SA event triggered reporting tests with additional mandatory gap pattern

#### 6.6.2.9.1 Test purpose

To verify that the UE makes correct reporting of an event when mandatory gap pattern with 3ms MGL is configured within inter-frequency NR cell search requirements in TS 38.133 [6] clause 9.3.4.

#### 6.6.2.9.2 Test applicability

This test applies to all types of NR UE release 16 onwards supporting *supportedGapPattern-NRonly-r16* and Gap Pattern 3.

#### 6.6.2.9.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.9.

#### 6.6.2.9.4 Test description

##### 6.6.2.9.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.9.4.1-1.

**Table 6.6.2.9.4.1-1: SA FR1 event triggered reporting tests with additional mandatory gap pattern supported test configurations**

| Configuration | Description |
|---|---|
| 6.6.2.9-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 6.6.2.9-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 6.6.2.9-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD – TDD duplex mode |
| NOTE.1: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.2.9.4.1-2.

**Table 6.6.2.9.4.1-2: Test Environment parameters for SA FR1 event triggered reporting tests with additional mandatory gap pattern**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.2.9.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in clause C.2.2. |

#### 6.6.2.9.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.9.4.1-2.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.9.4.1-2. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1280 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

   - if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.),
     OR:

   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.2.9.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90% with the confidence level of 95%.

## 6.6.2.10 SA event triggered reporting tests for FR1 when DRX is used

### 6.6.2.10.1 Test purpose

To verify that the UE makes correct reporting of an event when no gap is configured and DRX is used within inter-frequency NR cell search requirements in TS 38.133 [6] clause 9.3.9.

### 6.6.2.10.2 Test applicability

This test applies to all types of NR UE release 16 which supports interFrequencyMeas-Nogap-r16.

#### 6.6.2.10.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.10.

#### 6.6.2.10.4 Test description

##### 6.6.2.10.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.10.4.1-1.

**Table 6.6.2.10.4.1-1: SA event triggered reporting tests for FR1 without gap when DRX is used supported test configurations**

| Configuration | Description |
|---|---|
| 6.6.2.10-1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

### 6.6.2.10.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.10.4.1-2.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.10.4.1-2. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1080 ms for Test Configuration 1 and 900 ms for Test Configuration 2 and 3then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

   - if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.),
     OR:

   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

11. Repeat step 1-10 for each sub-test in Table 6.6.2.10.4.1-2 as appropriate.

| Propagation Condition | | Config 1,2,3 | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

In test config 1, UE is required to report SSB time index. UE is not required to report SSB time index. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

In test config 2 and 3, UE is not required to report SSB time index. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 900 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% with the confidence level of 95%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2.11 SA event triggered reporting tests for FR1 without gap when DRX is not used

### 6.6.2.11.1 Test purpose

To verify that the UE makes correct reporting of an event when no gap is configured and DRX is not used within inter-frequency NR cell search requirements in TS 38.133 [6] clause 9.3.9.

### 6.6.2.11.2 Test applicability

This test applies to all types of NR UE release 16 which supports interFrequencyMeas-Nogap-r16.

### 6.6.2.11.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.11.

### 6.6.2.11.4 Test description

#### 6.6.2.11.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.11.4.1-1.

**Table 6.6.2.11.4.1-1: SA event triggered reporting tests for FR1 without gap when DRX is not used supported test configurations**

| Configuration | Description |
|---|---|
| 6.6.2.11-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 6.6.2.11-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 6.6.2.11-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD – TDD duplex mode |
| NOTE.1: The UE is only required to be tested in one of the supported test configurations. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.2.11.4.1-2.

**Table 6.6.2.11.4.1-2: Test Environment parameters for SA event triggered reporting tests for FR1 without gap when DRX is not used**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |

### 6.6.2.11.4.2 Test procedure

In this test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR1 on NR RF channel 2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.11.4.1-2.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.11.4.1-2. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 800 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit RRCRelease message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

- switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

- if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and ensures the UE in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5. (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.), OR:

  - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

11. Repeat step 1-10 for each sub-test in Table 6.6.2.11.4.1-2 as appropriate.

|---|---|---|---|---|
| Propagation Condition | | Config 1,2,3 | AWGN | AWGN |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | |

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE is not required to read the neighbour cell SSB index in this test.

The rate of correct events observed during repeated tests shall be at least 90% with the confidence level of 95%.

## 6.6.2.12 NR SA FR1-FR1 event triggered reporting tests without SSB time index detection in DRX for UE configured with highSpeedMeasInterFreq-r17

### 6.6.2.12.1 Test purpose

The purpose of this test is to verify that the UE makes correct reporting of an event when UE is configured with highSpeedMeasInterFreq-r17. This test will partly verify the SA inter-frequency NR cell search requirements in 38.133 [6] clause 9.3.4.

### 6.6.2.12.2 Test applicability

This test applies to all types of E-UTRA UE release 17 and forward supporting enhanced inter-frequency NR measurement requirements in high-speed scenario (*measurementEnhancementInterFreq-r17*, as defined in TS 38.306 [11]).

### 6.6.2.12.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.0.1.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.12

### 6.6.2.12.4 Test description

#### 6.6.2.12.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.12.4.1-1.

**Table 6.6.2.12.4.1-1: Supported test configurations for NR SA FR1-FR1 event triggered reporting tests without SSB time index detection in DRX for UE configured with highSpeedMeasInterFreq-r17**

| Config | Description |
|---|---|
| 6.6.2.12-1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.2.12-2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.2.12-3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.2.12.4.1-2.

**Table 6.6.2.12.4.1-2: Initial conditions for NR SA FR1-FR1 event triggered reporting tests without SSB time index detection in DRX for UE configured with highSpeedMeasInterFreq-r17**

| Parameter | Value | Comment |
|---|---|---|
| Test environment | NC | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1. | |

| | | | |

### 6.6.2.12.4.2 Test procedure

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR SA, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.12.4.1-2.

3. The SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.12.4.1-2. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 2242 ms, then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

7. After the SS receives the *MeasurementReport* message in step 6 or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 3 physical cell identity = ((current Cell 3 physical cell identity + 1) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:

   - if the RRC Connection Release has been sent, transmits in Cell 1 a *Paging* message (including PagingRecord with ue-Identity) for the UE and proceed with step 1,
   OR:
   - if the device has been switched off, proceed with step 1.

10. Repeat step 2-7 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

### 6.6.2.12.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation Condition | | Config 1,2 | AWGN | | AWGN 1944Hz Note 5 | |
| | | Config 3 | AWGN | | AWGN 3334Hz Note 6 | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
Note 5: The AWGN 1944 Hz condition is a non-fading propagation channel with one tap. Doppler shift is a constant 1944Hz.
Note 6: The AWGN 3334 Hz condition is a non-fading propagation channel with one tap. Doppler shift is a constant 3334Hz.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 2240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90% with the confidence level of 95%.

NOTE: The actual overall delays measured in the test is 2ms higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2.13 NR SA FR1-FR1 event triggered reporting using MUSIM gap with lower and higher priority

### 6.6.2.13.1 Test purpose

The purpose of this test is to verify that the UE makes correct reporting of an event on an inter-frequency layer based on measurement performed within measurement gaps when UE is also configured with MUSIM gaps. This test will partly verify the SA inter-frequency NR cell search requirements in TS 38.133 [6] clause 9.3.4. In addition, the test will verify

that UE makes correct transmission/reception during occasions of measurement gaps and MUSIM gaps that are dropped due to collision handling as defined in TS 38.133 [6] clause 9.1.10.

#### 6.6.2.13.2 Test applicability

This test applies to all types of NR UE release 18 and forward, supporting providing MUSIM assistance information with MUSIM gap preference and related MUSIM gap configuration.

#### 6.6.2.13.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.0.1 and 6.6.2.0.3.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.13.

#### 6.6.2.13.4 Test description

##### 6.6.2.13.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.13.4.1-1.

**Table 6.6.2.13.4-1: Supported test configurations for NR SA FR1-FR1 event triggered reporting using MUSIM gap with lower and higher priority**

| Config | Description |
|---|---|
| 6.6.2.13-1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.2.13-2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.2.13-3 | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.2.13.4.1-2.

**Table 6.6.2.13.4.1-2: Initial conditions for NR SA FR1-FR1 event triggered reporting using MUSIM gap with lower and higher priority**

| Parameter | Value | | Comment |
|---|---|---|---|

### 6.6.2.13.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the different frequency from the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.2.13.4.1-3 and Table 6.6.2.13.5-1, respectively. In the measurement control information a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of four successive time periods, with time duration of T1, T2, T3 and T4 respectively. During time duration T1 and T3, the UE shall not have any timing information of NR Cell 2.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.13.5-1.

3. SS shall transmit an *RRCReconfiguration* message with *measConfig* and *musim-GapConfig-r17*. Priority of MISIM gap is lower than the priority of the measurement gap configured by *GapConfig-r17*.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. The SS starts continuously scheduling PDSCH reception on every DL slot not overlapped with measurement gap occasions.

6. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.13.5-1. T2 starts.

7. If UE

a) transmits a *MeasurementReport* message triggered by Event A3 within 922ms from the beginning of time period T2, and

b) sends HQRQ ACK/NACK for every corresponding PDSCH scheduled in PCell if PDSCH and PUCCH are not overlapped with the measurement gap occasions in time period T1 and T2.

Then the number of successes for the event “low priority MUSIM gap” is increased by one. Otherwise, count a fail for the event “low priority MUSIM gap” and go to step 14.

8. when T2 expires, set the parameters according to T3 in Table 6.6.2.13.5-1. The SS stops scheduling PDSCH reception. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008).

9. SS shall transmit an *RRCReconfiguration* message to reconfigure MUSIM gap with priority higher than measurement gap configured by *GapConfig-r17*.

10. The UE shall transmit *RRCReconfigurationComplete* message. T3 starts.

11. The SS starts continuously scheduling PDSCH reception on every DL slot not overlapped with MUSIM gap occasions and measurement gap occasions that are not colliding with MUSIM gap.

12.When T3 expires, the SS shall switch the power setting from T3 to T4 as specified in Table 6.6.2.13.5-1. T4 starts.

13. If UE

a) transmits a *MeasurementReport* message triggered by Event A3 within 1282 ms from the beginning of time period T4, and

b) sends HQRQ ACK/NACK for every corresponding PDSCH scheduled in PCell if PDSCH and PUCCH are not overlapped with the MUSIM gap occasions and measurement gap occasions that are not colliding with MUSIM gap in time period T3 and T4.

Then the number of successes for the event “high priority MUSIM gap” is increased by one. Otherwise, count a fail for the event “high priority MUSIM gap” and go to step 14.

14. After the SS receive the *MeasurementReport* message in step 13) or when T4 expires, the SS shall stop scheduling PDSCH reception and:

- transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

or

- switch the UE off.

15. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

16. Depending on the choice in Step 14, the SS:
- if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
or
- if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

17. Repeat step 2-16 until the confidence level according to Tables G.2.3-1 in Annex G.2 is achieved. Each of the events “low priority MUSIM gap” and “high priority MUSIM gap” is evaluated independently for the statistic, resulting in an event verdict: pass or fail. Each event is evaluated only until the confidence level according to Table G.2.3-1 in Annex G.2 is achieved. If all events pass, the test passes. If one event fails, the test fails.

6.6.2.13.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation Condition | | | Config 1,2,3 | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

During T1 and T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the measurement gap occasions.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

During T3 and T4, after UE sends RRC ReconfigurationComplete message for the reconfiguration of MUSIM gap priority, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with

- MUSIM gap occasions, and
- measurement gap occasions that are not colliding with MUSIM gap.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T4. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90%.

The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## 6.6.2.14 NR SA FR1-FR1 event triggered reporting using MUSIM gap with shorter MGRP

Editor's Note: This test case is incomplete in following aspects:

TT analysis is still missing.

### 6.6.2.14.1 Test purpose

The purpose of this test is to verify that the MUSIM gap capable UE makes correct reporting of an event when MUSIM gap collides with measurement gaps without assigned priority. This test will partly verify the SA inter-frequency NR cell search requirements in clause TS 38.133 [6] 9.3.4. This test is conducted assuming that the measurement gap is configured as Gap(s) configured via GapConfig without suffix, and the MUSIM gap parameters are configured as requested by UE.

### 6.6.2.14.2 Test applicability

This test applies to all types of NR UE release 18 and forward, supporting providing MUSIM assistance information with MUSIM gap preference and related MUSIM gap configuration.

### 6.6.2.14.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.0.1 and 6.6.2.0.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.14.

### 6.6.2.14.4 Test description

#### 6.6.2.14.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.14.4.1-1.

**Table 6.6.2.14.4.1-1: Supported test configurations for NR SA FR1-FR1 event-triggered reporting using MUSIM gap with shorter MGRP**

| Configuration | Description |
|---|---|
| 6.6.2.14-1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 6.6.2.14-2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6.6.2.14-3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note1: The UE is only required to be tested in one of the supported test configurations.<br>Note2: target NR cell has the same SCS, BW and duplex mode as NR serving cell. | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.2.14.4.1-2.

**Table 6.6.2.14.4.1-2: Initial conditions for NR SA FR1-FR1 event-triggered reporting using MUSIM gap with shorter MGRP**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.2.14.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in clause C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. The general test parameter settings are set up according to Table 6.6.2.14.4.1-3.
2. Message contents are defined in clause 6.6.2.14.4.3.
3. There are two NR cells on two carriers specified in the test. Cell 1 is the cell used for connection setup and Cell 2 is a target cell on a different carrier than Cell 1. The power levels and settings for Cell 2 are set according to Annex C.1.2.

**Table 6.6.2.14.4.1-3: General test parameters for NR SA FR1-FR1 event-triggered reporting using MUSIM gap with shorter MGRP**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | Config 1,2,3 | 1, 2 | Two FR1 NR carrier frequencies is used. |
| Active cell | | Config 1,2,3 | NR Cell 1 (PCell) | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell | | Config 1,2,3 | NR Cell 2 | NR Cell 2 is on NR RF channel number 2. |
| Gap Pattern Id | | Config 1,2,3 | 1 | As specified in clause TS 38.133 [6] 9.1.2-1. |
| Measurement gap offset | | Config 1,2,3 | 4 | |
| MUSIM Gap Pattern Id | | Config 1,2,3 | 0 | As specified in clause TS 38.133 [6] 9.1.10-1 |
| MUSIM gap offset | | Config 1,2,3 | 39 | |
| A3-Offset | dB | Config 1,2,3 | -6 | |
| Hysteresis | dB | Config 1,2,3 | 0 | |
| CP length | | Config 1,2,3 | Normal | |
| TimeToTrigger | s | Config 1,2,3 | 0 | |
| Filter coefficient | | Config 1,2,3 | 0 | L3 filtering is not used |
| DRX | | Config 1,2,3 | OFF | DRX is not used |
| Time offset between serving and neighbour cells | | Config 1 | 3ms | Asynchronous cells.<br>The timing of Cell 2 is 3ms later than the timing of Cell 1. |
| | | Config 2,3 | 3μs | Synchronous cells. |
| T1 | s | Config 1,2,3 | 5 | |
| T2 | s | Config 1,2,3 | 1 | |

#### 6.6.2.14.4.2 Test procedure

Two cells are deployed in the test, which are FR1 PCell (NR Cell 1) and a FR1 neighbour cell (NR Cell 2) on the different frequency as the PCell. The general and cell specific test parameters for PCell and neighbour cell are given in Table 6.6.2.14.4.1-3 and Table 6.6.2.14.5-1, respectively. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 2.

Measurement gap pattern configuration defined in Table 6.6.2.14.4.1-3 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap. In test 1 measurement gap pattern configuration # 1 as defined in Table 6.6.2.14.4.1-3 is provided for a UE that does not support per-FR gap and in test 2 without measurement gap pattern configuration as defined in Table 6.6.2.14.4.1-3 is provided for UE that support per-FR gap.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.2.14.5-1.

3. SS shall transmit an *RRCReconfiguration* message with *measConfig* and *musim-GapConfig-r17*.

4. The UE shall transmit an *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.14.5-1. T2 starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1282 ms then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the *MeasurementReport* message in step 6) or when T2 expires, the SS shall:

- transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

OR

- switch the UE off.

8. Set NR Cell 2 physical cell identity = ((current NR Cell 2 physical cell identity + 3) mod 1008) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in NR Cell 1 a Paging message (including PagingRecord with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5),
   Or
   - if the device has been switched off, switche on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.2.14.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

| Propagation Condition | | Config 1,2,3 | AWGN | | AWGN | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

In test 1 with per-UE gap and in test 2 without the gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2.

The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

The overall delays measured shall be less than a total of 1282 ms in this test case (note: this gives a total of 800 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

For the test to pass, the total number of successful tests shall be more than 90% of the cases with a confidence level of 95%.

## 6.6.2.15 NR SA FR1 event triggered reporting without SSB index detection in DRX mode for UE operating on a cell with less than 5MHz BW

### 6.6.2.15.1 Test purpose

The purpose of this test is to verify UE's ability to make a correct reporting of an event without SSB time index in DRX mode when the inter-frequency target cell is less than 5MHz bandwidth. This test will partly verify the inter-frequency cell search requirements in TS 38.133 [6] clause 9.3.4.

### 6.6.2.15.2 Test applicability

This test applies to all types of NR UE Release 18 supporting less than 5 MHz bandwidth.

### 6.6.2.15.3 Minimum conformance requirements

The minimum conformance requirements are specified in TS 38.133 [6] clause 9.3.4.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.2.15.

### 6.6.2.15.4 Test description

#### 6.6.2.15.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.2.15.4.1-1. Configure the test equipment and the DUT according to the parameters in Table 6.6.2.2.4.1-2 with config 1 apply to this test. Test environment parameters are given in Table 6.6.2.15.4.1-2.

**Table 6.6.2.15.4.1-1: SA FR1 event triggered reporting tests in DRX supported test configuration**

| Test Case ID | Description |
|---|---|
| 6.6.2.15-1 | NR 15 kHz SSB SCS, 3 MHz bandwidth, FDD duplex mode |
| Note 1: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

**Table 6.6.2.15.4.1-2: Test Environment parameters for SA inter-frequency event triggered reporting for FR1 without SSB time index detection in DRX**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-1 and TS 38.508-1 [14] clause 4.3.1 and 4.4.2. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.2.15.4.1-1. | | |
| Propagation conditions | AWGN | | As specified in Annex C.2.2. |
| Connection Diagram | TE Part | A.3.1.8.2 | As specified in TS 38.508-1 [14] Annex A. |
| | DUT Part | A.3.2.3.4 | |
| Exceptions to connection diagram | - Without LTE link<br>- For 4Rx capable UEs without any 2Rx RF bands use A.3.2.5.2 for DUT part and A.3.1.8.4 for TE part. | | |

1. Message contents are defined in clause 6.6.2.15.4.3.
2. There are two NR cells on two carriers specified in the test. Cell 1 is the cell used for connection setup and Cell 2 is a target cell on a different carrier than Cell 1. The power levels and settings for Cell 2 are set according to Annex C.1.2 and C.1.3.

### 6.6.2.15.4.2 Test procedure

The test procedures are same as 6.6.2.2.4.2 except these steps:

2. Set the parameters according to T1 in Table 6.6.2.2.4.1-2 config 1 and Table 6.6.2.2.5-1 config 1 with the exceptions specified in Table 6.6.2.15.5-1.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.2.2.5-1 config 1 with the exceptions specified in Table 6.6.2.15.5-1. T2 Starts.

6. UE shall transmit a *MeasurementReport* message triggered by Event A3. If the overall delays measured from the beginning of time period T2 is less than 1082 ms for Test 1 or 10242 ms for Test 2, then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement, then the number of failure tests is increased by one.

### 6.6.2.15.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clauses 4.6 and 7.3 with the following exceptions:

**Table 6.6.2.15.4.3-1: Common Exception messages SA inter-frequency event triggered reporting without SSB time index detection in non-DRX**

| Default Message Contents | |
|---|---|
| Common contents of system information blocks exceptions | |
| Default RRC messages and information elements contents exceptions | Table H.3.1-1<br>Table H.3.1-2 with Conditions GAP NEEDED and INTER-FREQ<br>Table H.3.1-3 with Conditions INTER-FREQ MO, SSB.y FR1 and Table 7.3.1-3 in TS 38.508-1 [14] with condition SMTC.5<br>Table H.3.1-4 with A3-offset = -6dB<br>Table H.3.1-5<br>Table H.3.1-6 with Conditions gapUE, Pattern #0 and gap offset = 9<br>Table H.3.1-7 with Condition INTER-FREQ<br>Table H.3.7-1 with Condition DRX.1 and Gap and INTER-FREQ for Test 1<br>Table H.3.7-1 with Condition DRX.7 and Gap and INTER-FREQ for Test 2 |

### 6.6.2.15.5 Test requirement

Table 6.6.2.2.5-1 config 1 with the exceptions specified in Table 6.6.2.15.5-1 defines the primary level settings for all tests.

**Table 6.6.2.15.5-1: Cell specific test parameters for SA inter-frequency event triggered reporting for FR1 without SSB time index detection**

| Parameter | Unit | Test configuration | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| Duplex mode | | Config 1 | FDD | | | |
| $BW_{channel}$ | MHz | Config 1 | 3: $N_{RB,c}$ = 15 | | | |
| BWP BW | MHz | Config 1 | 3: $N_{RB,c}$ = 15 | | | |
| PDSCH Reference measurement channel | | Config 1 | SR.1.2 FDD | | NA | |
| RMSI CORESET Reference Channel | | Config 1 | CR.1.3 FDD | | NA | |
| Dedicated CORESET Reference Channel | | Config 1 | CCR.1.7 FDD | | NA | |
| SSB parameters | | Config 1 | SSB.13 FR1 | | SSB.13 FR1 | |
| $Io^{Note3}$ | dBm/3 MHz | Config 1 | -69.9 | -69.9 | -75.4 | -67.6 |

In test 1 and 2, UE is not required to report SSB time index.

The overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays because of TTI insertion uncertainty of the measurement report in DCCH.

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The overall delays measured shall be less than a total of 1082 ms in test 1 and 10242 ms for test 2 (note: the total measurement reporting delay plus 2 ms for TTI insertion uncertainty).

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.6.3 Inter-RAT Measurements

### 6.6.3.0 Minimum conformance requirements

#### 6.6.3.0.1 Minimum conformance requirements for inter-RAT event triggered reporting to E-UTRAN FDD

The requirements are applicable for NR−E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN FDD cell is considered to be detectable when:

- RSRP related conditions in the accuracy requirements in TS 38.133 [6] Section 10.2.2 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [23],
- RSRQ related conditions in the accuracy requirements in TS 38.133 [6] Section 10.2.3 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [23],
- RS-SINR related conditions in the accuracy requirements in TS 38.133 [6] Section 10.2.5 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [23].

##### 6.6.3.0.1.1 Requirements when no DRX is used

When the UE requires measurement gaps to identify and measure inter-RAT cells and an appropriate measurement gap pattern is scheduled, the UE shall be able to identify a new detectable FDD cell within $T_{Identify,\ E\text{-}UTRAN\ FDD}$ according to the following expression:

$$T_{Identify,E-UTRAN\ FDD} = T_{BasicIdentify} * \frac{480}{T_{Inter1}} * CSSF_{interRAT} \quad ms,$$

where:

$T_{BasicIdentify}$ = 480 ms,

$T_{Inter1}$ is defined in TS 38.133 [6] section 9.4.1,

$CSSF_{interRAT} = CSSF_{within_gap_i}$ is the scaling factor for the measured inter-RAT E-UTRA carrier i which is calculated as specified in TS 38.133 [6] section 9.1.5.2.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{Measure,\ E\text{-}UTRAN\ FDD}$ defined in Table 6.6.3.0.1.1-1.

**Table 6.6.3.0.1.1-1: Measurement period and measurement bandwidth**

| Configuration | Physical Layer Measurement period: $T_{Measure,\ E\text{-}UTRAN\ FDD}$ [ms] | Measurement bandwidth [RB] |
|---|---|---|
| 0 | 480 x $CSSF_{interRAT}$ | 6 |
| 1 (note 1) | 240 x $CSSF_{interRAT}$ | 50 |
| NOTE 1: This configuration is optional. | | |

The UE shall be capable of identifying and performing NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements of at least 4 E-UTRAN FDD cells per E-UTRA FDD carrier frequency layer for up to 7 E-UTRA FDD carrier frequency layers.

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] section 10.2.2. The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] section 10.2.3. The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] section 10.2.5.

#### 6.6.3.0.1.2 Requirements when DRX is used

When DRX is in use and measurement gaps are configured, the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify,\ E\text{-}UTRAN\ FDD}$ specified in Table 6.6.3.0.1.2-1. When RRM enhancement for high speed is configured the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify,\ E\text{-}UTRAN\ FDD}$ specified in Table 6.6.3.0.1.2-2.

**Table 6.6.3.0.1.2-1: Requirement to identify a newly detectable E-UTRAN FDD cell**

| DRX cycle length (s) | $T_{Identify,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles) | |
|---|---|---|
| | Gap period = 40 ms, 20 ms | Gap period = 80 ms |
| ≤0.16 | Non-DRX requirements in Section 6.6.3.0.1.1 apply | Non-DRX requirements in Section 6.6.3.0.1.1 apply |
| 0.256 | 5.12*K (20*$CSSF_{interRAT}$) | 7.68*K (30*$CSSF_{interRAT}$) |
| 0.32 | 6.4*K (20*$CSSF_{interRAT}$) | 7.68*K (24*$CSSF_{interRAT}$) |
| 0.32< DRX-cycle ≤10.24 | Note1 (20*$CSSF_{interRAT}$) | Note1 (20*$CSSF_{interRAT}$) |
| NOTE 1: The time depends on the DRX cycle length.<br>NOTE 2: $CSSF_{interRAT}$ is as defined in Section 6.6.3.0.1.1. | | |

**Table 6.6.3.0.1.2-2: Requirement to identify a newly detectable E-UTRAN FDD cell for UE configured with RRM enhancement for high speed**

| DRX cycle length (s) | $T_{Identify,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles) | |
|---|---|---|
| | **Gap period = 40 ms, 20 ms** | **Gap period = 80 ms** |
| ≤0.16 | Non-DRX requirements in clause 9.4.2.2 apply | Non-DRX requirements in clause 9.4.2.2 apply |
| 0.16<DRx cycle<=0.32 | Note 1(15*$CSSF_{interRAT}$) | |
| 0.32<DRx cycle <= 0.64 | Note 1(10*$CSSF_{interRAT}$) | |
| DRx cycle = 1.024 | Note 1(10*$CSSF_{interRAT}$) | Note 1(10*$CSSF_{interRAT}$) |
| DRx cycle = 1.28 | Note 1(8*$CSSF_{interRAT}$) | Note 1(8*$CSSF_{interRAT}$) |
| 1.28< DRX-cycle ≤10.24 | Note1 (20*$CSSF_{interRAT}$) | Note1 (20*$CSSF_{interRAT}$) |
| NOTE 1: The time depends on the DRX cycle length.<br>NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2. | | |

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN FDD cells per E-UTRA FDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA FDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure,\ E\text{-}UTRAN\ FDD}$ specified in Table 6.6.3.0.1.2-3.

**Table 6.6.3.0.1.2-3: Requirement to measure E-UTRAN FDD cells**

| DRX cycle length (s) | $T_{measure,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles) |
|---|---|
| ≤0.08 | Non-DRX requirements in Section 6.6.3.0.1.1 apply |
| 0< DRX-cycle ≤10.24 | Note1 (5* $CSSF_{interRAT}$) |
| NOTE 1: The time depends on the DRX cycle length.<br>NOTE 2: $CSSF_{interRAT}$ is as defined in Section 6.6.3.0.1.1. | |

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] Section 10.2.2. The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in

TS 38.133 [6] Section 10.2.3. The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] Section 10.2.5.

#### 6.6.3.0.1.3 Measurement reporting requirements for Event-Triggered Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in TS 38.133 [6] clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The UE shall not send any event-triggered measurement reports, as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x $TTI_{DCCH}$ where $TTI_{DCCH}$ is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify, E-UTRAN FDD}$ defined in clauses 6.6.3.0.1.1 and 6.6.3.0.1.2 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify, E-UTRAN FDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [13], the event triggered measurement reporting delay shall be less than $T_{Measure, E-UTRAN FDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap has not been available and the L3 filter has not been used.

The normative reference for this requirement is TS 38.133 [6] clause 9.4.2.

### 6.6.3.0.2 Minimum conformance requirements for inter-RAT event triggered reporting to E-UTRAN TDD

The requirements are applicable for NR−E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN TDD cell is considered to be detectable when:

- RSRP related conditions in the accuracy requirements in TS 38.133 [6] Section 10.2.2 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [23],
- RSRQ related conditions in the accuracy requirements in TS 38.133 [6] Section 10.2.3 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [23],
- RS-SINR related conditions in the accuracy requirements in TS 38.133 [6] Section 10.2.5 are fulfilled for a corresponding Band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [23].

#### 6.6.3.0.2.1 Requirements when no DRX is used

When the UE requires measurement gaps to identify and measure inter-RAT cells and an appropriate measurement gap pattern is scheduled, the UE shall be able to identify a new detectable TDD cell within $T_{Identify, E-UTRAN TDD}$ according to the following expression:

- When configuration 0 or configuration 1 in Table 6.6.3.0.2-1 is applied,

$$T_{Identify,E-UTRAN\ TDD} = T_{BasicIdentify} * \frac{480}{T_{Inter1}} * CSSF_{interRAT} \quad ms\ ,$$

- When configuration 2 or configuration 3 in Table 6.6.3.0.2-1 is applied,

$$T_{Identify,E-UTRAN\ TDD} = (T_{BasicIdentify} * \frac{480}{T_{Inter1}} + 240) * CSSF_{interRAT} \quad ms,$$

where:

$T_{BasicIdentify}$ = 480 ms,

$T_{Inter1}$ is defined in TS 38.133 [6] section 9.4.1,

$CSSF_{interRAT} = CSSF_{within_gap_i}$ is the scaling factor for the measured inter-RAT E-UTRA carrier i which is calculated as specified in TS 38.133 [6] section 9.1.5.2.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{Measure,\ E\text{-}UTRAN\ TDD}$ defined in Table 6.6.3.0.2.1-1.

**Table 6.6.3.0.2.1-1: $T_{Measure,\ E\text{-}UTRAN\ TDD}$ for different configurations**

| Configuration | Measurement bandwidth [RB] | Number of UL/DL sub-frames per half frame (5 ms) | | DwPTS | | $T_{Measure,\ E\text{-}UTRAN\ TDD}$ [ms] |
|---|---|---|---|---|---|---|
| | | DL | UL | Normal CP | Extended CP | |
| 0 | 6 | 2 | 2 | $19760 \cdot T_s$ | $20480 \cdot T_s$ | 480 x $CSSF_{interRAT}$ |
| 1 (note 1) | 50 | 2 | 2 | $19760 \cdot T_s$ | $20480 \cdot T_s$ | 240 x $CSSF_{interRAT}$ |
| 2 | 6 | 1 | 3 | $19760 \cdot T_s$ | $20480 \cdot T_s$ | 720 x $CSSF_{interRAT}$ |
| 3 (Note 1) | 50 | 1 | 3 | $19760 \cdot T_s$ | $20480 \cdot T_s$ | 480 x $CSSF_{interRAT}$ |
| NOTE 1: This configuration is optional.<br>NOTE 2: Void | | | | | | |

The UE shall be capable of identifying and performing NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements of at least 4 E-UTRAN TDD cells per E-UTRA TDD carrier frequency layer for up to 7 E-UTRA TDD carrier frequency layers.

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] section 10.2.2. The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] section 10.2.3. The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] section 10.2.5.

### 6.6.3.0.2.1 Requirements when DRX is used

When DRX is in use and measurement gaps are configured, the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify,\ E\text{-}UTRAN\ TDD}$ specified in Table 6.6.3.0.2.1-1. When RRM enhancement for high speed is configured the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify,\ E\text{-}UTRAN\ TDD}$ specified in Table 6.6.3.0.2.1-2.

**Table 6.6.3.0.2.1-1: Requirement to identify a newly detectable E-UTRAN TDD cell**

| DRX cycle length (s) | $T_{Identify,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles) | |
|---|---|---|
| | Gap period = 40 ms, 20 ms | Gap period = 80 ms |
| ≤0.16 | Non-DRX requirements in Section 6.6.3.0.2.1 apply | Non-DRX requirements in Section 6.6.3.0.2.1 apply |
| 0.256 | 5.12*K (20*$CSSF_{interRAT}$) | 7.68*K (30*$CSSF_{interRAT}$) |
| 0.32 | 6.4*K (20*$CSSF_{interRAT}$) | 7.68*K (24*$CSSF_{interRAT}$) |
| 0.32< DRX-cycle ≤10.24 | Note1 (20*$CSSF_{interRAT}$) | Note1 (20*$CSSF_{interRAT}$) |
| NOTE 1: The time depends on the DRX cycle length.<br>NOTE 2: $CSSF_{interRAT}$ is as defined in Section 6.6.3.0.2.1. | | |

**Table 6.6.3.0.2.1-2: Requirement to identify a newly detectable E-UTRAN TDD cell for UE configured with RRM enhancement for high speed**

| DRX cycle length (s) | $T_{Identify,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles) | |
|---|---|---|
| | Gap period = 40 ms, 20 ms | Gap period = 80 ms |
| ≤0.16 | Non-DRX requirements in clause 9.4.3.2 apply | Non-DRX requirements in clause 9.4.3.2 apply |
| 0.16<DRx cycle<=0.32 | Note 1(15*$CSSF_{interRAT}$) | |

| | | |
|---|---|---|
| 0.32<DRx cycle <= 0.64 | Note 1(10*$CSSF_{interRAT}$) | |
| DRx cycle = 1.024 | Note 1(10*$CSSF_{interRAT}$) | Note 1(10*$CSSF_{interRAT}$) |
| DRx cycle = 1.28 | Note 1(8*$CSSF_{interRAT}$) | Note 1(8*$CSSF_{interRAT}$) |
| 1.28< DRX-cycle ≤10.24 | Note1 (20*$CSSF_{interRAT}$) | Note1 (20*$CSSF_{interRAT}$) |
| NOTE 1: The time depends on the DRX cycle length.<br>NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.3.2. | | |

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN TDD cells per E-UTRA TDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA TDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure, E\text{-}UTRAN\ TDD}$ specified in Table 6.6.3.0.2.1-3.

**Table 6.6.3.0.2.1-3: Requirement to measure E-UTRAN TDD cells**

| DRX cycle length (s) | $T_{measure, E\text{-}UTRAN\ TDD}$ (s) (DRX cycles) |
|---|---|
| ≤0.08 | Non-DRX Requirements in Section 6.6.3.0.2.1 apply |
| 0.128 | For configuration 2, non-DRX requirements in section 6.6.3.0.2.1 apply,<br>Otherwise: Note1 (5*$CSSF_{interRAT}$) |
| 0.128<DRX-cycle≤10.24 | Note1 (5*$CSSF_{interRAT}$) |
| NOTE 1: The time depends on the DRX cycle length.<br>NOTE 2: $CSSF_{interRAT}$ is as defined in Section 6.6.3.0.2.1. | |

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] Section 10.2.2. The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] Section 10.2.3. The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in TS 38.133 [6] Section 10.2.5.

### 6.6.3.0.2.3 Measurement reporting requirements for Event-Triggered Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in TS 38.133 [6] clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The UE shall not send any event-triggered measurement reports, as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x $TTI_{DCCH}$ where $TTI_{DCCH}$ is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify, E\text{-}UTRAN\ TDD}$ defined in clauses 6.6.3.0.2.1 and 6.6.3.0.2.2 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify, E\text{-}UTRAN\ TDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [13], the event triggered measurement reporting delay shall be less than $T_{Measure, E\text{-}UTRAN\ TDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap has not been available and the L3 filter has not been used.

The normative reference for this requirement is TS 38.133 [6] clause 9.4.3.

## 6.6.3.1 NR SA FR1 – E-UTRAN event-triggered reporting in non-DRX

### 6.6.3.1.1 Test purpose

This test is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1 under the cell search and measurement requirements.

### 6.6.3.1.2 Test applicability

This test applies to all types of NR UE supporting SA FR1 from Release 15 onwards.

### 6.6.3.1.3 Minimum conformance requirements

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.3.1.

#### 6.6.3.1.3.1 NR – E-UTRAN FDD requirement

The minimum conformance requirements are specified in clause 6.6.3.0.1.

#### 6.6.3.1.3.2 NR – E-UTRAN TDD requirement

The minimum conformance requirements are specified in clause 6.6.3.0.2.

### 6.6.3.1.4 Test description

#### 6.6.3.1.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.3.1.4.1-1.

**Table 6.6.3.1.4.1-1: supported test configurations**

| Test Case ID | Description |
|---|---|
| 6.6.3.1-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE FDD |
| 6.6.3.1-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.6.3.1-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.6.3.1-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE TDD |
| 6.6.3.1-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE TDD |
| 6.6.3.1-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.3.1.4.1-2 and Table 6.6.3.1.4.1-3.

**Table 6.6.3.1.4.1-2: Initial conditions for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Value | | Comment |
|---|---|---|---|
| Test environment | NC | | As specified in TS 38.508-1 [14] clause 4.1. |
| Test frequencies | As specified in Annex E, Table E.4-2 and TS 38.508-1 [14] sclause 4.3.1. | | |
| Channel bandwidth | As specified by the test configuration selected from Table 6.6.3.1.5-1 and Table 6.6.3.1.5-2. | | |

| Hysteresis | dB | 0 | |
| TimeToTrigger | s | 0 | |
| Filter coefficient | | 0 | L3 filtering is not used |
| DRX | | OFF | OFF |
| T1 | s | 5 | |
| T2 | s | 5 | |
| NOTE 1: Values are defined in Table 6.6.3.1.5-1 | | | |

1. Message contents are defined in clause 6.6.3.1.4.3.

2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. The connection setup is done according to the settings in Annex C.1.1 and C.1.2.

#### 6.6.3.1.4.2 Test procedure

The test consists of two successive time periods, with time durations of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Gap pattern configuration is configured before T2 begins to enable inter-frequency monitoring.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.3.1.5-1 and 6.6.3.1.5-2. Propagation conditions are set according to Annex C clause C.2.2.

3. SS shall transmit an *RRCReconfiguration* message.

4. The UE shall transmit *RRCReconfigurationComplete* message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Table 6.6.3.1.5-1 and 6.6.3.1.5-2.

6. UE shall transmit a MeasurementReport message triggered by Event B2. If the measurement reporting delay from the beginning of time period T2 is less than 3842ms the number of successful tests is increased by one. If the UE fails to report the event within the measurement reporting delay requirement then the number of failure tests is increased by one.

7. After the SS receive the MeasurementReport message in step 6 or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 14 + 2) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord

with UE-Identity) for the UE and ensures the UE is in state RRC_CONNECTED according to TS 38.508-1 [14] clause 4.5.4 (if the paging fails, switches off and on the UE and ensures the UE is in the state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5,
OR
- if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity *NR*, Connected without release *On* according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.3.1.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 4.6 with the following exceptions:

**Table 6.6.3.1.4.3-1: Common Exception messages NR SA FR1 – E-UTRAN event-triggered reporting in non-DRX**

| Antenna Configuration and Correlation Matrix note6 | | 1, 2, 3, 4, 5, 6 | 1x2 | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [24].
NOTE 2: DL RMCs and OCNG patterns are specified in sections A 3.1 and A 3.2 of TS 36.133 [23] respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 6: Propagation condition and correlation matrix are defined in section B.2 in TS 36.101 [27].

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3842ms from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The overall delays measured test requirement is expressed as:

$T_{identify,E\text{-}UTRAN\ FDD} = T_{BasicIdentify} * 480 / T_{Inter1} * CSSF_{interRAT}$ ms

Which:

$T_{BasicIdentify} = 480$,

$T_{Inter1} = 60$,

$CSSF_{interRAT} = 1$

TTI insertion uncertainty = $TTI_{DCCH}$ = 1 ms; 2x$TTI_{DCCH}$ = 2 ms

The overall delays measured shall be less than a total of 3842 ms in this test case (note: this gives a total of 3840 ms for measurement reporting delay plus 2 ms for TTI insertion uncertainty).

The rate of correct events observed during repeated tests shall be at least 90% with confidence level of 95%.

### 6.6.3.2 NR SA FR1 – E-UTRAN event-triggered reporting in DRX

#### 6.6.3.2.1 Test purpose

This test is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1 when DRX is used under the cell search and measurement requirements.

#### 6.6.3.2.2 Test applicability

This test applies to all types of NR UE Release 15 and forward supporting 5GS NR SA FR1, E-UTRAN and long DRX cycle.

#### 6.6.3.2.3 Minimum conformance requirements

The minimum conformance requirements are specified in clauses 6.6.3.0.1 and 6.6.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.3.2.

#### 6.6.3.2.4 Test description

##### 6.6.3.2.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.3.2.4.1-1.

**Table 6.6.3.2.4.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1**

| Test Case ID | Description |
|---|---|
| 6.6.3.2-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE FDD |
| 6.6.3.2-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.6.3.2-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.6.3.2-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE TDD |
| 6.6.3.2-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE TDD |
| 6.6.3.2-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.3.2.4.1-2 and Table 6.6.3.2.4.1-3.

| T1 | s | 5 | | |
| T2 | s | 5 | 15 | |
| NOTE 1: Values are defined in Table 6.6.3.2.5-1 | | | | |

1. Message contents are defined in clause 6.6.3.2.4.3.
2. There are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. Cell 1 is configured according to Annex C.1.1 and C.1.2, Cell 2 is configured according to TS 36.521-3 [26] Annex C.1.0 and C.1.1.

### 6.6.3.2.4.2 Test procedure

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter-RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

In each test the UE shall be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore the UE shall be allocated with PUSCH resource at every DRX cycle.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.3.2.5-1 and 6.6.3.2.5-2.

3. SS shall transmit an RRCReconfiguration message.

4. The UE shall transmit RRCReconfigurationComplete message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Tables 6.6.3.2.5-1 and 6.6.3.2.5-2. T2 starts.

6. UE shall transmit a MeasurementReport message triggered by Event B2. If the overall delays measured from the beginning of time period T2 is less than 3.48 s for Test 1 or less than 12.8 s for Test 2 then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the MeasurementReport message in step 6) or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 14+2) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord with ue-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [24].
Note 2: DL RMCs and OCNG patterns are specified in sections A 3.1 and A 3.2 of TS 36.133 [23] respectively.
Note 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 6: Propagation condition and correlation matrix are defined in section B.2 in TS 36.101 [27].

In test 1, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

In test 2, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 12.8s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### 6.6.3.3 NR SA FR1 – E-UTRAN event-triggered reporting in DRX for UE configured with highSpeedMeasFlag-r16

#### 6.6.3.3.1 Test purpose

This test is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1 when DRX is used under the cell search and measurement requirements for UE configured with RRM enhancement for high speed.

#### 6.6.3.3.2 Test applicability

This test applies to all types of NR UE supporting SA FR1 configured with RRM enhancement for high speed from Release 15 onwards.

#### 6.6.3.3.3 Minimum conformance requirements

The minimum conformance requirements are specified in clauses 6.6.3.0.1 and 6.6.3.0.2.

The normative reference for this requirement is TS 38.133 [6] clause A.6.6.3.3.

#### 6.6.3.3.4 Test description

##### 6.6.3.3.4.1 Initial conditions

This test shall be tested using any of the test configurations in Table 6.6.3.3.4.1-1.

**Table 6.6.3.3.4.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1 for UE configured with highSpeedMeasFlag-r16**

| Test Case ID | Description |
|---|---|
| 6.6.3.3-1 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE FDD |
| 6.6.3.3-2 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.6.3.3-3 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE FDD |
| 6.6.3.3-4 | NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode, LTE TDD |
| 6.6.3.3-5 | NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode, LTE TDD |
| 6.6.3.3-6 | NR 30 kHz SSB SCS, 40MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

Configure the test equipment and the DUT according to the parameters in Table 6.6.3.3.4.1-2 and Table 6.6.3.3.4.1-3.

| Note 1: Values are defined in TS 38.133 [6] Table 6.6.3.3.5-1 | | | |

1. Message contents are defined in clause 6.6.3.3.4.3.

2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. The connection setup is done according to the settings in Annex C.1.1 and C.1.2.

3. UE is configured with highSpeedMeasFlag-r16

#### 6.6.3.3.4.2 Test procedure

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter-RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

In each test the UE shall be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore the UE shall be allocated with PUSCH resource at every DRX cycle.

1. Ensure the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On and Test Mode *On* according to TS 38.508-1 [14] clause 4.5.

2. Set the parameters according to T1 in Table 6.6.3.3.5-1 and 6.6.3.3.5-2.

3. SS shall transmit an RRCReconfiguration message.

4. The UE shall transmit RRCReconfigurationComplete message. T1 starts.

5. When T1 expires, the SS shall switch the power setting from T1 to T2 as specified in Tables 6.6.3.3.5-1 and 6.6.3.3.5-2. T2 starts.

6. UE shall transmit a MeasurementReport message triggered by Event B2. If the overall delays measured from the beginning of time period T2 is less than 4.8s then the number of successful tests is increased by one. If the UE fails to report the event within the overall delays measured requirement then the number of failure tests is increased by one.

7. After the SS receive the MeasurementReport message in step 6) or when T2 expires, the SS shall:

   - transmit *RRCRelease* message to release the RRC connection which includes the release of the established radio bearers as well as all radio resources

   OR

   - switch the UE off.

8. Set Cell 2 physical cell identity = ((current Cell 2 physical cell identity + 1) mod 14+2) for next iteration of the test procedure loop.

9. Depending on the choice in Step 7, the SS:
   - if the RRC Connection Release has been sent, transmits in Cell 1 a Paging message (including PagingRecord with ue-Identity) for the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5 (if the paging fails, switches off and on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5),
   OR
   - if the device has been switched off, switches on the UE and ensures the UE is in state RRC_CONNECTED with generic procedure parameters Connectivity NR, Connected without release On according to TS 38.508-1 [14] clause 4.5.

10. Repeat step 2-9 until the confidence level according to Tables G.2.3-1 in Annex G clause G.2 is achieved.

#### 6.6.3.3.4.3 Message contents

Message contents are according to TS 38.508-1 [14] clause 7.3 with the following exceptions:

**Table 6.6.3.3.4.3-1: Common Exception messages**

| Default Message Contents | |

6.6.3.3.5 Test requirement

Table 6.6.3.3.5-1 and Table 6.6.3.3.5-2 defines the primary level settings including test tolerances for all tests.

**Table 6.6.3.3.5-1: PCell specific test parameters for SA inter-RAT E-UTRA event triggered reporting in DRX with PCell in FR1 for UE configured with highSpeedMeasFlag-r16**

| Parameter | | Unit | Configuration | Cell 1 | |
|---|---|---|---|---|---|
| | | | | T1 | T2 |
| RF channel number | | | 1, 2, 3, 4, 5, 6 | 1 | |
| Duplex mode | | | 1, 2, 3 | FDD | |
| | | | 4, 5, 6 | TDD | |
| TDD Configuration | SCS=15 kHz | | 2, 5 | TDDConf.1.1 | |
| | SCS=30 kHz | | 3, 6 | TDDConf.2.1 | |
| $BW_{channel}$ | | MHz | 1, 4 | 10: $N_{RB,c}$ = 52 (FDD) | |
| | | | 2, 5 | 10: $N_{RB,c}$ = 52 (TDD) | |
| | | | 3, 6 | 40: $N_{RB,c}$ = 106 (TDD) | |
| PDSCH reference measurement channel | | | 1, 4 | SR.1.1 FDD | |
| | | | 2, 5 | SR.1.1 TDD | |
| | | | 3, 6 | SR.2.1 TDD | |
| RMSI CORESET reference channel | | | 1, 4 | CR.1.1 FDD | |
| | | | 2, 5 | CR.1.1 TDD | |
| | | | 3, 6 | CR.2.1 TDD | |
| Dedicated CORESET reference channel | | | 1, 4 | CCR.1.1 FDD | |
| | | | 2, 5 | CCR.1.1 TDD | |
| | | | 3, 6 | CCR.2.1 TDD | |
| BWP configurations | Initial DL BWP | | 1, 2, 3, 4, 5, 6 | DLBWP.0.1 | |
| | Dedicated DL BWP | | 1, 2, 3, 4, 5, 6 | DLBWP.1.1 | |
| | Initial UL BWP | | 1, 2, 3, 4, 5, 6 | ULBWP.0.1 | |
| | Dedicated UL BWP | | 1, 2, 3, 4, 5, 6 | ULBWP.1.1 | |
| OCNG pattern[Note1] | | | 1, 2, 3, 4, 5, 6 | OP.1 | |
| SMTC configuration | | | 1, 2, 3, 4, 5, 6 | SMTC.1 | |
| SSB configuration | | | 1, 2, 4, 5 | SSB.1 FR1 | |
| | | | 3, 6 | SSB.2 FR1 | |
| CSI-RS for tracking | | | 1, 4 | TRS.1.1 FDD | |
| | | | 2, 5 | TRS.1.1 TDD | |
| | | | 3, 6 | TRS.1.2 TDD | |
| b2-Threshold1 | | dBm | 1, 2, 4, 5 | -98 | |
| | | | 3, 6 | -95 | |
| EPRE ratio of PSS to SSS | | dB | 1, 2, 3, 4, 5, 6 | 0 | |
| EPRE ratio of PBCH_DMRS to SSS | | | | | |
| EPRE ratio of PBCH to PBCH_DMRS | | | | | |

| | | | | |
|---|---|---|---|---|
| EPRE ratio of PDCCH_DMRS to SSS | | | | |
| EPRE ratio of PDCCH to PDCCH_DMRS | | | | |
| EPRE ratio of PDSCH_DMRS to SSS | | | | |
| EPRE ratio of PDSCH to PDSCH_DMRS | | | | |
| EPRE ratio of OCNG DMRS to SSS | | | | |
| EPRE ratio of OCNG to OCNG DMRS | | | | |
| $N_{oc}$[Note2] | dBm/15 kHz | 1, 2, 3, 4, 5, 6 | -106 | |
| $N_{oc}$[Note2] | dBm/SCS | 1, 2, 4, 5 | -106 | |
| | | 3, 6 | -103 | |
| $\hat{E}_s/N_{oc}$ | dB | 1, 2, 3, 4, 5, 6 | 18 | -2 |
| $\hat{E}_s/I_{ot}$[Note3] | dB | 1, 2, 3, 4, 5, 6 | 18 | -2 |
| SS-RSRP[Note3] | dBm/SCS | 1, 2, 4, 5 | -88 | -108 |
| | | 3, 6 | -85 | -105 |
| SSB_RP[Note3] | dBm/SCS | 1, 2, 4, 5 | -88 | -108 |
| | | 3, 6 | -85 | -105 |
| Io[Note3] | dBm/9.36 MHz | 1, 2, 4, 5 | -59.98 | -75.92 |
| | dBm/38.16 MHz | 3, 6 | -53.88 | -69.82 |
| Propagation condition | | 1, 2, 3, 4, 5, 6 | AWGN | |
| Antenna Configuration and Correlation Matrix | | 1, 2, 3, 4, 5, 6 | 1x2 Low | |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

Note 3: $\hat{E}_s/I_{ot}$, SS-RSRP, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

**Table 6.6.3.3.5-2: E-UTRAN neighbour cell specific test parameters for SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1 for UE configured with highSpeedMeasFlag-r16**

| Parameter | Unit | Configuration | Cell 2 | |

| Propagation Condition [Note6] | | 1, 2, 3, 4, 5, 6 | AWGN1944 | |
| Antenna Configuration and Correlation Matrix [Note6] | | 1, 2, 3, 4, 5, 6 | 1x2 Low | |

Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [24].
Note 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [23] respectively.
Note 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
Note 5: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 6: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [27].

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 4.8s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% with a confidence level of 95%.

## 6.6.4 L1-RSRP measurement for beam reporting

### 6.6.4.0 Minimum conformance requirements

#### 6.6.4.0.1 Minimum conformance requirements for SSB-based L1-RSRP measurement for beam reporting

Same as clause 4.6.4.0.1

The normative reference for this requirement is TS 38.133 [6] clause 9.5.3.1, 9.5.4.1 and 9.5.5.1.

#### 6.6.4.0.2 Minimum conformance requirements for CSI-RS-based L1-RSRP measurement for beam reporting

Same as clause 4.6.4.0.2

The normative reference for this requirement is TS 38.133 [6] clauses 9.5.3.1, 9.5.4.2 and 9.5.5.2.

#### 6.6.4.0.3 Inter-cell SSB based L1-RSRP Reporting

If a cell with PCI different from serving cell is known according 9.13.2 of TS 38.133 [6], the UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$. The requirements specified in this clause are only applicable when

- *highSpeedMeasFlag-r16* is not configured, and
- *highSpeedMeasFlagFR2-r17* is not configured, and
- highSpeedMeasCA-Scell-r17 is not configured, and
- SSBs of CDP outside SMTCs for L1-RSRP measurement are not overlapped with concurrent gaps.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ is defined in Table 6.6.4.0.3-1 for FR1,

For FR1,

- $P=\frac{1}{1-\frac{T_{SSB_CDP}}{MRGP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and
- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet pervious conditions.

For either an FR1 or FR2 cell with PCI different from serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 cell with PCI different from serving cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

**Table 6.6.4.0.3-1: Inter-cell L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ for known cells with different PCIs in FR1**

| Configuration | $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ (ms) |
|---|---|
| non-DRX | $\max(T_{Report}, \text{ceil}(M*P)*T_{SSB_CDP})$ |
| DRX cycle ≤ 320ms | $\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB_CDP}))$ |
| DRX cycle > 320ms | $\text{ceil}(M*P)*T_{DRX}$ |
| Note 1: $T_{SSB_CDP}$ is the periodicity of the SSB-Index configured for inter-cell L1-RSRP measurement. $T_{DRX}$ is the DRX cycle length. $T_{Report}$ is configured periodicity for reporting. | |
| Note 2: K = 1.5. | |

### 6.6.4.1 NR SA FR1 SSB-based L1-RSRP measurement in non-DRX

#### 6.6.4.1.1 Test purpose

To verify that the UE makes correct reporting of L1-RSRP measurement in non-DRX within L1-RSRP measurement requirements in TS 38.133 [6] clause 9.5.4.1.

#### 6.6.4.1.2 Test applicability

This test applies to all types of NR UE release 15 and forward.
